Dr. Lewis passed through transition to the Higher Initiation in San Jose, California, at 3:15 P.M. Pacific Standard Time, on Wednesday, August 2, 1939. Hundreds attended the services, and several thousand letters, telegrams, and cables were received from every civilized country in the world, expressing sorrow at the loss of his physical presence and personality, but joy at his final attainment. In accordance with an expressed wish in his Last Will and Testament, his mortal ashes were interred in Rosicrucian Park, beneath a symbolic triangle in the beautiful Akhnaton Shrine, a reproduction of a Temple in Egypt in which he had performed an initiation. It is now visited annually by great numbers of members, and his friends and admirers.

Imperator for the Worldwide Jurisdiction (the Americas,
Australasia, Europe, Africa, and Asia), A.M.O.R.C.

The following is a brief biography of facts gathered from the archives of the Order.

Ralph Maxwell Lewis was born in New York City, New York, on Sunday, February 14, 1904, at 10:30 A.M. His father, the first Imperator of A.M.O.R.C. for North and South America, was born in New Jersey, and was of Welsh extraction, being a descendant of Sir Robert Lewis, early American settler. His mother was born in Boston, Massachusetts. His father, at the time of his birth, was engaged as a feature writer for a New York newspaper, and, though still a young man, was nationally known for his articles on metaphysical subjects and psychological research in well-known magazines and the daily press.

Ralph M. Lewis received his early education in the schools of New York City and a military academy of New Jersey. In 1918, his family established residence in San Francisco, California. In 1919, he joined them, and later studied law and accountancy in that city, while engaged in clerical and other pursuits for a livelihood. While still in his teens, he evidenced a pronounced faculty for efficiently organizing details, and arranging every personal activity into a systematic campaign. Duties or programs which challenged the imagination and called for creative enterprise made the strongest appeal to his nature. From 1919 to 1923, while radio was still in its infancy and no standard receiving equipment was on the market, he collaborated with his father and other researchers in an especially equipped laboratory for the designing of unique receiving circuits, and for the improvement of the instruments used.

His abhorrence of routine detail caused a mental restlessness, and a search for a profession which would allow his imagination the necessary freedom. Having reached a point in his law studies where he would soon have been prepared for the bar examination, he abandoned his interest in law as a profession, because its logic and required research alone continued to appeal to him. Abstract subjects began to engross him more and more. He read works on oceanography, archaeology, and geology, especially those topics which entered the realm of speculation. His discussions with his father led his interest into the fields of ontology, metaphysics, and mysticism.

His father never urged him to become a Rosicrucian member or student. However, the answers he received to his questions—and which were not available through any other source of knowledge—aroused his admiration for the Rosicrucian teachings, and he crossed the Threshold of the Order by a special dispensation while still a youth. The Rosicrucian teachings touched a responsive chord and satisfied a previously misunderstood yearning. He progressed through the Degrees of the Order in the San Francisco Lodge, and began as

well a conscientious and systematic study of the principal philosophic thought of the centuries.

In 1924, the American Supreme Council of the A.M.O.R.C. elected him Supreme Secretary of the Rosicrucian Order of North America, to fill a vacancy created by retirement. This position afforded him an outlet for the unique combination of his talents—abstraction, creative enterprise, and organization. He was responsible for a number of drastic changes in the AMORC administration policies and the expansion of the Sanctum membership. He advocated a centralization of all the Order's activities in the Supreme Lodge, with the subordinate activities deriving their power and direction through the central body alone. This caused uniformity in function and a consequent unity which strengthened AMORC materially. Aside from his filial love for his father, he always had a great respect for his genius and gave him unswerving loyalty.

He was an American delegate on several occasions to the F. U. D. O. S. I. conferences (a federation of the authentic arcane orders of Europe) held in Brussels, Belgium. He was received by the Emperor of the Rose Croix of Europe, with honors due his rank, and had other Rosicrucian Degrees conferred upon him in Brussels.

In 1936, he was initiated into the Rose-Croix Kabalistique Order and into the Traditional Martinist Order of Europe. He had previously been made a Fellow of the Andhra Research University of India, which body had conferred upon him, because of his philosophic writings, the Honorary Degree of Doctor of Literature. He had also received the Star and Cross of Science from the International Academic Council in 1939.

On August 12, 1939, following the transition of Dr. H. Spencer Lewis, further high powers of the office of Emperor were transmitted to him, and he was duly and legally elected by the Board of Directors of the Supreme Grand Lodge of the A.M.O.R.C. as Emperor for this jurisdiction.

In the early part of 1940, the Supreme Council of the Traditional Martinist Order of the world transferred to him the title of Sovereign Grand Master of the Martinist Order of the World, with authority to perpetuate it. Until his transition. Dr. H. Spencer Lewis had held this authority.

In March of 1940, Mr. Lewis was elected President of the International Supreme Council of the Order Rosae Crucis.

Throughout the years, he has organized and conducted several motion-picture expeditions to the sites of the ancient civilizations and the birthplaces of religious and philosophical truths throughout the world. He has several times traveled throughout the world, filming ancient cultures in Egypt, India, Indonesia, Pakistan, Siam (Thailand), Ceylon (Sri Lanka), Peru, Greece, Persia (Iran), Tibet, and Iraq. In fact, he has been to every continent. These films are freely exhibited as an adjunct of the Rosicrucian Egyptian Museum, of which he is the Director.

He has spoken at Rosicrucian Conclaves (Conventions) in nearly every land in which the A.M.O.R.C. is established. He finalized the reestablishment of the A.M.O.R.C. of France and installed its incumbent Grand Master, Frater Raymond Bernard, in 1959. He also brought into existence the Grand Lodges of Brazil, Germany, and Japan, and in general has expanded the Order to its present worldwide extent.

CECIL A. POOLE, F.R.C.

Vice-President of the Supreme Council for the Worldwide Jurisdiction
(the Americas, Australasia, Europe, Africa, and Asia), A.M.O.R.C.

Cecil A. Poole was born in Monmouth, Oregon, on Sunday, August 11, 1907. His family were early pioneers in the old Oregon Territory, having come from Missouri and Michigan over the Oregon Trail. His great-grandfather, a Methodist circuit rider in the Willamette Valley, was instrumental in helping Oregon to become a state of the Union.

Inheriting the sturdy, questing pioneer spirit of his forebears and being influenced by the orthodox religious views of his family, Mr. Poole first considered the ministry as a vocation. He entered Willamette University, a denominational school, located at Salem, Oregon. There, however, he found himself more drawn to psychology and music. He planned to become a theater organist, but the coming of talking pictures forced him to change his goal. This time, he turned to education as a major.

After his graduation from Southern Oregon College of Education at Ashland, he began to teach in 1928 and soon became a school administrator. In this capacity, he helped to institute the first formal courses of study in character education. At this time, he laid a sound foundation for his future career at AMORC by handling school finances, budget problems, and legal matters.

Mr. Poole's long-time interest in philosophy continued to expand. Hearing about AMORC through a radio program, he searched libraries for more information. It was not long afterward that he joined the Rosicrucian Order. His career at AMORC began in October, 1934, when Ralph M. Lewis, the present Imperator, offered him a position as lecturer in the field. At first, he traveled by himself. Later, two trips, each lasting approximately ten months, were made as lecturer accompanying the courier car. Speaking both to the public and to members of Chapters and Lodges, he lectured in most of the United States.

In 1936, on his return to San Jose after the second tour, he was invited to join the local staff as Director of the newly established Latin-American Division. He retained this position until elected Supreme Secretary on August 12, 1939. From that time until December 6, 1963, more than twenty-four years later, Mr. Poole held two offices simultaneously. As Supreme Secretary and Supreme Treasurer, he directed the business and financial affairs of the organization under the ministry of the Board of Directors. He kept abreast of current business and financial trends by studying with the New York Institute

of Finance. Through his guidance, the Rosicrucian Order has achieved steady and stable financial growth.

Through the years, Mr. Poole has maintained his interest in the Latin-American Division. Having perfected his knowledge of Spanish, he lectures in Spanish on his trips to South America and at the annual International Conventions of the Order.

Mr. Poole's varied interests are revealed in the many articles that he has written for the Rosicrucian Forum and the Rosicrucian Digest, in which he has analyzed the philosophical and psychological aspects of mysticism and related them to a broad background knowledge of natural history and biology. He is a member of the American Association for the Advancement of Science, the American Ornithologists' Union, and a life member of the Cooper Ornithological Society. On January 24, 1969, after twenty-five years' membership in the California Academy of Sciences, he was elected a life member of this distinguished group. In addition, Mr. Poole's civic service was recognized in April, 1968, when he was elected to a three-year term on the Board of Directors of the Better Business Bureau of Santa Clara Valley.

His eager mind and unquenchable vitality have found many outlets. For years, he has read an average of two books a week. In addition, he has written more than a million words, the equivalent of a book a year. Through private correspondence, he has interested a number of scientists in contributing special articles to the Rosicrucian Digest. Besides scientific and philosophic interests, he enjoys classical music, opera, and ballet.

In August, 1972, Mr. Poole retired as Supreme Treasurer of A.M.O.R.C. but continued on as Vice-President.

His wife, Elise Stewart Poole, also a native Oregonian and a woman of quiet charm, has accompanied him on his numerous official visits around the country.

ARTHUR C. PIEPENBRINK, F.R.C.

Supreme Secretary for the Worldwide Jurisdiction (the Americas, Australasia, Europe, Africa, and Asia), A.M.O.R.C.

Arthur C. Piepenbrink was born in Elmhurst, Illinois, July 1, 1922. When he was four, his family moved to Beaver Dam, Wisconsin, a farming community of about 10,000 people. Here he experienced the Depression years, learning with his family how to be self-sufficient in an almost pioneer spirit—from the raising of food to carpentering.

His father, a teacher, had many interests, and his challenging, inquisitive mind and progressive ideas involved family life at all times in a mixture of the serious, philosophical, religious, educational, and moral. When he joined the Rosicrucian Order, the Rosicrucian principles he learned and lived struck a harmonious chord in the son and became for him the natural way to live, instilling in him even at so young an age a determination to work for the Order when he grew

up, and to assist in the work of disseminating the Rosicrucian teachings.

The depression years made it difficult for Mr. Piepenbrink to further his education after high school, and so it was that he worked for two years in the laboratory of a chemical factory. The possibility of a college education seemed remote at that time. With the war, however, the entire course of his life changed. After three and a half years in the Air Force as a navigator, he emerged a First Lieutenant and promptly took advantage of the G.I. Bill of Rights to obtain a college education.

His youthful ambition to work for the Rosicrucian Order had remained steadfast, and so he planned his educational program accordingly, majoring in speech arts and languages. However, because he realized that there might not be an immediate opening at Rosicrucian Park, he prepared himself for teaching, specializing, finally, in school administration. This training has proved singularly useful to Mr. Piepenbrink in his present duties as Supreme Secretary since the Rosicrucian Order is in a broad sense a school.

Although from time to time during his college years he inquired about available positions at Rosicrucian Park, there were no immediate openings until after his graduation, when he was offered a summer teaching position at the University by Cecil A. Poole, at that time Supreme Secretary and Dean of Rose-Croix University. After teaching a course in psychology in 1950, Mr. Piepenbrink returned to the University of Chicago graduate school and finished his thesis, receiving a Master's Degree in December, 1950. Brief experience later in a company management training program was interrupted by the offer of a permanent position as field representative for the Order, a position which was immediately accepted.

Mr. Piepenbrink's career at AMORC, beginning with his arrival in San Jose on New Year's Day, 1951, includes a year as field representative, seven years as Dean of Rose-Croix University and as Extension Director, and five years as Grand Regional Administrator. On December 6, 1963, he became Supreme Secretary of the Rosicrucian Order, succeeding Ralph M. Lewis and Cecil A. Poole, respectively.

Outside activities include community service, sports such as tennis, swimming, and hiking, membership in the Camelot Round Table—a branch of the Loyal Knights of the Round Table, a service organization—and many years as a member of the Humane Society of Santa Clara Valley.

BURNAM SCHAA, F.R.C.

Supreme Treasurer for the Worldwide Jurisdiction (the Americas, Australasia, Europe, Africa, and Asia), A.M.O.R.C.

Introductory remarks: Our new Supreme Treasurer, Frater Burnam Schaa, is quite unconcerned about his personal life, feeling it to be rather unimportant. However, because there may be those who would find it of interest, the following has been gleaned from record, family and friends.

He was born under rather unusual circumstances to parents in their middle years. His twin aborted mid-term, but William Burnam was quietly delivered at 7:37 A.M. T.L.T. (True Local Time) in Corpus Christi, Texas on February 17, 1943.

Corpus Christi was the temporary residence of Burnam's parents, Stella M. and George E. Schaa. His father, a watchmaker by trade, was conscripted by the Navy to work on delicate instruments during World War II, and the family was "stationed" there for two years.

The name Schaa often elicits questions. Burnam's first generation German father answered this by saying that his father before him came from a 200-year-old banking family in Germany. The spelling of the name appears to be neither Germanic nor Dutch in origin, and it has been speculated that perhaps, because of the pronunciation, it may have been a conversion of the Scottish name Shaw. Burnam's mother is from two old Southern English and French families—the Brookes and Dentons of Mississippi.

When Burnam was two years of age his family moved to Clovis, California, a small town on the outskirts of Fresno, a major city in the San Joaquin Valley, a great agricultural valley of California. From earliest times Burnam seemed to be marked by a quiet neutrality of character even though he actively championed society's less fortunate and counted among his friends those from every race and walk of life, some even outcasts from society. Perhaps it was this universal neutrality that inspired his peers to elect him, without any effort on his part, to serve them as a student body leader. Yet in spite of his active participation in school government, activities and sports, Burnam was often a solitary spirit by choice, taking great joy in long walks or excursions alone into the surrounding hills. Each evening he admired the Milky Way and listened deeply to the symphony of night sounds present in the silence of a small town. From such experiences, the mystical awareness steadily grew within him, and at 18 he joined the Rosicrucian Order.

Although an adamant conscientious objector to war and abuse of any kind, Burnam was able to discipline his own rebellious nature by joining the National Guard following Junior College. During these seven years of Guard service he attended Fresno State University, first majoring in Pre-medical studies and then changing to the Humanities Department where he specialized in ancient history and philosophy. But the humanities only heightened his interest in the human condition, so he then decided on a teaching career, majoring in sociology. However, after a few years of serious study in this field, he

came to understand that the only real way to help humanity alleviate its manifold problems was to help the individual help himself and change the world in the process. For him, neither the teacher, physician, or the politician seemed able to accomplish this to any extent.

The Order's teachings had gradually brought about many major changes in his own life, and increasingly Burnam hoped that others might also benefit as he had; therefore the urge grew ever more insistent within him that he should offer himself in service to the International Order of the Rose Cross. In the summer of 1969 Burnam Schaa left Fresno State University with a rather broad and lengthy education and came to Rosicrucian Park to serve the Order wherever he was needed. He was first employed in AMORC's Shipping Department before becoming a member of the first AMORC in-house Computer Department. This computer system was rather unique on the West Coast and Frater Schaa had to learn from on-the-job experience as well as from specialized computer science training. His capabilities soon earned him promotion to Department Head. Then, surprising to all, he was chosen to succeed the retiring Curator of the Rosicrucian Egyptian Museum. Although his enthusiasm for computer sciences was obvious, Frater Schaa also loved ancient history, and had continued his interest in Egyptian and Tibetan mysticism throughout his membership. To this he added a college degree in Museum Science, and pursued an active interest in modern Egyptology. During this time he began his extensive travels for the Order, touring Egypt, Lebanon and Damascus as well as studying the major Egyptian and Babylonian collections of the United States. Frater Schaa seemed to have found his niche in life.

However, in December of 1976, the Emperor asked Frater Schaa to leave the Museum in order to learn bookkeeping skills and become familiar with the financial workings of AMORC. In May of 1977 Frater Schaa was appointed AMORC Controller, and served in that capacity until his promotion to the Office of Grand Secretary. Hierarchy membership needs, lecture writing and departmental coordination became his primary concern until his recent election to the Supreme Board and appointment as Supreme Treasurer of AMORC.

Frater Schaa comes to us with a wealth of experience in both business and mysticism; however, his greatest value remains in his deep love for the Order and its humanitarian ideals. Frater Schaa still enjoys his nature walks and is now able to share them with his dearly loved life-companion, June. The Schaas own a small cottage close to Rosicrucian Park and have two cats to share their hearth and yard. Soror Schaa is also a devoted member of the Hierarchy.

RAYMOND BERNARD, F.R.C.

Supreme Legate of the Rosicrucian Order, A.M.O.R.C., for Europe

Raymond Bernard was born in Bourg-d'Oisans (Isere), France, on May 19, 1923, at 8:00 P.M. With a just and kind father and a gentle and understanding mother, he grew up happily in a united home. At eleven he was sent to boarding schools in Grenoble.

After passing his baccalaureate, he spent his vacation at Bourg-d'Oisans where he met Mrs. Edith Lynn. He asked her if she would help him improve his English. She agreed and on his birthday, in 1941, brought him some reading matter and copies of some 1939 Rosicrucian Digests along with a booklet explaining the Rosicrucian Order. He wanted to become a member immediately, but because of the war such was not possible. For four years, he studied at the Faculty of Law in Grenoble and received from Mrs. Lynn mystical instruction that left an indelible impression on him.

After military training, he participated in the first years of the occupation of Germany as an ordnance officer. At this time Mrs. Lynn returned to England, writing a last letter to him in which she declared: "My mission with you is ended. Keep in touch with Mile. Jeanne Guesdon."

The correspondence with Mile. Guesdon, begun in 1945, became more frequent. She kept Mr. Bernard informed of her efforts to establish the French Jurisdiction of A.M.O.R.C. and loaned him Rosicrucian works in English.

In December, 1948, Jeanne Guesdon wrote that everything was ready and sent him an application for membership which he immediately filled out. Thus he became the first member of the French Jurisdiction with the key number 2, the Emperor having been honored with number 1.

On March 29, 1955, Mile. Guesdon passed through transition after a short illness. In 1956, the Emperor asked Raymond Bernard to become the head of the French Jurisdiction, according to Mile. Guesdon's wish. In accepting this, Frater Bernard undertook the task of establishing Lodges, Chapters, and Pronaoi in all French-speaking countries, preparing the rituals in French, continuing the translation of the teachings and extension work to make the true Order known and recognized.

In 1959 he attended the International Rosicrucian Convention in San Jose with his wife Yvonne, who assists him very efficiently. He was installed by the Emperor as Grand Master for all French-speaking countries at that time.

The death of Mrs. Martha Lewis, the widow of Dr. H. Spencer Lewis, left a vacancy on the Board of Directors of the Supreme Grand Lodge. On August 4, 1966, Raymond Bernard was elected to fill that vacancy and was given the title of Supreme Legate of A.M.O.R.C. for Europe.

In 1969 he bought a casde to house the headquarters of the French Jurisdiction, where it now conducts its activities. The castle, Chateau d'Omonville, is located in Le Tremblay, 27110-Le Neubourg (Normandy), France.

Part Eight

Attaining Psychic Illumination

and
The Rosicrucian
Code of Life

A SPECIAL MANUSCRIPT
PREPARED FOR THIS MANUAL
BY DR. H. SPENCER LEWIS
(First Imperator of the present cycle of AMORC)

ATTAINING PSYCHIC ILLUMINATION

"WHEN THE STUDENT IS READY"

The question may be asked: "What is the ultimate goal of Rosicrucian study and preparation?" It is an old question that has been answered thousands of times in each country by the attainment that has come into the lives of the most devoted students.

It is well that the Neophyte and the Adept alike should be reminded again of the real purpose of the work we are engaged in and the reward that may be theirs when found ready and worthy.

There is a very old and well-founded injunction that "when the student is ready the Master will appear." This has been very greatly misunderstood and is used by thousands for refusing to unite with any school or organization, preferring to "wait until the personal teacher manifests."

The injunction distinctly says: "When the student is ready, the Master will appear!" What is meant by being ready? Surely it is not merely a matter of time! It must mean precisely what thousands have found it to mean: When the student is ready through preparation and worthiness.

This leaves the matter very clearly in the hands of each student. He may prepare slowly through selected reading, through long hours of meditation covering many years, or through the occasional attendance at lectures and discourses. If time is of no consequence, then a student may wait until the close of this incarnation or even another, for the appearance of that Master who is to be his personal teacher.

Here again we may ask: "What Master, what teacher?" Surely not an earthly Master, for such do not require the preparation and development necessary for Cosmic Illumination. The sincere student who truly prepares himself and becomes worthy of the personal instruction from a Master soon develops beyond the point where any earthly Master would satisfy. Only a Cosmic Master would meet the requirements of one who is ready.

HOW TO PREPARE

How, then, shall the student prepare most efficiently and with the utmost economy of time? This, too, is an age-old question, asked in

the mystery schools of Egypt, as it is asked in the arcane schools of our Order today.

There is but one answer: By taking the preliminary and graded steps in the earthly schools of the Masters and attaining the degrees of readiness through directed preparation. Hence the establishment of the arcane schools in all lands; hence the Great Work allotted to them by the Masters.

Where are the Great Masters and how are they contacted? Here we find more difficulty in answering, not because our knowledge is meager, but because language is inadequate to express the sublime facts. There are some conditions of cosmic life which even the language of the Shakespeare gems could not describe. We may comprehend, we may apprehend, and there may come to us, through words, some faint conception of the beauty, magnificence, and divinity of the cosmic scheme, but never a complete realization until we have made the personal contact and found Cosmic Illumination.

Know, then, that there is a wonderful union or assembly of Master Minds, Master Personalities, who constitute the Holy Assembly of the Cosmic. One of these masterful characters, Kut-Hu-Mi, the Illustrious, is shown in a portrait in another part of the Manual. He was one of the two Masters referred to by the ancient mystics and made somewhat known to advanced Theosophists by the late Mme. Helena P. Blavatsky, who was one of the personal students of the Master.

THE GREAT MASTERS

The Master K-H-M is Deputy Grand Master of the Great White Lodge of the symbolic Great White Brotherhood. (See definition of Great White Brotherhood, p. 167.) He was at one time known on Earth as Thutmose III of Egypt, and at one time resided at Lake Moeris (Morias). He was referred to in the Zend-Avesta as the Illuminator and was also known in Egypt as the Kroomata (Kai-Ra-Au-Meta) from which comes our Rosicrucian word used in our rituals and salutations: Cromaata. (It is interesting to note that if we take the initials of the title of our Order: The Ancient and Mystical Order Rosae Crucis, and reverse them, we have CROMAAT.)

The Master K-H-M (often called "K-H") passed through a number of reincarnations and was an important character on this Earth many times, and has lived for over a hundred and forty years in many incarnations. During his most recent incarnation on the earth plane, he lived at a secret monastery and temple near Kichingargha, called variously Kichinjirgha, Kichi-jirg-jargha, or Parcha-jarg-hatba by the Tibetans and Sikkimese.

COSMIC INITIATION

Hence, the real preparation of which we are speaking is for the purpose of ultimately being admitted, by Cosmic Initiation, into the symbolic Great White Brotherhood, that herein the Master will

appear to the student who is ready, to take him under personal instruction, and lead him (or her) on to higher development, where, someday, Mastership in the Great White Brotherhood is certain, and assignment to service as Imperator, Magus, or Hierophant in some phase of the work on Earth will then bring affiliation with the Great White Lodge.

How is such instruction given by the personal Master? It is, truly, personal, and is given through the media of the Cosmic. In other words, it becomes what is generally referred to as Cosmic Illumination, or Cosmic Consciousness, for at certain hours, days, or weeks of one's life one becomes conscious of some new and astounding knowledge, often with, and sometimes without, being aware of the presence or contact of the personal teacher.

The student, who attains membership in the Great White Brotherhood, after due preparation and real worthiness, first discovers this by becoming conscious of having passed through a series of events constituting a true Initiation. Often these occur during the night, or while he is on periods of rest and meditation in the mountains or valleys, away from active worldly affairs. This consciousness is accompanied by an influx of Divine Apprehension and Spiritual Awakening, affecting even the physical body to such an extent as to bring about a real rebirth of the body with rejuvenation, increased vigor, restored functioning in organs and parts that were tired, depleted, or subnormal.

COSMIC CONSCIOUSNESS

This is followed by a sudden increase in the functioning of a sense which is mistakenly called intuition at the time, for it seems to be like the intuitive faculty that was being highly developed during the earlier stages of preparation leading up to the original Initiation into the Great White Brotherhood. It is not intuition, however, but Cosmic Consciousness of events now occurring and decreed to occur in the near future. It is knowledge and not a prophetic impression. Then follow guiding instructions and definite knowledge of laws and principles, acts, and actualities in accordance with the needs and desires of the member. From then on the member attends the earthly Lodge as a worker to help others who are on the Path and to assist in the Great Work; but he receives no instruction through an earthly Master by means of books, lectures, papers, or diagrams.

This is why we urge those who have gone fairly high in the development of their psychic bodies, and have attained certain knowledge and powers in our Order, to maintain a close contact with the Order, with its Class Masters, and its Imperator, for through such contact these members may find at any time, unannounced and unexpected, the Initiation that will take them into the Great White Brotherhood. The last three Degrees of study and preparation in the Rosicrucian Order are designed especially to prepare the members, in the most minute and varied details, for the ultimate goal.

What, then, do we suggest to our members to aid them in attaining this ultimate goal?

That, above all else, they be loyal and devoted to the ideals of the Rosicrucian teachings and maintain every physical contact with the physical organization known as AMORC in the worldwide jurisdiction (The Americas, Australasia, Europe, Africa, and Asia), and by similar names in other lands.

BENEFITS OF OUR LESSONS

The mere intellectual study and comprehension of the specialized monographs and lessons issued to student members is not sufficient. Of and by itself, such study is but a third of the work of preparation leading to readiness and worthiness. The monographs are designed to accomplish two things:

- (a) Train the brain and augment the knowledge of the mind in regard to fundamental laws and principles leading up to a comprehension of the higher laws;
- (b) Give and suggest certain experiments and tests which will consciously and unconsciously develop certain psychic centers in the member that will quicken his psychic powers and abilities for more complete Mastership and control of natural forces.

Many members look upon the monographs and lessons as if they were intended to cover only the first of the above purposes. To them the lessons in all the Degrees are like unto discourses in philosophy or metaphysics, often seeming to be simple and inconsequential. It is difficult, indeed, to make them appreciate the fact that unless the various exercises and tests are performed each week, or even each day, for a few minutes, there will be very little psychic development accompanying the comprehension of the monographs, and, of course, no real progress made.

PSYCHIC AWAKENING

On the other hand, another most difficult point to make plain to many members and students is that not all of the psychic development and awakening of psychic centers will be manifest to the objective consciousness of the student. To think that it should be is to believe that all of the functioning of the psychic body should make itself continuously or periodically known to the objective mind. This will appear unreasonable when one stops to consider that not one thousandth of the functioning of the parts of the objective, physical body is realized by the objective mind. Is one conscious of the functioning of the kidneys, the spleen, the pancreas, the brain, the air chambers of the lungs, or of the solar plexus, or the plexus around the aortic arch of the heart, or a thousand other places?

Very often the most devoted student and the most regular applicant of the tests and experiments feels that he is making little progress because he senses no particular development from within. He is likely to become discouraged, knowing that he is familiar, from an intellectual standpoint, with each law and principle he has studied, with no apparent manifestation of unusual abilities. But if he is persistent, and patient, there comes a time when, having need of the laws in a practical way, and not merely in a test, he finds a sudden impulse of power, a sudden quickening of a faculty—and there is a marvelous demonstration! Or he may go back over some experiment that puzzled him for weeks and now find a manifestation that was impossible before.

Such students are always urged to continue their studies and diligently test each principle, try each experiment, and apply each law in the way described in the weekly monograph. They should give each monograph a full week's trial, and then if no success has been attained—or not such success as was expected—go on with the next monograph as though success had been attained. Try the new lesson diligently, and then the next lesson, and so on. After several months have passed, if the student goes back and reviews some of the experiments which were not successful, he will find that he has some slight or large degree of success. Such reviewing does not interfere with the study and practice of the new lesson and does not delay, but assists, the progress.

PSYCHIC DEVELOPMENT

The monographs are all arranged so that the exercises lap over one another in affecting certain psychic centers. Three different exercises in three successive weekly monographs may appear to be unrelated, yet each of them may pertain to the same end in view; and by going on to the second or third one, when the others did not show any success, one will aid in continuing the development started by the first.

It must be kept in mind that the exercises and experiments DO start certain degrees of development each time they are tried, whether a successful issue to the experiment is manifest or not. Once a serious application of a law is made, an awakening of some center results, and four or five applications in one week for the same purpose will start a process of development that may not be realized by the outer self, but will continue for weeks and months.

Therefore, to repeat, the mere study of the monographs, as one would read a book of law to memorize the principles, is not sufficient for psychic development. And—psychic development requires TIME in each human being, more or less according to the stage of development when the study is started. We come into each incarnation at a point in psychic development where we left off in the process at the time of transition in a previous incarnation. While the soul and psychic self are on the Psychic Plane awaiting reincarnation, certain

work is being accomplished and certain knowledge attained; but that phase of psychic development which is capable of manifestation while in the human body must be developed on the earth plane; and this ceases, to some degree, while on the Cosmic Plane. Therefore, not all of us are born alike in psychic development; some will have certain experiences early in the lesson work, and some will have them a little later. But when those who have had to wait begin to manifest, the process is rapid and wonderfully satisfactory. (Right here, to anticipate any questions which may be sent to us by members, let us say that it is impossible for the Officers of the Order to tell any member when she or he may expect to have certain manifestations, or to what degree a member is developed psychically before being able to make any manifestation of his development. After development has started to manifest and the member can apply the development, it is a simple matter for the member, and others equally developed, to sense the development and its degree.)

PROGRESS AND DELAYS

The most rapid development is made by the student who is least concerned, during the first few Degrees of study, about his or her psychic status. Careful study of the monograph for an hour on the night of the weekly lesson, and a few minutes' meditation on it each day, at a convenient time, plus an occasional test of any exercise, will do more for the student than anything else.

Previous studies and beliefs are the greatest source of trouble. Members who have studied Theosophy, New Thought, Christian Science, Yoga Philosophy, or Practical Psychology for one year, two years, or five years—as is often the case—believe that they should see some special good coming from the Rosicrucian teachings after ten weeks of study. They attempt to compare the knowledge gained through our teachings in ten weeks with what they have learned in five years from other systems—always deciding that they are receiving very little from us in comparison to what they know. In truth, they are only comparing what we give them with what they believe. It is necessary to take all these beliefs out of their minds before we can have them start on our work, unhampered by previous doctrines, theories, and speculative dogmas.

Attainment of some success in psychic matters through the teachings in other systems does not indicate any special preparedness for the Rosicrucian work. Very often we hear the remark made: "Before I took up your Rosicrucian teachings and exercises I had visions that were prophetic, could at times see other persons at a distance, and make them sense me, and could even heal by laying my hands on others; but now all of these things have stopped, and I find I have gone backward in my development. What is wrong?" Without being unkind in our intentions we say to these persons: "Yes, and you may be able to play several pieces of music quite well on the piano without knowing anything of music, and after taking up the study of

music for a while you will find you cannot play the old pieces at all. But would this indicate that you had gone backward in your talent?"

CONTROLLING PSYCHIC MANIFESTATIONS

Many persons do have unusual experiences of a psychic nature before they ever take up any course of practical, psychic development. This is because they attained some degree of development in a previous incarnation and those faculties are striving to manifest, and do manifest at times, but without control and direction by the person. What must be done is to learn how to control and direct the faculties and develop them to a more perfect state of functioning. To do this, the spasmodic action of these faculties must cease for a time; and nature stops them until the time comes to use them under control after the laws and principles have been learned.

Therefore, our members are guided and directed in their individual development. And, in addition to the study and practice of the lessons, the one who is truly on the Path will give the utmost of devotion to the Order, to assist it and its other members, that the Masters may be helped by the very ones who will later on seek help and guidance from the Masters.

SPECIAL HELP IN DEVELOPMENT

Being always ready to render some service to the Order, through the Order, or because of the Order, is a form of devotion which pays each member the greatest dividends in development; for by such service he obligates the Order and the Cosmic to him, and from the Cosmic he can expect compensation. That is why the keynote of the Rosicrucian Order is service. All through the graded work in the Temples of our Order the student is impressed with the fact that service is the duty he owes to it and all mankind.

Few members realize, of course, the many ramifications of the Rosicrucian Order, and in its public literature it says very little of this phase of its Great Work. The fact is that not only has AMORC in the Worldwide Jurisdiction (The Americas, Australasia, Europe, Africa, and Asia), for instance, three or four very definite associate organizations under its direction, but it has twelve definite avenues of service and labor in behalf of its members, and about the same number in behalf of mankind generally. All of these activities—often carried on to a high degree without being known except to a few hundred of America's foremost newspaper editors, scientists, judges, lawyers, physicians, and educators—require trained experts to do the work in secret, funds to meet emergencies, secretaries to keep records, and space for the preservation of the work in our national organization. These avenues are only revealed to the individual if it is thought he can and is qualified to serve in one of them.

Perhaps one of the greatest services rendered to our members is through the personal correspondence to and from the Grand Lodge. Do our members ever think of the nature of that correspondence

and the cost—the tremendous cost—to maintain such a service department? Take, for instance, the students of a law course issued by a correspondence school of law or by a college in personal instruction. The students of such a course may confine their written or oral questions to points of study in their LAW lessons, and cannot expect answers and detailed help on other subjects. Or take students of an engineering course; they must confine their questions and appeals for help to matters strictly limited to the subject of the phase of engineering they are studying at the time.

But take the students of our work! They are not studying any one definite course of instruction, nor are they striving to attain mastery in just one direction. And we, as directors of their studies, friends of their interests, brothers of the whole membership, and Officers of a very broad and inclusive system of humanitarian activity, must be prepared to assist in thousands of ways. The interests of our members are our interests; their personal problems are our problems wherever it lies within our power to help them. Were one a student of a law or engineering course, the school from which he receives his instruction could not be expected to show any interest in the members of his family. Not so with us! Likewise his business affairs, his health, his social affairs—all these are of importance to him in his progress through life and MUST, therefore, be of interest to us, within our facilities.

Here is where the Instruction Department, the Council of Solace, and the specialized directors of certain branches of our work render the great service which has made the Rosicrucian Order famous as a practical institution of real benefit to its members.

MAINTAINING CONTACT

The Rosicrucian Order, AMORC, is a fraternity of men and women who through their study and application of natural laws and principles endeavor to promote that harmony and peace which reside within the heart and minds of each person. Of necessity, the acceptance of this work is at all times voluntary. Thoughts of good will, kindness, and health are best received by an open and receptive mind. Active affiliation and psychic contact assure the continuance of both the material and the psychic work of the Order. The active participation of each frater and soror strengthens the bonds of the Order, assuring that the benefits of the Order will be available to all that seek them.

An active member of the Order is one who maintains both a physical and a psychic contact. While financial support is necessary for the continuation and operations of AMORC, the mere payment of dues, or the possession of a membership card, does not in itself fulfill the purposes of being a Rosicrucian student. Active members study and apply the Rosicrucian teachings in their own lives the best they can at the time. They are receptive to allowing peace, harmony, kindness and good health to come to the surface within their own lives and they are supportive of others attempting to do the same.

The active member maintains his membership by study, active practice and support. For this reason the greatest honor the Rosicrucian

Order can bestow upon any man or woman is active membership in its rank and file of working members- Because we each desire within ourselves to make progress toward our ultimate goals of self-mastery, harmony and peace, we are also protective of our contact, our devotion, our active participation with others of the Order. Through our active participation our own membership comes to have for us deep meaning and significance that is indeed precious. For active members, the Order's work comes to signify and represent an inner process unfolding within themselves.

DIVINE ILLUMINATION

The Great Goal of the Great White Brotherhood (see definition in Rosicrucian Dictionary) is ever before the vision of all sincere Rosicrucians. The word "white" has no reference to race. It alludes to light. The sublime joy of Cosmic Consciousness, Divine Illumination, can be known only through experience; and those who have made the contact have written in hundreds of books in the past ages such alluring descriptions as were calculated to tempt the seeker on the Path to be patient and persistent in his journey toward that Goal.

You will realize, of course, that the Great White Brotherhood and the Great White Lodge have no visible organization. They never come together in one united session; their members are never assembled in any one meeting; they have no temple known by their names; and they have no earthly rituals, physical organization laws, or material form as a brotherhood or lodge. That is why it is often said, in mystical writings, that the "real Rosicrucian Brotherhood is an invisible organization." The Rosicrucian ORDER is truly visible, but the Great Brotherhood back of it is not visible as a body.

INDICATIONS OF PROGRESS

How will a student know that he is truly progressing toward the Goal? By many indications that will come to him as he maintains his active interest in the Order. First of all, he will receive, from time to time, slight indications that the Master of his Lodge, then the higher Officers, and finally the Grand Master of his country, are showing some personal interest in his progress.

Such indications may be in the form of a call for a personal interview at the Lodge or offices of the Order, or by a personal note commenting on some experiment, or a letter verifying some psychic experiment. There may be no reference to the Goal, none to what is in the mind of each (the student and the Master), or anything else that another could understand as being a reference to a personal interest.

THE INNER URGE

Then, there will be a consciousness of a desire to assist the Order or one of its Lodges; this will be the result of a growing desire to become a part of the Order, more closely allied with its activities. The desire for more Light, more monographs, more knowledge, is not the only indication of progress toward the Goal, for even the beginners on the Path are most anxious in this regard. Members often voluntarily plan to review the old monographs, and the Masters of the Lodges know that this is a very serious indication; it spells magic to the heart of every Officer who is anxious to see his members make real progress.

There also comes to such members the continued urge to SERVE; they want to go out and become disciples—lecture, promulgate the great principles, spread Light where there is darkness. They seek for opportunities to assist their Lodge with real physical labor—in accordance with their trade, their profession, their art. Artists seek to decorate, and paint, and beautify their Lodge Temple with symbolical pictures and ornaments; carpenters, electricians, and mechanics offer to build, repair, and improve the material structure; physicians and scientists ask for means of assisting, and so on. It is a notable fact that all of the Egyptian and other Oriental temples of our Order in the Americas, as in Europe, have been built and decorated by the voluntary services, as far as possible, of the members. All a work of love! And what wonderful rewards have come to "The Builders" in most cases!

Also, those who cannot serve contribute in some way, perhaps financially, or by gifts that will help in research, in mechanical processes. They are anxious to make some sacrifice, contribute some part of their blessings, and thereby become a part of the Order other than a student member.

Naturally there is no thought of reward, special advancement, or sureness of progress because of their offers. No Officer of the Order can assure that; none will accept any help or gift on that basis; and the one who is truly on the Path, making real progress, knows that his "gift" is inspired by the inner impulse to want to be a more intimate worker in the Order, and by that sign or token he proves his worthiness to advance.

SPECIAL OPPORTUNITIES TO PROGRESS

As soon as the higher Officers of the Order learn of the progress of those who are headed in the right way for the Goal, they diplomatically offer them further opportunities for study, for service, and for personal test. We have said that there are a number of special avenues of work connected with the Order and that there are several allied organizations under the direction of AMORC. Into these the progressing members are directed from time to time without anything said as to why. Some members are suddenly called upon

to do certain things. They may refuse, they may hesitate, they may impulsively and enthusiastically accept. And thereby hangs the fate of their progress; whether it shall be rapid or regular. Not that any Officer of the Order can deter or accelerate a member's psychic development, but the Cosmic is ever mindful of the intents and motives that actuate all mystic students who seek its blessings. The more impulsively and whole-heartedly one responds to an inner impulse or urge, the more definitely it is registered in the cosmic records.

Various ways are used by the Order to assist its progressive members of the higher Degrees to attain greater mastery of the laws and principles. In the early Degrees a close and sincere application to the studies and the practices is all that is required or necessary. But after advancement through the first five or six Degrees there comes a time in the journey of each member when he may safely rest a while in his progress and dwell at the "houses" of special preparation.

These houses will be pointed out to him diplomatically, and he may not even suspect that he is pursuing some study or branch of work that is not shared by others. These houses are not explained to the member in advance of his preparation for them. Petitioning on the part of the member for such special opportunities when he is not ready will mean nothing to the Officers, who are guided by no ulterior motive and can profit nothing personally by the delay or advancement of any member. Nor does the Order exact any financial or material compensation through its special interests in any member, for there are no special fees or dues to be paid by those who are given opportunities to advance their own interests.

All of this may be difficult of comprehension for our members, for it is difficult to explain, as we mentioned in our opening paragraphs. Nevertheless, the discerning student of our Order will read between the lines and find encouragement.

THE LENGTH OF TIME FOR MASTERSHIP

Always arises the question of TIME. New members, who have been studying with various schools and systems for years, and frankly state in their application blanks that they have been seekers for five, ten, or fifteen years, wish to know HOW SOON they may expect to manifest mystic powers. When they read that it requires a year to complete the preliminary work (which enables them from the very start to apply many important laws) they feel that it is a long time. Not until a member reaches the higher Degrees in his second or third year does he begin to realize that time is of little consequence, since even a whole lifetime would not be sufficient to learn all that there is to learn, and with much already accomplished, great things are possible.

What are three years or five years compared with the twenty-five, thirty, and forty years you have lived without special knowledge, and the twenty, thirty, fifty, or sixty years, or more you will live with the new knowledge? Why, then, be impatient? Looking at it broadly,

the five or six years required to bring the average member to the very threshold of mastership, as compared to one's whole cycle of incarnation, is like a pencil dot on a very long line. But how we can magnify that dot and lose sight of the line!

THE ATTAINMENT OF DESIRES

The full attainment of our desires is almost impossible at best. That which we desire today, and will go far to attain, becomes small in importance after we have it, and discover through it what else we may attain—and our desires are at once increased and made more difficult of attainment. Members just admitted into the Order often frankly state that it has been their desire for many years merely to contact the Order and now they feel they have attained their greatest desire. Ah, how that sense of attainment is forgotten in the first weeks of study!

Each monograph, each experiment, and each test of the early Degrees arouses new and stronger desires. In their anxiety to get into the next Degree, and the next, the great desires of the heart before admission into the Order are forgotten. With each monograph the definite benefits therefrom simply accelerate the desire to progress.

Each member will find, however, that not a single monograph, from the Introductory Private Mandamus, is without some special benefit that empowers, strengthens, augments his abilities, his faculties, and his special psychic functionings. Therefore, as we have said, the member practices the exercises as well as reads the monographs, and does not become impatient because such development of certain faculties is not made manifest at once.

EVOLVING INSTRUCTION

The work of the Rosicrucians is not an arbitrary plan or scheme developed by some individual or discovered by some leader of a cult. It is an evolved plan, worked out by the master minds of many ages and still being evolved. It is designed to give the utmost help and advantage to every sincere student on the Path and every devoted member of the Order. Nothing is left out of the teachings that will help. No modern thought revealed by any master mind is ignored if it is practical, but is immediately added to our teachings, so that our members will have all that is worthwhile. To believe that some mystic of India, or Persia, or some other land, possesses knowledge known only to his cult, knowledge that is not to be found in the Rosicrucian teachings, yet which he has offered to students for years at a commercial price, is to believe that the Order is unmindful of its obligations to its members, unacquainted with all sources of real wisdom, and inconsiderate of its own best interests. If any real knowledge of truly practical help to sincere students of mysticism is known to any group of students anywhere, it soon becomes a part of the Rosicrucian teachings, if it is not already a part of them. It is this

fact that makes the Order the eminent repository of great wisdom. That is why members are urged not to spend money and time in private lessons from foreign or domestic teachers of personal systems, or in buying new books as they are issued rapidly by firms and individuals solely for the purpose of presenting in a new and puzzling form some of the ancient wisdom, or personal systems of discovered knowledge—and often at high prices.

Therefore, be devoted in your work, be loyal to your promises and the Great Oath of the Order, be sincere in your studies and practices, and you will find yourself, sooner or later, at the very portal of the Great White Brotherhood, and ready for the Master who is to appear when you ARE ready. AMORC is happy to serve you, and through SERVICE, on the part of both the Order and its membership, is the ultimate Goal attained.

THE ROSICRUCIAN CODE OF LIFE

The following rules are taken from old and modern manuscripts wherein certain regulations are set forth for the guidance of Rosicrucians who are devoting their entire lives to an idealization of the Order's principles.

Perhaps only in some of the old monasteries of India, or those in Tibet, could one live strictly in accordance with all the ancient regulations; but those selected for publication here can be adopted by a great many of our members in the Occident. We know from practical experience that most of these can be adhered to by any man or woman without interfering with the necessary duties and obligations of present-day living. We know, also, that most of our Officers and advanced members are living the Rosicrucian life in accordance with the rules suggested here, much to their own great advancement, the joy of their associates in family and business, and the betterment of mankind generally.

It will profit you greatly to try adopting as many of these rules as possible.

1. Upon arising in the morning start the day with a prayer of thankfulness to God for the return of consciousness, because of the opportunities it affords to continue the Great Work and mission of your life. Face the geographical east, inhale fresh air with seven deep breaths, exhale them slowly with mind concentrated upon the vitality going to each part of the body to awaken the psychic centers. Then bathe, and drink a glass of cold water before eating.

2. Upon retiring, and after conducting all psychic experiments scheduled for the night, or attending to any special psychic or Rosicrucian work contained in your weekly lesson or program, give thanks

to God for the day and its fruits; ask the Cosmic Hosts to accept your psychic services while you sleep, to use your consciousness as they desire and, if it please God and the Masters to have you live another day on Earth, So Mote It Be! Then, with thoughts of love for all living beings, and a sense of peace and harmony with all the universe, close your eyes and fall asleep, visualizing your inner self in the consciousness of God.

3. Before each meal wash your hands clean and hold them, palms downward, over the plate of food for a fraction of a minute. Then mentally pray that the benediction of God be granted to the food you eat that it may be magnetized with the spiritual radiations from your hands, and thus greatly supply the needs of the body. Before eating the first morsel, say mentally: "May all who need food share with me what I enjoy, and may God show me how I may share with others what they have not."

4. Before accepting any blessing from the material world (whether purchased by money, labor, or exchange, or whether received as a gift), say mentally: "By the privilege of God I receive this and pray that it may help me better to fulfill my mission in life." This applies even to such things as clothing, personal requisites, periods of pleasure at the theatre, church, musicals, etc., or even to such small things as books, helpful reading matter, etc., and of course includes the receipt of money as salary, commission, gifts, or otherwise.

5. Whenever any special blessing is received, such as long desired things from the material world of any nature, or a small or large luxury, or an unexpected piece of goodness, do not use or apply it to your own personal use in any way until you have retired to the silence somewhere for a few minutes to meditate and ask this question: "Have I truly deserved this blessing and is there any way in which I can share the benefit of it—directly or indirectly—with others or for the benefit of man?" Then wait for an answer from the Cosmic. If you receive no word that it is undeserved or should be shared, or passed on to another, then say: "I thank God and the Cosmic for this blessing; may I use it to the glory of my Soul."

6. If any special honor—military, governmental, political, social, or otherwise—is being conferred upon you, always act with the utmost humility, proclaim your unworthiness (for who is truly worthy of all things?) and with a mental resolution that it must not make you proud or selfish. Accept the blessing with a prayer of thankfulness and assert that, in the name of those whom you can serve better with such blessing, you receive it.

7. Never permit yourself to enter discussions of other persons' religious beliefs, except to point out the soundness, goodness, or possible benefits of certain doctrines and thereby show them the good that exists in all religions. Hold not your religious thoughts as superior. Speak well of them if need be, point out how they serve you, but do not create in the minds of others the thought that they are in sin or error because of their beliefs. That religion is best for each which enables one to understand God and God's mysterious ways.

8. Be tolerant on all subjects and bear in mind that destructive

criticism creates naught but sorrow. Unless you can constructively comment on matters, refrain from speaking.

9. Attempt no direct reforms in the lives of others. Discover in yourself what needs correction and improve yourself, that by the Light of your Life you may point the way to others.

10. Flaunt not your attainments, nor boast of your Rosicrucian knowledge. You may be a Rosicrucian as a member of the brotherhood, but as a Rosicrucian in knowledge and power, the greatest and highest among us is but a child of the studies and unworthy of Rosicrucian recognition. Proclaim yourself, not as a master, but as a Rosicrucian student—ever a student—eternally.

11. Seek to share what you can spare, daily, even if in small ways and meager amounts. Go out of your way to find where that which you can give or do will be a blessing to someone or many, and while performing this duty shun all personal glory and let it be known that you are simply "about the work of the Cosmic."

12. Accept no personal thanks for any blessings you bestow, any gift you give, or any help you render. When "thanks" are expressed it is customary to say: "Please thank me not, for it is I who am grateful. I seek, and must seek, to serve and labor for the Cosmic; you have afforded me an opportunity. But, now the obligation to pass it on rests with you; may you, too, find an opportunity to serve someone else,"—or any other words indicative of this spirit.

13. Accept no gift of a material nature for any good you do unless you agree with yourself in the moment of accepting it, and so state to the giver, that you will divide the blessing with someone where it will continue to carry on its mission of relief and help. This is essentially necessary when the material gift is of such a nature—like money, food, clothing, etc.—that it can be divided and is a common necessity on the part of many.

14. Bear in mind that through your Rosicrucian Order you always have an open portal to help many, and that by sharing with them any blessings you pass on to others, who are fratres and sorores of the Order in need, the blessings which come to you, perhaps as a trustee of the Cosmic.

15. As you give so shall you receive! As each opportunity to give is seized upon with the utmost impulsiveness, so will future blessings, sought or required, be granted to you by the Cosmic. The greater the impulsiveness—with little thought as to personal sacrifice—the greater will be the compensation credited in the Cosmic.

16. Let not a day pass by without speaking to someone of the work of the Cosmic through the portal of the Rosicrucian Order. Each day make someone more familiar with its Great Work, not always by soliciting, not always by preachments, but by simple statements of facts, simple demonstrations, and the kind word of recommendation,

17. Respect all persons, honor thy father and mother; be sympathetic to the sinful, helpful to the afflicted, and of service to the Cosmic. He is greatest among you who is the greatest servant unto

all. Hence the Master of a Lodge and the Emperor are greatest, because they may be the greatest servants.

18. Provide now, while consciousness can assist you, to take care of those who may be dependent after your transition; and if you have no one who will require a share of your earthly possessions after your transition—or you have sufficient to more than do for them—be certain that you grant, in proper and legal manner, a disposition of some of your worldly blessings to the superior body of your Rosicrucian Order—the Supreme Grand Lodge—that it may be helped in the work it is doing for others.

19. Go to the assistance of any living being, regardless of race, creed, or color, when you can render direct or indirect aid in any emergency. If you cannot give aid in person, but can call or solicit aid, this, too, is imperative. In quiet and peace perform your work, render your service, and retire with as little recognition as possible.

20. Maintain one place in your home that is sacred to you and your Order. In it find peace and time for meditation daily. Profane it not with pleasures of the flesh, but sanctify it with your higher thoughts.

21. Give your support, moral or physical, to some church in your community, that it may have your help in carrying on the Great Work in its Light.

22. Assume no political office without properly and duly notifying all who may sponsor or support your attainment of your definite views and principles toward humanity at large, that they may not expect or depend upon your submission to principles of a lesser degree.

23. Judge not, unless you are so placed that those to be judged come legally and formally before you as an accredited servant of the multitude. Then in sympathy understand, in mercy comprehend, in leniency estimate, and with love be fair. For the Law of Compensation will make adequate demands, and the God of all is alone a truly competent judge of all facts.

24. Repeat no slander, tell no tales, and support no reports that injure or condemn unless accompanied by more than the same degree of constructive criticism and comment, and only after you have completely investigated and learned all the facts.

25. Seek the good in all things and give public praise to what you find. Look not upon the changing character of the outer self, but discover the real Self within. Learn to know all beings and love them.

26. Gamble not with the lot of another who in ignorance may lose and suffer what you gain.

27. Avoid all extremes in thought and act; be moderate in all desires, and subdue your passions in all directions.

28. Attempt no radical or sudden changes in the natural scheme of things; remember the Rosicrucian injunction: Not by revolution, but through evolution, are all things accomplished in permanency.

29. Hold sacred and above all criticism the ideals of the Rosicru-

cians. Permit no slander to affect the good name of your Order. Live that life which will prove the goodness of your principles. And be ready to defend the emblem of the Rosy Cross with the might of your life and the light of your being.

(Members may purchase a very handsome printed card in several colors containing the Rosicrucian Creed which differs from the above code in brevity and nature. It may be purchased from the Rosicrucian Supply Bureau, San Jose, California 95191, at very small cost.)

Part Nine

GLOSSARY

The following words are commonly used in Rosicrucian literature. A phonetic type of spelling is given to convey the proper pronunciation. In a few instances the pronunciation herein given deviates from what is essentially correct. The change is the consequence of usage, a license taken because the original sound of the word is harsh and generally less acceptable. Such variations, however, have become traditional with all Rosicrucian subordinate bodies and in all addresses given by officers of the Order.

AMORC	— AM'-ORK. The last syllable is as in "cork."
COLOMBE	— Cull-ohm'.
FRATER	— Fra'-ter. The "a" is pronounced as in "art." (Actually the word should be pronounced "freighter," but Rosicrucian usage adopts the former style.)
IMPERATOR	— Im-per'-a-tor. The accent is on the second syllable which is pronounced like the fruit, pear.
MATRE	— Mah'-tray. (The word is of Latin origin and comes from Mater. Rosicrucian traditional usage is of the style shown here.)
NEOPHYTE	— Knee'-o-fight.
POSTULANT	— Pahst'-u-lant.
PRONAOS	— Pro-nay'us. (The plural is pro-nay-oi. The last syllable is pronounced like "oy" in "toy.")
ROSAE CRUCIS	— Rose-eye Kroos-iss.
SHEKINAH	— She-kine'-ah. The "a" is pronounced as in "art."
SOROR	— So-roar'.

ROSICRUCIAN DICTIONARY

A

Absolute—That which includes all; hence the consciousness of God, perfect, complete, embracing every divine law, working in harmony, constructive, positive.

Absent Treatments—Those given to a person at a distance, whether it be a few meters or many kilometers. In absent treatments we make ourselves channels through which metaphysical forces may be directed so that harmonium may be restored in another person without immediate contact with him.

Actions—**Voluntary and Involuntary**—Certain processes go on inside our bodies which we do not control. They continue whether we think of them or not. These are involuntary actions, such as those of the heart, stomach, and lungs. Voluntary actions are those of which we are conscious, such as speaking—those for which conscious effort is produced.

Actual—That which is responsible for exciting in the objective consciousness, through the sensations of the objective senses, such concepts as weight, breadth, length, bulk, etc. Actualities are the manifestations of the law and order of vibrations and are associated with "action." Actualities need not be realities. (See the term Reality.)

Adept—One who exhibits a particular skill or proficiency in some subject or activity. In the mystical sense, one who has attained illumination and a mastery in applying his knowledge of cosmic laws and principles to the affairs of life.

Akashic Records—The term is a mystical and allegorical one. It refers to the indelible record of all events, occurrences, and knowledge which is an integral part of the Cosmic Consciousness, the Divine Intelligence. All things which have come to pass, or which will be brought about, are established in the Akashic Records, for all things happen through cosmic law and the volition of the Supreme Being. When a mystic or student of mysticism says he will consult the Akashic Records, he means he will seek to attune his conscious mind with the Cosmic Consciousness and be imbued with its omniscience. The word Akashic is derived from the Sanskrit word, Akasa, which, in the Sankhya philosophy means an indeterminate essence such as space or ether.

Alden (pronounced Awlden)—sometimes spelled Ahldain; A'ldain; the name of a former Master of the Great White Brotherhood, who gave jurisdiction over the establishment of mystical centers on the North American continent during the fifteenth century, and after whom the first Temple in the United States was named in 1603. His personality still affects much of the work in this country.

Allegory—A symbolic story or drama in which the characters and the story represent ideas, emotions, situations, etc., other than their

literal nature and meaning. In Rosicrucian allegories, this symbolic meaning is philosophic and mystical. A ritual drama is an allegory based on ritual or initiatic rites and may constitute in itself a ritual or initiation.

Amen—A Hebrew word introduced into the Egyptian mystic rites at an early date as a term used to express the hidden and invisible God, or a truly inspired representative of God. In this latter sense the term is used in the Christian Bible just once; in Rev. iii: 14, Jesus is called "The Amen." But at a much earlier date the same word, with the same mystic vowel sounds, was used to designate the name of the god of Thebes, and the term Amen-Ra came to express the name and hierarchy of a powerful god among the Egyptians. Amen-hotep IV changed his name to Akhnaton because of the significance of the term Amen. As used in modern religious practices, the term Amen means verily. The origin of the word is found in the Sanskrit aum and also in om.

AMRA—If you petition for special help and your petition is answered, you are obliged, by the Law of AMRA, to make compensation by passing along to others some portion of the blessing you have received.

Appellation Rite—(See Naming)

Aquarian Age—The position of the Sun on the vernal equinox moves through the path of the zodiac westward at the rate of a sign in about 2200 years. This period is referred to astrologically as an Age. Due to this precession, the spring equinox does not begin in Aries as it once did, but in Pisces. When it crosses into the sign Aquarius, the Aquarian Age will have begun.

Arcane—That which is not hidden, but visible only to those who attune to it or are ready for its revelation; mystical, divine, cosmic.

Assumption—Exchanging places, persons, and power. You assume you have exchanged places with the other person, assuming the other's personality. In Divine Assumption, you assume you are exchanging your limited self-consciousness for the consciousness of God.

Astral Plane—The cosmic, ethereal, divine plane. Rosicrucians recognize but two planes of existence; that which is the worldly or material plane where we live in both objective and subjective consciousness, and another plane, which is beyond the material—call that other plane the astral, psychic, cosmic, or whatever best expresses your idea; it is that plane where the soul of man functions free from the limitations of the body and where the subconscious mind of man functions at times independent of the objective.

Astrology—An ancient system, partially scientific in its application, based upon close observation of the coincidence of human characteristics with the date and hour of birth. Time and careful analysis have proven the coincidences to be based upon fundamental laws regardless of whether the planets have any effect upon birth or upon the nature of man after birth. Only the fanatical extremist makes—or believes—the claim that we are ruled by planets. It is advisable that all be acquainted with the history of astrology out of which arose the science of astronomy.

Aten—A name for the symbol of the "sole everliving God" made understandable by Akhnaton after he established a monotheistic religion in Egypt. Aten was represented by the sun disk, the Sun being the symbol of the life-giving radiance of the invisible God. Not as God, or even as a sacred symbol, is the sun disk used by modern Rosicrucians, but as an objective symbol of the creative mind and Divine Essence of God.

Atlantis—The name of the continent once occupying a considerable portion of the space occupied now by the Atlantic Ocean. Atlantis was well advanced in civilization in parts and was the ancient home of mystic culture. Mt. Pico, which still rises above the ocean among the group of Azores Islands, was a sacred mountain for mystic initiation (see ritual of Fourth Degree). The story of the lost Atlantis was first told by Plato; another story of mystic peoples using the name Atlantis is told by Sir Francis Bacon (read the *New Atlantis*). Investigations by French and American scientists have proved that there is the contour of a continent on the floor of the Atlantic Ocean. (Read also *The Lost Atlantis*, by Ignatius Donnelly.)

Atom—The smallest division of matter having a definitive nature; the first distinctive unit which "electrons" form after perfect unity. Divisions of matter smaller than atoms are "electrons," including all subatomic particles (see *Electron*). Such smaller divisions have no characteristic nature as matter.

At-one-ment—It refers to a state of attunement attained in religious, mystical, and metaphysical practices. The mystic is said to attain at-one-ment when he experiences a union with the Absolute or Cosmic. The term literally means the realization of a state of oneness.

Atrium—The word atrium is Latin in origin. Originally the word referred to the central court or main chamber in a Roman house. There was an opening above the floor of the atrium through which the sky could be seen and through which smoke from the hearth was emitted.

Later, however, the word became associated with a reception chamber, a place of introduction. So, symbolically, the use of the word atrium in our monographs alludes to the introductory Degrees of the Rosicrucian teachings. The monographs so designate it.

Attunement—During its temporary residence in the human body, the soul essence keeps in touch or attunement with the great divine source from which the soul came and to which it returns. All soul personalities on this earth plane and on the cosmic plane are in constant attunement. It is because man's soul personality is attuned with all other soul personalities that thought vibrations operate at great distances. By attuning ourselves to the Divine Mind we can receive the laws, rules, and facts of knowledge which we can depend upon as being truthful.

Aura—A field of multi-colored luminous radiations seen by active and passive visualization techniques to surround objects, the human

body, and other living things. Everything in nature is surrounded by energy fields. The following contribute to the properties of auras: electric fields, magnetic fields, infrared radiation, ultraviolet radiation, volatile chemicals and hormones, and psychic emanations. In other words, the aura consists of both Spirit Energy and Vital Life Force. Our thoughts, emotions, health, and growth all affect, and are affected by, the energy flow in and around the body. The study of human energy is an important aspect of a Rosicrucian's work and research.

Avatar—In general mystical parlance, and in the mode used by the Rosicrucians, an avatar is one whose soul personality is highly advanced or spiritually developed through numerous cycles of incarnations on this plane. There is no specific number of incarnations designating one as an avatar. Spiritual insight, compassion, human understanding, mastery of life, and unselfish service are the characteristics of an avatar. One who is an avatar has no peculiar manner of dress, speech, or appearance. His comprehension of life and its problems, and his conduct are his only outward signs of attainment. One obviously cannot attain avatarship in one incarnation. It is a process of evolution. The etymology of the word is Sanskrit. It is commonly used in the Hindu philosophy, but in a manner not wholly compatible with Western mysticism's interpretation.

B

Belief—Considered from the mystical point of view belief implies lack of knowledge; it is like unto hope without foundation. A mystic should have no beliefs, but should supplant them with knowledge or a frank admission that he does not know. (See Knowledge.)

Birth—Mystically, birth occurs when the animal body takes its first Breath of Life. Then the body becomes a conscious being. Birth is the opposite phase of the passing of the Breath (and consciousness) which is falsely called death. (See Death.)

Black Magic—The erroneous belief that man can invoke supernatural powers which he considers demoniacal and satanic in order to do his evil bidding. Such so-called "black arts" are usually motivated by the intent to inflict harm upon others. Black magic depends upon the false premises of primitive reasoning. The only person who is harmed by it is the one who believes that such a power exists and that it can affect him. Actually, if harm does occur it is self-induced by autosuggestion. Consequently, one is being subjected to the mental poisoning of his own mind and its superstitious beliefs. To deny the existence of black magic is to dissolve its implied force.

Borderline State—This term is used to designate that mental and psychic condition where the objective consciousness and objective mental functioning as well as the subjective processes of man are merging into the subconscious. This state can be induced through concentration, or occurs naturally on going to sleep, or when awakening, or through suggestion it may be externally induced (but not

without the cooperation or willingness of the self). A similar state exists where the objective mind or the objective functioning of the brain is made abnormal through drugs, fever, injury, fright, or strain. In such cases, however, the benefits derived from a proper borderline state are lost, for there is not an intelligent and comprehensive exchange of ideas or communication between the objective and subconscious faculties. Often, just prior to so-called death, the first stage of transition is a borderline state which is remarkable for its cosmic touch.

Brain—The physical organ for the objective functioning of the mind. Mind can, however, make many manifestations without the use of the brain.

Breath of Life—In Rosicrucian teachings this term is used to refer to Nous. It is a combination, so to speak, of both the Vital Life Force and Cosmic Consciousness. (See Nous and Vital Life Force.)

Brotherhood, Great White—(See Great White Brotherhood)

C

Celestial Sanctum—A cosmic meeting place for all minds of the most highly developed and spiritually advanced members and workers of the Rosicrucian fraternity. It is the focal point of cosmic radiations and thought waves from which radiate vibrations of health, peace, happiness, and inner awakening. The Celestial Sanctum is a concentration of the spiritual selves of all those members who seek Cosmic Attunement. It is, abstractly, a plane of consciousness where are assembled the many minds who have similar impersonal ideals.

Cell—A body of spherical or other shape having a wall with negative polarity and a nucleus of positive polarity. The cell is the fundamental form of all creation. Every living cell floating in a liquid is connected with every other cell in that liquid by a force which pervades them all. Man's relation to the universe is identical to this. We have no distinct individuality so far as our beings are concerned. We are all united in the universe as the cells are united in a mass of flesh, bone, or blood. The Sun is a cell with a positive polarity. The Earth is also a magnetic cell with a negative polarity. The nucleus is the focal point, the center of action, the heart of any creation possessing, latent within itself, all the potentialities of development in connection with a cell. On the earth plane the nucleus of the cell is positive in polarity and the rest negative. The nucleus has within itself all the characteristics of former unions in previous generations, and in each successive manifestation blends in the additional characteristics of the present union, thereby establishing the conditions and qualities of heredity.

Christ Consciousness—The Christian delineation of the highest form of consciousness attainable. The moral values, powers, and insight had by Christ are attributed to his all-embracing consciousness,

the result of his attunement with the divine of his own nature. The term has no significance other than Cosmic Consciousness. The non-Christian mystic prefers the latter term because this universal or Cosmic Consciousness has been had by other illuminated personages and should have no personal designation.

Colombe—The word colombe means dove. In earlier Rosicrucian Temples there were one or more Vestal Virgins who not only kept the important symbolical and holy fire in the Vestal Stand ever burning, but who also served in the ritualistic work and mystical exercises as a symbol of fire, light, life, and love, and the dove of consciousness. The Colombe also represents the conscience of each frater and soror of the Lodge.

Compensation—(See Karma)

Concentration—Concentration means bringing to a center. Rosicrucian mental concentration is a technique of gathering all of one's attention and directing it towards observing and defining one condition, object, or principle. Perfect concentration directs attention to only one of the five physical faculties at a time. Ordinarily the mind rapidly alternates its attention from one objective sense to another as well as from one condition or object after another. Two faculties, such as seeing and hearing, may rapidly alternate in their concentration so that it may seem as though both were concentrated at one time, but this is not so. We can be aware of only one objective impression at a time. We appear to experience things as a whole, rather than sequentially, because our separate impressions are unified in our imagination.

By our sense impressions we are capable only of perceiving and concentrating on change. For instance, when we normally see, our eyes constantly scan and shift focus. Such motion is essential to the formation of a visual image whether we use our inner or outer faculties. If we stare fixedly at an object without changing focus or point of view, the object will disappear from our field of vision. The essence of concentration, then, consists in fixing the attention upon one idea or thing with one sense faculty at a time, and being able to hold that attention as the idea or object moves, interacts, and transforms within our conscious realization. The important thing in concentration is not to lose sight of the essence of the idea or object as it moves and is transformed in the mind.

There is one principal difference between concentration and contemplation: It is the difference in the use of consciousness. Concentration is primarily the focusing of attention upon externalities, things outside ourselves which register on our objective senses, such as our consciousness of hearing, seeing, etc. Contemplation is a more subjective process which takes place entirely within the reasoning mind itself and is independent of the outside sense organs. Even more subjective processes occur when we are imagining, visualizing, and meditating. The real art of concentration leads one to turn objective thoughts inward until through contemplation and meditation they become ideas of the inner self.

Conception—In our Rosicrucian teachings we are told that our concept of anything we comprehend through the five objective faculties depends, for its accuracy and its effect on us, upon our knowledge and beliefs. Our concept of material things changes as we grow older, more experienced, and more illuminated. Not the actuality of any thing but our realization of it and our interpretation of it form our concept. By conceiving and giving our conception the power and reality of an actuality do we tend to create. In the beginning of all creation there was—and always will be—conception. (See Reality, also Actuality.)

Conscience—The term in our ritual and teachings to indicate the "still, small voice" of the Master Within; the Cosmic Mind with its inspiration and urge; the mind of the psychic self, knowing all truth, all law, all principles, ever constructive in desire, dependable, "ever present when the tempter tempts."

Consciousness—An attribute of the soul. It is the mental aspect of life which includes sensation, realization, and reasoning of which the active principles are imagination, aspiration, and inspiration. It is the center of man's life, poised between two worlds, and naturally open to both. One of the functions of consciousness is the response to its environment or surroundings. Another is the response which the animate thing has to its own innate actions or being. The Divine Consciousness in man has its own faculties for the perception of truth and its own domain of functioning. The spiritual consciousness is the inner self. The physical consciousness can become acquainted only with things of a material nature. Consciousness, life force, and mind are related and come into and go out of the body together.

Contact Treatments—The technique whereby the fingers are placed upon the patient's back close to the spine is called the system of "Rosicrucian contact treatment." This is because the one who is giving the treatment has to be in actual physical contact with the patient.

Cosmic—Used both as a noun and adjective to mean the universe as a harmonious relation of all natural and spiritual laws. It is the divine, infinite intelligence of the Supreme Being permeating everything. It is not a place, but a state or condition of order and regulation. The Cosmic is the totality of the laws and phenomena which manifests in man and nature—the forces, energies, and powers which account for the finite and infinite worlds. It is therefore a unity; the particulars which man experiences are but expressions.

Cosmic Consciousness—That consciousness radiating from God which pervades all space (and hence all things), having vitality, mind, constructive power, Divine Intelligence. Into this consciousness is projected all the psychic consciousness of all Masters, and all adepts may attune with it. It knows all—past, present, and future—for it is all. (See Absolute.) After preparation through study and meditation, after deserving through serving, after attuning through practice and with nobility of desire, there comes to all adepts an influx of illumination and inspiration which maintains a continued con-

nection with Cosmic Consciousness. This is called illumination by the mystics. This is one of the gifts desired by all adepts.

Cosmic Mind—Referring more specifically to the mind or intelligence that forms a part of the Cosmic Consciousness. It is also called the Divine Mind. (See Divine Mind.)

Cosmogony—Theory of creation or of the origin of the world or universe.

Cosmology—Study of the science or philosophy of the universe.

Council of Solace—An association of officers, staff, and certain high-degree Rosicrucian members who use the principles of the Order's teachings to assist other individuals. Absent treatments are given for conditions of health, and other problems of a personal nature whenever they are brought to the attention of the Council.

Cremation—Mystically, this is a process of reducing the material elements of the body to the primary elements through fire, as though an alchemical process were being used with crucible and fire. It carries out the ancient law that the body shall return to the dust of the earth from whence it came. Cremation simply hastens the natural process in a most sanitary way. The custom of burying the dead in the ground to decay was always considered a barbarous and unclean practice by the ancient mystics. Cremation is not a modern method and will in time become universal among civilized people. The Rosicrucian burial service and ritual in its explanation suggests a preference for cremation of the body and the scattering of most of the ashes upon running water in brooks or rivers or in the open soil. (See Death and Funeral Service.)

Cromaat—The word Maat is an Egyptian word meaning truth. When combined with Cro, it means as in truth. It is a salutation quite frequently used in the rituals of the organization, both in the Temple Lodges and in the Grand Lodge rituals. Peculiar to note, if you reverse the letters of the word, Cromaat, they constitute the abbreviation of the words: The Ancient and Mystical Order Rosae Crucis.

Crux Ansata—The looped cross. A tau or T cross with a loop at the top. It is of ancient Egyptian origin and was referred to by them as the ankh or key of life. An ancient symbol of immortality and of life. It was often included as part of a Pharaoh's name as in Tutankhamen.

Cycle—A period of time, evolution, process, method, or manifestation. Mystically every progressive action is in cycles, definite and important. The cycle of human life is divided into periods of seven years, each of which is a cycle in the growth and development of the mind and body in the being; even the prenatal period is divided into cycles. The evolution of the universe, the evolution of man from a primitive being into the present can be divided into cycles. The twenty-four hours constituting a day are divisible into planetary cycles. The consciousness of man is at present in the early part of the Aquarian Cycle. Cycles form an easily understandable and significant method of measuring time and progress.

D

Death—The mystic not only looks upon death as inevitable, but as a necessary element in the cycle of life. Death and birth are synonymous in this sense, for so-called death is birth into another plane, while birth is likewise a transition. The transition of soul into a body is considered just as strange and fraught with unknown possibilities by the mystic as the transition of soul from a body. Both constitute the Great Experience. Both are a form of initiation affording an opportunity for greater advancement. Therefore, both are looked forward to by the soul without grief or fear.

On the other hand there is no "death," whether we consider the transition from a material or spiritual viewpoint. Matter is indestructible; that is a fundamental law of matter. It can change only its form or nature of manifestation, and matter is in constant change—another fundamental law. The soul is immortal and cannot be destroyed, lessened, increased, or otherwise modified, except in growth of experience. After transition the material part of man, the body, does not cease to live, but is in fact still vibrant with Spirit Energy, even to the most minute cell. Hence neither body nor the soul ever dies, and there is no death. (See Birth and Cremation.)

Deduction—A process of reasoning. The objective mind can reason by all processes, inductively, deductively, syllogistically, etc. The subconscious mind, on the other hand, tends to reason deductively all the time. Starting with a true and understandable premise or basic fact, reasoning by deduction therefrom, one will come to a logical conclusion if the deductive reasoning has been logical in accordance with law. It is the excellent reasoning ability of the subconscious mind which brings about the correct conclusions through deductive reasoning. Bringing about a borderline state of mind will enable one to take advantage of the subconscious reasoning.

Disease—A local or general disturbance of the harmonious constructive process of the living creative cells. Regardless of the cause, the condition is fundamentally the same. The disturbing, breaking-down process among the diseased cells is being strongly or weakly fought by the healthy, normal cells, according to the general constitution of the body. Through the creative, constructive powers of the healthy cells, nature attempts to end the destruction and renew the diseased cells and restore health. The battle calls for concentration of energy and robs the general system of its normal status, while the disease is also disqualifying many cells, organs, tissues, and parts of the body for normal, constructive work; hence fevers, weakness, mental and physical disturbances, and pains.

The logical procedure is to help nature, mostly by not interfering and by ending the cause of the disturbance when it is known. Proper breathing, proper eating, proper exercise, sleep, and thinking are the first essentials in helping nature and removing the cause of interference. Giving to the blood, nerves, and general system that which was lacking (and which caused the disturbance) or is now lacking in helping to restore normalcy, is the next essential. Hence the various

schools of therapeutics may assist and contribute to the restoration of health, but solely through assisting nature.

While so-called death or transition is inevitable, disease is not necessary. The physical body can reach a state of age and exhaustion where the breaking-down process of cells and parts of the body is more rapid than the reconstruction, and as a principle of economy the Soul will cast off or vacate the body and await another and more useful one. But such breaking-down and gradual weakening of the whole system need not be accompanied by any specific disease and can be free from any pain or suffering.

Divine Mind (Universal Mind or Cosmic Mind)—The consciousness of God which pervades all. It is not only the mind of God but also the consciousness and mind of all living beings on the earth plane. These are so united as to be a consensus of mind and thought, in which every inspiration, idea, and expression of universal importance is registered and may be contacted through proper attunement with this Universal Mind. The Supreme Mind is not a collection of individual intelligences. No sum of tilings alone could equal the Universal Mind, because it is also potential with that which is as yet without discernible nature or form. The Universal Mind as an intelligence permeates every cell of our being and is accessible as an infinite wisdom. However, the Cosmic Mind does not contain within it all the particular details of human knowledge and experience, but is an exalted form of evaluation.

Dreams—The visual imagery experienced during sleep, dreams represent one of the most extraordinary mysteries of life. Everyone dreams throughout the different stages of sleep, but not everyone remembers their dreams. Modern research indicates that dreams are most apt to be remembered if they are experienced during the REM (rapid eye movement) phase of sleep, when the eyes under the closed lids move more rapidly as though the sleeper were watching something. Dreams seem to take place on the borderline of two worlds (see Borderline State). There can be a fantastic alteration of time, place, and possibility, which we may accept without question in the dream plane. A dream may be of short duration, and in a brief period of two to three seconds one may experience a long story. This is because the imaginative experiences of borderline states are often realized by the mind just as one realizes a whole picture after a glance of a few seconds, yet must use hundreds of words and many minutes in explaining or describing.

Dreams were once regarded as messages from the gods, guardian angels or ancestral spirits, counseling and forewarning the dreamer. Some held that a man's own soul wandered off and its adventures were communicated to the sleeper as dreams. The causes of dreams are many. Dreams may be a continuation of the waking state, a muddled recapitulation of recent daytime experiences. Many medical researchers tend to account for dreams entirely on the basis of the physiological or emotional state of the sleeper. Glare on the eyelids, spots before the eyes, ocular spectra, indigestion, physical pains and aches, a full bladder, sexual tension, fever, cold, noise, anxiety, fear,

anger—all can give rise to dream sequences, to suit the situation. But it must be said that although such stimuli may find their way into dreams they are by no means the sole cause of dreams. In the Rosicrucian view each of the components of the total person (body, mind, and sou!) contributes data to the dream content from its own plane. All become superimposed in varying degrees of intensity and make up the composite imagery of the dream. Mental and psychic input to dreams include the first objective thought or idea which passes from the objective to the subconscious mind at the beginning of the borderline state, and mental impressions received by the subconscious mind from another person. The psychologist Alfred Adler held that a person's feelings of inferiority and disability would lead to an attempt to make up for them not only in real life but in dreams. The psychologist C. J. Jung regarded dreams not only as an integral and personal expression of the individual consciousness but often as pointing meaningfully toward a deeper archetypal or universal symbolism. These physical, psychological, and psychic impressions which appear in dreams illustrate the Rosicrucian view that dreams represent the "total person." They provide a hint of a person's total inheritance, of what is psychically innate in him. Dreams, therefore, are something primordial, epigastric, intuitive.

At Rose-Croix University and in dream laboratories in various centers around the world dream phenomena are being studied using scientifically established principles in an attempt to unravel some of the secret mysteries hidden in dreams. One recurring problem is that the medium of recollection does not seem to be the memory recollection associated with outer consciousness. Unless a dream is recalled at various depths of consciousness as one passes from the deep subconscious through the borderline states to outer consciousness, a dream may swirl away and begin to fade as soon as we wake up. As for the dreams one has had earlier in the night, they are usually lost altogether and have little trace in the memory recollection of outer consciousness.

E

Ego—The subconscious self as distinguished from the objective self. This term is not used often in Rosicrucian teachings, for the term psychic self or psychic mind expresses more correctly what is meant.

Electricity—Electric current is a vibratory force in action; static electricity is a potential vibratory power inactive and under stress ready to manifest itself under certain conditions. These terms and definitions are not as one finds them explained in scientific works but will make plain the terms as we use them. Electricity is a vibratory energy. Natural electricity is the result of the radiations of the Sun (therefore one of the manifestations of spirit essence and Nous); all other electricity is artificially produced through chemical and mechanical action.

Electron—A basic form into which spirit essence concentrates preparatory to material manifestation. The essence when stressed under certain conditions gathers into very minute focal points of electrical charge which we call electrons. They are both positive and negative. As used in our teachings, the term electron generally includes all subatomic particles, especially the major three: protons and neutrons, as well as electrons as they are now defined by scientists. Symbolically, the word electron is used to denote the principle of condensation and conversion of Spirit Energy into subunits of material manifestation.

Electrons do not manifest any definite chemical nature until they unite in certain combinations to form atoms. (See Atoms and Molecules.) Single electrons are invisible, but their effects may be seen and measured.

Element—One of the many different natures expressed through combinations of electrons into atoms. There are 144 elements composing all material creation. Of these, at least 105 are definitely known to scientists in perfect form or by their reactions in nuclear transformations; others are known through analysis of the vacant places in the periodic table of elements. Some can be sensed in a psychic manner only as far as their nature and purposes are concerned. (Not to be confused with a similar term in the Temple monographs.)

Elementals—Sometimes called salamanders and other terms used by early philosophers and by some modern schools of strange thought. In this sense an elemental is supposed to be—"nature-spirit presiding over the elements of fire, air, etc." A superstitious belief exists that these elementals or beings can cause good or evil, or that they can fill a room and cause disturbances or manifestations, or influence our thinking, hearing, and seeing. Needless to say, there are no elementals in this sense.

Emanations—The radiations or projections from all material and psychic forms. The emanations are extensions of the vibrations within the form—the vibrations of the spirit essence composing the form. It is through the emanations reaching us from all things that we sense, either subjectively or objectively, the existence of all things.

Esoteric—In mysticism and related subjects, it has reference to that which is indwelling, innate, and often private, as, for example, esoteric knowledge referring to cosmic enlightenment or intuitive impressions as contrasted to objective experience. Also alludes to the arcane wisdom imparted to the initiate. Its antonym is exoteric, the outer aspect

Evolution—The progressive growth and perfecting of all that is manifest or in the conception of the Cosmic Mind. Even so-called devolution or disintegration is a part of evolution, being one of its phases. Evolution implies onward and forward. It is the fundamental law of nature that every element in nature is tending toward perfection and becoming higher in its rates of vibrations and more evolved in its manifestations.

Eye—The All-Seeing Eye depicts the all-inclusive vision and consciousness of God from which nothing is excluded. It appears in most Rosicrucian Lodges and Chapters throughout the world on the Master's lectern in the "East."

Eye, Third—The pineal gland is a transformer of the Cosmic Consciousness into rates of vibration which are discernible by our objective minds. This is the Third Eye, the true eye of the soul.

F

Faith—We find the term faith often defined as "active" belief or a belief which amounts to a basis for action upon the accepted premises. From the mystical viewpoint, however, this is not exact. A distinction must be made between faith, belief, and knowledge. The mystic should have no beliefs, but rather knowledge; his knowledge may create faith or give him faith in certain laws and principles, but it would supplant belief. Therefore, we may say that faith is an expression of confidence, and confidence is born only from experience—knowledge. (See Knowledge.)

Fourth Dimension—From the Rosicrucian viewpoint there is nothing mysterious about the fourth dimension. Two points should be remembered: It is a dimension and it is the fourth. The other three dimensions are length, breadth, and thickness. Each of these is expressible by numbers—whole, fractions, or decimals. Each of these three dimensions, when expressed in numbers, helps us to have an objective realization of some attribute of the things referred to. We may write on paper these figures, 100 cm X 10 cm X 10 cm. At once we know that whatever the thing may be it is long, but not very big around. Regardless of how irregular in form the thing may be we can mentally picture it or express its form with numerals, and from these actually draw upon paper a diagram of its form. (Note the complicated yet exact designs and diagrams of parts of machinery, architectural elements, etc., expressible with numbers.) Intelligently as these three dimensions express a thing to our consciousness there are essential elements still missing in the expression—one or more attributes or qualities lacking.

What is the nature of the above thing that is 100 cm x 10 cm x 10 cm? Is it wood, or iron, or stone? What is its weight, its color? Is it hard or soft? We say that all these questions can be answered by expressing the fourth dimension, and expressing it in numerals as the other three are expressed. In this case, as an example, the figures 100 cm x 10 cm x 10 cm/12.0147 (a specific gravity figure would mean that the thing referred to was a piece of South American (not any other kind) mahogany, with a color equivalent to a certain line in the Sun's spectrum, and having a specific gravity, a certain degree of hardness, tensile strength, etc. With the first three dimensions, and knowing the specific gravity, one could figure the exact weight of the piece of wood to within a gram, if the first three dimensions were exact. On the other hand, these figures; 200 cm x 250 cm x ?/12006.042 (a specific gravity figure) would mean that the thing re-

ferred to was a misty light blue-gray cloud of a certain density or opaqueness, but unknown thickness, covering an area of 200 centimeters by 250 centimeters and formed of cosmic energy in a very high rate of vibration, so balanced in space as to be easily controlled (moved) by mental power. (Members in the Eighth and Ninth Degrees will appreciate this.) By means of the fourth dimension (and a dictionary of all the figures) one could easily express the nature and attributes of all things made manifest on the objective plane. Likewise one would be able to determine what fourth dimension would neutralize or combine with another.

The fourth dimension is nothing more nor less than the rate of electronic vibration. All qualities and attributes manifested by all material things result from this rate. From another point of view the fourth dimension should really be the first. It is the projection from cosmic space into the worldly, material plane of manifestation of all material things. Such projection is the first phase of manifestation. The coming together of "electrons" into atoms, and from this into molecular formation, constitutes the first phase of creation into the material world of objectivity. The next step or phase is that of limitation, or form, caused by natural laws or by man's desires and handiwork. Hence the three dimensions of length, breadth, and thickness should follow dimensions of objective proportion, which is a more correct term for the fourth dimension. Mystics will see, now, why the fourth dimension, in its true nature, has always interested the philosophers and was one of the laws carefully studied and utilized by the alchemists of old, and the advanced mystics of today use the law in many strange manifestations. This Rosicrucian concept differs from the fourth-dimensional continuum of space-time as advocated in the theory of relativity.

Funeral Service—The Rosicrucian funeral service is a ceremony of celebration in its spirit, at which time those assembled around the body of the frater or soror take part in a ritual significant of the passing through a Higher Initiation of the one who is no longer limited by the work of the Order in its material form on this plane. Purple, rather than black, is used to express the sacredness of the occasion (that is, wherever decorations or drapings are used in the Temple or home). Flowers are used to express the beauties of life. Sorrow is expressed only because of the absence of the member from such personal contact as had often been enjoyed in the past.

The service can be performed in a Rosicrucian Temple. The service ritual has also been adapted to performance in funeral parlors. (See Cremation.)

Those not members of the Order may be invited to the service and such friends and members of the family should be seated on special seats at the Northeast of the Temple. The rule is that the R. C. ceremony must be the last ceremony performed; if there is any other religious or fraternal organization ceremony, it must precede the R. C. Service. A further rule requires that the deceased must have been an active member of the Rosicrucian Order at the time of his transition, or, if inactive, only because of circumstances beyond

his control. Under no circumstances will this service be conferred upon a non-member regardless of the fact that he or she may have been related to a member. One of the most beautiful parts in the ceremony occurs after the opening of the service, when with a special prayer, and some other points, the Master of the Temple permits the Guardian of the Temple where the frater or soror had attended to stand beside the body and remove the Rose from the Lodge apron (which is on the body), while speaking these words:

"From our midst has departed one expression of Soul we have loved.

"Across the cosmic threshold has passed another initiate into the Temple of God. In that Temple there are degrees of understanding; grades of advancement; cycles of progression; and then the sublime degree of perfection wherein thou, O departed one, shalt be one of the Divine Illuminati and enter again the School of Experience where we shall once more enjoy thy noble, loving companionship. In this earthly initiation, the Rose and the Cross were given unto thee in the form of this apron to wear as a symbol of thy readiness to serve humanity. Thy body and personality were ensconced by the Rose and Cross. In thy divine initiation thou shalt have no need of the Cross, for thou hast borne thy Cross well and God hath laid it aside. But the Rose, in all its sweetness and perfect development, shall remain with thee as a symbol of the unfolding of thy soul experience. To symbolize this, I do now remove from thine Apron the rose, and in the hand of thine earthly body I place another rose, fresh from life, with fragrance, and purity, that it, too, may return unto the dust of the earth to rise again and, through resurrection, become manifest in all its glory."

G

Ganglion—A mass of neuron cell bodies, which serve or function as a center for various nerve impulses. Here the exchange, translation, or transmutation of such impulses, and a coordination of the influences passing into or through such body is effected. A ganglion is therefore like a central station of a telephone system or a switchboard for certain electric trunk lines. The ganglia of the Autonomic Nervous System are of special interest in their functioning and intended purposes to the Rosicrucian. The nervous system and the physiological and psychic functioning of ganglia are explicitly and interestingly presented in the work of the Sixth Degree of the Order.

God—To Rosicrucians there is but one God, everliving, ever present, without limiting attributes or definite form of manifestation—it is the God of our Hearts, a phrase found throughout our ritual and meditation practices. The God which we conceive, of which we can be conscious, sooner or later manifests in that strange intimacy within us. Rosicrucians are of many creeds and religious faiths in all

parts of the world, but there is absolute unity in this one idea of God, the Supreme Intelligence, the Divine Mind. In ancient rituals we find this as part of the Rosicrucian pledge: "Man is God and Son of God, and there is no other God but Man." But this has a mystical meaning and is not to be taken literally. The Rosicrucian concept of God is essentially a Universal Mind, intelligence, and infinite power. The concept is not dogmatic. The Rosicrucians expound the principle that God is wholly a subjective experience and thus a personal interpretation. Consequently the Rosicrucian refers to the God of my Heart.

Gravitation—In the earliest monographs of the lower Degrees of our work as given in America many years ago, the statement was made many times that the force of gravitation is not a pull but a push. The postulations of science in the last few years tend to prove that the Rosicrucian contention in this regard is correct. While in the ultimate manifestation the results are the same, in the fundamental laws involved there is considerable importance in the difference between a push and pull action, especially as regards gravitation. It is impossible to overcome the force of gravitation; at best it can be lessened in its action; its best application is in being utilized. If it could be overcome it would not solve any of the great problems now confronting scientists, but would bring about problems greater than those with which man could cope.

Great White Brotherhood—The term, "Great White Brotherhood" (or "Great White Lodge"), does not allude to a fraternal organization actually in existence by that name in India, Tibet, or elsewhere. Rather, it represents a body of mystical and esoteric doctrines which are the result of the wisdom of many enlightened minds throughout the centuries. These doctrines were preserved originally in Tibet in the mountain fastnesses where such mystics and philosophers had taken refuge from the persecution to which they had been subject in other lands. Most all such enlightened individuals had been affiliated with great mystical Orders, such as the Rosicrucians. Consequently, the body of teachings, rites and rituals, not individuals, became known as the "Great White Brotherhood." The teachings were eventually disseminated gradually to organizations throughout the world whose principles and ideals were recognized to be of the same high quality as those of the sources of the "Great White Brotherhood."

No individual can apply to become a member of the "Great White Brotherhood" as it is not a single organization but an archive of wisdom preserved by a collegium, that is, a group of mystical Orders with equal authority. For analogy, no individual can become a member of the United Nations, for such is a unity of nations only. One may only benefit from the United Nations by being a citizen of a nation which is accepted in the United Nations. So, too, an individual may only affiliate with an organization which is perpetuating the traditional ideals and teachings of the "Great White Brotherhood," not the latter itself.

Any individual claiming to have membership in any society, group, or body terming itself the "Great White Brotherhood," is either misrepresenting the truth or is being deluded by a fraudulent body.

Guardian of the Threshold—Your conscience, your inner self, the sentinel of the subconscious mind, acting as your guide and protector. The Guardian also stands at the Threshold of the Cosmic, of the Unseen, and is at the threshold of every soul, of every chamber of privacy, of every mind.

H

Habit—In the early Degrees of the Order habit is carefully analyzed and studied. There is a short, too short, definition given to the effect that habit is an unconscious law of the subconscious mind. A more comprehensive definition would be that habit is a law of the subconscious mind, which law has become unconscious to the objective mind. Habits are usually, if not always, formed consciously by the objective self. Such acts are not habits at the time, regardless of how systematically they may be performed, nor are such acts intended to become habits unless one is striving to make the acts or series of acts an unconscious practice, such as maintaining rhythm in music, the formation of letters in writing, etc. It is only when the act is performed unconsciously that it is a habit, a law of the subconscious self, unconscious to the objective self.

Hallucination—Imaging of the mind. Such imaging may become fixed in intensity and interest and limited in regard to subject, or unlimited, and is then a hallucination. On the other hand, imaging may be rational, intense, not fixed, but under control, in which case it is creative thinking. A definite hallucination, such as that characterizing the unsound mind, is a fixed idea born of illogical deductive reasoning which becomes the obsessing thought of the subconscious mind, while the objective thinking may be impaired by injury to the mind or any other cause of unsoundness. Such hallucinations are of the subconscious entirely; they can be removed or modified only by dealing with and through the subconscious; for the objective, being capable of sound reasoning, cannot be utilized to assist. If the objective impairment is due to physiological causes, these should be remedied first, but thereafter the subconscious should be reached and enlisted in the work of curing the mind. This calls for psychic processes applied by those well experienced and knowing all the laws.

A hallucination, then, is an imaging experience having the characteristics of a sense perception (visual, auditory, tactile, etc.) but without sensory stimulation. It can be contrasted with visualization in that the lucid visualizer knows that he is mentally creating, while the hallucinator believes he is receiving external stimuli which are not actually present. A hallucination is termed veridical if it corresponds to an event or circumstance unknown to the percipient.

Harmonium—A state of harmony. The metaphysical meaning when applied to the relationship of humans is unity of thought, agreement of purpose, the direct communion or kinship of souls. As applied to the relationship of the Cosmic to the human soul, it means that state of ecstasy where the human becomes conscious of the at-

tunement of the natural forces of his being with the Absolute or the source from which they emanate. Within the individual, harmonium includes health, rhythm, coordination of action in all parts, plus the properly balanced relationship between the psychic and objective functionings.

Healing—The Rosicrucian system of healing does not deny the good that can be done by medicine, surgery, or other established systems of therapeutics. It is based on the fact that the autonomic nervous system carries and distributes to all parts of the body an intangible energy which vitalizes organs and cells of the body. It takes into consideration primarily the psychic side of man and the psychic cause and nature of disease and pain.

Health—(See Disease.)

Hermes Trismegistus—Rosicrucian records tell us that there actually was such a character as Hermes or Thoth. He was not a god, but a sage born in Thebes in 1399 B.C. He received the appellation "Thrice Illustrious" (Trismegistus) because he participated in the organization of the great mystery school, had the experience of seeing the illustrious Amenhotep IV initiated as a Grand Master, and the honor of assisting in the initiation of the successor to Amenhotep IV. The best known work attributed to Hermes is the Divine Pymander, or the Shepherd of Men.

Hierarchy—A group of persons or things arranged into a progressive order according to their authority or other determined qualities. Mystically, this alludes to the Celestial Hierarchy or a group of spiritual or allegorical beings arranged into nine orders of three triads each. These nine orders constitute a kind of celestial ladder, the most spiritually advanced or highest triad being the one most approximate to the Cosmic Mind, and each of the others being of a lesser advanced stage.

Hypnotism—A subject it is well to approach carefully and in detail. There are two distinct methods of inducing a hypnotic condition—by the use of drugs or by means of mental processes. In either case a condition of sleep need not result, nor is the condition of sleep an indication that the person is under control mentally or physically. Whether hypnosis is produced by drug or by any mental (or mind) process there must be certain cooperation on the part of the subject. In the case of mental induction such cooperation is not only essential but fundamental, and without it hypnosis cannot be induced.

Hence the process of induction is not a contest between minds, the stronger overcoming the weaker, but a case of the stronger mind concentrating its whole attention upon the idea of passivity. Unless this is the attitude and the ability of the subject, only a small degree of success will be attained, no matter how competent the operator. A weak mind can rarely exercise sufficient concentration to assist in bringing about hypnosis by any mental process.

Occasional hypnosis is not dangerous to either the mental or physical organization of the body; continued experiments with one subject make that subject enter such a state more readily as long as

the same operator conducts the experiments. No one was ever placed in the state against his or her will and cooperation, for it is impossible (except in some rare cases where drugs are used, and then the state will more nearly approach a heavy or deep sleep as when chloral, sulphonal, hypnal, ether, and similar drugs are used; in this state the subject is not under the mental control of the operator or physician, and the mind of the subject is not inhibited as when a mental process is used). But while all this is true and is intended to dispel the fear and false statements about hypnotism, there is seldom any need for its use (especially that which is induced by mental processes) and the practice should be limited to physicians or scientists who have made a careful study of the laws and principles, and who have naught but the highest ethical and scientific reason for inducing the state. Psychically, it is a state where the objective mind is at least four-fifths passive or dormant in functioning and the subconscious mind is consequently and proportionately active or super-active. For psychic experience of the average and desirable nature the borderline state is more efficient and calls for no assistance from any operator. (See Borderline State.)

I

Idealism—In philosophy, the concept that ideas are fundamentally real. Idealism as a philosophy expounds the notion of a mind cause behind reality as opposed to a mechanistic concept of the universe.

Illuminati—To students of mysticism and occultism, the term generally means the enlightened ones. It means those who have received illumination, or light, in the sense of attaining Cosmic Consciousness, a realization of the omniscience. The term has been traditionally and historically applied to Rosicrucians and Martinists. The Rosicrucians were often known as "Brothers of the Illuminati," and in fact, in different periods of their history, outwardly used the name of Illuminati, or les Illumines. The Illuminati were well established in southern France in the region of Toulouse, and of course, were one and the same as the Rosicrucians. Also, in Germany they were prominent in the latter part of the eighteenth century. In 1776, one Adam Weishaupt established a sect which he called the Illuminati. It had no connection with the older movement, concerned itself greatly with politics, and came into bad repute. Some historians have confused the true Illuminati with this latter movement.

Illumination—In the Rosicrucian and mystical sense in particular, it refers to the enlightenment of the mind. This enlightenment, however, is not restricted to the intellectual. It means as well noetic experience, that is, a kind of intuitive knowledge imparted to the individual directly from transcendental sources such as the Cosmic.

Rosicrucians also distinguish illumination from knowledge. The former is apperception or clear understanding as well as a mere accumulation of ideas gained from experience.

Imaging—Imaging is the power of the mind to reproduce mental images. Imaging is thus a form of visualization. When we image we

reassemble in our consciousness all of the detailed parts or impressions of things that once composed an actual experience or reality which we perceived. A distinction must be made between imaging and imagination. Imagination is principally the constructive process of the mind. It is the combining of mental forms to comprise a new image, something not yet outwardly experienced. Imagination includes imaging, but imaging or visualization need not be a form of imagination. If, for example, we recollect in detail a tree which we have seen, we are imaging. If, on the other hand, we conceive the change or alteration of a thing or plan an enterprise, we are imagining.

Individuality—A separate, absolute distinctiveness. That which is real in man is an inseparable part of the Great Soul, the Universal Mind. That Soul may express itself differently in one body than it would in another body. This difference makes up the personality. It does not give the individuality, which is a material, transient thing. Personality pertains to the inner man, the Soul, the psychic or divine being within the physical body. The individuality refers to the transient and mortal, objective side of man.

Initiation—A rite, ceremony, or method by which one is introduced to a particular knowledge. The ancient mystery initiations were intended to dramatically reveal an abstruse gnosis or wisdom to the candidate. Such initiations were generally in four parts. Each was an impressive rite. Rosicrucian initiations are of this nature.

Inner Self—The spiritual consciousness within the physical human body. It has its own immaterial faculties and functionings, and constitutes a separate form from the physical form in which it temporarily resides. This consciousness constitutes man's real being and is part of the soul or the divine element of man's existence. The spiritual consciousness of man is different in essence from the material part of man. The two are related, for they are both part of the same cosmic whole. However, matter and divine consciousness in man constitute two different realities working in harmonious parallel. The outer self with its material, physical consciousness is limited in the nature and quality of contact it can make. The inner self, the spiritual consciousness, is unlimited and in no way restricted by "time" or "space," or by the nature and quality of material things.

Intuition—Intuitive knowledge is that knowledge which appears self-evident and which flashes suddenly into the consciousness and about which we entertain no doubt. It is mystically referred to as the intelligence of the Cosmic Mind, resident in the subconscious and which periodically enters the objective mind as a comprehensive and completed idea commonly called a hunch. Psychologically, intuition may be said to be the unconscious synthesis of ideas which pass into the conscious mind without volition and with great clarity.

K

Kabala (or Qabbalah)—The word is from the ancient Hebrew and, literally translated, means "Doctrines received by ancient traditions." The written teachings of the Kabala go back perhaps no

later than the eleventh century. There is every evidence, however, that the oral teachings were in existence at a far earlier date. Traditionally, they are said to date back to the time of the secret wisdom related by Moses.

By a system of numbers, and letters of the Hebrew alphabet, the Kabala discloses the esoteric mysteries. Its philosophy, in other words, concerns ontology, the nature of being; cosmology, the origin of the universe; theology, the nature of God; and anthropology, man's relationship to God and the world.

Karma—A term used by us to mean the working of the law of compensation. Rosicrucians do not contend, however, that the exactions of the law of compensation will result in any reversal of the law of evolution, as is claimed by some modern schools. That a human being may be reincarnated in the form or body of a lower animal as a punishment is inconsistent with the laws of reincarnation and evolution, both of which teach us that each stage is progressive and we shall never descend in the scale of physical expression regardless of the karmic debt to be paid. One of the fundamental principles of the law of compensation is that for each sorrow or joy we cause another, we shall have experiences in like degree and manner and at times when the lessons to be gained thereby will be the most impressive. This principle does not exact an eye for an eye or a life for a life, for there is no vengeance in the process, and no intention to cause suffering. The sole purpose of Karma is to teach us the lesson, to make us realize our errors and to evolve the understanding thereby.

For these reasons one cannot be sure just when or how the law of compensation will exact its requirements. Of this we can be sure, however: We will not suffer through any requirements of Karma and be unconscious of the fact that it is a karmic debt we are paying. Such suffering, without a keen realization of why it is so and what we are compensating for, would be inconsistent with the fundamental principles of Karma—that we will learn a lesson through it and advance in our understanding.

It must also be understood that the law of balances (Karma) works both ways—that is, a human being may have a karmic credit due him. He will thus be in line as a recipient of compensation.

Keyboard—The substance of the Universal Being or the Cosmic consists of all the forces and energies of which we have knowledge. They compose a cosmic keyboard. The Cosmic Mind works through a sea of vibratory energy which is one vast spectrum or keyboard. The highest octaves produce what is termed psychic phenomena.

Knowledge—The Rosicrucians ever held that one could not know of anything except through personal experience. For this reason a distinction was made between belief and knowledge. The experience which is thus necessary may be through objective realization or psychic reality, but there must be the personal realization. It is customary for a mystic to say that he either knows or does not know when speaking of the experiences, problems, or facts of life and nature; nothing is accepted by him on faith and he has no beliefs.

Life and Life Force—The mystery of all ages. Two methods of examining its nature lead to false conclusions; the chemical method would reduce all life to chemical action; the spiritual would reduce all to divine essence and ignore the material elements or actions. Rosicrucians insist that due consideration be given to all parts and all actions, realizing that in its pristine essence all life emanates from God through cosmic forces, but animal life force, as it expresses and manifests on this earth plane, is not solely a spiritual essence devoid of chemical action.

Lodge—A body of Rosicrucian students united for the purpose of working and studying together under the jurisdiction of a Grand Lodge of AMORC. In the Rosicrucian system, active members of a Grand Lodge receiving monographs and carrying on their studies in home Sanctums may further promote the work by organizing Lodges, Chapters, or Pronaoi.

A Lodge is required to have permanent quarters, conduct at least three convocations a month, and maintain a library available to members and the public at least four days a week. Only a Lodge is permitted to conduct Temple Degree initiations.

A Chapter represents at least forty active members and is required to conduct a minimum of two convocations a month.

A Pronaos is the smallest body that may be organized and must have at least thirty members. Its status is expected to change as soon as its membership increases to the minimums set for Chapters and Lodges.

Lodge Chamber—This is the central chamber devoted to the general convocation and formal study of God's works. It is the "inner" or "middle" chamber, the Soul of the Temple, the first circle within the great circle. Our Lodges represent the surface of the Earth with four cardinal points. The East of the Lodge is the first point on the horizon. In the East the new life is begun. It is the place of Divine Illumination and Resurrection. The South is the point where the Sun shines in greatest glory, and where the Divine Mind finds fullest spiritual expression. In the West the Sun of life closes its journey. It is where the fratres and sorores seek peace, rest, and attunement with the Cosmic. The North is the place of "dismal darkness" where the Sun sheds not its glorious light. It is the abyss of evil, the valley of death, the realm of darkness, the hours of the night where the seeker for light dwells and the Neophyte enters the Lodge in search of more light.

Lodge, Grand—This is a body subordinate to, and deriving its existence and powers from, the Emperor and the Board of Directors composing the Supreme Grand Lodge of AMORC. It is a separate and distinct body from the Supreme Grand Lodge and, with its properly authorized affiliated bodies and members at large, constitutes the membership section of the Order in The Americas, Australasia, Europe, Africa, and Asia.

Lodge, Supreme Grand—This is the legal, corporated body of the

Rosicrucian Order, incorporated under the laws of California as a nonprofit organization. The general administration of the Order is governed by the Board of Directors of the Supreme Grand Lodge of whom the Emperor is President. The general membership of the Order constitutes a separate body under the direction of the Supreme Grand Lodge through the Grand Lodge Executive Committee, composed of the Grand Master, the Grand Secretary, and the Grand Treasurer.

Logos—The creative cosmic or divine power manifest as a spoken word. The divine idea or thought objectified by divine utterance.

Lost Word—To the natural cosmic forces, the physical laws of the universe, man attributes a once uttered Word as their source, which continues to reverberate throughout the universe and which he can no longer, at least in its entirety, apprehend. The Word is conceived as a vibratory, undulating energy in which the basic essence of all things exists. All manifestations owe their existence to the continuous reverberations of the Word throughout the universe. The vibratory nature of each thing thus fits into a gigantic scale or keyboard.

M

Maat—The Egyptian word for truth. The symbol of Maat was a feather. Cromaat means "The Truth shall be," or "So mote it be." The Confession to Maat is taken from the confession—contained in the Book of the Dead—spoken in the Chamber of Maat in Egyptian Temples of Initiation.

Magic—Presumes there are occult powers in nature which must be invoked by the application of certain agencies. Both natural and supernatural forces, it is believed, can be brought to serve human will. Black magic is the superstitious use of magical rites for malevolent purposes. White magic is the use of these rites for benevolent purposes.

Magnetism—Every electrified body has its aura, and when that aura is active it constitutes a magnetic field and the aura is sometimes called magnetism. Magnetism, from a purely electrical point of view, is described somewhat differently; but even so, the fundamental law involved in the foregoing definition remains. The fact that some minerals are "naturally" magnetic, as iron of a certain nature, while others can be made magnetic, indicates that magnetism is not a result of the atomic or molecular structure of matter, but rather of an electrical action that is taking place within the substance or which can be set up in the substance. In electrical science we are instructed how to induce magnetism in a metallic body by surrounding it with an electrical charge; but this further illustrates the law that magnetism results from action in the aura that surrounds all matter. This aura is fundamentally an essential part of the electron, and the molecule, therefore, has an aura which is a mixture of the auras of the electrons composing it. Some auras are positive, some are receptive or repulsive, and some are alternating in their action. Those which are not passive cause a manifestation which we term, in physical science,

magnetism, with either an attractive or repulsive tendency or positive or negative polarity.

The cells composing the human body are surrounded by an aura and the body of man also has an aura. This aura can be made active, radiating its magnetic energy, or passive, or even repulsive or receptive. The human mind, with its control of the electrical energy in the body, is the guiding factor in the process of exciting the electrical charge that arouses the aura of the human body to its fullest power. The word mind is used in the psychical sense.

Marriage Ceremony—The Rosicrucian marriage ceremony is a non-sectarian, fraternal ceremony which must follow within one week after the legal ceremony. The ceremony is beautiful in its symbolic portrayal of the uniting of two souls which the institution of marriage represents. The ceremony is performed in Rosicrucian Lodges by the Master of the Lodge, or by the Chaplain. The Chaplain is a ritualistic officer of a Rosicrucian Lodge and does not represent any religious sect. Since the Rosicrucian Order is not a religious organization, the marriage ceremony has no legal or social status: this is the reason for the necessity of its being preceded by a legal ceremony. Also, both of the two parties to the marriage must be members of the Order in good standing. There are no exceptions to this. Friends of the couple who are not Rosicrucians may be invited to attend the ceremony.

Master—the term is used in several ways in our work, but we will not touch upon the use of the word to indicate one who is an Officer of a Lodge or director of a Degree of the work. Otherwise the term is used to represent one who has attained some degree of perfection in evolution, or a high sense of mastership of laws and principles.

Cosmic Masters are not deities. They are intelligences who were once mortals. They became Masters by learning how to awaken and apply the powers of Self so they could direct the affairs of their life consonantly with cosmic purpose. By such development, they rose to that soul personality development where it became no longer necessary for them to incarnate in physical form.

Invisible Masters, on the other hand, are those who have passed from this plane to the cosmic plane and from there project their personalities to the psychic plane and never function or express upon the earth plane until reincarnated. In order that we may sense these Masters—not see them with objective eyesight—we must attune ourselves to the psychic plane completely. Our physical bodies are dormant or inactive then in all functioning except that of a purely physical nature as when asleep, in a passive state, or in a deep and profound meditation. At such time contacting the personality, minds, and messages of the invisible Masters is possible. One cannot expect that a Cosmic Master will literally be assigned to him as a personal servant and guide combined! Until we have prepared ourselves, we are not worthy of the assistance the Cosmic Master can give.

Complete functioning on the psychic plane for a few minutes or

hours at a time, as desired, and there contacting a personality of the invisible Masters, is a condition much desired by all mystics and is attained by careful study and preparation, many preliminary experiments, and a pureness of purpose. It is in this way that Cosmic Illumination or Cosmic Consciousness is realized.

Master Within—The Inner Self. The conscience is this Master's voice. The soul force brings into our being a Divine Intelligence. The aggregate of this intelligence is our psychic body, and this intelligence is our personal Master.

Matter—Rosicrucians view matter from almost the same viewpoint as physical science. Differing from some schools of metaphysics, we know that matter is essential to expression or existence on this plane, has its place in the scheme of things, and should not be negated, ignored, humiliated, or aggrandized. We know that matter has no consciousness or mind independent of that consciousness or mind which resides in all living forms; and we know, further, that matter does not exist independent of the Spirit Energy which animates it. This knowledge enables us to place matter in its right category and shows us how to make it serve us rather than rule us. The fundamental laws regarding the composition of matter are fully covered in the monographs of the First, Second, and Fourth Degrees.

Meditation—A transformation of consciousness. When we meditate, we change our state of receptivity, like tuning to a higher wavelength. Meditation is attunement. Concentration is the focus of consciousness. Contemplation is the interrelation of thought. In meditation we employ concentration and contemplation, but now we are more sensitive to our inner impressions rather than those of the objective sense faculties. In other words, through concentration we turn objective thoughts inward until through contemplation and meditation they become the ideas of the inner self.

Memory—That function of mind which receives, conserves, and reproduces impressions. It begins with the first conscious thought of our first incarnation and continues through all incarnations to the present time. We call the perfect memory the complete storehouse of facts and experiences. It is located in the subconscious mind. In order to reach the storehouse of memory, it is necessary to make the objective mind relatively dormant so the subconscious mind may rise in activity.

Metaphysics—An inquiry into ultimate and fundamental reality or the nature of being. Also an inquiry into the nature of knowledge.

Microcosm and Macrocosm—There is but one universe, one system of cosmic laws directing the forces which manifest in all things. Things are different in their forms only, not in the basic principles which give them existence. A cell of the body differs from a planet only in its particulars, its extension, or mass and function. Both are subject to the same universals, or cosmic order. We are wrongly accustomed to think of the so-called finite things and the things of ourselves and our Earth as constituting one world, and the infinite as another. The world, however, as seen through the microscope is

the same cosmos as seen through the telescope. The error in differentiating caused the origin of the words microcosm and macrocosm. Microcosm is derived from the Greek words mikros, meaning small, and kosmos, meaning world; thus, small world. Macrocosm is derived from makros, meaning great; thus, great world or universe. The sages warned against this false thought, this separation of the two, by expounding the adage, "as above, so below."

Mind—The mystic makes the important distinction between brain and mind. The brain is a physical organ for some of the functioning of mind, just as the lungs are organs for the functioning of breathing. Mind works through the brain to a great extent, but not exclusively through that organ. It is possible for the mind to function in many ways after the brain is removed. This has been proven with tests on animals. Mind is divided into two domains of functioning—subconscious and objective. The objective has associated with it a subjective aspect as in memory and imagination. While it is common to speak of these two domains—objective and subconscious—as two minds, it is not correct in a broad sense. The mind of man is immortal, because it is a part of the Soul and personality, while on the other hand, the brain, like all the physical organs, is mortal. Mind and soul personality persist after transition from the physical body, and retain, as part of their attributes or equipment, the complete storehouse of memory. The psychic body utilizes the subconscious functioning of the mind as its essential consciousness; hence in all psychic work and projections of the psychic body the subconscious mind is keenly active. (See Borderline State.)

Miracle—The result not of supernatural but of natural law. They are miracles only to those who do not understand what is meant by natural law. A miracle is any occurrence which appears to be contrary to nature and for which no natural cause is evident.

Molecule—The smallest particle subdivision of a chemical compound capable of maintaining its unique chemical properties and attributes. A molecule may be a combination of atoms (see Atom) of one element or several elements.

Monotheism—The concept of a sole deity.

Mysticism—The intimate and direct awareness of God or the Cosmic through Self, that is, through the domain of the subconscious. The ideal of mysticism is the ultimate attainment of conscious union with the absolute, or the Cosmic. Mysticism teaches cosmic laws and principles by which man is brought into closer consciousness of his divine power. The mystical experience of union with the One imposes upon the mystic a moral obligation: he must utilize his knowledge for the welfare of other men.

Mysticism is not mystery. Mystery is commonly related to magic, deception, and delusion. The mysteries of Egypt and the Orphic and Eleusinian Schools of Greece alluded to a hidden gnosis or wisdom, not to be profaned by divulging it to the masses. To the ancients it was a sacred knowledge to command the spiritual response of the individual.

Naming (The Rosicrucian Appellation Rite)—The Rosicrucians have a ceremony for the naming of children, to be performed in their Temples. The age of the child must not exceed eighteen months. One or both of the parents must be members of the Order. Certain promises are exacted from the parents, such as pledging that the child will be properly educated during his youth in nonsectarian schools; that he will be taught to know and love and give obedience to God's laws; that the child will be given every opportunity to enter the Order at the proper age without interference or unnecessary urging. Such ritual may take the place of, or supplant, any christening ceremony. This ceremony is, of course, nonsectarian.

Natural Law—That law or set of laws decreed in The Beginning by the Divine Mind as the working basis of all creation and without which no manifestation can occur and exist. Such laws are universal as to scope and manner of operation. Natural law operates alike on all planes and in all kingdoms. Natural laws are extremely simple and direct, as all such fundamental laws must be. Their mission is to insure progressive gradations or cycles of evolution in spite of all the obstacles placed by man to thwart their operation. Therefore, natural law establishes such powers, functions, attributes, and phases in the various kingdoms of the universe as will unswervingly impose strict adherence to them in the search after the ideal in each plane, kingdom, class, etc. The idea, the motive, back of natural laws is the preservation of life for the attaining of the ideal expression. Such preservation for such purpose recognizes no man-made ideal, no man-made law, no dictates of civilization where these are contrary to the best purposes as decreed by Divine Mind.

Natural law is always constructive—constructive even when it seems indisputably destructive. In this it follows the method symbolized by the "Law of the Triangle." Natural law is that basic principle which, while demanding, commanding, and insisting on strict obedience to its dictates throughout, is elastic enough in one sense to allow for much and frequent blending of the entities of any plane as long as such blending harmonizes with its purposes. Thus it is seen that there can be no such thing as supernatural law, a term which is not only a misnomer but grossly misleading. Miracles are not the result of so-called supernatural law; they are the result of obedience to the demand of natural law. Miracles as such are so only to those who do not understand what is meant by natural law.

Negative—That phase of polarity which is the complement of the positive. It is that phase or condition which receives the positive elements and nurtures them to fruition when the result will manifest the blending of the two phases of polarity. The negative is passive, static, receptive, and nurturing in contradistinction to the positive, which is active, creative, and dynamic. The negative registers a hunger for the positive, while the positive registers an urge, an impulse toward union with the negative in order that it may, with the cooperation of the negative, cause a manifestation or creation. Neither

can, of itself, produce any result, for one complements the other, supplies what the other lacks. The coming together of the negative and positive under proper conditions allows for the perfect blending of the two when a third element, the product of the two, is created, revealing in better manner the characteristics of both negative and positive.

Nerves—The function of the nerves is a simple one: the nervous system serves as a channel for the guidance and expression of power in and through the body. Nerves are the channels through which information is carried, both to and from the central station, the brain. Signals sent out from the brain to all parts of the body guide and control the expression of growth, healing, and action. These signals are sent along the efferent nerves while the afferent nerves are used in receiving both feedback information and impressions of the world outside the brain which are helpful to the brain's guiding and protecting functions.

Nervous System—By analogy, it can be said that the nervous system is like an electric circuit, consisting of a central control station, the brain; a system of wires, the nerves; and nerve terminations at which manifestations are produced. Just as an electrical circuit requires two wires or sets of wires in order that it may function properly, so does the living organism require two sets. This is because the living organism is dual in nature, requiring one set for each phase, yet each set being also dual, afferent and efferent.

The nervous system in a living organism consists of a Spinal Nervous System for the material aspect, and an Autonomic Nervous System with sympathetic and parasympathetic divisions placed at the disposal of the immaterial, invisible aspect. It is the function of the Spinal Nervous System to provide such power of the grosser and more material nature as will care for the needs of the earthly body, while the Autonomic Nervous System cares for the more subtle requirements of the immaterial one.

Since, according to divine decree, the soul makes use of a physical body for expressing its mission on this plane, provision is made for affording to each phase or expression that set of nerves which will best cater to its requirements. Immaterial and invisible though it is, the soul, while functioning through a physical body, requires the use of such tools as will allow it to do its work normally and with the least interruption. So that system known as the Autonomic Nervous System is allowed to the immaterial side of a living organism, the side that functions psychically, that is in constant contact with the Cosmic and allows the soul to function through a material body. Such system is naturally more sensitive, and so created that it can receive and transmit into power more subtle vibrations than can the Spinal Nervous System, which is created solely to provide for the maintenance and preservation of an earthly body.

The Spinal Nervous System finds its central station located in the cerebrum. The central station of the Autonomic Nervous System is in the thalamus and cerebellum. Over all is the brain proper as a whole. The points of intercommunication, the points where the two

nervous systems unite to found a perfect, harmonious plan of co-operation and collaboration, are in the two small glands in the brain about which so little is known generally.

To recapitulate, the brain may be said to be found everywhere in the living organism, taking into consideration that the two nervous systems, each with its afferent and efferent nerves and nerve centers or substations, according to the analogy of the electrical circuit, may be said to be a brain that is elongated and made use of by mind. The earthly, material, objective mind makes use of the Spinal Nervous System and the immaterial, subconscious mind makes use of the Autonomic Nervous System in order that the soul may function normally on the earth plane through a physical body and so fulfill the demands of the evolutionary plan.

Nous—That energy, power, and force emanating from the source of all life, possessing positive and negative polarity. It is manifested in vibrations of various rates of speed which, under certain conditions and obeying the dictates of natural law, establish the world of form, be that form visible or invisible.

Nous possesses within itself all potentialities; that is, all manifestations of any kind are within it, uncreated, awaiting the right moment, the precise time, the exact locality for manifesting as entities. Nous is the essence out of which all creation comes. While it is the divine substance out of which things are made, it is yet amenable to natural law.

Nous is vibratory in character, dual in nature, triune in manifestation. It operates through a system of harmonics by means of a Cosmic Keyboard of eighty octaves. Each octave represents a definite number of vibrations of Nous, beginning with two vibrations per second for the first octave, and ending with trillions of vibrations per second for the last one.

Octaves constitute not only groups of notes but groups of manifestations. Thus, the first ten octaves produce the sensation of feeling and hearing—manifestations of action which may be felt and even seen, and those of sound. The next octaves give different manifestations, and so on throughout the eighty octaves of the Cosmic Keyboard.

Nous, in more understandable language, may be said to be a combination of Vital Life Force and Cosmic Consciousness moving from the source toward Earth in an undulating manner, in an infinity of waves, traveling at different rates of speed, each rate characteristic of a special phase of manifestation. Within these waves, traveling with the same speed as the waves themselves, are to be found those particles of Nous essence which, grouped together according to specific number combinations, make cognizable all manner of creation. It is due to the vibratory rate of each Nous wave that the created masses themselves are able to send forth the vibrations by which they are known and recognized.

Nucleus—The focal point, the center of action, the source of aggregated manifestation. This point is the heart of any creation possessing latent within itself all the potentialities of development

commonly used in connection with a cell. But what applies to it in a cell applies equally as well in larger masses of matter. The nucleus is endowed with a polarity complementary to that of the rest of the mass of which it is the nucleus.

On the earth plane the nucleus of a cell is positive in polarity while the retaining wall and the space between the two are negative. It is due to the dynamic, creative quality of the positive polarity that search is made by the nucleus for its complementary negative in order that the business of life may be started. In this manner the law of attraction is observed as well as it was established in the beginning of time. According to the Law of Attraction there is formed between the nucleus and periphery the field of operation in which the stressed condition existing between the two polarities may be used in creating. This field is known as the magnetic field and is in actuality the meeting or uniting place of the two polarities.

On the immaterial plane the elements are in reverse order. The nucleus will have the negative polarity and the outer wall and environs will have the positive polarity, but the *modus operandi* will be the same for cells whether single or collective on both planes.

The nucleus possesses within itself all the elements lying in a dormant state awaiting the proper conditions for awakening that are necessary for the growth, assimilation, and reproduction of the cell. It has crystallized within itself all the characteristics of former unions in previous generations and in each successive manifestation blends in the additional characteristics of the present union, thereby establishing the conditions and qualities of heredity. This union of the nucleus with the complementary polarity in the field of manifestation, each with its inherent and acquired traits, and their inevitable blending, is what makes evolution possible.

O

Objective—The perception of externality or consciousness of the outer world.

Objective Mind—Is the mundane mind, the mind that operates in a material world, through a physical body, and in a self-centered manner for the main purpose of preserving the physical vehicle or tool of the soul as it manifests on the earth plane. The objective mind must necessarily be selfish in purpose, but the selfishness should be constructive in purpose and principle. As it commonly is, the objective mind is destructively selfish. By constructively selfish is meant that selfishness which tends to preserve the body, and all its powers and functions, at its best in order that the soul within the body may be unhampered in its mission here on Earth. Being constructively selfish means that an individual seeks to better himself in every direction in order that he may serve and make the world a better place to live in. Such selfishness has divine sanction. To attain its purpose and end the body was given an objective mind that could and would cope with the purely worldly or carnal conditions and problems. To be destructively selfish means that the objective mind, in such

case, is seeking benefits to be used not in service for others but primarily for the one self only.

The purpose and function of the objective mind, as has been said before, is essentially a worldly one. Its place is to keep the body well-nourished, in normal condition, and ready at an instant's notice to obey the demands of the soul as they manifest through the subconscious mind. The objective mind, like the physical body, is subservient to the subconscious. Its province is to tell the subconscious of existing mundane conditions in order that the subconscious mind be guided as to how it is to express cosmic ideals in a material world. The province of the objective mind is over the five physical senses and their functions, over the voluntary acts, over recollection, inductive reasoning, and finally complete reasoning, all of which will easily demonstrate how important in the divine scheme of things is the objective mind functioning through a physical body and brain.

Obscure Night—Just before one attains a quickening of the inner consciousness, a real psychic unfoldment, there is a period of great darkness for the soul. The ancient Essenes were the first to call this the Obscure Night of the Soul. During this period the individual is stripped of all his vanities, self-assurance, and pride in whatever achievement or talents he may have. He stands naked before his own inner vision, seeing his weaknesses and realizing himself as he is, and he does not like what he sees. It is a time of personal readjustment of one's spiritual and mental selves, a reorganization of the whole being. It is the great crucible in which we are purged of our weaknesses in preparation for the Golden Dawn, the great initiation just ahead. The Golden Dawn is the New Birth into the Greater Light.

Occultism—In the popular sense, occultism is held to be a system of hidden methods, of strange practices, whereby man may acquire the way of attaining inexplicable powers by which he may do or accomplish almost anything. Such a popular conception is that the occultist is able to witness phenomena which the average mortal may never experience. Consequently, occultism is thought to include such subjects as magic, marvels, miracles, and religious ecstatic experiences, such as theophany and epiphany.

Aside from general occultism as it is conceived by the man in the street, there are what are known as the occult sciences. These embrace that subject matter, those objects of knowledge, which belong to the field of science, but which, nevertheless, were—and many still are—erroneously considered by religion and orthodox or mundane science, as absurdities.

Color therapy is a subject that has been long considered by the occultists. It is held that color affects the human emotions and plays a definite part in relationship to health, moods, and our reactions. However, color therapy was heralded by the mundane scientists as an occult superstition! Today, color therapy is a branch of psychological investigation by medical science.

Occultism affirms that man has powers which are subliminal (beyond the level of his normal consciousness, and of which he is ordinarily unaware), and which are just as much a part of his being as

his sight, his hearing, or his powers of speech. Occultism further contends that whatever man's wordly accomplishments may be, as the result of the exercise of his material objective power, they can be greatly enlarged upon if he will but resort to the use of his unknown inner faculties ever at his command.

Omnipotent—Having illimitable power. A term used in referring to the powers of God and the Cosmic. But such power, illimitable as it is, is amenable to cosmic or universal laws as established in The Beginning. While it may seem that omnipotence is, therefore, lessened, it is, on the contrary, increased or strengthened, for by adhering to its own laws nothing is impossible. Adherence to these laws insures that system and harmony, that plan of number, that peace which establishes omnipotence. So it may appropriately be said that God is omnipotent because in His Wisdom He established those laws and principles, not only for His Creation, but for Himself, adherence to which gives omnipotence.

Ontology—The study of the ultimate nature of reality. It is the true science of all being. And in perfect accord with this definition and the standard which it involves are the AMORC teachings. Those laws and principles alone can help humanity solve every problem which is universal in character and application. Such must, perforce, be based on divine truths and ideals, not with the idea or purpose of making goody-goodies out of humanity but of making it normal. Such laws and principles, because they are simple and direct, are easily demonstrable to the entire satisfaction of anyone willing to take the time to prove them. They are operative in the daily life of every creature. When observed they bring happiness, success, and ecstasy. When they are ignored intentionally or through ignorance, they allow unhappiness, failure, and despair to manifest, not for the purpose of punishing in a retaliative spirit, but solely for the purpose of teaching those fixed laws and principles and fulfilling their decrees.

It may seem strange to the unthinking reader that the study of the law of vibration with its seemingly endless ramifications should give us the knowledge whereby we learn to solve economical, social, ethical, and religious problems, yet it does do precisely that. Universal laws are operative in like manner and degree through all the planes of creation, in all conditions.

It may seem stranger yet that by studying the universal and natural laws, as they manifest and apply in the purely material world, mankind should know how they operate and manifest in the immaterial, spiritual world, yet each study does just that. By studying all about the seen world, by recognizing the laws that apply to it, learning how to make use of those laws and putting them into operation, if altruism is the motive actuating the purpose, the unseen world becomes not only intelligible but as intimately known, contacted, and associated with as the seen. By learning how to use natural, universal laws in transmuting material, physical conditions and things mankind can learn to transmute unfavorable conditions of whatever kind. Ontology teaches what are the universal and natural laws. It teaches how to use them in transmuting destructive conditions into constructive ones.

It teaches, further, that what is mastered in regard to purely material things can be used, if the purpose is in accordance with divine ethics, for spiritualizing the purely mundane and raising such to the higher plane for manifestation. Ontology teaches, moreover, not only mastery of physical and cosmic forces, but it teaches also that more difficult subject, the mastery of the self, giving each individual the right blending of the humble, the noble, the magnetic traits which characterize mastership wherever it may be found. It gives these through knowledge.

P

Pantheism—The concept that God is immanent in all things.

Parapsychology—Literally meaning a field of research contiguous to or near psychology. It concerns such subjects as extrasensory perception, telepathy, telekinesis, and the phenomena of psychical research. It is definitely an empirical or scientific approach to such phenomena.

Peace Profound—The harmony of man's accord with the Cosmic which brings a warm glow of contentment throughout one's whole being. If we have truly gained Peace Profound within our minds, we are able to face all changing conditions with a philosophic and detached attitude.

Perception—Is that faculty of the objective mind which obtains knowledge through the five objective senses and faculties. It is the process of getting that infinity of facts of a material or mundane nature which goes to make up the sum total of our objective knowledge after such facts have been classified by another process of mental functioning.

Personality—To the Rosicrucian, in contradistinction to individuality, is that distinctive manifestation of soul personality, with its peculiar and innate qualities, which reveals or establishes the identity of any entity. The term personality is often used in our writings in place of soul personality. Personality pertains to the inner man, the Soul, the psychic or divine being who resides within the physical body and expresses the character which the soul has evolved through the cycles of time from the hour of the creation as a soul. The personality reveals all that has been garnered through numberless experiences and absorbed as part of its very essence of expression. It demonstrates all the qualities which have been adopted by the soul as its own peculiar characteristics or earmarks, so to speak. And so there are all kinds of personalities according to each individual's evolution. It is due to the personality of the soul that certain acts or deeds are performed which we recognize as being those performed by any particular personality. Personality reveals the true psychic identity of each individual of the human race.

Individuality, on the other hand, refers to the transient and mortal objective side of man. While it is true that individuality signifies that which may not and cannot be separated, this term applies not to the soul, which is not separable from its Creator, but to the ob-

jective individual, who possesses a body composed of units which cannot and may not be divided or separated one from another without destroying the objective manifestation. The individuality is essentially worldly and material because its purpose in life is to function on the mundane plane. The personality is essentially unworldly and immaterial because its purpose is to function on the immaterial plane. The two, personality and individuality, or the psychic and mundane, the immaterial and material working in unison, reveal an entity recognized both through its individuality and personality as it expresses itself in daily life. (See Reincarnation and also Soul Personality.)

Philosopher's Stone—The principal search of the alchemists was for a pure and penetrating matter which, when applied to the metals, plants, or vegetables, exalts them. This perfect essence, this soul of matter, imparts its nature to all that is brought into contact with it. This substance which transmits its perfect qualities was called the philosopher's stone. To the transcendental alchemists, the philosopher's stone was not a substance but the spiritual gnosis and exalted wisdom whose virtue transmutes man to a higher plane of consciousness and personal power.

Pineal and Pituitary—Glands which, in their physiological purpose, have to do with the regulating of various functions of the body such as the circulation of the blood, the growth of the bones and tissues, and the development of the sex and emotional functions. They act in this sense as governors essentially. In the psychic sense, they are transformers, stepping down for objective sensing those exceedingly rapid vibrations which come from the spiritual or psychic planes or stepping up the slower vibrations of a material nature that they may be sensed on the immaterial plane.

By a series of exercises these glands may be brought up to that standard of functioning decreed by the Creator and which has not been generally in evidence for many ages. It is one phase of the work of mysticism to afford the sincere, earnest seeker after light, knowledge, and power the privilege and means of bringing up to normal these most essentially important glands in the human body. Such a one will have, among other faculties, the power of seer and prophet.

Any standard work on physiology or anatomy will give the description of these glands, together with their function and place in the physiological economy. This may be found under the heading of Endocrine Glands. But the description of these same glands, together with their place and function in the psychic economy of man, is not to be found in any book nor is the knowledge given to the idle seeker for the mere asking. These glands have to do so greatly with the spiritual side of life that they must be developed slowly so that their pristine normalcy be regained.

Planes—Rosicrucians recognize but two planes of existence. One is the worldly, material plane where we live in objective and subjective consciousness. The other is beyond the material, and is that plane where the soul of man functions free from limitations of the body. The latter is sometimes called the astral, psychic, or cosmic

plane; the former the earthly or mundane plane. The psychic plane may be reached at any time provided the purpose is pure and noble. It is here we carry on our psychic work as our share in the uplift of mankind.

Plastic—Refers to that which is endowed with all manner of possibilities but which lacks form or definite and characteristic expression. That is plastic which allows molding or shaping according to the ideas of the molder.

Polarity—Is the predominance of one or the other phase of electrical or magnetic force possessed by any manifestation of creation, and which gives it its distinguished character of positive or negative. This is contrary to the commonly accepted understanding of the term polarity, which is defined as that which has two poles. In actuality it is more than the quality of having two poles. It is the quality of having in addition more of one phase or the other of that which is found at the poles. This applies to all forms and kinds of creation, for each has its individual and characteristic polarity by which it is distinguished from the other manifestations of its own class and of other classes. Here may be found a key to the explanation of personality, its power of attraction and repulsion when thinking of polarity as applied to mankind.

Polytheism—The concept of a plurality of gods.

Postulant—A candidate of a philosophical, religious, mystical, or initiatic school, who pleads for further knowledge or enlightenment and assumes, in return for same, certain obligations. One who has advanced through the elementary or Neophyte Degrees of the Rosicrucian teachings is proclaimed a postulant. He is thus an applicant or candidate for the advanced instruction of the Order.

Potential—Refers to that state or condition of anything which is not in an active state. It is a static condition and not a kinetic one. It is dormant, awaiting that touch which will change it from its inactive condition to an active or dynamic one. Any potential condition has crystallized within itself all the qualities and essentials needed in the kinetic or active state of manifestation. The potential state lacks nothing which it would have in the active state. Its inactivity is all that characterizes this condition. This is in contradistinction to that condition which lacks that which is essential to its active state.

Prayer—A petition, a supplication, or entreaty, addressed usually to the Creator, for the granting of some special request. In many cases, the divine laws and principles involved in the granting of prayer are completely ignored or overlooked by the petitioner. Yet neither negligence, nor ignorance, nor wilfulness will abrogate them nor diminish by an iota their efficacy or reduce their operation. God, in His wisdom, decreed and established certain laws of universal operation in order that there might be system and order in the world. Such laws are applicable to all and infrangible. Any prayer which does not meet the requirements of such laws will not be answered, for, could or would God answer all prayer irrespective of its motive and purpose, chaos would result.

The mystic well knows that should he petition for any purpose he

must base his prayer on that which concurs with divine ideals. He asks, first, not that his prayer be granted, that his plea, out of a world full of pleas, be singled for fulfillment, but that he be given light and understanding of the laws involved in the granting of the prayer and of the consequences to accrue from its fulfillment. Next, the mystic assures himself that his prayer is altruistic. It is not necessary that it be wholly altruistic but it must be over fifty percent so, as in the case of asking benefits and blessings for ourselves. It is right to ask for these when we desire them in order that we become better fitted to serve others.

Having asked for understanding of divine decrees and laws, having asked that we be shown if it is right that our petition should be expressed, having assured ourselves that our prayer is, in the final analysis, altruistic in nature and purpose, we proceed to give expression to the prayer with a feeling of confidence. This feeling of confidence is not an impossible one, for since our prayer is formed in harmony with the divine scheme, meets the requirements of the laws, and is based on altruism, we find that there is nothing to prevent us from having the feeling that we will obtain the object of our petition since we are doing all that is possible in fulfilling the requisites imposed. And so, having achieved our feeling of confidence and knowing that our prayer will be fulfilled, we express our thanks for the fulfillment, for spiritually it is already granted under these circumstances.

From the foregoing it may not be apparent why prayer is so often unanswered. God, in His mercy, refuses to answer our entreaties knowing how great the penalties for us would be could He and would He abrogate His own laws to grant our prayers, however agonizing the need from our human point of view. But that prayer is answered which meets the requirements and standard of the Creator, because it is a prayer which, when granted, will add to the general betterment, not only of the individual, but of the greatest number. One other wonderful feature to be noted, as a result of basing prayer according to the divine principles, is that the manner, ways, and means of fulfilling the prayer are indicated to us and we proceed to demonstrate that God helps those who help themselves.

Projection—Is not only the act of releasing at will, on the psychic plane, the psychic body of man with all its consciousness, mind, powers, and functions, but it is also the freeing of the psychic body from the limitations of time and space and other hampering and confining conditions. Projections are made for the purpose of contacting those whom we wish to aid or by whom we wish to be assisted and inspired.

Projections are endowed with all the distinguishing traits, characteristics, and mannerisms that distinguish the personality of any entity. Projections carry with them these earmarks: Traits developed through the incarnations making the projections recognizable anywhere at any time through these very characteristics, because the soul personality and psychic body are immortal.

Projections are endowed with five psychic senses and faculties,

allowing for their sensing and expressing psychically in the same manner as the five objective senses and faculties allow the physical and objective individuality to become conscious of conditions and circumstances. Projections are guided and directed by the soul and impregnated by the soul's ideals and hopes. Naturally, in communing with other psychic bodies or subconscious minds, a projection will act in full accord with the ethical code characteristic of its soul.

So strong are the powers of the soul, and so forceful its ways of making itself felt that, to those who can see, hear, and feel psychically, the soul is recognized by its projection as easily and completely as one physical body or manifestation is recognized by another physical one. This is most commonly done during sleep. But it can be done at will by those trained to do so, trained to release the psychic body, manifesting at any specific place at any definite time for a very particular purpose. Sensing the psychic body in a projection and recognizing it as the personality of any entity is also a matter of training. Both these privileges and powers are part of the birth-right of man.

Pronaos—The outer vestibule or portico to the entrance of the Temple.

Psychic—In our physical experiences, in things seen or heard, for example, there may often be included phenomena whose physical causes are not apparent and which are, at the time, inexplicable. Since man has divided the causes of his experiences into those having a physical origin and those having a direct, divine origin, he has become accustomed to ascribe these mysterious phenomena to the divine, or refers to them as being psychic, meaning by that that they partake of the quality of man's soul. The soul thus became the repository for all of the indeterminate qualities of man's nature.

The ancient Greek word for soul was psyche. In ancient times, and even up into the time of modern philosophy, beginning with Descartes, many attributes of man which are now definitely associated with the organic working of the mind, brain, and nervous system, were ascribed to the Soul or to the psychic nature. Such psychological processes as reasoning and the emotions were proclaimed to be psychic in the sense of being of the divine essence of man.

The true mystic does not draw a distinction between the physical, or material, and the divine insofar as essence and source are concerned. Every manifestation has a divine origin, in that it is the consequence of a God mind and order. What lies beyond the range of our physical senses and extends into infinity as Self, and is seemingly inexplicable, is characterized as the divine and psychic. It is the duty of man to transmute as much as possible of the psychic, that which he now relegates exclusively to the divine, into the realm of the physical—into the world of everyday living. Rosicrucians recommend discovering the psychic, the infinite potentialities of your being, and converting them into principles which will expand your objective existence. Since all is basically divine, nothing can be contaminated by being brought into the realm of physical existence. After all, much that is today termed psychic will tomorrow become

material—not in relation to the cosmic whole of which it is a part, but in our ability to utilize it in our daily lives.

Psychic Body—The term is really a misnomer but it helps to convey the idea that the psychic body is an aggregate of the higher, more sensitive levels of consciousness permeating man's being. It is that consciousness and intelligence which accounts for the involuntary actions of the body. The psychic body is a kind of conscious field that corresponds to the physical body. The silver cord is the connecting link between the physical and psychic organisms so that the two may work cooperatively. The autonomic nervous system is the medium for the subconscious mind to carry out the commands in the psychic body. The psychic body carries with it a behavior pattern from the most primitive states of mankind, and the pattern of cosmic order of which this energy of life consists.

There are seven important psychic centers or glands which receive and transform the psychic vibrations which we receive into grosser ones, enabling us to have a consciousness of them. These are the thyroid, the pituitary, the pineal, the adrenals or suprarenals, the thymus, the parathyroids, and the pancreas.

Psychic Experience—A phenomenon related to the higher levels of consciousness, beyond or behind those levels which respond to the physical world only. It may originate as a transmission from other minds or from attunement with cosmic forces and intelligences outside the individual organic being, or from a realization of the Cosmic Consciousness. To realize a psychic experience, the phenomenon has to be translated into terms of our sense faculties and associated ideas.

Psychic Plane—That plane or condition in the divine economy which has been provided by Divine Mind as the meeting place and field of action for the psychic bodies of the dwellers of the Cosmic (where dwell only those freed from functioning in physical bodies) and earth planes, wherein they may meet to their mutual benefit. It is here that our loved ones, who have cast off their earthly bodies, may be contacted. It is here that our thoughts, hopes, plans, and requests are projected along with our personalities. It is here that in response we receive the inspiration, guidance, direction, and illumination we are in search of when appealing to those whom we feel are better fitted and ready to give. It is here we, too, carry on our psychic work as our share in the uplifting of mankind. This plane may be reached at any time provided the purpose is pure and noble.

Psychology—From the common point of view is the science of mind, or the science which treats of the analysis of the laws of connection and condition of mental phenomena. From the Rosicrucian point of view it is more than that: It is the science which treats of the Soul, its attributes, mind, and consciousness and its purpose, place, and function, as well as its influence in our lives as regards habits, their formation, adoption, rejection, or transmutation, the action and interaction of the two phases of mind, the objective, including its subjective phase, and the subconscious, and many other forms of psychic and mental existence.

Reality—The Rosicrucians make a very definite distinction between realities and actualities. As stated under the term actual, actualities are the manifestations of the law and order of vibration. On the other hand, realities are real things to the subconsciousness or psychic consciousness, regardless of the true nature of actuality. We may easily select from our own experiences many instances of realization of realities which had no actuality in the purely objective world, and there are thousands of actualities in this strange world which up to now have brought no realization, or created no reality, in our consciousness. The important point with true mystics, however, is that we are affected by both actualities and realities, but as individual organisms we are most concerned with our realization of things. As far as our consciousness is concerned it is our realities which affect us—our realization of things—whether actual or not. Therefore, mystically, we live in the world of realities, or realization, and anything or any stimulus, impulse, urge, or inspiration which causes a realization in our consciousness is affecting us. It may not affect all, it may affect only one of us, but to the one affected, a reality of the consciousness is as actual as a material thing of the objective world. (See Actual.)

Reasoning—Deductive or structural reasoning is the function of the knowing mind; inductive or genetic reasoning is of the cognition. Induction is progressing from results to cause. Its weakness is in the process. Deduction consists of logical steps forward from the primary idea to its ultimate conclusion. Its weakness is in the premise. The objective reasons by all processes, the subconscious mind tends to reason deductively.

Reincarnation —The Rosicrucian doctrine of reincarnation is unique in some respects, yet it represents the one religious or ethical doctrine more universally held in the world today than any other, because the doctrine is nonsectarian, just, understandable, and revealing. In brief, it is that the soul of man, a divine essence, has as an attribute a memory and consciousness which constitute the personality of the individual ego. This personality is immortal, as the Soul Essence is immortal. The Soul Essence is unseparated from the universal cosmic or divine essence, only a part of which resides in each being during an earthly incarnation. The personality is, however, distinct and unique with each being. This personality manifests in the human body during its earthly life as the ego or character of the person, and at transition moves on and into the cosmic plane along with the Soul Essence. There it remains until the right time for another incarnation with the Soul Essence in another physical body, for more and different earthly experiences, which are added to the personality memory and remain intact there as the accumulating knowledge and wisdom of the inner self. Each personality may incarnate many times, the limit being unknown. Reincarnation should not be confused with transmigration: the personality never retrogrades or enters the bodies

of animals. The mystical doctrine underlying the necessity of reincarnation is the absorption of the soul personality into the Universal Mind, the process of perfecting the soul personality. Life by life through varied experiences the personality unfolds as we become more and more conscious of the cosmic intelligence within us. When our soul personality is equivalent to the soul force within us, then perfection is realized. We are then one with the consciousness of the Cosmic. At such a time, rebirth is no longer necessary.

Religion—The knowledge of God and God's ways leads to a real religious devotion on the part of Rosicrucians, and the mystic is always a true student of essential theology. But aside from uniting with sectarian churches in order to assist in the great work they are doing, the Rosicrucian is broad and tolerant in his religion and Ends God in everything and every one of His creatures.

Ritual—Ritualistic ceremonies are a combination of acts and symbols designed to induce a psychic and emotional experience. They are not an intellectual presentation of ideas intended to convey knowledge. Every mystical ritual is a well-organized psychological plot designed and tested to produce particular psychic and emotional experiences upon the part of the individual. Rituals are prescribed patterns of action to discipline and impress the mind with certain experiences to which importance has been attached.

Rosy Cross—An abstract or artificial symbol consisting of two elements. It symbolizes the physical body of man, with arms outstretched, facing the light. In the center, where the horizontal arm joins the verticle staff of the cross, is superimposed the rose. It represents the soul personality. The partially unfolded rose alludes to the evolving consciousness as it receives the greater light.

S

Sanctum—In each Lodge it is the place or condition located between the Shekinah and the East. It is kept holy and reserved exclusively for certain parts of sacred ceremonies or Convocations and must not be used for other purposes. Trespassing in the Sanctum is forbidden to all but the Master or Colombe and is a "serious and grievous error" because of the traditional reverence associated with it.

Sanctum, Home—A sanctuary within the home, a temple dedicated to the highest ideals and concepts of which one is capable. It is a refuge, a place to which you may retire from the usual conditions with which you are confronted, free from encumbrances and distractions. It is, as well, a little eminence upon which you can stand to look up to the Cosmic. A Sanctum is a place you have consecrated to your better self, to the God of your Heart, to your ideals. Entering it constitutes a rite of transition from the world of your usual thought to one of devotion, where you may receive and learn.

Shekinah (usually pronounced in the Occident as sheh-ky'-na)—It is from an old Egyptian word, though for centuries believed to be

a Hebrew word because it is found, in the Hebrew religion, to mean the same symbol. In the Rosicrucian Temples it is a plain white triangular altar, 76 cm (30 in.) high and 76 cm (30 in.) wide on each of its three sides. On each of its sides (painted a French gray, just off-white) is a raised gold cross; in the center of which is a red rose. The Shekinah may have a dark-red plush cloth (or one of red satin) covering it, and may have a glass top to protect it. Three candlesticks are placed on the Shekinah, one at each corner of the triangle. The Shekinah is usually placed for all Convocations with its points as follows: one point toward the West, the Matre's station; the second point toward the South, the Chaplain's station; and the third point toward the North, the station of the High Priestess, or, for Convocations, the Chantress. A small footstool may be placed before the Western point. The Shekinah represents the presence of the concentrated power of the holy assembly of the Cosmic in the center of the Temple. The Sanctum of each Temple is that area between the Shekinah and the East platform of the Temple.

Solar Plexus—One of the most important groups of a number of small plexuses, forming the largest plexus in the human body, located in the center of the abdomen. Its objective or physical functioning is very important, but far more important is its psychic or sympathetic functioning. It was believed by the ancients that this plexus was the center of the Soul in man, as the Sun is the center of the solar world; hence its name. Many systems of so-called mystical instruction pretend to tell us how to use the solar plexus for attaining certain results, but it requires many years of careful development of this plexus to make it of real value in true mystical work.

Soul—We wrongly speak of the Soul in man, or man's Soul, as though each human being—or each conscious organism, had within its body on this earth plane a separate and distinct something which we call Soul; and, therefore, in one hundred beings there would be one hundred Souls. This is wrong, indeed. There is but one Soul in the universe: the Soul of God, the living, vital consciousness of God. Within each living being there is this Universal Soul, and this is the Soul of man. It never ceases to be a part of the Universal Soul any more than the electricity in a series of electric lamps on one circuit is a separate amount of electricity, unconnected with the current flowing in all the lamps. The Soul in man is the God in man, and makes all mankind a part of God—brothers and sisters under the fatherhood of God. (See Personality.)

Soul Personality—The soul personality is self, and self is an expression of the Soul within the body of man. The Soul strives to manifest its divine nature and cosmic qualities through the objective consciousness of man. To the extent that man becomes conscious of his divine essence, the Soul, to that same extent does self, or the soul personality, conform to it. The soul personality, then, is the objective manifestation of one's response to the unseparated segment of the Universal Soul with which man is imbued. As man elevates his objective consciousness and becomes more sensitive to the influences of

Soul, the more his conduct, his thoughts, come to correspond with the spiritual nature of the Soul. The Soul is the perfect essence in man, for it is of the Universal Soul Essence which flows through all men alike. It is the personality, therefore, which man must gradually evolve. This evolution consists of seeking to have the soul personality conform absolutely to the nature of the Soul, to express objectively all of the inner spiritual qualities. (Also see Soul and Personality.)

Space—Like time, space depends upon the relation of our consciousness to other things. Space appears as an area between the objects which we perceive and ourselves; it falsely conveys the notion of having a definite reality. Unconsciously man has associated the duration of time with the extent of space. Because man measures time and space by means of his five senses, which are undependable, he is a victim of delusion or deception.

Spirit—Rosicrucians were the first mystics to make a distinct difference between Spirit and Soul. Spirit is a universal essence pervading all nature, even unconscious matter, and manifesting in many ways, such as cohesion, adhesion, etc. It is a divine, universal essence like Soul, but of a lower rate. Spirit Essence makes its first material manifestation in the formation of "electrons," which enter into the composition of atoms. Soul, as an essence, can manifest only psychically, because of its very high rate of vibrations.

Spiritualism—A religious doctrine attempting to use some of the psychic manifestations of Soul, some of Spirit, and some of personality, to sustain a theoretical scheme of the Soul's activities here on Earth, or in the Cosmic, after the change called transition. Spiritualism as a system or a "science" is taboo with Rosicrucians, for they know that the spiritualistic explanation of various phenomena is wrong, that most so-called mediums are unaware of the facts, know little or nothing of the laws and principles which they are attempting to demonstrate, and often bring serious situations and sorrows into the lives of those who are being guided by them. Furthermore, Rosicrucians know that departed "souls" do not return to Earth in a material form, that departed "spirits" do not make materialized demonstrations as entities, and that communications received from the Cosmic, or through the psychic bodies of living persons, are not always what they seem to be to the spiritualists.

Subconscious—The entire stream of consciousness with its various levels which are subliminal, that is, which lie behind our realizations of self and of the external world. The objective and subjective consciousness are but two of the levels of the stream of consciousness. The subconscious is directly related to the Cosmic or Universal Mind.

Subconscious Mind—The mind in man may not be dual—it may be but one mind, manifesting in two distinct domains at times, or in two phases, but since the manifestations group themselves into two distinct classes, called objective and subconscious, it has become common in psychology, and especially mysticism, to speak of the mind as being dual—subconscious and objective. There are certain aspects of the objective consciousness, when it is introverted, as recollection

and imagination which are called subjective. For the functionings of the sections of one mind, the student must refer to the many monographs of our studies, where all the details are carefully given.

Subjective—A conscious state having to do with conception, will, recollection, imagination, reason, etc.

Suggestion—A subtle command, a request, a wish, an order, or a law of one's objective mind to the subconscious. Mental suggestion means that through the power of will a certain desire is directed or concentrated upon a given point. When the objective consciousness is at rest, the subconscious is susceptible to suggestion. Autosuggestion is suggestion to oneself.

Summum Bonum—The supreme or highest good.

Symbolism—A symbol is a device or object such as a sign to represent an idea. A symbol is the embodiment of a thought which it concisely suggests. Symbols are of two general kinds, natural and artificial. Natural symbols are those things in nature which by experience have come to represent a phenomenon—such as dark clouds symbolizing a storm. Artificial symbols are those which men devise to depict some idea for a particular class of people or for universal acceptance. Symbols in mathematics and the different sciences fall in this category.

T

Thaumaturge—A miracle or a wonder-working. The practice of employing natural laws in such manner as to produce unusual phenomena. That which gives the appearance of invoking supernatural forces. Thaumaturgy is thus associated with primitive magic or religio-magic rites.

Therapeutics—Generally used to mean any system of healing or method for the alleviation of pain and physical suffering. The ancients, however, used the word in a mystical sense and a branch of the Rosicrucians in Egypt was known as the Therapeuti. This was a branch of the ancient Order, which at that time used various names in different lands to conceal the mystical part of its work. The same organization was known as the Essenes in the Holy Land, and researchers in the past century have revealed the fact that the Therapeuti, Essenes, and other similar organizations were a part of the Egyptian mystery schools, or arcane schools, in which the Rosicrucian organization had its birth.

Time—The duration of consciousness or the period that consciousness requires to be aware of the material things of life. Time is not a material element of the universe; it does not have an external reality. The objective consciousness and the inner or subconscious of man have a different sense of "duration." Time and space are illusions of the objective mind—but not illusions to be denied, for they are essential.

Transcendentalism—Concept of the realm beyond the awareness of the objective senses.

Transition—This term is generally used to indicate the condition called death in modern times, but since there is no death in natural law, any more than there is in the spiritual or so-called supernatural, the term is not only erroneous, but absolutely contradictory. The great change that takes place at the time when death is supposed to occur is, after all, a mere transition and transposition of the various component parts which when united constitute a living human being or a living entity of conscious matter. This transition consists of separation of the dual parts of man (soul and body) and also changes the constructive processes of the physical body which have been holding together, to some degree, the material elements composing it, permitting a new condition to exist whereby these elements begin to separate and return to their primary form of living matter. Therefore, it is truly a transition with no indication of death to any part of the former physical and spiritual expression.

Transmutation—This is not merely an alchemical term but a mystical term. Transmutation may be mental, as well as physical, and can be spiritual in a broad sense. Transmutation means the changing of the vibratory nature of a material element or the vibratory expression of a spiritual manifestation so that the manifestation or expression is different after the change. The ancient Rosicrucians claimed that it was possible to transmute the baser materials into the more refined. They demonstrated this in their day, as we do in our day, in a material or chemical world, by the transmutation of gross metals into gold or platinum, both of which represent a higher and more refined expression. But they also claimed as we demonstrate today, that the highest demonstration of transmutation and the more ideal, profitable, and noble demonstration is that which occupies our greatest attention in the world today as Rosicrucians: This is to transmute the baser elements of our physical natures into the highest ideal expressions and to transmute our desires and thoughts into living spiritual ideals. Thus all of us are striving to become true alchemists and demonstrate the real art of transmutation.

Triangle—A symbol of the numeral 3, and of perfection in the use of natural laws or in any undertaking. There are two phases or qualities of things. From their blending comes a third or new condition or state, having the attributes of both of the separate ones.

Truth—Whatever is real to us is truth. From the philosophical point of view, whatever lacks reality—that is, what we doubt or which cannot serve us as a point of knowledge—is not accepted as truth. Nothing is true merely because it has the sanction of tradition. Our experiences, to be real, must have the quality of intimacy; and if they are not real, we repeat, they do not constitute the truth to us. The intimacy of an experience must include one of two factors: first, the full extent of our powers of perception, our ability, for example, to see or hear something satisfactorily; second, it must have the full capacity of our reasoning. Certainly, if something is not clear to our sight or to our understanding, it is not real to us. Truth is not eternal, but is dressed in an ever-changing garb and that garb is our own consciousness and understanding. An eternal truth is but an appear-

ance of reality behind which man has not yet been able to detect change.

U

Universal Mind—See Divine Mind.

Universe—As Rosicrucians we think of the universe in terms of Absolute Being, that is, the totality of reality without either a beginning or an end, rather than as a complex of galaxies or universes which are a subsequent development of previous causes. In the Rosicrucian cosmogony the word "universe" signifies one cell, and, if the word is worthy of being used at all, it should indicate that all that exists is a universe. Mystically, the idea of one universe as a cell, with the Cosmic Consciousness and Intelligence within it, gives the foundation for the general idea of the unity of all existence and the brotherhood of all expressions of life.

V

Vestal Virgin—This is another term that has often been used in the place of the word Colombe (see explanation regarding Colombes in the forepart of the Manual regarding Officers of Lodges). It was believed for many years that the Vestal Virgins were an institution of Roman origin, but research has shown that in the arcane schools of Egypt, and in the earlier Rosicrucian Temples, there were one or more Vestal Virgins, who not only kept the important symbolical and holy fire in the Vestal Stand ever burning, but who also served in the ritualistic work and in the mystical exercises as a symbol of fire, light, life, and love, as well as the dove of consciousness. Hence the word Colombe, which means dove, is a symbol which has always had an important place in the mystical and religious ceremonies of ancient and modern times.

Vibrations—A periodic impulsion or wavelike oscillation of forces. Vibrations occur in solids, liquids, air, and in electromagnetic phenomena. According to Rosicrucian ontology, all being is vibratory.

Vibroturgy—The phenomenon of detecting the physical and mental qualities of a person from inanimate objects once in their possession. Objects acquire the magnetic influence of the human aura of those in whose possession they have been. These vibrations affect our autonomic nervous system. We become conscious of certain psychic impressions of the personalities whose auras were in contact with the material substance.

Visualization—Consists, mystically, of painting on the screen of consciousness an image, simple or complex. A person paints on the screen of his mind representations of that which he desires. In his mind's eye he gradually sees a picture of his desire. When he sees the picture as complete as he can visualize it, he dismisses it entirely from his mind. This transfers the image from the objective to the subconscious and thence outward into the Cosmic. The individual, by the positive thought transmitted to the Cosmic will be drawn to those

conditions and circumstances by which he will bring the visualization into reality in objective ways. The image on the screen must become so realistic as to be actualized.

Vital Life Force—This term is fully explained in the monographs and teachings of the various Degrees. It refers exclusively to that form of energy which vitalizes the human body at the moment of birth and which leaves the human body at the moment of transition. It has naught to do with Spirit Energy (which pervades all space and which does remain in the human body and is active after transition), which also exists in all living matter, whether conscious or not. The Vital Life Force is from the same source as all energy, but is of a distinct and different rate from that which constitutes Spirit Energy and Soul Essence. (See Spirit)

Vowel Sounds—The oldest form of ceremonial formula known to man employed sounds and syllables to bring about attunement. Spoken properly, these syllables produce unusual results. They start certain rates of vibrations in the room which harmonize with other vibrations of the universe and affect a certain condition connected with the aura. Vowel sounds produce vibrations that pass through one's own being to stimulate the psychic centers and to produce the beneficial effects explained in our teachings.

W

Wisdom—As distinguished from knowledge, it is understanding or the ability to apply knowledge. Knowledge is an accumulation of particular ideas, whereas wisdom is judgment in the exercise of the knowledge had. Wisdom may cause the rejection of certain previously acquired knowledge.

Work—The work of the Order consists of studying, testing, and teaching such laws of God and nature as will make our members masters in the holy temple (the physical body), and workers in the divine laboratory (nature's domains). This enables us to render more efficient help to those who do not know, and who need or require help and assistance. Each initiate has an obligation to serve, making it imperative to study and practice the laws taught in our Order, and to apply them at every opportune time.

Worship—A process by which the soul personality of man becomes consciously aware of its oneness with that of God. It gives him a realization of his part in the great scheme of all that is. Worship, never an end in itself, should be the evidence of man's desire to bring himself to a higher plane of realization of the ideal worshiped. Worship is essentially a process or condition which exists within man. While certain physical aids are valuable in creating a favorable environment, real worship must be carried on within the Sanctum of man's own being.

Explanatory

THE ROSICRUCIAN ORDER

Purpose and Work of the Order

Anticipating questions which may be asked by the readers of this book, the publishers take this opportunity to explain the purpose of this Order and how you may learn more about it.

There is only one universal Rosicrucian Order existing in the world today, united in its various jurisdictions, and having one Supreme Council in accordance with the original plan of the ancient Rosicrucian manifestoes. The Rosicrucian Order is not a religious or sectarian society.

This international organization retains the ancient traditions, teachings, principles, and practical helpfulness of the Order as founded centuries ago. It is known as the Ancient Mystical Order Rosae Crucis, which name, for popular use, is abbreviated into AMORC. The Headquarters of the Worldwide Jurisdiction (The Americas, Australasia, Europe, Africa, and Asia) is located at San Jose, California.

The Order is primarily a humanitarian movement, making for greater Health, Happiness, and Peace in people's earthly lives, for we are not concerned with any doctrine devoted to the interests of individuals living in an unknown, future state. The Work of Rosicrucians is to be done here and now, not that we have neither hope nor expectation of another life after this, but we know that the happiness of the future depends upon what we do today for others as well as for ourselves.

Secondly, our purposes are to enable men and women to live clean, normal, natural lives, as Nature intended, enjoying all the privileges of Nature, and all benefits and gifts equally with all of humanity; and to be free from the shackles of superstition, the limits of ignorance, and the sufferings of avoidable Karma.

The Work of the Order, using the word "work" in an official sense, consists of teaching, studying, and testing such Laws of God and Nature as make our Members Masters in the Holy Temple (the physical body), and Workers in the Divine Laboratory (Nature's domains). This is to enable our Members to render more efficient help to those who do not know, and who need or require help and assistance.

Therefore, the Order is a School, a College, a Fraternity, with a laboratory. The Members are students and workers. The graduates are unselfish servants of God to Humanity, efficiently educated, trained, and experienced, attuned with the mighty forces of the Cosmic or Divine Mind, and Masters of matter, space, and time. This makes them essentially Mystics, Adepts, and Magi—creators of their own destiny.

There are no other benefits or rights. All Members are pledged to give unselfish Service, without other hope or expectation of remuneration than to Evolve the Self and prepare for a greater Work.

The Rosicrucian Sanctum membership program offers a means of personal home study. Instructions are sent once a month in specially prepared weekly lectures and lessons, and contain a summary of the Rosicrucian principles with such a wealth of personal experiments, exercises, and tests as will make each Member highly proficient in the attainment of certain degrees of mastership. The lectures are under the direction of the Imperator's staff. These correspondence lessons and lectures comprise several Degrees. Each Degree has its own Initiation ritual, to be performed by the Member at home in his or her private home sanctum. Such rituals are not the elaborate rituals used in the Lodge Temples, but are simple and of practical benefit to the student.

If you are interested in knowing more of the history and present-day helpful offerings of the Rosicrucians, you may receive a free copy of the introductory booklet (previously called *Mastery of Life*), by sending a request to:

COMPILER'S DEDICATION

*I dedicate this book with the deepest
and most respectful esteem*

to

*(Mrs.) Gladys R. Lewis,
wife of the Imperator of*

A M O R C

P R E F A C E

This unique book contains a carefully selected group of prayers found in the personal and private writings of many well-known characters and in the liturgy of various religious movements.

They have been selected by Mr. Cihlar after a careful study of the prayers of all peoples and all nations in relation to the processes of mystical attunement and spiritual development.

Mr. Cihlar is a Rosicrucian, a high officer in this time-honored and beautiful body of Mystics, adhering to and promulgating the divine principles of earthly life.

From his sanctum in Vienna, Austria, his manuscript was sent to America that it might be published by the Western World branch of the Rosicrucian Order and given to the people of this new world with the hope that it may lead to a greater desire to pray and a greater efficiency in the manner of praying.

We trust that this hope will be fulfilled by the widespread distribution of this book and the daily reference to the prayers contained in it.

—The Publishers

INTRODUCTION

How To Pray

An examination of the prayers which appear on the following pages reveals the fact that the great mystics of all ages understood the real processes of prayer and knew how to pray.

Christians have the beautiful example of the prayer given to them by Jesus, the Christ, as a standard; and it is a most beautiful standard. But, long before the Christian era, the Mystics, the Avatars, and those through whom the Light of God shone among men, knew by divine inspiration how to pray. Examples of their prayers contained in these pages prove this fact.

The Mystic and those who were touched with the Light of Cosmic Consciousness had a very definite understanding of the processes of prayer. In the Western World today millions of persons have digressed very greatly from these processes, and, making their prayers long and filled with personal petitions, are often disappointed with the seeming lack of efficacy in their prayers or the inefficacy of praying. It may be permissible, therefore, briefly to outline or review true processes of prayer as understood by the Mystics.

According to the mystical viewpoint, praying to God is based upon the conviction that God is omnipotent in power, present everywhere, and willing to listen to our sincere petitions. This is all that we should have in mind when praying.

MYSTICS AT PRAYER

The average person in praying, however, has in mind some assumptions which mislead him in wording his prayers, and in approaching the very attitude of prayer. He assumes that God is not only omnipotent in power, omnipresent, and merciful, but that with all of His power, with all of His intelligence, with all of His mastership and control throughout the world, and with all His attunement with the beings which He created, *He is, nevertheless, ignorant of our wants and needs, and completely unacquainted with what we require in life in order to live abundantly and secure our everyday necessities.* Very often, the prayerful petitioner also assumes that God has given no thought to the outcome of certain contests in life or struggles between various factions of human beings, and is incapable of justly deciding such contests or awarding the victory to the right side. These false assumptions are responsible for the mistakes that are made in prayer and for the failure of prayers to be highly efficacious.

To go into prayer with the idea or belief that God does not know what we need or even what we want, or what is best for us, and that we must advise Him, argue with Him, stress our viewpoint and convince Him, *or at least urge Him*, to adopt our ideas and decisions and grant what we plead for, is to make the most serious mistake in the process of praying.

In the first place, the process of prayer is a transcendent method of *communion with God*. It is the most intimate, personal contact that human beings can make with their Father, the Creator of all beings. This sublime period of communion should be approached with clean thoughts, but most of all with a clear understanding of our privileges and

MYSTICS AT PRAYER

a total absence of any feeling that we have any *right* to petition God to grant our wishes.

The Mystics know, also, that true prayer is based upon a cosmic and spiritual law. That law is this: "Seek and ye shall find, knock and it shall be opened unto you." The ancient mystical injunction was that you must *ask* in order to receive, that you must proffer your hand in order to have the token given unto you, that you must *express* your desire before it will be answered. In all mystical processes, the expression of a sincere wish or desire opens wide the doorway to the reception of spiritual blessings. The asking in sincerity and the reverential expression of such wishes attunes the person with the one who has the power to give and, unless there is a meeting of the minds and a meeting of the consciousness of both persons, there can neither be attunement nor the passing from one to the other of the spiritual things desired.

To the Mystic, therefore, prayer is a meeting of the minds. It is not an occasion for personal petitioning, but for *spiritual communion*. It is a time when the soul within us and the deepest and most inner parts of our being sacredly, sincerely, and quietly speak to God and express the deepest wishes of our hearts and minds. The belief, therefore, that our human conception of our needs must be outlined in minute detail and expressed in great elaboration is also a misconception, since the thoughts moving us to prayer are easily transmitted to the divine consciousness during this communion, and the lips need only speak the fewest words of appreciation and thankfulness.

MYSTICS AT PRAYER

Prayers should not consist of a categorical representation of details or a long list of the things that we feel we want, but merely an expression of a desire for divine blessings. Have we any right to come before God in this privileged period of communion and demand, or even plead, that long life be given to us because we desire it and have come to the conclusion that it is the thing we should have? Is that not an indication that we have concluded that God may not have thought about our lives or may have ordained otherwise, or differently, and that we hope to change His mind or set aside His wise decrees because of our petition? Have we any right to come before the Creator of all, and say that we *want* this, that, or the other thing in a manner which intimates that we have outlined and decided upon such things as being *our judgment* of what is best for us?

If we lived in a great kingdom under a most just and merciful king, and were enjoying every benediction and blessing that the king could bestow upon the multitudes who lived under him, and we were notified that we had the *extraordinary privilege* of coming before this king in personal communion, and during this communion we might express our great desires in some form of prayerful petition, would we not hesitate for a long time in formulating our desires and arranging the expressions we would use? Undoubtedly, when the moment came to face the king and be permitted to open our lips and speak any words at all, we would first utter some words of profound thankfulness for the blessings we had enjoyed, and humbly add that *if it pleased the king*, we would be happy to continue enjoying the same blessings or possibly a few more. Not one of us would think of attempting to petition this king to grant us a long list of mate-

MYSTICS AT PRAYER

rial things, nor ask him to give us victory over others, or to make any exception in the universal standard of living, that we might rise above all our fellowmen in the kingdom; nor would we ask for many of the things that were most desired. We would be so happy in the fact that the king had granted us the privilege of communion that we would be moved to an attitude of thankfulness and an expression of appreciation for what we had, rather than entering into a demand for many other things.

How many go into prayer or come before the consciousness of God in Holy Communion in this attitude? How many cleanse their hands of debt by first thanking God for each individual blessing throughout the day? How many approach God in prayer in an attitude of profound appreciation for the very life and consciousness which animates their beings? After all, is not the gift of life the greatest blessing that God can give, and if we have it, have we not that which is greater than anything else we may desire? To ask for other things than life or to petition for anything other than the consciousness of God in our beings is to lift lesser things and insignificant things above the greatest.

From the mystical point of view, our prayers should be expressions of desires for a continuation of the benedictions God has already granted, and which He, in His supreme wisdom, has seen fit to bestow upon us. Ever uppermost in our minds should be the thought that, "Thy will, not mine be done." The simple expression of, "May it please the Father of us all that health may return to my body," is a more concise, honest, and worthy petition than one that demands or suggests that God change the law now in operation in our bodies, and set aside certain specific conditions and estab-

MYSTICS AT PRAYER

lish others, simply because this is the conclusion that we have reached, and is our greatest desire at the moment. A prayer for victory should not be asked by the vainglorious one who has reached the conclusion that he, above all others, should be the victorious one in a contest, and that God has made no decision and is waiting for man to present his conclusion.

By examining the prayers we will find that the Mystics always assumed that whatever might be their lot in life, and however the state of their health or the condition of the circumstances surrounding them, be they ill or fortunate, all things proceeded from God and were ordained by Him and, therefore, were just and in accordance with some law or some principle that was merciful and necessary to human experience. The fact that man in his finite and undeveloped understanding could not comprehend the reason for these experiences, or believe them to be wrong, unnecessary, or undesirable, does not warrant man in coming before God in the Holy Communion of prayer with the conclusion that his finite and undeveloped understanding is correct, and that God is in error or in ignorance of the conditions and needs to be advised and petitioned to make certain changes or to recall or undo His decrees.

As we shall see in the following pages, the Mystics approached God with the attitude that whatever was their lot in life would be gladly and silently accepted, and all pains and suffering endured, *if it be the will of God*. We find in many of these prayers the thought expressed that even the sufferings and trials, and the tribulations in life, were appreciated since they were unquestionably the result of God's

MYSTICS AT PRAYER

plan being worked out in the individual for some ultimate purpose unquestionably good and profitable.

The fact that we are not surrounded by any restrictions in regard to prayer and that God has given us the consciousness and ability, as well as the privilege, of approaching Him in Holy Communion and of attuning ourselves with Him at any hour of the day or any moment in our lives, is in itself a divine gift or concession that the Mystics valued above all things. Therefore, prayer was approached with thankfulness in every sense, and the first expression uttered by the lips was words of appreciation and thanks.

Learn *how to pray*, and make prayer the real pleasure of your life, for it brings you in closer contact with the great Ruler of the universe than you can ever approach Him while living on this earthly plane of existence. Make your Holy Communions frequent. Thank God for the breath of life and the return of consciousness when you arise in the morning. Silently thank Him for every morsel of food at mealtime. Express your appreciation for every pleasure, every worldly gift, every moment of happiness, and every rich reward of your efforts or the efforts of others. At the close of day, enter into Holy Communion of prayer and express your faith and trust in His divine guidance of your soul and consciousness throughout the night, and again be thankful for the day and all the opportunities it contained to carry out your desires and ambitions, and to enjoy the divine blessings. Make prayer the transcendental and sublime pleasure of your inner self—more important, more enjoyable, more uplifting and benefiting to your entire being than any other of your earthly experiences.

MYSTICS AT PRAYER

You will find many of the prayers on the following pages useful either in their precise wording, or as a guide and help in learning how to express the thoughts of your soul. The more you pray in the proper attitude, the more spiritually attuned you will become, and the richer will be the influx of the blessings from the Cosmic through the great love and mercy of God.

—H. Spencer Lewis.

The Temple of Alden,
Rosicrucian Park,
San Jose, California.

MYSTICS AT PRAYER

The Book of the Dead

O THOTH, let, I pray, THY face be towards me. Make THOU my word to be Maat* against my enemies, as THOU didst make the word of Osiris to be Maat against his enemies.

Δ Δ Δ

A Babylonian Prayer

O LORD, do not cast THY servant off!
In the deep watery morass he lies—take hold of his hand!
The sin that I have committed, change to grace!
The transgressions that I have committed, let the wind carry off!

Δ Δ Δ

Psalms 19:14

Let the words of my mouth and the meditation of my heart be acceptable in THY sight, O LORD, my strength and my redeemer.

Δ Δ Δ

Pericles

Grant that no word may fall from me against my will unfit for the present need.

Δ Δ Δ

*Maat is the Egyptian word for truth.

Syrian Clementine Liturgy

O GOD, WHO art the unsearchable abyss of peace, the ineffable sea of love, the fountain of blessings and the bestower of affection, Who sendest peace to those that receive it. Open to us the sea of THY love and water us with the plenteous streams from the riches of THY grace. Make us children of quietness and heirs of peace. Enkindle in us the fire of THY love; sow in us THY fear; strengthen our weakness by THY power; and bind us closely to THEE and to each in one firm bond of unity.

Δ Δ Δ

Emperor Julian

Point me the way that leadeth upward to THEE. For yonder regions where THOU dwellest are incomparably beautiful, if I may divine their beauty that is at THY side from the pleasantness of the Path which I have already traveled.

Δ Δ Δ

Jacobite Liturgy

O GOD, the FATHER, ORIGIN of DIVINITY, GOOD beyond all that is good, FAIR beyond all that is fair, in WHOM is calmness, peace and concord; bring us all back into an unity of love, which may bear some likeness to THY sublime nature.

MYSTICS AT PRAYER

Prayer of Manasses

O LORD ALMIGHTY, which art in heaven,
THOU GOD of our fathers,
Of Abraham and Isaac and Jacob
And of their righteous seed;
THOU who hast made the heaven and the earth,
With all the array thereof,
Who hast bound the sea by the word of THY
command;
Who hast shut up the Deep, and sealed it
With THY terrible and glorious Name.
Infinite and unsearchable in THY merciful
promise.

For THOU art the LORD MOST HIGH, of great
compassion, long-suffering and abundant in
mercy, and repentest THEE for the evils of men.

THOU, O LORD, according to THY great goodness
hast promised repentance and forgiveness to
them that have sinned against THEE, and in the
multitude of THY mercies hast appointed repentance
unto sinners, that they may be saved.

Δ Δ Δ

St. John Chrysostom

Thanks be to THEE, O GOD, for everything.

Δ Δ Δ

MYSTICS AT PRAYER

Zoroaster

With bended knees, with hand outstretched, I
pray to THEE, my LORD,
O INVISIBLE BENEVOLENT SPIRIT!
Vouchsafe to me in this hour of joy,
All righteousness of action, all wisdom of the
good mind,
That I may thereby bring joy to the Soul of
Creation.

Δ Δ Δ

Zoroaster

All that I ought to have thought and have not
thought;
All that I ought to have said and have not said;
All that I ought to have done and have not
done;
All that I ought not to have thought and yet
have thought;
All that I ought not to have spoken and yet
have spoken;
All that I ought not to have done and yet have
done;
For thoughts, words and works, pray I for for-
giveness, and repent of with penance.

Δ Δ Δ

Socrates

Grant me to be beautiful within, and all I have
of outward things to be at peace with those within.

MYSTICS AT PRAYER

Jesus Christ

Our FATHER, WHO art in heaven, hallowed be THY name, THY kingdom come, THY will be done on earth as it is done in heaven. Give us this day our daily bread, and forgive us our trespasses as we ought to forgive those that trespass against us. Lead us when in temptation, but deliver us from evil. Amen.

Δ Δ Δ

Liturgy of the Greek Church

That which we know not, do THOU reveal; that which is wanting in us do THOU fill up; in that which we know, do THOU strengthen us.

Δ Δ Δ

Liturgy of St. Mark

We give THEE thanks—yea, more than thanks—O LORD our GOD, for all THY goodness at all times and in all places.

Δ Δ Δ

St. Ephrem the Syrian

THOU hast quieted those which were in confusion. Praise to THY calmness, praise to THY reconciliation, O LORD GOD.

Δ Δ Δ

MYSTICS AT PRAYER

St. Basil

Steer THOU the vessel of our life towards THYSELF, THOU tranquil Haven of all storm-tossed souls. Show us the course wherein we should go.

Δ Δ Δ

St. John Chrysostom

Into THY guidance and care, O LORD, THOU LOVER of Man, we entrust all our life and hope.

Δ Δ Δ

St. Patrick

May the Strength of GOD pilot us. May the Power of GOD preserve us. May the Wisdom of GOD instruct us. May the Way of GOD direct us.

Δ Δ Δ

St. Blasius

May God, the uncreated ABYSS, vouchsafe to call unto HIMSELF our Spirit, the created abyss, and make it one with HIM, that our spirit, plunged in the deep sea of the GODHEAD, may happily lose itself in the Spirit of GOD.

Δ Δ Δ

Synesius

O UNITY, THEE I sing by voices or by silence; for both are alike significant to THEE.

MYSTICS AT PRAYER

Synesius

I hymn THEE, O BLESSED ONE, by means of voice, and I hymn THEE, O BLESSED ONE, by means of silence; for THOU perceivest as much from silence spiritual as from voice.

Δ Δ Δ

Synesius

Behold THY suppliant attempting to mount; enlighten me, enable my wings, relax my fetters. May I escape from the body to THY bosom whence flows the Soul's source. Restore me to the Spring whence I was poured forth. Grant that beneath the ordering of my SIRE, I may sing in union with the ROYAL CHOIR. Let me mingle with the Light, and never more sink to earth.

Δ Δ Δ

Sarum Breviary

ALMIGHTY GOD, we invoke THEE, the fountain of everlasting Light, and entreat THEE to send forth THY truth into our hearts, and to pour upon us the glory of THY Brightness.

Δ Δ Δ

MYSTICS AT PRAYER

Gelasian Sacramentary

O GOD of unchangeable Power, let the whole world feel and see that things which were cast down are being raised up, that those which had grown old are being made new and that all things are returning to perfection.

Δ Δ Δ

Leonine Sacramentary

Grant us, O LORD, not to mind earthly things, but to love things heavenly; and even now while we are placed among things that are passing away, to cleave to those that shall abide.

Δ Δ Δ

St. Augustine

Come LORD and work. Arouse us and incite. Kindle us, sweep us onwards. Be fragrant as flowers, sweet as honey. Teach us to love and to run.

Δ Δ Δ

St. Augustine

Grant us to know THEE and love THEE and rejoice in THEE. And if we cannot do these perfectly in this life, let us at least advance to higher degrees every day till we can come to do them to perfection.

Δ Δ Δ

MYSTICS AT PRAYER

St. Augustine

LORD, teach me to know THEE, and to know myself.

Δ Δ Δ

St. Augustine

We seek THY face, turn THY face unto us, and show us THY glory. Then shall our longing be satisfied, and our peace shall be perfect.

Δ Δ Δ

St. Augustine

LORD, when I look upon mine own life it seems THOU hast led me so carefully, so tenderly, THOU canst have attended to none else; but when I see how wonderfully THOU hast led the world and art leading it, I am amazed that THOU hast had time to attend to such as I.

Δ Δ Δ

St. Augustine

Take THOU possession of us. We give our whole selves to THEE, make known to us what THOU requirest of us, and we will accomplish it.

Δ Δ Δ

MYSTICS AT PRAYER

St. Augustine

O GOD, where was I wandering to seek THEE?
O most infinite Beauty, I sought THEE without,
and THOU wast in the midst of my heart.

Δ Δ Δ

Coptic Apocrypha

Glory be to THEE, PROPITIATOR.
Glory be to THEE, UNDYING ONE.
Glory be to THEE, KING of PEACE.
Glory be to THEE, WHO was not born.
Glory be to THEE, the INCORRUPTIBLE.
Glory be to THEE, KING of GLORY.
Glory be to THEE, the HEAD of the UNIVERSE.
Glory be to THEE, HOLY and PERFECT ONE.
Glory be to THEE, THOU TREASURY of
GLORY.
Glory be to THEE, THOU true Light.
Glory be to THEE, DELIVERER of the
UNIVERSE.
Glory be to THEE, THOU WHO art indeed the
GOOD ONE.
Glory be to THEE, ALPHA of the UNIVERSE.
Glory be to THEE, LIFE of the UNIVERSE.
O SWEET NAME.
O THOU, WHO art at the head of the Universe.
O THOU Beginning and End of everything
Amen.

Δ Δ Δ

MYSTICS AT PRAYER

St. Anselm

O THOU plenteous Source of every good and perfect gift, shed abroad the cheering light of THY sevenfold grace over our hearts.

Δ Δ Δ

Collect from the 6th Century

O GOD who hast folded back the mantle of the night to clothe us in the glory of the day, chase from our hearts all gloomy thoughts, and make us glad with the brightness of hope that we may effectively aspire to unknown virtues.

Δ Δ Δ

Alcuin

O ETERNAL LIGHT, shine into our hearts. O ETERNAL GOODNESS, deliver us from evil. O ETERNAL POWER, be THOU our support. ETERNAL WISDOM, scatter the darkness of our ignorance. ETERNAL PITY, have mercy upon us.

Δ Δ Δ

Johannes Scotus Erigena

O THOU, WHO art the everlasting essence of things beyond space and time and yet within them; THOU WHO transcendest yet pervadest all things; manifest THYSELF to us, feeling after THEE, seeking THEE in the shades of ignorance, yet seeking nothing beside THEE.

MYSTICS AT PRAYER

St. Anselm

Pierce with the arrows of THY love the secret chambers of the inner man. Let the entrance of THY healthful flames set the sluggish heart alight; and the burning fire of THY sacred inspiration enlighten it.

Δ Δ Δ

St. Hildegard

OMNIPOTENT FATHER, out of THEE flows a fountain in fiery heat; lead THY sons by a favourable wind through the mystic waters.

Δ Δ Δ

St. Bernard of Clairvaux

I love THEE because I love; I love that I may love.

Δ Δ Δ

St. Bernard of Clairvaux

In what blaze of Glory dost THOU rise, O SUN OF RIGHTEOUSNESS, from the heart of the earth, after THY setting!

In what resplendent Vesture, O KING of GLORY, dost THOU enter again the highest heaven!

At the sight of all these marvels, how can I do otherwise than cry: "All my bones shall say, 'LORD, who is like unto THEE?'"

MYSTICS AT PRAYER

St. Bernard of Clairvaux

If THOU, LORD, art so good to those who seek,
what shall THY goodness be to those who find?

Δ Δ Δ

St. Thomas Aquinas

Give me, O LORD, a steadfast heart, which no unworthy affection may drag downwards; give me an unconquered heart, which no tribulation can wear out; give me an upright heart, which no unworthy purpose may tempt aside.

Bestow upon me also, O LORD, my GOD, understanding to know THEE, diligence to seek THEE, wisdom to find THEE, and a faithfulness that may finally embrace THEE.

Δ Δ Δ

St. Thomas Aquinas

Grant me fervently to desire, wisely to search out, and perfectly to fulfill all that is well-pleasing unto THEE.

Δ Δ Δ

St. Richard

May we know THEE more clearly, love THEE more dearly, and follow THEE more nearly.

Δ Δ Δ

MYSTICS AT PRAYER

Dame Gertrude More

O my GOD, let me walk in the way of love which knoweth not how to seek self in anything whatsoever. Let this love wholly possess my soul and heart, which, I beseech THEE may live and move only in, and out of, a pure and sincere love to THEE. Let me love THEE for THYSELF, and nothing else but in THEE and for THEE. Let me love nothing instead of THEE; for to give all for love is a most sweet bargain.

Δ Δ Δ

Ali Bin Uthman

THY will be done, O my LORD and MASTER.
O THOU who art my Spirit's treasure MEANING.
O ESSENCE of my being, O GOAL of my desire,
O my SPEECH and HINTS and my GESTURES.
O all of my all, O my HEARING and my SIGHT.
O my WHOLE and my ELEMENT and my PARTICLES.

Δ Δ Δ

Mozarabic Liturgy

Do THOU meet us while we walk in the Way and long to reach the Country; so that following THY light we may keep the Way of righteousness and never wander away into the darkness of this world's night.

Pierre Teilhard de Chardin

Give me to recognize in other men, Lord God,
the radiance of your own face. The irresistible
light of your eyes, shining in the depths of things,
has already driven me into undertaking the work I
had to do and facing the difficulties I had to over-
come: grant me now to see you also and above all
in the most inward, most perfect, most remote lev-
els of the souls of my brother-men.

Δ Δ Δ

Jalal-ud-din-Rumi

O GOD, THY grace is the proper object of
our desire;
To couple others with THEE is not proper.
Nothing is bitterer than severance from THEE,
Without THY shelter there is naught but
perplexity.
Our worldly goods rob us of our heavenly goods,
Our body rends the garment of our soul.
Our hands, as it were, prey on our feet;
Without reliance on THEE how can we live?
And if the soul escapes these great perils,
It is made captive as a victim of misfortunes and
fears
Inasmuch as when the soul lacks union with the
Beloved,
It abides for ever blind and darkened by itself.

Δ Δ Δ

MYSTICS AT PRAYER

Dante Alighieri

Give us this day the daily manna, without which through this rough desert he backward goes who toils most to go on.

Δ Δ Δ

Sufi Invocation

Praise be to THEE, O HIDDEN ONE and MANIFESTED ONE. Praise be to THY Glory, to THY Might, to THY Power, and to THY Great Skill.

O ALLAH, to THEE all greatness belongs. O THOU who possessest the Power and Beauty and Perfection. THOU art the Spirit of All.

Praise to THEE, O SOVEREIGN of all Monarchs; to THEE, O MASTER of all affairs; to THEE, O CONTROLLER of all things; to THEE, RULER of all BEINGS.

THOU art free from death, free from birth and free from all limitations. O THOU ETERNAL ONE, THOU art free from all conditions, pure from all things. O ALLAH, THOU art the GOD of Souls on earth; THOU art the LORD of Hosts in the Heavens.

Δ Δ Δ

Johannes Tauler

We honour and glorify THY unspeakable mystery with holy reverence and silence.

Δ Δ Δ

MYSTICS AT PRAYER

Johannes Tauler

As the sun-flower ever turning
To the mighty sun,
With the faithfulness of fealty
Following only one—
So make me, LORD, to THEE.

Δ Δ Δ

Jan van Ruysbroeck

O LORD, I gasp in my desire for THEE, yet
can I not consume THEE. The more I eat—the
fiercer is my hunger; the more I drink—the greater
is my thirst. I follow after that which flieth from
me, and as I follow, my desire groweth greater.

Δ Δ Δ

Jan van Ruysbroeck

O LORD, THOU desirest my spirit in the in-
ward parts, that I may see THEE as THOU seest
me, and love THEE as THOU lovest me.

Δ Δ Δ

Angela of Foligno

O SUPREME GOOD, THOU hast designed to
make us know that THOU art Love, and makest us
in love with that love; wherefore they who come
before THY face shall be rewarded according unto
their love, and there is nothing which leadeth the
contemplative unto contemplation saving true love
alone.

MYSTICS AT PRAYER

Heinrich Suso

THOU hast granted my heart's desire—
Most blest of the blessed is he
Who findeth no rest and no sweetness
Till he rests, O LORD, in THEE.

Δ Δ Δ

Heinrich Suso

It is meet that I should be enamoured of THEE,
and whatever I shall know to be THY dearest will
that I will always do.

Δ Δ Δ

Heinrich Suso

Gentle LORD, cause some sweet fruit of good
instruction to issue forth from our sharp thorns of
sufferings, that we may suffer more patiently, and
be better able to offer up our sufferings to THY
praise and glory.

Δ Δ Δ

Andrewes

Unto all men everywhere give THY grace and
THY blessing.

Δ Δ Δ

St. Catherine of Siena

Punish me for my sins in this finite Life.

St. Catherine of Siena

O LORD, I pray for all those whom THOU hast given me, whom I love with a special love and whom THOU hast made one thing with me. For they are my consolation and for THY sake I desire to see them running in the sweet and narrow way dead to self and pure from all judgment and murmuring against their neighbour. May they all attain to THEE, O ETERNAL FATHER, to THEE who art their final end.

Δ Δ Δ

St. Bernardino

O GOD, acknowledge what is THINE in us, and take away from us all that is not THINE, for THY honour and glory.

Δ Δ Δ

Lady Julian of Norwich

GOD, of THY Goodness, give me THYSELF, for THOU art enough to me, and may I nothing ask that is less, that may be full worship to THEE; and if I ask anything that is less, ever me wanteth,—but only in THEE I have all.

Δ Δ Δ

MYSTICS AT PRAYER

Thomas a Kempis

Praised be THY name, not mine; magnified be
THY work, not mine; blessed be THY Holy Name,
but to me let no part of man's praise be given.

Δ Δ Δ

Thomas a Kempis

Grant me, O LORD, heavenly wisdom, that I
may learn above all things to seek and to find
THEE; above all things to relish and to love THEE;
and to think of all other things as being what in-
deed they are, at the disposal of THY wisdom.

Δ Δ Δ

Thomas a Kempis

O LORD, THOU knowest what is the better
Way, let this or that be done, as THOU shalt please.
Give what THOU wilt, and how much THOU wilt,
and when THOU wilt. Deal with me as THOU
knowest, and as best pleaseth THEE, and is most
for THY honour. Set me where THOU wilt, and
deal with me in all things just as THOU wilt. I am
in THY hand; turn me round and turn me back
again, even as a wheel. Behold I am THY servant,
prepared for all things; for I desire not to live unto
myself, but unto THEE; and oh that I could do it
worthy and perfectly.

Δ Δ Δ

MYSTICS AT PRAYER

Thomas a Kempis

O LORD, if only my will may remain right and firm towards THEE, do with me whatsoever it shall please THEE. For it cannot be anything but good whatsoever THOU shalt do with me.

If THOU willest me to be in darkness, be THOU blessed; and if THOU willest me to be in light be THOU again blessed.

If THOU vouchsafe to comfort me, be THOU blessed; and if THOU willest me to be afflicted, be THOU ever equally blessed.

Δ Δ Δ

Girolamo Savonarola

LORD, we pray not for tranquillity, nor that our tribulations may cease; we pray for THY Spirit and THY love that THOU grant us strength and grace to overcome adversity.

Δ Δ Δ

St. Ignatius Loyola

Teach us, good LORD, to serve THEE as THOU deservest; to give and not to count the cost; to fight and not to heed the wounds; to toil and not to seek for rest; to labour and not to ask for any reward, save that of knowing that we do THY will.

Δ Δ Δ

MYSTICS AT PRAYER

The Friend of God

O LORD, I wish for the love of THEE to keep from all sin today. Help me this day to do all I do to THY glory and according to THY dear will, whether my nature likes it or not.

Δ Δ Δ

Nicholas of Cusa

Restless is my heart, O LORD, because THY love hath inflamed it with such a desire that it cannot rest but in THEE alone.

Δ Δ Δ

Desiderius Erasmus

Vouchsafe to bestow upon us some portion of THY heavenly Bread, day by day, that the hunger and thirst for earthly things may diminish in us continually.

Δ Δ Δ

St. Teresa

Govern all by THY wisdom, O LORD, so that my soul may always be serving THEE as THOU dost will and not as I may choose. Let me die to myself, so that I may serve THEE; let me live to THEE, who in THYSELF art the true life.

Δ Δ Δ

MYSTICS AT PRAYER

St. Teresa

Do not punish me by granting that which I wish or ask, if it offend THY love which would always live in me.

Δ Δ Δ

St. Ignatius Loyola

Take, O LORD, and receive my entire liberty, my memory, my understanding, and my whole will. All that I am, all that I have, THOU hast given me, and I give it back again to THEE to be disposed of according to THY good pleasure. Give me only THY love and THY grace; with THEE I am rich enough, nor do I ask for aught besides.

Δ Δ Δ

St. John of the Cross

O sweetest Love of GOD, too little known; he who has found THEE is at rest.

Everywhere with THEE, O my GOD. O my love, all for THEE, nothing for me.

O my GOD, how sweet to me THY presence, Who art the SOVEREIGN GOOD. O LORD, I beseech THEE, leave me not for a moment, because I know not the value of my soul.

Δ Δ Δ

MYSTICS AT PRAYER

St. Francis of Sales

O GOD, how admirable is that which we see;
but O GOD, how much more so is that which we
cannot see.

Δ Δ Δ

St. John of the Cross

GOD of my life! nothing can make me glad,
For all my gladness springs from sight of THEE,
And faileth me because I have THEE not.
If 'tis THY will, my GOD, I live forlorn,
I'll take my longings even for my comfort
While dwelling in this world.
When shall there dawn that most delicious day,
When, O my Glory, I may joy in THEE
Delivered from this body's heavy load?
Yet if my life can bring increase of glory
To THINE ETERNAL BEING,
In truth I do not wish that it should end.

Δ Δ Δ

Book of Christian Prayers

O Light which does lighten every man that
cometh into the world, without whom all is most
dark darkness, by whom all things are most
splendent; Lighten our minds, that we may only
see those things that please THEE and may be
blinded to all other things.

Δ Δ Δ

MYSTICS AT PRAYER

Benjamin Whichcote

O GOD of the spirits of all flesh, naturalize us to Heaven and reconcile us to all the things of that high estate, that so we may not drudge in the world, nor act in a slavish spirit in ways of Religion, but that we may serve THEE with ingenuity of mind and with freedom of spirit, as those that are set at liberty.

Δ Δ Δ

John Norden

We are forced, O FATHER, to seek THEE daily, and THOU offerest THYSELF daily to be found; whensoever we seek THEE we find THEE, in the house, in the fields, in the Temple, and in the highway.

Δ Δ Δ

Sir Thomas Browne

Defend me, O GOD, from myself.

Δ Δ Δ

Jacob Boehme

In THEE would we lose ourselves utterly; do in us what THOU wilt.

Δ Δ Δ

MYSTICS AT PRAYER

Jacob Boehme

O THOU great incomprehensible GOD. Who fillest all, be THOU indeed my heaven. Let my spirit be indeed the music and the joy of THY spirit. Do THOU make music in me and may I make harmony in the Divine Kingdom of THY joy, in the great love of GOD, in the wonders of THY glory and splendour, in the company of THY holy angelic harmonies.

Δ Δ Δ

Jeremy Taylor

Guide me, O LORD, in all the changes and varieties of the world; that in all things that shall happen, I may have an evenness and tranquillity of spirit; that my soul may be wholly resigned to THY divinest will and pleasure, never murmuring at THY gentle chastisements and fatherly correction.

Δ Δ Δ

Jeremy Taylor

THOU, O LORD, art our Defender, THOU art our Worship, and the Lifter-up of our heads.

Δ Δ Δ

Blaise Pascal

LORD, I give THEE all.

MYSTICS AT PRAYER

Richard Baxter

O THOU Spirit of Life, breathe upon us THY
graces in us, take us by the hand and lift us from
earth.

Δ Δ Δ

Nathanael Culverwel

O my GOD, I'll bless THEE for those eternal
treasures that are in THY self, though I should
never taste of them.

Δ Δ Δ

Thomas Elwood

O that mine eyes might closed be
To what concerns me not to see;
That deafness might possess mine ear
To what concerns me not to hear;
That truth my tongue might always tie
From ever speaking foolishly;
That no vain thing might ever rest,
Or be conceived within my breast;
That by each deed and word and thought
Glory may to God be brought!
But what are wishes? LORD, mine eyes
On THEE is fixed, to THEE I cry;
Wash, LORD, and purify my heart,
And make it clean in every part.
And when 'tis clean, LORD, keep it, too,
For that is more than I can do.

MYSTICS AT PRAYER

Thomas Traherne

O give me grace to see THY face and be a constant mirror of ETERNITY.

Δ Δ Δ

Madame Guyon

THY creatures wrong THEE, O THOU
SOV'REIGN GOOD.
THOU art not lov'd because not understood.

Δ Δ Δ

Miguel de Molinos

Give me leave, O LORD, to lament our blindness and ingratitude. We all live deceived, seeking the foolish world, and forsaking THEE Who art our GOD. We forsake THEE, the fountain of Living Waters, for the foul mire of the world.

Δ Δ Δ

John Wesley

O LORD, let us not live to be useless.

Δ Δ Δ

François de Salignac Fenelon

All we ask is to die rather than live unfaithful to THEE. Give us not life, if we shall love it too well.

François de Salignac Fenelon

Give to us, THY children, that which we ourselves know not to ask. We would have no other desire than to accomplish THY will. Teach us to pray, pray THOU in us.

Δ Δ Δ

François de Salignac Fenelon

O my GOD, preserve me from the fatal slavery that men madly call liberty. With THEE alone is freedom. It is THY truth that makes us free. To serve THEE is true dominion.

Δ Δ Δ

François de Salignac Fenelon

LORD, I know not what I ought to ask of THEE; THOU only knowest what I need; THOU lovest me better than I know how to love myself. O FATHER, give to THY child that which he himself knows not how to ask.

Δ Δ Δ

François de Salignac Fenelon

ALMIGHTY GOD, grant me THY grace to be faithful in action, and not anxious about success. My only concern is to do THY will, and to lose myself in THEE when engaged in duty. It is for THEE to give my weak efforts such fruits as THOU seest fit, none, if such be THY pleasure.

MYSTICS AT PRAYER

Brother Lawrence

O LORD, the sense of THY love well-nigh overwhelms me. If it be THY will, bestow these many tokens of THY loving kindness on those who know THEE not, to draw them to THY service.

Δ Δ Δ

Brother Lawrence

O Loving-Kindness so old and still so new, I have been too late in loving THEE.

O LORD, enlarge the chambers of my heart that I may find room for THY love.

Sustain me by THY Power, lest the fire of THY love consume me.

Δ Δ Δ

John Henry Newman

I am born to serve THEE, to be THINE, to be THY instrument. Let me be THY blind instrument. I ask not to see, ask not to know; I ask simply to be used.

Δ Δ Δ

Gerhard Tersteegen

Draw near to my heart and inflame it. Touch my uncircumcised lips with a burning coal from THINE altar, that I may not speak of THINE ardent love in a cold or feeble manner.

MYSTICS AT PRAYER

Gerhard Tersteegen

Let THY love so warm our souls, O LORD, that we may gladly surrender ourselves with all we are and have unto THEE. Let THY love fall as fire from heaven upon the altar of our hearts, and teach us to guard it heedfully by continual devotion and quietness of mind.

Δ Δ Δ

Benjamin Jenks

O LORD, renew our souls and draw our hearts unto THYSELF, that our work may not be to us a burden but a delight, and give us such a mighty love for THEE as may sweeten all our obedience. O! let us not serve THEE with the spirit of bondage as slaves, but with the cheerfulness and gladness of children, delighting ourselves in THEE and rejoicing in THY work.

Δ Δ Δ

Blaise Palma

O ADMIRABLE WISDOM, that circlest all eternity, receivest into THYSELF all immensity, and drawest to THYSELF all infinity; from the inexhaustible fountain of THY light, shed some ray into my soul that I may more and more love whatever tends to THY glory and honour.

Δ Δ Δ

MYSTICS AT PRAYER

Melchior Ritter

O GOD, in THEE alone can our wearied souls
have full satisfaction and rest, and in THY love is
the highest joy. LORD, if we have THEE, we have
enough.

Δ Δ Δ

William Blake

Pour upon us THY Spirit of meekness and love.
Annihilate selfhood in us. Be THOU all our life.

Δ Δ Δ

Collect from the 18th Century

Grant us grace to rest from all sinful deeds
and thoughts, to surrender ourselves wholly unto
THEE, and keep our souls still before THEE like a
still lake, so that the beams of THY grace may be
mirrored therein, and may kindle in our hearts the
glow of faith and love and prayer.

Δ Δ Δ

John Greenleaf Whittier

Dear GOD and FATHER of us all, forgive our
faith in cruel lies; forgive the blindness that de-
nies; forgive THY creature when he takes, for the
all-perfect Love THOU art, some grim creation of
his heart.

Δ Δ Δ

MYSTICS AT PRAYER

James Martineau

O GOD, Who hast commanded that no man should be idle, give us grace to employ all our talents and faculties in the service appointed for us; that, whatsoever our hand findeth to do, we may do it with our might. Cheerfully may we go on in the road which THOU hast marked out, not desiring too earnestly that it should be either more smooth or more wide; but daily seeking our way by THY light, may we trust ourselves and the issue of our journey, to THEE the Fountain of Joy, and sing songs of praise as we go along.

Δ Δ Δ

Oliver Wendell Holmes

LORD, what am I, that with unceasing care
THOU didst seek after me?

Δ Δ Δ

Rabindranath Tagore

If THOU speakest not, I will fill my heart with
THY silence and endure it. I will keep still and
wait like the night with starry vigil and its head
bent low with patience. The morning will surely
come, the darkness will vanish, and THY voice
pour down in golden streams, breaking through
the sky.

Δ Δ Δ

MYSTICS AT PRAYER

Charles Kingsley

Exalt us with THEE, O LORD, to know the mystery of life, that we may use the earthly as the appointed expression and type of the heavenly, and by using to THY glory the natural body may befit it to be exalted to the use of the spiritual body.

Δ Δ Δ

Christina Georgina Rossetti

O LORD, make us we implore THEE, so to love THEE that THOU mayest be to us a Fire of Love, purifying and not destroying.

Δ Δ Δ

Christina Georgina Rossetti

Love me in sinners and saints,
In each who needs or faints—
LORD, I will love THEE as I can
In every brother man.

Δ Δ Δ

Hindu Prayer

They who never ask anything but simply love,
THOU in their heart abidest for ever, for this is
THY very home.

Δ Δ Δ

MYSTICS AT PRAYER

Hindu Prayer

Out of the unreal, lead me to the Real.
Out of the Darkness, lead me into the Light.
Out of Death, lead me to Deathlessness.

Δ Δ Δ

Rabindranath Tagore

Give me the strength lightly to bear
 my joys and sorrows,
Give me the strength to make my love
 fruitful in service.
Give me the strength to raise my mind
 high above daily trifles,
And give me the strength to surrender
 my strength to THY will with love.

Δ Δ Δ

I. Wright Beach

Heavenly FATHER, THOU has healed me
through the sweet restoring influence of divine
love and I feel THY rich, new life now coursing
through my entire body.

Δ Δ Δ

Brihtnoth

O GOD, I thank THEE for all the joy I have
had in life.

Δ Δ Δ

MYSTICS AT PRAYER

Rudyard Kipling

FATHER in heaven, who lovest all,
O help THY children when they call;
That they may build from age to age,
An undefiled heritage.
Teach us to bear THY yoke in youth,
With steadiness and careful truth;
That, in our time, THY grace may give
The truth whereby the nations live.
Teach us to rule ourselves always
Controlled and cleanly, night and day,
That we may bring, if need arise,
No maimed or worthless sacrifice.
Teach us to look in all our ends
On THEE for judge, and not our friends,
That we, with THEE, may walk uncowed
By fear or favor of the crowd.
Teach us the strength that cannot seek,
By deed or thought to hurt the weak;
That under THEE, we may possess
THY strength, to succor man's distress.
Teach us delight in simple things,
And mirth that had no bitter stings;
Forgiveness free of evil done,
And love to all men 'neath the sun.

Δ Δ Δ

John Colet

Let not our sins be a cloud between THEE and
us.

MYSTICS AT PRAYER

Katherine Augusta Tingley

O my DIVINITY! THOU dost blend with the
earth and fashion for THYSELF temples of mighty
Power.

O my DIVINITY! THOU livest in the heart-life
of all things and dost radiate a Golden Light that
shineth forever and doth illumine even the dark-
est corners of the earth.

O my DIVINITY! Blend THOU with me that
form the corruptible I may become Incorruptible;
that from imperfection I may become Perfection,
that from darkness I may go forth in Light.

Δ Δ Δ

Golden Words of N.H.D.

Let not my dreams of Things I hold most dear
Tie me to earth, but with a vision clear,
Help me to build this day, dear LORD
with THEE,

The things which last through all eternity.

Attune my ears to hear THY message, LORD;
Inspire my lips to speak alone THY word.

Veil THOU mine eyes from things I
should not see,
Help me to leave my burdens all with THEE.

Δ Δ Δ

M.S.F.

Dear FATHER, we thank THEE for this beauti-
ful world.

MYSTICS AT PRAYER

Gorsedd Prayer

Grant, GOD, protection
And in protection, strength
And in strength, understanding
And in understanding, knowledge
And in knowledge, the knowledge of the just,
And in the knowledge of the just, the love of it,
And in the love of it, the love of all existences.
And in the love of all existences, the love of GOD,
GOD and all GOODNESS.

Δ Δ Δ

John White Chadwick

I do not pray because I would,
I pray because I must.
There's no beseeching in my prayer,
But thankfulness and trust.
And THOU wilt hear the thought I mean
And not the word I say,
Wilt hear the thanks between the words
That only seem to pray.

Δ Δ Δ

Sister E. T. Cawdrey

O GOD, THINE is the kingdom, the power and
the Glory, for ever and ever. Amen.

Δ Δ Δ

MYSTICS AT PRAYER

Sister E. T. Cawdry

Let us go into the silence; O GOD, our Heavenly FATHER, before THY altar of love we come and in praise and adoration we lift up our voices unto THEE. O THOU great living light of the universe, we THY children ask THEE to grant unto us THY richest blessing and to remove all shadow of doubt from our minds as regards the life that awaiteth each one of us when we too shall pass through the gates called death. But we thank THEE, O GOD, that the light of heaven has illumined our Pathway and that THOU hast given unto us this light that indeed is a living power to sustain and to uphold us at all times.

Δ Δ Δ

Kenneth Sylvan Guthrie

O HEAVENLY WISDOM, Who art the glorious fullness of the rays of Infinite Love and Righteousness, Piety and Justice, Tenderness and Stern Reproof, we supplicate for THY control. We would not willingly continue stumbling on in our old way. Our hearts are open to THY view; to the utmost are we willing to do Thy will. O that we might not be left unknowingly to leave the Narrow Way! Not because of the suffering which we willingly accept from THY dear Hand, but the withdrawing of THY dear Face. We will do our best; it shall be only for lack of Guidance if we fail to do THY Will. Amen.

MYSTICS AT PRAYER

Beatrice Colony

For health, prosperity and happiness
To THEE I pray,
But most of all a smile to greet
The newborn day.

Δ Δ Δ

Walter De Voe

In divinest self surrender,
O my LORD, I come to THEE,
All my life to THEE I render;
I will THINE almoner Be.

Δ Δ Δ

John Keble

Sun of my Soul, THOU SAVIOR DEAR!
It is not night if THOU be near.
O may no earth-born cloud arise
To hide THEE from THY servant's eyes.

Δ Δ Δ

Lady Margery Kempe of Lynn

LORD for THY great goodness, have mercy on
my wickedness, as certainly I was never so wicked
as THOU art good, nor never may be though I
would; for THOU art so good that THOU mayest
no better be.

Δ Δ Δ

MYSTICS AT PRAYER

Charles How

Most great and glorious GOD, be graciously pleased, I most humbly beseech THEE, to make the stream of my will perpetually to flow a cheerful and impetuous course, bearing down pleasure, interest, afflictions, death, and all other obstacles and impediments whatsoever, before it, till it plunge itself joyfully into the unfathomable ocean of THY DIVINE WILL.

Δ Δ Δ

Louis Lisener

Holy Spirit!
Give me a clear mind,
A pure heart,
A contrite spirit,
And a healthy body. Amen.

Δ Δ Δ

Francis Rous

Let my love rest in nothing short of THEE, O GOD. Kindle and inflame and enlarge my love. Enlarge the arteries and conduit-pipes by which THOU, the Head and Fountain of Love, flowest in THY members, that being abundantly quickened and watered with the Spirit I may abundantly love THEE. Put THINE own image and beauty more and more on my soul.

Δ Δ Δ

MYSTICS AT PRAYER

Richard Rolle

When so it liketh THEE, love speaks send
THOU me; make mine heart all hot to be,
burning in the love of THEE.

Δ Δ Δ

Grenville Kleiser

If I can do some good today,
If I can serve along life's way,
If I can something helpful say,
LORD, show me how!
If I can right a human wrong,
If I can help to make one strong,
If I can cheer with smile or song,
LORD, show me how!
If I can aid one in distress,
If I can make a burden less,
If I can spread more happiness,
LORD, show me how!
If I can do a kindly deed,
If I can help someone in need,
If I can sow a fruitful seed,
LORD, show me how!
If I can feed a hungry heart,
If I can give a better start,
If I can fill a nobler part,
LORD, show me how!

Δ Δ Δ

MYSTICS AT PRAYER

Veni Cooper Mathieson

O great FATHER-MOTHER GOD.
THY eternal Life is my life.
THY infinite Wisdom guides me.
THY wondrous Intelligence illumines my mind.
THY glorious Substance feeds me.
THY perfect Health is revealed in me.
THY infinite Power upholds me.
THY almighty Strength is my support.
THY unchanging Love surrounds me.
THY eternal Truth has made me free.
THY perfect Peace broods over me.

Δ Δ Δ

Grace B. Norris

DIVINE LOVE, PRINCIPLE, GOD of
love, I pray;
Guide me in the way of Truth
Tenderly, today.
Weed my heart of weariness, scatter
every care.
Teach me how to know the truth:
Love is everywhere.

Δ Δ Δ

Scupoli

Behold THY creature; do with me what THOU
wilt. I have nothing, my GOD, that holds me back.
I am THINE alone.

MYSTICS AT PRAYER

F.W. Scott

THY glory alone, O GOD, be the end of
all that we say;
Let it shine in every deed, let it kindle the
prayers that I pray;
Let it burn in my innermost soul till the
shadow of self pass away,
And the light of THY glory, O GOD, be
unveiled in the dawning of day.

Δ Δ Δ

C.S. Tirpentine

ALMIGHTY LIFE! THOU FORCE that bides
with all,
Awake my soul to see and use THY might,
And give me strength to heed THY daily call,
To walk with THEE in paths of truth and right.
Absolve me from all vain and useless thought
That clouds the vision of my daily task,
And help me labor in the field I ought
Till I can do for self the things I ask.
THOU art my harbor and my fortress too.
In THY strong arms support me on my way.
If THOU and I shall guard the things I do
I know I shall be safe by night and day.

Δ Δ Δ

Walter De Voe

The Prayer of faith shall heal the sick.

MYSTICS AT PRAYER

E.C. Wilson

Tomorrow
I am content to leave with him
Who gives today
For today the sun smiles
And the earth responds,
And a twinkling, singing sea
Forms lacy patterns on the sand.
O, GOD
I am grateful
For this day!

Δ Δ Δ

Henry Vaughan

THOU SUN of RIGHTEOUSNESS with healing
under THY wings, arise in my heart; make THY
light there to shine in darkness, and a perfect day
in the dead of night.

Δ Δ Δ

H.

FATHER—MOTHER—SON in ONE,
From our inmost hearts we plead
For power to love unselfishly,
For wisdom to perceive aright,
For courage to pursue a righteous course,
For determination of purpose, and
For will to act according to THY will.

Δ Δ Δ

MYSTICS AT PRAYER

Michael Wood

Within THY Heart, O HOLY ONE of GOD,
 Make us to rest;
Within THY still and changeless Heart, O LORD,
 Not on THY Breast.
THOU willest it shall tremble with our woes,
 Renouncing peace.
Feeling our joys that we may find our home,
 Where dreams shall cease.
Within THY Heart may we find earthly shows
 Close garner'd there by THEE;
The saints we honour'd, sinners whom we lov'd
 We in THY Heart shall see.
Within the still and changeless Light of Truth,
 The Wisdom from above,
We shall give honour where we lov'd and wept,
And to the honour'd—love.

Δ Δ Δ

Emanuel Geibel

Strecke die Hand nur empor im Gebet, GOTT
fasst sie von oben,
 Und die Berührung durchstromt dich mit
geheiliger Kraft.

*Stretch the hand only upward in prayer,
God seize it from above,
And the touch flows through thee
With holy strength.*

Δ Δ Δ

MYSTICS AT PRAYER

I.O.S.

Thy love provides for all
THY substance feeds all
THY Purity clothes all
THY life preserves all
Thanksgiving, honor, praise, and glory to THEE
Evermore. Amen.

Δ Δ Δ

Anonymous

Universal GOD,
Our Life,
Our Light,
Our Power!
THOU art in All beyond expression and
beyond conception.
O Nature! THOU something from nothing
THOU Symbol of Wisdom!
In myself I am nothing, In THEE I am I.
I live in THEE! I, made of nothing!
Live THOU in me and bring me out of
the region of self
Into the ETERNAL LIGHT.

Δ Δ Δ

Edward Rowland Sill

GOD be merciful to me, a fool.

Δ Δ Δ

MYSTICS AT PRAYER

Belle-May

Prayer brings us into harmony with the highest in nature.

Δ Δ Δ

Alphonse de Lamartine

Prière! O voix surnaturelle
Qui nous précipite à genoux;
Instinct du ciel qui nous rappelle
Que la patrie est loin de nous.

*Prayer! O supernatural voice
Which forces us to our knees;
Heavenly instinct which calls to us
When our fatherland is faraway.*

Δ Δ Δ

Judah ha-Levi

Incline Thou mine heart
To do the service of Thy Kingdom,
And my thought
Make pure for knowledge of Thy Godship.

Δ Δ Δ

Solomon ibn Gabirol

In the flood of Thy love I have rapture eternal
And prayer is but an occasion for praise.

Δ Δ Δ

MYSTICS AT PRAYER

St. Augustine

O GOD, WHO dost grant us what we ask, if only when we ask we live a better life.

Δ Δ Δ

Talmud

May it be Thy will, O God, that we return to Thee in perfect penitence, so that we may not be ashamed to meet our fathers in the life to come.

Δ Δ Δ

Mohammed

O LORD, grant us to love THEE, grant that we may love those that love THEE; grant that we may do the deeds that win THY love. Make the love of THEE to be dearer than ourselves, our families, than wealth, and even than cool water.

Δ Δ Δ

Theologica Germanica

I would fain be to the ETERNAL GOODNESS what his own hand is to a man.

Δ Δ Δ

Ralph Waldo Emerson

Prayer is the contemplation of the facts of Life from the highest Point of view.

Δ Δ Δ

Black Elk

Grandfather, Great Spirit, once more behold me on earth and lean to hear my feeble voice. You lived first, and you are older than all need, older than all prayer. All things belong to you—the two-legged, the four-legged, the wings of the air, and all green things that live.

You have set the powers of the four quarters of the earth to cross each other. You have made me cross the good road, and the road of difficulties, and where they cross, the place is holy. Day in, day out, forevermore, you are the life of things.

Δ Δ Δ

Dhu'l-Nun al Misri

O God, I never hearken to the voices of the beasts or the rustle of the trees, the splashing of waters or the song of birds, the whistling of the wind or the rumble of thunder, but I sense in them a testimony to Thy Unity and a proof of Thy Incomparableness; that Thou art the All-prevailing, the All-knowing, the All-wise, the All-just, the All-true, and that in Thee is neither overthrow nor ignorance nor folly nor injustice nor lying. O God, I acknowledge Thee in the proof of Thy handiwork and the evidence of Thy acts: grant me, O God, to seek Thy Satisfaction with my satisfaction, and the Delight of a Father in His child, remembering Thee in my love for Thee, with serene tranquillity and firm resolve.

MYSTICS AT PRAYER

Shams ud-din Mohammed Hafiz

O God! since for our every want Thou dost
provide,
And art our Judge, our all-sufficient Helper,
Guide;
Why should I tell the secrets of my heart
to Thee
Who art Omniscient, and from Whom no secrets
hide?
The express image of the word “Divine” art Thou!
The mirror of all loveliness art Thou!
Without Thee in this world naught of itself
exists;
Search where we will, we surely find all, all is—
Thou!
Sole object of my heart’s desire and love art Thou!
Sole Source of all the passionate love I feel art
Thou!
When’er I look upon the world and Time,
I see
All, all is Thou today—tomorrow all is Thou.

Δ Δ Δ

R. A. Nicholson

Soul of the World, to Thee I turn again
With bleeding heart and bring Thee all my pain,
Myself behind, before me need and woe,
And love still waxing—never may it wane!

Δ Δ Δ

Jalal-ud-din Rumi

O Thou who art my soul's comfort in the season
of sorrow,

O Thou who art my spirit's treasure in the
bitterness of death!

That which the imagination has not conceived, that
which the understanding has not seen

Visiteth, my soul from Thee; hence in worship I
turn toward Thee. . . .

If a never-ceasing bounty should of kingdoms,
If a hidden treasure should set before me all that
exists,

I would bow down with my soul, I would lay my
face in the dust,

I would say, "Of all these the love of such a One
for me!"

Δ Δ Δ

Omar Khayyam

I am an erring slave, accept Thou me!

My soul is dark, make me Thy light to see!

If heaven be but the wage for service done,

Where are Thy bounty and Thy Charity?

O Thou! who know'st the secret thoughts of all,

In time of sorest need who aidest all,

Grant me repentance, and accept my plea,

O Thou who dost accept the pleas of all.

Δ Δ Δ

Nur ud-din ‘Abd-ur-rahman ibn Ahmad Jami

Make my heart pure, my soul from error free,
Make tears and sighs my daily lot to be,
And lead me on Thy road away from self,
That lost to self I may draw near to Thee!
Set enmity between the world and me,
Make me averse from worldly company:
From other objects turn away my heart,
So that it be engrossed with love to Thee.

△ △ △

Rabi‘a al-Adawiyya

O my Joy and my Desire and my Refuge,
My Friend and my Sustainer and my Goal,
Thou art my Intimate, and longing for Thee
sustains me,
Were it not for Thee, O my Life and my Friend,
How I should have been distraught over the spaces
of the earth,
How many favors have been bestowed, and how
much hast Thou given me.
Of gifts and grace and assistance,
Thy love is now my desire and my bliss,
And has been revealed to the eye of my heart that
was athirst,
I have none beside Thee, Who dost make the desert
blossom,
Thou art my joy, firmly established within me,
If Thou art satisfied with me, then
O Desire of my heart, my happiness has appeared.

Rabi'a al-Adawiyya

O God, the night has passed and the day has dawned. How I long to know if Thou hast accepted (my prayers) or if Thou hast rejected them. Therefore, console me for it is Thine to console this state of mine. Thou hast given me life and cared for me and Thine is the glory. If Thou wert to drive me from Thy door, yet would I not forsake it, for the love that I bear in my heart towards Thee.

Δ Δ Δ

Al-Junaid of Baghdad

Now I have known, O Lord,
What lies within my heart;
In secret, from the world apart,
My tongue hath talked with my Adored.
So in a manner we
United are, and One;
Yet otherwise disunion
Is our estate eternally.
Though from my gaze profound
Deep awe hath hid Thy Face,
In wondrous and ecstatic Grace
I feel Thee touch my inmost ground.

Δ Δ Δ

MYSTICS AT PRAYER

Francis of Assisi

All mighty, eternal, just, and merciful God,
grant us in our misery [the grace]
to do for You alone
What we know You want us to do,
and always
to desire what pleases You.

Δ Δ Δ

Rabi'a al-Adawiyya

I love Thee with two loves, a love that is passion
And one which besides Thou hast earned as
Thy due.
The passionate love is the thought which
forgetting
All else is of You, aye, for ever of You.
Thou earnedst the other by rending asunder
All veils and disclosing Thyself to my view.
Not mine be the praise for the one or the other
The praise and the thanks are all Thine for the
two.

Δ Δ Δ

Sha'wana

O my God, how great is my desire to meet
with Thee and how great is my hope of Thy re-
ward. Thou art gracious, there is no disappoint-
ment from Thee, the Hope of all who hope; there
is no frustration with Thee, Thou Desire of all who
yearn.

Srimad Bhagavatam

Thou art the Lord of universe,
Beyond all name and form:
Who can express thee, thou who art
 inexpressible?
Yet they sing the glory of thy power,
For thou dost charm away all evil.
Beyond speech and mind art thou, yet easily
 attainable by thy devotees;
Thou dost manifest thyself to those who worship
 thee in any name or form,
If only that worship is offered thee with a sincere
 and devoted heart.

Δ Δ Δ

Srimad Bhagavatam

Thou art Holiness;
Holiness is thy name.
Thou art the friend of the poor and lowly.
Thou art manifest in the hearts of all
Who take shelter at thy Lotus Feet;
They are purified by thy holy presence.
Thou art the highest of the high;
Thy peace reigneth in the universe.
Associating thyself with thy divine maya,
Thou dost create, preserve, and dissolve this
 universe;
Yet thou existest in thine own primal glory, pure
 and absolute.
Obeisance unto thee!

MYSTICS AT PRAYER

Srimad Bhagavatam

Even as rivers spring from different sources,
Yet mingle in the ocean,
So all the Vedas, all Scriptures, all Truth, though
of diverse origin,
Come home to thee!

Δ Δ Δ

Srimad Bhagavatam

Thou art the Atman, the divine Self;
Not without do the wise seek thee, but within,
For thou art present in the hearts of all.
Knowledge brings freedom,
But the mere intellect gives no knowledge of thee.
Those who devote themselves to thy service
Come to know thee through thy grace.
May I be even the least of thy devotees,
And may I devote my life to thy service alone!

Δ Δ Δ

The Cloud of Unknowing

God unto whom all hearts are open and unto whom
every will speaks, and from whom no secret thing
is hidden, I pray Thee to cleanse the intent of my
heart with the ineffable gift of Thy grace, that I
may perfectly love Thee, and worthily praise Thee.

Δ Δ Δ

Rabi'a al-Adawiyya

O my God, the best of Thy gifts within my heart is the hope of Thee and the sweetest word upon my tongue is Thy praise, and the hours which I love best are those in which I meet with Thee. O my God, I cannot endure without the remembrance of Thee in this world and how shall I be able to endure without the vision of Thee in the next world? O my Lord, my plaint to Thee is that I am but a stranger in Thy country, and lonely among Thy worshippers.

Δ Δ Δ

Kabir

Are you looking for me? I am in the next seat.
My shoulder is against yours.
You will not find me in stupas, not in Indian shrine
rooms, nor in synagogues, nor in cathedrals:
not in masses, nor kirtans, not in legs winding
around your own neck, nor in eating nothing
but vegetables.
When you really look for me, you will see me
instantly—
you will find me in the tiniest house of time.
Kabir says: Student, tell me, what is God?
He is the breath inside the breath.

Δ Δ Δ

MYSTICS AT PRAYER

Ryokan

In all ten directions of the universe,
there is only one truth.
When we see clearly, the great teachings are the
same.
What can ever be lost? What can be attained?
If we attain something, it was there from the
beginning of time.
If we lose something, it is hiding somewhere
near us.
Look: this ball in my pocket:
Can you see how priceless it is?

△ △ △

Lao-tzu

The highest good is like that of water. The goodness of water is that it benefits the ten thousand creatures, yet itself does not wrangle, but is content with the places that all men disdain. It is this that makes water so near to the Tao.

△ △ △

Basho

Dew drops, let me cleanse
in your brief, sweet waters
these dark hands of life.

△ △ △

MYSTICS AT PRAYER

Sitting Bull

Behold, my brothers, the spring has come;
The earth has received the embraces of the sun
And we shall soon see the results of that love!
Every seed is awakened and so has all animal
life.

It is through this mysterious power that we too
have our being
And we therefore yield to our neighbors,
Even our animal neighbors,
The same right as ourselves, to inhabit this land.

Δ Δ Δ

Mary Austin

I arise, facing East,
I am asking toward the light;
I am asking that my day
Shall be beautiful with light.
I am asking that the place
Where my feet are shall be light,
That as far as I can see
I shall follow it aright.
I am asking for the courage
To go forward through the shadow,
I am asking toward the light!

Δ Δ Δ

INDEX

(*Indicates Rosicrucian Authority)

Alcuin* (735-804), English theologian.	27
Andrewes (1302-1373), bishop of Frissli.	34
Angela of Foligno (A.D. 1309), blessed mystic.	33
Anselm, St. (1033-1109), archbishop of Canterbury.	27-28
Aquinas,* St. Thomas (1225?-1274), Christian priest and mystic, called "The Angelical Doctor."	29
Augustine, St. (354-430), bishop of Hippo. ...	24-25-26, 65
Austin, Mary (1868-1934), Nature writer, feminist.	76
Babylonian Prayer. From the religious beliefs in Babylonia and Assyria.	17
Basho (1644-1694), Japanese poet.	75
Basil, St. (A.D. 316), Christian martyr.	22
Baxter, Richard (1615-1691), English Nonconformist priest.	43
Beach, I. Wright, author of "Unity".	51
Belle-May	64
Bernard of Clairvaux, St. (1091-1153), French ecclesiastic.	28-29
Bernardino of Siena, St. (1380-1444), Franciscan friar.	35
Black Elk (c. 1863-1950) American Indian medicine man and spiritual leader.....	66
Blake,* William (1757-1827), English artist, poet, and mystic.	48
Blasius, St. (A.D. 316), bishop of Sebaste, Armenia, and martyr.	22

Boehme,* Jacob (1575-1624), German mystic and Rosicrucian.	41-42
Book of the Dead. Old Egyptian Book of Mysteries.	17
Brihtnoth (A.D. 991), earl of the Northmen. Mystic.	51
Browne, Sir Thomas (1605-1682), English philosopher, and physician.	41
Catherine of Siena, St. (1347-1380), Christian mystic.	34-35
Cawdry, Sister E. T., an African mystic.	54-55
Chadwick, John White (1840-1904), American Unitarian clergyman and author.	54
Christian Prayers, Book of (A.D.1566).	40
Chrysostom, John, St. (345?-407), Greek church father born in Syria.	19, 22
Cloud of Unknowing, The (14th century)	73
Colet, John (1467?-1519), Dean of St. Paul's, London. Scholar and mystic.	52
Collect, from the 6th and 18th centuries.	27, 48
Colony, Beatrice, author.	56
Coptic Apocrypha. The Book of the Resurrection of Jesus Christ, by Bartholomew.	26
Culverwel, Nathanael (1618-1651), English clergyman, Cambridge Platonist.	43
Dante Alighieri (1265-1321),* Italian mystical poet.	32
De Voe, Walter, American mystic, founder of the Eloist Ministry.	56, 60
Dhu'l-Nun al Misri (d. 859)	66
Elwood, Thomas (c. A.D.1639), English mystic.	43
Emerson, Ralph Waldo (1803-1882), American philosopher.	65
Ephrem, St. (306?-378?), Syrian churchman and hymnist.	21
Desiderius Erasmus (1466?-1536), Dutch scholar.	38
Erigena, Johannes Scotus (815?-?877), Celtic philosopher living in France.	27

Fenelon, François de Salignac (1651-1715), French archbishop of Cambrai. Author.	44-45
Francis of Assisi, St. (1182-1266) Italian friar and preacher	71
Francis of Sales, St. (1567-1622), Savoyard nobleman and ecclesiastic.	40
Friend of GOD,* from the “Oberland.” The unknown chief of a 14th century religious union.	38
Gabirol, Solomon ibn (1020-1070), Poet and philosopher.	64
Geibel, Emanuel (1815-1884), German lyric poet.	62
Gelasian Sacramentary. Gelasius (c. A.D. 476), bishop of Caesarea.	24
Golden Words of N.H.D.	53
Gorsedd Prayer.	54
Guthrie, Kenneth Sylvan (1871-1940), American author and mystic.	55
Guyon, Madame Jeanne Marie de la Motte (1648-1717), French mystic, one of the founders of the Quietism.	44
H.	61
Hafiz, Shams ud-din Mohammed (1325-1389) Persian lyric poet	67
Hildegard, St. (1098?-1179), German abbess and mystic.	28
Hindu Prayers	50-51
Holmes, Oliver Wendell (1809-1894), American physician and author.	49
How, Charles, American author.	57
I.O.S.	63
Jacobite Liturgy (3rd century A.D.). The Jacobites, a name of the Monophysites. Monophysites were those who maintain that there was but a single nature in Christ.	18

Jalal-ud-din Rumi (1207-1273), Persian poet and mystic.	31, 68
Jami, Nur ud-din ‘Abd-ur-rahman ibn Ahmad (1414-1492) Persian poet and mystic	69
Jenks, Benjamin, 17th century mystic.	47
Jesus Christ, The Messiah, The Saviour	21
John of the Cross, St. (1542-1591), Spanish mystic.	39-40
Judah ha-Levi (1085?-?1140), Hebrew poet.	64
Julian (331-363), Roman emperor, called “The Apostate.” Neoplatonist.	18
Julian of Norwich (1342-1415), English mystic.	35
Al-Junaid of Baghdad (d. 910)	70
Kabir (1440-1518), Indian mystic and poet.	74
Keble, John (1792-1866), English clergyman and poet.	56
Kempe of Lynn, Lady Margery. Data unknown.	56
Kingsley, Charles (1819-1875), English clergyman and novelist.	50
Kipling, Rudyard (1865-1936), English author.	52
Kleiser, Grenville (1868-1953), Teacher of oratory.	58
Lamartine, Alphonse de (1790-1869), French poet.	64
Lao-tzu (c. 604-531 B.C.), Chinese Taoist philosopher.	75
Lawrence, Brother (1666-1691), Christian mystic.	46
Leonine Sacramentary (5th century). Città Leonina, a part of ancient Rome.	24
Levi, Judah ha-	64
Lisener, Louis, American author.	57
Liturgy of the Greek Church (3rd century A.D.).	21
Liturgy of St. Mark (2nd century A.D.).	21
Loyola, Ignatius of, St. (1491-1556), Spanish ecclesiastic and founder of the Society of Jesus.	37, 39
Manasses (reigned 697-642 B.C.), king of Judah. (The Apocrypha of the Old Testament.)	19

Martineau, James (1805-1900), English Unitarian theologian and metaphysician.	49
Mathieson,* Veni Cooper, Australian author	59
Mohammed (570-632). Arabian founder of Islam.	65
Molinos,* Miguel de (1640-?1697), Spanish Christian mystic.	44
More, Dame Gertrude (1606-1633), Christian Mystic. "The Nun."	30
Mozarabic Liturgy. Mozarab, a member of certain ancient congregations of Spanish Christians which existed under the Moors and had a liturgy of their own.	30
Newman, John Henry (1801-1890), English cardinal and author.	46
Nicholas of Cusa (1401-1464), German cardinal and philosopher.	38
Nicholson, R. A.	67
Norden, John, 16th century mystic.	41
Norris, Grace B., Author	59
Omar Khayyam (1048?-1122) Persian poet and astronomer	68
Palma, Blaise, 17th century mystic.	47
Pascal, Blaise (1623-1662), French philosopher and mathematician.	42
Patrick, St. (389?-?461), Christian saint, apostle of Ireland.	22
Pericles (495-429 B.C.), Athenian statesman.	17
Psalms. One of the Old Testament Hymns.	17
Rabi'a al-Adawiyya (717?-801) Moslem ascetic	69-71, 74
Richard, St. (died 1253), bishop of Chichester.	29
Ritter, Melchior, 17th century mystic.	48
Rolle, Richard (1290?-1349), hermit of Hampole.	58
Rossetti, Christina Georgina (1830-1894), sister of De Gratia. English poet.	50

Rous,* Francis (1579-1659), English hymnologist and Cromwellian mystic.	57
Ruysbroeck,* Jan van (1293-1381), Flemish mystic.	33
Ryokan (1758-1831), Japanese Zen Master	75
Sarum Breviary (4th century A.D.). Old Sarum (Sorbiodunum) near Salisbury, was the residence of the Saxon kings.	23
Savonarola,* Girolamo (1452-1498). Italian reformer and Christian martyr.	37
Sha‘wana, Persian ascetic	71
Scott, F. W., English author.	60
Scupoli, mystic. Data unknown.	59
Sill, Edward Rowland (1841-1887), American poet and author.	63
Sitting Bull (1834-1890), American Indian leader, defender, medicine man	76
Socrates (469-399 B.C.), Athenian philosopher.	20
Srimad Bhagaratam.	72-73
Sufi. Sufism, a system of Islamic mysticism, developed especially in Persia.	32
Suso, Heinrich (1300?-1366), German Christian mystic.	34
Synesius (370-415), Christian prelate and Neoplatonist, friend of Hypatia.	22, 23
Syrian Clementine Liturgy (1st century A.D.)	18
Tagore, Rabindranath (1861-1941), Bengali poet and mystic.	49, 51
Talmud, Selection from.	65
Tauler,* Johannes (1300?-1361), German Christian mystic.	32-33
Taylor, Jeremy (1613-1667), English prelate and author.	42
Teilhard de Chardin, Pierre (1881-1955) French paleontologist and explorer	31

Teresa, St. (1515-1582), Spanish Christian mystic. ..	38-39
Tersteegen, Gerhard (1697-1769), Poet and ascetic. .	46-47
Theologia Germanica,* a tractatus in 54 chapters containing the teachings of the Friends of GOD. ...	65
Thomas a Kempis* (1380-1471, German Christian mystic.	36-37
Tingley, Katherine Augusta (1847-1929), President of the American Theosophical Society.....	53
Tirpenting, C.S., Author.	60
Traherne, Thomas (1637?-1674), English poet and Cambridge Platonist.	44
Ali bin Uthman	30
Vaughan,* Henry (1622-1695), British mystic poet.	61
Wesley, John (1703-1791), English theologian and founder of Methodism.	44
Whichcote, Benjamin (1609-1683), English theologian and Cambridge Platonist.....	41
Whittier, John Greenleaf (1807-1892), American poet.	48
Wilson, E. C., American writer and philosopher.	61
Wood, Michael, English poet and writer.	62
Zoroaster (6th century B.C.), Founder of ancient Persian religion.	20

THE ROSICRUCIAN ORDER

Purpose and Work of the Order

The Rosicrucian Order, AMORC, is a philosophical and initiatic tradition. As students progress in their studies, they are initiated into the next level or degree.

Rosicrucians are men and women around the world who study the laws of nature in order to live in harmony with them. Individuals study the Rosicrucian lessons in the privacy of their own homes on subjects such as the nature of the soul, developing intuition, classical Greek philosophy, energy centers in the body, and self-healing techniques.

The Rosicrucian tradition encourages each student to discover the wisdom, compassion, strength, and peace that already reside within each of us.

Introduction

IDEAS ARE BORN out of things. The mind of man seeks to attach a meaning or give identity to each external thing which it experiences. The unknown is aggravating to intelligence, even to the intelligence of the primitive mind. Consequently, nothing which commands attention, or seems to touch our lives continually, is left unexplained by us. Where the natural causes are not observed, others are imagined by the fertile human mind. The savage man has an explanation for every phenomenon in his world of experience.

There are, however, some objects which we perceive which not only suggest their own nature to our minds, but likewise depict other ideas or concepts which we have had. In other words, such objects are representative of something other than themselves. Such objects become *symbols*. Natural symbols are principally the result of suggestion. There is something about the form of the sign which resembles an element or elements of some previous group of ideas in our experience. By association, the symbol continually makes us aware of these other ideas. A dark cloud, for example, is a natural symbol. It suggests all of that which is associated with a storm. Such natural symbols are obviously quite generally accepted by mankind, because they are related to common human experiences.

On the other hand, there are *artificial* symbols which a man or a group of men may create to represent notions of their own. Such artificial symbols or devices will be related to their own particular experiences and may mean nothing to any other group of persons. For example, we have the signs which are used by physicists and electrical engineers to depict instruments in an electric circuit. To the layman, they are unintelligible. These artificial symbols may exist for an indeterminate time, such as family escutcheons, or signs adopted by secret societies to represent their purposes. Frequently they gradually

or suddenly pass into oblivion. Conversely, natural symbols persist, since they are rooted in some phenomenon of nature which men of each century perceive more or less alike. The interpretation of the natural symbol may alter, namely, there may come about an elaboration of the ideas it represents, but it will continue to be related to man's original conception.

Artificial and natural signs are combined by the mind to form true *mystical symbols*. Just how is this combination accomplished? Intelligent men and women, those who have inquiring minds, look out upon nature. They study her, they observe her, to ascertain lessons from her operations. They look at the heavens above and they look at things of earth and they discover certain uniform occurrences in phenomena. When certain things happen time after time, they find that the same conditions prevail with each happening. In other words, man discovers that phenomena depend on certain basic conditions—that fire, for example, cannot exist or become manifest until these conditions become existent, and that there cannot be a flow of water, for further example, unless certain other conditions prevail. These uniform conditions of dependency are what man has decided to call laws.

Laws, therefore, are irrevocable Cosmic truths. They are immutable, so far as the consciousness of man is concerned. The important point to remember in connection with mystical symbolism, or rather symbols having a mystical meaning, is that a discerned truth, such as a natural law which we discover, creates in our mind its own symbol. The meaning we perceive in a law of nature is the symbol itself. When there flashes into our consciousness the realization that we are discerning a law, a Cosmic truth, the shape which that meaning, that understanding, takes in our consciousness, as a mental form, becomes the symbol itself. It is far closer to depicting the truth of which we are conscious than any other symbol which we could later devise or design to mean the same thing.

There are, therefore, no substitutes for true mystical symbols. A mystical symbol is the very *thought form* of the Cosmic law itself. We may say that a mystical symbol is the mental reflection of a Cosmic

truth which we have discerned. We cannot discern any Cosmic truth without at the same time engendering a picture of it in our mind as a symbol. Therefore, I repeat, we cannot have substitute mystical symbols, because any sign we create that does not arise spontaneously in our mind from the discerned truth itself, is not a mystical symbol, no matter what we may call it.

Let us examine in this book a few, a very few, of these eternal mystical symbols. We say they are eternal, because they have come forth from truths which early man came to know, and which mean the same to man today as they did to the ancients. When each of us, today, contemplates age-old truths, the same symbols shape themselves in our mind, so they are truly eternal.

The All-Seeing Eye

IN MODERN TIMES the Eye may be used to represent the eye of the Supreme Architect of the Universe, but this is a limitation of the interpretation which the mystics of old and of today give this very ancient symbol.

To them the Eye is symbolical of sight, but especially of that *clear sight* which gives realization. When the Eye was adopted as the symbol of the Supreme Ruler of the Universe, it was intended to typify the all-conscious, or ever conscious mind of God which *sees all*, and therefore *knows* all. In this sense the Eye came to be the symbol of Divine Consciousness or *Cosmic Consciousness* (called by some modern mystics, the *universal consciousness*). Therefore this Eye is said to rule over the Sun and the Moon, the Comets and the Stars, and likewise the heart of man; not that these obey (by volition) the ever-watchful eye, as the child obeys the parent in fear of the watchful eyes, but all nature manifests according to the divine scheme conceived in the mind of God and all such manifestations are ever the same, ever true to principle, because the Eye of Divine Consciousness directs the operations of all Cosmic laws.

The Forty-Seventh Problem of Euclid

IT MAY WHEN understood in its geometrical presentation, arouse an interest in the arts and sciences, as is often claimed; but, the emblem is seldom presented in such light. To the average student of mysticism of modern times, the emblem means nothing, although it suggests some law pertaining to the square and triangle.

Geometrically, of course, the problem is a result of the work of Pythagoras, who studied the ancient Egyptian mysteries in the old temples and later founded a branch of the *Rosicrucian Brotherhood*. By it he proved that the area of the square was equal to the area of two smaller squares built upon the triangle, and vice versa.

To the mystics, however, the problem proves the contention of the Masters that the *triangle* is a symbol of perfect creation because it *contains all* and will support all that may be built properly upon it.

We find this principle utilized in many secret organizations as a law for the placing of the feet of the *initiated*; the feet are either placed so that they form the sides of a triangle or the two sides of a square.

There are, of course, other esoteric interpretations, which may not be given here.

The Anchor and the Ark

HERE WE HAVE another dual emblem, part ancient and part very modern. The exoteric meanings of these two are too obvious for extended comment,—safe passage on the sea of life, and safe mooring in the harbor of peace. But the two emblems have other and more esoteric interpretations.

To the mystics the Ark was emblematical of the secret, sacred places wherein were deposited and preserved the sacred possessions of a material or worldly nature belonging to the Temple or the Officers or Brethren thereof. In this sense the Ark was held as a repository distinctly different from *The Book*. One contained and preserved the spiritual possessions, the Divine Laws; the other contained and preserved the secret things pertaining to earthly existence and the Temple's *work*. Therefore the Ark was the emblem of the concealed, tiled, guarded and safe *place* where the bonds which united the Brethren were secretly and sacredly preserved.

The Anchor, on the other hand, is a more modern emblem and is in fact a development from the ancient symbol of the Caduceus of Hermes, which consisted of the wand entwined by serpents. That old emblem was a symbol of power and authority; and the Anchor is intended to convey the same meaning in connection with Temple or Lodge convocations. Therefore the above dual emblem means: The *depository* of the secret and sacred papers or jewels of the Temple, and the *power* or *authority* of the assembled body.

The Three Steps

WHILE EXOTERICALLY REPRESENTING the three steps or phases of life, —youth, manhood and age, or the three degrees of progress through the mysteries of Life, the truly ancient interpretation is quite different.

As temple after temple in ancient Egypt is brought to Light by the excavations of the various exploring organizations, we find that *three steps* lead to the entrances of these temples or to the altars within. In no part of these temples where any “holy” or sacred *point* was located do we not find *three steps* leading thereto.

The explanation—or interpretation—of this symbol is found in the triangle, the most ancient of all symbols or emblems. The equilateral triangle was a mystical symbol because it was possible to place it in any position and have it true in its representation. In this the *square* or cube was much like the triangle.

The principle is found in the figure 3. This numeral typified the ancient principles of *divinities*, or the law of creation, *perfect creation*. Therefore, in approaching a “holy” or sacred place, three steps were taken (as the last steps in reaching the point, not as three steps in the beginning or middle of the approach as is now often done) to indicate that he who approached the point was conscious of, or mindful of, the

BEHOLD THE SIGN

three principles of nature and God which gave him earthly existence. For, according to the law of the triangle, man's whole conscious existence depended upon the unity of these three principles in man. Exoterically the three principles were expressed as *body, spirit and soul*.

The Maul, the Spade, and the Coffin

IN THEIR COMBINATION these emblems form a symbol limited to one or possibly two forms of secret societies. But, separately, each has a mystical meaning quite interesting.

The Maul was ever the symbol of *directed*, or *controlled* force, possibly because it was so used in its practical application by the stone workers and others. Therefore, mystically, it represents a specific application of power or energy to one place, sudden and determined, with a definite and *final* result. Therefore we see how it came to be used in more modern symbolism.

The Spade was held as a symbol of research because it was used for *delving into the earth*. In this sense the digging of a grave with a spade is a mystical symbol of preparing an entrance into deeper or more serious mysteries.

The Coffin, like the Tomb, was a symbol of *confinement*, *imprisonment* and suspension of existence or manifestation. To be entombed was to prevent the continued transition of the body and the growth of a newer form of manifestation. With the Acacia at the side of the Coffin, growing naturally, the symbol meant that while the body was held a prisoner, the Soul was immortally free.

The Pot of Incense

PERHAPS ONE OF the most sacred of all points reached by three steps in the ancient Temples was the Altar. Upon this altar, always in the true, geographical East, was the sacred fire, burning in splendor and ever alive with heat and flame. But upon the altar or just in front of it was the pot of incense.

The incense may be used in modern times to symbolize the flame and heat of the fire on the altar, and it *may seem* to represent the flame or glow of appreciation in our hearts for our existence; but in truth the use of incense had a very distinct purpose in the days of old, and incense is still used in some sacred ceremonies of secret guilds for the same purpose as of old.

If the purpose of the incense pot were simply to demonstrate a burning fire, the incense itself might be disposed of and only the glowing charcoal used. But the incense used in Egypt, and still used in some ceremonies, was carefully prepared according to the laws of alchemy. The vibrations emanating from the incense pot were of such a nature that they first produced upon those in the Temple, a physical effect, then a mental effect and finally a *spiritual effect*, and this was the true purpose of the incense. The proper kind—known only to the sects using the ancient Egyptian ceremonies—will induce or bring about a spiritual attunement with nature's divine forces and thus make possible greater Cosmic or divine illumination. Therefore, we find that the present incense pot has lost its purpose and its symbolism. May it soon be *found*, along with the lost word, which is and is not lost.

The Double Interlacing Triangle

THE DOUBLE INTERLACING triangle is used in very many of the Jewish Synagogues, and is called the shield of David. The two Yods in center are not part of the shield, but are sometimes placed as shown; they are also used in the center of a triangle, and are an abbreviation of the word Jehovah, and are used by the Jews to express that word, on account of the prohibition to pronounce or write the word in full.

To the Rosicrucian, the triangle is the symbol of perfection. It depicts the unity of two polarities of a different nature resulting in a manifestation. All through nature, whether in the macrocosm or microcosm world, the law of duality exists, and when these opposites are brought together a creation results whether it be a material, spiritual, organic, or inorganic creation. Two points of the triangle allude to the opposite polarities, and the third point, therefore, is the place of their meeting or unity. It is the culmination of the law. The interlaced triangles, as in the above illustration, represent the perfection of the law of duality on both the material and spiritual planes.

Dove: Symbol of God the Holy Spirit

THIS IS THE regular conventional treatment. Formerly, church decorators generally placed this symbol in a central position and kept to the conventional drawings, but there has been a strong disposition of late years to make this dove more natural. The dove is sometimes used as an emblem of the resurrection; it is then called the ascending or resurrection dove.

“And straightway coming up out of the water, he saw the heavens opened, and the Spirit, like a dove, descending upon him.” Mark 1:10.

Aside from the common theological explanation given above, there is a deeper mystical significance attributed to this symbol. The descending dove alludes to the consciousness of God descending to and pervading the mind of man in all of its purity. The ascending dove alludes to the God consciousness in man soaring heavenward and thus maintaining its unity with God. In other words, the descending and ascending doves represent the oscillation of Cosmic consciousness between man and the source of all Cosmic consciousness.

The Beehive

BEING “BUSY AS little bees” may give rise to the belief that the beehive is an emblem of industry and that it reminds us of the fact that we must labor and none shall be idle among us. But one could hardly call that a mystical interpretation of this symbol, and it most certainly is not the ancient meaning given by the mystics of Egypt and other countries to this strange, natural emblem.

The beehive, in the days of old, typified several laws of nature and several principles of divine mysticism. In brief they are: That we must build a place wherein to labor; this was to represent the Temple. That within the Temple, all must be engaged in mutual, cooperative production; this was the foundation or keystone of the cooperative crafts or guilds. That we are servants unto others and must devote our lives to extracting from nature those elements which are useful to man and refine them; in this sense honey was often used to represent the same principle or law for man to follow. That we must take from the material world such elements as will build our bodies into a home for the soul to reside, as the bee builds the hive into which is stored the sweets of life.

BEHOLD THE SIGN

In other words, the mystical interpretation of this symbol was that man must mold his outer and physical body so that it will contain, and preserve, the richness, sweetness, and fruits of his labors and experiences, not for his own selfish use, but for the up building and strengthening of others. There is, indeed, a great lesson to be learned from a study of this mystical interpretation, and we find the Pyramids in Egypt were built in similar design, in similar manner and for a *similar purpose*. And—the purpose has been fulfilled!

The Scythe

THIS IS SUPPOSED to be another symbol of time, reminding us of our short span of earthly existence. But this, too, is a purely exoteric interpretation of the emblem.

From the mystic's point of view, the Scythe represents the destructive forces of nature, so called by the semi-illuminated. To the illuminated mind the so-called destructive forces are actually the forces of *transmutation* or *transition*.

To the ancient alchemist— and even to the modern mystic— the process of regeneration includes action which seems to be destructive. To change a gross metal into a more refined metal required the work of the crucible, that the heat and flames might *tear down*, to some degree, the atomic structure of the gross metal so that the process of rebuilding might be more easily carried out.

The human body, like metals and other material structures, must, in time, submit to the tearing down process; it must come to a point where its component parts separate and seem to disintegrate. From this stage begins the process of transition resulting in a newer relationship of all parts, manifesting in another form of earthly expression.

Thus the Scythe is to remind the mystic that life on earth in the present form is but transitory, always becoming something else. It means *a change*.

The Hourglass

THIS IS ANOTHER emblem which has so obvious an exoteric meaning, that its mystical interpretation is often lost sight of. Truly, time is fleeting, and the human life on earth is like the passing of the sands.

But, to the mystics, the hourglass was not known and in its place *time*, measured by the sun's movements, was symbolical of opportunities that come and go.

In the first place, we must remember that the second, minute, and hour of time as now used, is a man-made affair and to the mystic no such arbitrary standard or *gauge* could have a deep and divine significance. To the Master mystic neither *time* nor *space* exist; both are artificial creations of man's mind to explain away, or excuse his inability to overcome *seeming* obstacles.

In the Cosmic world and in the world of thought, the *present* is linked with the past and future. What *was*, is *now*, and *shall be*. Thought travels so instantaneously that The Word spoken *now*, reaches all places as it leaves the mind and is *here* and *there* and *everywhere* at the same time. Thus time and space are *not* annihilated, for they *do not exist*; they are not *overcome* for they constitute nothing to be overcome. Thus the hourglass with the wings is an emblem or symbol to remind us that *time* and the journey through *space* are mere symbols themselves and that our lives on this earth are like unto the symbol—*seeming* conditions.

The Law and the Sword

WELL MAY SOME consider the “Constitution” as the law and the sword as the Guardian’s defense against cowans, but the symbolism of the double emblem is quite different from this.

To the mystics the law was Logos, and Logos was the law. In other words, THE WORD was THE LAW, and the word or law was represented first by the stone tablets with rudely cut hieroglyphics, then by the parchment scroll, and later by *the book*. Therefore, a tablet, scroll, or sacred book was always placed on the Altar along with the other sacred articles. This ancient custom was changed in the later years by substituting the Holy Bible for the ancient book, for the Bible came to be considered as *The Word or Law* through the influence of religion and the church which considered the Holy Bible as the permanent record of The Logos. This is the origin of the use of the Bible in so many secret societies and fraternities of modern times, although there are some such organizations which adhere to the more ancient custom and use neither the Bible nor Book of Constitution, but have a book, usually a hand-illuminated one, containing the ancient laws and rituals of the guild which they emulate.

The Sword, on the other hand, was symbolical of the *force* which would defend the brethren against attack and at the same time enforce the practice of the laws laid down in *The Book*. Therefore, the brethren were admonished or reminded by the combined emblem that “between the Law and the Sword was to be found decree and obedience.” A brother’s good conduct was safely lodged between the two and never conflicting with either.

The Ark of the Covenant

ORIGINALLY A TEMPLE was a certain area of ground or space set aside for sacred purposes, or for worship, where men and women could congregate to make their offerings and to meditate. It was holy ground. It did not mean a structure, but rather a place. It was customary to have in this area a focal point represented by a small structure or altar, which alluded to the presence of God. This central point became known as the Sanctum Sanctorum and the altar became known as the ark or the Shekinah. Later when actual structures were erected to house or protect the sacred ground, the Shekinah or ark continued to be placed in the center. It was the place where the consciousness of God was thought to descend to the mundane. There has come down to us today in most religions the belief that wherever man may dedicate a place, a thing or a condition to God, there the presence of God dwells and makes that place, by virtue of its dedication, holy and sacred.

The Cross on the Rock

THERE ARE VARIOUS interpretations of the symbol of the cross mounted upon a rock. The most common theological interpretation is based on the following in Matthew XVI:18: “. . . upon this rock I will build my church; and the gates of hell shall not prevail against it.” The rock represents the stability of Divine principles being therefore eternal and enduring. The cross alludes, in the theological interpretation, to the Christian church and its righteous doctrines and teachings founded upon the rock of infinite truth. The mystical interpretation defines the rock as the permanency of truth and infinite knowledge, enduring time, and unchanged by the vicissitudes of man. Upon the rock may be mounted the symbol of any faith, teaching, or principle, if, in reality, it is built upon the stability of infinite truth.

The Lamb, the Book, and the Seven Seals

THIS IS ANOTHER composite symbol of which there are numerous theological interpretations. Therefore, we will merely give the mystical interpretation here. The lamb is generally alluded to as a symbol of purity, of innocence. It was customary to offer the lamb as a sacrifice for this reason and because among nomadic people it was one of the highest prized possessions. The Book represents the Word of God—unadulterated, true. The Seven Seals, it is commonly agreed, allude to the cardinal virtues of man, such as fortitude, temperance, etc.

Further, the above symbol or symbols infer that he who acquires the Truth of God and an understanding of Infinite Wisdom, or he who obeys the Mandate of God shall be possessed of the cardinal virtues, the Seven Seals, and have the purity and innocence of a lamb.

The Serpent and the Hourglass

THIS SYMBOL IS a composite one—a combination of two very old symbols. The oldest of the two is the snake with his tail in his mouth. The snake has long been used as a symbol of wisdom by ancient peoples. There is no definite reason given in any sacred literature or in early records as to why wisdom has been attributed to the serpent, unless it arose from the Biblical story of the Garden of Eden and similar stories.

The symbol of the circle formed by the snake placing his tail in his mouth is a symbol of eternity—the universe without beginning or end, complete in itself, and all-wise. When this symbol is combined with the one of the hourglass which alludes to time, the interpretation is universal wisdom, being constant in its application and eternal in its existence.

Transition

THIS ILLUSTRATION IS a very beautiful and inspiring allegory. It is composed of a number of symbols, each very significant individually and each contributes to the meaning of the whole. The broken column in the foreground represents death. It alludes to the physical body of man still retaining after death some of its grace, beauty, and symmetry. The tower in the distance is the church, or any spiritual movement or organization, any uplift body, anything which contributes toward the development of the inner spiritual nature of man. Through it, or its method, one attains the Cross, which is in the upper center of the illustration. The Cross, of course, in its pure mystical significance has no sectarian meaning, but alludes to spirituality, and Cosmic Consciousness. The flight of the dove, from the broken column toward the tower, is indicative of the ethereal realm or the freedom of the soul consciousness from the mortal body. One can also notice a pathway from the tower to a stream in the foreground, the stream alluding to the moving force of life. A careful scrutiny and analysis of the illustration will reveal much other symbolism in this very unusual allegory.

God Geometrizes

THE ANCIENT PHILOSOPHICAL ad age that “God geometrizes” is borne out in the significance attributed to these geometric forms:

The Seven-Pointed Star. It represents the seven days of the week, seven branches to the candlestick of Moses, seven churches of Asia, seven mysterious seals, seven stars in the right hand of God, the point of unity of the triangles on the finite and infinite planes.

The Eight-Pointed Star. It depicts stability on both the Cosmic and material planes when they are at harmony with each other. Number four or the square is the symbol of stability and dependability; twice four or eight depicts stability on both planes.

The Octagon. Emblematic of regeneration; for this reason very often used for the ground plan of the fonts.

The Nine-Pointed Star. Emblematic of spirituality, love, joy, peace, temperance, goodness. Nine as a mystical number alludes to the ultimate completion and final perfection of any great under taking; it being the ancient symbol of the triangle. The triangle in itself is a symbol of perfection in any single undertaking either of material or spiritual nature.

The Twelve-Pointed, Star. It alludes to the disciples, the council of Divine Wisdom, the gathering of the prophets, the conclave of the holy masters who have dwelt among men.

The Material Triangle, the Dove, Fire and the Flaming Heart

THIS IS ONE of the most esoteric forms of symbolism used by the ancients to express the gifts of the Cosmic.

It must be remembered that symbols are used to express in a picture form an idea, as the artist conceives the Cosmic truths. At the top you will note the Triangle in the form of a symbol of material manifestation. The dove, the symbol of the soul, is sending rays through eternal love, which reaches, first, the flames whereby all thoughts are purified, and descends to the seven flaming hearts, all symbols of spiritual love which culminate in the Cosmic gifts, wisdom, understanding, counsel, strength, knowledge, piety, and ardor. The straight lines signify water in which all truths have their solution.

The Trinity of Wisdom, Understanding, and Counsel, and the Trinity of Knowledge, Piety, and Ardor, support the entire structure in the Strength of the wisdom of the soul manifesting in the love toward humanity expressed in tolerance, harmony, and peace.

The Law, the Sword, the Palm, and the Cloud

THIS SYMBOL IS the combination of the Law, Sword of the Spirit, and Faith. The clouds represent doubt and obscurity—sometimes grief, obstacles, difficulties in life; the palm, victory, conquest, success. The clouds overlies or obscure the palm of victory and the table of the Law which rests upon the Sword of the Spirit (which is the Word of God). Over all is the sun (the source of light), emblematic of inspiration, revelation, knowledge and power. It is truly a remarkable symbol and this is merely the pure mystical interpretation. Each religious sect naturally interprets these symbols in accord with its own doctrines.

The All-Seeing Eye and the Triangle

THESE TWO SYMBOLS combined constitute one symbol which is the most enduring of all—that is, its significance today is just the same as it was centuries ago. It is not a symbol which had a meaning for a certain time, brought enlightenment to men's minds, and then was discarded in preference for another symbol or symbols, which more nearly approached universal truths. A true symbol portrays a definite law or a definite truth of nature or of the universe, and thus changes but slightly in its form with time. The All-Seeing Eye, as we find it inscribed on the Obelisk or the walls of grotto temples in Egypt or even as we find it used today, has always meant the all-pervading consciousness of God or the universal vision of the Deity. No matter where man may go, across the face of the earth, he can never evade the Divine consciousness represented by the All-Seeing Eye, nor is he outside the vision or the Divinity of its system of laws.

The triangle is a symbol of perfection. The law of duality, being a universal law, is represented by two points of the triangle. When two different forces or phases of nature are brought together throughout all of nature, a third condition or thing arises at the point where they will be brought together. That third point or point of materialization is creation and perfection. Thus the combination of the two symbols as we have them above alludes to the perfection of the Divine consciousness, its completeness, its thoroughness, its all-embracing nature.

Geometrical Forms

THE FIRST ASSOCIATION of mathematics with the laws of Nature, in a scientific manner, was by the Greek philosopher, Pythagoras. He conceived matter as being minute particles which combined according to the law of proportion and number. It was, he contended, the mathematical proportion and assembly of matter that accounted for its geometrical design and harmony. Plato, Archimedes, Euclid, and other early thinkers, assigned to certain geometrical designs a symbolical interpretation of natural law which has come down to us today. In fact, in Nature we do find, as one philosopher aptly put it, that “God geometrizes.”

Figure One alludes to the triangle. The triangle is the symbol of perfection. Two points represent the dual forces of the universe; the third point represents their perfection at the point of combining.

Figure Two alludes to the square, the symbol of stability and soundness, also the earth, earthly life.

Figure Three, the circle, alludes to completion, the universe without beginning, without end. The triangle within the circle represents a perfect universe and eternity.

Figure Four alludes to the eternity of life, being the square within the circle.

Figure Five is the five-pointed star, and it contains five Alphas. It is called the Star of Beauty; once called the symbol of health and held to be a talisman against witchcraft.

The six-pointed star is a symbol of the Creator. In reality it is the interlaced triangles, the symbol of perfection of the microcosmic and macrocosmic worlds, perfection in the physical universe, and perfection in the spiritual world. It is the symbol of the unity of both phases of existence of which man is aware.

Egyptian Hieroglyphics

THE FIRST ATTEMPT by man to convey ideas from his mind to the mind of another were by pictures, straight lines, angles, curves—attempting to form pictures of the idea had in mind. Eventually one or more pictures were combined, forming phonetic sounds such as the picture of a bee, for example, combined with the picture of a leaf, forming the word belief. Opposite are illustrated some of the letters of the Egyptian hieroglyphic alphabet. It will assist you in understanding some of the early Egyptian writings to be found on relics in our leading museums and in books on the subject.

A careful study of the accompanying hieroglyphics will cause you to realize how the characters of our alphabet evolved from picture writing or ideographs. As time went by, the pictures were inscribed or drawn by the scribes so rapidly that they lost in appearance any relationship to the actual thing of which they were copies, but they continued to retain their original meaning. Many of the characters of our present day alphabet can be traced back through the Greek and Phoenician to the Egyptian writing of centuries ago.

You will notice in Figure Two that the symbol depicts the old Egyptian cosmological beliefs. The heavens were thought to be suspended upon four gigantic pillars—a sort of roof or ceiling over the earth, from which the stars were suspended on long cords. The four pillars were four mountain peaks actually seen by the Egyptians and thought to represent the outer boundaries of the universe.

It is not to be wondered that primitive peoples have always associated the sun with a Deity or in fact deified it. It was quite apparent that light, heat, and consequently life was dependent on it.

In the opinion of the early Egyptian masses it was a Divine Entity, but to the learned few of the mystery schools, Ra, as It was named, was a symbol of Divine power, a medium only through which universal energy radiated, and thus was not to be worshiped in its own right.

During a period of Egypt's history, the worship of Egypt was divided between Ra, the solar deity, and Isis, goddess of verdure. Affixed to

the circle, symbol of Ra, were spread wings, emblematic of his flight across the heavens from east to west daily. He later became known as the winged god.

Egyptian hieroglyphics pertain to the heavens and the earth. Star, or Sothic time, was used in Egypt.

The lives of the Egyptian people were colored by their religious thoughts and philosophy, even to an expression of this thought and philosophy in their art and hieroglyphic symbols. There were three permanent ideas of focal facts: the Sun, overhead, as a positive godlike energy; the Earth and its waters as the negative force receptive to the Sun; and the more personal idea of solving the mystery of man's life after death in relation to the above-mentioned two great Cosmic precepts.

In the Pyramid texts, one concept of the afterlife was the abode of the soul of the deceased in the heavens. The Circumpolar stars, probably because they never went into obscurity below the horizon, were considered as the locale of the soul's abode after death.

Figure 18 gives another concept of the abode of the dead in the Underworld. This is the Osirian concept which conflicts with the Solar idea of the next life in the sky. The Egyptian interpretation of figure 18 came probably from their observation of the starry night sky.

From the early Egyptian symbols originated some of the characters of our present-day alphabet. For instance, the combination of figure 16 and figure 17 is the basis upon which our calendar term, "month," was originated.

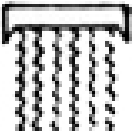

As we look upon the peculiar inscriptions of the ancient Egyptians, we are apt to think that the meaning attributed to them was either exaggerated or that the crude pictures are not relevant to the ideas they were intended to convey. However, if we take one of our own ideas and attempt to reduce it to those pictures which will cause another to realize our meaning, we will be startled by the similarity of our own designs to some of the Egyptian hieroglyphs.

Generally we associate the Egyptian hieroglyphs only with the inscriptions to be found upon the walls, tombs and sculptures of Egypt, partially obliterated by the ravages of time and the elements. They seem to us as the markings of a dead race and age; however, many of them have found a place in our present-day civilization, for we find them constituting the symbols used by many of the crafts and guilds of today. Some of our outstanding fraternal organizations, especially those of a philosophical nature, employ these ancient symbols to designate meanings differing but slightly from those assigned to them by the ancients. Study the accompanying symbols and you will notice a similarity to those used by many fraternal organizations today, even in your own community.

In the early history of the Egyptians we find stress laid upon their very accurate laws dealing with land and property ownership. These laws were based upon an intricate and amazingly correct system of Geometry and Mathematics. It became necessary for the Egyptians to evolve such an ethical system because of the frequent periods of inundation of the Nile which necessitated establishing new land borders and surveys to be correctly carried out to discern property lines. Measurements were necessary for building, construction and engineering purposes. It was during the Third Dynasty that the Prime Minister Imhotep engineered the first large construction in stone for King Zoser. It is an established fact in Egyptian history that signs and symbols were used in stone masonry as early as the Second Dynasty. Archaeological excavations have uncovered massive blocks of stone bearing these signs and symbols which serve as a journal of record of some of the geographical conditions of the early Egyptians, and give us an insight into their ingenuity in overcoming many of these obstacles.

1.  *pet.
her.* That which is above, Heaven, the Divine World; the blue dome.

2.  *kerh* Sky or Heaven at night with stars shining clearly; a clear night. A bright lamp (light) in the sky.

3.  *ätet* Water falling from sky, rain; dew (if added to No. 7), storm (if added to No. 4).

4.  *ehen* Lightning; forks of light coming down from Heaven.

5.  *gert* One half of Heaven; the Eastern half of the sky.

6.  *Rā.
hru,* The Sun, Day, Source of Life; Symbol of God in the Heaven; Aten; Midday; Noon.

7.  *kw.* Sun shining brightly; radiance; splendor of light; sparkling.

8.  *Ra.* Symbol of Egyptian Sun-God. A temple god.

9.  *Mu, uben* The sun sending forth its rays; beams of blinding sunlight. Fire from the sun.

10.  *Sept* (The star "Sothis") To be provided with; that which is given or acquired.

11.  — Sun's symbol with uraei.

12.  The winged Sun.

13. 
 *Ka.* The sun rising in East, beginning of day, the first hour of the day; eastern horizon.

14.  *part.* Cake; an offering, a prized piece of food enmesh of Gods.

15.  *sper.*

A rib; to arrive at, to reach (a place or condition); termination of a journey.

16.  *šāh,
šbt.*

Moon; one month, a period of 28 days.

17.  *šā,
tā.*

Star; star of dawn; one hour; to pray.

18.  *tut.*

The underworld, the world of darkness, sin, and despair.

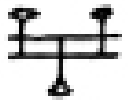

19.  *ā.*

Smooth land; land of good, fine soil; the most fertile land; a very receptive mind.

20.  *tat.*

Rough land; land of soil mixed with large stones, wood, etc.; a mind filled with sin or delusion.

21.  *set.* *Mountainous land;
land of hills and valleys.*
22.  *ku* *Mountain of wickedness.
Really, a valley of wicked-
ness and despair; a
barren valley.*
23.  *hut.* *Horizon; usually the
East horizon (but it is
also used to mean the
East horizon)*
24.  *Foreign; barbarians;
A stranger on our
mountain tops. (Applies
to things and conditions
as well as persons)*
25.  *hosp.* *A home; an infected
place; a place of evil
manifested; error com-
ing forth.*
26.  *a!eb.* *Land on either side of
the Nile*

- 27  Land on both sides of the Nile. usually designates all of Egypt
- 28  Land in a small meaning, specifically, a bounded lot, plot, farm, city, etc
- 29  *ust*, A roadway, an established or public highway, the way to a place
- 30  *kes m*, Side, one part of a thing.
- 31  *ânen* A large stone of one piece; a unit of stone work or masonry; used to sometimes indicate the inner hall of stone Temples, or the "loose"
- 32  Stone work composed of many stones, a collection of stones, sometimes used to mean a tiled floor

The Pelican

THIS ILLUSTRATION DEPICTS the pelican shedding its blood for its young, which is an ancient superstition and has been proven false. When this was believed, however, the pelican was adopted as a symbol of Christ shedding His blood for the church and mankind.

This, however, is purely a theological interpretation of the symbol; it has another purely mystical significance. It is a symbol of self-sacrifice, that as we give of ourself, of our possessions, of our intellect and our ability, so we nurture our virtues, develop our character and our personality, and as the years go by our self-sacrifice is reflected in good deeds which live long after ourselves, the result of the sacrifices we have made.

The Benediction

BRIEFLY, THE THEOLOGICAL interpretation of the symbol above is “The souls of the redeemed in the hands of the Almighty.” This is undoubtedly founded on the Biblical inscription—”In whose hand is the soul of every living thing, and the breath of all mankind.”—Job XII:10. The mystical interpretation of this symbol is that the five miniature figures represent the five objective faculties of man, and which at all times should be devoted toward aiding him to live a godly life, and that man should not permit his senses to lead him from the guiding hand of God. The symbol on the right was originally the Greek form of benediction. In the Greek form of benediction, the forefinger is extended to resemble the letter “I,” while the middle finger is bent in a “C”-like form. The thumb and third finger are crossed to make an “X” and the little finger is bent into a “C” again, so that we get “I, C, XC,”—the initials and final letters of the Greek name for Jesus Christ.

The Dragon

THE EVIL FORCES of nature and of man have always been represented, if in form, as a hideous being. Usually the form has no equal in nature. Most times it was a composite of all the fearful animals or reptiles of which man had experience. If these were not fearful enough in appearance, man's imagination supplied the need.

One of these grotesque beings, emblematic of Satan, sin, and pestilence, has been, since antiquity, the dragon. Archaeologists have claimed that the dragon, as we see it depicted today, has some foundation for its use in that it resembles a prehistoric reptile. Even so, it is safe to say that the above includes embellishments of man's superstitious mind.

The Heart, Chalice, Dove and Arrows

A GAIN WE HAVE a composite symbol with a multiple meaning. The cup or chalice in the mystical sense alludes to the fullness of life, the richness and joys of living. Above the cup is suspended the heart, emblematic of the emotions and sentiments which are required to temper life and guide it from sensuous paths. The cross seen upon the heart indicates that spiritual interests must keep man's emotions within their proper bounds. The dove, as usual, alludes to purity and ascending consciousness. In this symbol the dove depicts the true life, the ideal of purity and the desire to raise the consciousness to a lofty plane. The arrows represent temptation striking at the very soul of man and which he must resist regardless of the torture and torment such resistance affords. The theological interpretation of this latter element of the symbol is found in 2 Timothy III:12, "Yea, and all that will live godly in Christ Jesus shall suffer persecution."

The Phoenix

EMBLEM OF IMMORTALITY and Resurrection. A fabulous bird of antiquity; was said to be like the eagle in form and size, but of very beautiful and vivid plumage, mostly gold colored and crimson.

Among the Egyptians it was the emblem of the soul. It was said to live about six hundred years, and then to make a pyre of aromatic gums and spices, lighting the pile with the fanning of its wings and then to be consumed; and from its ashes it arose reinvigorated and with its youth renewed. Although this myth has long since been proven false, the Phoenix is still a favorite symbolism.

The Sword, Shield, Helmet and Breastplate

THE EARLY ARMOR of man has often been used symbolically and allegorically in classical, philosophical and ecclesiastical literature. The following are allegorical Biblical references to the armor of a warrior:

“Wherefore take unto you the whole armour of God, that ye may be able to withstand in the evil day, and having done all, to stand.

“Stand, therefore, having your loins girt about with truth, and having on the breastplate of righteousness;

“And your feet shod with the preparation of the gospel of peace;

“Above all, taking the shield of faith, wherewith ye shall be able to quench all the fiery darts of the wicked.

“And take the helmet of salvation, and the sword of the Spirit, which is the word of God.”

Ephesians VI:13-17

It is quite infrequent that allegories of the Christian Bible may be interpreted in the same sense mystically, but in this instance they may be without any loss of value and without suffering a limitation of meaning.

Flowers

FLOWERS HAVE ALWAYS had a spiritual significance and have been used for centuries as a mystical symbol. Philosophers and mystics have referred to the budding of man's soul, the flowering of his mind, the blooming of the consciousness of man. The flower has also been likened unto the brief span of man's life. We quote below Biblical references wherein the analogy of the flower has been used.

“As for man, his days are as grass: as a flower of the field so he flourisheth.

“For the wind passeth over it, and it is gone; and the place thereof shall know it no more.”— Psalms CIII:15, 16. “. . . they are like grass which groweth up.

“In the morning it flourisheth, and groweth up; in the evening it is cut down, and withereth.”— Psalms XC:5, 6.

The Wreath and Torch

THE WREATH AND torch generally represent death and victory. Usually, however, the inverted flameless torch is emblematic of death and the laurel of victory. Very many of the early converts to Christianity were from among the so-called pagans. Their early training influenced their ideas after conversion. They were familiar with many of the emblems of the Greeks and used them with new ideas in their religion.

These emblems are from the early Greeks. We do not know of any two emblems which are more expressive of their significance than these two. The early Christians used the symbol to depict life and peace, death and victory through Jesus, the Christ. Since that time the torch and wreath have been used separately to convey many other meanings.

Celtic Cross

PERRHAPS ONE OF the oldest symbols of man, and which still is prominent today, is the cross, but there are various forms of the cross, many of which had no religious significance, but were purely geometric or mystical. The most commonly known crosses are the Crux Ansata, the looped Egyptian cross, the Tau cross, the Swastika, and the various ecclesiastical forms.

One of the oddest forms of the cross is that which is illustrated here, known as the Aberlemno, or Celtic. The original is formed of a single slab, seven feet in height. If our readers will refer in their local public library to the subject of "cross," in any of the leading encyclopedias or Hasting's *Encyclopedia of Religion and Ethics*, they will find, therein, some intensely interesting and instructive reading about the origin and significance of the different forms of the cross.

The Hermetic Rose Cross

THIS INTRICATE SYMBOL is called the alchemical and hermetic Rose Cross, and is a very old mystical symbol. It is composed of two Rosy crosses united into one: the small Rosy cross at the center—representative of man, the microcosm—is in turn the center point of a larger rose residing at the heart of the large cross—symbolic of the macrocosm. Upon the four ends of the large cross are inscribed the three alchemical symbols: mercury, sulphur, and salt. At the top of the cross, mercury is placed in the center, sulphur on the left, and salt on the right. Upon the other ends of the cross the symbols have been inscribed in such an order as to conform to the esoteric tradition.

Also upon each arm, adjacent to the alchemical symbols, is the symbol of the pentagram. This five-pointed figure is a symbolic representation of the Rosy cross itself: the victory of the quintessence over the four alchemical elements. The wheel at the top of each

pentagram represents the quintessence; the small triangle on the left, with the point downward and a line parallel to the base, symbolizes earth; the triangle above, with a line parallel to the base but with the point upward, represents air; the upper triangle on the right of the pentagram, with the point downward, symbolizes water; the lower small triangle on the right, with the point upward, represents fire.

On the lower arm of the figure, below the large rose, is a hexagram—symbol of the macrocosm—composed of two interlaced triangles. At its points are inscribed the six planets, according to the ancient astrological tradition: at the bottom is the Moon, at its right is Venus, followed in turn by Jupiter, Saturn, Mars, and Mercury. At the center of the hexagram is the Sun. The order of arrangement of these symbols conforms to certain Cabalistic rituals.

The lower end of the longest arm is divided into four sections by two diagonal lines. These sections are colored according to the four colors of Malkuth of the Cabalistic “Tree of Life.” The four sets of three rays which extend outward from the center of the large cross symbolize the Divine light. The letters inscribed upon each large center-ray combine into I N R I, which combination, according to the Rosicrucian historian Fr. Wittemans, represents a Latin motto meaning “Nature is completely renewed by fire.” The letters upon the smaller rays represent evocative names of Latin, Egyptian, and Greek origin.

The petals of the large rose on the cross are twenty-two in number, and stand for the twenty-two letters of the Hebrew Cabalistic alphabet. The outer circle of twelve petals represents the twelve single letters of this alphabet, and in particular the twelve signs of the Zodiac. The next circle of seven petals symbolizes the seven double letters—in particular the seven astrological planets. The innermost circle of three petals represents the three Mother-letters—air, fire, and water.

At the center of the large rose is the microcosmic rose cross, an unfolded cube with a five petaled rose at its center. Four barbs emerge from behind this cross, pointing into the four directions in space.

The complete symbol or “Encyclopedic” Rose Cross symbolizes all the majesty, power, beauty, and protection of the Rosicrucian Order.

Crosses and Their Meaning

THE CROSS IN its various forms may be traced back to remotest antiquity. It is not endemic to civilization, for it has been found inscribed on the pottery of peoples that may be archaeologically classified as prehistoric.

What did the cross in its earliest form suggest to the mind of primitive man? Perhaps the conception of *duality* was the most dominant idea identified with it. If you, today, were to pictorialize, in a very simple form, the unity, the marriage, if you will, of two different conditions or things, can you think of any more expressive form than a simple, *equilateral* cross? (See Figure 1)

All crosses, of course, do not have a psychological and natural foundation. Others have a religious, mystical, and heraldic significance. The religious and mystical interpretations are, however, at their bottom, principally related to the psychological principles from which the cross sprang. There are as many as 385 different types of crosses, a number of which are purely ornamental designs. A form of the equilateral cross was depicted by the Chaldeo-Assyrians, as a symbol of the sky and its god Anu (Figure 2). It possibly suggested as well the radiation of space, of extension, and direction.

The *Tau Cross* (Figure 3) is so named because it effects the design of the Greek letter Tau. With the Gauls, the *Tau* comes to stand for the hammer of Thor. Even with the Egyptians, it was the sign of a two-headed mallet, the sign of the *enforcer*.

The *Crux Ansata*, or looped cross (Figure 4) is really a Tau cross with a handle or loop attached to its top. To the Egyptians, this symbolic device, cross, was known as the Ankh, which means "life." The sign was placed in the hands of gods and personages to show that they were living, not perhaps in the physical sense, but that they were living in the next world.

The *Swastika*, or gammated cross (Figure 5), only of recent times has come into ill repute, by symbolizing an anxious political regime. Heretofore, it has been venerated by peoples of every era for exalted

meanings. It is often alluded to as the gammated cross, because it appears like four gammas (the third letter of the Greek alphabet) joined together.

The Swastika's suggestion to the primitive mind was principally one of motion. The apparent diurnal movement of the sun across the heavens, the movement of the earth, running water, the wind, the uniting of four castes—all of these were associated with the early Swastika.

The *Christian Cross* began as a glorification of the Roman Lignum-Infelix (unhappy wood). This Roman cross was in reality a wooden post, with a horizontal crossbeam near the top upon which it was the custom of the day to execute criminals just as we in many countries of the world today execute criminals upon the gallows, also principally of wood. Since Christ was crucified upon the Roman cross, it became to the Christians a symbol both of infamous wrong and of His sacrifice. The *Crux Immissa*, or Latin cross (Figure 6), finally in the early centuries took its place officially as the symbol of Christianity.

The *Crux Decussata*, or Saint Andrew's cross (Figure 7), is an example. It derives its name from the Roman number ten (X), upon which type of cross it is claimed Saint Andrew was martyred.

The *Maltese*, or rayed cross (Figure 8), is still another example. This cross was worn as a decoration by the hospitalers, for their Christian deeds of charity. The latter were a knighthood formerly known as the Knights of St. John of Jerusalem. Its form is still often used as a meritorious military award.

Again the *Patriarchal Cross* (Figure 9) was so named after the Bishops of the early Christian church, who were known as patriarchs. This form sometimes had three and more horizontal bars. The Cross *Perronnee* (Figure 10), so named because it is mounted on steps, is more commonly known as the Cross of Calvary.

A form of the St. Andrew's cross also evolved into the monogram or emblem of Christ (Figure 11). X is also like the Greek letter *Chi*. P is the Greek letter Rho. These constitute the first two letters of the

Greek word for Christ. The abbreviation, namely, X and P combined, as shown, became the symbol of Christ. It is for that reason that the term *Xmas* is still often used today as an abbreviation for Christmas.

The *Rosicrucian Cross* (Figure 12) has a distinctly mystical and allegorical meaning, unique unto itself. It may be held that the cross represents the physical body of man, with arms outstretched, in salutation before the sun in the East, the latter depicting the *Greater Light*. The partially unfolded rose in the center of the cross represents the soul of man, the inner self unfolding within him as it receives more of the light. The rose placed in the exact center of the cross, where the two lines intersect, depicts the point of unity. It alludes to that point where manifestation occurs, by virtue of the two different conditions—the material and the spiritual—having joined their natures in a common purpose.

Sri Iantra

THIS SYMBOL IS called Sri lantra and is of Hindu origin. The large circle represents the universe without beginning or end. The triangle with the apex up depicts the positive or male element, the triangle with the point down, the female element. Both, though visibly distinct, are united. The unity of these two creates a microcosm or small world, represented by the next smaller circle. For religious purposes an idol or image of a god or avatar is placed in the exact center of the symbol when it is drawn upon the ground.

The symbol has been adopted by numerous esoteric orders and societies, and its interpretation as a whole varies. The general significance they attributed to its geometric elements, the circles and interlaced triangles, is about as related.

Pentacle

THE ACCOMPANYING SYMBOL is known as the Pentacle or five-pointed star and is often referred to as the Pentagram. The symbol is related to have been used as a badge by the members of the Pythagorean School, and is said to have signified health to these ancient philosophers.

Marks of this kind are also used in Northern India on utensils, particularly domestic objects. The symbol is used by the people as a protective amulet or charm to prevent scorpion stings and fever.

The Pentagram is also used by a venerated mystic order to symbolize the numeral 5, and disorder or *fall, death, disease, corruption and putrefaction*.

Rhythmic Cosmic Motion

THIS GEOMETRIC SYMBOL was used by the Egyptians and, subsequently, by other ancient peoples. There is no universal assent as to its meaning. A philosophic concept, now a tradition among certain venerated esoteric orders, is that it depicts Rhythmic Cosmic Motion, upon which the existence of all things depends. The circle represents the Cosmos or the state of being, namely, eternity without beginning or end. The sine or curved line depicts the perpetual motion of the Cosmic and the state of equilibrium which it effects. The equilibrium is denoted by the crest (upper part of curve) and the trough (lower part of the curve) equally dividing the area of the circle.

If we interlace the sine with another of the same length and curvature we have a crude form of the swastika which is still another ancient symbol which has denoted motion of the universe.

This symbol may also be said to represent life's cleavage or the simple division of the cells.

Quintessence

THE INTERLACED TRIANGLE, or pentagram, again appears as an esoteric symbol. The key to their meaning this time is the numeral 5, appearing in their center. The 5 in this relationship depicts the fifth essence (quint essential) of the alchemists. According to the Pythagoreans, there are five elements, the first four being earth, air, fire, and water, the fifth or quintessence being of a celestial nature. In fact, this fifth element was really conceived by the alchemists as the prima materia (first matter). Not only were the other elements believed to have originated in this fifth essence, but it was likewise thought to be the universal or Cosmic Mind, which directed the formation of all properties and substances. Thus it was an immortal mind force. As one translation of an archaic Rosicrucian alchemy manuscript reads, inert, "The quintessence is the power, the quality, and the virtue of each and everything in nature. "Therefore, we may consider the quintessence as constituting a fifth element within all matter. As such, it forms the foundation from which flow the four visible lower elements: fire, water, air, and earth. These four well-known elements may be regarded as being the home of the quintessence. "The quintessence is a most subtle essence, which permeates all objects, which, although it lies concealed within each and every substance, may nevertheless be made particularly discernible. Through its power and its activity, all objects are mutually attracted or repelled, in accordance with their polarities."

Sistrum

THE SISTRUM WAS an instrument used by the ancient Egyptians in the worship of the Goddess Isis. When shaken, its parts emitted a rattling sound. It became an ancient symbol of Cosmic motion. Plutarch, in referring to it, says: "The Sistrum, too, shows that things that are must be shaken and never cease from motion, but be, as it were, aroused and stirred up when they slumber . . . showing that, when corruption has tied fast and brought it to a standstill, Generation again unlooses and restores Nature by means of Motion." Plutarch further explains the bars across the oval of the Sistrum as follows: "And as the Sistrum is circular in the upper part, the arch contains the four things that are shaken, because the part of the universe that is born and perishes is surrounded by the lunar sphere, but all things are yet in motion and changed within it by means of the four elements, fire, earth, water and air"

Macrocosm

THE UNIVERSE, A cell with a nucleus of terrific heat and gases. Around it, concentric rings of molten matter and flames. The illustration here is an early design of the universe used in the macrocosmical studies of the medieval mystics and philosophers. The theory is responsible for the simple circle being used so commonly as a symbol of the universe, even by our modern philosophers and metaphysicians. Allegorically, the circle also represents being, or the universe without beginning or end.

The Germ of Life

THE EGG HAS often been used in past times as a symbol of the germ of life. The transition from germ to living form was most conspicuously apparent in the egg, and was the source of study by ancient alchemists and philosophers. Early chemists attempted to compound artificially the chemical ingredients of the egg, hoping by this means to discover the Cosmic formula of life itself. The egg has been used in the ornamentation of ecclesiastical furniture and paraphernalia, and can be seen used in this manner in the great cathedrals of Europe.

Friendship

THE SYMBOL SHOWN here is a compound one. The clasped hands allude to friendship, brotherhood, fraternalism—and are used as a symbol having this same significance by societies and fraternities today. The flames, seen rising from the chalice, depict the holy fire of purification, the temptations and trials of life, which we must go through. The combined symbol represents friends who together have passed through such fires, and have had their minds purged of any jealousy and envy of each other. It also means that their friendship has been molded by the flames through which they have passed.

The Rock and the Sprig

THERE ARE CERTAIN things in nature which, by their very form or substance, lend themselves to adoption as symbols. Thus, the rock has for centuries been the symbol of determination, unperturbability, staunchness and durability. The sprig, on the other hand, has often been used as a sign of new life, or to depict the struggle that the comparatively weak life force has against the elements and environment. The combination of the rock and the sprig as shown here alludes to a life of strong character and noble sentiments—the sprig being life, and the rock the foundation on which it rests, or in other words, character and noble sentiments.

The Conquest of Ignorance

THIS ALLEGORICAL ILLUSTRATION might well be termed “Man’s Conquest of Ignorance and Superstition.” Hideously formed beasts were meant to depict the vicious nature of superstition and ignorance. Most times, as here, they are shown dwelling in caves or dark places, representing the fact that ignorance and superstition can exist only in darkness. The figure of the man pulling the beast from his cave, alludes to those courageous individuals who spread knowledge and conquer ignorance by exposing it to scrutiny and investigation. This is another woodcut from a several-centuries-old Rosicrucian book in the archives of the Rosicrucian Order.

Abuse of Knowledge

THIS ILLUSTRATION IS an allegory alluding to the intoxication that comes from an excess of knowledge which is acquired without proper mental digestion; that is, cogitation and reflection. The tree with the trunk in the form of a woman alludes to temporal or sensual knowledge. The fruit of this tree can be eaten with benefit by man if digested and used for the purpose for which it exists. But if man indulges too freely, the fruit soon intoxicates him, robs him of his reason and normal powers. This state of intoxication is indicated by the reclining male figures. Briefly, the lesson taught is that man should acquire knowledge only to the degree of his ability to master and direct it, or else it gains control of him.

The Altar of Lust

HERE WE HAVE another composite symbol consisting mainly of the Altar and the Serpent. In this instance, the serpent represents wickedness, or immorality. The altar depicts those things which man venerates by his devotion to them.

The allegorical illustration in its entirety alludes to the destruction that awaits a civilization which gives itself over to an incontinent life, or that countenances the depraved conduct of its people. In the distance are seen the ruins of a city, and, immediately behind the altar, the remorseful humans.

Pillars of Learning

IM THIS SMALL allegorical illustration is contained a wealth of philosophical truth. In the upper left-hand corner are two columns which form a portal. The columns allude to wisdom and the stability of knowledge. All who wish to live a greater and higher life must pass through this portal, or, in other words, acquire knowledge. On the right may be seen the ruins of a structure, representing decaying civilization. In the foreground is a wild beast devouring refuse; the beast depicts a degenerate people looking for bits of happiness in the debris of society. The man in the center-foreground is exhorting the beast—the fallen people—to look upward and to enter the portal of wisdom and thus find the greater pleasures of mind.

Dual Being

NOT ONLY DOES our common law consider marriage as uniting two individuals into a single entity, but the early Canon or Ecclesiastical law did as well. The mystical principle behind the church law was that man and woman were originally one being of dual sex, and thereafter became separate beings, each with but one polarity of life, or sex, and this condition marriage strove to correct.

The allegory above depicts these ancient principles. To the right of the two sweethearts is Cupid, a well-known symbol. Above them is a two-headed figure alluding to the state of marriage, wherein persons may have separate minds, yet can return to the original condition of man—the duality of sex and one being. (Reproduced from an early Rosicrucian volume—dated 1687 A.D.— in the archives of the Rosicrucian Order, AMORC.)

The Two Selves

IN THIS ILLUSTRATION of archaeological symbolism we see the idea of the duality of our natures represented by two creatures at war. Throughout our earthly lives, there is a constant contest between the soul and the animal body. In this symbolism we see the soul represented by the winged creature, capable of walking the earth and flying through space, but we see it being attacked by the strong creature of the earth plane who wants to argue against every opportunity of dominance given to the soul. It wants to be the pre-eminent and overpowering mind and force in our daily thinking and activities.

One or the other of these two natures in man must win eventually. The future happiness and progress of man depend upon the eventual supremacy of the soul. It is man's duty to learn of ways and means of giving the inner self and divine nature of man every opportunity to assert its magnificent mastership.

The Zodiac

NEARLY ALL OF the symbols used by the mystics of the Middle Ages contained astrological or astronomical signs and chemical signs. In the symbol shown herewith the Zodiac of twelve divisions with the twelve signs is shown in the outer circle, representing the twelve classes of human beings and the twelve primary qualities or conditions in life. Inside the circle at the four sides of the square are shown the Latin words for fire, air, earth, and water, representing the four principal elements in the manifestation of nature's laws. In the center is shown a star with the various astronomical and chemical emblems indicating nature's products. The relationship of all these things to man and his life and interests was the basis for the metaphysical science of astrology and not the modern form of fortunetelling.

Oldest Rosicrucian Allegory

THIS SYMBOLIC ILLUSTRATION is the most revered of all Rosicrucian ones for it depicts the fundamental tenets of the Order's philosophy. The large circle is emblematic of the macrocosm, the universe as a whole, being complete without beginning or end. Within the circle is the triangle, the symbol of perfection representing the law of duality, the binary forces of nature combining to produce all creation.

The smaller circle with the human figures within it alludes to the microcosm, the small world of which mankind is a part, and which is governed by the same laws as the macrocosm, of which it is a part.

The square symbolizes stability and indicates that all human conduct, in accord with the principles of the macrocosmic and microcosmic worlds, is proper and will lead to a life of security.

In the allegorical scene are also shown numerous geometrical symbols, which are to teach us that the laws of the universe are orderly truths and as dependable as the axioms of mathematics, one of the sciences based upon these universal laws.

This illustration is taken from a very rare Rosicrucian book of the 17th Century, now in the archives of the Order.

The Crocodile

MAN IN THE early days of his struggle for spiritual light attributed to the beasts, birds and reptiles certain supernatural powers. This belief arose from observing the superior physical attributes they possessed. Man's imagination ran riot. He conceived mythical animals having the combined forms and characteristics of these beings with which he was familiar. One of these was the dragon, resembling a crocodile. The dragon was conceived as the symbol of evil, deception and foreboding, the god of destruction. In this illustration, taken from a rare book of Rosicrucian symbology, we see the dragon about to devour his own tail. The allegory implies that evil eventually destroys itself and cannot endure.

Justice

MANY WILL RECOGNIZE in this illustration age old geometrical symbols, and their arrangement will recall their mystical meaning. The circle represents the universe without beginning or end. Within the circle is the square, representing stability and dependability. Within the square is shown the equilateral triangle with point upward, alluding to nature's manifestations on the material plane.

Written in Latin about the circle are the names of the seasons. Behind all is humanity represented by the figure, attempting to render justice as is indicated by the scales and the sword which he holds.

Since an understanding of justice will come from a careful study of nature and her laws, it is noticed that the figure is shown scrutinizing the symbols of nature before him. This is another combination of mystical symbols reproduced from a Rosicrucian book dated 1618 A.D.—the original book being in the archives of AMORC.

Life and Death

THE SKELETON STANDING above the casket and the broken trunk of a tree in the middle distance signify that notwithstanding the fact that we build churches and cathedrals in which to worship God and place the proper value upon spiritual things, we still look upon the physical, material side of life, even in its broken and lifeless state, as being important. By the position of the skeleton above the casket the idea is symbolized, with the cross embroidered on the cover of the casket and the candle still burning, that even after death we have in mind throughout mourning the loss of the physical and give little consideration to the spiritual side of man. The opposite symbol, revealing what is proper, would be the spirit of the soul rising from the casket to the heavens.

The Temple of Life

THE CIRCULAR STRUCTURE, somewhat like a temple, represents the period of man's life from birth to death. Always in his presence is the tree of knowledge, with its fruit of wisdom. If man partakes of this fruit, he may look beyond the narrow confines of the structure, or his daily life, and see the magnificent vista of the universe, depicted by the landscape which surrounds the structure. The open doorway alludes to the portal through which man will learn to look when he has eaten of the fruit of the tree.

This impressive and beautiful symbolism is from a Rosicrucian manuscript, centuries old, in the repository of the Order.

The Dragon's Tail

THIS ALLEGORICAL ILLUSTRATION, like many symbols and allegories, can be interpreted in various ways. The common interpretation of this very, very old allegory is that before the arts and sciences can be established in any new land or community, there must be driven from that land all of the superstitions, fears, and the misbeliefs of the people. The coast land in the illustration represents it to be a new country. The figures of humans with various symbols above their heads depict the different arts and sciences, culture and learning. They are shown driving from the land demons, serpents, and monsters, which allude to the misbeliefs and superstitions that dwell there. This is another illustration from one of the rare Rosicrucian books in the private archives of AMORC.

The Stream of Life

THIS CENTURIES-OLD ALLEGORY contains some profound principles of mysticism and metaphysics, and was used to illustrate a rare Rosicrucian manuscript. The stream in the foreground alludes to the flow of the years of man's life. In the center of it are found small bushes and shrubs representing the opportunities for the growth of one's better nature if they are cultivated. The wise man, instead of standing idly on the banks of the stream of life, letting years flow by, is seeking to make the best of these opportunities. He is reaching out to bring to the surface these partly hidden growths. In the distance, in the bright sunlight, is seen the city of attainment toward which life flows. Just before the stream reaches the sunlight, it is crossed by a bridge which depicts the end of life for those who have not prepared themselves to carry on in the face of obstacles. The obstacles are depicted by the face in the skies blowing a gust of wind toward the earth.

The Swastika Cross

THIS STRANGE LOOKING symbol becomes easily identified when one's attention is called to the fact that it is the basis of the swastika cross symbol. The lower section of the symbol composed of a circle containing three hearts is the mystical interpretation of the trinity. Remember that the snake in ancient symbolism was a sacred representation of the world.

This old symbol had a religious, a philosophical, and an alchemical significance according to how it was used and what principles of activity were associated with it.

The Mystic

THIS IS ANOTHER reproduction of an old woodcut illustration taken from one of the rare Rosicrucian books in the archives of the Order. It may be rightly termed the mystic, for it depicts the ancient alchemist employing in a mystical manner the laws of nature to manifest its phenomena. Note the lion representing the power of justice, devouring the serpent which depicts the satanic influence of evil. On the wall beneath the window is shown the symbol of the planet Mercury—☿—of great esoteric significance to the alchemists.

Flight of Time and Certainty of Death

THE HOURGLASS SYMBOLIZES time; the scythe, death.

“Watch therefore for ye know neither the day nor the hour wherein the Son of man cometh.” Matthew XXV:13.

“Remember how short my time is: wherefore hast thou made all men in vain?”

“What man is he that liveth and shall not see death?” Psalm LXXXIX:47, 48.

This symbol is another composite symbol. The hourglass, of course, has been symbolic of the passing of time for several centuries. The scythe has been the symbol of the grim reaper of death, taking the toll of life without exception to any man of any class of society. The wings indicate the flight of time. Time moves on inevitably and cannot be checked by money, power or influence of any kind. Therefore, man should prepare for the eventuality of death and give thought as to immortality and the result of transition from this life to another.

THE ROSICRUCIAN ORDER, AMORC

Purpose and Work of the Order

The Rosicrucian Order, AMORC, is a philosophical and initiatic tradition. As students progress in their studies, they are initiated into the next level or degree.

Rosicrucians are men and women around the world who study the laws of nature in order to live in harmony with them. Individuals study the Rosicrucian lessons in the privacy of their own homes on subjects such as the nature of the soul, developing intuition, classical Greek philosophy, energy centers in the body, and self-healing techniques.

The Rosicrucian tradition encourages each student to discover the wisdom, compassion, strength, and peace that already reside within each of us.

DEDICATION

*To the Fearlessness and Frankness of H.F.
who has so often and convincingly expressed his
faith in the Doctrines of Reincarnation, and
who has demonstrated his complete trust
in those principles by his broad
vision, human sympathy,
and unlimited plans for
the future.*

*This Book is Dedicated
with the wish that his marvelous industrial
achievements may continue to have
the well-deserved Cosmic
Benediction and
Blessing.*

CONTENTS

Introduction

1. “I GO TO PREPARE A PLACE FOR YOU”
2. WHY ARE WE HERE?
3. THE ANCIENT BELIEFS
4. THE QUEST
5. THE COSMIC CONCEPTION OF THE SOUL
6. THE PERSONALITY OF THE SOUL
7. DOES PERSONALITY SURVIVE TRANSITION?
8. HEREDITY AND INHERITANCE
9. KARMA AND PERSONAL EVOLUTION
10. THE AGGREGATION OF PERSONALITIES
11. THE RELIGIOUS AND BIBLICAL VIEWPOINT
12. CHRISTIAN REFERENCES
13. THE OVERSOUL AND CYCLES OF INCARNATIONS
14. BETWEEN INCARNATIONS
15. MULTIPLE AND SECONDARY PERSONALITIES
16. SOULS OF ANIMALS AND “THE UNBORN”
17. RECOLLECTIONS OF THE PAST
18. THE FEAR OF DEATH
19. QUESTIONS AND ANSWERS

INTRODUCTION

THE CONTINUED INTEREST in the Western world regarding the religions and religious wisdom and philosophies of other lands has led many thinking persons to give serious consideration to the very old and logical doctrine of reincarnation.

The demand for some understandable and rational explanation of the doctrine of reincarnation is responsible for the publication of this book. There are many small books or pamphlets in the libraries of the Western world today dealing with the subject of reincarnation, but in nearly every instance these books have been written and issued in conjunction with the outline of some ancient mystical religion. For this reason most of them are filled with strange philosophical terms or mystical principles which make the fundamentals of reincarnation difficult to understand and difficult to accept.

Perhaps this is why so many of those who are devout students of the modern Christian or the modern Jewish religions hesitate to accept any of the principles of reincarnation. I have yet to find an intelligent man or woman who, after hearing the true doctrines of reincarnation properly presented, refuses to admit that they are reasonable, logical, and acceptable.

With this in mind, therefore, the chapters of this book were prepared at various times as inspiration moved me to write.

This much can be said in closing any argument regarding the truthfulness or soundness of the doctrine of reincarnation. We are here on this earth plane living a life of trials, experiences, lessons, and constructive instruction. Whether we accept the doctrine of reincarnation or not we will continue to live in accordance with some law, some principle, some scheme of things; and, when the end comes,

this period of life on earth will be consummated and through transition we will learn of what there is in the future. What we may believe, or think, in regard to reincarnation will not change one principle of the doctrine nor affect the laws involved one iota. The great effect of such belief or disbelief, or the acceptance or non-acceptance of these doctrines, will be in our lives as we are living them *here* and in our readiness and preparation to meet transition when we come face to face with it.

Knowing, therefore, that the acceptance of these doctrines will bring to the reader, as it has brought to millions of others, greater happiness in life through a greater understanding of the trials and problems involved, and an absolute fearlessness of so-called death, I close my manuscripts and pass them on to the mechanical masters who will prepare them for the public, and rest in the hope that thousands may find *Light*, *Life*, and *Love* through what I have written.

—H. Spencer Lewis

Chapter 1

“I GO TO PREPARE A PLACE FOR YOU”

THE STONE WAS struck and there issued a spark! Again the striking of the stone, and another spark! And a third time! Now a little flame grew in the dry grass and feathers; and the flame gave forth light and burned the little twigs, producing a fire. The fire was kindled and nourished until it enlarged its size and intensity. Burning on flat stones and crudely protected by others, there was soon a small furnace of heat and light which radiated its vibrations into the gloom of the small wood-and-mud cabin.

Rejoicing in this new and marvelous addition to their roughly constructed home, primitive man and primitive woman, for the first time, seated themselves on the bark covered floor and gazed into the dimly lighted recesses of the enclosure which now became an enjoyable place at night.

Not long ago, this man and woman had ventured from the protected place in the branches of a tree, where they had lived in safety, to construct and occupy the dream place of their evolving minds. Contemplating the possibility of a larger environment than the tree afforded for safe relaxation and protection from animals of prey, they had built the first home, the first cottage, the first castle man ever knew.

With the setting of the sun each day came darkness and the coldness of the night. The long hours of silence, accompanied by the inability to see or to employ the time, added to the despondency and discouragement of the monotonous life from sunset to sunrise. True,

the more perfect enclosure and protection from winds and storms made this crude home so superior to the dwelling place in the trees that a sense of kingship and mastership over the elements and the creatures of the earth brought many new inspirations to the minds and hearts of these beings, who were looked upon as more fortunate and blessed than their companions.

The night had afforded but one pleasure, one rich reward, for the labors of the day; this was to sleep and dream. But, the idleness of the early evening hours, when the mind was keenly active and speculation unlimited, became the dread of each day. Surely life held something better than this, even though the light of the sun and the shadows of the night painted no picture of an answer to the mystery.

Then came the discovery of the spark, the light, the flame, the fire, the heat! In an instant, the life of primitive man and woman was changed. The darkness of the night could be dispelled, the coldness of the evening air and morning breeze could be modified, metals could be reduced to malleable forms, and food could be prepared more tastefully than in the past.

The greatest change of all, however, was that which came with the coming of *light*. Light at night. Light in the darkest hours and in the darkest home. Light and warmth at the fireside. A hearth place of comfort. A place where the long and silent hours of the night might be profitably spent. Pleasure, comfort, discourse, learning!

The coming of the night was anticipated with joy throughout the day. When the setting sun brought an end to the hunt and to the work of the fields, and when the tired body could no longer carry on, there were still the hours of the evening to refresh man and afford him the luxurious pleasure of warmth while he rested in enjoyable companionship before the fire.

Sitting in the glowing lights of the blessed fire, the mind was tricked into concentration upon the fantastic forms and weird action of the flames. The marvels of nature's powers and possibilities intrigued the imagination and tempted the speculative faculties of primitive

man's receptive consciousness. Here, meditation was the school, and the mysteries of life the teacher who questioned and drew forth the answer from the inspired impressions of each mind.

To this fiery shrine came others with their questions, their dreams, their problems, and their desire for light *and more light*. The fireplace became the center of the temple of mystery, and the hearthstone became the altar of the worship of primitive man, when his thoughts were turned toward nature and its marvels.

It was here that men first directed their thoughts toward the possibility of an omnipotent power which ruled the forces of the universe and created the bounties of life; it was here that primitive men first lifted their thoughts beyond themselves to that which must be greater than the greatest among them. It was here that men first sought the castles of the soul, more grand than the castles of the body or the castles they built with mud and wood.

Heathens they were called, because they worshiped at the hearthstone. Castles they sought, for in castles there were protection, warmth, comfort, and the time to think and dream. Mansions of the souls they looked for and found at last in the uplift of their thoughts and the uniting of their minds in one perfect conception of a heavenly realm.

Still, there was always the quest for knowledge and the desire for answers to problems unsolved. "Why are we here? who are we? whence came we? and whither do we go?" There were the questions that were asked at the first hearthstone, and are asked today at every hearthstone, with the same sincerity and an increasing desire for explicit and understandable explanations.

Have we, as individuals, a definite mission in life? Is each human being an entity, an individuality, known to and considered by the Infinite Intelligence as an important element in the universal scheme of things? Is the earth, after all, merely a stage, presenting a passing drama into which we have cast ourselves by our own voluntary preference? And when our parts are played, is our work on earth truly done?

The sacred scriptures of all religions speak of only one earth, one globe, one place in the whole of the universe where man was created and exists as an image of some Creator. Science, on the other hand, busily occupies itself on the borderline of discovery, anticipating that it may reveal to us at any moment the actual existence of other planets than this one, filled with human life or living creatures not unlike ourselves. The gospels of the ages and of all nations speak of great avatars and messengers of the Holy Messiah and the God of Gods, who have come to earth to save all living beings. Is there no redemption, no saving grace, for the beings on other planets, or have they no souls, no personalities that are divine and worthy of infinite consideration?

Is this personality of ours, this individuality which we strive to build up through idealism and the elimination of undesirable traits, merely a temporary or imaginary creation of our minds?

Down through the ages has come the cry for *light and more light*. About us, everything is changing and nothing seems permanent and fixed. The mountains crumble away, the rivers dry up and cease to flow, islands sink, and new seas are formed. The great oaks, in all their majesty, must succumb to transition, to change, or death. Man goes on his way and crosses the borderline into the unknown and seems to end his existence in the twinkling of an eye. Is there any part of man, therefore, or any part of nature, that is immortal, unchanging, permanent, and continuous?

Is there a survival beyond man's mere memory of the personalities that now exist in human form? Will the death of the body or the change of its form release an intangible and invisible something that will rise to greater heights than the monuments to remembered characters, or surmount the limitations of time and space, and thereby attain incorruptibility and immortality?

If the present physical body is a mansion of the soul and the Great Messenger of God went forward to prepare other places of this soul, are there other mansions then to be attained, and how?

It has been the hope of the world—and the inspiring power that has enabled man to carry on in the face of mighty obstacles—that some day he would be freed of the mortal cloak that enslaves him on this earth and he would rise to a life of eternal bliss and goodness. If the religions that have inspired man are true, and the culminating joy of his life is to be found only in the spiritual existence of his soul in a realm beyond the earth, why have the souls of millions been imprisoned here to suffer and to know torment, sorrow, strife, and conflict? What end is served, what mission fulfilled, by the incarnation of the soul here? If, out of the sublime, spiritual consciousness of a blissful kingdom comes each soul, and to this same high state must it return to enjoy its divine heritage, why is it sent forth from such a transcendental place to dwell in association with corruption, sin, evil, and dross?

These are the questions which millions are asking today and which must be answered more completely, more satisfyingly, and more constructively than they have been answered in the past. Directing our attention to the worship of God, and inspiring us with the belief that this God is loving, merciful, tender, and just, will not answer these questions but will merely add to the mystery of our existence. Granted that an omnipotent, all-wise, merciful, and loving God created us in his image and directed into these physical bodies a part of his soul consciousness to suffer and to endure the trials and tribulations of unknown and unexpected experiences here on earth, still the question remains, “Why are we here?” and “How are mercy, love, and justice made manifest in such a plan?”

Chapter 2

WHY ARE WE HERE?

TO THOSE WHO say, “I do not believe in the doctrine of rebirth or immortality,” I would like to reply by saying, “Do you really know what the doctrine actually means?”

In twenty years of public lecturing and writing on subjects dealing with spiritual and cosmic principles, I have found thousands who were ready to express strongly their disbelief in certain doctrines, and yet had to admit that they neither understood them nor had ever attempted to investigate them. It is truly difficult for one to accept a doctrine that is not understood, and it is especially difficult to accept a doctrine or principle that has been popularly misrepresented. This tendency on the part of human nature is nothing new, for in the time of Jesus, and for centuries preceding his introduction of new principles, the races of man rejected many doctrines which they did not properly comprehend.

No one compliments himself by saying that he has discarded or rejected a statement, a principle, or a law that he neither understands nor gives sufficient consideration to comprehend. Such an attitude is one of intolerance, bigotry, or ignorance. One may appear to be with the majority or with the popular mind in smiling at new ideas or new principles, but, after all, the smile may have to be changed tomorrow by the sudden discovery on the part of the populace that the rejected or ridiculed idea has been found true and acceptable.

After all, what is there about the real doctrine of human rebirth that any strictly orthodox religious person, or any rigidly scientific mind, cannot accept? I will grant you that there are certain things about the popular notions of reincarnation that are absurd and so greatly

misrepresented that the logically minded or thinking person feels that it is a presumption upon his intelligence even to consider the statements made. When, however, we find that three fourths of the world's thinking and analyzing minds have accepted a certain principle or doctrine for many ages, and when we find that the best-informed persons and the keenest intellects in the business, scientific, and religious world have given their approval and credence to such a doctrine or principle, then we should feel inclined to give a few minutes' thought to the doctrine and discover whether there is in it the essence of truth or probability. This is only fair to ourselves and fair to the doctrine.

We have learned through experience in the past century that the popular impression of a doctrine, principle, or idea may be very wrong. We have learned through many important examples that even the learned persons and the commentators in encyclopedias may be misinformed in regard to certain principles and thereby influence or prejudice our understanding. Certainly, we in the Western world have learned that popular criticism is not always a standard by which we may safely gauge our own convictions.

All of this is particularly true regarding the subject of human rebirth. When we read in the question-and-answer columns of the largest newspapers in America that a clergyman, who is nationally known and is devoting his time principally to the answering of religious questions, states that his understanding of this doctrine is that man may be born again as a cat or a dog, or some other animal lower in the scale than the human being, we keenly realize what an injustice is being done to a very beautiful and important law of nature through gross ignorance or willful misunderstanding. And, if such a learned man has no better understanding of the real principles of reincarnation than this, we should not be surprised that lesser lights, or those millions who do not have access to sources of information, should have other distorted ideas regarding reincarnation.

Perhaps the most important point to be kept in mind by each investigator on this subject is that the doctrine or law of reincarnation is not a religious creed, a religious doctrine, or a religious law. It is a natural law and has to do with the evolution of nature and the

carrying out of nature's principles aside from any connection these principles may have with the revelation of God and God's omnipotent intelligence. In other words, the laws pertaining to reincarnation are no more religious than are the laws pertaining to conception, the growth of the embryo, and the birth of the body. God's divine laws as natural laws are unquestionably operating in this marvelous process of the reproduction of the human race, but no one would classify the study of embryology as a religious doctrine or a religious creed. The facts pertaining to embryology are strictly within the domain of science. Likewise, no one would think of classifying the study of disease, the breaking down of the human body and its ultimate transition, as a religious or theological study, even though divine principles are involved.

Furthermore, a careful and truly conscientious study of the doctrine of reincarnation reveals that there is nothing in the true principles that may be considered contradictory to any of the religious principles found in any of the recognized or long-established religions. Reincarnation in its truthful presentation is not antagonistic toward the principles of sound theology, and I know that Christians will be astonished when I say that there is nothing in the truthful presentation of the doctrine of reincarnation that is contrary to, or inconsistent with, the fundamental Christian principles *as revealed and taught by Jesus*. A reading of the other chapters of this book will prove that this is so, and it is a notable fact in the Western world today that Christians find more joy in the true understanding of the doctrine of reincarnation than do persons of other denominations. The reason for this will become apparent as this book is read. Again I say, however, that some of the popular notions regarding reincarnation and some of the willfully misrepresented fancies connected therewith are not only inconsistent with the Christian theology and doctrine, but with all true religions.

One of the most often repeated criticisms of the doctrine of reincarnation, generally expressed by those who have had only a casual understanding of it, is to the effect that it seems strange that God should require the soul of man to have many and varied experiences here on earth. Persons expressing this idea generally say that they cannot see why the soul of man could not continue to exist without requiring

incarnation in a physical body on this earth plane. This argument is generally presented as a conclusive and final closing of the entire discussion. However, such an argument is fundamentally unsound. It is not based upon any rational premise. The fact of the matter is that the doctrine of reincarnation does not start with the assumption, or the theory, that man *must be* incarnated in a physical body and have earthly experiences. Reincarnation starts with the fact that man *is* incarnated in a physical body and *is* here having earthly experiences. Since these two wonderful facts are established by our actual existence here, and are, therefore, removed from the field of speculation and are not mere assumptions used in the doctrine of reincarnation, we must begin with the fact that man *is* here and *is* living in a physical body, and confine ourselves to answering the question of "Why?"

Since the dawn of civilization, when man began to think of his vicissitudes, trials, and tribulations, and to seek for some reward for all that he suffered, he has asked the same question over and over, "Why are we here?" Theology has its answer to this question and the answer has become evolved and involved until it is no longer a brief, definite statement, but a group of statements constituting a creed; and there are many creeds according to the various viewpoints and beliefs. Science, on the other hand, has its answer also. But the scientific answer does not cover all of the elements, all of the principles which concern man more deeply than do the problems of cosmology and biology.

If one eliminates the religious elements of the question, "Why are we here?" and confines the discussion to either the materialistic or the atheistic viewpoint, there is still a great need for more light and more information on the complex problems included in the question

It is not sufficient, either, to say that we *are here* because of some divine principle known only to God and incomprehensible to man. There is nothing in the whole history of civilization and in the cultural development of man to indicate that any of the laws of nature or any of the laws of God were ever intended to be concealed and kept from man's understanding. The very inner nature of man seems to be inspired with an unquenchable thirst for knowledge about himself and his relationship to the universe, and nothing short of the truth

in these matters will suffice. Our encyclopedias and textbooks of knowledge are filled today with free and exhaustive explanations of laws and principles which were at one time or another proclaimed to be God's secret knowledge, and beyond the comprehension of man's finite mind. Those very questions, which at one time were condemned by church and state as heretical and beyond the right or privilege of man to ask, are now freely asked and answered with precise knowledge by both church and state institutions. In fact, religious and educational foundations are active today in the promulgation of knowledge pertaining to those very things which were condemned by the church at one time as nobody's business and God's secret prerogatives.

Since we are here, and since the church, through its theologies, claims that we are here because God created us to live on this earth plane, we have a right to ask the *why* and the *wherefore*. And, since science also claims that our existence here is in accordance with a definite law of evolution which is a logical consequence of the divine, creative principle, we have a right to ask science to investigate still further and tell us what purpose is served by our existence.

This book, then, is an attempt to explain in non-technical language, and without religious bias or prejudice, the reason for the incarnation of a *divine soul* in a *physical body*, and the purpose or mission of that soul in a physical body on this earth plane. The explanation does not involve any propaganda for a new religion, a new creed, or a new form of worship. It does not attempt to soothe the weariness and struggles of life, nor blunt our minds to the obligations of life. That the doctrine of reincarnation does bring, in its understanding, a newer and different viewpoint of life resulting in more contentment and more harmonious cooperation with nature's laws is simply in the nature of the laws revealed. But that newer viewpoint and that contentment which comes with the understanding of the doctrine of reincarnation in no way lessens the seriousness of life or makes man immune to the sufferings and tribulations which he must endure.

Finally, I may add without seeming to be facetious, that whether one believes in or accepts the doctrine of reincarnation or rejects it, the truth of its principles will continue to manifest itself and the laws

will continue to operate. We neither obliterate nor modify a law or principle by denying it or refusing to accept it. Therefore, it behooves everyone to become acquainted with the facts and at least to know something of the laws under which we are living and by which we are directed and controlled in our existence.

We may continue to live without knowing these things, and we may find some degree of satisfaction in life without understanding any of the principles involved. The whole culture and advancement of man's civilization, however, has proved that man has become more happy, more contented, and more masterful through understanding every natural and divine law involved in his existence. The constant quest for more knowledge along these lines indicates the restlessness of man's nature because of his determination to gain greater success and joy in life through the knowledge that is necessary for him to possess. For this reason, the knowledge of the doctrine of reincarnation will constitute one of the most beneficial aids to his education.

Chapter 3

THE ANCIENT BELIEFS

THE ONE INCONTESTABLE fact which is the foundation of our whole study of man's existence is that man is here on earth and that his life consists of a series of experiences which at various periods bring joy and sorrow, happiness and sadness, contentment and unrest, love and hatred, peace and suffering.

The second important fact revealed through the experiences of life is that man's nature is dual, or at least it is dual in manifestation. He is a physical, mortal body, with humanly conceived ideas and ideals, desires, ambitions, and conceptions. He is also an emotional or spiritual body having a subjective self or consciousness, which urges submission to its desires, inspirations, tendencies, and inclinations. Between these two sides of man's nature there is a constant contest for supremacy and domination. Hence, man has come to think of himself as being more than a mere physical body like a mass of matter united by a chemical formula, and more than a mere mechanical contrivance like an automaton. He is likewise convinced by the sufferings and ordeals of the flesh that he is more than a purely spiritual being.

In attempting to find an answer to the question: "Why are we here?" man cannot subdue or cast out of his consciousness the idea that if he could determine *what* he is, he would know *why* he is. Therefore, along with man's quest for knowledge concerning the purpose of his existence in an earthly life is the desire for knowledge concerning himself and his relation to the universe.

Theology has always attempted to explain what man is and why he was created. Science begins its explanation of man's nature at a point

where man is already a living, thinking entity. It does not deal with those phases of his creation that precede the chemical, the biological, or the mechanical constitution of his nature and being. This pre-entity period of man's creation has been left to theology to explain. The theological answers have been varied and unique in accordance with the periods of time through which man has passed in the process of civilization, and in accordance with the light of knowledge possessed by the nations in all ages from antiquity to the present moment

There is one point of agreement to be found, however, in all of the theological explanations offered in regard to the nature of man's being. In all times and among all races, and in all degrees of cultural education, the inspired or logically evolved answer has been that man is a physical body with its accompanying physical consciousness, in which resides a soul, or a divine self, or a segment of some divine consciousness constituting an inner self. The duality of man's existence is, therefore, a universally accepted idea. That idea is challenged by science since it cannot accept as a fact any premise or any principle beyond its ken. In all religions, however, the idea of an inner man or inner self is a fundamental which is stated as neither theory nor speculative conclusion.

If one denies the existence of an inner consciousness or soul as an entity distinct and apart from the physical body, then the whole subject of birth and rebirth reduces itself to a consideration of chemical action and reaction, and its purely physical principles. Such a belief would preclude any consideration of the subject of reincarnation just as it would preclude any consideration of the immortality of any part of man or the existence of any divine element in man. Therefore, since we are not dealing with the materialistic and non-divine idea of man's being, we must set aside this phase of speculation and adopt the more universal idea that man is a physical body clothing a soul or form of spiritual consciousness.

Looking upon man, therefore, as a dual being, body and soul, we are forced to turn to theology and the religious doctrines of the past and present to find any illumination regarding the immaterial part of man. The scientist says that we may look to him for any and every

explanation pertaining to the chemical, biological, pathological, and physiological nature of man's existence. We must turn to ontology and theology for our knowledge regarding the spiritual part of man. Whether the present-day scientist is right in thus limiting his field of investigation, or is wrong in this regard, we may determine after we have studied the question in the future chapters of this book. We may say in passing, however, that it was not always so. Theology was not always a subject of study apart from the general philosophical sciences. Nor was there always a distinct study known as the *sciences* as we have it today. Nor was there always a time when man, in his search for truth about himself, found two opposed schools dealing with distinct dual parts of his nature.

However, the tendency in modern times has been to leave all questions pertaining to the spiritual or infinite consciousness of man to the schools of theology, and if we are to accept any of their explanations in regard to the nature of man and his relation to the universe, we must enter into a simple summary of them, for they are too diverse, contradictory, and inconsistent to serve any purpose through elaborate examination of their minute details.

In brief, we find theology in general throughout the ages admitting one fact or claiming one point with consistency. It is to the effect that the real part of man is the infinite, divine, or intangible consciousness and essence which constitutes the inner self. For this inner self many names have been invented and universally adopted at various times. The most general of these names is that of *soul*, and we find it associated with another word, which means the *breath*; and for many ages the inner self of man was associated with the idea of breathing an invisible essence which constituted the spiritual nature of man. A second general principle most universally and consistently adopted was the idea that this soul of man is a distinct entity, or a spiritual something, that is immortal and at times separates from the physical body.

Thus we have two important points coming down to us from antiquity as fundamental principles involved in the explanation of man's spiritual existence. These points we find beautifully incorporated in an attempt to explain the creation of man in the translated book

of Genesis in the modern Christian Bible. Therein, we read that God made man out of the dust of the earth which represented the physical, chemical, mechanical, and material part of his being, and into this God breathed as a second part of man the breath, or essence, or consciousness, of life, and the physical body became a living, or animated, visible soul.

Two important secondary principles are intimated by this symbolical or allegorical process of man's creation. First, that the physical body, made of the material elements of the earth, was completed and perfected as a purely material form before any consideration was given to the process of animating it with consciousness of life. Second, that with the physical body completed and yet lifeless, it was necessary for something more to be done to make it a living being, and that to do this there was added a second and a distinctly different and separate element called "the breath of life" After this entered the physical body, the physical part became insignificant, for man was then not merely an animated body, or a physical body that was filled with life, but a *soul* that could live on earth and manifest itself and was, therefore, a *living soul*.

When the original version of this passage in the Bible is read and analyzed in its original tongue, one is more deeply impressed with the significance of the second point. We are impressed with the fact that the physical body did not take on life but that the invisible, infinite *soul* took on a physical form by the uniting of the breath with the body. Even the ancients were impressed with this significance, and in their philosophies, which gradually evolved into theological principles, we are constantly reminded of the fact that man is essentially a *soul* clothed with a body, and not a body animated with a soul.

A further survey of the theological and philosophical explanations of the past and the present reveals some other points consistently adhered to in the explanations, though often modified in accordance with sectarian creeds. These are to the effect that the breath of life, or *soul* of man, was originally a part of the Creator, or God essence and consciousness. We are reminded in many ways and by many words that whereas the physical part of man is an accumulation of unorganized elements gathered together from the products of the earth, the soul of

man is something that was drawn out of space and made into a form to be placed in man. We are reminded also that whereas the physical part of man was made out of nothing that had any form or nature of man in it, the soul of man already existed in the soul and consciousness of the Creator when he made the body of man.

We are reminded also by other points of the explanations that the soul in man existed from the beginning of all time and must continue to exist until the end of time, if there be such an end. In most of the philosophical explanations we are impressed with the belief that the soul's immortality distinctly implied that since it was not mortal and could have no end, it never had any beginning, whereas man's physical body had a distinct beginning when it was created out of the lesser and unorganized elements of the earth, and would have an ending when these mortal elements lost their organization and became disassociated.

Finally, our survey of the theological and philosophical explanations of the spiritual part of man reveals a universal belief in the principle that the soul or consciousness of man was always a part of the soul of the Creator, or God, and that it will live, or exist, or continue to function, as long as God or the Creator exists.

In these principles and ideas, therefore, we have a very definite picture of the nature of man's being. We have man as a physical being represented by his physical body composed of the material elements of the earth. Within this physical body we have the spiritual body or soul. Man is therefore dual, body and soul. His body is mortal, being composed of mortal elements or of corruption, to use a theological term. Its mortality makes it corruptible. The spiritual part of man, or the soul essence, is a part of the God consciousness, and is infinite, divine, and immortal. It was originally, and is essentially in its nature, of the immortal and incorruptible. It resides in the body of man and, therefore, takes on a cloak of corruption, for the body of man cannot always continue, but must decay and corrupt.

The soul is therefore only temporarily resident within a physical body and cannot remain eternally in one body, since in that case the body would have to be immortal, as is the soul. Man is born with a new body recently composed of the chemical elements of the earth, and

into this enters the pure and immortal soul that has always existed and will continue to exist for all eternity. The mortality and corruptibility of the body cannot affect the immortality and incorruptibility of the soul. Therefore, there must come a time when the physical body in its corruption becomes disorganized and can no longer contain the soul essence. A change takes place which is incorrectly called *death*, but which is merely a transition. Body and soul are separated and the corruptible goes into corruption, and the immortal and incorruptible retains its infinite state.

Science has proved the correctness of the belief in the mortality and corruption of the physical body. The experiences of the flesh in our individual lives demonstrate that from hour to hour, and from day to day, we rebuild our physical bodies with the material elements of the earth in order to replace the corruptible and worn-out elements which previously composed it. Our other experiments have shown that the physical body can completely wear out and become so incapable of retaining life and vitality that the so-called breath of life, or soul consciousness, leaves it.

By these experiences of science and our individual lives, we become convinced that it is a part of the economy of the Creator's laws, and of the economy of life itself, for the soul to separate itself from the corrupting and corruptible physical body and leave the body to continue its transition into primary elements again, by which it returns to the dust of the earth, while the soul remains immortal.

If this broad and general explanation of the nature of man's being is acceptable to you, my reader, then you are face to face with the next important question: "Why is the soul of God, or the Creator's consciousness, placed temporarily in a *physical* body, and what becomes of it after its release?" That double question has been the most insistent and most important query in the consciousness of man since the dawn of thinking and believing. It is to answer that question with more facts and less theory that this book was written and dedicated to thinking men and women.

Chapter 4

THE QUEST

I HAVE INTIMATED that one of the objections on the part of those who are fundamentalists of the modern type in their religious viewpoints is that the doctrine of rebirth seems to place the soul of man in the position of being a *spiritual entity*, continuously bound to *earthly* conditions. Such persons say that it is disturbing to the peace of their minds and their spirits to think of the soul as requiring earthly experiences, trials, and tribulations in order to evolve or perfect itself. They also argue that it should not be necessary for the soul to have earthly experience or to require any process or system of earthly development. Their contention is that the soul of man is a divine, infinite, spiritual something, having its origin in God and maintaining eternally its transcendental nature, and that it can be neither added to nor subtracted from, nor in any way made more divine than it is when it leaves God and enters the body of man. A final contention is that it is horrifying to think that the soul must have more than one contact with the quagmire of earthly contamination instead of returning to the eternal spiritual world and remaining there in its sublime spiritual state.

All of these arguments are based upon certain assumptions which are faulty, or at least misunderstood. In the first place, attention is called to the fact that the soul of man *is* here in a physical body and *is* in contact with the earthly experiences, and this fact is neither an assumption nor a simple matter of doctrinal faith. All of our reasoning and arguing about the why and wherefore of the soul's incarnation in a physical body here on this plane cannot alter the fact that *it is here* and is passing through a process of experiences.

Granting that the soul in its spiritual essence is absolutely perfect and sublime and that no earthly experiences can improve this high degree of perfection, and granting that the soul has its origin in the consciousness of God but is nevertheless infused in a physical body to live for a time on this earth plane, we come face to face with the question as to why a soul in its perfection should require earthly experiences for even a day or an hour.

Orthodox theology of the Western world briefly and simply says that there is a divine reason and purpose for the soul's contact with earthly conditions and its incarnation for a time in a physical body on this earth plane. That is really saying something that common sense would admit. It is not a theological conclusion but a rational conclusion. We cannot possibly conceive of there being no reason, no purpose, and no great end to be served by the incarnation of the soul in a physical body. To think of such an important element in the scheme of things as being purposeless would be to tear away the very foundation of our faith in the belief that the whole universe and everything in it exists and operates in accordance with law and reason, and that God has established nothing or instituted nothing that did not have some definite purpose or plan back of its motive and existence.

It is my purpose in this book to show that there is a good reason, a logical reason, and an acceptable reason for the soul's incarnation in the physical body. This reason is not contrary to any of the sound, theological principles, and fortunately it is consistent with the understanding held by all of the religious movements of the world. By understanding these reasons and analyzing them, even casually, one is better prepared to understand the real purpose of our existence here on earth and to see why the true doctrines of reincarnation—freed from all of the unsound idiosyncrasies that personal opinion has attached to them—are plausible and acceptable to the thinking mind.

Starting then with the fact that the soul in its essence and vital nature is a spiritual substance originating in the consciousness of God and emanating from the spiritual realm, we proceed to study the attributes of this soul and learn what it really is, and why it may benefit by contact with earthly experiences.

Perhaps only in the Western world and among Western religions is the nature of the soul so little understood. The rapid advance and propagation of the claims of modern spiritualism represents a form of speculation possible only because of the lack of knowledge on the part of persons in the Western world regarding the soul, its nature, and its attributes. To the Orientals and to almost three fourths of the world's religious population the many preposterous claims of spiritualism as a religion, a philosophy, or a popular belief originated in the Western world solely because of popular misconception regarding the soul. It was claimed recently by one eminent clergyman, who regretted the increasing interest in spiritualistic seances in America, that the World War [I] with the attendant loss of millions of lives was responsible for the great increase in numbers of persons who turned to spiritualism to find some consolation, and perhaps some illumination, in regard to the unknown or sudden passing of beloved ones. But in many foreign nations there was also a tremendous loss of life, and among these peoples there was not the frantic turning to spiritualism for understanding because most of these foreign persons were too well acquainted with certain fundamental facts which enabled them to understand what the Western minds had not yet learned.

Clergymen in the Western world are as responsible as any others for the progress of spiritualism, for if the churches of the Western world and the religions of the Occidental had not eliminated from their early doctrines and creeds the principles which revealed the true nature and attributes of the soul, there would not be the present-day misunderstanding and misconception in this regard, and the many mystical movements now found in America and England would have no actual necessity as a foundation for their existence.

In most of Europe, and in all of America, the great fundamental truths of man's spiritual nature and existence have been modified or entirely eliminated from modern creeds and dogmas. If these were understood as well today as they were in the days when Jesus the Christ talked to his disciples and with the multitudes, and when the foundation for the Christian church was laid, there would be no need for any such book as the present one or the hundreds of others which have been published within the last ten years casting new light on the teachings of Jesus, and the pristine principles of Christianity.

Chapter 5

THE COSMIC CONCEPTION OF THE SOUL

IN THE OCCIDENTAL or Western world there is a general or popular idea of the soul which pictures it as an invisible, intangible, spiritual substance of an immortal nature. This substance is believed to be the “breath of life,” or, in other words, an etheric vitality emanating from the Source of All Sources and carrying with it the creative power or energy of the Creator of all things that exist. In brief, it is believed to be a spiritual essence, the nature of which is to give animation and life to all conscious things.

This is all that can be definitely stated by the most orthodox and enthusiastic followers of the religions of the Western world. We may divide the principal religious denominations of the Western world into two broad classifications under the headings of Jewish and Christian. Therefore, let us pause just a moment to see what the leading authorities in those two fields of religious thought have to say regarding the soul. Turning first to the *Jewish Encyclopedia*, we find that the nature of the soul, as taught in the Talmud, is that which was conceived by Philo, the philosopher. This conception— which is a human conception— is that the soul is dual in nature. One part is called the *active soul*, which is the consciousness breathed by God into man, and the other part is the *vital spirit* with which he inspired man. Here we have the foundation for a distinction between spirit and soul, as two parts of the same thing, and a reason for the confusion in regard to spirit and

soul, which leads many modern religious writers and preachers to use the two terms synonymously as though they were identical. It is this confusion which is responsible for the spiritualistic movement and similar movements using the term *spirit* for the term *soul*. We note in the *Jewish Encyclopedia* also that in some prayers the phrase is used, "May God give spirit and soul to the embryo" In other Jewish writings, quoted in the encyclopedia, it appears that the Jews believed that all souls are preexistent and that there are souls of different quality. The rabbis, according to the encyclopedia, do not agree in the belief of the preexistence of the soul. According to them "each and every soul which shall be from Adam until the end of the world, was formed during the six days of creation and was in Paradise".

For the Christian viewpoint, we may turn to the original Christian doctrines, as presented in the *Catholic Encyclopedia*. Here, we read that the soul "may be defined as the ultimate, internal principle by which we think, feel, and will, and by which our bodies are animated" In this expression we find the Christian idea that in addition to the vitality which animates the physical body through the coming of the soul, there is a form of consciousness or mind that accompanies the soul and which enables this physical body to see, to think, and feel, and act with understanding.

Much more is said in both of these encyclopedias about the soul. Many peculiar ideas are expressed therein which will probably surprise and astonish the average devoted Jew and Christian. Further presentation and discussions of these unusual ideas regarding the soul will be referred to in other parts of this book in connection with the points raised by them. At the present moment we are concerned solely with the nature of the soul and not its origin or the means of its entrance into the body or its purpose after it has become incarnated.

We note, therefore, that the Jewish and Christian religions adopted the almost universal idea of all other religions claiming that the soul of man was not only a vitalizing essence of a divine nature but the *seat* of consciousness or mind. We may safely say, therefore, that the universal human conception of the soul today is that it is the vitality and consciousness in man. This must be the view of every orthodox Christian and every orthodox Jew of the Western world, as well as

the conviction of every orthodox person of the various religions throughout the Oriental world. With such a general foundation for an analysis of the soul and its nature, let us turn to the viewpoint as expressed by mystical revelation and see what is the cosmic conception of the soul.

First, we discover that there is a very definite distinction between spirit and soul. Spirit is the animating vitality or energy that permeates all living matter in the universe. We must remind the reader right here that it is unnecessary to use the term *living matter*, since all matter is *living*. There is a difference between living matter and conscious matter. Rocks are living in the sense that there is a vitality, or force, or energy which infuses every crystal and every atom of their structure, and which holds the mass together in the proper atomic and molecular form to express the specific nature of matter. All matter is vibrant with this universal energy or essence which is universally called *spirit*. It is in every cell of the elements composing the body of man, the body of every plant and vegetable, and of every material thing in definite expression in the universe. Spirit is, therefore, the universal essence that creates and maintains the expression of matter. Chemically speaking, or from the viewpoint of physics, we may say that the essence which composes the electron is the universal spirit. Therefore, we will put the subject of spirit aside for a moment and consider soul as something apart from spirit.

Our cosmic conception shows us that the soul of man and all conscious creatures is a form of divine consciousness, which has certain attributes or functions. It may, therefore, be called *infinite mind*. This infinite mind has certain faculties which we may term *seeing, feeling, hearing, smelling* and *tasting*. These faculties are not separate and distinct functionings, as they are in the physical body, but a group or amalgamated faculty of apprehension and comprehension which in any one of its five forms of impression or receptivity is interpreted by us as that of seeing, feeling, tasting, hearing, or smelling. In other words, the mind of the soul is capable of receiving and comprehending knowledge through a faculty of perception, which is a combination of seeing, hearing, feeling, tasting, and smelling. The reception and interpretation of an impression by the soul is translated to our outer

physical consciousness in the terms of the senses: seeing, feeling, hearing, tasting, or smelling. Judging the soul impressions, then, from our objective or physical form of consciousness, we would feel at times as though the soul had seen something, or heard something, or felt something, whereas, as a matter of fact, the soul impression was not through any limited channel of one means of consciousness.

The perception or reception of knowledge or impression by the soul through its one complex channel constitutes what modern mystics term the *psychic sense*. When this sense receives an impression which is prophetic, it is called *intuition*. By others the psychic sense is called the channel for inspiration. Many other terms are used to describe this perceptive and comprehending faculty of the soul, and among the Oriental religions and philosophies we find many strange words indicating the rather indefinite idea I have attempted to express in the foregoing sentences.

Thus, the soul has the attribute of comprehension, as a faculty of its consciousness. It has likewise the faculty of communicating, through a similar channel of psychic impressions, the thoughts within its consciousness. These thoughts impress themselves on the consciousness of the soul in other physical bodies by a simple process. The soul in man, being a part of the God consciousness or Oversoul of the universe, is never separated from the soul that is resident in every physical body, and a thought in the consciousness of the soul in one physical body can be immediately in contact with the consciousness in the soul of any other, or every other, physical body on the earth plane or in the spiritual realm.

Right here we have a cosmic truth which, if developed to its full explanation and understanding, would make plain the misconceptions of the modern spiritualistic doctrines. Nothing said in the foregoing paragraphs is consistent with nor in support of any of the claims made by the spiritualistic doctrines of the present day. In fact, an understanding of these cosmic truths will reveal the error of the present-day spiritualistic beliefs and practices, and will make plain why many comprehensible experiences and revelations have come spontaneously and unexpectedly through what has seemed to be an application of the spiritualistic principles.

This mind of the consciousness in the soul, being part of the Infinite Mind, is wise in all universal cosmic wisdom. This does not mean, however, that the essential wisdom of the soul, which it possessed before it ever became incarnated in a physical body, includes a knowledge of all of man's artificially established and arbitrarily created beliefs and practices. It is often argued by the young student of mysticism and metaphysics that since the soul is infinite in its wisdom, there can be no reason for the statement that through its experiences here on earth it adds to its knowledge, and if it possesses all knowledge, it cannot possibly add to that wisdom.

Such students overlook the fact that the infinite mind of the soul previous to any incarnation on this earth plane would not be familiar with such mundane knowledge as the Sanskrit alphabet, the Morse code, the invented laws of man's form of chemistry, the driving of an automobile, the best methods to use in buying and selling in the stock market, or the ethical codes and legal statutes arbitrarily established by man in various countries, communities, and localities. The universal wisdom possessed by the soul before incarnation and ever afterwards retained as its fundamental knowledge pertains strictly to cosmic laws and principles—divine decrees and rulings.

When we stop to consider that the essential knowledge of one nation in one part of the world today is not the essential knowledge of another nation in another part of the world, or of the same nation in that part of the world centuries ago, we will realize that human knowledge, or earthly knowledge of human origin and application, is a transient, mortal something that changes rapidly and is not fixed for all times. The soul would not be aided in its earthly purposes during its incarnation in a body by being conscious of all the human knowledge accumulated by it through all ages.

The essential knowledge possessed by the infinite mind of the soul is that transcendental knowledge which man cannot obtain through any of the human channels or through any of the physical organs of perception and which he must, therefore, obtain through a spiritual means.

The coming of the soul into the body, therefore, is not for a single purpose, and we realize at once that we now have two good reasons

for the incarnation of a spiritual soul in a human body. First, that for a reason which we will explain shortly, the soul is to have certain earthly experiences, and secondly, the human physical body is to have the advantage of spiritual knowledge and illumination in addition to its mundane knowledge.

The next point for our consideration is that after the soul is incarnated in the physical body and brings to the physical body the divine consciousness and wisdom, plus the transcendental faculty of perception and communication with the soul consciousness of the universe, we have a combination which in the human form expresses the closest approximation to the image of God.

Even a cursory examination of the principles of biology, anatomy, and pathology indicates to us that the physical body of man, independent of the soul and its consciousness, has a form of consciousness and intelligence of its own. The most minute biological cell under examination through the microscope reveals reactions to light, color, and heat, and other external conditions, which prove that it has a primitive form of consciousness of its own. This physical, mundane consciousness is limited and mortal. The smallest living organisms, such as the smallest ones living in water, are an aggregate of the primitive cells, and their bodies contain, therefore, the aggregate consciousness of the cells that compose the bodies. The physical consciousness in each living body on the face of the earth is no more than the aggregate consciousness of the cells composing the body.

Limiting our discussion to man's physical body, we note from scientific experiments that the consciousness in the cells which compose the roots of our hair is a different consciousness from that which is in the cells composing the fingernails, the bones, the outer tissues, the muscles, the blood, or the other parts of our bodies. Each cell carries on its functioning and adjusts itself to its environment with similar cells and maintains its personality and integrity, its individuality, and its usefulness in accordance with the distinct consciousness within it. The cells which produce hair would not produce bone or tissue, or any other form of matter. No matter where they may congregate or with what other cells they may associate, they will strive against great odds and under

very adverse conditions to maintain and perpetuate, establish and reproduce, their individual nature in accordance with their individual consciousness. There are forms of physical disorders in the human body where hair cells, teeth cells, bone cells, and others, accumulate in an unnatural position or relationship and continue to manifest their natures and reproduce that which they were intended to reproduce, despite the obstacle of wrong environment and abnormal situations.

The consciousness of the physical body is, therefore, an aggregation of the consciousness in every physical cell of the human body, and is likewise a combination of the different natures of consciousness of the many kinds of cells.

The mystic knows, therefore, that the difference between the most highly evolved ape and even the primitive man is not a question of soul evolution but a question of the difference between the natures of consciousness in the cells composing the physical body and the dwelling of a human soul in that body instead of the soul of an ape. In other words, the difference between the ape and the human is not only a difference of the soul in each of them but a difference also of the aggregate and combined consciousness of the cells which compose the physical bodies of each. An ape, therefore, could not evolve into a man by suddenly having a soul of man enter its physical body in place of the soul of an ape. A great change would have to be made in the physical consciousness of its body as well.

Nor could the ape become a man by any process of evolution whereby the physical consciousness in the cells of the body of the ape became like unto the consciousness in the physical body of man, unless at the same time a human soul entered the body of an ape. The idea of seeking, therefore, for a single missing link in the evolutionary stage of cell life composing the physical body of the ape is a foolish one. The greater missing link in such an imaginary chain would be the single link representing the stage of change from the soul of an ape to the soul of man. And no one can seriously consider making a search for such a link.

Man's physical body, therefore, has a consciousness distinctly its own, limited and adjusted through attunement of its faculties to perceive and

comprehend things of its own nature. The consciousness of physical man is keenly attuned to the consciousness of all physical nature. But it cannot be attuned to the consciousness of the Cosmic or Divine Mind, for this is of a transcendental nature and of a higher vibratory rate than the vibrations of the physical consciousness. All of the perceptive faculties of the physical body and all of its impressionistic channels are limited to the grossly mundane things of the physical world.

The eyes can only see to a limited extent and within a limited portion of the universal scale of vibrations. There are colors and tones too high and too low for the physical eyes to see. The physical ear cannot hear all of the sounds that exist in the universe, for its consciousness and its mechanical means of translation of impressions are limited to a certain low portion of the scale of vibrations. The same is true of tasting, smelling, and feeling. In other words, the human physical consciousness is a consciousness of itself and of its like throughout nature. It was created and placed in the cells of matter in order that matter might be conscious of itself in all physical forms; beyond that it has no consciousness and cannot perceive or comprehend.

Truly, man, in a physical sense, is a finite, mortal, limited creature, and without the breath of life, the soul, and the divine consciousness, is not “a living soul,” but a mere aggregation of earthly substances with their limited form of earthly consciousness.

A violet growing in the green fields is an entity with a personality and character easily distinguished. Its characteristics of form, color, odor, cycle of birth and rebirth, and other distinguishing features constitute its personality. Its personality is the result of all of the consciousness within its body. A rose is distinguishable from all other flowers by its character or its personality. These are a result of the consciousness within it. Burbank learned that by modifying the consciousness of a flower or a piece of fruit through the introduction of a few cells of different consciousness, the outer and inner character and personality of flowers and fruit might be changed. Primitive man learned long ago that he could graft the personality of one tree into another by grafting some part of the physical consciousness or cell life of one into the other.

Returning to man again as our principal study, we find that the character and personality of man are the result of the thought consciousness within his being. And just as the character or personality of a flower, a tree, or a piece of mineral, or a piece of fruit is not exclusively manifested by the outer shape or form of the thing, so man's character and personality do not rest in the form of his body nor its size or weight, but in other subtle expressions of form, size, and color.

Realizing, then, that the consciousness within a man's body, like unto the consciousness within all things, is responsible for the distinct character or personality of man, we need think only of one other important point in order to have a perfect picture of man as a marvelous creation. That point is this: The soul consciousness added to the physical consciousness in the body of man during incarnation here on earth gives man his character or personality. Differing from those things which have no soul or divine consciousness, man's character or personality is not solely a result of the physical consciousness in his body, but the result of a blending or uniting, or cooperative action and reaction of the soul consciousness with, and upon, the physical consciousness. Thus, the dual consciousness of man constitutes his personality or character.

One final point in connection with this cosmic conception of the soul. As the physical consciousness in man changes through its physical evolution tending toward perfection, the physical characteristics of man change. As the soul consciousness in man is given more and more opportunity to express itself and to guide or dominate the thinking and the acting of man, so his character and personality will change. In other words, as the soul consciousness and the physical consciousness in man change through experience, through greater opportunities to express, through more complete understanding and comprehension, through more perfect attunement with the higher principles of life, so the character and personality of man change and evolve.

We now find that we have three reasons for the incarnation of the soul in the body. First, that—for a reason which we will explain shortly—the soul is to have certain earthly experiences; and, second, the

MANSIONS OF THE SOUL

human physical body is to have the advantage of spiritual knowledge and illumination in addition to its mundane knowledge; and third, that the character and personality of man may be perfected.

Chapter 6

THE PERSONALITY OF THE SOUL

IN THE PREVIOUS chapter we learned that one of the purposes of the soul's incarnation in the physical body is to assist in the building up of character and personality. This brings us to a consideration of what is character and what constitutes personality.

We have shown that all of the ancient and modern religions and philosophies conceded that the joining of the soul to the physical body results in "a living soul" on this earth. But we are not known as living souls but as certain characters and personalities, each distinctly different in many ways and classified only in certain broad generalities.

Our consideration, therefore, should be of what constitutes the personality of a living being. Character is generally considered as the ethical and moral principles which become the guide in life for each individual. Character, like individuality, is something that is not only constantly changing in many respects but is such a combination of elements of the physical self that it may be changed or modified at will. We mold our character, build our character, and establish our character by the things that we think, principles we hold fast to and adopt, and the acts we perform.

A banker as an individual is a banker only because that is his occupation or profession. The classification of a man as a banker refers more to his individuality and perhaps to his character than it does to his personality. The plumber likewise is classified as such because of his occupation or his trade. Some elements of character may enter

into the determination of that classification, but his *personality* may be absolutely unknown even to those who have employed him the most often as a plumber. An actor is classified as such because of his profession but not likely because of his *character*. There may be traits or elements of nature in his character that would enable us to identify him as an actor or capable of playing the part of an actor, even though we know nothing of his *real personality*. The artist may have nothing about him which would identify him as an artist, but there may be traits in his character which reveal the artistic tendencies and abilities which he possesses. He may be occupied in his art and he may not be. Nevertheless, he may be classified as an artist although we lack knowledge of his personality.

Individuality and character may be so instantly altered as to mislead us in our judgment. We may know a certain person as a banker through our daily business transactions. He may be employed in a bank where we have met him for many years and the mere mention of his name brings to our minds the immediate classification of "banker" In his outer habits, manner of dress, and manner of business conversation he may reveal himself as a character properly classified as a "banker" But we may accidentally meet him some evening in his home and find him playing a violin or a piano so proficiently that we instantly discover that in character he is also a musician. His individuality, as far as clothes and mannerisms are concerned, may continue to show us that he is essentially a banker by profession, but we notice that he can cast aside this individuality or character of the daytime and become the musician in the evening. Still, we may know nothing of his *true personality*. We may meet him in the summertime in the grounds of his country home and find that he is also a very proficient and enthusiastic agriculturist. His long study of the subject of gardening, for instance, as a hobby may make him very expert in this classification and as we see him in his overalls with rake and hoe we see a different individual or character than the one of banker— and yet we may know nothing of *his personality*

The dignified businessman who has held a responsible position and earned the popular faith in him as an efficient business executive may be tempted to commit some crime and we may find him later on in a

penitentiary serving some period of time. Having been found in his crime and discovered in his false characterization of an honest, worthy, sincere businessman, he has now thrown off his cloak and reveals his individuality and character on a level with the other prisoners around him; and we may be surprised through his language and actions to learn that the mannerisms of speech and habit which he exhibited for so many years in his business office were merely superficial qualities worn as a cloak. We may now classify him not as a businessman but as a criminal. Still, we may know nothing whatever about his *real personality*.

I trust that I have enabled you to appreciate the difference between character and personality. Personality appears to be, therefore, that inner, private nature of our real selves which has little to do with all of our outer physical or mental characterizations. It is unquestionably true that the real personality of every individual will consciously and unconsciously affect the outer habits and mannerisms of the physical self. It is also true, however, that all of the outer characterizations do not constitute a perfect index to the real personality within.

The personality within us constitutes, in a mental phase, that which we actually believe, that which we actually know, and that which has become a positive conviction with us through our thinking and our experiences. In a spiritual sense the inner self is that which is closely associated with our deep emotions and with our silent, private, cosmic and spiritual experiences. In a moral sense our personality consists of those things which we have secretly and privately established as our immutable principles or code of life. In our actions our real personality influences us by the habits, customs, and mannerisms which we have adopted gradually and so profoundly that we are almost unaware of their existence and find it almost impossible to change them or modify them.

Briefly, we may say, therefore, that personality is the inner self, or the self that is being built up by the inner consciousness and the inner man. In contrast, character and individuality constitute the outer self, or that which is of the physical, mental consciousness.

A study of the human personality through psychology and psychiatry has revealed in the past several hundred years that it is gradually formed in each individual by external influences and internal influences. Some specialists in psychology call this inner personality the *subliminal self* or the *self-conscious self*. In a true classification, however, it should be called the *true personality*. It is undoubtedly true that through heredity we inherit some elements of our personality, and it is unquestionably true that we also acquire most of the elements of our personality through internal and external influences.

By internal influences I mean those urges, inspirations, ideas, and impulses that rise within our emotions as a result of spiritual or cosmic contact, or through the transmission of ideas and principles to the inner consciousness from the *outer* consciousness. Certain courses of study, certain pictures, selections of music, and experiences in life will establish ideas, principles, and convictions in the outer consciousness which, because of their agreeableness to our understanding or to our other elements of personality, are adopted by the personality as further points of modifications. Experiences in life which teach invaluable lessons and bring to our outer consciousness a conviction of the truth of some great law or principle which we accept as being universal in nature and helpful in our progress through life, are adopted by the inner personality as rules and laws unto itself.

Sorrow, pain, and suffering, and the sympathetic understanding of the sorrow and sufferings of others will soften some of the harsh elements in our own outer nature and carry some points of characterization into the inner personality and there become fixed as additional elements of the inner self. Meditation, prayer, spiritual visions, and similar experiences of the inner self constantly add elements to the evolving personality. In this way the personality of the self within is being gradually developed toward a degree of perfection which it did not have when it entered the physical body

Because of the very intimate nature of the lessons learned by this inner self, and because of the confidential principles and ideals held by this inner self, the real personality of an individual being is known only to those most intimately associated with him and discovered only through long, intimate contact.

It has been found also, through a long study of the personality of man, that the tendency of the inner self is to build up a personality progressively toward a higher degree of perfection rather than toward a lower one. Regardless of how the outer man may live, and even pervert the morals and ethical principles to a continuously lower standard—as with the habitual criminal who is brazen and bold to the utmost degree—the *real personality within* is usually molding itself along lines that tend toward a higher standard and a greater degree of perfection.

It is a positive fact, revealed even by the action of confirmed criminals, that the higher ideals and more perfect standards of the inner self constantly challenge and question the actions of the outer self. Thus, most criminals sooner or later find themselves horribly annoyed and persecuted by a form of remorse actuated by what is sometimes called the *conscience*, but which is really the voice of the inner self or personality challenging the conduct of the outer self. Psychology in recent years has found a way to reach and arouse from its temporary imprisonment the inner personality of many persons to such an extent that a correct picture of the real self is revealed and the better tendencies of this inner self are given an opportunity to control the outer being.

The reason for the general upward tendency of the development of the inner personality is due, first of all, to the fact that it is closely associated with the Divine Consciousness in man and with those channels, or means of securing knowledge, which constantly inform the self of what is right, what is just, and what is merciful. Secondly, the outer self of man may deceive others through temporary modifications or coloring of its true nature, but the inner self of man cannot be deceived by the outer self nor can the outer self be deceived by the inner self. And, therefore, man in his own private periods of meditation and thoughtfulness knows what is right and what is wrong and is not deceived by any fictitious claim on the part of the physical consciousness. Thus, man tends toward higher thinking and self-improvement inwardly through his own private understanding of the real facts of life, while outwardly he may not be conforming to the standards thus being established.

Chapter 7

DOES PERSONALITY SURVIVE TRANSITION?

IN ANY ANALYSIS of this question we are confronted by two distinct and opposed claims. One is a theological doctrine; the other is called a scientific conclusion. Both of them are accepted by a large number of persons on faith. Both of them are sustained by the same kind of evidence when presented by the average representative of the school supporting them.

To proceed properly, let us place in a few words the two opposing claims in regard to man's destiny:

1. The theory of theology that man possesses an immortal *soul* or *personality* which survives the death of his body.
2. The theory of materialistic science that man's *individualism* or *personality* begins at the birth of his body and ends with the death of his body.

Let us note that the words used in these two brief contentions are carefully chosen. In number two the word *soul* is not used. Materialism does not recognize the existence of a soul, but does admit the very positive existence of that "something" labeled *personality* or *individuality*. The term *materialistic science* is used to distinguish one form of "science" from the many. Likewise, in number one the words *soul* and *personality* are joined as synonymous only because theology *assumes* such to be representative of a fact

The question of man's destiny, or the fate of his "personality" after the death of the body, is so old that its origin is lost in antiquity. The earliest records of man's thinking indicate that the discussion was a common and familiar one with but three conclusions as possible answers. In fact, we find that the materialistic conclusion was held by the minority of ancient civilization as today; and the majority sincerely held to the other. In all ages this conclusion or doctrine was philosophical, and not purely theological, as man has tried to make it in recent centuries.

We should not be considered presumptuous when we compare these various conclusions and beliefs, if it is our desire to find which of them is most in harmony with justice and which does the least violence to our natural feelings.

The materialistic doctrine is born of and based upon the *assumption* that man is born a helpless, ignorant infant as a product of an unknown principle called *heredity*, operating through or with forces and impulses of which he knows nothing and cannot combat; that, therefore, he possesses as advantages and handicaps, certain abilities, tendencies, fortitudes, and weaknesses, for the possession of which *he is in no way responsible*. Why he was born at all, why he is what he is, and to *what* end, he does not know and cannot know.

He tries to reconcile conditions, as he finds them, with the doctrine of materialistic heredity—regardless of the many manifest contradictions; for his doctrine says that the thief, the murderer, the fool, the liar, and the depraved have but inherited the endowment of their forebears; while the good, the noble, the rich, the happy, and the prosperous have unconsciously, mechanically, or *simply*, received the blessings passed by preceding generations. Such a doctrine does not account for the birth of a thief or a murderer in a long line of honorable ancestors, nor the birth of a noble, fortunate one in a family tree "rotten to the roots".

The believers of such a doctrine contend that they should not be condemned for their frailties, tendencies, or commissions. Even man-made laws excuse conditions thrust upon one by another without contributory responsibility or warrant, and even the most savage

racers would not tolerate—let alone create—a law which justified the punishment of one man for the sins—or commissions—of another.

Such beliefs as this preclude the possibility of a Divine Intelligence concerned in the birth and existence of man, individually and even collectively, and eliminate the existence of divine consciousness or soul in man of a nature distinct from the material essence of chemical life in his body.

Therefore, says material science, man is a chemical product—the result of mechanical or systematic laws which automatically carry on their processes of reproduction without conscious intelligence. Man is just born as he is, what he is, struggles to modify the blind, indifferent laws of nature, and eventually succumbs to the inevitable breaking down processes of the material elements—and dies. That is the end of man—again, individually and collectively.

A doctrine of *fatalism* is the religious creed of the materialistic believers. That we are born men—a certain type of chemical product—instead of monkeys, rats, or cattle, is due to chance. Our place in the animal kingdom is due to lottery. We have come from nowhere—by no real law that would prove itself by and through justice, mercy, forgiveness, consideration, or love—and pass on to nowhere again.

The good men and the just in the world are deserving of no more credit for their qualities than are the evil deserving of condemnation or punishment. Just as our tendencies, abilities, weaknesses, and prowesses are inherited without our sanction—or conscious warrant—so our experiences, fortunes, sorrows, joys, successes, and failures throughout life are acquired by us without deserving them and without moral or personal responsibility.

If we can cheat the system by beating the game of life in any move, if we can frustrate blind principles by our own developed sight, or build where tearing down seems imminent, we prove our individual strength and fitness to survive the decree of fate. The belief in eternal justice, law, order, goodness, and love is but a delusion. The law of right overpowering might, and character determining destiny is but a childish illusion—so declares the doctrine of materialism!

The theological doctrine—like unto the materialistic one—includes an assumption, viz: that the soul or personality of each individual being is *uniquely created* for each existence by God through immutable laws and principles known only to God. While this doctrine *seems* to be a great and inspiring relief from the depressing viewpoint of the materialist—and for that reason has become the hope of many—it is found, upon analysis and experience, unsatisfying to progressive, thinking minds.

We discover, first, that although it transfers the authorship of our creation from blind, unconscious chemical action to God, man remains a creature made and born from the nowhere, and the credit or *responsibility* for his existence rests with a personal maker and not with the process. Man is still a creature of circumstance and free from the responsibility of his creation, his existence, or his equipment, mentally, spiritually, or physically.

By attributing to the personalized creative power—God— that which we could not attribute to the impersonal creative, chemical processes, we have our responsibility for our existence endowed with conscious understanding, omnipotent power, infinite wisdom, and universal purpose.

The very first of these endowments—conscious understanding—warrants our belief in universal law, order, system, and purpose. To create knowingly, to cause consciously and permit understandingly, God must have a purpose, a plan, a scheme of things. There can be no element of chance, no lottery, no accident. All must be by decree. Hence man is, again, and after all, a creature of fate—divine, spiritual, infinite though it may be.

Likewise, if man is the creature of such a Creator, he, the creature, must be in possession of some of the attributes of his Creator; he must have the wisdom, power, and understanding, to some degree, of the essence from which he emanated. He must inherit—through his ancestral heredity—that infinite equipment which theology calls *soul* and which it intimates is synonymous with “personality”.

Theology proceeds a step further in its explanation of man's inherited possessions and states dogmatically or logically—however you may view the point—that since the consciousness, wisdom, and power of God and man are of a universal and eternal nature, the soul of man is therefore eternal, *immortal*.

As we have said, the theological doctrine is different from the materialistic one in only a few elements. It still leaves man the creature of fate. It relieves him of all responsibility for his birth, his existence, his endowments, and his heritage. A theological problem is involved in such a doctrine and requires explanation; and theology meets the issue quite conveniently.

The creator of man, possessing understanding, omnipotent power, and infinite wisdom, working through a universal purpose, must willfully permit, at least, the sufferings, sins, and errors of his offspring. Hence, God must either be indifferent toward his creatures or positively approving of these things. And, since there is a universal purpose in God's consciousness, he must approve of man's sufferings as well as man's joys.

At once we find ourselves face to face with involved theological doctrines, creeds, and dogmas which include *predestination* and revenge.

Predestination, as set forth in the Westminster Confession of Faith, is the doctrine which reveals that: "By the decree of God, for the manifestation of His Glory, some men and angels are predestined into everlasting life and others foreordained to everlasting death . . . whereby He extendeth or withholdeth mercy, as He pleaseth, for the Glory of His Sovereign Power over His creatures".

The principle of revenge or retribution is set forth in the Second Commandment (Exodus 20:5): "For I the Lord Thy God am a jealous God, visiting the iniquity of the fathers upon the children unto the third and fourth generation of them that hate me; . . .".

Practically all of the theological controversies of the past have arisen through attempts to reconcile the theological principle of *fatalism* with *infinite* or even *mundane justice*. One of the results has been a tendency to

shift the responsibility for the evil in men's lives to a satanic character. Even this leaves open the contentions regarding predestination, free will, the original sin of Adam and the atonement for it.

For, according to the theological principles quoted above, man is created arbitrarily and without his desire, and at the moment of creation is either *blessed* or *damned* eternally. Hence, man is either good or evil, fortunate or unfortunate, noble or depraved, from the first step in the process of his physical creation to the moment of his last breath, regardless of his individual desires, hopes, ambitions, struggles, or devoted prayers.

Such is theological fatalism! Does it offer any consolation when compared to the principle of material fatalism? Only our deeper and truly mystical conception of God's real laws and purposes enables us to see behind these theological creeds and dogmas and find the truth.

Is it any wonder that progressive, searching, sincere men and women in all lands object to the narrowness of the theological creeds which permit such conclusions to be reached as we have in the foregoing paragraphs?

The principle of justice in all things—especially in the course of life—demands that man shall earn what he gets, deserve what he requires, and merit what he seeks; likewise, it assures man that he shall not get what he has not earned or deserved. The law of *reaping what we sow* is not a theological, religious, or ethical decree, but a scientific, philosophical, and moral principle, the basis of justice.

The idea that man must suffer the sins of another, solely because the other was sinful through the fatalistic decree of his Maker at the time of his making, is certainly contrary to the principles of *human justice*, let alone *divine justice*. That one creature is good because the Maker planted good in him and another is bad because the Maker planted evil in him— forever and eternally, unalterably and irremediably—is most surely unfair to all mankind. But that the evil men should have their unearned or undeserved sins transmitted to their offspring “unto the third and fourth generation” is the utmost of *injustice*.

Thus the doctrine that all men are sinners and have the essential sin of Adam is a challenge to justice, mercy, love, and omnipotent fairness. Of course, if it is necessary to *assume* that *fatalistic man* can sin against the omnipotent and infinite will or decree of his Maker, then the sin of Adam was strictly his own by permission or tolerance of God, and he alone could compensate for his sin. On the other hand, if mankind—forever and forever—sinned through Adam, then man alone should compensate through personal, individual suffering. Therefore, the doctrine of atonement, whereby man's responsibility for his essential sin was shifted to another to be paid by crucifixion, is also opposed to justice.

Salvation through right living is impossible, according to these doctrines, for man cannot be saved through personal merit, since he has none—for all that is good in him, of him, and through him belongs to his Maker who decreed and foreordained it.

Man so loves *justice*, and has through the ages developed a so much better and more noble idea of justice—regardless of its seeming absence in the *theological scheme* of things—that he has refused to countenance, let alone support or encourage, the doctrines of either materialistic or theological fatalism. No successful scheme of conduct in life, either moral or ethical, least of all religious, can be built upon the theory that we are, from the primary phase of our creation, and for no merit or demerit of our own, either the favorites of God's arbitrary blessings or the blind victims of his vengeance and wrath.

Therefore man seeks the truth—and his essential desire is to see justice done to the wisdom and power of God as well as to the interests of God's creatures. This is what the true modernist seeks; it is what the mystic of all ages has demanded.

Chapter 8

HEREDITY AND INHERITANCE

THE BODY OF a child is not *created* but reorganized from preexisting elements. Every element entering into its physical make-up has always existed since “the beginning” and will always exist—even after the “death” of the body. Chemically these elements are either pure or impure, according to the nature of the environment in which they are assembled or the contamination by impure “seeds sown to be reaped”.

Heredity is the process of modifying the pure stream and straight line of ascent of the body’s physical evolution. It relates exclusively to the material elements of the body as transmitted or contributed by the preceding period of evolution, the preceding generation of existence.

A period of reincarnation for the *physical body* begins at the moment when preexisting elements are drawn together to re-form an organized body, and ends when the magnetic influence—life—ceases to hold the elements together; and these elements separate and return “unto the dust of the earth” again. From conception, or unification, unto “death” is one half the cycle of *physical evolution* of each body. From dissolution or “death” unto unification again is the other half of the cycle.

The second half of the cycle is as essential to the process of evolution as the first half. Through dissolution or decomposition of the elements of the body they are freed from any abnormal or unnatural associations they may have been forced into by man’s willful violation

of nature's laws. Disease is the result of abnormal, subnormal, or inharmonious relation or association of elements in a part or parts of the body. Perfect health is pure harmonium of elemental relationship.

“Death”—or dissolution—is nature's economical method of ending the stress and struggle between the inharmonious elements for dominion and power, and the first step in the process of the return to a pure, normal, natural state and environment of each element. Thus, dissolution is the phase of physical evolution which is cleansing, purging, and rehabilitating.

From the rehabilitation state each element is attracted again by the magnetic influence of reconstructing life, and finds its way to association, organization, and group manifestation.

In the procedure from rehabilitated primary state to recomposition in a new group form, these elements may become contaminated, or have forced into their general assembly some disadvantageous or impure elements. In this manner the very first and later stages of physical evolution, *prior to birth*, may prove to be qualifying stages of normalcy. This, and this alone, is *heredity*—what the larger, parent body has sown. The offspring will harvest what its parent has planted. The lesser part experiences the effects of the acts of the larger part, while the larger bears the responsibility and must compensate. It is the law of justice in magnificent demonstration.

When the soul enters the physical body it takes residence within a physical form prepared, in purity or contamination, to receive it. The physical form has no choice in the selection of the soul to be its companion through the forthcoming cycle of existence. The soul, on the other hand, has no free choice in the selection of the body in which it is to be imprisoned or glorified for another period of incarnation. Both are drawn together, attracted to each other, and united by the law of compensation—the law of justice.

The soul comes forth from its eternal abode with its consciousness and personality unimpaired by the changes in the mortal body from which it was freed at “death” or transition. It is not composed of dissimilar elements or temporary associates. It is one entity, uncomposed,

uncreated, and undivided. It is the very antithesis of the physical body in every characteristic. Whatever may distinguish the physical body is a negative expression of the soul's positive character.

The soul possesses, as a heritage from the Infinite Consciousness and Mind "in the beginning," a *mind and memory*, constituting a continuity of experience which is eternal. It is this consciousness of self, this *mind and memory*, which we characterize as *personality*, then, which grows and is molded into greater comprehension and power through the various cycles of evolution.

Into the physical body comes the soul with its personality, its perfect memory of all past experiences and its acquired penalties and rewards earned through the Law of Compensation. It is still free to choose, free to decide, free to submit or to rebuke the urges which comes from its memory of past experiences or the whisperings of the world without. But it has debits and credits to its record from the past and these it cannot avoid.

Whatever it may decide to do, it must contend with the Law of Compensation in attempting to carry out its decisions. The debt to be paid will be demanded by the Law of Karma at the moment which is most propitious. Ever and anon the silent adjuster of the law stands by and with the nod of his head permits the decision of man to come to an issue or to fail.

Karma is not revengeful. It would be self-annihilating if revenge or retribution were its motives. It can only be re-creative and constructive. The progressive evolution and advancement of the personality is its sole purpose. It demands not "an eye for an eye and a tooth for a tooth," as does the law which man invented as his imitation of the Law of Compensation.

It demands only justice—justice to all, the sinner and the one sinned against, the benefactor and the one benefited. It has the power to carry out its principles. It leaves nothing to the judgment of man, for he had his choice and decided; it retains the sole responsibility for its operation, for man agreed to this when he decided. Its aim is guidance; its methods are instructive; its functions are redeeming. Such is the Law of Karma.

Karma selects for its *propitious time* to exact compensation or bestow blessings that moment in the period of the soul's residence within the physical body when the personality will profit most by the lesson to be learned, the experience to be realized, or the reward to be utilized to the betterment of all concerned.

It selects for its place of manifestation that localization of events which is most favorable for an impressive demonstration to all who may discern and profit thereby. It selects for its means of action or medium of performance those channels which will afford the utmost of efficiency and direction in compensative adjustment, with consideration for every living creature.

Since Karma seeks neither revenge nor retribution, but exacts only an adequate adjustment of conditions, a balancing of realization—that man may become more perfect in conduct—it may elect to suspend an objective compensation in favor of a subjective penitence.

If the personality of man is brought face to face with a situation in life which clearly reveals itself as a karmic debt to be canceled by a trying experience, it may find the experience modified, the test lightened, or the suffering eased, by *acknowledging the justice of the debt*, and discovering the lesson contained therein. With appreciation for the knowledge, and with penitent heart for the error previously committed, the personality may find that the ends of justice and Karma have been satisfied. Thus the principles of salvation by grace, and redemption by atonement, have their real origin in the just working of a great law.

We discover in reincarnation and Karma the only rational and acceptable explanation and cause for the seeming injustice of the inequalities of life.

Some are born in wealth, some in abject poverty; some are born with every advantage for education and advancement, some with no opportunity at all. One is born handicapped, physically and mentally; another is born without flaw. In a given family of four children, one is strong and healthy of body but mentally defective; another is born sickly and with a weak body, but brilliant in mind; one is born with

cruel, mean, sordid tendencies, bringing shame to all the others; and the fourth is serious and noble, with religious ideals.

Heredity alone cannot account for all the physical defects endowed at birth; it cannot always account for the physical differences in the various children in one family. Nor can materialistic or theological fatalism explain—with satisfaction and justice—the inequalities found in each race, each nation, or even each group of men.

The Law of Reincarnation alone makes understandable and acceptable the conditions and experiences of our lives.

I am tomorrow, or some future day, what I establish today. I am today what I established yesterday—or some previous day.

I may be as unmindful of things I do to establish my Karma as I am unmindful of many of the results of Karma.

I may be enjoying good health in this incarnation without appreciating the fact that I earned it, deserved it, or established it, by some acts or attitude of mine in the past. And I may show so little appreciation for this blessing of health, and so neglect its possession, that some day I shall suffer poor health—either in this incarnation or another.

I may possess those desirable endowments which others do not have, and simply take them for granted. I may elaborate upon the things I do not possess and consider my lot peculiar, accursed, and damned.

Each of us from our personal point of view is prone to measure the inequalities of life by the yardstick of his needs, and to overlook his blessings. If, however, we consider the good things we possess as natural birthrights, deserved or earned in some way, we should be consistent enough to look upon our afflictions as similarly deserved or earned. As soon as man looks upon his whole station in life as his birthright, rather than just the half that is acceptable, he will be ready to meet his Karma and work it out.

How careful man is to guard his fortunes lest he lose them by some act that would justify the loss! How concerned he is that he may commit some act or fail to do something that will automatically, logically, and

fairly turn the blessings of his life into other channels. Yet he fails to realize that the afflictions, adversities, weaknesses, and crosses in his life may be transformed, transmuted, and transcended in the same manner.

Thus we see that the inequalities in life are karmic and, in accordance with the Law of Karma, are adjustable. Thus man's fate is *ever in the molding*, and man alone bears the *responsibility*.

The full course of man's life is *not* one incarnation on earth in one physical body. To assume or believe it is, is to say that the elements of the physical body—matter—never cease to exist, never *die*, or become annihilated, but man's personality and soul come into existence, manifest for a time, and then cease to function.

We see, plainly, that the existence of matter is one continuous cycle of periodic re-formations, of expressions, never ceasing to manifest, retaining its essential nature always, but reborn in a new form in accordance with the immutable laws of the universe.

The *personality* of man has its course of existence, eternal and continuous. Each personality came into existence "in the beginning of all creation," and has always existed and will exist into eternity.

The course of such existence for each personality is marked by definite periods of rebirth in a physical body—a new medium of expression. We call each period of existence in the body an *incarnation*, for the personality or soul is incarnated in the flesh. The successive incarnations are reincarnations or rebirths in physical bodies.

From birth to birth, or rebirth to rebirth, is a *period of evolution* for the soul or personality. This period may be divided into two phases: (a) the *mundane phase*—from rebirth to transition; and (b) the *cosmic phase*—from transition to rebirth. We may consider the entire line of the course of existence of the personality as eternally moving forward in undulating phases.

The very terminology used in this schematic illustration is suggestive of laws and principles. It is borrowed from the teachings of the Rosicrucians, the most highly evolved group of mystics living in all ages, whose knowledge of God's laws and nature's ways is most profound.

Chapter 9

KARMA AND PERSONAL EVOLUTION

MAN IS NOT discouraged or disheartened in his quest for perfection by learning from experience that there are certain immutable laws universally established. Nor is he checked, in his determination to attain the heights of his ambition, by discovering that these immutable laws are *impersonal* and *impartial*. That these laws affect all of God's children, and even every species of living things, regardless of parental heritage, social standing, financial power, or divine attunements, makes man see in and through them a principle of real justice.

The mystic claims that it is the continued demonstration of the *immutable* laws of nature which proves the existence of an Infinite Mind and Omnipotent Power, inspired by Love, Mercy, and Justice.

Unquestionably it is the evidence of the workings of these immutable laws that has maintained and sustained the faith of millions of people, in all ages, in the existence of some fair, just, and Infinite Intelligence ruling the universe. It has been this faith—aye, even conviction—that has saved the world from self-damnation and self-destruction; and it is this same conviction, growing more and more convincing through test and demonstration in science and every phase of common experience, that is responsible for the worldwide challenge of the truth of certain theological doctrines.

Man is truly becoming more and more religious in his thinking and living, and less theological. This is detrimental to some of the churches, but joyous for the Kingdom of God.

What are the fundamental immutable laws? First, that matter and energy are indestructible. Fire, decay, the will of man, the decree of God, may change, modify, or redirect the manifestation and nature of matter, but nothing can destroy its essential existence. Energy—the fundamental, universal essence of all power—may be directed and redirected in its course of action and demonstration, but it cannot be destroyed any more than it can be created. It has always existed and always will exist.

Man has come to understand the principle of immutability so well that he realizes that even the Master who originally conceived and decreed these immutable laws and set them into action with the “Word” (Logos) cannot now suspend, modify, or abrogate them. One incident of suspension, one demonstration of modification, would rob those laws of their universal justice. But neither history nor tradition record a single authentic instance where even the least important laws of nature has been changed.

What a marvelous conception in the beginning! What wonderful system, order, and law of equity! How our hopes rise and our fears fade away in the knowledge of sublime justice for all—every created and living thing. Truly, God was just and fair—in the beginning! Why should we doubt that God is *still* just?

Another immutable law is that we shall reap as we sow; the tendency on the part of every living cell to reproduce its own nature plus some degree of progression in its evolution. Against varying odds, willful interference on the part of man, and the influence of environment and unrelated forces of nature, the tendency of every living thing is to be true to type, even reverting to type when forced for a while to accept unwarranted modifications. As a companion principle, we have what is generally known as the Law of Compensation, or “Karma,” as the mystics of many ages have called it.

The work of Luther Burbank was possible only because of nature's immutable laws. By continually blending the elements of nature in accordance with the laws of synthesis, man has reaped a harvest of testimonies to the law. "If but once man in any part of the world should reap an orange from planted watermelon seeds, our faith in the whole scheme of living would be shattered!" said an eminent clergyman in England some years ago. If man should ever discover a single instance when the Law of Compensation or automatic adjustment did not operate in nature's normal processes, he would be justified in losing all faith in the infinite wisdom of the Universal Mind.

An ancient philosopher, who was truly a mystic, expressed the greatest principle of creation by saying that all things "are becoming" Each hour of the day every material thing is becoming something else. It is the law of change, of motion, of life.

In the whole universe there is nothing today that is *new* in existence. Nothing has been *created* since the beginning when the "Word" established all *created things*; and, as we have said, nothing has been destroyed or ever will be destroyed.

All is unceasing, *progressive* change. This is the true law of evolution. The mystic knows that man as a species has been and is *evolving*—not from a lower species, but from a lesser to a greater degree of perfection. In the beginning was the Word and the Word was made flesh; and man as a species was conceived and created simultaneously with all living creatures resembling him in some characteristics. But primitive man was as far advanced beyond the ape as modern man is advanced beyond the primitive progenitors of his type. He has evolved more rapidly than all other species of the animal kingdom because of endowments not possessed by other creatures.

All that which seems like "creating" is "re-creating"— evolution, change. All that which seems destructive is but a phase in the process of constructive change. It is also evolution. Therefore, all that which is loosely called *creation* and *annihilation* is really transformation. That which seems new is but old matter, old thought, old spirit, old life, old hate, old evil, old errors, in new forms, new births of manifestation.

There are no contradictions in nature's laws. Harmony is the element that binds them all into one law—the Law of Evolution.

Since there is no destruction of matter, energy, force, or principle, and no creation of this from what has not always existed “from the beginning,” all is eternal, immortal. Hence, even the body of man in its elements, the spirit of life in its essence, the soul of man in its consciousness, are eternal and immortal.

There must be a law of evolution—change—new form for the mind, character, personality, and soul of man, as there is for the physical body of man. Coincident with the gradual, progressive evolution of man's physical body in the ages of the past has been the progressive evolution of the soul of man.

The soul in man—or call it mind, personality, or character—is the flower of God's creation, the acme of nature's products. It is inconceivable that nature should give immortality, and the accompanying opportunity to evolve, to the least speck of unconscious dust and deny it to the soul of man.

We have intimated that the soul in man is associated with personality, and that it has a conscious *mind*.

There is hardly any basis for argument in the statement that man is a dual being. Without the least consideration of any of the ancient or modern philosophies we can say in simple words that man, as a sentient entity, is a physical being through which expresses a *personality*, individuality, or distinct character. Essentially, man is partly physical and partly non-physical; partly material and partly immaterial.

In this duality we sense a unity of different beings. That we are warranted in looking upon the personality or soul of man as a *spiritual being* within the physical body is indicated by the many common experiences of life quite independent of the principles expounded by psychology.

The experiences commonly designated as *dreams* reveal at least that man may be conscious of his existence and conscious of the world, without any functioning on the part of his waking consciousness.

Whatever way we analyze dreams and conclude that they are the result of restlessness on the part of the brain or mind, the fact remains that the consciousness of the self during dreams is not the same as the self-consciousness during our normal waking conditions, in either degree or nature.

On the other hand, there are those occasions when this consciousness of self is asleep or dormant while the physical body is active and more than normally functioning; as, for instance, when chloroform or ether is used to dull the consciousness while the body is kept active through handling, abuse, and trial.

There is that very large class of frequent phenomena typified by the experience in which the consciousness of one in profound meditation seems to leave the physical body and, as a sentient being, goes out into space and revels in environments far removed from the locality of the physical body. At such times there is always a distinct sense of the separateness of the material and immaterial selves.

What is this inner self? Theology answers and says, "the soul" Philosophy answers and says it is "consciousness of self" The mystic—ever more guarded and precise than the theologian or the philosopher—says, "It is the personality or ego!"

Personality or ego is the consciousness of the spiritual body—the soul. It is the part of dual man that has been progressively evolving along with the evolution of the physical body. Just as the physical body has gradually acquired a more upright position, a more tranquil expression, and a more refined form, so the personality—or consciousness of the soul—has evolved a more universal knowledge, a more intimate acquaintance with itself, and a more idealistic relation of its purpose in life. This development of the consciousness of personality in man is conveniently called *personal evolution*. The purpose of such evolution is to build character.

Every ethical and moral system of the past and present has had for its aim the building or perfecting of character. Even the primary stages of elementary education contribute greatly—for good or bad—in the molding of character. The Greeks adopted a system, now being revived,

of character molding *before birth*, through the prenatal influences of the mother. Unquestionably education has the most formidable influence upon character, while religion, ethics, and morals—as codes and creeds—contribute a refining element.

It is the desire of every progressive, thinking being to develop the character to a degree of nobility and perfection where it is not only a personal asset—assuring very definite dividends—but an asset to the family, the city, and the nation.

We are told that *character is salvation*. Through the development of character man discovers himself and rounds out his dormant abilities while rounding off the rough corners of his nature. Truly, in this sense, the evolution of character is the approach to salvation from failure, sin, and ignominy.

Character is fate! Certainly, as we build our character in the *now*, we decree our fate in the future. The forcefulness Every experience in life, every incident consciously realized—and many of which we are unconscious, form a part of our molding personality. We are not only *now* what we *think*, but we will become that which results from our thinking. We are reaping daily and hourly as we have sown. Each day we become, mentally, spiritually, and physically what we have made ourselves. Hence, we are forever working out our own salvation or damnation, independent of the subtle influences of heredity, and independent of any predestined course in life.

Man possesses the power to choose. Free will is a fundamental factor of his highly developed—evolved—consciousness. But as he chooses, so must he abide. The responsibility rests with *him*. As he sows, so must he reap; as he obligates, so must he compensate; as he demands, so must he pay.

Man's life is an endless battle between urge and decision. Cosmic, divine inspirations from the consciousness *within* vie with worldly, material, gross temptations from without. Man is motivated by urge; he is free to decide and he *becomes* what he thereby decrees. Such is the principle, the true law of fatalism. The responsibility rests not in

some blind law of chemical action and reaction, nor with a jealous, revengeful God.

Man may be blind to the consequences of his decisions, and may often be blind to the true nature of the urge which brings the need for decision. But the *immutable laws* provide one direct benefit as a result of every decision, every act. As man chooses—sows—so shall he reap and pay. That is the Law of Compensation.

According to this law, nature in every department of manifestation demands justice, equalization, and compensation. It is so old in the understanding of man that most of his self made laws, even among primitive tribes and races, are based upon observations of its working.

The manifestation of the Law of Compensation constitutes the *great school of experience*. Through this school man has come to learn of his powers and limitations, his weaknesses and strengths, his advantage over all other living creatures. From childhood until old age, man learns that his evil acts are essentially a sin against his own career for which he must suffer or pay. He learns, too, that his noble deeds, unselfish acts, and idealistic thoughts bring their balanced rewards.

Each experience with the Law of Compensation adds to the molding of his creed in life, his guide of conduct, his code of thinking. The memory of each experience—each lesson—remains as a stone in the structure of the character that he is building. Personality—or character—is thereby evolving from childhood onward through every hour of conscious existence.

Thus the soul in man, the immaterial part of his dual being, the consciousness of the self, is an evolving entity which the mystics call *personality* or *ego*. And because of its very nature, because of its association with the immaterial part of his being, *personality is a spiritual, eternal, immortal entity*.

The following statements are not presented as the component elements of a mere doctrine, but as the essential parts or related phases of a law.

That reincarnation, as a doctrine, affords a more satisfactory explanation of life and its trials, tribulations, and compensations is apparent from the fact that it does not require a basic assumption other than that already adopted by all Christian and nearly all other forms of religious beliefs—the immortality of the soul.

On the other hand, it does not require the acceptance, upon faith, of any principle of fatalism, predestination, or retribution, operating through blind, material action or a revengeful, jealous God. Neither does it shift the responsibility of our fate from earthly atom to heavenly deity, but leaves it resting surely upon the individual.

Let us see, therefore, what the fundamental *assumption*, referred to above, means.

The soul, with its consciousness or personality, is *immortal*. This is the assumption and contention of all Christian doctrines and practically all other religions. The mystic claims that if the soul of man is something which is created anew and given existence for the first time when it enters a physical body, then it would cease to exist at that change of dual existence called *death* or *transition*—for if the soul of man is immortal *after death*, it must have been immortal *before birth*.

The immutable laws of nature prove to us that it is inconsistent with the whole scheme of nature to suppose, assume, or believe that the soul which enters each new body is an eternal, immortal entity created for the first time for each body, but living eternally thereafter.

The idea that the soul is immortal *only after it leaves the physical body* is but half of the truth, if true at all. That which is immortal *is* and *was* forever immortal. Immortality is not an element or quality that can be called into sudden existence and added to a thing to serve for an indefinite period of time. If it *is* at all, it must have been eternally.

Furthermore, if the soul in man is a gift, or an endowment from the Cosmic or the Infinite Consciousness or God, it must be of the essence or nature of the Infinite God—eternally immortal. It must have existed “in the beginning” and will exist into eternity. There

can be no periodic creation of *new* parts or segments of the Divine Consciousness. Such a thought is so inconsistent with all other laws of nature that its belief is abhorrent to the real thinker.

Our only conclusion must be that the soul of man, with its consciousness of self, or personality, is preexistent, immortal, and eternal. It has always existed, but passes through the universal process of change.

The physical body of man, as we have seen, has attained its present degree of high perfection in appearance, form, nature, and functioning through progressive cycles of evolution. In all direct family lines of ascent we find that each generation of the blood, each cycle of the physical rebirth of the body, shows the effect of physical evolution, *if no evil seeds have been sown to be reaped.*

And coincident with these cycles of evolution—periods of rebirth along one line of ascent—the soul also evolves in cycles of existence along one line of ascent. Likewise the soul of man in each existence, in each reincarnation in a physical body, shows the effect of mental and spiritual evolution, *if no evil seeds have been sown to be reaped.*

Chapter 10

THE AGGREGATION OF PERSONALITIES

IT WOULD APPEAR from what has been said in the foregoing pages that since man evolves a distinctly different or modified personality in each earthly incarnation, these personalities, being an attribute of the soul, would give to each individual on earth an aggregation of the personalities previously evolved.

In other words, if the soul upon entrance into the physical body at birth carries with it any remnant of the personality or personalities possessed by it through previous incarnations, each one of us would possess at the present time in the present incarnation an aggregation of personalities rather than a single one.

The truth of the matter is that each *one* of us manifests primarily in each incarnation only one personality, and that one is that which is being evolved at the time; but this evolving personality is unquestionably an aggregation of the essential elements of the previous personalities possessed by the soul. Herein lies the only logical explanation for the commonplace manifestation of those complexes which psychoanalysis and psychiatry attempt to distinguish and separate into distinct traits or elements of character.

Merely as a hypothetical example, let us assume that we have before us for critical study a businessman, forty-five years of age, who has risen to his position from a family living in moderate circumstances and of average intellect. Let us assume that his schooling was derived exclusively in the public schools, with no college or special academic

training, and that after entering the business world and contacting various occupations he finally entered the employ of a firm wherein diligent application, some special abilities, loyalty, and sincerity enabled him to become promoted until at the age of forty-five he reached the position of general manager, and is now a married man with two children, a fine home, a good income, a well-trained mind, with the advantages of some travel and much reading, and the benefits of culture and good social position to make the remainder of his life one of assured happiness and peace.

And let us assume, in our study of him, that while he is not an extremist in religious thought he is a supporter of the church and of every humanitarian, religious activity, is fond of wholesome outdoor sports, is conservative and dignified in his personal habits and language, steady and logical in his thinking, reasoning, and general activities, and given to one or two hobbies for relaxation. In general, he is neither a special study for the psychoanalyst nor one to be cast aside as having no complexes of any kind. In other words, he is just the average successful businessman whose personality and character seem to have been softened by many experiences and whose life is not affected by any of the passing thrills or momentary excitements of the day; yet he has shown unique ability in a number of directions and holds a number of convictions in his mind which nothing can reverse or modify. To his intimate friends he has a personality that is distinct enough to be recognized and distinguished from others, yet there are a few elements of this personality which appear to be foreign to it or at least unexpected variations.

From the viewpoint of those who do not believe in reincarnation this man's character and personality would be the result of his education, training, and experiences in the past forty-five years of this one incarnation exclusively. In other words, his present personality would be solely that which has evolved during this one incarnation.

From another point of view this personality is a blending and an aggregation of the essential and outstanding elements of his character and personality in all of his previous incarnations. In other words, we will assume that this man in his last incarnation was essentially a soldier, for most of his life was devoted to army training and to military

experiences plus a few lessons of life learned through separation from his family, through a lack of sufficient income to give him in the latter part of his life the luxuries that he would have enjoyed, and similar experiences.

And we will assume that in the incarnation preceding that of a soldier he was essentially a physician, or one devoted to the study of disease and the practice of any methods that would relieve diseases and physical suffering, and that through this training and experience he learned many serious lessons of life, which, before the close of his incarnation, left indelible convictions upon his memory as elements of his personality.

And we will assume that in the incarnation preceding that of the physician he was a farmer in a provincial sense in some country bordering the Mediterranean, and that, as such, he learned through experience many other lessons of life, especially those relating to agriculture, the conservation of small funds, the benefits of diligent effort and watchfulness, the value of sacrifice, and the benefits of saving, as well as the detriments of the lack of education and the lack of opportunity to improve the mind and hand in practical application.

Without going back any farther in possible incarnations preceding these, we will see now that upon each transition this man carried in his soul and personality certain keenly learned lessons, or extremely well-learned experiences, which constitute at the present time the foundation stones or principal elements of his character and personality. If we look upon these outstanding lessons of each incarnation as rules and guides of life, written down in a ledger as the immutable laws by which he would govern himself, we will find that as he passed through each incarnation and added to the character ledger of his life, he also added new rules, new laws, new convictions, new elements of personality.

When he passed from the life of a farmer, and through reincarnation became the physician, he entered into a new life with some of the outstanding lessons he had learned as a farmer written secretly but indelibly in the inner nature of his being; and as he passed through childhood and studied to become a physician these deeply buried elements of his previous personality subtly manifested themselves by

acting as controls or guides, or modifying tendencies, in the situations which confronted him in his daily life. Perhaps as a physician he may often have wondered at his inner liking for agriculture. Perhaps he wondered, also, about his deep-seated tendency to be saving, economical, and conservative in his expenditures. Undoubtedly he would have no recollection of having acquired these principles through experiences in a previous life. As he learned more lessons through his profession as a physician, new rules were established and new elements of personality were adopted and the rough and uncouth elements of his life as a farmer were eliminated, and at the close of his incarnation as a physician his personality was that of a blending of the principal elements of both the farmer and the physician.

When he came into life again in another incarnation as the soldier, he probably found early in his youth that he had a liking for the study of the human body and desired to know more about the organs and functionings of parts of the body, while at the same time upon occasion there may have been an uprising in his consciousness of a knowledge as to what to do in emergencies or in accidents, or when his body or the body of someone else was in great suffering. All the while there may also have been a tendency to want to be out in the open country close to orchards, or to fields of wheat, or among grapevines, or where the farmers were at work. There may have been in his consciousness a desire to know something of herbal extracts and of chemistry, and it would have been said of him probably that he was a youth of strange nature or temperament and tastes in his lines of study. But after being entered into the army as a young man, and after developing an appreciation of military training and regulation, new features were added to his character and personality so that when the time came for transition again, many new and valuable lessons of life had become established in his personality as guides and laws.

Therefore, we would find that when this man came into in his present incarnation his undeveloped personality consisted only of the deeply seated and unawakened elements of personalities from the past. Had there been any way of analyzing his past or scrutinizing the undeveloped personality residing within him as a boy of twelve or less we would have found that in that soul of his being his personality

was like an unfinished book upon the pages of which were written certain laws and principles to become the fundamentals of his present personality.

We would have found the love for the country, the admiration of nature's processes, the instinct to save and to economize, the ability to plant and make things grow, the desire for greater knowledge and more modern advantages, the liking for chemistry and botany, the sympathetic feeling toward those who suffer, with a natural ability to know what to do to relieve such suffering, the instinct to live properly so as to guard against disease, and, with all, an inherent love of country and a highly developed degree of patriotism, and an instinctive dread of ammunitions, firearms, or physical conflicts. Out of this group of character elements, which the expert would call *complexes*, there developed gradually in the youth the natural desire to be engaged in some constructive, peaceful, conservative, modern, practical activity, which would entail no destruction of life, no sacrifice of personal needs, no lack of opportunity for education, and at the same time allow the expression of sympathy and the desire to help those who suffer.

Understanding, then, what were the essential elements of his evolved personality and what were the fundamental laws of his character, we should not be surprised to find that as he passed from one occupation to another in his present incarnation he finally found satisfaction and contentment in the service of a company devoted to the making of proprietary remedies from herbal extracts for the alleviation of physical conditions. In other words, we find him now as general manager of a company manufacturing and selling bottled extracts which are used by physicians and chemists in the preparation of remedies for physical suffering. In this business he has found opportunity to be in sympathy with all of the instincts of his nature and to express all of the complexities of his personality. He not only has found happiness in his work but an unusual degree of efficiency and expertness in his activity.

We would also understand from our study of his past why it is that in his present incarnation he had some "peculiar" whims or fancies, as

his friends called them, and why he used to love to get away from the busy city life, with all of its tinsel and noise and rapid activities, and go out into the country and go among the orchards and the fields of growing things to ponder over the wonders of nature. We would also know why he loved to hear military music, loved to see the soldiers on parade, but had an inherent and well-fixed conviction that war was a brutal and unnecessary thing. And we would understand why, in his wealth and assured position of steady financial income, he still gave expression to some strange instinct of husbandry and insisted upon buying large supplies of essential goods and storing them in storerooms of his home, regardless of the fact that in these modern days all these supplies could be quickly purchased at nearby stores. These and many other traits of personality which seem to be inconsistent with that of a modern, conservative businessman would be called *complexes* by the student of character, and would be classified as *peculiarities* by relatives and friends.

Thus, this hypothetical man would be, today, the aggregation of his previous personalities. In his normal convictions he would exemplify those principles which had become convictions in character through bitter lessons of the past. In his ethical standards he would practice those things which he had learned were the best policies and principles. The weaknesses which this man might evince would represent tendencies which had not been modified by previous experience, and were, therefore, unaffected by lessons which had brought convictions and established principles. These weaknesses he would indulge in until by experience he had learned of their value or of their detriment in his life. In this way he would learn either to modify them or eliminate them so that by the close of his life these weaknesses would be overcome, or, if found pleasurable and non-injurious, would be continued as desirable elements of character for the future.

Each one of us is, in the same manner, an aggregation of our past personalities. In this life we draw upon the great lessons and experiences of the past and express them as the fundamental elements of our present character, while at the same time learning, through lessons and experiences, new principles and new elements out of which

we decorate and modify, shade, blemish or improve *the beauty of our character*. This is the purpose of reincarnation. By its principles we are enabled to taste all of the cup of life and to learn all of its lessons. By our own will we overcome those things which are evil, eliminate those things which are detrimental, strengthen those things which are good, and thus perfect our ego and bring us close to the divine consciousness and the image of God.

In no other way can the human personality develop and evolve in *one span of life* on earth, even though it be of a hundred years. One span of life would be insufficient and inadequate in the time element alone to permit of the development, evolution, and perfection of a personality; and aside from the time element there are also the elements of human contact, environment, geographical location, varied occupation, and the progressiveness of civilization. Those born this year and living only a hundred years in the present time and never having lived before, and never to live hereafter, could not possibly evolve and develop a perfect personality of universal knowledge, experience, and understanding, for they would have no appreciation of the past through which man has developed and they would have no appreciation of the magnificent developments of the future.

To claim, therefore, that each soul *has but one short span of life on earth*, and that this span, separated from all the experiences of the past with their very valuable lessons, and separated from the magnificent lessons to be learned in the future, and in contact with only one phase of humanity in one country in one age of time, constitutes all that is necessary for a man or woman to develop and perfect a human character is absurd and unsound, as well as unfair and unjust.

If we, as human beings, are to be judged later on by the development and attained perfection of our characters, and by that judgment condemned eternally to peace or happiness, joy or sorrow, rich reward or eternal condemnation, then it is manifestly unfair that we should be born but once, handicapped and blighted by the original sins of our forbears and the great sin of Adam, and given but a few years under predestined conditions to accomplish those changes in our lives and

characters which would eliminate all of the inherited sins and make us competent to overcome the sins of today and be ready for eternal judgment.

In fact, there would be no purpose served by the soul's entrance into a physical body for just one incarnation of a few short years. To be judged, therefore, because of the unattained perfection which is not possible in one incarnation is an injustice of such nature that it is incompatible with our beliefs in divine goodness, love, and mercy.

Chapter 11

THE RELIGIOUS AND BIBLICAL VIEWPOINT

THOSE WHO HESITATE to accept the doctrines of reincarnation generally claim that no support for such doctrines can be found in any of the Western world religions. Those who are of the Christian denomination are especially positive in their statements that the Christian Bible, and the Christian doctrines as propounded by Jesus, contain no references to reincarnation and no statements which even tolerate, let alone support, the idea of reincarnation.

These persons argue that because some of the modern religions in the Western world, representing only a minority of the religious thought of the entire world, contain no support of the doctrine of reincarnation, that it should be rejected. In their minds the modern religions are the standard by which all others are to be gauged, and the beliefs of the minority are to supplant the beliefs of the majority. Such an attitude is a continuation of the ancient attitude of intolerance toward the truths held by others, and we are happy to find that in recent years the average person of the Western world is no longer inclined to be bound by the doctrines and beliefs of his forebears, but seeks knowledge and truth, regardless of its antiquity, its origin, or the fact that it may be incompatible with the creeds and dogmas of a minority of the Western civilization.

Fortunately, however, the belief that the religions of the Western world, and the Christian Bible, give no support to the doctrines of reincarnation is disproved by a careful analysis of available sources

of indisputable information. Those who have heretofore held to the belief that the Occidental religions and those which constitute the religions of Western civilization contain no reference to reincarnation will be surprised by the facts I am about to give.

Before proceeding to quote from the standard versions of the Christian Bible, I feel that it is proper to explain why the doctrine of reincarnation is not generally recognized in the Western world as an almost universal religious belief. The two great religions of the Western world today are the Jewish and the Christian. The latter is fundamentally an outgrowth of the former. There are many eminent scriptural and religious authorities who claim that many of the theological principles of Christianity are founded upon mystical principles contained in the Oriental religious philosophies. We are safe in saying, however, that except for those new and unique doctrines taught by Jesus, the greater part of the Christian religion is similar to the Jewish religion, and in the Jewish religion one may trace very easily many principles of Oriental philosophies, which were found to be sound and useful, and which were retained by the Christian church during the processes of evolving the present-day Christian religion.

Before one can thoroughly understand all of the passages in the Christian Bible, as we find them in the standard versions, one must have some understanding of the religious beliefs which were universally accepted by the Jewish people at the time of the public preachings of Jesus. Many of the passages in the New Testament, and many of the references by Jesus to conditions existing around him, are not understandable unless one is familiar with the customs, habits, beliefs, and general philosophy of the people of his time. The passages in the New Testament referring to marriage and to the separation of the classes of people, and to the methods of praying, or the giving away of worldly things in order to become humble, are not fully appreciated by the Bible student, unless he is familiar with the customs, habits, and beliefs of the Jewish race at the time these allegorical or moral and ethical statements were made.

The moment the student of the Jewish religion and Jewish history becomes acquainted with the customs and habits of the people at the

time of Christ's mission, he realizes that there are many interesting facts connected with the life of the people and their beliefs and general practices not elaborated upon in either the Old or New Testaments of the Bible, because they were so commonplace and so generally accepted and acknowledged that the writers of the Bible did not feel that it was necessary to comment upon them.

In many places in the Bible reference is made to stoning a person to death. No explanation is offered by any of the writers of the Bible as to why this method of punishment was universal in Palestine, for the writers probably believed that in their day when these facts were written, everyone was familiar with the history and universal nature of such a process. When one comes to study the history of Palestine and is fortunate enough to visit the country and live among the people for a while, one comes to realize that because of the abundance of small stones or rocks everywhere and the ease with which a multitude or a mob assembled at almost any place could reach down and quickly seize many rocks to throw at a person, that it was only natural for the mob practice of throwing stones to become a popular method. There are other references in the Bible to time of the day, periods of the year, seasons, climatic conditions, social practices, personal customs about the home, and other intimate facts which are not elaborated upon or explained in detail for the same reason.

Many of the important details about the crucifixion of Jesus the Christ are not given in the various accounts found in the New Testament simply because at the time that these accounts were written, the authors knew that the populace was familiar with such details and there was no reason for elaborating upon them in their accounts and, therefore, they dealt in detail with those points which were unique in connection with this historical event. For instance, the precise shape of the cross, the manner in which it was made, the manner in which the body was attached, and the manner in which the cross was erected, are points which were so familiar to everyone that comment upon them seemed unnecessary. There are thousands of similar voids of detail throughout the Bible which today are of great importance.

Because certain facts are not elaborated upon in the Bible is no reason for the student to believe that they did not exist or were not known to the mass of people. It may be safe to argue that since we find no reference in many ancient works to ice, that this form of frozen water was then unknown to the people of Palestine or elsewhere.

Historical research and scientific knowledge support our conclusion that ice may not have been known to the mass of people at that time in the sense we understand "ice" today.

But to argue that the art of dentistry was unknown because there is no reference in the Bible to artificial or false teeth is to make a serious mistake, inasmuch as research has proved that among the early Egyptians the art of dentistry was known, and many mummies have been found with artificial teeth. Likewise, no one should argue that no scientific or hygienic attention was given to childbirth simply because there is no reference to it to be found in the Bible, and because the most important birth recorded therein lacks any details regarding the attention given to the mother and child.

We now know that there were hospices for the care of mothers at delivery and that even the poor had attention voluntarily given by midwives or those who were capable of assisting at such a time. Because the details in this regard are lacking in connection with the birth of Jesus, it is not right to assume that Mary and Jesus had no hygiene or other professional attention. The authors of the story of the birth were not concerned with the facts that were commonly recognized as prevalent and general, but with those facts that were unique and of distinct importance.

The doctrine of reincarnation was generally accepted and universally established among the philosophers and mystics of the Jewish people at the time of the birth of Jesus and throughout his entire life, as we shall see in passages to be quoted. But this doctrine was not a purely religious one anymore than the doctrine or principles associated with the conception of human life, and the birth of the human body, or the principles connected with the preparation of food, the curing of disease, or the preparation of the body for burial. Such commonly accepted and generally known principles were looked upon by the

writers of the Bible as universal knowledge and had no more place in the scriptural writings than had the details of the planting of seeds in the ground for crops or the weaving of cotton into cloth, the sewing of costumes, the making of shoes, or the thousand and one other things that were part of the general knowledge, practice, and customs of the day.

There are many references, however, in the Christian Bible to the doctrine of reincarnation, which are positive, definite, and unquestionable, but they are associated with other statements in such a casual way that the average reader of the Bible overlooks them. This I will show later on where such passages are quoted. To prove, however, how universal was the belief in reincarnation among the Jewish people and among the disciples of Jesus, and even with Jesus himself, I am going to outline here some of the principal points in connection with reincarnation as held by the Jewish people during the Christian era. The same beliefs were also held by the people in the Oriental lands, but since the Christian and other present-day Western religions evolved out of the Jewish religion, we will limit ourselves to the presentation of the doctrines of reincarnation as known to and taught by the Jewish teachers. It is probably the first time that this information has been completely revealed in the Western world in connection with the subject of reincarnation.

I believe that I can do no better than quote from the precise words written within recent years by Moses Gaster, PhD, Chief Rabbi of the Jewish Congregation of London, and Vice-President of the Royal Asiatic Society, who is a widely recognized author on various subjects of Jewish religion, belief, and practice. The following paragraphs are condensations of his writings without comment. Remember that this eminent authority is referring wholly to Jewish beliefs and religious practices, and that he is quoting from such standard Jewish sacred books as the Zohar, the Manasseh ben Israel, and others.

The belief in the migration (or reincarnation) of the soul presupposes the existence of the soul; and a whole Esoteric system about the creation of the soul, and the conception of sin and redemption, are the fundamental principles upon which such a doctrine must rest. God is the creator of everything; therefore, souls are His creation. His creation came to an end with the close of the sixth day. At the beginning, the souls were created. The power of God is thus limited to what He had done on that occasion. The souls created, then, are of a limited number, as the creation was only a limited act, and had to come to an end at a definite period of time. These souls are God's creation, not any emanation from God. They are conceived as having an individual existence; they live separately and fully conscious of their individuality; they dwell in the heavenly halls or in paradise in rapt contemplation of the divine glory; thither they are allowed to return at the end of their peregrination through the lower world. The souls of the born and the unborn, of those who have already been in the earth world and of those who have not yet been in that world, are dwelling together in the heavenly halls or in the treasury of God (see Deuteronomy 32:34).

Moses in his ascent to heaven saw the souls of the great and pious and of those who have lived upon earth and of those who are to come to life hereafter—among others David and Aqiba. No new souls are created for each child that is born, the number of souls being limited. Man must by his actions approach the Divine, and his whole life must be along sustained hymn of praise to God. But man, made of the dust of the earth, cannot rise to such perfection unless the Divine Soul lifts him up, and unless the Divine Law guides him steadily upward towards heaven. His life is a constant struggle between the grossly material inclinations inherent in his earthly nature and the high spiritual promptings of his Divine Soul. According to the way in which he inclines, his soul will become more or less contaminated by the contact with matter; it will lose more and more of its spiritual luster and purity. For man has absolute free will; he is master over his own actions.

The souls have been created for a specific use; they must enter human bodies; but the choice is not left to them, either of the bodies

to be selected or of the time of entry, and the time and manner of exit. Although the soul forgets most of its spiritual existence when it enters into a body in the earth world, yet a dim recollection remains, a subconscious image, which is the guiding principle in elementary recognition of good and evil. Thus every man has within himself a standard of right and wrong given to his soul in its pre-mundane existence. In the Zohar the incarnation of the soul is described in the following manner: All souls were created at the beginning of all creation; when not incarnated in bodies they dwell in heavenly bliss and divine illumination. When a body is being prepared to receive a soul, a soul requiring special earthly experience is directed or attracted to such a body as will provide such experience and knowledge. The law says unto the soul: "Ye shall see how the Lord has mercy on you. He has given you His precious

Now the soul begins its course upon earth. It must endeavor to obtain the absolute mastery over the body and not to become its slave. In the first entry, the soul is absolutely pure and without blemish. It is not met by the obstacle of original sin. The principle upheld always is that "Each man dieth by his own sin, but the weakness inherent in matter" soon makes itself felt, and there are temptations placed in its way through the envy and spite of evil minds, which are anxious to drag it down to their own level. Through trial and trouble, man must win the crown of eternal bliss. A term is set for man's redemption. When all souls have thus become purified through successive reincarnations and have attained the ultimate goal of perfection, the kingdom of heaven upon earth will then be established. The evil in the world strives in vain to impede the steady development and unfolding of the evolving and purifying souls. The evil may delay the development of souls, but cannot indefinitely frustrate it. The soul, which has been contaminated through earthly experiences, can be purified again; the sins committed can be atoned for through compensation and even here the means is given to the soul to achieve its own purification. The soul retains its own consciousness and is sensible to its own failings; it realizes the bitterness of punishment and the tragedy of not being allowed to ascend on high and stand before God in its Pristine purity. After transition, it remains in an intermediate state of the spiritual world waiting an opportunity to purify itself and compensate for its sins.

This comes to it by being re-embodied or reborn, and thus the soul migrates from one body to another. It may or may not remember in each incarnation its former existence. Such migration continues until all the blemish has been eliminated. Such migration of souls is made to serve another and still higher and more direct purpose—the Justice of God.

The great problem which has haunted every form of religious belief has been: how to reconcile the happiness of the sinner and trials and sufferings of the pious and good with the justice of God. Every religion has endeavored to establish a doctrine which would answer this question. Some of them have relegated the solution of this problem to a continued life after death, whereby the soul remains in combination with a physical body in order that the latter may suffer the torment of hell. Such an explanation was after all a subtle way out of a difficulty and it is not quite free from a possible reproach of selfishness. Not so with the belief in the reincarnation of the soul. Here, upon earth, in the sight of all, the sinner —whosoever he might be —has to expiate his sins. Here he has to suffer for the wrongs committed, and here obtain, as it were, a pass for the heavenly regions. By this slow process of purification in successive reincarnations the whole world would benefit and the general progress and welfare of mankind would be hastened.

There are, as it were, successive incarnations for each pre-existing soul, and for their sakes the world was created. Simon Magus put forth the claim of former existence, his soul passing through many bodies before reaching that known as Simon. The Samaritan doctrine of the *Tabeb* teaches the same doctrine of a pre-existing soul, one of which was given to Adama, but which through successive incarnations in Seth, Noah, and Abraham, reached Moses. The doctrines further taught that not only is the world perfected by the rebirths of souls but each sinner gradually expiates his sin in this world in the new existences in which his soul reappears. The sinner's soul may enter the body of a pious man, and by his good deeds, he will cleanse the dross, still adhering to the soul, and facilitate its ascent on high. If a truly pious person suffers, it is only and solely because of sins committed in a previous incarnation and his suffering is not a punishment for

sins *now* committed but a form of purgatory for evil deeds in a *former* life. Likewise the sinner benefits from the good deeds that he has performed in a previous existence whereby he may prosper now for a while, but if he continues to sin, he will absorb all of the good benefits from his past life and bring upon him suffering and punishment here or in his next incarnation.

There is a difference of opinion as to how many times a soul will reincarnate before it has attained perfection. It is generally believed that the full cycle of reincarnations is that in which the soul has performed the whole of the 613 commandments of the Law, by which alone perfection is attained by means of reincarnation the soul fulfills the object of its creation—to pass through human existences on earth and to lift man higher and to bring him nearer the Divine. This doctrine, being a justification of God's ways with men, is, at the same time, a source of comfort to the pious, and a source of terror to the sinner. It reconciles man to suffering and trial, and at the same time explains the hidden meaning of many a law and ceremony which seems obscure.

The foregoing gives us an excellent idea of the general beliefs regarding the soul and its purpose in the world as popularly held by the mass of people in all of the Oriental countries. These beliefs were firmly fixed in the minds of the majority of men and women during the lifetime of Jesus and this being the case, we can understand better the many references made to this doctrine in the Christian Bible. In a later chapter I will refer to some of the specific points outlined in the foregoing picture of Jewish beliefs.

Chapter 12

CHRISTIAN REFERENCES

TO THOSE WHO are devoted to the Christian religion and who judge any moral, ethical, or religious doctrine by its compatibility with the writings in the Holy Bible, I now direct my attention.

In fairness to the subject, I plead with these devout Christians to be tolerant and liberal in their attitude for the time being, and consider the following remarks with the same degree of fair and just interpretation as they expect of others when they argue their beliefs and their principles of faith.

As stated in the previous chapter, there are many passages in the Christian Bible which directly and indirectly refer to reincarnation, and even Jesus the Christ referred to the doctrine of reincarnation in a manner which leaves no doubt as to his familiarity with the doctrine and his belief in it. The fact that the doctrine is not elaborated upon or explained in detail in the Bible is not a reason for concluding that it was not a popular doctrine or was one that was not acceptable to Jesus and his disciples.

The doctrine of reincarnation had no important place in the great message which Jesus brought to the world, and there was no more need for the presentation of the details of the doctrine in the writings of the apostles or the great prophets than there was for the presentation of the details of many other universally accepted scientific convictions and philosophical beliefs.

There is nothing in the doctrine of reincarnation that is not compatible with the doctrines expounded by Jesus, nor with the life he lived. I have shown in the previous chapters that the doctrines of reincarnation were universally known and accepted among the Jewish people and this fact was known also to Jesus. The belief in reincarnation, however, could not possibly prevent anyone from accepting the new messages expounded by Jesus, and there was no reason, therefore, for him to either criticize, modify, or comment upon the doctrine of reincarnation during his missionary work.

What Jesus said of the soul of man and of its redemption and salvation in nowise conflicts with the fundamental principles and great truth of reincarnation.

The average Christian believes that *somewhere* in the Bible, and *somewhere* in the sayings attributed to Jesus by his disciples, there is some statement regarding the soul to the effect that at transition the soul of man separates itself from the physical body and rises to a spiritual kingdom and there dwells in unconscious bliss or peace awaiting the ultimate Judgment Day. These persons also believe that Jesus, or his disciples, definitely stated that the soul of man after transition remains eternally in a spiritual kingdom, and that the Judgment Day will come when all have passed through transition and all are ready to be judged at one time. If these statements of Jesus were actually expressed in the Bible, they would certainly appear to be incompatible with the doctrines of reincarnation. But the fact of the matter is that no such statements were made by Jesus.

The idea that the soul of man leaves the physical body at transition to live eternally in a spiritual kingdom, awaiting Judgment Day, is a doctrine that was *added to the Christian faith long after the life of Jesus*, and is not based upon anything said by him. Truly, there is reference to *judgment*, and to the dwelling of the soul in a spiritual kingdom, and of the ultimate and final weighing of our sins, but there is no statement to the effect that each individual may not have many incarnations before the time of the ultimate Judgment. The doctrine of reincarnation includes the coming of a final Judgment, and explains *how* and *why* we are given opportunities to prepare for that Judgment: but there is

no reason to be found in the original teachings of Jesus to warrant the belief that at transition each soul of each individual passes to a spiritual kingdom, or any kingdom, where it must reside until the end of time awaiting the ultimate Judgment Day.

If the Christian or the student of Christian theology can honestly and bravely eliminate from his consciousness and from his categorical beliefs the idea that the soul of man at transition enters into a place or condition where it is to remain unto the end of time, then there will be no difficulty in accepting the true doctrines of reincarnation.

It will be seen that I am making a distinction between the Christian doctrines as taught by Jesus and propounded by his disciples, and the Christian doctrines which were *invented* or *agreed upon* by church conclaves in *later* centuries. I frankly admit that the present-day Christian doctrines as taught in the average Christian church do not permit of an acceptance of the doctrine of reincarnation. But these doctrines *are not the original doctrines of Jesus the Christ*. I am not attempting to criticize the goodness, or soundness, of the doctrines thus invented or adopted, except to state that they have included certain beliefs that are now contrary to reincarnation; but they are also contrary to the other passages in the Bible, as I will show by quotations. In other words, it is possible for a person to be a devout Christian and a sincere follower of the Lord Jesus Christ as man's savior, and as one of the Holy Trinity, and at the same time accept the doctrines of reincarnation. There are hundreds of prominent Christian clergymen and Christian advocates in America today who are firm believers in the doctrine of reincarnation and who do not find this ancient doctrine incompatible with anything taught by Jesus or anything demonstrated in his life.

To start our Bible research and investigation, let us turn to the Old Testament for just one of the many passages which clearly indicates the popular belief in man's continued rebirth. We will turn to the thirty-third chapter of the book of Job and proceed to read the last part of this chapter. Beginning at the twenty-seventh verse we find the belief of repentance and redemption expressed in clear language. We find the idea conveyed that if a sinful person confesses his sin at the time of transition or when he feels that his earthly life is about to

end, he will save himself from future punishment and redeem his soul from the pit of darkness. In the twenty-eight verse we read that such a repentant sinner “will deliver his soul from going into the pit, and his life shall see the light” In the next verse we find the principles of reincarnation or rebirth expressed in these words, “Lo, all these things worketh God oftentimes with man” In the thirtieth verse there is a further explanation of the twenty-ninth verse. It reads: “To bring back his soul from the pit, to be enlightened with the light of the living”

Taking these three verses together there is no possibility of mistranslation or misunderstanding. Bringing the soul back from the pit into the light of the living can only mean one thing. The use of the word *pit* to mean the ancient burial places is a quite common expression in the Old Testament. It is often used to refer to the underworld or to Hades. The use of the word to indicate a grave or the place of the dead is shown in Ezekiel 32:23, Isaiah 38:18, Isaiah 14:15, and also in Job 33:18 we read of *the pit* as associated with death. To be redeemed from *the pit*, therefore, and brought back into the “light of the living,” and to have this thing occur “oftentimes with man” can only mean being reborn after death and *given life again among the living*.

The thoughts expressed in these verses are reflected in many verses throughout both Testaments, as, for example, in Revelation: Him that overcometh will I make a pillar in “the temple of my God, and he shall go no more out”

When we start to analyze the New Testament we find that the same thoughts were held by the populace.

That Jesus was thoroughly familiar with the doctrine of reincarnation and of the law of compensation is made manifest in many of his statements. I am not going to take the time to quote every one of the statements made by Jesus to his disciples which would indicate this, but I will take one that is typical. In the Gospel of St. John in the ninth chapter, from the second to fourth verses, we find a very interesting incident that deals exclusively with reincarnation and the Law of Karma. In this instance Jesus passed along the highway with his disciples and met a man who was blind and who was known to have been born blind. The disciples considered this an opportunity to learn

more about the Law of Karma and the cause of human suffering, and so they called the attention of Jesus to the blind man and asked:

“Master, who did sin, this man, or his parents, that he was born blind? Jesus answered, “Neither hath this man sinned” nor his parents: but that the works of God should be made manifest in him”

You will notice that the disciples distinctly stated that *the man was born blind*, and, therefore, they were puzzled as to the cause of the blindness. If his blindness had come about later in life through accident, injury, disease, mistreatment of the eyes, or through any of the many causes of blindness, there would have been no problem about his case. Please note that the question of the disciples was whether the blind man himself had sinned or his parents. If the parents had sinned, disease or accident might have been responsible for the man being born blind, but in what manner could the man himself have sinned to have brought about blindness *before birth*? Only by having sinned *in a previous life*, and by bringing the blindness upon himself as a karmic condition. No other interpretation can be given to this question on the part of the disciples.

Please note, also, that the disciples asked this question without hesitation and without apparent timidity. The question is stated as though it were a common question and a most natural one, and the very nature of the question itself indicates that the disciples were thoroughly familiar with the laws of Karma and rebirth, and that they knew that Jesus was familiar with rebirth and Karma as universal laws.

Note also that the answer given by Jesus is not a rebuke to their question, and is not a criticism of the beliefs held by the disciples, nor does it ignore the thoughts in the minds of the disciples which prompted the question. Jesus accepted the implication in their question and answered that neither the man nor his parents had sinned, but that the condition had come upon the man in order that God might teach a lesson and manifest a principle.

Certainly this one incident should be sufficient to show that Jesus and his disciples were thoroughly familiar with the doctrines of reincarnation or rebirth and Karma, and there was nothing repugnant,

repulsive, or incompatible with the teachings of Jesus in the doctrine of reincarnation or Karma; otherwise, Jesus immediately would have corrected his disciples for expressing ideas along such lines and would have rebuked them for such erroneous thoughts. Throughout the New Testament we find that Jesus never missed an opportunity to correct his disciples or rebuke any one of them when he wrongly expressed a universal law or expressed a false principle.

In the third chapter of St. John, in the verses three to nine, we find another incident which clearly refers to the rebirth of the soul. Here Jesus is telling how important it is for a man to be born again in order that he may enter the Kingdom of God. Nothing is said as to how many times or how often a person must be reborn so as to purge the being of its sins and attain that purification which would admit one to the spiritual kingdom. But we find in the eighth verse of this chapter that the spirit, or soul, of man will come and go as the wind, and no one can tell how often or in what direction or in what manner it will come and go. This is an allegorical statement of the birth and rebirth of the soul, and the entire process of purification and redemption.

Another very pointed reference to reincarnation is found in the ninth chapter of St. Mark. Beginning at the eleventh verse we find Jesus again discussing, confidentially, the important doctrines of life with his disciples. The disciples were asking their usual questions and Jesus was answering in his typical manner. They asked him why the scribes were saying that Elias must first come. Jesus answered them and said that truly enough Elias would come first and restore all things but, he added, *Elias indeed has come*. The question as to the coming of Elias referred to his rebirth and to his coming again.

In the twelfth verse of the seventeenth chapter of St. Matthew the answer given by Jesus is amended slightly to include the fact that although Elias did come again as had been expected, the public knew him not and therefore disbelieved in him and mistreated him. In all of the references to Elias throughout the four gospels we find that the rebirth of Elias was expected. Nowhere did Jesus correct his disciples for expressing such an idea, but on the contrary, answered their questions and remarks with perfect compliance to the intimated principles of reincarnation.

We find this reference to the rebirth of Elias in one other very remarkable verification of the doctrine of reincarnation in the Holy Bible. I refer to that outstanding event recorded by Matthew, Mark, and Luke. Turning to the sixteenth chapter of Matthew we find that when the disciples were alone with Jesus again he wondered regarding the attitude of the public toward his life and his mission. He knew that they had expected the rebirth of Elias, and that every great avatar or son of God was considered a *reborn son of divine appointment*. Therefore, he wondered which of the expected reborn holy men the populace thought he was. So, he turned to his disciples and said, Whom do men say that “ I, the Son of man, am? In other words, he said to them,” “Now that I am being discussed and talked about as the Messiah, who do they say that I am, since I am a son of man and am performing these so-called miracles and proclaiming these new teachings? In their conversations and in their private conferences, who do they say I really am?”

This question can refer to nothing else than the commonly discussed subject of rebirth and reincarnations. The public believed that he was a son of man, and that Joseph was his father or had accepted Jesus as his son, and there was no question in the minds of the populace as to who Jesus was *in his physical form* or hereditary lineage. Furthermore, Jesus would not have been concerned with such matters, and would never have asked such an inane question as, “Whose son do the people think I am?”

Notice the answer as given in the fourteenth verse. The disciples replied and said, “Some say that thou art John the Baptist; some, Elias; and others, Jeremias, or one of the prophets” Observe that the answers of these disciples referred to persons *who had been anticipated by rebirth* and who were expected to be born again, and who were being looked for by the populace as *reborn prophets* and leaders. Their whole reply is an expression of their belief in rebirth and a reflection of the common belief in reincarnation.

Jesus had an opportunity here to rebuke or correct his disciples for their expression of reincarnation principles, but he did not do so. He seemed to agree with their beliefs, as he did in every other instance where the principles of reincarnation were stated in his presence.

His very answer to them is an acceptance of their statement and an acceptance of the principles implied. For he turned to his disciples and said, "But who say ye that I am? In other words, he said to" them that, after having been associated with him and learning his doctrines, and having been taught the secret of his mission and place in life, who did they understand that he was. It was here that Simon Peter made his famous reply and said, "Thou art the Christ, the Son of the living God"

Jesus accepted this statement and charged his disciples with keeping his divine identity a secret, and allowing the multitude to look upon him as any one of the former great characters as they pleased to do. The same incident is reported in practically the same words in the eighth chapter of the book of Mark and in the ninth chapter of the book of Luke. The fact that the incident is related in the same terminology with the same ideas by three of the gospel writers proves that it is not an incident of little importance, and that no "accidental wording" of the thoughts could be responsible for the principles implied.

As a further illustration of the general popular belief in the rebirth of individuals, we find in the ninth chapter of Luke, beginning at the seventh verse, another interesting incident. In this story, Herod heard of the wonderful work being done by Jesus and he was perplexed, because it was commonly reported that this new great teacher was none other than *John reborn*, while others claimed it was Elias, or one of the other prophets, come to life again on earth to live through another incarnation of activity. Surely, when the rulers of the country, and the public generally, hold such beliefs and they are discussed with Jesus and he does not correct them, but answers their questions with a sympathetic understanding of their beliefs in reincarnation, we cannot claim that these doctrines were unknown, *or new*, in his time.

Taking the foregoing quotations as typical examples, we find that whereas nowhere in the statements of Jesus, as contained in the Bible, is there any remark on his part that is incompatible with the belief in the doctrine of reincarnation, or any statement that man is born but once, or that after transition he never returns to earth again; yet, on the other hand, many quotations show that Jesus and his disciples believed in the rebirth on earth. So we are forced to realize that those who object

to the doctrine of reincarnation on the basis of its incompatibility with Christian beliefs are misled by the statements made by modern Christian leaders who cannot find authority for their statements in anything that Jesus said.

Returning to the one example of where the disciples asked Jesus, “Who sinned, this man, or his parents, that he was born blind? we want to call attention to the fact that it was” thoroughly understood among the Jewish people that the sins committed in a previous incarnation would bring about some form of punishment in this life. Let me quote again a paragraph from the Jewish doctrine of the time: If a truly “pious person suffers it is only and solely because of sins committed in a previous incarnation—a form of purgatory for evil deeds in a former life” This passage is from the writings of the eminent Jewish rabbi whom I have already quoted in this book. It was this point that aroused the inquiry on the part of the disciples.

Certainly there is no reason for devout Christians to feel that the doctrines of reincarnation, as presented in this book, are inconsistent with the fundamental principles of true Christianity, nor contrary to anything that Jesus taught or his disciples believed. We find in the foregoing few quotations sufficient proof of the acceptance of the doctrine of reincarnation on the part of Jesus and his disciples.

If the later Christian churches, or the modern Christian religion, have modified the pristine teachings of Jesus, or introduced new doctrines that are contradictory to those held by Jesus, no true Christian should feel that he is bound to accept them simply because they have the approval of modern religious authorities. For that matter, many of the modern Christian lights and leaders of Christian thought have accepted the doctrines of reincarnation and have publicly stated that these doctrines are the only just and fair explanation of the universal laws of life.

The doctrines of reincarnation, as set forth in this book, do not do away with redemption, salvation, and the ultimate judgment of our sins, nor do they set aside any of the fundamental principles that Jesus taught or which constitute the foundation stones of the

Christian religion. Devout Christians who are sincere and tolerant in their examination of the Christian principles and sincerely striving to understand their religion better, will find in these doctrines a valuable aid in understanding life. The bigoted and prejudiced will simply close their eyes to the statements in this chapter of my book, and will attempt to explain away the quotations I have given in the belief that they conceal other thoughts or other ideas which we do not understand. Therefore, I will make no further attempt to prove that the doctrines of reincarnation are compatible with the beliefs and teachings of Jesus. The wise and fair-minded persons will be quite satisfied; the others can never become convinced by any rational argument.

Chapter 13

THE OVERSOUL AND CYCLES OF INCARNATIONS

IT HAS BEEN intimated in the preceding pages of this book that there is but one soul existing throughout the entire universe and this soul is the consciousness and divine essence of God. It has also been intimated that the so-called individual souls of human beings are not separate and independent souls, but *unseparated segments* of the Universal Soul, never losing their association or contact with this consciousness of God and the divine essence which constitutes the vital life force. Because these facts may be new to a great many Western minds it seems appropriate at this moment to augment these statements with the use of schematic diagrams and symbols, and make plain the beautiful fundamental laws which are involved in the principles set forth in this book.

That there is *one soul* in the universe, and that this soul is the consciousness and vital essence of God should not be surprising to any devoted student of sacred literature; nor will it be surprising to those who have made a careful study of the fundamental laws of biology and ontology.

If God is the creator of all things, and from his consciousness and divine essence emanates all consciousness and all vitality, then all consciousness throughout the universe and all vital energy of a living, creative nature must have *one central, divine source*, and must be continuous and uniform throughout the universe.

Even a moment's reflection will reveal that it is far more difficult to think of God having created out of his consciousness and essence millions upon millions of individual souls, each retaining its distinct individuality and separateness, than it is to think of *one universal essence and one universal soul*. To conceive of any means of maintaining individual entities of the same soul essence and same divine consciousness, without a tendency on their part to unite and blend into *one essence and one consciousness*, is a difficult thing indeed.

God, the creator of all things, is the Father of all images created by him in his likeness. We cannot conceive of the human children of one earthly father as being of a vital essence or blood energy so separated that the same essence is not in each of them. With the soul essence, however, we are dealing with a subtle and transcendental energy that pervades all space and which cannot be isolated or confined in any enclosure, and we cannot conceive of this essence as being in a human form without at the same time extending beyond that form and contacting the same essence resident in all other human forms.

When the sacred writings of the Orientals and even of the Christians speak of the soul in man, they do not necessarily imply an *individualized and separated soul*, but the soul essence and *soul consciousness* of God that is resident in man. Each of us has *soul*, but not a *soul* in the sense that it is a *thing apart from every other soul* in human beings.

To illustrate the principle, or law involved, I have resorted to the homely illustration of the electricity that is utilized in the lighting of modern electric lamps.

Fig. 1

In Figure 1, I have shown the electric wires in the upper part of the drawing passing along from lamp to lamp without any break in their connections. The lamps A, C, D, E, F, G, H, and I are various types of electric bulbs common in use today. Some of them are colored with various tints; some are very small and give only a small amount of light, others are large and very luminous; some are long, and some are short.

The electricity that flows into each *one* of these lamps, and causes the lamp bulb to be alive with light, is not broken in its continuity or in its flow through *all of the lamps*. The electricity that illuminates these bulbs and gives them life or *light* flows through each lamp and out again to enter into the next lamp, and so on. The electric current, therefore, in each lamp may be likened to the *soul essence* of the lamp, and while we would say that each lamp *has its own electricity* which it is utilizing, we cannot look upon that electricity in each lamp as *being separated from or distinct from the electricity that is in all of the other lamps*. Merely a *segment* of the electric circuit is resident in each lamp, and *all of these segments are united* in one continuous circuit. Even if we separate one of the lamps from the circuit, as shown at B in the diagram, the electricity that was once resident in the bulb comes to the point or place of its former entrance into the lamp bulb, and then passes on into the next one. The lamp that no longer has the electric current passing through it is now *lifeless and without light*.

In the lower part of Figure 1, I have compared the universal soul essence and consciousness with the electric current. The dotted circles labeled A, B, C, D, E, F, G, and H at the bottom of this diagram represent human physical bodies and the upper dark line represents the soul essence and consciousness of the universe, with segments of it coming down and passing through each of the physical bodies. You will see at once that this divine consciousness and essence, called *soul*, is not broken into *individual* and *separate* segments in each one of the physical bodies, but passes into each body and manifests there, giving the body life, yet manifests simultaneously in the other physical bodies. While the segment of soul is in one of these physical bodies it manifests consciousness, life, and intelligence in the physical body, and without this soul essence the physical body would be lifeless and without intelligence or consciousness. The dotted circle B represents a physical body after transition when the soul essence and consciousness have withdrawn from the body and left it lifeless and unconscious.

The electric lamp bulbs are not electric lights until electricity manifests in them and through them. When you buy an electric bulb at a store and carry it home with you, you have nothing more or less in your hands than some of the minerals of the earth, gathered together by a scientific process and formed into a body by the master creators of electrical devices. You cannot call it a *light*, since it manifests no light, and it is therefore lifeless, useless, and without any value so long as it is unassociated with the electric current. The moment you place this bulb in a socket, or in a position where the electric current can flow into it, you immediately transform the lifeless, lightless, physical body of the bulb into a *vibrating illuminating, living thing* of light, and the moment the electric current or electric essence is withdrawn from the bulb it is again lifeless and useless and cannot fulfill the purpose for which it was made.

Man's physical body is precisely like the electric bulb. Every bit of its physical and material form and nature has been extracted from the earthly elements and drawn together by a marvelous process and formed by a Master Creator, but until the divine essence of life and consciousness enters that physical body it is lifeless and truly lightless.

This recalls to our minds the principle that is so well worded in the Christian Bible, in the book of Genesis, wherein we are told that God formed man out of the dust or elements of the earth, and then breathed into his nostrils, or into his physical body, the *breath of life* or the divine essence, and man became a *living soul*. Until such essence was breathed into his body man was lifeless and incapable of fulfilling the purpose for which he was created, and he was of no more use than an electric light bulb before the electric essence gives it light and life. The physical body of man is without divine intelligence or consciousness, and without vitality or purpose, until the soul enters it and makes it a living soul rather than a mere existing body.

We can see by these two illustrations that the soul essence and consciousness resident in each physical body is not separated from the essence and consciousness that is in *every other living body*. If we were to think of the soul in each individual body being a *separate and distinct soul*, independent of all the others, and not in actual contact with all others, we would have a condition similar to that shown by the letter J in the upper part of Figure 1. Here the electric lamp bulb has the electric wires within it but these are not connected with the electric circuit. We see at once that a lamp in this condition is no different from that shown by the letter B, for there is no contact between the electric wires in the bulb and those which contain the real energy. Such a lamp could not manifest light of any kind.

By looking at the body identified as letter I at the end of the lower diagram, we see that same point illustrated by breaking the connection between the soul in the body and the universal soul essence. We see at once that such a condition is an impossibility, for the soul essence and the consciousness in a physical body must remain in contact with the *source of essence* and the *source of consciousness* in order to maintain its manifestation of essence and consciousness. Matter itself is not intelligent, for it is composed of the gross elements of the earth, and these elements have neither mind nor consciousness until they are organized and prepared to receive some form of consciousness.

Long ago the ancient philosophers and mystics gave a name to the universal soul and consciousness that pervades all space. This name we have modernized into the term *Oversoul*. Some have called it the Cosmic Soul; some have called it the Divine Soul; and others the *Soul of God*. Such other terms, however, imply that there are various kinds of souls in the universe, and that one of these is divine, or the Soul of God or of the Cosmic, whereas the others are not. But, since there is *but one soul* in the universe, the term *Oversoul* is preferred, because it does not attempt to distinguish this soul from any other, except to intimate that it is the soul that exists everywhere without being separated from its various manifestations in physical bodies.

Therefore, we will use the term *Oversoul* to mean the Universal Soul or God, or, in other words, the divine consciousness and essence of God which pervades all space, and segments of which are manifested in each human body. This means that in the body of each human being there is the soul essence, the power, the energy, the consciousness of God, that *God is within us* rather than without. This brings us to a clearer understanding of many of the sacred writings of the past and especially those which are found in the Christian doctrines.

In thinking of the Oversoul extending a part of itself downward and into the body of each human being, we must give some thought to the relationship of the soul to the ego and the personality of each human being, as touched upon in preceding chapters. In order to impress these relationships upon the mind of my reader I have resorted to another schematic illustration which is given here as Figure 2.

Here we have two heavy dark lines descending from above and coming down into a circular enclosure. Let us consider the two dotted circular lines in the center of the diagram as representing the physical body of man. Inside of these two dotted lines we see the heavy black lines representing the soul essence and consciousness descending from the Cosmic into the physical body. In the center of this soul we find another body, often referred to as the *psychic body*, which is the ego or personality, and this ego is composed of the mind and memory that is associated with each segment of the Over-soul.

In other words, if we look upon the Oversoul in the universe as being divided into unbroken segments, and each segment representing a part of the Oversoul that resides in a human body, we will find that each one of these segments of the Oversoul possesses an ego or personality composed of mind or intelligence, and consciousness with memory. The soul itself is composed of the divine essence, or vital life force—creative energy which emanates from God, the source of all life. However, in addition to this creative and vitalizing energy of the soul, each segment possesses, as an attribute, an ego or personality, with its mind, memory, and consciousness. As I have stated above, this ego or personality, with its divine mind and divine consciousness, has often been referred to as the *psychic body* of man, resident with in the physical body.

In Figure 2 you will also see the aura radiating from the physical body. This aura is like the radiations of light that come from an electric bulb when the wires within are connected with the source of electricity. The aura of the human body is the result of the soul essence and vitality resident within the physical body. I have illustrated this aura in the form of an egg or oval, inasmuch as the aura within a human body is often seen in this form, and in many ancient manuscripts the aura of man is referred to as an egg, and therefore symbolical of the reproductive energy of the animal kingdom. When the soul with its essence and consciousness is withdrawn from the physical body, the aura follows the soul and no longer manifests around the physical body. As I have stated elsewhere in this book, thousands of observations have been made at the time of transition when the aura of the physical body has been seen to rise above the body and to remain in space as the soul withdrew and left the body lifeless.

Fig. 2

It is very important that the elements of Figure 2 should be carefully studied. Keep in mind that the two black lines represent the divine essence of the Oversoul descending into the physical body. The physical body is represented by the two large dotted circular lines. But, the soul in the body has also other attributes besides its divine essence and vitality. These attributes constitute the ego or personality, with mind and memory. This ego or personality *always remains with each segment* of the Oversoul, for the ego is immortal like the soul itself, and cannot be destroyed and never ceases to exist. Whether the segment of the soul *is in the physical body or out of it*, the ego, with its mind, memory, and consciousness remains with it, and so we see that we can have an intelligent, conscious segment of the soul *either in a body*

or *out of a body*. When it is in a *body* we have the union of the spiritual with the material, making a perfect manifestation of a living soul on earth. When it is *out of a body* we have a physical body that is lifeless, unintelligent, and unconscious, and a segment of soul still retaining its vitality and consciousness, ego, and intellect.

With these points well fixed in your mind we will now look at Figure 3. Here I have shown a number of physical bodies with the soul segment and personality, or ego, in them A, B, C, and F represent living bodies with the soul essence and ego resident in them, and the aura of life extending around the physical body. At D, I have shown what occurs at the time of transition. Here the soul with its ego and aura is withdrawn from the physical body, leaving the body without any aura or life. At E, I have shown the complete separation, and you will notice that I have illustrated this by showing the segment of the soul still maintaining its aura and personality or ego, although having ascended into the Cosmic and no longer in contact with the physical body which is now lying into the dust of the earth, disintegrating and returning to its primary elements.

Fig. 3

You will notice by studying Figure 3 that all of the egos in each segment of the Oversoul are connected and associated through the contact with the divine soul essence, and that even in the case where the soul has completely withdrawn from the body, the ego of the segment is in contact with all of the other egos through its universal contact with the Oversoul.

So much for the illustration of the principle of the universal association and contact of all egos in all living things. This should impress us with the principle that the personality which each of us

possesses throughout life, or the ego which we manifest throughout life, is not a *mortal* thing but an *immortal* thing, and a part of the Oversoul existing eternally.

We should also be impressed with the fact that the ego, or personality, which each of us manifests during our lifetime, continues to exist and retain its identity over after transition. Therefore, there are egos, or personalities, existing in physical bodies on the earth, and existing *outside of physical bodies* in the Cosmic. And all of these egos, or personalities, incarnated in bodies or existing outside of bodies in the Cosmic, are in contact and constant communication with each other through having the same soul essence continuously passing through them.

Incidentally, it may be mentioned that this ancient understanding of the association of all egos with each other, and the uniting of all souls into one *soul*, was the foundation for the belief in the *universal brotherhood of man* through the *universal fatherhood of all beings*, and establishes the fact that all human beings are brothers and sisters under one creator and of the same essence, same vitality, and same consciousness, regardless of race, creed, color, or other distinctive elements of the ego.

The next important consideration is in regard to the cycles of incarnations. The question is often asked as to how many times man incarnates on earth, and when this process of development will discontinue. Mysticism, and the scientific study of this subject, gives a well-known example of *perfect soul personality development*, whereby the need for further incarnations on earth was brought to an end. This is in the case of *Jesus the Christ*, who, having had many previous incarnations as intimated in the Christian gospels, was finally born pure and with a personality or ego requiring only *one more* group of experiences. At the end of these experiences, which were to demonstrate the highest principles of cosmic law and God's will and power, *Jesus the Christ* having attained Christhood through the highest perfection and pureness of a consciousness, ascended into heaven and was there absorbed into the consciousness of God, and the ego of Jesus became one of the divine elements of the Godhead.

Until such perfection is attained by each human being, there will be need for each personality and each ego to reincarnate *again and again*,

and through the experiences of life, through personal effort and attainment, through devotion and sacrifice, purge the ego of all evil in thought or action, and finally become pure in every point and ready for the ultimate Judgment, when it will be accepted unto God again and become a part of the Divine Godhead.

Jesus himself promised that this would be the ultimate and highest reward for all devotion and effort toward godliness. What he stated in this regard was well understood by the prophets who preceded him, but none of whom had attained the degree of perfection attained by him.

Therefore, we see that it is impossible to tell how many times each ego, or personality, must be reincarnated in physical form on the earth plane. One point, however, in regard to the cycles of reincarnation, has been determined by observation. It has been found that each ego, or personality, reincarnates on earth *approximately every 144th year*. In other words, 144 years has been found to be the average length of time *between rebirths*. This does not mean, however, that there can be no exception to that average. Just as there is an average length of time for human gestations, although this may vary at times, so there is an average length of time between rebirths on earth, although this, too, may vary according to circumstances.

It has been found, however, that although there is a variation in these periods of 144 years, after ten or twelve reincarnations the number of years involved in them shows that the average time is about 144 years between rebirths in infant bodies.

Nominally, man should live in his physical body 144 years, and then the soul would withdraw from that body, ascend to the Cosmic, and in a few days, or few hours, descend again into a new body. But, man by his manner of living, and his continued violation of natural laws, has gradually shortened his length of time on earth so that the average physical body reaches transition long before 144 years have passed. But since he will not be *reborn again* until the 144th year, there will be a period of cosmic residence for his ego, during which the ego will await the coming of the 144th year of rebirth.

In other words, if a person lived to be 100 years of age on earth, and then passed through transition, the ego would have a period of waiting in the Cosmic for 44 years until the normal time for rebirth. If a person lived to be 124 years of age on the earth, the ego would wait in the Cosmic 20 years. And a person who had lived 80 years of earthly life would reside in the Cosmic for 64 years.

By referring to Figure 4, we will see these periods of rebirths plainly illustrated. The top line of Figure 4 shows the cycles of rebirth divided by periods of 144 years. In this top lines the double circles labeled E, represent the *cycles of life on earth*, or, in other words, the cycles of the soul incarnated in a physical body. The small dotted circle above the line, marked with the letter S, represents the *spiritual residence* of the ego in the Cosmic. The entire top line shows an imaginary life line of an ego that lived *on earth 100 years* in each period, and *44 years in the Cosmic* in each period. Starting with the first birth *on earth* we find that the next rebirth occurred at the 144 th year, the second at the 288 th year, the third at the 432nd year, etc. In other words, in 1152 years this personality would have passed through eight incarnations on earth and would be ready for the ninth.

Fig. 4

Such an equal division of births and rebirths is purely imaginary, however, and probably impossible to find in actual experience. Therefore, let us consider the lower line of Figure 4. Here we have an imaginary life line of a person as we may find it in any part of the world. In this life line we soon notice that the periods of life on earth are of various lengths. Beginning at the start of the line we find

that the first period on earth, indicated by the letter A, was about 90 years, leaving a period of 54 years for the personality to reside *in the Cosmic*, as shown by the dotted line B. At the 144th year, however, the personality was reborn on earth, and this rebirth is shown by the double line marked C. This period on earth, however, was for only 50 years, and after transition the personality resided on the cosmic plane for 94 years, as shown by the dotted line D.

Then, in the 288th year, the personality was reborn, as shown by the double line E. The earthly existence this time was for 135 years and the personality then ascended to the Cosmic and resided there for 9 years, as indicated by the dotted line F. At the end of this cosmic period the personality was reborn, as shown by the double line marked G, but this time the earthly life was for only 10 years, and after transition the personality ascended into the Cosmic; but because its previous period on earth *had been so short* the personality resided in the cosmic for only 35 years, and then was reborn, as shown by the double circle marked I.

Thus we see there were short and long periods on both the earth and cosmic planes, and the rebirths did not always occur at precisely the 144th year of the cycle. However, we notice that at the end of 1152 years this personality had passed through approximately eight incarnations on earth, just as had the imaginary one on the upper line of the diagram. Therefore, although one of these lives was not strictly according to the 144-year periods, it did average about eight incarnations to 1152 years.

So it has been found with the average person whose incarnations have been traced through past history. Although they have not always been reborn at precisely the 144th year of the complete cycle, nevertheless taking ten, twelve, or fourteen of the past incarnations and dividing the number of years involved by the number of earthly incarnations, we find that they did average about 144 years between rebirths.

A child born today and living but a few hours, and then passing through transition, may have its ego reside in the Cosmic for the balance of 144 years or it may be reborn in ten, twenty, or fifty years. But, after a number of reincarnations the average period will be found to be 144 years.

This means that the average person living today can roughly estimate that he or she was reborn approximately each 144-year period backward through history. The rule is not exact, for there are exceptions as shown in the lines of Figure 4. Why some personalities are reborn sooner than others can only be judged by a consideration of the law of Karma. Since the purpose of the ego's residence in the Cosmic awaiting rebirth is to be purified and instructed, and prepared for the next incarnation, we may safely judge that those who have lived a pure and nearly perfect life here on earth up to the time of transition will require a very short time of cosmic preparation before being reborn. On the other hand, those who have fallen out of grace and who have yielded to temptation and who have sinned much will probably find that they must spend the full and allotted time upon the cosmic plane in being purged and prepared for rebirth.

We seen in all of this the marvelous and beautiful justice of God's ways, and of the uniformity of cosmic laws and principles manifested even in the cycles of life, as they are in the formation of crystals, the movement of planets, and the composition of the elements of matter.

Even man's life on earth is divided into periods and cycles of seven years each, during which certain definite things occur in the life of everyone. By a study of these earthly cycles any man or woman can easily foresee and foretell what definite events will occur in their earthly lives, and prepare for them, and take advantage of those which are propitious or fortunate. In my book dealing with the cycles of life* on earth, all of these periods have been explained and worked out in the tables, so that each and every person can easily determine the fortunate and unfortunate periods of his earthly life and be prepared for emergencies of all kinds. Even the cycles of previous incarnations can be determined in this way, and it is possible to learn what our previous personalities and egos manifested in our last incarnation. Since all of this has been dealt with exhaustively in my other book, I will not deal with it here, for it has no definite place in the discussion of the present subject.

**Self Mastery and Fate, With the Cycles of Life, published by the Supreme Grand Lodge of AMORC*

Chapter 14

BETWEEN INCARNATIONS

TWO QUESTIONS ARISE as to the activities of the soul during its period of temporary existence in the spiritual realm between rebirths. The first of these is, Why should the soul have a long or short existence in the spiritual world between incarnations? The second is, What is known of the soul's activities in these periods between earthly incarnations?

The first question is generally associated with the thought that if it is advisable for the soul of man to have a number of successive rebirths on earth in order to develop and perfect the ideal ego, why does not the soul pass from one body at transition immediately to another without more than a few minutes or few hours elapsing between the two great events? In other words, why should there be any delay at all in the soul's passing from one body which it is vacating to the new body it is to occupy?

Considering that throughout the world there are births occurring every minute of the day and night it would seem that no matter when transition occurred with anyone, the soul could escape from the old physical body it occupied and pass immediately into another body just being born. There are many thousands of persons, having only a slight acquaintance with the doctrines of reincarnation, who believe that this often occurs. There are those who believe that when a mother passes through transition at the time of childbirth her soul passes right into the newborn body, not only because the body was close at hand and ready to receive a soul, but because of the relationship that exists. There are a great many who also believe that when an elderly person passes away in any community, the soul of that person will immediately enter

the body of any child being born in that community.

These ideas are the result of a lack of knowledge of the principles involved, as outlined in the preceding chapter. Each personality or ego of the Oversoul has a definite cycle of rebirth with periods of spiritual existence between them. We have seen in the preceding chapter how the earthly incarnations of the soul, with its ego and personality, may vary in length from one hour to one hundred years or more, and how the periods between incarnations will vary in length; but only occasionally would there be a very brief or short period of existence in the spiritual realm between incarnations.

The purpose of these intervals between incarnations is to permit the ego to purify itself further and become illuminated by the Divine Mind and Cosmic Wisdom. It is like a period of rest and relaxation between hours of daily labor. It is refreshment for the soul and personality, and is strength to the spiritual powers of the divine faculties of the soul.

We may compare the intervals between incarnations to the hours of sleep that occur between the daytime periods of activity in our daily affairs. We may labor sixteen or eighteen hours of the day in waking consciousness and then spend from six to eight hours in sleep, wholly unconscious of our earthly objective affairs. These hours of sleep and rest afford an opportunity for the gathering of strength and recreation of the tired, worn-out, and exhausted faculties and functioning of the physical body. Sleep permits stronger exercise of the faculties and a more vitalized degree of power in the body and mind in the morning when the body awakens.

The same can be said regarding the intervals between incarnations. Immediately upon transition the soul and ego of the individual separate gradually from the body. This separation is not so sudden that the entire soul essence and ego are withdrawn from the body and rise *instantly* to the spiritual or cosmic realm. The withdrawal of the soul essence and ego from the body requires from ten minutes to a half-hour and sometimes more time. This has been observed in thousands of cases where in homes, hospitals, and sanitariums, persons have been gathered about the bedside of a person passing through transition, or where very observant nurses or doctors have made the notations.

Generally, when there is a soft light in a room, or other vibratory or magnetic conditions which are favorable, the aura of the human body will be seen to extend itself gradually as transition begins, and this aura of a very faint color or combination of colors will gradually rise out of and above the body, until, in from five to twenty minutes, it is almost wholly out and above the body, and separated from it. But it does not continue to rise and does not leave the presence of the body for some little time. In some cases the aura has been observed to remain in the same room, hovering over the body or near it for many hours; and in cases where the light of the room and other conditions were favorable for observation, this aura has been seen to continue in the presence of the body for several days.

In many cases perfect observation of the aura near the body after transition has been interfered with by the sudden lighting of many lights and the presence of persons who had to perform their proper duties in caring for the body. In cases where there was no such interference for hours the observation of the aura has been perfect, and many interesting details have been noted.

In many ancient writings this phenomenon has been commented upon. In those cases where the aura or ego of the body was seen to linger and remain in the presence of the body for several days (or in the room where the transition had occurred) it was claimed that the soul or ego was “earthbound”

The belief is quite common in Oriental lands, among people who have observed and studied the action of the soul after transition, that the soul and ego remains after the separation from the body to perform certain definite things before rising above the earth plane to exist in the spiritual realm. Among the purposes thus referred to are the soothing and strengthening of the principal mourners or those who have been suddenly and seriously affected by the transition, the inspiring of certain actions or thoughts in the minds of intimate associates, and the entanglement of many mysteries that might be connected with the transition.

It has been claimed, for instance, that hundreds of carefully studied cases show that where transition has occurred suddenly without giving

the individual an opportunity to look after a serious problem and properly to advise those who would be left in a quandary, the soul or ego has remained in the immediate environment of the relatives or companions of the deceased and aided them by inspiration or intuition to locate certain papers, hidden valuables, or other matters of extreme importance. It is also claimed by these authorities that the ego often remains in contact with the mourners to point out to them through intuition, or otherwise, the cause of transition when this has occurred through murder or accident involving a serious mystery.

In many other ways the ego can have a very soothing and comforting effect upon those who were closest to the deceased. It is this record of carefully observed facts regarding the ego's contact with the earth plane after transition that gave rise to the superstitious belief in the existence of ghosts.

When the uneducated and unformed minds heard of the instances of egos remaining for a while to point out how a crime had been committed, or where an accident occurred, or where certain papers and documents were concealed, they believed that the ego was a highly luminous figure of the deceased's body, and that it remained for an indefinite time in the environment of the transition and made itself visible to every person that came near the place where transition occurred. As I have said, this sort of belief was responsible for the development of the idea of ghosts which is so prevalent among the ignorant.

The truth of the matter is that only those whose psychic development or spiritual development has reached a high state can see the faint aura of the released soul and ego. Those who were closest to the deceased and who would be the most likely to receive any impressions from the ego very often do not see the lights of the aura, but feel the magnetic or vibratory radiations of the ego for many hours, or several days after transition, and they usually have a strong impression that the personality of the deceased is still in their midst trying to comfort and sympathize with them, and still lives.

The more sympathetic and complete the attunement that existed between the deceased and those who are left here on earth, the more

perfect will be this impression of the ego's presence after transition, and this impression is unmistakably definite in the minds of mothers when a son or daughter, of a loving and companionable nature, has passed through transition.

It has been claimed by some students of this phase of universal principles that a man or woman who was given in earthly life to an exaggerated faith in material things was sure to be "earthbound for some days or weeks after transition, and that the material things which enslaved him during his earthly life would continue to hold him to the earth plane for some little time. Thus they believed that a man who was a miser, or who gave his whole heart and mind to money or material wealth, or to some earthly thing which he made his God, would be bound and enslaved to this thing for many days or weeks after transition. In this wise came the expression that certain persons were doomed to be "earth-bound"

Many fantastic stories have been written with this idea as the principal theme, and there are many astute and successful criminologists in various lands who claimed that their experience in solving murder mysteries and some other crimes has proved to them that a person who committed murder or some very serious crime against an innocent person is "earthbound" by this crime and for days and weeks after transition will linger in the vicinity of the crime in an attempt to aid in the solution of the mystery. These persons claim that the ego finds no peace, no happiness, and no opportunity to rise and free itself from the earth, until it does assist in solving the mystery of the crime it committed and in seeing that no innocent person suffers for the crime that it committed. These criminologists claim that by waiting patiently and observing the action of other persons and analyzing the impressions that come to the minds of those formerly closely associated with the deceased, many clues will be found that will aid in solving the mastery.

This is a very wonderful field for exploration and study on the part of those who are interested in criminology, and in the possibilities of "earthbound" egos inspiring in the minds of others the correct solution of the crimes they have committed. Such a subject has no

place in this work, even though many Rosicrucians in various lands have been delving deeply into this subject with eminent success.

Shortly after transition, however, the soul and ego are drawn upward into the spiritual or cosmic realm, and there remain until the time comes to descend again toward the earth plane to enter into a newborn body. As stated in the previous chapter, the personality or ego remains with the segment of the soul as a part of it, and the ego never loses its identity nor does the segment of the Oversoul associated with this ego ever lose its identity. Whether the ego is to remain in the spiritual realm for a week, a month, or many years depends upon various laws and principles with which we are not as familiar as we are with those laws and principles pertaining to the soul and ego's existence on this earth plane.

During its period of spiritual existence the soul with its ego and personality is in immediate contact with all of the minds and egos, not only in the spiritual realm, but throughout the universe. I have shown in the preceding chapter that at all times every soul expression and every ego in the universe, whether incarnated in a physical body or existing on the spiritual plane, is united and in continuous contact with all others because of the continuous contact of the Over-soul. This permits of the divine mind or psychic body of each ego communicating with every other psychic mind without difficulty.

The only manner in which the mind of the physical, outerself can know of such universal communications is by having the knowledge transferred from the inner self, or ego, to the outer self. In this very important point lies the one problem which makes universal communication seem either impossible or uncontrollable.

The untrained and the undeveloped experimenter in telepathy or in cosmic communications is apt to judge his ability to communicate with others by the degree of knowledge that is thus transferred from the inner self to the outer self. The outer self has no other way of knowing whether the inner self is ever in contact with other egos or not, except through the occasional transference of some impression from the inner self to the outer consciousness. If such transference or

impressions is only occasional, or incomplete and indefinite, the outer self will misjudge the true functioning of the ego in this regard.

Experiments made by those who understand the laws and principles reveal that it is as easy for one ego to communicate with another as for one outer self to speak to another in a room. It has also been found that our inner selves are constantly receiving impressions from the Cosmic which have been released by other egos and that this sort of exchange of communication and impressions is more or less constant. Very often the transfer of these impressions is made from the ego to the outer self during dreams or visions, while the outer self is partially asleep or on the so-called *borderline* of consciousness. At other times the transfer of impressions is made through the faculties of intuition, or a sort of urge within.

The important point to keep in mind is that we should not judge the degree or amount of contact communication thus being carried on by the degree or amount of knowledge which is transferred to the outer self; for only a small amount of such knowledge ever crosses the borderline and becomes known to the objective consciousness.

Of course, processes of development, concentration, meditation, and experiments will enable a man or woman to utilize the faculties that have been given him to bring about such transference of thought from the inner self to the outer self at will. This is one of the phases of mystical development known to the Orientals and to the members of the Rosicrucian brotherhood and similar bodies of mystics and meta-physicians throughout the world.

When the soul and ego are freed from the physical body, however, and return to the cosmic realm, the personality with its mind and memory remains as part of the soul; and direct communication with other egos, both on the cosmic plane and the earth plane is maintained with the same degree of accuracy and intimacy as before transition. This is true to such an extent that persons living on the earth plane and who are mystically developed, or who know the process of attuning the outer and inner selves for the purpose of transferring impressions, very often receive knowledge or impulses of thought which are difficult to classify, inasmuch as it is often impossible to tell whether the inner

self has received these impressions or impulses from the ego of a person living on earth or an ego that is in the spiritual realm awaiting reincarnation.

In other words, messages or impressions may come to our inner selves, or to our psychic minds and egos, not only from the persons living around us on this earth plane, but from egos that are now dwelling on the cosmic plane in the interval between incarnations.

Nothing said in the foregoing paragraphs should be taken as an implied verification of the claims of the modern spiritualistic movement which contends that the soul or “spirit” of those who have passed on *returns to earth* and delivers messages to those who are still living here. Nothing in this chapter can be interpreted in that sense, for it is a fact that neither the soul nor the so-called spirit of a departed person *returns to earth* except to reincarnate in a physical body and remain here for a certain period of time. You will understand, therefore, that I am intimating that there is a different process and method whereby the divine mind or ego within us can communicate with the egos of those who have passed on, without manifesting any of the conventions and claims of the spiritualistic movement.

While these egos of departed personalities are existing on the cosmic plane they maintain the dominant nature of the last personality expressed on earth. I have shown in previous chapters that each personality is an aggregation of personalities, or, in other words, an accumulation of the essential elements of preceding personalities. And, after transition the ego of each individual maintains the same dominant personality that it had during its last incarnation in a physical body on earth. It is, however, always conscious of its preceding characterizations, although these are in the background, so to speak, and are like memories of our childhood.

Therefore, the man who was successively the farmer, the physician, the soldier, and then the banker, and who passed into the spiritual realm as a banker, would retain the dominant personality of a banker, while awaiting reincarnation, although he would be conscious of the fact that in the past he had also been farmer, physician, soldier, and perhaps many other characters in earthly lives. Even the name by which this

personality was known in its last incarnation on earth is maintained as an identification symbol during the period of cosmic existence. It is not until the soul and ego enters into a new body for another incarnation on earth that the name of the last personality is laid aside and the dominant characteristics are placed in the background and new ones formed.

Thus we find in the spiritual realm millions of egos or personalities awaiting reincarnation. Some have been therefor many years; some for only a few days or a few hours. Some will reincarnate tomorrow or the next day or years from now, all according to the cycles of life as explained in the preceding chapter. Some of these egos in the Cosmic at the present time have the personalities of infants, for their transition occurred early after birth or in childhood; others are the egos of youths; and others of old age. But all are equal in soul essence, in divine power, and wisdom, although *unequal* in world-experience and world-attainment.

It is in this cosmic realm that we find these egos dwelling in the *Mansions of the Soul*. These mansions are mentioned in many places in the Bible, and from what we can understand through these references, and by the impressions transmitted to us by the egos dwelling there, it would appear that the egos of all human beings are privileged to dwell in twelve divisions of the cosmic realm like unto twelve chambers in a great temple, and that each ego awaiting reincarnation enjoys the privilege of dwelling in one of these twelve mansions until it is time for reincarnation. These twelve mansions are mentioned or described in the nineteenth chapter of the book of Matthew, in the twenty-seventh to thirtieth verses, as twelve thrones, and elsewhere in the Holy Bible and the sacred writings of many peoples, these mansions are given various names and allegorical representations. Even Jesus mentioned them by saying that in his Father's house were many mansions, and he told his disciples that he was going to leave them to ascend to the heavenly realm to prepare a place for them.

In these *Mansions of the Soul* the personalities dwell in preparation for reincarnation and receive knowledge and divine benedictions which purge them of their errors for which they have made repentance,

and which they have freely confessed. This bathes them with new effulgence so that they are more evolved and more highly developed for their new mission in life.

The sins committed by these personalities in the previous life on earth, and which constitute their karmic debts, are known to them while in the spiritual realm and, while they are forgiven for these sins, and they are purged of the blot upon their characters, they realize that they must return to earth and make compensation for each sin and each error and that only in this wise can such sins and errors be adjusted. Therefore, while these egos or personalities dwell in these mansions and are prepared to live more noble lives in the future, they are also prepared to return to earth and workout their salvation by compensating for their sins and living a life of adjustment.

During their regeneration in the *Mansions of the Soul* these egos become keenly aware of their previous mistakes, and the repentance and regret in their hearts and their burning desires to undo the wrongs they have done and make compensation constitute the factors and conditions which men have been pleased to call *hell* and *purgatory*. But the real suffering which each individual must endure for the suffering he has caused or the evil he has committed *is not suffering on the part of the soul*, but a *suffering of the flesh*, for it is the flesh that has committed the sin, and it is the flesh that must compensate through suffering. Therefore, the soul and ego must become incarnated again on earth in order to take on a body and be possessed of flesh which can suffer, and can compensate, and thereby make proper adjustment. The real *hell* of the flesh is therefore *on earth*, for the flesh cannot suffer *after transition*, and in the spiritual world there is no flesh to suffer.

These are the facts regarding the conditions and circumstances of the egos or personalities awaiting reincarnation as learned through cosmic contact, divine revelation, and the recollection of the ego's memory. Again the student of sacred literature and the Holy Bible will find in these principles a further understanding of the allegorical statements made in such writings and explanation of many of the parables and stories told by Jesus Christ to his disciples.

Chapter 15

MULTIPLE AND SECONDARY PERSONALITIES

A FEW YEARS ago the public became acquainted with many new theories regarding the self, the ego, or the personality of human beings through the unique arguments introduced in public trials or in the newspaper discussions of the criminal acts of prominent persons. Such terms as *dementia americana* and *exaggerated ego* were the first to be made public and these were followed by a unique description of the “little man” who took possession of a sane and sensible person and caused him to commit murder. Later on more conservative psychologists or learned students of the human ego introduced the terms *multiple personalities* and *secondary personalities*.

All of these terms were used to imply that the average human being was a mixture of two or more personalities, one of which was the outer or general personality and the others deeply rooted in the inner self or inner consciousness.

The scientific experiments conducted by the eminent leaders of psychical research in England and America further developed the idea that whenever the outer or general personality of the average human being could be inhibited or made inactive, as in a trance or through deep concentration and relaxation, one or more of the *secondary personalities* or inner selves would take possession of the body and supplant the outer personality. The expression of the belief on the part of recognized scientists opened wide the doors to the unscientific

minds in the spiritualistic field and they immediately seized upon these beliefs and the scientific terminology, and we heard much for many years about the secondary personalities of so-called mediums.

Fortunately, the continued research of scientists brought to light certain facts regarding human personalities and especially regarding the so-called secondary personalities, and these facts gradually robbed the whole subject of its mystery and prevented any further development of the superstitious or spiritualistic beliefs regarding such personalities in connection with showy demonstrations in questionable seance rooms. The subject of secondary personalities has at last been taken out of the speculative, superstitious, and magical fields of demonstration, and put into the truly scientific field of psychical research.

Many of the most wonderful examples of automatic writing or automatic dictation are unquestionably beautiful examples of the existence and functioning of a secondary personality, and how a secondary personality may control the functioning of the mind and of the hand in writing or speaking.

In such circumstances the secondary personality assumes a name for itself, presumably the name which it once legitimately possessed, and expresses itself with all of the characteristics with which that personality was presumably once very familiar and well known. It is not unusual, therefore, to find this secondary personality very different in many important essentials from the present general outer personality. In some cases there is a difference in sex, a difference in nationality or tongue, and a considerable difference in education, tastes, abilities, and desires.

In the case of those demonstrations where the secondary personality has been of value because of its unusual writings or dictations, it was found that the secondary personality had an education far superior to that of the outer personality. In some cases the secondary personality was learned in the arts and philosophy, possessed a high degree of literary and ethical culture, and expressed itself in beautiful thoughts truly worthy of publication. In some other cases, however, the secondary personality has been found to be illiterate and uncouth in its expressions and almost wholly the opposite of the outer personality.

The measure of genuineness of the secondary personality lies in its continued and consistent expression of a definite nature. With tests made over a long period of time it has been found that the writings of some of these secondary personalities are consistently of the same literary style, with no slips that reveal any forced or artificial tendency, and with an excellent recollection or memory of events and conditions, persons, and things associated with its life as an entity.

In other words, continued study of some of these secondary personalities has conclusively shown that so far as distinctiveness of character, distinctiveness of education and worldly experiences are concerned, the secondary personality is like unto a separate entity having lived at some time, somewhere, separated from the present outer personality.

To make this a little more understandable to those who have not been inclined to study the subject of secondary personalities we will use one illustration. For nearly fourteen years I was president of the New York Institute for Psychical Research. During that time the organization held monthly and semi-monthly meetings of a regular nature with many special sessions in between these, when unique investigations were necessary. I think that in those fourteen years our members investigated over one hundred cases of so-called secondary personalities or cases of automatic writing, automatic dictation, or automatic expression through the ouija board. Many of these cases were not worthy of more than one evening of test, for there was either evidence of willful deception on the part of the outer personality or such a blending of the outer and the secondary personality that the two could not be separated in the writings and dictations. On the other hand, there were many genuine and intensely interesting cases which we watched for many years. I will take one of these as an illustration.

Mrs. J. B. was the wife of a prominent attorney in New York City. She had received an ordinary school education with one year at high school. She was of a fairly well-educated family of moderate circumstances and had received the usual instruction in the ordinary principles of ethics and culture. Her husband was a graduate of a university, but interested, however, in no other intellectual pursuit than his law studies.

He prospered well during the first two years of his practice and then married, and during the two following years he accumulated sufficient funds to occupy a very fine home in New York and to provide his wife with many luxuries.

Mrs. J. B. was a very kind, loving, and sympathetic woman of about forty years of age, with a magnetic personality and a charming manner which made her an excellent hostess. During the course of their many social affairs at home it was discovered that Mrs. J. B. had developed a sympathetic attunement with her husband to such an extent that she was conscious of many of his strongest thoughts or emotions even when he was many miles absent from her. One incident of this will indicate what I mean.

On one occasion when the members of the society were all assembled at this lady's home, preparing for a test of her automatic writing, two of us suddenly and spontaneously thought of a test of her attunement with her husband. Mrs. J. B. at that moment was in the large reception room of her home with a group of the women members about her and was animatedly engaged in a discussion of frocks, and dresses, and other matters of this sort, while three or four of the men were with Mr. J. B. at the front door of his home under an awning, smoking and waiting for the meeting to be called to order.

Without any preparation or any long consideration of the test, my companion took a pin and suddenly jabbed it into the arm of Mr. J. B. as though by accident. Mr. J. B. jumped, and an expression of pain came into his face, but there was no outcry, for he was the type of man who would immediately control himself in any condition of pain or suffering of any kind. However, less than a fraction of a second after Mr. J. B. felt the pain there was a loud and uncanny outcry from Mrs. J. B. in the other part of the house, fully seventy-five feet distant from him and separated by several rooms filled with fifty or more persons talking and moving about.

The moment Mrs. J. B. cried out we rushed to her side, as did others, joining the group that was standing about her. She immediately said, "John has just had a pain in his arm, right here, and I felt it, and I want

to see what happened to him” She indicated correctly where the pain was caused by the pin, and in joining him she stated that she felt the pain at the same time that he did. She said it was a common thing for her to feel any sharp pain which he felt.

It was not her attunement with Mr. J. B. that interested us, however, but her automatic writing. For hours she would sit at a table with pencil and sheets of paper before her and write thousands of words of philosophy, advice, comments, or incidents of the past, descriptions of persons and principles, etc, without hesitancy or without seeming to become tired. Before beginning her writing she would sit in a relaxed position with pencil in her hand resting on the sheets of paper and wait for some gradual change that came over her inwardly or outwardly, and when this change was completed the hand holding the pencil would suddenly begin to write extremely rapidly, and Mrs. J. B. would often close her eyes and keep them closed for a half-hour at a time while sheet after sheet of paper was filled more rapidly than the average human can write coherently and profoundly.

In answer to questions, which were always reluctantly answered, this personality that expressed itself in the automatic writing claimed to be the “inner” self of Mrs. J. B, and claimed that the personality of Mrs. J. B. with which we were familiar was only an infant personality that was trying to usurp the position of the *real self* within. This “real self” gave us the name of *Clara W.* It refused, however, to tell where it had ever lived or when. Its writings, however, revealed much in this regard.

It showed very intimate acquaintance with many sections of the New England states and with towns and rivers in certain sections which were very old. It referred to buildings and especially to several churches which had existed in those towns a hundred years previous, but were now either in ruins or completely gone. It also referred to persons living in those cities who were no longer living. It was thoroughly familiar with music and the harmonics of music, although Mrs. J. B. herself could play no musical instrument and had never been known, even among most intimate friends, to have anything more than a casual interest in music. This secondary personality was also well read in certain lines of literature of a profoundly Puritanical nature and

likewise familiar with the Bible, and with certain religious beliefs that clearly classified its religious denomination.

In the philosophical writings the expressions were always Puritanical, somewhat narrow, but nevertheless kind and sympathetic. In all of the years that Mrs. J. B. wrote there was never an expression or even a word that was not absolutely consistent with all that had been written and expressed by this personality in previous writings, and even thought he same questions were asked many years apart, the answers were always the same as proved by comparison of the writings. Mrs. J. B. never had any copies of the writings to retain and, therefore, could not have prepared herself for the future questions.

This separate personality of hers was unquestionably a distinct entity at some previous time, and today it was an imprisoned secondary personality striving at times to regain its control of her physical body. I mentioned her close attunement with her husband only because it was this unusual fact that first made both the man and his wife realize that her mentality or spirituality was of a nature slightly different from the average human being, and it led them into investigating the laws and principles of human personality. Whether Mrs. J. B. had any other unusual psychic development or not I cannot say at this time, for our research work was limited to a study of her secondary personality.

Now, Mrs. J. B. is no different from millions of other men and women. Back of this secondary personality in Mrs. J. B. was another personality, and back of that one still another, etc. Many tests conducted in Europe and America have revealed that the existence of three and four personalities of a distinct nature. These *multiple personalities* are unquestionably the result of previous incarnations, as explained in previous chapters of this book. The interesting point, however, is that the study of secondary personalities has become quite systematized and has been reduced to a very definite field.

The investigators of secondary personalities are not interested in any doctrines or principles involving the reason for the existence of such personalities, or how or when they came into the human being. They are interested only in the present manifestation of such personalities. Such research and study has brought to light many interesting facts.

Primarily, it has revealed that each one of us is at times influenced by the rising demands, desires, urges, or inclinations of a secondary personality that seems to be just across the border from our outer personality. In other words, so far as personalities are concerned, there seem to be two in each human body trying to have dominance over the objective faculties and functioning. When the secondary personality is inclined to differ in taste, desires, and ways of living with those of the present outer personality, there is sure to be some conflict, and this conflict will express itself in the form of contrary or strange complexities which beset the events of our lives.

Often the desire to travel or to visit certain foreign lands, or to indulge in certain habits or practices, or to taste of certain foods, is the result of an uprising unconsciousness of the submerged personality. A pious and good person maybe tempted to evil deeds in this way, and an evil person maybe tempted to good deeds through the inclinations or urges of a secondary personality. This secondary personality may also manifest itself in periods of dreams or meditation, when the outer self is partially dormant and relaxed. Certain diseased conditions or injuries may bring on prolonged periods of dormancy to the outer self and permit the secondary personality to take entire control of the mind and faculties of the body. In such cases the person would manifest different traits, habits, customs of living, and mannerisms of speech, and would seem to be an entirely different person.

There are only two possible explanations for the existence of secondary or multiple personalities. One is the belief that someone outside, or the personality of a person now living, or who has passed into the Beyond, has temporarily *possessed* our bodies and submerged our outer personality and supplanted it with its own. In other words, being "possessed" is one explanation. Such an explanation, however, resorts to what may be called *supernatural laws and principles*, or *supernatural beliefs*, and it resembles too greatly the ancient superstitions and beliefs in the existence of *evil entities* which can take possession of us and control us. The only other explanation for secondary or multiple personalities is that they are the *remnants of our own previous existences on earth*. Such an explanation does not resort to supernatural principles or to any unique or irrational principle in life.

Of the two explanations you have your choice. If you discard the doctrine of reincarnation and refuse to believe that we have ever lived before on this earth plane, or ever had any other personality of our own than the one that is generally known as our present outer personality, then you must believe that the great mass of scientific evidence showing the existence of multiple personalities and the easy manifestation of a secondary personality is proof that the human consciousness can be possessed or submerged by another personality and enslaved by it for a short or long period. Certainly it is more difficult for the sane and rational mind to believe that God in creating us and in putting his own divine consciousness within us also permitted of our enslavement by other personalities, than it is to believe in the rational doctrines of reincarnation.

Chapter 16

SOULS OF ANIMALS AND “THE UNBORN”

THE QUESTION OFTEN arises as to whether animals lower in species than the human being have souls and what becomes of these souls after transition. Again this question occasionally implies that each animal has a distinct and separate soul which is in nowise connected with any other soul of the universe.

We cannot know of the so-called animal soul what we have been able to learn regarding the human soul for obvious reasons, but we do know that there is an Oversoul essence for all of the animal kingdom as there is for the human beings of the universe. This universal soul essence pervades the bodies of every living thing in the animal kingdom. Incidentally we may add that there is also a universal soul essence for every living thing in the vegetable and mineral kingdoms.

Unquestionably, the personality or character element of the animal soul passes through stages of evolution and development like that of the human. I mean by this that the soul character of a dog, for instance, will evolve and progress through various incarnations until it becomes a well-trained, well-educated, and highly intellectual character or personality. In other words, the soul personality of a fox terrier will reincarnate in the bodies of fox terriers from time to time and in this way evolve to a very intellectual character. The soul character of a fox terrier will continue to incarnate in the bodies of fox terriers until it has attained a certain degree of perfection and then will start a new cycle of incarnations in a larger or more highly developed animal body.

Judging the cycle from this point of view we would say that the soul personalities and characters of the animal kingdom pass through various incarnations in each species and then start a new cycle in the next higher or next progressive stage of animal development. A study of the intellect of animals on the part of specialists has revealed that there is a progressive stage of intellect in the animal kingdom. By some of these experts the horse is considered the most highly developed from an intellectual point of view; by others the dog is considered the most highly developed. The elephant also runs high in this line of progression. No attempt has ever been made to classify properly the various species of animals from such a point of view and the subject has not attracted the attention and serious study that it really warrants.

Theoretically it may be true that the animal soul begins its first cycle of earthly incarnations in the lowest or smallest or most inconsequential species. The size of the animal cannot be one of the factors in determining the intellectual progress; it is known, for instance, that among the insects the bee and ant show almost the same degree of evolved intelligence, although there is a great difference in the size of their bodies. There are many animals much smaller than the largest snakes which show an intelligence superior to the snakes, and an ability to outwit them in any contest of intellect. The rhinoceros with its huge body does not begin to have the intellect of many small animals.

Association with human beings is unquestionably one of the factors that enters into the progressive development of the character and personality of the soul of animals. Whether this special development of intellect on the part of such animals is due to special objective training which they have received at the hands of humans, or whether Nature has especially decreed that certain animals shall be more highly developed intellectually in order to serve man more efficiently, is a matter that remains to be determined through careful study.

For instance, those who have been devoting their time to this study for some years have not yet reached a conclusion as to whether in India and other lands the association of the elephant with humans, who have trained him to do very efficient work and render unusual service, has resulted in the development of a high degree of intellect in

the elephant or whether the cosmic conception of the soul personality in the elephant was originally decreed to be of a high stage in order that the elephant might serve man in many ways. The latter assumption seems to be the most universal opinion, and it will not minimize the effect that man's training has had upon the elephant's intelligence. It may truly be that the elephant was preordained to serve man as he does and is born with a high degree of intelligence in order to fulfill his special services and this higher intelligence has been added to and strengthened by training and association with human beings.

In regard to the structural anatomy and special physiological characteristics of certain animals, we know that they have been cosmically prepared and uniquely evolved to fill certain places in the scheme of things and to contend with certain conditions. The camel, for instance, is most uniquely qualified to contend with life upon desert land where water is scarce, and to battle against sandstorms and other conditions of life in the desert. Whether the animal has gradually evolved to such qualifications in a physiological sense or was originally created with them is outside of our present scope of study. Undoubtedly the continued struggle with certain conditions in desert life has tended to evolve in each successive generation of the camel a more efficiently equipped creature better prepared to meet such conditions. If this is true in the physiological sense it most certainly would be true in the intellectual, mental, or character sense.

The idea, however, that the soul personality of an animal, lower in development than that of the human being, can eventually evolve into a degree of perfection where it is prepared to enter the body of a human being as a sort of *primitive human soul personality* is an idea that had its origin in ancient beliefs and is not supported by any actual facts found by those who have spent their lifetimes in investigating the subject.

It is probably true that the physical body of man in its anatomical and physiological sense has passed through many stages of *material evolution*. There is no question about the fact that the earliest forms of primitive man were crude and far more homely and lacking in certain refinements than the human form of today. There is every possible

evidence to prove that man's physical form has grown in gradual stages from a more beast-like appearance to the present refined appearance. Despite the fact, however, that we can take the physical form of man and trace its development backwards to periods when the human arms were longer, or the feet larger, or the head and brain capacity less developed, with nostrils larger, the ears bigger, and the muscles stronger, there is no reason for the belief that we can ever continue this line of development backward to a point where the human form was no longer human, *but entirely beastly*. In other words, the fact that man in his primitive form was more or less animal-like does not warrant the belief that there were stages of development before this in which man was either of the monkey, gorilla, or any other animal species.

Man as a *distinct species* was created at the same time that all the other animal species were created. Regardless of the fact that in some period of man's development his body was far more beastly than it is now, he was at that time so far superior to any other species of the animal kingdom that he was unquestionably the highest type of animal creation and had certain faculties and physiological attributes as well as soul character that made him the essential *image of God*, and far above any other creature.

Man's environment and his mode of living have had some effect upon the physiological changes that have taken place in his body, but his evolving mentality and soul character, from one incarnation to another, are responsible for the changes in his environment and for the improvements that he has made. The soul personality of man has ever struggled to reach greater heights of development and perfection, and has always held before it the ideal of cosmic attunement and eventual oneness with God. This in itself would lift man gradually into a better environment which he would create for himself, and while these improved environments have had their reaction upon his physical condition, it is a fact that man has made his environment rather than the environment has made man.

The wearing of shoes has had a considerable effect upon the formation of human feet and is bound to have a still greater effect in future centuries, for the physical body will gradually adjust itself to

enforced physical conditions; but after all it is man who created the shoes and who is responsible, therefore, for the effect that shoes have had upon him. The same can be said of many other things in the life of man. The greatest effect upon man's physical being, however, has been the result of the development of the intellect and of the soul personality within.

What becomes of the soul character in the most highly developed animals is something that we cannot answer. Elimination of the belief that a highly developed animal soul personality can some day enter into the body of a savage man and begin its career as a human personality leaves us without any explanation or understanding of the future or ultimate purpose of the animal soul personality.

Sentiment, of course, has tended to make many believe that the soul of a pet animal, especially a highly intelligent dog which has manifested many traits of character in understanding human thought, may some day become the *primitive soul essence* of a human being. It is not an unkind or irreverential idea but wholly one that is unsupported by any evidence.

Let us take, for instance, the highly intelligent dog which accompanied Commander Byrd on his expedition to the South Pole. This dog, which had always been the leader of the group of other dogs that led the first sleigh into all of the unknown regions of Byrd's previous expeditions, revealed a high degree of intellect, human understanding, and intuition. When the dog became injured, and yet insisted upon facing the storms of the South Pole and appeared brokenhearted when he could not lead the expedition sleigh, it was found necessary to shoot him and bury his body in the ice of that barren part of the world in order that he would not starve or freeze to death, causing suffering which none of the men could bear to think about.

What is to become of this highly evolved dog character and personality? The men who loved that dog would like to think or believe that some day it will be born again and reach a higher state of development. This is possible, but nothing can warrant our belief that the development of this soul character will take place in the body of a human being, of even a most primitive form of development.

Everything that we know of the human soul indicates that it is a part of the divine Oversoul of the universe, which is the consciousness and divine essence of God; and that this consciousness and creative essence was established in the universe by God, who resides in the image of his own likeness as a definite species of the animal kingdom called man. This divine Oversoul, which provides the human soul characters and personalities throughout the universe, must always exist intact, since God created mankind and has never added to or subtracted from it through any of the evolved processes that are taking place in the lower manifestations of nature.

The next interesting point in connection with the human soul is in regard to those soul characters or personalities which were destined to enter human bodies at birth, but were unable to do so because of an interference with the life of the body. The question is often asked as to what takes place when a human body is born lifeless or it fails to reach its full degree of embryonic development.

It must be noted that a human soul character, or personality, does not begin to function in a human body until the first breath of life is breathed into the nostrils. The soul that is to enter an unborn body is known to hover over the expectant mother and to envelop both the mother and unborn child for some time preceding birth; and unquestionably some of the soul essence permeates every part of the mother and unborn child; but there is no functioning of this soul in the body of the little child until the child begins to breathe and is a *distinct entity* in a physiological and psychological sense. Throughout all of the mystical sacred writings of the past we find the thought that is expressed in the book of Genesis stated plainly and positively. The body of man is formed out of dust or elements of the earth, but does not become a living soul until the breath of life is breathed into its nostrils or taken into its body and it becomes living in consciousness and all of its functionings.

A soul, therefore, drawn from the Cosmic toward an unborn child envelops both the mother and body of the child awaiting birth. If the little body is born lifeless or fails to breathe, if it is prematurely born lifeless or is destroyed or injured in the early stages of its embryonic

development, the soul fails to enter the body in a functional sense. As soon as the little body is separated from the mother and is no longer vitalized but wholly lifeless, the waiting soul personality with its vital essence returns to the Cosmic from whence it came and there is no incarnation or earthly existence in the little body.

What effect this may have upon the soul character is not known and it is mere speculation to express even an opinion. If the little newborn body takes but a few breaths, or the organs are conscious of the bodily functions for a short time, even though that be but an hour or two, the soul has entered the little body and has started its earthly career. If transition follows thereafter, it is similar to the transition that occurs at any time during the earthly life of any individual. This is all that can be said on this subject with positive knowledge.

The belief that any destruction or injury to the embryonic body of the unborn child is an injury to the soul is merely a sentimental thought with a rightful reverential attitude of mind. Unquestionably the destruction of the human body or embryo in any stage of its existence from conception to maturity is a sin, since it is a sin against the process of nature and, therefore, a sin against the plans of God. But it is a mistaken idea to believe that any destruction or injury can have any effect upon the soul of the child, for even after its birth no accident or injury to the body of a human being can injure or harm the divine, immortal essence and consciousness of the soul.

Chapter 17

RECOLLECTIONS OF THE PAST

ONE OF THE arguments most often used in an attempt to deny the possibility of reincarnation is this: If we have lived once before and our memory retains any knowledge of that existence, why is it that we do not recall any event of our previous lives?

You will note that this question, no matter how it may be worded, always includes the positive statement or the positive intimation that no one ever recalls anything of his previous incarnations. The question is really not a question but a statement and precludes any argument, since it assumes right from the very start that no one does recall anything of the past.

Such an attitude is absolutely unfair for two reasons. In the first place, no one has a right to assume because he or she has no distinct recollection of a previous existence that no one else has; and, second, it is not right to assume that the mind does not occasionally reveal to us real pictures of the past which we do not understand or appreciate as having any connection with the past.

To illustrate my point, I will refer to just one very recent and fortunate conversation. A businessman of conservative and orthodox religious viewpoints, wholly out of sympathy with the doctrine of reincarnation, called upon me in regard to my plans for a trip to Egypt and Palestine with a number of my co-workers. He frankly admitted that while he was not interested in the researches we intended to make or any of the

ceremonies that we would attend while in Egypt, he nevertheless had a deep-rooted desire to go to these foreign lands but had never wanted to go alone. Now that a few persons in his city, whom he knew fairly well, were going with us, he wished to go along with them and enjoy their companionship on such a trip. Knowing from previous remarks made by him that he was out of sympathy with many of the thoughts expressed in this book, I asked him bluntly why he wanted to go to Egypt and Palestine rather than on any other tour. His first answer was this: "Because I have always felt a strange fascination or a peculiar attraction toward some part of Egypt or the Holy Land"

I tried to analyze his statement and find out what part of Egypt, or what things in Egypt and the Holy Land were responsible for the attraction he felt. His answers were always indefinite and vague until I finally drew from him the following: "Well, ever since I was a young man, I have felt that certain pictures I have seen of Egypt or Palestine were more interesting to me than pictures of any other part of the world. I do not mean pictures of the busy streets of Cairo, but of some of the outlying, native villages. I have always felt that I would find something there or discover something in such a locality that would be of intense interest and perhaps personal profit to me in some way"

Upon further investigation, he reluctantly admitted that some of the scenes he had seen of native villages and people with native costumes seemed "somewhat" familiar to him, and he further admitted that this fact had led him to read many different books on the history and customs of Egypt and the Holy Land. And, that in some passages describing incidents of a few centuries ago, he seemed to feel a familiarity, or a *sympathetic understanding*, as he put it, which only increased his attraction toward those countries.

I could not help smiling when he made these admissions with such reluctance, for I knew at once precisely what he was experiencing, and I also knew that it was useless at the present time to point out to him why certain incidents in history relating to certain localities and peoples and certain scenes and places connected therewith were "somewhat" familiar to him. I know that if I had pressed my questioning far enough, he would have admitted that some of these scenes were as familiar to

him as though they had been seen by him sometime in a dream. This would have aroused his suspicion, however, and caused him to feel that I was trapping him into admissions which he did not care to make, and so I dropped the argument.

This experience on the part of this man is typical of that which can be found in the life of the average human being I believe that in my lifetime I have questioned perhaps ten thousand people in regard to so-called recollections of the past. I have not called these things by that term, but have asked them frankly this question: Do you ever find in your "moments of meditation, contemplation, or revery, certain scenes of places, people, buildings, or homes, rising in your mind like pictures or scenes that were familiar to you?"

If this question is asked before anything is said about the subject of reincarnation, the average person one meets in the average walks of life will frankly admit that such is true in his case and that he has often wondered about it, and has really been puzzled about it. If the person to whom the question is put is one who has traveled much, especially in foreign lands, he will generally add that, "When I was traveling here or there, I was surprised suddenly to come upon a scene in front of a building (park, public square, bridge, or other picturesque setting) that I found to be precisely a duplicate of what I had seen in my mind many times, but which I had never before seen in real life"

When these persons say that they have come upon scenes which they had never seen before in real life, they always mean that they had never seen them in *this life* or in *this incarnation*, and they will frankly tell you that it was the first time that they had ever traveled or had been anywhere near the familiar scenes in their present earthly existence. If, then, you open the subject of reincarnation and ask them if it is not possible that the familiarity with such scenes maybe due to having lived near them in a previous incarnation, you find some who are broad enough in their thinking to realize the possibility of this and admit that it may be true, whereas others will instantly tell you that since they do not *believe* in reincarnation, they cannot look upon these things as an indication of having lived once before.

This means that we must allow such persons to offer another theoretical explanation of why and how they have scenes coming before their consciousness with a certain degree of familiarity but which they have never seen in actuality. The explanations thus offered are often amusing-and, of course, associated with extreme supernatural principles or impossible mental laws. In other words, the explanations do not explain at all. And yet these persons will seriously assure you that they do not have any recollections of a previous existence and, therefore, they certainly could not have lived at some other time.

On the other hand, nearly every person who has read of historical events in other lands at other times than at present has found himself strangely attuned with the history of certain periods or of certain places, and is attracted more to the history of these places than to other places. Sometimes this interest is in relation to places in America or even in the same state where the person now lives, or often the places are located a few hundreds, a few thousand, or many thousands of miles away.

Then there are many human beings who in moments of reflection, relaxation, or revery find themselves slipping backward, so to speak, to a rapid panorama of scenes and incidents which seem to struggle to come up out of the fog and mist of past recollections, but cannot quite reveal themselves in all of the clearness and distinction that makes for perfect recognition. Persons who have experienced this are often puzzled, not only by the peculiar pictures that do come close to the borderline of clear perception, but by the multiplicity of scenes that seem to flash so rapidly in the background of the consciousness. There are also many who have had certain definite impressions come to them from the depths of their consciousness, which seem to be related to their own lives in a time and period long past. These persons, too, are puzzled over these things, but seldom associate them with anything like a past existence.

Now, just what should one expect in regard to the recollection of events in a past life? Is it logical for the average human being to expect that the events of a past life should be registered in a memory so close to the borderline of our present consciousness that we can easily

reach across or pierce through the veil that separates the past from the present and bring these pictures into living reality? Assuming that the memory we have now is the same memory that we have had in a previous life, and assuming that in its storehouse vaults it retains all of the pictures and impressions registered upon it throughout all of our lives, is it logical to suppose that it should be an easy and simple thing to reach into those vaults and unlock the records *at will* and withdraw clear and distinct pictures relating to any period of time? If you believe that this is logical, then it is reasonable for me to ask why it is not possible for you to reach right into your storehouse of memory now and withdraw all the scenes, all the pictures, relating to the events of your life in the present incarnation during your life in the present incarnation during your second, third, and fourth years of childhood. Can you do this?

You may answer and tell me that you do recall certain incidents of your childhood and youth very distinctly. At best, you may tell me of ten incidents clearly registered in your mind and easily recalled, which relate to your earliest years. But, think of the millions of other impressions and pictures that are locked in that memory and which you cannot recall. The few that you speak of constitute such a small fraction, and such a small fragment, that it is hardly worth speaking about as an illustration of recollection.

Let us examine the few that you do recall, and let us see how clear and distinct they are. Do you remember the first time you were allowed to play on the street or to play with your neighborhood companions? You may answer by picking out one incident connected with this important event in your life. But, if we analyze that incident, we find, first of all, that there is some unusual feature connected with it, which not only impressed you very profoundly at the time, but impressed your parents or your relatives, or your companions, and caused them to speak about it often. The event may have occurred in your second year, or your fourth year, but you will find that it was an event that was probably discussed and spoken about in your household for several years thereafter, and was not only registered in your mind and memory a number of times, but through repetition of description and the telling about it, it was carried along into your fifth or sixth year of life.

Then perhaps many times during your eighth or ninth year, you easily recalled that event and spoke about it, and heard others speak about it, and so it was once again brought up out of the musty old records of the past into the present and was again registered in your eighth or ninth year, even though it had originally occurred in the second, third, or fourth year. Now, perhaps during your twelfth year, it was recalled again by some similar event or some family discussion, and once more the picture and incident that was becoming slightly vague and preparing to fade into the indefiniteness of the past was revived and recolored and strengthened in its details and registered once more in your twelfth year.

This may have happened so many times in your life that this particular incident out of millions of others has been refreshed from time to time and brought from the *past* into the *now*, until when you want to recall it *now*, you only have to reach back to the last time that you registered the incident to revive it, and bring it into close examination.

You will admit that such an incident is not typical of all the incidents of your past. To prove this, you can take any one of the incidents of your childhood, which you easily recall, and after having described it and painted it in all of its fullness of reality, ask yourself this question: What did I do the next day after this incident, or what did I do that same afternoon or evening? Certainly, if you reach into your past easily and quickly and get in contact with a certain day or hour of your past life as a child, you should be able to move the finger of recollection along the unwritten records to the next few lines and recall what happened a few hours after the incident you relate. Can you do that?

Usually, the few incidents of childhood that are easily recalled are not only those which have been revived from time to time, as stated above, but they are widely separated from each other in nature and in period of time, and the great gaps in between these events remain absolutely unrecalled. Does this not tend to prove that although a perfect record of all events in the past is retained in the mind, the matter of recollection is not so easy, and it is not given to man to have free access to all of these impressions?

If you ask why it is that it is not as easy to recall all of the events of a certain day or month twenty-five years ago as it is to recall the events of yesterday or last week, let me point out to you the psychological fact that our present consciousness of ourselves is always in the nature of a central point in a large picture, and this picture contains the events of the last few days. As we go backward, past the few recent days, the picture extends itself into vagueness and indefiniteness. Today we are conscious not only of ourselves and our immediate surroundings, but we are conscious of the things we did this morning and of the plans we made for this afternoon, tonight, and tomorrow. We are right now in the center of a whirling mass of impressions and this gives us consciousness of ourselves and our relationship to persons and places. But man would soon lose saneness and soundness of mind and become a hopeless maniac if there were in the borderline of his present consciousness the living, vibrating impressions of all the things that had occurred in his past life or since childhood.

As each day passes, the pictures and impressions that were alive and active in the consciousness for a while are slowly taken from it and placed away in the records of the memory. It is like the librarian in a large library who makes it his business each morning when he finds new copies of new issues of magazines and periodicals on his desk to go into the reading room of the library and deposit these new issues and collect those which are becoming old and place them away in the reference files to be called for on demand. If the old ones were allowed to accumulate while the new ones were constantly added, there would soon be such a litter of publications on the reading table as to make it impossible to be aware of which were new and which were old.

So we find that while the records of the past are stored away indelibly, they can only be recalled by association of ideas or by some special process which enables us to pick one impression or one scene at a time from the past records and bring it into the now. Sometimes, through the association of ideas or the similarity of scenes and events, a picture or impression of the past is brought into present realization. The older that impression is, or the more ancient the picture, the more vague and indefinite it is, until some of these are like fantastic sketches on a transparent surface through which we can see so clearly as to make

the picture almost invisible. If this is true regarding events which have occurred within our present lives and which are not more than 30, 40, or 50 years of age, think of how indefinite must be the impressions stored away in the memory and which are 100 or 200 years old.

According to the cycles of reincarnation, the average man or woman of today would have ended the last previous incarnation on earth about 100 to 130 years ago. That means that one would have to reach back at least 130 years in order to have impressions of the last years of that previous existence. If 30 or 40 years will soften pictures and impressions and cover them with a mystic veil of indefiniteness, 100 years would surely make them very vague and very faint, indeed. Only the most impressive, the most psychological, and important of such ancient pictures and impressions, perhaps written and printed in blood or pain, suffering, trial, and anxiety, would be so indelibly impressed as to retain brilliancy at the present time.

Is it any wonder, then, that in our reveries and meditation, we have but faint pictures and impressions coming to us like familiar scenes, and these are never frivolous things or connected with mere transitory conditions. Impressions of a city or of a building, or of a race of people, of a park, or a bridge, or something of this kind may be the registered pictures that accumulated in the memory through years of serious contact with them and are, therefore, more indelibly impressed than the mere passing events of one day or one hour.

However, there are those human beings who have at times found many definite recollections in connection with certain events that were of more than ordinary importance in their past lives. On one of my trips through Europe a companion traveler seeking for a certain castle that he had seen in pictures and which seemed familiar, suddenly came upon it when he did not expect to do so. It was late in the evening and by artificial light he saw only the remnants of an old iron gateway in a huge wall. This had been no part of the picture he had in his mind. But, as he stood before it with me, wondering where the gateway led to, he suddenly recalled or felt a degree of familiarity with that opening in the wall. Turning to me, he said: If there is another small door. "way

inside of the enclosure of this wall whereby a person can walk down a few steps and pass under the wall, then I know where I am”

With our flashlights and lantern, we went inside the old and abandoned enclosure and found, fifty feet away, another opening in the wall closed with remnants of wood and much shrubbery, and which led down twelve steps to a tunnel under the wall. And this in turn led to an underground chamber which my companion perfectly described to me before we entered it. Returning again to the highway and our hotel, we waited until daybreak and then found in the center of this walled enclosure the old building that he had described to me so often in our interviews in America, and for which he had been searching in Europe. The interior of this great building was precisely as he had described it. In fact, we had some trouble in having a doorway opened to another underground passageway and chamber, which my companion described accurately before we entered it, and which the guide and authorities of the village claimed had not been opened for one hundred years or more because of its dangerous condition and the difficulty in reaching it.

My companion claimed that he had either lived or labored in and around this place, and that his duties took him especially into these underground places, which were probably wine cellars in his time. I cite this illustration to show that one picture, one impression, one thought, may associate itself with another and serve as a key to unlock a number of related pictures and impressions. The sight of that old gate in the wall recalled to this man's mind the fact that there was another archway in the wall leading to an underground room. This he had never recalled in all of his other talks about a castle and its many rooms. Very often, the sight of one part of a building or part of a city will instantly recall from memory other related pictures and impressions which seem so familiar to us that we feel we could write about them, paint them, and reach out and touch them.

Whence come these impressions, these pictures?—not from our present lifetime experience, surely, for most of these things relate to distant and faraway places which we have not contacted in the present life.

Then, we have the cases that are quite frequent where a child or an adult suffering under some unusual mental or psychological condition is placed in a state where the storehouse of the memory suddenly unlocks itself and reveals amass of its impressions and pictures in living brilliancy and without restraint. One case of this kind was that of a young girl in a hospital in Montreal, who could speak only French and knew nothing of any foreign languages and was not well educated. This child was in the hospital for an operation against which she protested and fought with all the strength in her little body. Finally, as the last moments approached and the doctors were ready to take her into the operating room, she made one more struggle to battle with them. In her wild fury and frenzy, she threw herself into a hysterical state in which she screamed and laughed and wept. Unable to control her, they were about to strap her to a chair, when her fury again burst forth in the wildest talk that the doctors and nurses had ever heard.

This time the girl talked perfect English and told them that she had had this operation performed in a previous life, when she was thirty-five years of age, and had suffered so much from it that she refused to have it done again. She gave her name, her family name, the name of the town in which she had lived, and many other incidents of her life, and then suddenly relapsed again into quietness and could not remember later what she had said or that she had expressed such ideas. The use of perfect English and the strangeness of the facts she related induced the authorities to make an investigation and this was continued by several organizations and newspaper men. It was found in the town where she claimed to have lived and passed away that a woman of her age and name had lived there some eighty years previously and had passed away, and even the grave and tombstone were located, verifying the name and the date.

Only recently, in India, a young girl through illness entered into a peculiar psychic state in which she claimed that she recalled her previous life and knew where her previous relatives could be located. Eminent investigators accompanied the young child to the city she mentioned and which she had never seen in her present life. She led the investigators along a certain road previously described, to a certain building which she had also previously described, and there, beneath

the flooring of one of the rooms, in a condition and position as she had predicted, they found an old box containing records which were identical with those that she had mentioned to them. These records proved the identity of the girl and verified her story.

Hundreds of such incidents as these have been recorded in the past and verified by every investigator who has looked into the matter. A complete list of these cases would make interesting reading, but would make a book of this kind too cumbersome. A denial of these facts is merely a denial of published knowledge beyond dispute.

Each one of us has in his memory, in the closed and sealed books of the past, a complete record of his previous experiences, impressions, and activities. These serve us at times as lessons learned and experiences to be used as standards to guide us in our present living. But because we cannot easily recall them, and cannot drag them out into the open as we would bring forth the things of yesterday, is no proof that they are not there, for when occasion requires, or when they will serve some purpose, they are available; and every person who has had considerable experience in the practice of certain psychological, metaphysical, and mystical laws has brought forth sufficient impressions from the past to prove at least one or two of his many past incarnations

Chapter 18

THE FEAR OF DEATH

PERHAPS ONE OF the most beautiful and satisfying results of understanding the doctrines of reincarnation is the complete removal from our consciousness of any fear of so-called death.

I have known in my lifetime very intimately and among my closest kin, those who have suffered intensely in the latter part of their lives through this unexpressed though potent fear of inevitable transition. Among these were several who were unquestionably sincere and devoted Christians, and who found their only happiness in the contemplation of transition through believing that living the Christian life would save them from the torments of hell. But they found no happiness or joy in the prospect of a long period of unconscious existence in an unknown ethereal realm awaiting an ultimate Judgment Day.

The average Christian believes that at the time of transition his soul enters unknown realms to pass through unknown experiences, and then dwells in oblivion for an eternal length of time awaiting a Judgment Day before the rewards of goodness or right living can be enjoyed. He shudders, however, at the thought of this eternal sleep and loss of consciousness. You may say what you please, and sing the songs of your church rejoicing in the fact that after you have been found good and worthy you will dwell in the Spirit of God; but the fact remains that in the privacy of your own thoughts you are like millions of others who do not find the prospect of any happiness or pleasure in waiting for some Judgment Day so far distant that a seemingly endless period of time must be spent in total unconsciousness and oblivion.

Two factors enter into the cause of the usual fear of transition, as found in the hearts and minds of the average persons of the Western world. The first is the belief that so-called death may come upon them suddenly and cut short their careers, ambitions, and desires for achievement, and deprive them of their success in life. The businessman who has just entered into the working out of his life's ambitions, and is now venturing upon the realization of all of his hopes and plans, realizing that time is required to see the fulfillment of all that he has created, is always depressed and made unhappy by the thought of the grim figure of death stepping up to him and ending it all for all time. The young man or young woman just entering into the fullness of life and beginning to sense some happiness as a reward for all of the past waiting, hoping, praying, and suffering, fears death may come at any time and end it all.

Is there anything of a hopeful nature which these persons can find in a Western world orthodoxy? All that they can learn is that after the sudden closing of this life, they will be plunged into a place of purging for the cleansing of their sinful bodies and minds—or, if this does not happen, they will go into an eternal, unconscious sleep that is more dark and more void than anything known in this life, and they will remain in this state for an endless length of time, perhaps millions and billions of years, and then suddenly be brought before the Great Judge and either given eternal rewards or condemned to a place of punishment and purging.

Is there anything cheerful about this aspect, or this picture, of the future? Is there anything cheerful in the idea that at the end of this life, when transition comes, we are going to be held accountable for the sins we have inherited from Adam and Eve and our forebears, and for the sins that we have committed in ignorance and through lack of understanding, and that we shall suffer for these things without being given any opportunity to undo the wrongs, wipe away the sins, and live a life of goodness?

If our transition means the end of all of our earthly existence and that what we are at the time of that transition constitutes the picture or the record by which we are to be eternally judged, then transition is

the beginning of a period of suffering, sorrow, and regret. Our inner nature cries aloud at the injustice of this. Even man's poorly invented and imperfectly conceived laws are more fair than this, for no man is held accountable for the sins of others, and his inability to know the laws and redeem himself is given consideration.

An understanding of the doctrines of reincarnation changes the entire viewpoint of life. First of all, it enables us to realize that the greatest sins which we have inherited are those which we have committed ourselves and for which we alone are responsible. Furthermore, it enables us to understand that the sins which we commit here and now through ignorance or lack of understanding may be compensated for and the slate wiped clean and a new start given, whereby we may live a joyful life and try once more to make the goal with a clean record. It helps us to understand the purposes of life and to find the benefits that lie in all of our trials and tribulations. We can understand why there may be a profitable lesson in the suffering we bring upon ourselves, if we are to have another opportunity to live again and through conscious memory of the present mistakes avoid them in the future. We can look forward to the time of inevitable transition without fear and even with hope if we know that it is not the end of all of our experiences, but merely the stopping of one journey and the beginning of another.

Through an understanding of the doctrines of reincarnation we are prepared to go ahead and create and build and evolve our plans and start them into action, realizing that if whatever we are doing is the real mission of our life, we should put all of our effort into it and do it well without any fear that our mission may be cut short and our desires unfulfilled. If transition comes before we have completed the great work we have started here, we know that if it is truly our great mission in life, we will come back and take it up again and carry it on to a grand fulfillment.

The doctrines of reincarnation teach us that so-called death is not the beginning of self-annihilation, or of a long and endless sleep, or of an eternal period of oblivion, but merely a change of earthly consciousness which will in nowise affect the inner consciousness or the consciousness of self, and that instead of a long dark sleep we shall

be alive and among the living in the cosmic realm improving ourselves consciously and preparing for a new opportunity, a new period, of earthly existence and effort. Such a knowledge of the true laws enables us to be prepared for the future regardless of transition, and it makes us realize that there is nothing in transition to be feared and nothing to be regretted if we live in accordance with the highest ideals of the Cosmic.

The doctrines of reincarnation assure us that if we follow the Great Master, living the true Christian spirit, or follow the highest teachings of our religion whatever it may be, we will earn certain rewards that will strengthen us and prepare us for another life in which we can earn additional rewards and reach a higher state of development. Through these continued existences on earth we can gradually attain that perfection and that degree of Christian spirit in our consciousness that will make us ready to stand before the Great Judge and receive the Highest Benediction.

The person who has accepted the doctrines of reincarnation knows truly that there is no death. He is not one who sings the songs and proclaims "there is no death " and yet fears it in his heart, fighting against the decrees of nature when the time comes for the casting off of the old and worn-out body and the taking on of a new life. He is cheerful and happy in the knowledge that as he sows today, so shall he reap; that he will suffer for the evil he has done, but is given every opportunity to compensate and to redeem himself and live again in accordance with the highest ideals. Wherever we find one who understands these doctrines, there we will find one who is cheerful, happy, successful, godlike, kind, tolerant, and considerate. But more than anything else you will find that such a person has no fear of the future, nor fear of transition, and no dread of so-called death.

Chapter 19

QUESTIONS AND ANSWERS

IT MAY BE more interesting to cover the usual objections and questions relating to the doctrines of reincarnation by selecting the principal ones from a mass of correspondence and putting the answers with them.

Question: Why is it that we do not hear more about reincarnation from eminent or well-known scientists and clergymen? Does this not indicate that such persons do not approve of the doctrines?

Answer: Clergymen or others who are the accepted representatives of religious creeds or movements which do not include the doctrines of reincarnation can hardly be expected to promote such doctrines or endorse them, regardless of what their personal opinions may be. On the other hand, many eminent clergymen and scientists have endorsed the principles of the doctrines of reincarnation. Scientists, especially, have often made public statements in this regard, and so have many prominent and successful businessmen. Typical of both of these classes are Arthur Conan Doyle and Henry Ford. We must remember, however, that few people wear their religions on their sleeves and very few, indeed, desire to proclaim their personal religious or philosophical beliefs; the mere silence on the part of any person in regard to such beliefs in nowise indicates the true thoughts that may be in his mind. If you can succeed in having prominent persons tell you in confidence their personal opinions and beliefs you may be surprised at their comments.

Question: Why do you not publish a list of all of the prominent people or well-known thinkers who have endorsed the doctrines of reincarnation?

Answer: Simply because such a list would be unfair unless it were nearly complete, and a complete list would make an entire volume of a large size, which few would care to read. Secondly, the doctrines of reincarnation are not offered or presented to anyone as something which should be accepted because of eminent endorsement. Many of the most notable fallacies and unsound theories which have had popular acceptance were at one time offered to the public solely through eminent scientific or ecclesiastical endorsement. Thousands have been burned at the stake or slaughtered in their homes because they refused to accept doctrines or dogmas which were eminently endorsed and promoted by the representatives of those who endorsed them. Yet, these very principles and dogmas were later found to be untrue.

Millions of persons in the past have accepted on faith the ideas and beliefs of others only to find that they were just as truly misled by such eminent endorsement as by their own judgment. The doctrines of reincarnation have not spread throughout the world to become important guides in the lives of millions through endorsement, but through the commonsense, logical reasoning on the part of the men and women who have given their own thoughts to the mysteries of life and to the analyzing of the doctrines. If your own good judgment cannot convince you of the soundness of the doctrines of reincarnation, you should not accept them on the strength of someone else's faith in them or someone else's endorsement of them.

Question: What becomes of the idea, or belief, in the resurrection of the body, if the doctrines of reincarnation are true?

Answer: If it is true that there will come a day when all of the physical bodies in dissolution in all parts of the world will have their elements drawn together and the dust of their bones restored and the cells of the flesh reestablished into physical forms again and arise

from the graves to ascend into the heavens, there is nothing in the doctrines of reincarnation to refute it. The personality or soul of a person may reincarnate a thousand times and still dwell eventually in heaven and await the resurrection of the last physical body possessed by it. Whatever is true will be made manifest, and if the doctrines of reincarnation are true they cannot be contrary to any other doctrines that are true.

Question: What about twins? If two bodies are born at practically the same minute, are there two segments of the soul or two personalities in the bodies, or just one?

Answer: Physiologically and biologically the bodies of some twins are “identical ” and had their origin in one conception. The same soul personality that was intended for one body would then be divided between the two, and would reside in the two bodies, and manifest through them throughout life. This is why some twins have the same inner natures, the same tendencies, talents, and emotional characteristics even when the outer, physical countenance is slightly different. When transition comes, the soul in the bodies of such twins returns to the Cosmic as one soul personality and may or may not enter the bodies of twins again. There are records of many a person who had found in the peculiar complex nature of his personality, and in the psychic functioning of his soul, that in a previous incarnation his soul personality had been divided between two bodies of twins and had accumulated many strange experiences in life.

When one of the twins passes through transition ahead of the other, the soul with its personality of the one that has passed on unites with the one still living. The continued contact between the two inner selves of the twins, whereby each is constantly conscious of the thoughts and emotions of the other, and often senses even injuries to the physical body of the other, or suffers similar disorders and annoyances, proves how closely related the soul personality in each of them actually is.

Question: What effect has suicide on the evolution of the soul?

Answer: The willful interference with any of nature’s laws creates a karmic condition which the personality of the individual must adjust

through compensation. The willful and sudden ending of human life with the arbitrary separation of the soul from the body plunges the soul personality into an abyss of darkness for many days and weeks, in which condition the personality suffers intensely and is "earthbound" for a long period. The regret for the act is keenly realized and felt by the personality throughout its entire cosmic existence, and its reincarnation is always in a body which will have to suffer certain trials and tribulations of life until it learns the error of what it has done and makes proper compensation. The idea that suicide will bring an end to any of our earthly sufferings, trials, and tribulations is the most absurd idea that man has ever held. No matter how intense may be our earthly sufferings, or how despondent we maybe, all of this is nothing as compared with the suffering that is immediately realized after transition through suicide.

Question: Since Jesus did not definitely proclaim his belief in reincarnation, and my church does not preach it, I cannot believe that the doctrines are true. Is not *the old religion* of the Christian church good enough for me?

Answer: What do you mean by the old religion? The Christian religion has been evolving and passing through stages of modification ever since Jesus first proclaimed it to his disciples. Many of the things which you hear preached in your church today, and which you have accepted during your lifetime, were unheard of and unknown in the Christian religion some centuries ago. The Christian religion is a living, evolving guide in men's lives, and it evolves and keeps alive through man's continued elaboration of his interpretation and understanding of that which Jesus taught. There are many things which Jesus taught his disciples which are not preached in the Christian religion because they would not apply and could not apply to our modern ways of living, and there are many things in the Christian doctrines of today which were not expounded by Jesus, nor contained in the Christian teachings, until many centuries after the ascension of Jesus. There are, undoubtedly, many principles and doctrines of your religion acceptable to you today which your great grandparents would have criticized and would have said were modernistic, man-made, and unwarranted.

You are mistaken when you think that Jesus did not show any belief in or acceptance of the doctrines of reincarnation. Your minister, or someone else, may tell you that he did not, but if you will read certain chapters of this book again and read your Bible carefully, you will find that Jesus did admit the soundness of the doctrines of reincarnation. However, if your present religion is perfectly satisfactory to you, and you can find joy and peace in knowing and accepting only some of the laws of life while you ignore and turn your back upon others which are equally important, then this is your privilege and you should not attempt to force yourself to change your attitude.

Question: I think it is horrifying to believe that the soul must go through all of these periods of earthly experiences, suffering, and trials. Since the soul is divine and a part of the God essence, why should it require earthly experiences to help it reach perfection?

Answer: The fact of the matter is that the soul is here in the physical body in contact with earthly trials and tribulations, suffering an earthly existence, through the decree of God. We cannot get around the fact that God has ordained this. It may be horrifying for you to think that a part of God's consciousness is here on the earth, associated with sordid things, but as a matter of course this fact is true, and God alone is responsible for it. That being so, why should it appear horrifying that the soul and personality should have more than one opportunity to exist on earth, and perhaps have several opportunities to exist here in better circumstances and under better conditions, with more happiness and joy than maybe found in just one lifetime?

You seem to assume that the doctrines of reincarnation are responsible for the soul of man being imprisoned in a physical body here on earth. This is not true. The doctrines of reincarnation simply attempt to explain why this divine fact was decreed by God. If you take the doctrines of reincarnation and destroy them and wipe them out of existence, you still have to explain why the consciousness or soul of God was extended into a physical body to reside here on earth and go through trials and tribulations which the soul of God would not require. If you can answer that question with a more logical doctrine than that of reincarnation, you will solve the greatest problem that has confronted thinking men and women since the dawn of civilization.

But remember the answer given by the average clergyman that it is “the will of God and not for us to understand,” is not an answer but an evasion. We may not be able to understand all about it but we certainly understand enough to know that the divine consciousness of God was purposely projected into the physical body here on earth, and while here this divine soul of God is in contact with sorrowful and perplexing conditions. To say that we cannot understand does not wipe out of our minds the question, and does not answer your own question. A better answer must be found, and the only better one that has ever been found is in the doctrines presented in this book.

Question: Do you not realize that your doctrines of reincarnation do away with hell and purgatory as established in the Christian religion?

Answer: I know this one fact, that the Christian religion did not originally contain any dogmas about hell and purgatory. I challenge you to find any place in the New Testament where Jesus has spoken about purgatory or described hell in the manner in which it is presented today in the Christian religion. Therefore, please do not try to attribute hell and purgatory to Jesus, regardless of what your clergyman may say Both of these conditions or places are additions to the Christian doctrines made long after the life of Jesus. But, again, I say if they are true, then no other truth can destroy them. If there is a hell or purgatory into which the soul and personalities of man must pass or dwell after transition, it would not in any way interfere with the rebirth of the soul and personality after these had been purged or cleansed in hell or purgatory.

Question: Why should we bother about the subject of reincarnation at all? Is not life just as happy without knowing about all this?

Answer: Very likely life is just as happy for some without any knowledge as it is for those who have a great amount of knowledge. Why do you read the Bible, or go to church, or study anything about God’s laws? You will probably live just as long without such knowledge but you certainly will not be as happy. While you are in perfect health and seemingly far from the day of transition you may safely say that you have no interest in what happens after your transition, but there may come a day when you will become profoundly interested

in knowing something about the future and when you will find great consolation and peace in any knowledge regarding the hereafter. Fortunately, the larger part of the world finds its joy and happiness in knowledge, and the more knowledge and the greater understanding of life and its principles, the more happiness and contentment. The more that anyone knows about the real principles of his existence here and hereafter, the more happy and successful and perfect the life of that person will be.

Question: I do not like the thought of coming back again in some unknown body and having to live again through all the suffering of this life. I would rather dwell in eternal peace when this life is over.

Answer: It is not a matter of what we would like, but of what is the law. When you are born again you will come into this earthly life just as you did in your present incarnation, knowing nothing about your past existence and filled with the joy and happiness of being alive and among the living. If you are one of the unusual persons who find no joy at all in life, and find nothing in life to make it worthwhile, you are of the type that has failed to bring joy and happiness into the lives of others and you are reaping only what you have sown. You will live again whether you want to or not, and you will continue to be reborn on this earth until you make the utmost of your life and find real joy and happiness in being among the living and in accomplishing much for others. Do not think that by ignoring the laws of reincarnation and claiming that you do not believe in them that you will prevent their operation or manifestation in your life. Therefore, so long as you will be born again and will live again, is it not better that you should know something about it and prepare yourself for it?

Question: What determines the nature of the soul for any specific body that is to be born?

Answer: The determining factor is Karma. A personality awaiting rebirth which has certain karmic compensations to make or certain karmic adjustments to make will be cosmically directed toward an unborn body, which, by the nature of its environment, family associations, locality, nationality, etc, will provide the opportunities for

the soul personality to carry on with its Karma. A soul personality that is awaiting rebirth and which has in its make-up the talents and abilities for music or art because of previous experience in these lines, will be directed toward an unborn body that will provide the opportunities for the expression of these talents and abilities.

Let us say, for instance, that there is a soul personality in the Cosmic awaiting rebirth which should continue its musical career and become more famous or more perfect in music. It will be directed toward an unborn body, the parents of which will be inclined by their own desires and tastes to give the child further musical education and provide the opportunities for its development along this line. If, for instance, an expectant mother desires to have a child who will be famous as a musician, and throughout the prenatal period concentrates her mind upon attracting to her unborn child the soul of a musician, and the father likewise agrees with the wife that the child that comes to them will be given every opportunity to have a musical career, the Cosmic will direct toward the unborn body the soul personality of one inclined toward or partially perfected in music.

The same would be true of any other special talent or abilities. In determining into which body a soul should enter, the Cosmic takes into consideration what the soul personality will accomplish in its next incarnation and also what certain unborn bodies may provide in the way of opportunities for these karmic conditions to manifest. An unborn body about to be born in an environment of poverty, ignorance, and physical as well as material handicaps, will have directed toward it the soul personality that requires these earthly conditions, in order to learn certain lessons and to overcome and master certain conditions. The prenatal influences of the parents, and especially of the mother, have a very definite effect with the Cosmic in determining which personality or soul essence shall enter the body of the unborn.

Question: Has the soul any free choice in the selection of the physical vehicle for its next earthly expression?

Answer: The soul personality dwelling in the Cosmic awaiting rebirth does not have any free choice in the selection of the body into which it is to be incarnated. It may be attracted toward certain unborn

bodies by a previous relationship, a sympathetic understanding, or some other sentimental or psychic condition, but unless this attraction fits in with the cosmic scheme, such an attraction will not decide the matter at all. The greatest influence outside of the Cosmic Mind is in the influence of parents and especially that of the mother. Parents who purposely conceive of a child with the intention of providing a vehicle for a beautiful, spiritual soul, in order that a great character and personality may be incarnated on earth and accomplish great things, will undoubtedly attract to the unborn body the very kind of soul personality they have in mind.

The more holy and sacred is the relationship of human conception and the higher the ideals held by the parents for the future of the unborn body, and the more definite their visualization of the type of character they desire in the child, the more surely will the Cosmic attend to the fulfillment of their wishes. Considering that the Cosmic at all times possesses in its Oversoul thousands upon thousands of personalities awaiting rebirth, each of a distinctly different type with a distinctly different karmic future and distinctly different tendencies and abilities, it is easy to understand how the Cosmic can direct toward any unborn body the type and character of personality that the parents may desire.

Question: What effect upon the future child have the destructive thoughts of a mother or father who does not want a child and tries to prevent its birth?

Answer: In such a case we would have a situation the very reverse of that stated above. When a mother is determined not to have a child, and from the moment of conception attempts to destroy the embryo or prevent the development and birth of the body, her mind is filled with two strong emotions. First, that of hatred and enmity toward the body that is being created and the body that is coming, and, secondly, the thought of murder and destruction. She will attract to the unborn body the soul personality that must fulfill certain karmic conditions of its own and at the same time assist in teaching the parents the error of their thoughts. Therefore, a personality that is of an unsympathetic and unkindly type, given to destructive acts, may be directed toward

this unborn body, and during this child's adolescence the parents will realize the error of their thinking and will appreciate the fact that they have reaped as they have sown, while the child itself will grow into manhood and have an opportunity of purging itself of the evil tendencies it has and be prepared for a better and more noble birth in the next incarnation.

Question: What effect does the education and social position of parents have upon the selection of a soul personality for their unborn child?

Answer: Parents who are in good social position and well educated will have directed toward them, or may attract to them, the personality of a soul that requires the opportunities for karmic adjustment which social position and education will provide; or such a soul personality as must learn the lessons of life through being born into a family of affluence and suddenly find these things taken away and a life of poverty remaining. A soul personality that in a previous incarnation had bitterly hated all persons of wealth and social position would be cosmically directed to be born in a family of wealth and influence in order that it might learn that all such persons are not evil minded and unworthy of esteem.

A soul personality that in a previous incarnation had freely and happily given away everything of its small earthly wealth to help in every possible humanitarian activity, and gladly suffered in want in order to help others, might be cosmically directed in the next incarnation to a body born in an environment of wealth so that it could continue to do its humanitarian work without limitation. If, in this new incarnation, it failed to continue to do the good it had done when living in want, it would not be born again in wealth, but after having had an opportunity to distribute wealth to the needy and having applied it selfishly, it would be born in its next incarnation in an environment of poverty or want in order to be impressed once again with certain values and conditions of life.

Question: Is it possible for an expectant mother to attract to her unborn child the soul personality of a child she had earlier in her life and which was taken away through transition?

Answer: This is possible, although the mother might not know for many years that she had succeeded in attracting the same soul personality for a second time. There are instances on record where a mother has finally recognized in her second child the character and personality of a child that she had many years before and which passed through transition at the age of twelve or fifteen. Such instances, of course, require a short period on the cosmic plane between births and are an exception to the general cycle of rebirth, but for some cosmic reason the exception is made.

Question: Do the thoughts of the mother during the prenatal period have any effect upon not only the personality of the soul that is to come to the child, but upon the child's physical body and sex?

Answer: If the prenatal influences of the mother begin soon enough after conception, or really start at the time of conception, it is possible for these thoughts of the mother and father to determine the sex and the general physiological characteristics of the future child as well as the spiritual characteristics. The Greeks were famous for their knowledge and efficiency in the application of such knowledge along this line, but the art of prenatalism has almost become lost. There are some organizations in the world, including the Rosicrucians, who retain and promulgate private instructions and knowledge regarding this subject. The degree of success attained through prenatal wishes depends upon the efficiency of the methods used by the parents and the use of the proper degree of concentration.

Question: Is there any tendency upon the part of the Cosmic to continue the incarnation of certain soul personalities in the same family lines of generation?

Answer: Nothing has been found in any of the tests and revelations connected with research on this subject indicating that this is so. After a soul personality enters the Cosmic through transition it loses all of its association and connection with its physiological or material, earthly relations. Family blood and family trees are matters of the physical body and not of the soul personality, and in the Cosmic there are no such things as physical, earthly relationships.

Question: What is meant by “carrying over ” something from a previous incarnation?

Answer: Usually it is said that when a person manifests early in this life some very distinct tastes or tendencies or dislikes and repulsions, he has carried these things over from a previous existence. It is also said that persons who have a fear of the water, or of fire, or sharp instruments, or of certain locations or positions, have also carried these things over from the past. It has been found that many of the strongest likes and dislikes in our present personality, and especially those which manifest themselves in our childhood or youth, are the outstanding points of our personality in its last incarnation, and that these things had such a dominant place in our life that they easily rise now from the memory of the secondary personality and have become parts of our present character.

Question: Is it true that the things which we were most concerned about during the last hours of our life in a previous existence become dominating factors in our thinking and acting in the present existence?

Answer: From very careful investigations which have been made it has been quite conclusively proved that those thoughts which occupied our minds most strongly, and with profound concern, during the last conscious moments before transition in a previous existence will become guideposts to our thinking in the present incarnation. A man or woman whose last conscious thoughts were centered around regrets for having performed or committed some sin or act of injury to another, and whose last conscious thinking was concerned with a desire to be able to undo or make recompense and compensation for these acts, will undoubtedly carry into the next incarnation the unquenchable desire to do something for those who are found in similar predicaments.

As a hypothetical example let us say that a person in his last hours regretted the fact that he had at some time in his life performed an injustice against a widow with two children by robbing them of their rightful inheritance, and he desired above all things that he might live a few hours longer and make recompense and undo the wrong he did.

If this all-absorbing desire was still in his mind when transition came, it would be so registered in the consciousness of his personality that in the next incarnation it would be uppermost in all of his inward reflections or passive meditations. It would seem then as a strange and unquenchable desire to locate widows with children or persons in similar conditions who were in great want, or who were in serious predicaments through the wrongs of another, and try to alleviate their suffering or do something to help them in adjusting their affairs.

This desire might manifest early in childhood or youth in the form of a sympathetic emotion which would rise uncontrollably whenever the story or facts of such a situation were brought before him, and even though this person later on attained only moderate circumstances in life he would be found at various times attempting in some way to help those of this class who were in such situations. This explains why many persons, even those who are living a life of evil or crime, often have deep-seated emotional tendencies of a charitable or humanitarian nature. Very often these persons look upon such tendencies in their nature as weaknesses, and they frankly admit that there is a “baby ” nature within them which they cannot restrict and correct, and which cries and is moved by certain forms of sorrows or wrongs in life. Many of our strongest emotions or impulses toward human conditions and relationships, which were discovered in our nature early in life, are unquestionably carried over from the past.

Question: Is it possible that a person who lived a life of crime and who always sought an opportunity to injure others, and who passed through transition suddenly in the height of his ambitions for crime, would “carry over ” into the next incarnation these tendencies and desires to do wrong and injury?

Answer: The purpose of the soul’s temporary residence in the cosmic realm between incarnations is for the cleansing and purification of the evil tendencies in the personality. A person whose transition occurred in the very height of crime activity, with the personality held in the ambition of crime, would not come into life again with these same tendencies. Before his rebirth his personality would not only have been purged of these evil desires and tendencies, but the

suffering through regret, and the lessons learned while in the cosmic realm, would have taught the personality the error of such thinking and would have substituted the desire to live properly. There would still remain, however, the karmic debt to make compensation for the crimes previously committed. Therefore, such a person would be born again with no desires to do evil, but rather with strong desires to live properly. Nevertheless, the need to pay the karmic debt would force this person to pass through many forms of suffering, injury, and sorrow at the hands of others similar to that caused in the lives of other persons in his previous existence.

This person now attempting to live correctly and being free entirely from any evil thoughts or evil desires and ambitions, always doing what was right, would nevertheless find himself suffering and in sorrow as though he had actually committed many crimes and many evil acts in his present life. This is why so many persons who are truly trying to live a good life, and who are really idealistic in their desires and plans for living, wonder why they are often plunged into sorrow, want, and misery like unto those who are now living lives of evil and crime. They say, "I am trying to do my best, living the best I know how, doing no injury to anyone, and yet every now and then I am reduced to want, denied those things I desire the most, and made to suffer like those who do evil. Does it pay, therefore, to live rightly and think rightly when one has to suffer like those who live wrongly?"

If these persons understood that the sorrow and misery in their lives is the adjustment that they are making for the past, and thereby cleansing the spirit and making it wholesome for a future life of happiness, and by their present attempts to live correctly they are guaranteeing a life of joy and abundance in the future, they would not become so discouraged and would not be puzzled by the seeming paradoxes of life.

Question: Why is it that so many persons who are living in evil ways and actually doing wrong unto others seem to be so happy and enjoy not only all the necessities and many of the luxuries of life, but apparently escape all punishment here and all detection in their evil ways?

Answer: First, let me say that in most cases we make serious errors in our judgment of the success, happiness, and prosperity of persons who are engaged in crime or evil living. From our distant or external point of view it may seem that these persons are happy, or prospering in their crimes and avoiding dedication and punishment. The fact that the Cosmic is conscious of our wrongs, however, and that they are not escaping cosmic detection and inevitable punishment, shows how we may be mistaken in thinking that human detection has been evaded. Most certainly we may be greatly mistaken in believing that these persons are prospering in financial, social, or other ways through their crimes, for it is a fact that very few criminals, even those who have in the height of their careers obtained enormous fortunes of worldly possessions, have ever passed away in even moderate worldly circumstances; and usually the close of their lives finds them in abject poverty and want, along with social rejection and the scorn of their companions.

The average criminal who has eventually found redemption through his own thinking, or through religion or personal help and guidance, has admitted that in dollars and cents paid to avoid detection and cover the crimes or secure legal advice, and to escape the revenge of his blackmailing associates, and in hours of worry, hiding, mental torment, and inner condemnation, it had cost him more than he ever secured through his crime. The criminal's prosperity of today, or of this month or year, may be his karmic load of tomorrow or the following year. His outward appearance of enjoying the things of life may be the coating of veneer which he must assume in order to escape public detection. Neither you nor I can ever tell what such a person suffers in the privacy of his own life. But, even though the person who lives in evil should prosper in the material things of life, there is no question about the *inevitable price* that he must pay and suffer in the purging process during the cosmic period and in the karmic compensation process in his next life among other mortals.

It is only our man-made process of punishing a criminal or evildoer here and now, and in like manner unto his crime, that makes us think that those who are continuing in evil without *immediate* punishment are escaping punishment altogether. As stated elsewhere in this book, the

cosmic laws of compensation do not seek to punish a man on a basis of an eye for an eye and a tooth for a tooth, nor to revengefully make man suffer for his evildoing, but seek to bring about such reactions for his crime as will sometime, in some manner, most propitiously and efficiently cause him to realize the error of his ways and aid him to correct them, and give him an opportunity to compensate for them and otherwise find redemption and salvation. The keynote to the cosmic law of Karma is *regeneration* rather than *punishment*.

Question: Is it true that when a person is under the influence of a powerful drug and is in a deep unconscious state, the soul leaves the body and wanders about in space and may not return? Is it also true that in such circumstances the soul of some person also wandering in space may come back into the wrong body?

Answer: Both of these questions can be easily and quickly cast aside with the explanation that the soul never leaves the physical body and breaks its contact with the body except at “death” or transition. That being true, the other fanciful beliefs regarding the soul wandering in space and getting lost are seen to be absurdities. The only difference between the state called *death* and the deep sleep or a trance condition is the separation of soul and body. When this separation takes place and the soul is no longer in contact with its body, we have the unique condition called *transition* or *death*. There is no other condition precisely like it. A person, therefore, must be either living or non-living so far as the soul in the body is concerned.

What occurs during the period of sleep or unconsciousness through drugs of any kind is of a purely psychological nature and has very little to do with the soul. The state is primarily physiological with its related effect upon the psychic conditions. The soul does not wander in space at such times but remains in the body. The ego may extend itself and its consciousness may appear to wander in space by making wide and various contacts through its extension, but it never becomes separated from the body. Furthermore, there are no souls wandering in space to become lost, and there is no such thing as a lost soul slipping back into a body to which it has not been cosmically assigned. These sorts of ideas are examples of the strange teachings issued by some mystical

schools and are limited only by the daydreams and imagination of the authors of such teachings.

Question: Are there any reports on record of persons who have been on the borderline of transition and returned to life to explain any strange experiences?

Answer: Yes, there are many such reports and the only evidential value that lies in these reports is the similarity of statements made by persons in various parts of the world who had no way of knowing what others had reported in similar circumstances. A typical case of this kind is that of a young man of twenty-four who suffered a relapse after an operation in a hospital, and for several days continued to sink in vitality and consciousness until the doctor and nurses were waiting the ultimate transition. One afternoon, at a little after two o'clock, when two nurses, a physician, and four friends were seated around the bedside of the semiconscious patient, he suddenly relaxed and gave every indication of having passed into the so-called death state. As the nurses proceeded to cover the body and arrange the hands and arms in a proper position, all in the semi lighted room were surprised to see a white haze float upward from the body for a few feet, and then assume a vertical position and descend, to remain over in one of the corners of the bedroom. Everyone rose to his feet and stood spellbound, silent, and reverential. Not a word was spoken for a full long minute. Then the physician recommended that the body be removed from the room for the usual care given to the dead.

As the nurses again attempted to touch the physical body, the misty haze in the corner of the room trembled or shook violently so that its light waves seemed to undulate in a peculiar manner. This action was so definite that everyone in the room except the physician suggested that the body be left on the bed for a while and that tests be made to see whether "death" had actually occurred. Every scientific test was made during the next fifteen minutes and the nurses agreed with the physician that there was no possibility of life in the body. Again, however, the strange misty haze in the corner of the room, which was almost six feet in height and about the width of a human body, trembled and seemed agitated by the attempt to remove the body from the bed.

One of the friends present—who was a student of the Rosicrucian teachings and well versed in these matters—suggested that the room be darkened by drawing down the shades at the windows and closing the door for a few minutes in order to see if the misty light or haze in the corner of the room had any real significance. The physician agreed with some reluctance and all the persons in the room stood in a corner opposite to the misty haze, so as to have a better view of it. As the eyes become accustomed to the darkness of the room it was noticed that a very thin and hovering cord or beam of hazy light seemed to stretch across the bed and unite the misty haze in the corner with the physical body on the bed. This was definitely seen even by the physician and the nurses, who agreed that it was an unusual sight. It was suggested then that this might indicate that consciousness had not entirely left the body and that there was still some life in it.

The idea was proposed then that all remain seated for awhile and see if there was any development of a significant nature. The physician explained that if the body was lifeless, minutes should not be lost in performing the usual preparations upon the body in making it ready for burial. Of course, this meant the draining of the fluids from the body and the injection of the embalming fluids. At each suggestion that this be done, the misty haze in the corner became agitated as though protesting against the suggestion. It was this possibility that gradually dawned upon the consciousness of those assembled, for it did appear that each time the approach was made to the body to remove it, there was a reaction as of protest on the part of the misty haze.

After about twenty more minutes had passed, those assembled in the room became conscious of the fact that the thin beam of light that united the body with the haze in the corner was widening or becoming thicker or more brilliant. At first, this was attributed to the adjustment of the eyes to the darkness of the room, but soon it was noticed that the misty haze in the corner was being absorbed into the beam and that in this manner the whole hazy figure in the corner of the room was being drawn toward the physical body on the bed. In what was considered to be about four minutes, the entire misty haze in the corner had disappeared and was hovering over the physical body and was gradually beginning to lower itself into the physical form. In another

two or three minutes, there was no indication of the misty haze in any part of the room. The shades at the windows were lifted and in the soft light of the room further tests were made of the physical body. Indications of life or vitality were then discovered, and immediately methods were used to restore or strengthen the vitality to its greatest degree. In a little less than an hour breathing started, and there was a return of temperature to parts of the body.

By seven o'clock that evening, with the same nurses and visiting friends still in attendance and with only an absence of one hour on the part of the physician, the young man regained consciousness sufficiently to open his eyes and to announce that he was "all right" Three other physicians and several nurses of the staff were invited to the room to watch the procedure. The young man regained consciousness sufficiently to sit up in bed before ten o'clock in the evening, and to make a few comments. His only statement at that time was that he had been outside of his body and had watched the whole procedure in the room, but knew that he was still connected in a strange way with the physical body on the bed and that he had done his out most to prevent them from doing anything that would have severed that connection.

The next day, he told his story of how he had passed through a strange change whereby his consciousness or his real self with which he did his thinking and realizing had floated out of his body and remained in the corner of the room, being pushed to that corner by some peculiar emanations of the physical bodies of those present and yet held fast to his own physical body by an extension of consciousness, or something that enabled him to feel every touch made on the physical body that was lying on the bed. He said that his first desire was to keep on going off into space, for he heard beautiful music, saw endless spaces of clouds with brilliant lights, and saw many forms like his own with emanations of peace and happiness. He said that this temptation to go off into space and not return to the physical body was checked only by the strange pull toward the physical form and that every time the nurses laid their hands on his physical body or attempted to move it in its position, it gave him a shock like an electric shock.

The hundreds of other things that he described later on coincided with similar statements made by others who had passed through the same experience in various parts of the world. These experiences have no place in this book, since they deal with purely personal impressions and cannot be verified except by those who have passed through similar experiences. The only positive evidence that can be extracted from such experiences is that which the nurses, physician, and friends saw with their own eyes, and from the fact that the body had been found to be so lifeless that no life would register on the most delicate instruments, and yet in less than eight hours afterwards, the man was alive again and able to sit up and talk.

Question: Is it true that in the so-called spiritualistic seances held in darkened rooms the souls of departed persons return to earth and clothe themselves with a material form of such a nature that no physiological difference can be found between these materialized souls and an actual, earthly, physical body?

Answer: It is an absolute fact that the soul of an individual does not return to earth except to reincarnate again, and therefore does not float around in space and visit seance rooms, or psychic laboratories or research circles at any time. It is also an absolute fact that the soul cannot take on mortality, or physical form, except through incarnation in a physical body in the form of an infant. To explain what *apparently* takes place in a seance room and what *actually* takes place would require a large volume.

It is possible for the consciousness of a departed soul to project its mentality to a distant place on earth, just as the consciousness or mentality of a person living on earth can project itself to a distant point and make itself sensed by those who may be properly attuned to receive such impressions. But this is not a projection of the soul, nor is it a materialization of the soul, as the students of spiritualistic phenomena claim through their misunderstanding of the real principles involved. I do not mean to say that certain things do not occur in a seance room, which will give the impression of a materialized soul, but I do mean to say that it is not what they believe it to be and, therefore, not what they claim it to be. The soul does not materialize itself, and it does not become clothed with a physical form except through incarnation.

Question: Is it true that the most intimate contacts made with departed souls are those which are made in the privacy of one's own home or in private circumstances, rather than in general seances or research assemblies?

Answer: This is absolutely true and it explains why groups of scientists, proceeding to investigate psychic phenomena in a materialistic, cold scientific manner, do not have the experiences and the convincing results that have been experienced by millions of persons in the privacy of their own home, or when alone, and in proper mental, spiritual, and psychic circumstances.

We may well understand that if it is possible for a love done, who has departed, to project his or her mental consciousness to the earth plane in order to communicate some consoling thoughts or spiritual knowledge of a personal nature, it would be done preferably in circumstances that are reverential and personal rather than in circumstances of a public or scientific nature. It is also true that the one most concerned here on earth in such an experience and who desires such a spiritual contact must, through reverential sacredness and spiritual attunement, lift up the consciousness part way to meet the consciousness that is being projected toward the earth. It is this mutual attunement of a truly sacred nature that makes possible the many thousands of personal, private, intimate contacts never duplicated in public, or scientific laboratories, or seances. Rosicrucians and others well versed in the true spiritual and cosmic laws of the universe, and knowing man's spiritual and cosmic qualifications, attune themselves through study and experiment to make such contacts easily and efficiently.

THE ROSICRUCIAN ORDER, AMORC

Purpose and Work of the Order

The Rosicrucian Order, AMORC, is a philosophical and initiatic tradition. As students progress in their studies, they are initiated into the next level or degree.

Rosicrucians are men and women around the world who study the laws of nature in order to live in harmony with them. Individuals study the Rosicrucian lessons in the privacy of their own homes on subjects such as the nature of the soul, developing intuition, classical Greek philosophy, energy centers in the body, and self-healing techniques.

The Rosicrucian tradition encourages each student to discover the wisdom, compassion, strength, and peace that already reside within each of us.

The Cycles of Changes in the Earth

Lemuria

PUBLISHER'S PREFACE

Some years ago a representative of the Rosicrucian Brotherhood in China visited our offices in San Francisco and placed in our hands, as an official portfolio, some very rare manuscripts dealing with many of the age-old traditions preserved in the secret archives of Tibet and China. Among these manuscripts was a very old and worn copy of the secret spiritual and ethical teachings of the Tibetans, which this representative was anxious to have brought to light in the Western World in modern form. The truly mystical and private manuscripts of a Rosicrucian nature were deposited with us for use in connection with our usual activities as publishers of the magazines and other printed matter of the Rosicrucian Brotherhood.

In order to facilitate the proper publication and public dissemination of the Tibetan teachings the foreign representative organized a publishing company under the name of the *Oriental Literature Syndicate*, and this syndicate produced the Tibetan manuscript in book form under the title of "Unto Thee I Grant..." This rare book has had a number of editions and is considered one of the most beautiful specimens of Oriental literature published in recent years.

Among the manuscripts retained by the *Oriental Literature Syndicate* were several dealing with the ancient records and traditions telling the story of the lost continent of Lemuria. It was the intention of the *Syndicate* eventually to gather together from all parts of the world the thousands of tabulated and recorded facts regarding Lemuria and its people, and to put these into a highly instructive and fascinating book for public dissemination. The work of gathering this information and compiling it was placed in the hands of Wishar Spenle Cervé, who was selected because of his interest in the subjects of archaeology, geology, and meteorology. As the matter was gradually accumulated

and the astonishing facts put into readable form, many interesting stories evolved, each of which was worthy of independent publication. One of these stories was published by us in the Rosicrucian magazine known as "The Mystic Triangle" for August 1925. The publication of this story aroused wide spread interest and immediately there were requests from all parts of the world for the further publication of similar stories or the publication of a complete book dealing exhaustively with Lemuria and its people.

With the assistance of representatives in China and Tibet, the entire holdings of the Oriental Literature Syndicate were taken over by the publishing department of the Rosicrucian Brotherhood in America, and therefore the book called "Unto Thee I Grant..." and all the other accumulated manuscripts and records owned by the Syndicate became the possession of the Rosicrucian Brotherhood of AMORC for North America.

The researches started by Mr. Cervé have continued during the past ten years, and because of the increasing demand for the publication of the fascinating facts, we decided to have him put the most essential ones and the most alluring parts of the story of Lemuria into a public book, free from all technical data of a ponderous nature, and replete with the human interest features which make the story of Lemuria the equal of any of the world's fascinating romances.

This book is now offered in the present form with the hope that it will please and instruct as well as satisfy the natural curiosity in the minds of millions of persons living in the Western World. To a great many the book will be a surprising revelation, and undoubtedly thousands of readers will question the truthfulness of all the facts stated herein and will demand scientific proof and verification. A complete index of all of the records, writings, traditions and facts regarding Lemuria would make a book of itself.

We have deemed it advisable to State a few of these authorities and records in an appendix to this book, but we do not attempt to establish the facts of Lemuria in such a manner as to be indisputably verified in the minds of those who would undoubtedly question any or all of the statements regardless of what proof might be submitted.

There are certain facts that are self-evident regarding Lemuria, and its people, and these few or many, as the readers may discover them, constitute a selection or framework throughout the present volume that is sufficient foundation upon which to build a firm belief in the entire story. To ignore these indisputable facts and self-evident points and criticize a few which have not been substantiated by the most acceptable authorities is to do an injustice to the work of the author.

We have just stated that our desire has been to make this book free from ponderous, scientific quotations, and for any to take advantage of this by criticizing the lack of such evidence will be a sign of insincerity. If the self-evident and indisputable facts to be found in this book are given proper consideration, there can be no doubt left in the mind of any critic that most of the entire story of Lemuria as recorded herein must be true.

One of the points that might be disputed is in connection with the statement that the changes which have occurred on the surface of the earth in past centuries have been in cycles. Many years ago this astonishing fact was discovered by a well known scientist, Mr. John H. Tice. When he attempted to publish his findings in 1875 no publisher would accept his statements of the scientific principles constituting natural evidences of a Cosmic power and the manifestation of Cosmic laws unknown to other scientists. He, therefore, published his findings in private form and we are happy to quote part of these findings in support of the claim for cycles of changes in the earth's surface in *Appendix Number One* at the close of this book. Much that Mr. Tice published privately in 1875 and practically all that is contained in his rare manuscripts now in our possession have been verified in recent years by the independent researches of hundreds of other scientists, none of whom, however, have so completely related the various discoveries and strange manifestations as Mr. Tice related them in outlining his theory.

The people of the Western World seem to be generally of the opinion that outside of sacred literature very little positive information regarding ancient times is available or of a dependable nature. It is common belief, for instance, that the only complete or authentic record

of any great flood, which, as a cataclysm, destroyed or changed part of the earth's surface is to be found in the sacred writings now published in the form of the Bible or in related Jewish records. The truth of the matter is that this great flood and many others are very completely and interestingly recorded in the sacred and scientific records of many ancient peoples, and verification of these are found in the modern records of nature's own archaeological registry.

From similar writings and records of the ancients the facts contained in this book have been gathered and compiled without discrimination, and without religious or scientific bias.

We wish to acknowledge our appreciation for valuable help and assistance to the many persons mentioned in our appendix relating to authorities, and especially to Dr. Ward for his special chapter dealing With the very unique subject with which he is most intimate as a high representative and graduate of some of the oldest institutions of learning in India.

The American people, especially those living in California, will be delighted with the mysterious facts contained in this book and we feel sure that all those living in North and South America, and who are citizens of these countries will feel a greater pride in the ancestry and origin of their countries and their native races. We feel that this book has a glorious message and a means for much enjoyment in the field of fascinating research.

The Publishers —

INTRODUCTION

I WISH TO anticipate many comments that will be made regarding this book by those who may have expected to find within its covers a scientific treatise on the subject. I have not attempted to make this book a treatise on the subjects of anthropology or anthropometry, nor in the fields of archaeological and geological research. Nor will meteorologists, astronomers, cosmologists or others find herein a ponderous encyclopedia of technical information.

With the same enormous mass of facts which I have had at my disposal, and with the same artists and other assistants ready and qualified to prepare matter in a technical form for me, such a book as some may anticipate could have been prepared and offered to the public, or to that limited portion of the public, desiring its knowledge in a technical form. But my purpose was to comply with the desires of the publishers in preparing and presenting an easily readable, enjoyable, and fascinating account of the lost Continent of Lemuria, with all of its past history, effects upon the races of man, and ancient, human incidents of life.

After all, it is a fact that all of us enjoy a relaxation from preachments and ponderous academic dissertations no matter how deeply we may be concerned with specialized scientific subjects. The very men who claim to cast aside a book that deals lightly with an historical, learned, or scientific subject are found in their times of relaxation completely lost and absorbed in the fascinating and alluring stories of the popular magazines and Sunday newspapers; and I do not hesitate to say that I have found among my scientific acquaintances many who have admittedly discovered their first dues to attractive subjects of research through the reading of the semi-scientific articles prepared for lay reading in the popular publications.

Scientific research and investigation may be substantial food to the scientific mind, but a readable story, brilliantly coloring the human interest side of the facts revealed by science, never fails to become food to the emotional, human, side of our natures.

The facts contained in this volume are arranged and presented in the same manner that the facts of life are presented to you dally. The serious points are mingled with those that are amusing or lightly interesting, instructive, or perhaps practical. The beam of the spotlight of interest is centered more upon the human interest features of the story than upon the ponderous technicalities of scientific erudition. The people, the characters, the scenes in the backgrounds, the facts and figures themselves, are all brought out of their laboratory niches and heavily draped positions, and paraded upon the stage of life before us to the accompaniment of lively music with the bright lights playing upon them while we, the readers in the audience, watch this age old play of life go on and on.

The story in this volume is a play of life that started over two hundred thousand years ago with a vague and indefinite prologue, and continuing through many astonishing, surprising, interesting, acts up to the present time. The play is still going on, for the descendants of Lemuria are still in our midst, and we are dally contacting the effects produced by these people who attained a high degree of civilization and established many principles of life which are still fixed in their purpose and practice.

After my task was started and I had overcome the hesitancy I had in writing lightly and freely in a non-technical manner of matters that might have been dealt with more deeply, I began to enjoy the work. I found the continents of which I was writing becoming alive, instead of dead, specimens painted on old yellow maps. The people themselves looked at me, talked to me, and told me their stories, and I found myself entering into their communities and observing the transitions in nature, the changes in all forms of life, and the evolution of the races of man. Then it was I discovered why the facts of the story of the lost continent of Lemuria had never reached a universal understanding among the lay-minds of the public. Only the geologists, archaeologists,

profound historians and those who delve into the anthropology of man have found any interest in the history of Lemuria, and what they found they tabulated in such a dry and uninteresting manner and preserved as such sacred personal assets of their own achievements in research, that few knew what had actually been discovered.

I hope, therefore, that this book will make the subject more popular and arouse further interest in the investigation of the hundreds of available sources of information still untouched by those who have spent their lifetime seeking for positive facts.

With this hope and with the further desire that what I have written may contribute to a better understanding of the development of the human individual in all of his physical, mental, spiritual, and so-called psychic qualities, I offer this work.

W. S. C.

July 7, 1931.

Chapter I

THE FIRST RACES OF MAN IN AMERICA

ONE OF THE most interesting problems in the study of world civilization is the origin of the first races of men in America. It has been commonly believed, as a popular idea, that the cradle of civilization was in Mesopotamia and there is a very general belief that the first races of man could be traced to some Oriental country. In fact, the so-called *Garden of Eden* has always been considered as a mythical description of an Oriental location.

A few years ago some scientists advanced the idea that the valley of the Ohio River might have been the real Garden of Eden, inasmuch as discoveries there tended to indicate that the mound builders and the cave dwellers may have descended from the first races of man to people the earth, and various relics unearthed in that valley seemed to be older than anything that had been found up to the period of their discovery. Since then further discoveries have changed the idea somewhat. While it is generally admitted that there is ample evidence to prove that the Ohio Valley did shelter and protect some races of man antedating the history of man in many other parts of the world, there are now many evidences to indicate that the Pacific Coast of the United States is unquestionably the only existing location of the earliest races of men who had reached a civilized state of development.

Many and various fantastic theories have been given to account for the presence of the aboriginal Americans. The history of the origin of the American Indian is a wonderful study and is a subject which may never be completely cleared of its mysteries.

The fact that the American Indians were divided into many tribes widely separated in their locations and widely differing in their language and yet appearing very much alike and having many customs and habits in common, permit of many forms of speculation as to their origin. The things which have been found to be common with most of the American Indian tribes afford a foundation for the theory that all of them were descendants of one race, while the many differences in their habits and customs and in their language afford a foundation for the theory that they were in no way related and that those in the western part of North America may have descended from other races that came from the West, while those in the eastern part of the continent were descendants of Eastern tribes or races who had made early contact with this continent.

In studying the problem we have many reliable scientific principles as guides and much data of an accumulative nature that constitutes a fairly dependable index. In studying the history of men we must bear in mind that there are certain characteristics which are common to all races and that slight variation may not always indicate distinct races but rather the effect of environment upon countenances, nature, and habits of man.

Certainly, we are face to face with one of the two possible explanations for the existence of the many races of man. Either all the races of man throughout the world had one common origin, in one cradle, in one location, and from this one point moved in all directions to cover the face of the earth, or man had his origin in many places throughout the world practically simultaneously. The question therefore is whether all mankind had one common origin and became differentiated in races and characteristics through evolution affected by environment as man moved to various parts of the world, or whether human beings evolved or were created in hundreds of widely scattered localities at the same time with distinct characteristics, natures, and habits in accordance with the purpose of creation and the environment in which the creation occurred.

Environment and the consequential effects of it will change the nature, appearance, habits, and customs of any race and it is perfectly possible for all of the races of man to have had one common origin

and to have been identical in countenance, customs, and habits until the members of this one original race became scattered in various parts of the world and developed future generations having such modifications as the effect of environment would produce.

We know that men who live where there is an abundance of bright light such as in the northern or Southern polar regions or in countries having wide areas of snow for many months of the year, or where there is a great amount of white sand reflecting the brilliant sunlight, acquire squinting eyes or eyes which become slightly oblique, and from the squinting and continuous attempt to keep the eyes partly closed against the glaring light the cheek bones have a tendency to be raised or the muscles of the face are raised to appear like high cheek bones. On the other hand, those who live in the mountains or mountainous regions and must climb a great deal and struggle much in moving from place to place, soon develop strong legs, deep chests and powerfully developed muscles in the back, and these characteristics are transmitted from generation to generation until we have a different type of man from those living where there is snow or desert lands.

Likewise, the races of men who live along rivers or the borders of Oceans and have developed means of moving rafts or logs or other floating things for conveyances, using the arms as a motive power rather than the legs, soon develop broad chests and powerful shoulders with great muscular arms and under-developed legs.

Just these few points will indicate to you how physical characteristics may be developed in successive generations until an almost distinct race of man may be evolved through the effects of environment. If we add to these effects the additional ones of deeply tanned complexion in the warmer or brilliantly lighted climates or where there is a great deal of sunlight as in the north and south polar regions, and fairer complexions in the mountains or shaded valley sections of the temperate zones, and the effect upon the height and physical development generally resulting from warm or cold climates, accompanied by the effect upon the thickness, color and growth of the hair on the body, we will see that many greatly modified and diversified forms of the human body will evolve under the effects of environment.

We must not forget, either, the effect of food, water, and personal habits. The mental development of a race, adding to it the character of the soul within, also has an extremely important effect upon the outer appearance of man. It is generally conceded that the more intelligent races of man developed in those countries where the climate was extremely mild or cold while the less intelligent races developed in those countries where there was extreme heat. Analyzing this we find a very logical reason for this law. In the colder countries where there is much snow and ice man was forced to invent and reason out ways and means of clothing himself and protecting himself against the cold and the winds and he had to invent homes and shelter, and devise ways and means of warming them. He had to devise ways and means of securing food and preserving it. All this taxed his imagination, challenged his mental ability, and made him more industrious and a deeper thinker. Those who lived in the very mild and warmer climates found an abundance of food the year around, required little or no clothing, no specially constructed homes or huts of any kind, and because of the heat and the enervating effects of the climate he became sluggish in his thinking and in his physical actions.

There are some modifications to the above and there are some indications of races that reached a high degree of culture in tropical climates, but most of these modifications are explained by the fact that those parts of the world that are now tropical may not have always been so tropical and those places which are now so completely covered with snow may have been more temperate in climate; and again many of the races of man that attained high civilization in tropical lands were descendants of tribes that came to such countries from more temperate or colder zones.

In so far as North America is concerned it is a remarkable fact that all of the explorations and investigations into the antiquity and origin of the primitive races of this continent show that the greatest and highest degree of civilization was attained on the Pacific coast. I will speak more of this later, but in passing it may be fitting to say here that this is an important point in our consideration of the history and ultimate disappearance of the continent of Lemuria and the distribution of its surviving people.

In considering whether the races of man had one common origin or not we must keep in mind the fact that if the races of man originated in one locality and from that point distributed their descendants throughout the world, we must concede that there were ways and means for the journeying of the races of men from one continent to another throughout the world. In this regard we have little difficulty for there is every indication of a reliable nature, that many of the great open spaces now filled with Oceans and bodies of water were at one time occupied by continents and large islands.

We need not resort to the theoretical possibility of man having traveled from Russia and through Asia across the Bering Strait into Alaska, for while there is evidence that men of an Asiatic origin did eventually reach Alaska and leave monuments there proving the fact, nevertheless, there is other evidence to indicate that men reached the shores of America by devious routes in various ages.

On the other hand, in considering the question as to whether man may have originated in various parts of the world simultaneously and without contact or knowledge of the existence of other races in other parts of the world, we have this one very important fact to keep in mind, namely, that investigations and researches including the most carefully made study of the relics found in excavations in all parts of the world show that the primitive or original races existing in each locality started with some culture or development of civilized ideas, and gradually created an original or independent civilization of its own. If all the races of man had one common origin and gradually spread throughout the world we must concede that the migrations would not have begun until man had attained a very high State of civilization and had developed many methods of caring for himself and promoting his best interests. In such a case those who reached foreign lands and established communities of their race on new and virgin soil where no other human beings had ever lived, would naturally have begun their new lives in a new land with a certain degree of advanced culture and advanced forms of civilization.

The rapidly accumulating evidence from all parts of the world proves that this is so. In nearly every case, the earliest relics, the earliest evidences of human occupation indicate some form of civilization

and for this reason we have a right to assume that in these localities the races of men did not have their beginnings independent of any other races in any other parts of the world. Consideration must be given, of course, to the results of retrogression in culture in countries widely separated from easy contact with others.

There is a very large amount of evidence that proves conclusively that there was a considerable amount of migration in the early history of this earth. This is especially true of the Pacific coast, of South America, and is an important factor in the study of the mystery of the disappearance of the continent of Lemuria.

Before entering upon a discussion of the existence of the continent of Lemuria and a description of its people and their habits and customs it may be well to State in this first chapter the nature of some of the evidence that has been carefully compiled after being gathered by many men and in many expeditions, all of which I have followed with keen interest. In the first place, it is more than likely that we shall eventually find that the North American Indians are descendants of the "lost tribes of Israel." This belief has gradually developed in the minds of those who have made a careful study of the origin of the American Indians and of their languages, customs, habits, and early products. It may be interesting to my readers to know that one of the outstanding discoveries in this regard was the finding that in all of the various tribes of Indians in America there are certain words that are common to all, although slightly different in sound or symbol. A list of these words common to all of the tribes has shown that they were words which were identical with words used by the tribes known as the Israelites.

When one considers the unusual and enormous diversity of the languages and the tribes of North American Indians and the fact that tribes that lived very near each other were unable to understand each other or to communicate with each other in any form, then the existence of certain common words of an identical nature and meaning become highly significant. In the second place, it has been found that nearly all of these identical words had a religious or mystical meaning and had nothing to do with objects or conditions of a purely local nature,

and very often related to principles and laws of a Cosmic nature and pertaining to nothing else in their language or in their customs and habits. In the third place, it was found that there were certain holidays or holy days or ceremonial days that were quite common to all of the tribes despite the great variance in their manner of living, their beliefs, and their tribal philosophy.

Again it was found that most of these ceremonial days had a Cosmic, mystical and religious significance and were coincident with similar holy days prevalent among the "Israelites." Again, considering the fact that many of these Indian tribes were so widely separated that an entire continent lay between them so that they were so unknown to each other that when they were eventually brought into contact with each other they were astounded to know of the existence of the other, we can well realize that the similarity and coincidence of ceremonial days could not be the result of late intercommunication or the recent exchange of ideas.

How the American Indians came to be the descendants of the "lost tribes of Israel" is a matter that requires further investigation and the presentation of the problem would require another separate book. The subject has no special relationship with our study of the continent of Lemuria except that we must keep in mind the fact that the American Indians may represent a portion of the descendants of Lemuria and Atlantis.

That these American Indians could have descended from the Israelites by way of migration across the Pacific is indicated by the fact that many Asiatic dialects and Asiatic evidences have been found in North America and this subject, too, is complete enough to constitute a volume of its own. But there is this significant point in connection with the study of the distribution of the Asiatic dialects and Asiatic distinctions. AU of the Asiatic dialects and Asiatic relies are found only on the Pacific coast, and almost wholly along the north western shore of the North American continent. This becomes highly significant as we shall see later on.

On the other hand, along the western coast of South America we find striking evidence of the identity of tribal words with oceanic

dialects, plainly indicating and definitely proving that there was some easy means of access between the western shore of South America and the various people of Oceania. In fact, many of the tribes living along the western shore of South America are surprisingly like the natives of many of the present Pacific Islands both in features and color and in many minute respects. For instance, the Sirionos of Bolivia, constituting an isolated race of primitive people unlike all of the other races of that country but having slightly wavy hair of a very fine texture with large bushy beards and typical Oceanic features resembling no other race anywhere in the world except those of Oceania, are unlike any of the Indian tribes of either North or South America. Furthermore, in some of the expeditions which I have carefully followed and worked with in analytical study of their researches, there has been unearthed along the California coast certain pre-historic graves in which were found adzes, axe-heads, and other stone articles carefully made, and in a style and manner typical of the work of some of the tribes still existing on islands in the Pacific Ocean, and made of stone that is found no where else except in those islands of the Pacific Ocean.

It must be kept in mind that these islands now existing in the Pacific are unquestionably the remnants of other islands and a large continent which once occupied the space or part of the space of the Pacific Ocean, and unless we concede that ancient men did sail or journey by some means for many months from distant islands in the Pacific to the western shore of South America, we must admit that there must have been other islands or large bodies of land in the Pacific close to South America and which were occupied by tribes like unto those still existing on the Pacific islands and with stone similar to that still found on such islands. In such a case it would have been a simple matter for the pre-historic tribes to have journeyed from the one continent on the Pacific to the other and to have made such migrations at a time when the Pacific continent was slowly submerging.

Another interesting point is the fact that North America affords the greatest study in the investigation of the origin of man because, even excluding the many American Indian tribes with their various dialects, customs, and habits, we still have evidence in North America of other tribes of distinctly different dialects and habits. In fact, the variation of

racess, of dialects, and customs, was unquestionably greater in this new world than it ever was in the old world, and so far as the Pacific coast is concerned, more than one hundred distinct languages or dialects were spoken by the various tribes within a few square miles, constituting a greater number of distinct tribes for the same amount of country than in any other part of this world. Even at the time that North America was first visited by explorers the condition of variation in tongue and character was highly impressive. Many of the natives were naked and savage; others were nomads. Other tribes were partly civilized. Some were agriculturists; some were hunters. Some dwelt in the open fields and valleys in the shelter of the brush and trees, while others had built their homes of adobe and the skins of animals using methods found in no other parts of the world, or using methods, customs, and habits that were identical with other tribes in other parts of the world. Most of the tribes evidenced a progressiveness in development to the stone age indicating that they had advanced beyond all the primitive states. Some of these tribes had already reached a very high State of culture and had attained real artistic skill, and many of them had accomplished feats which had never been excelled or equaled by any of the other races in the history of the world.

I am referring particularly to the Pacific coast where the early explorers were astonished to find among primitive races and primitive people the evidence of a very high civilization.

It is true that in the Yucatan there was found much evidence of a highly civilized race with a very remarkable development in culture, but this is the story of the Mayans, a race of people who descended from the Atlanteans and Lemurians intermarried, when the continent of Atlantis submerged in the Atlantic Ocean. This, too, is another story in the history of man that has no bearing upon the story of the Lemurians but the fact that the Mayan writing is one of the most marvelous achievements of any race and is known only in its most perfected form, and must have required thousands of years for development, indicates how a cultured and civilized race of people came to this North American continent to live among primitive conditions.

Certainly this gives us a picture of the polyglot of races of man, the mixtures of civilization, the variance of culture, and the wide dissemination of man himself on a continent in the new world, as it is called today, but which we shall see was really an old world before Europe had become even partly civilized.

In the book of Genesis we have a story of the origin of man that is not only symbolical but in some passages quite historical. We must bear in mind, however, that the story given to us in Genesis is the result of age-old traditions passed from person to person by word of mouth for many ages before becoming recorded in the crude writings on stones. Then such stories were later rearranged and re-worded for preservation in manuscripts, and still later re-arranged, edited, and prepared for translation into other languages and for wider dissemination. The stories, therefore, of the origin of man and especially of the great flood, are not mythical stories but historical facts known to all ages of man as part of the traditions of man's history. Geology and the study of the earth's surface and a study of all of the things within the earth give us mute but indisputable evidence of the fact that at one time great floods did destroy most if not all of the living things on the face of the earth, and that as the flood came to various parts of the world there were migrations and the movement of hordes of people from one country to another. The flood was not simultaneous everywhere but gradual throughout a long period of time with one continent or another gradually disappearing here and there. There is scarcely a tribe of people in any part of the world that has not a story of a great flood among its traditions. The early visitors and explorers who came to the shores of America were astonished to find that the tribes living here in such great isolation and separated from all other parts of the world with no means of communication or contact with the traditions of the Orientals, had their own stories of a great flood that were identical with the stories told in Genesis and held by the people of Asia and other parts of the Orient. How this story of the world flood came to the American Indians and the hundreds of other tribes here was a puzzle, indeed, to the early explorers, but today there is no more mystery about it and the explanation of the possible means of such knowledge constitutes a part of our study.

We have been accustomed to think that man's first appearance in America was not many years before the coming of Columbus or the early explorers. I am speaking now of years in a relative manner, for a few hundred years, or a few thousand years, constitute a short time compared With the existence of the races of man. But the researches within recent years, by every department of geology and the study of man, have set back man's presence in America many thousands of years. Some years ago no one would have believed that human beings dwelt in America more than twenty thousand years ago. Today we have proof that is indisputable that man not only inhabited North America thousands of years ago, but that the races of man existing in this country at that time were the equal if not actually the superior of the races of man in the old world at the same time. I have in mind the exhibits from the gravel deposits in Frederick, Oklahoma, and in Raton, New Mexico, where we have seen articles that were buried and associated with animals known to have lived only in very ancient times. Such animals were mastodons, camels, horses, elephants, ground sloths and others. Underneath the fossils were found flint arrow-heads and spear heads and other human-made articles, and some of these were buried in the bodies of the animals and were still attached to the bones of these animals who had been killed with them, and these animals are indisputably and scientifically recognized as belonging to very ancient periods. In at least fifty localities in North America such exhibits have been found. The most definite proof was found at Colorado, Texas, where flint weapons which had undoubtedly killed the animals were within the skeletons or embedded in the bones. Every scientist and profound student of the subject of the origin of man in America will tell you that the evidence is rapidly piling up and while some of these may not admit with me the existence of Lemuria as a separate continent with its own race of people, they will admit that people came to America many, many thousands of years ago from some unknown country in the west.

Chapter II

FASCINATING INCIDENTS OF THE PAST

THE IDEA THAT there have been a number of continents which disappeared in ages gone by is very old and is found expressed in various ways in the oldest legends of many lands. There are references in many ancient writings to tribes of people living toward the east or toward the west in localities that are now occupied with seas and Oceans.

I must avoid the subject of the continent of Atlantis as much as possible because that lost continent has been well dealt with in the book by Ignatius Donnelly and by others and because as a story, not as fascinating as that of Lemuria, would occupy a complete volume in itself. But, for many centuries the idea of a lost continent having once existed in the space now occupied by the Atlantic Ocean was expressed in hundreds of manuscripts and books, though considered often as merely a legend without scientific foundation. Even when Sir Francis Bacon wrote his famous book called "The New Atlantis" and thereby gave some weight to the old stories of a lost Atlantis, many still believed that the ancient continent was as mythical as the New World he described. Along with the coming of the realization that the new Atlantis described by Bacon was a prophetic picture of the United States and Canada, also came a realization, through scientific discoveries, that the lost Atlantis might be more fact than fable.

In recent years, however, all doubt about a submerged continent at the bottom of the Atlantic Ocean has been cast aside, for the great scientific explorations and tests have revealed that there is such

a continent, and that at one time it undoubtedly filled most of the space between the shores of the New World and the Old World in the temperate zone. The Azores Islands and the Madeira Islands are now generally accepted to be mountain peaks of the ancient Atlantis continent still lifting their heads above the Oceans surface. That there were other such islands in the Atlantic in centuries gone by is now generally believed because of the many references to them in ancient writings.

The disappearance of the continent of Atlantis, however, is only one incident in the history of the changes that have taken place on the surface of this earth. It is more than likely that at one time there was far more land than water, and because of the picturesqueness of the subject I wish to deal lightly and briefly with some of the great changes that unquestionably took place. It is impossible in a book of this kind and in a limited chapter of this nature to speak of all of these changes in detail.

First of all, we cannot exactly determine how large the continent of Atlantis really was, but, of course, we can be sure it came in contact with North America and Africa. It may appear as though this would indicate that the continent of Atlantis must have been very large, but we will anticipate that argument by stating that there are other good scientific reasons for believing that the continental shores of North America as we know them today and the shores of the European coast were not as widely separated as at the present time. First of all we have evidence to show that the coast lines of both continents have been gradually changing, just as they are changing today. Despite the many places in which man has filled in, with earth and other material, various points and places along each coast and especially along the North American shore, the washing away of the earth and the disappearance of part of the land along the Ocean has been more rapid and more exhaustive than we realize at first consideration. Many of the very ancient maps that show discrepancies between the present coast lines of North America and Europe are not the result of error, but fairly accurate pictures of what the coast line was at one time.

We have no reason to assume that a continent is something that is anchored and fastened to the center of a great sphere and is immovable. Small islands have shifted as well as disappeared and reappeared in times past and it is possible for an entire continent to move either eastward or westward or even toward the north or south or twist itself slightly diagonally. Scientists now believe that because a continent can float and move on the surface of the earth that very likely the North American continent was a part of the European continent and that the two present shore lines of the North American and European side were once the shore lines of a river that merely divided certain parts of a great continent, and that gradually the river widened because of the movement of the continents and continued to do so until the river became an Ocean.

One of the points held forth to justify this idea was the fact that not only did the continents move but that the rugged and peculiar Eastern shore line of the North American continent seemed to have a similar contour to the western shore line of the European continent, and in fact there is such a similarity despite some discrepancies. It is scientifically possible that during the many and marvelous changes that have taken place on the surface of this earth and while an entire continent of ice changed into a continent of grass and trees, changing even the very surface of the earthly substances themselves, there may have arisen a great mass of land in the Atlantic Ocean after the two continents, or the two half's of one continent, had separated and formed two independent continental bodies.

Among the other picturesque changes is that of the creation of the present Gulf of Mexico. Undoubtedly at one time the present Gulf of Mexico did not exist as a body of water but as a deep and beautiful valley lying between, or nearly completely surrounded by, high mountain regions. The present peninsula of Florida is not a part of such mountain regions rising above water but an accumulation of sand, coral, and shells which have been deposited on the upper peaks and surface of a sunken mountain chain. In other words, at one time the chain of mountains known as the Appalachians was continued on southward in a line to meet what is now the West Indian Islands and on to South America, or another mountain chain began just north

of Florida and continued downward to the West Indian Islands and South America. Such a mountain chain would have enclosed a large valley lying between it and the present eastern shore of Mexico with its mountainous regions, for we find that it is a mountain chain that constitutes the only present connection between North and South America through which the Panama Canal has been cut. The present Caribbean Sea, as well as the Gulf of Mexico, would have been within this valley. While the Islands of the West Indies are really composed of parts of the ancient mountain chain, still above the surface of the water, the land of Florida is a newly composed material accumulated in time, as things from the sea are accustomed to accumulate around anything to which they can anchor themselves.

Undoubtedly the present Mississippi River flowed through the center of this ancient valley and had an outlet somewhere near the Islands of Martinique and Barbados. Into this valley spread the survivors of the lost continent of Atlantis, for there are some islands of the West Indies group, such as those just mentioned, which indicate that they were once in close contact with the people of the lost continent of Atlantis. As time made its changes in this valley and it began to sink lower than the sea level, and no longer carried the water of the Mississippi off into the Atlantic Ocean, it gradually became filled with an inland sea and this in turn became the great gulf with the continuous sinking of the eastern mountain range which separated it from the Atlantic Ocean.

The descendants of Atlantis and Lemuria living in this peaceful valley gradually migrated to the sides and top of the mountain ranges both east and west. Eventually those who had migrated to the mountains on the eastern side now lying beneath the peninsula of Florida had to migrate again, and some went south to the mountain peaks now constituting the West Indian Islands, while the others went westward and upon the highest land accessible to them they once again built their temples and their homes, this time more permanently than ever because of belief in the permanency of the new site. Thus we find in the Yucatan and the countries of Guatemala, Honduras, Salvador, Nicaragua and parts of Mexico, the very wonderful temples attributed to the race known as the Mayans, whose structures are scientifically admitted to be older than those in Egypt.

This story of the Mayans is also one that is too great and too interesting to condense into a brief chapter of this book and perhaps some day the marvelous truths and knowledge of the Mayan people will be presented in a separate volume.

Another remarkable change in North America is that of the gradual disappearance and evaporation of the great inland sea that one time occupied the entire central area of the United States. The Great Lakes, the Mississippi Valley, and the great desert region lying between the Mississippi and the Rocky Mountains were due to terrific though gradual changes in the rising of the land. But even these changes are not as remarkable as another change in the North American continent to which I will refer in a moment.

Going further north we find evidences to indicate that Alaska and Siberia were at one time united and probably the land was broken through and the continents separated by the onrush of ice in the time of the change from the glacial period to the next period, and even north of this there is definite evidence that the country of Canada was once a high plateau continuing far beyond the 70th degree of latitude. Greenland and Canada were originally united and the many islands now composing the Arctic archipelago composed one united land reaching far into the north.

Going into the old world we find many similar examples of changes, as for instance the separation between Africa and Arabia and the separation that is still taking place between Arabia and Persia. The present China Sea and the Gulf of Siam now occupy a place that once constituted a very beautiful valley closed in by a mountain region on the east which now constitutes the Island of Formosa, the Philippine Islands, and the Islands of Borneo, Sumatra and the Malay Peninsula.

We are not concerned at the present time with the Old World and its changes which are far more recent than those of the so called New World, and which are continuing more rapidly in their present day changes than are the changes of North and South America. The Pacific Ocean is today a great area of continuous changes. The changes in the earth's surface seem to be periodically in zones. From observations I have made over a number of years I firmly believe that the zones of

changes are in parallels running westward and eastward; that is to say, like the degrees of longitude. In other words, these parallel zones are at right angles to the equator. In each zone certain changes take place and then the changes move westward to the next zone and complete their work and then move on again westwardly to the next zone. The period of time occupied by each set of changes in each zone is now being studied from a theoretical point of view in order to check up with the periodical changes discovered in the earth's surface by geologists and scientists of various schools of investigation. If this theory is proved to be true and more evidence as convincing as that already found is discovered in the next few years, we will undoubtedly find that part of the Pacific Ocean is at the present time being affected by some of these changes and that these changes will gradually move westward across the continents of Asia and Australia and eventually reach Europe and Africa. The many recent earthquakes off the coast of Asia and Australia indicate that the zone of changes is gradually approaching these continents, and looking back over the history of the changes that have occurred in the Pacific Ocean we find that within the last few hundred years many changes have taken place in a zone that included the Philippine Islands and the thousands of islands north and south of them. This is probably the 20th or 30th time that such changes have taken place in the Pacific Ocean. In other words, the 20th or 30th time that the zones of changes have moved from the east to the west across the entire surface of the earth. The changes that take place are accompanied by earthquakes, terrific storms and cyclones, tidal waves and fires and extreme changes of temperature. There would seem to be also a movement of land along with the movement of the zones of change, and this would account for the continents of North and South America moving away from the continents of Europe and Africa after they had once been divided by water. It would account, also, for the continuous movement of these continents and for the rising of a new continent and its eventual submersion. Keeping in mind that more than half of North America was at one time beneath the water, as well as other parts of it far above the water, and that which was above is below and that which was below is now above, we can see how wonderfully the surface of the earth is being remade and modified. The gradual changes in climate, often blamed upon tidal waves, earthquakes, and Ocean currents, is simply another manifestation of the zone changes

referred to above. The changes in climate seem to follow in separate zones after the other changes have taken place or sometimes precede the other changes. There are those who remember many such changes in climate as, for instance, those who recall that in our own lifetime the climate along the north eastern States of the United States was entirely different than what it is today, with winters that began very early in the fall and were extremely cold and white with snow before Christmas, whereas today New York, for example, seldom experiences heavy snow storms until almost the beginning of spring or certainly not before February or March. If such a great change could take place in the lifetime of one generation we may well understand how such a change could have taken place as would have altered the eastern states from being completely covered with snow and ice throughout the entire year to moderate temperature and warm weather most of the year. Similar changes in climate are taking place along the Pacific coast at the present time, definitely modifying the temperature and improving the climate of northern and central California especially.

Many interesting geographical changes have been made through these zone effects and, of course, it is reasonable to say that the results of these changes are responsible for some of our national and international boundaries. The British Isles for instance are powerful in their present position solely as a result of the changes that have taken place in centuries gone by. Very often picturesque effects have resulted from such changes, such as the magnificent Niagara Falls and some of the wonderful falls in Southern Africa. Then, again, Manhattan Island in New York is an example of how nature can contribute to the fortune of man. Manhattan Island was at one time a part of the mainland and was suddenly cut off as though a huge knife had sliced off an edge of the mainland and pushed the slice away leaving a river in the space between. A study of the Palisades along the Hudson River would convince anyone that some terrific earthquake or volcano has split the solid rock of the mainland in almost a straight line, and the slice that was thus separated from the larger body dropped several hundred feet into the Ocean to form a peninsula floating in the Ocean at a lower level than the mainland. This peninsula finally broke loose from its upper connection and became an island, and is the most valuable island in the world.

The Great Salt Lake of Utah is a remnant of an enormous inland sea that covered hundreds of miles in each direction filling the valley that lies between the Rocky Mountains and the foot-hills of the Sierra Nevada range. The gradual evaporation and condensation of the water for many centuries is responsible for the saltiness of the present remaining water. Marks on the side of the rocks surrounding the present lake plainly show the original height of the surface of this sea and also show the gradual lowering of that level throughout many centuries.

All of the foregoing changes, representing only a fraction of those that might be pointed out, are far less surprising than one great change that has taken place on the Pacific coast of North America and which enables us to understand much about the disappearance of the continent of Lemuria and the migration of its race of people.

In order that this important change may be thoroughly understood the reader is urged to study the maps and illustrations presented in this book so that a proper registration of the pictorial effect may be made in the consciousness.

First of all we must take into consideration that the Pacific coast of the United States, as it now exists, represents the unity of two continents. Every student of geology and every expert in the study of the soil, the flora, the minerals and the relics of the races of man has come face to face with the many mysteries of the Pacific coast. The whole region of that coast from Vancouver to Lower California presents distinctive and unvarying differences of soil, flora, minerals and relics of nature and the races of man unlike anything found in the mid-west of the continent. In other words, the land lying between the eastern foothills of the Sierra Nevada mountains to the shore line along the Pacific Ocean, is distinctly different in all of its exhibits from the land that lies east of the Sierra Nevada foothills or the foothills of the Cascade range. Here, in this narrow strip of land, averaging about three hundred to five hundred miles in width and several thousand miles in length we have soil, products of the soil, along with relics of man, representing the oldest surface of the earth ever discovered by scientific investigation. Here the oldest living things known to man still

remain, such as giant redwood trees that are at least three thousand years old, with relics of other trees that lived and grew to great age many, many, thousands of years previously. In fact, the flora of this land was so abundant for so many thousands of years that the soil today is filled with and partly composed of the decayed flora that has accumulated for so many centuries that it constitutes the most fertile and the most productive soil in the world, and everything that will grow in soil anywhere in the world will grow in this soil prolifically and to unusual development. Immediately east of the Sierra Nevada Mountains and the Cascade Range the soil is entirely different and all of its products are different.

A close study covering a very long period, resulting in the finding of many exhibits of nature and the handicraft of man along with the remains of many species of animal life, proves conclusively that between the Sierra Nevada Mountains and the Cascade Range and the Rocky Mountains, or in other words in that great valley that lies between these two great ranges there was a body of water covering the soil and separating the mountain ranges for many centuries. In other words, if we imagine that the Gulf of California, which now separates Baja California from Mexico, was continued on northward through the valley of the Colorado River and up into the district of the Great Salt Lake and then on through Idaho, parts of Washington, and Montana into Canada, we would have a complete separation of the Pacific part of the continent from the mid-west as shown on a map herewith. There probably were many islands rising in this body of water at some period of the past, but ages ago this great Ocean separated the Rocky Mountains from the present coast range of the North American continent.

The coast range, the Sierras, the Cascades, and the present valleys of California, Oregon, and Washington, were part of another continent that rose in the Pacific Ocean west of the original continent of North America. This other continent of which we now have only a relic was the continent of Lemuria.

To understand what occurred we must realize that continents and islands have not only completely submerged in the centuries that have passed but in some instances have only partially submerged, and

large islands have dipped or tipped to one side or one end, while the other end has risen higher into the space above the water, just like a large piece of wood floating upon the surface of the water and being pushed downward on one end; there would be a tendency to have the opposite end rise slightly and especially so if at the time of the change that caused the dipping or tipping of the land there were such eruptions and earthquakes and other natural changes in the surface of the earth as would have pushed up one end while causing another end to dip into the water. From a study of many ancient maps and a study of deep sea explorations we find many parts of islands that are under water having every indication of one time being far above water, and we have the reverse condition in many places where study of the flora and soil and the remaining rocks show that in ages gone by they were covered with water for a long time and have only recently, comparatively speaking, risen from their watery cradle.

From every investigation that has been made and the closest study of the nature of the Pacific Ocean and its islands, and from the deep sea soundings and study of the flora of the Pacific Ocean, it is very evident that the continent of Lemuria occupied a great area and was probably a continent as large as the North American continent if not considerably larger. It unquestionably reached from 0 degrees Southern latitude to 40 or 50 northern latitude, and from a close proximity to North America to a close proximity to the continent of Africa. The New Zealand group of islands and all of the other thousands of large and small islands in the Pacific Ocean are mountain peak remnants of the submerged continent.

There are indications that the eastern shore of this ancient continent was close enough to the North American continent to permit of migration and some form of transportation long before Lemuria submerged. When the continent submerged, however, the extreme eastern edge of it which was very mountainous and very high above the sea level remained partly above water and the changes that took place during that cataclysm caused the continent of North America to move westwards until the mountain ranges which remained above water united with the rising land of the western part of the North American continent. This brought the great valley lying between the Rocky Mountain range and the Cascade and Sierra Ranges above sea

level and made one continuous piece of dry land except for the inland sea in the Salt Lake region.

We must bear in mind that most of the separated continents, as we look upon them in present day maps, are united beneath the water of the Ocean. A study of the flora of the Ocean would show, for instance, that the present Gulf of Mexico is merely a deep valley into which the waters of the Atlantic have rushed and that the continent of South America is connected with the continent of North America by much more land than the mere peninsula through which the Panama Canal has been cut. Undoubtedly the submerged continent of Lemuria is connected with part of the continent of North America beneath the Ocean.

We are inclined to think of rivers being formed by the flow of water down the mountain sides and eating away the soil in the mad rush to find an outlet to the Ocean or to a lake or some other form of dispersion, but until nature forms a valley or a continuously declining surface into which the draining water of the mountains can naturally flow a river cannot form itself. In some cases earthquakes and surface changes in mountainous regions have caused a spreading of the rocks creating a canyon in the midst of mountains into which the waters of the mountains will pour and form a river. The Grand Canyons of Colorado are unquestionably a living testimony to the cataclysmic changes that took place at the time the continent of Lemuria was submerged and the waters lying between the Rocky mountains and the Sierras and Cascade mountains were emptied into the Pacific to make room for the rising land of the present valleys and desert places.

By studying the maps in this book, therefore, one will see that the western portion of the United States is a remnant of the submerged continent of Lemuria and that here we have the oldest of living things, the oldest of cultivated soil, and the most numerous relics of the human race which had reached a higher state of cultural development and civilization than any other races of man. It will be interesting, therefore, to examine some of these wonderful exhibits of antiquity as discovered in California and other parts of western America and see the real proofs that Nature has preserved for us.

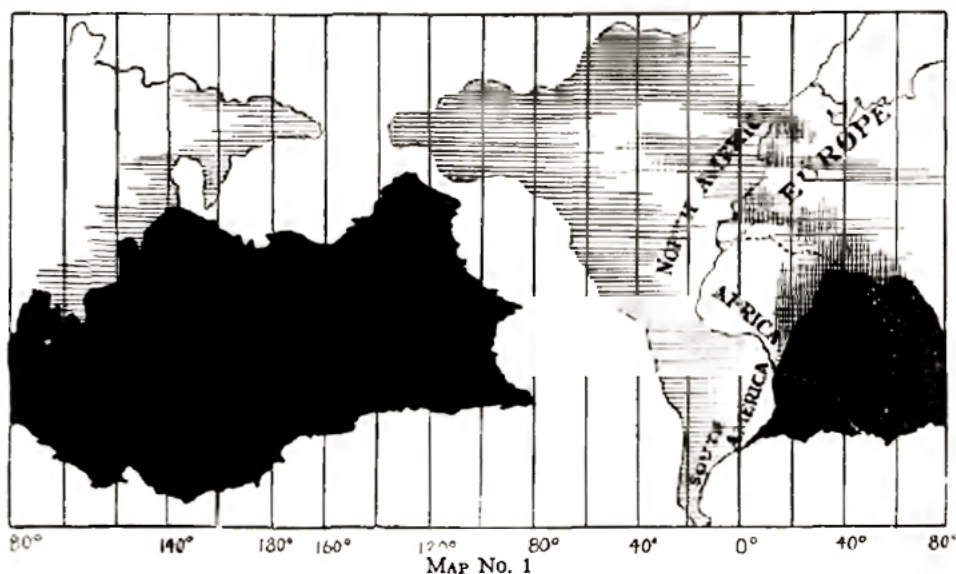

Chapter III

MYSTERIOUS FORCES OF THE UNIVERSE

IN ORDER TO understand some of the mighty changes that took place in the surface of the earth in ages gone by, I believe it well to present here, in very brief form, a panoramic picture or description of what occurred in the past two hundred thousand years.

I will not take the time nor space to quote authors or records for the statements made in this chapter, but will refer to these in a separate part of the book. Suffice it to say that where archaeological and geological records do not give some of these facts, ancient writings, carvings, and engravings on stone supply the deficiencies in an indisputable manner.

Beginning, then, at the earliest period of which we have any definite knowledge, we find that two hundred thousand years ago the surface of the earth was very much like that pictured in map No. 1. The large dark portions shown on this map constitute one unbroken continent reaching from the 20th degree of eastern longitude to the 80th degree of western longitude, and occupying a large population of the present Pacific Ocean and lapping over into Asia and Africa. This continent was the only habitable land sufficiently above water to have any considerable degree of vegetation. The shaded portion shown on the map, which represents the ancient continent of North and South America and the present continents of Asia and Africa, was either wholly submerged beneath the water or it was a form of swamp land known to the inhabitants of the continent of Lemuria but not available for habitations of any kind.

At least one hundred and fifty thousand years ago these partially submerged lands were known and described and sometimes pictured in maps, from which the map shown herewith has been taken. But, for many thousands of years, these swampy lands were unpopulated and considered as barren and useless. There must have been parts of this swampy land that were higher than others and, from some indications, we find that those portions, shaded a little darker than the others on the map, were known as *highlands*, but still of little value.

On the one continent shown in black on the map, all human civilization began, and, probably, here too, was the beginning of all creatures that lived out of or above the waters of the earth. This ancient continent, which is now called Lemuria, but which had other names in times that are past, was truly the *cradle of the human race* and the original Garden of Eden, if we look upon the ancient traditional story of the creation of man as symbolical of the actual facts. In all ancient records and among all tribes of people there is a trace of this same old story of the creation of man in a Garden of Eden, and like many others in the Old Testament of the present day Bible, these symbolical, traditional stories are evidences of great truths passed down from generation to generation of the human race.

For one hundred thousand years or more the cradle of civilization on the ancient continent of Lemuria rocked the newly born of many tribes which descended from the earliest created beings, and it may be said, in passing, that the earliest records indicate that man was created coincident with the creation of other living creatures, and that he was not a descendant from any lower specie of the animal kingdom, but always of human form and expression and with dominant control over the other creatures around him. Thus, the old Biblical story, representing the ancient traditions of the history of man, appear to be correct and indicate that God created man immediately after having created the other creatures over whom he was to have dominion.

Just about a hundred thousand years ago great changes began to take place on the surface, and below the surface, of the lands and waters of this earth. I shall not take time to speak of the facts about gas belts, volcanoes, and other causes of earthquakes, temblors and shocks, which periodically affected the surface of the earth in such a definite manner as to make it evident that the earth was passing through a regular and continuous program of evolutionary changes, for the science of archaeology and geology are replete with traditions and interesting descriptions of the causes and nature of such periodic changes. Suffice it to say, in this regard, that these changes appear to have been cyclic* (see appendix 1) and to have moved in waves like magnetic waves from the east toward the west, and each wave covered a narrow band of the earth's surface much like the bands of longitude shown on the maps herewith. These bands were evidently about forty to eighty degrees of longitude in width and extended from the north to the south poles. They were truly magnetic in effect for their results are indelibly recorded in the matter and elements that compose the hard and dry substances of the earth's surface and show that great heat of an electric and magnetic nature often instantaneously reduced the hardest materials to molten. Sometimes such changes occurred in two opposite parts of the earth's surface at the same time, but the changes were in progressive steps across the surface of the earth from east to west.

Our continents, as we know them today, therefore, have grown to what they are through the many changes that have taken place and they

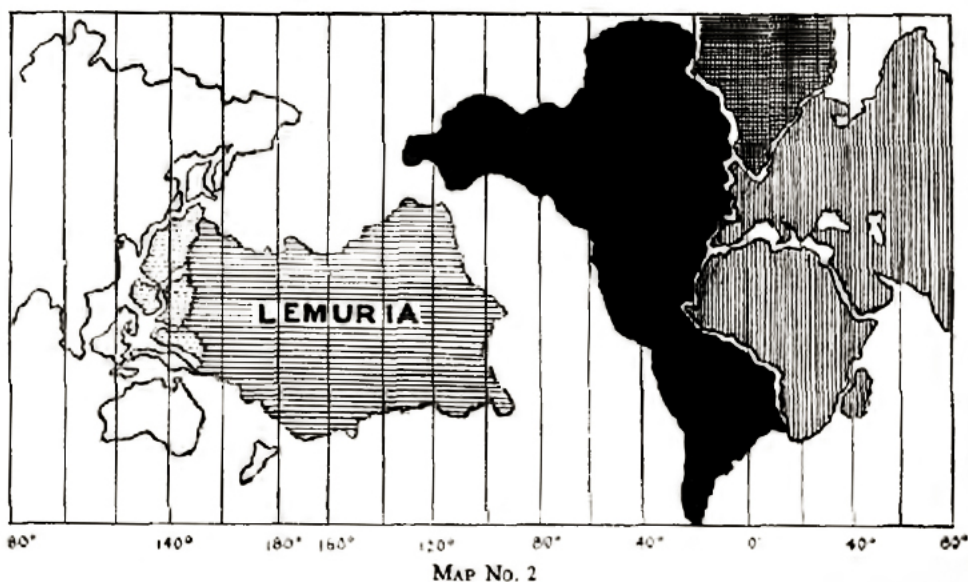

are continuing to grow and to change. Coast lines of all continents are varying from century to century and new islands rise and disappear in various parts of the world. Mountains have changed their height; valleys have been raised or lowered; seas have come and disappeared and even climatic conditions have changed in the western world, as well as in the eastern world.

It is interesting to note that in the processes of the development and growth of continents on the surface of this earth that all lands began as swampy marshes and either raised slowly in parts or were left higher through the waters receding in a gradual manner, or were pushed upwards in places by sudden submarine or other explosions; but, practically all of the continents in their early stages were more or less level, and high mountains were entirely unknown, for mountains are a very recent addition to all continents.

A hundred thousand years ago, when the present European and adjoining continental lands were beginning to be higher and dryer, there were very few high places that might be called hills and absolutely no mountains at all. Even Lemuria, the oldest of the continents and the one which was at this time well populated and thickly covered with vegetation, had little or no hills and absolutely no mountains.

About eighty-two thousand years ago the first of the definitely recorded series of magnetic waves began to move once more around the earth's circuit from east to west. The ones which had preceded these by several hundred thousand years, are not definitely recorded, but those which began about eighty-two thousand years ago affected civilization to such an extent and made such important changes in the lands that were highly civilized, that records regarding the changes were made. We find that the first and most important change that took place is that shown on map No. 2. First, beginning at about 140 degrees eastern longitude, the part of the continent of Lemuria that was connected with Asia and Africa began to sink slightly enough to be broken up into swampy islands, and other parts of it submerged leaving the continent of Lemuria a much smaller continent, located entirely in the Pacific Ocean and contacting some of the present day islands near the shore of Asia. As the magnetic waves and degree of

changes passed eastward, the continent of Europe rose higher and ceased to be a swamp-land and became high and dry desert wastes with a few inland seas, as shown on the map. Rivers were formed in the lowest of the sections of the lands and as the magnetic waves continued further eastward large rivers were formed which separated or divided parts of Europe into several continents. Map No. 2 shows the European continents shaded in a manner to separate them. The large black portion forming one entire continent from the north to the south, and reaching from about 20 degrees eastern longitude to 130 western longitude, is the land that was destined to become North and South America. This great continent, shown in black, rose very high, and rapidly became covered with heavy vegetation, while the rest of Europe, shown in shaded lines, and all of Africa, remained desert land, with most of Asia still swampy land.

The people of Lemuria now began to colonize, and the records indicate that about eighty thousand years ago they began to make pilgrimages to other lands, sending sufficient numbers in each pilgrimage to constitute a colony or community. The first experiments of this kind were directed toward Asia, but many pilgrimages were made both easterly and westerly.

About seventy-five thousand years ago the continent in black, shown on Map No. 2, began to drift and to separate itself from the rest of Europe and Africa. To those who may wonder whether it is possible for a continent to drift or not, let me say that there are many and sufficient proofs in the sciences of archaeology and geology to show that this is possible; not all land on the surface of the earth is a part of the submarine floor or body of the earth. Even when continents are attached to the body of the earth these continents can be moved and have moved through the changes in the surface of the earth, caused by earthquakes and cataclysms of various kinds. It appears from a careful study of the nature of the earth, as a sphere, that there must be internal regions of great space filled with great heat and gases. It is apparent that in some of the cataclysms that have taken place, land has been swallowed up by the vast internal spaces of the earth, as well as having submerged just beneath the surface of the water, for all of the continents that have disappeared, and all of the islands that have lowered beneath the surface of the water are not discoverable through deep sea exploration. As I shall point out later, the sinking of some of these continents has caused a lowering of the level of the ocean's surface. The sinking of a continent just beneath the surface of the Ocean would not cause the waters to materially drop in their height, inasmuch as the displacement of water by the sinking of the continent would make up for the absence of the continent in the surface of the water. Some continents, however, and many islands, have been drawn completely into the very bowels of the earth and have not displaced any of the water at all.

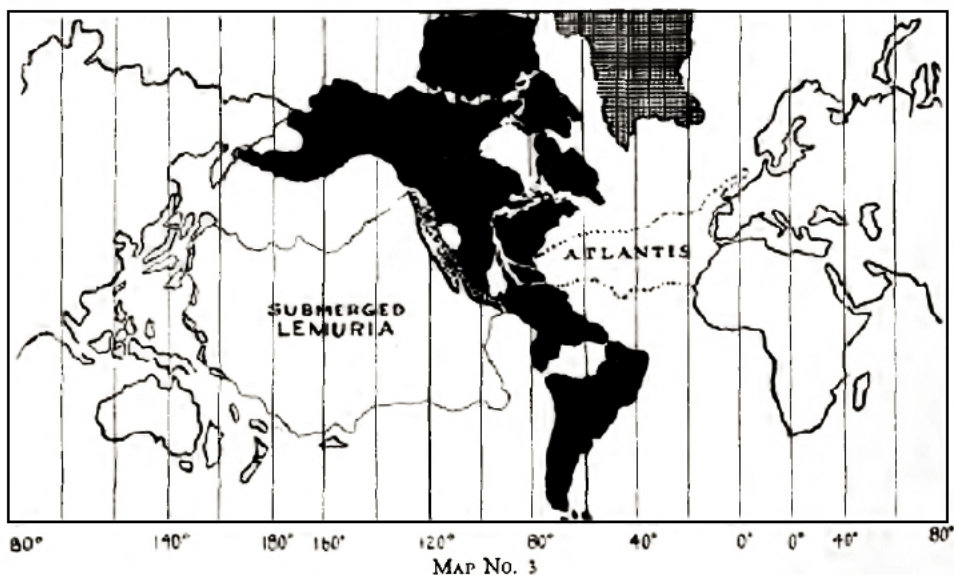

In keeping with the magnetic pulsations and earthquakes moving in an easterly direction around the earth, the continent that became North and South America moved westerly in a gradual manner, separating itself entirely from Europe, Africa, and Greenland, and at the same time leaving a unique coast-line for Europe and Africa. Students of geography have noticed for many years that the eastern shore line of North and South America was very similar to the western shore line of Greenland, Europe, and Africa, and that the pieces of continent could be fitted together much like the pieces of a cut-out puzzle, making due allowances for the ever continuing changes of shore lines. At the same time that these changes were taking place mountains were beginning

to grow in the form of small hills, and the people of Lemuria were continuing their colonizations in other lands.

About fifty thousand years ago other very important changes were noted by those who made any official records or permanent writings of any kind. We find the surface of the earth much like that shown in Map No. 3. The continents of North and South America had moved westerly and had gone as far as they could go, inasmuch as the western shore of North America had reached and contacted the easterly shore of Lemuria, and that part now known as Alaska had reached and was contacting the easterly limits of Asia. At the same time we find that a new continent was beginning to rise in the Atlantic, and swamp lands appeared there, contacting and uniting North America with the shore of Europe and Africa.

The reader should keep in mind that it does not take a very great cataclysm to make many important changes in regard to continents and islands. Only recently it was determined by deep sea soundings and under sea explorations that if the entire land surface of the earth should be caused to raise above four thousand feet, or a little less than a mile, every continent on the face of the earth would be connected by land above water. In other words, when another great cataclysm occurs, and it should be in the nature of explosions that would raise the land only four thousand feet, all of the continents of the world would be in touch with each other above the surface of the water and thereby afford dry land communication and transportation. Think what a mighty change in the world would result from this! And, it may be said in passing, a cataclysm that would raise or lower the surface of continents or lands only four or five thousand feet would be a small cataclysm, indeed, compared to those that have taken place in the past. Therefore, we should not be surprised to learn that about fifty thousand years ago this new continent suddenly appeared above the surface of the water. Whether it had been in submarine existence at the time the North and South American continent rode over it in its westerly journey, or whether it was pushed entirely from the bowels of the earth upward for many miles cannot be determined, since little of it remains to this day.

Along with the rising of this continent of Atlantis the continent of South and North America also rose to a considerable height and mountains rose higher. Where marshy lands were thus enclosed by highlands deep seas were formed, and lakes and rivers. By studying map No. 3 the reader will note that the bay of Hudson was at one time a great sea connected with the St. Lawrence River and the Lakes, and that the Mississippi Valley had a very wide river connecting with an inland sea or lake in the Colorado Valley, and that between the Sierra Nevada Mountains and the Rocky Mountains there was another great inland sea covering what is now known as the State of Utah. Another sea was formed in South America in the valley of the Amazon. In fact, records show that boats from Lemuria and from the west were able to sail into this sea and out again into the Atlantic Ocean, and that international communication and pilgrimages from east to west were made by this route. This would have made the lower part of South America a separate continent, as shown on the map.

Greenland was caught midway in its westerly movement and remained fixed where it is today, although the northern part of North America was not broken up into islands but formed several large continents.

The most important consideration, however, is to be given to the western coast of North America. As the continent of North America moved westward it joined with the eastern high coast of Lemuria, which was the first part of Lemuria to have its hills rise to great heights and become real mountains. Later on when the continent of Lemuria was submerged this high portion of Lemuria, joining the western part of North America, remained above the water and constitutes the Pacific coast of North America, including the States of Washington, Oregon, all of California, a small part of Nevada, Lower California, and parts of Arizona and Mexico. The western end of Lemuria, near the coast of Asia, was beginning to sink and form islands, and here was the beginning of the formation of the new or separate continent of Australia and the islands east and north of it. In Europe mountains were beginning to rise and in Lemuria itself civilization was reaching a great height of development and the people were attaining mastership in a sense not even comprehended by us today; for their civilization was now fully a hundred and fifty thousand years old, whereas our present civilization is still a child in comparison.

Approximately twenty-five thousand years ago, further important changes took place on the surface of the earth. The continent of Atlantis rose higher and mountains began to form on it, especially in the eastern section, and mountains were forming rapidly in Europe in and around the Mediterranean Sea or north of it, and across the French and Spanish peninsula. The shore line of Europe and Africa was gradually changing through the disappearance of islands and the washing away of swamp-lands along its edges, leaving the continent of Atlantis separated from both Europe and Africa.

North and South America were also passing through changes, for the land was rising in South America to form mountains, and new mountains forming the Rocky Mountain range were rising, narrowing some of the seas to a smaller area, closing the rivers to a narrow stream, and closing the Amazon sea in South America to a river in a dry valley. As the western coast of Atlantis began to change and separate itself from North America, islands were formed and parts of the continent at Bering Strait were seriously affected, as well as the small continents north of Canada, now composed of islands.

Lemuria itself was continuing to sink in the western portion, forcing all of the people to move to parts of Asia, Australia, and the islands of the Pacific, or to the eastern part of the continent bordering upon the shores of North and South America. The continent of Atlantis had become peopled with pilgrims and colonists from Lemuria, who had crossed North and South America. Many parts of South America and many parts of North America were also peopled by tribes descended from the early pilgrims from Lemuria.

Approximately eighteen thousand years ago Atlantis was at its height in civilization. The eastern part of its continent now had enormous mountains and toward the west there were civilized areas covered with mountains rising to great heights. The people from Lemuria had reached Africa in their westerly journeys and had settled along the shores of the Red Sea and the Nile River, which was a very wide river feeding a number of lakes and inland seas and thereby affording excellent vegetation and the conveniences and necessities for civilization. This was the beginning of Egyptian civilization.

Three thousand years later, or approximately fifteen thousand years ago, another great cataclysm occurred which greatly changed the Southern part of North America. The people from Lemuria had settled in and around the rivers and great seas in what is now known as Texas and parts of Mexico and Yucatan. It was natural for these colonists to establish communities where water and vegetation were most abundant and where there would naturally be highlands or mountains acting as watersheds and affording the new product called stone and marble, from which homes could be constructed or into which caves or protected places could be carved or cut. But the great cataclysm of fifteen thousand years ago suddenly came upon the continent of Atlantis and caused the western part of it to sink and at the same time the great valley just north of Mexico and through which the great river known as the Mississippi flowed submerged, destroying almost all of the civilization centered in that part of North America. These people were known under the general name of Mayas, which was a general term given to all of the Lemurians and some of the Atlanteans who had entered that valley and built temples and large cities. The result of this submerging of land formed the present Gulf of Mexico. The

peninsula of Florida did not exist at this time, but a few mountain peaks rose where the peninsula of Florida now is and the islands of

Cuba, Porto Rico, and the other islands of the West Indies group were left as remnants of the sinking land. The newly formed mountains of North America that reached down to South America prevented North and South America from becoming separated and formed the present Isthmus, while that part of the old valley that was the highest, because of its great mountains, became the present land of Yucatan, while the rising land that forced the inland sea to disappear became part of the states of Texas, Arizona, and surrounding territory.

The civilization in Atlantis was at its height at this time and the records show that Queen Moo was ruling over the people that had survived and had joined those who lived in the mountains of the Yucatan.

Three thousand years later, or approximately twelve thousand years ago, a sudden and more or less unexpected cataclysm caused the entire continent of Atlantis to sink and become submerged in less than twelve years. The eastern high points of Atlantis were all that remained above water when the cataclysm was ended and these mountain tops or mountain peaks now form the islands known as the Azores, the Canaries, Madeira and others. Even in Europe many great changes took place, such as the sinking of the ancient civilization of Athens and practically destroying all living Athenians. The continent of Lemuria had completely disappeared and only its rocky mountain eastern shore line remained and was now a definite part of the continent of North America. The inland sea that once existed between the Rocky Mountains and the Sierra Nevada Mountains in the Nevada basin, was now beginning to dry up and disappear, gradually reducing to a small sea. The present small Salt Lake of Utah is the last remnant of that great sea, and this is gradually disappearing. Some day, fifty thousand years from now, or even less, students of the history of the earth's surface will read with much doubt the story of the existence of a lake in the heart of Utah, just as many of you are reading with considerable doubt the facts regarding the inland seas of our present continents and the disappearance of continents of ancient times. There was also a

small inland sea lying between the Coast Range and the Sierra Nevada Mountain range in California. This sea was in the northern part of California, lying in what is now the Santa Clara Valley and being a part of the present San Francisco Bay. Another small inland sea existed in the region of Puget Sound, for that was the northern extremity of the old land of Lemuria. In many parts of the present valley of Santa Clara, known for its very old soil and its wonderful relics of antiquity, sea shells of various kinds are found embedded in lands that are now high above sea level. Of other changes in Europe and other parts of the world we are not concerned in this book.

Lemuria had been torn to pieces and her great civilization submerged and lost, except so far as her colonies throughout the world were concerned. When the continent of Lemuria sank, it caused the water of the Pacific Ocean to recede on all coastlines and to change the shore-lines of all continents, leaving them higher and allowing many islands to appear that had not been visible before. When Atlantis sank the great hole left in the Ocean was immediately filled with an inrush of Ocean water which likewise changed the shore line of North America, allowing islands to be formed and some lands to be sliced off, such as a part of New York State being cut off and dropped into the Ocean forming the present Hudson River and the island of Manhattan, and that which is known as Long Island. The water of the St. Lawrence River and the Great Lakes and the Hudson Bay were drawn into the Atlantic Ocean at the same time, thus narrowing the rivers and making smaller the lakes and bays. We are not concerned, however, with the many changes that occurred throughout the rest of the world but with the results from the submergence of Lemuria, approximately twelve thousand years ago.

What became of her people? What races of mankind descended from this earliest race on earth? To what heights of civilization did she attain? What did she accomplish in her thousands of years of development and progress? Are there any remnants of her strange people living today? And what is the great mystery of California and the Pacific Coast of North America? These are the questions that interest thinking people today, and these are the questions that I will attempt to answer in the following pages.

Chapter IV

THE LAND AND THE LIVING

NATURALLY, ONE OF the first questions that is asked by every person who hears the story of the lost Continent of Lemuria is in regard to the land and the living thereon. What was the country like? How did the people live? And what did they do? The student of arcane literature invariably asks another question, "Did the Lemurians attain any special degree of intellectual, mental, or psychic development, as is sometimes reported?"

Regarding the nature of the country itself we have certain evidence from archaeological researches and undeniable testimonies in the form of relics. The country as a continent was probably not as mountainous as the western part of the United States except along the eastern shore, which is now a part of the State of California. The central part of the continent was more or less level with an occasional mountain peak rising to perhaps two to four thousand feet. These peaks were unquestionably formed through volcanic eruptions and undoubtedly the entire continent was badly shaken at times by the eruption of the many volcanoes which dotted every part of the continent. In the extreme western part of the continent there were some mountain ridges whose high peaks constitute the many islands near Asia.

The vegetation on the continent was undoubtedly of an extremely tropical nature. Viewing the continent from our present day considerations we would say that most of it was in the tropical zone but viewing it from the time of its existence we can say that all of it was of a tropical nature since most of it, if not all, was within an extremely

warm belt. Those who have made a study of nature in its relation to the zones of temperature know that in tropical countries all living things of the vegetable kingdom grow to an extremely large size and in the animal kingdom all species lower than man in intellect and spiritual development tend to grow to extreme size. From specimens that have been discovered in various islands of the Pacific, long encrusted in the soil and preserved for us through many centuries, we see that even the smallest insects, as we judge them today, were of an enormous size in Lemuria. That which we call the ant today was so large that it was at least two inches in length in Lemuria, and the bug generally known as the roach, for instance, was from four to five inches in length, with large wings capable of flying a very long distance. All other animals grew to enormous size proportionately to those I have mentioned. The largest among the animals was that belonging to the class Dinosauria. These creatures grew to be over a hundred feet in length and sometimes much longer and they were undoubtedly the greatest destroyers of human life, animal life, and vegetation. Their strange grumbling, made by a form of gurgling in the throat, which always preceded one of their wild rampages in search of flesh, or the crackling of vegetation as their huge bulky forms moved through the high growth of grass and wild bushes, were sounds for which the natives constantly listened and in which they lived in dread.

Birds were especially prolific and of many varieties and it is believed by some of the best authorities that the eagles, especially that peculiar genus, the bald eagle found in the western part of North America is a remaining descendant of one of the huge birds that had its natural habitat in Lemuria, for it is found in some relics carved as an emblem, and in some pieces of stone parts of its wings, or the bony structure, has been embedded, giving us an excellent idea of its size and power.

Snakes and serpents of various kinds were also quite common and even though up to very modern times the belief in sea-serpents has been smiled upon by scientists who took the position that the sea-serpent was a mythical creature never having had real existence, it is now known that such creatures actually existed and that the ancient writings referring to them and the pictures carved by the Lemurians and their descendants were based upon actual facts. Only very recently,

or within the year 1931, the first fairly complete skeleton of such a sea-serpent was found on American soil in the State of Texas where it was uncovered by excavators who had dug into virgin soil for the first time. Scientists who have examined the skeleton agree that the remains are many thousands of years old and that this gigantic Plesiosaurus flipped through the waters of the Pacific Ocean at the time that the Pacific Ocean reached inland to the district of Texas before the continent of North America was completely formed.

THE PLESIOSAURUS

From specially made photographs prepared for my study and examination I am convinced that the measurement of seventy-five feet for the length of the animal is correct. Its head is over eighteen inches wide and its neck over twenty-five feet long. Such creatures were evidently very frequently seen around the shores of Lemuria and were another source of terror to the inhabitants of the continent.

Perhaps the most interesting of the various species of animals that inhabited the continent of Lemuria and that which was the most prolific was that known as the *Lemurs* which constituted the class in the animal kingdom known as the Lemuroidea. Briefly and in non-technical language one may say that this class of creatures was much like that of the monkey or ape but with certain distinct differences which scientists have easily recognized even from the most fragmentary of specimens of skeletons. These creatures were of various sizes and in some parts of Lemuria, especially in the more tropical sections, grew to the size of the human body, or nearly six feet in height when standing up-right. With the average Lemur the tail was very long but other characteristics of well formed fingers and toes and well shaped heads have been responsible for an error being made in the judgment of those who found the earliest specimens of the skeleton remains of the Lemurs, and who thought that these fragments were parts

of the skeletons of the humans who lived on Lemuria. This led to the conclusion that the Lemurians were an undeveloped sub-race of man. Many strange stories have appeared in various books regarding the native Lemurians and their primitive physical form and undeveloped human characteristics.

The strange belief that man evolved from a continuous and progressive development of the Lemuroidea and that the eventual human Lemurian was a descendant of the ape-like Lemurs is also unfounded inasmuch as excavations and discoveries made within the past centuries have shown that the Lemurians as a race of man were highly developed in every physical and mental sense while the ape-like creatures were still true to their primitive form. There is nothing to indicate that the Lemurians were a primitive race except in the thousands, or perhaps millions, of years preceding the building up of the continent of Lemuria as a highly civilized nation, and there is no evidence that warrants the belief that the Lemurians were descendants from any lower specie of the animal kingdom. In fact this belief is abhorrent to every profound student of the Lemurian civilization.

It may be interesting to note in passing that the name of Lemuria as a name for the lost continent was arbitrarily adopted by scientists many years ago because of their knowledge regarding the existence of the Lemuroidea in the islands of the Pacific and the lands surrounding the Pacific and because it was believed that this class of creatures belonging to the primates had its original habitation on the continent that is now beneath the waters of the Pacific. The continent, however, is referred to in ancient writings as the motherland of Mu.

Regarding the people themselves, we have evidence that indicates that they were a little above the average of today, perhaps six feet in height and weighing around one hundred and sixty to two hundred pounds. They were of a strange appearance, however, with many unusual features. First of all they were not given to the eating of much meat, especially that of large or wild animals and when they indulged in flesh at all they ate that of small animals and fish. They lived principally upon vegetables and fruit and had discovered or evolved a method of baking many forms of food from vegetables made in the same way as our bread of today is made from wheat or corn.

This method of eating had a considerable effect upon their manner of living, for, in the first place it did away with every invention or process for the hunting or capture of large animals or wild animals. This would naturally eliminate also the effects of hunting which have had a considerable influence upon the culture and modes of living of other races. Not being hunters they did not venture into wild parts of the country and did not become discoverers of new cities or new lands except as other forms of necessity might take them for short distances away from home sites or scientific exploration warranted. In fact new communities were established only as the old ones grew larger.

After the first great catastrophe that eliminated more than half of the original continent and left only a small continent in the center of the present Pacific Ocean the highest culture among the people of Lemuria developed along the eastern shore on the high mountain slopes facing the Pacific Ocean. Trade was exchanged between this shore and points of the new continent now known as South America. North America at this time was so swampy or covered with water that the raised parts, or those sufficiently above water to permit of habitations, were far to the south or north.

South America had afforded the opportunity for the establishment of cities and communities originated by those of Atlantis who had gone westward from the Yucatan in the time of their great catastrophe and there was a continuous exchange and communication between the Lemurian and the country of South America, especially the northern part.

While speaking of this exchange and trade it may be interesting to note one of the high developments and scientific achievements of the Lemurians. They did not use steam ships as we know them today although they did use the wind as one means of propelling or driving some of their vessels in certain directions. According to some carvings and writings found in very old records and buried specimens, they had found among the volcanic regions certain stones that had been thrown to the surface of the earth and which had a peculiar activity which affected water. When such a stone was placed in a large body of water it pushed or shoved water away from it in one direction with a

very peculiar repulsion. This stone was used by attaching it to the rear part of a raft between two extended arms so that the stone was held just slightly beneath the surface of the water. The stone was turned in such a manner that the repulsion of water was toward the rear. Since the water could not move away from the stone, the stone was forced forward and this pushed the raft in a forward direction. Whether there was any considerable speed to this mode of travel or not we cannot judge from our present day comparisons, but evidently it saved considerable labor and was sufficiently efficient to enable rafts and large enclosed vessels containing from ten to twenty men and a large store of supplies to make long journeys with safety. A form of steam propelling was known and used in many mechanical ways. Wind mills were also used in manufacturing purposes and there seems to have been another stone having some sort of magnetic repulsion, radiating an energy from it that was used to turn wheels that had large pieces of iron or some similar metal attached to its surface.

Light was also produced in homes or enclosures by means of some stone or mineral that was like unto radio-active ones discovered today, but which gave a very brilliant light continuously. Many rare minerals and unusual stones were used by the Lemurians in various purposes little understood by us since we have not yet discovered duplicates of them and from the occasional references to them, in writings or carvings, it is difficult to appreciate their nature and the purposes to which they were put. Evidently the continent in most parts was rich in minerals almost unknown to us today or else the Lemurians were so advanced in scientific knowledge that they were able to use many of the minerals now known to us for purposes unsuspected by us.

A large portion of the continent was constantly in a steaming condition due to the large areas of boiling lava. In this respect the surface of the continent in many places must have been like that seen near Naples with the hot boiling mud bubbling from the fires beneath and giving off steam continuously. I have walked among these beds of mud and studied the nature of the soil beneath and around such areas and have tried to picture the Lemurian continent with its active volcanoes beneath it and the other active ones rising high above the surface of the table lands, and it was easy to understand how such an

continent might become destroyed and so shaken that the water of the Ocean would rush in over it and cause it to sink and disappear. Undoubtedly the large areas of boiling mud were lower than sea level and vegetation covered only those portions of the continent which were above sea level and along the shore of Oceans and rivers. This, however, would have permitted vegetation to have covered at least 75% of the continent.

Scientists have generally agreed in believing that the continent was four or five million years old at the time of its disappearance and this refers to the portion that remained in the Pacific after the first division and general floods which submerged the half of the continent lying east of Australia. Those scientists who have studied the evidence of the flora of Lemuria point out that it included principally coniferous and giant ferns while its fauna included many specimens of unusual scientific interest.

Whatever structures or buildings were erected by the Lemurians in the latter days of their civilization were unquestionably composed of stones of an extremely hard and durable nature much like granite and marble. Relics of these structures show not only the use of unusually hard stone but the use of a form of cement or mud for the joining of the stones and filling in of spaces between them that has stood the destructive forces of time, tide, and storm. The strange nature of the stone is one of the chief sources of evidence regarding the dispersement of the Lemurians before and after the great catastrophe. Structures have been unearthed in parts of South America bordering the Pacific Ocean, along the shores of Baja California and in certain parts of California and even in parts of Nevada, composed of this same hard stone, despite the fact that nowhere in the present excavations of North American soil have such stones been found in a natural state. This, along with the discovery of many unusual carvings, strange pieces of wood, specimens of unusual pottery and bead work and agricultural implements typical only of some of the Islands of the Pacific Ocean which are remnants of the lost Lemuria, give conclusive proof of the fact that the ancient Lemurians were in contact and communication with the shores of North America before the submergence of the continent.

The homes and other buildings were generally built in the form of rectangular walls averaging about ten to eleven feet in height over which wood and leaves and a coating of mud formed a roof. The roof extended from four to six feet beyond the walls on the outside thereby affording some shade around each building and keeping the interior cool. The extreme heat and the brilliancy of the sun was evidently one of the problems which the Lemurians had to contend with for there are many other indications that they suffered greatly from such sun heat on a continent where the very soil was warm from great fires and beds of lava beneath. There were numerous rivers and cooling streams due to the many small hills forming many valleys, which was most fortunate, and this, coupled with the fact that there were frequent heavy rains throughout the year, made it possible for the Lemurians to endure the heat and cultivate the soil. Larger structures were much like the small ones except in the height of the walls, and were composed of separated units with covered hall ways between them or perhaps long passage ways so that persons could go from one unit to another without going out into the heat of the sun. Other homes were carved into the sides of great rocks or mountains.

Most of the agricultural work, which was the principal employment of the populace, was done early in the morning or late in the afternoons because of the heat of the sun. Pottery and the making of ornaments seemed to be the chief manufacturing industry and this would indicate that there was a considerable exchange of these things between various sections of Lemuria and various other countries or continents. It is very possible that that part of Lemuria which disappeared first may have been considerably different in its soil and mineral elements and that there was a large exchange of the products of one part of the country with the products of another part sufficient to have warranted the Lemurians in the far eastern part devoting most of their time to the manufacture of articles of adornment, decoration, worship and mechanical service.

Wood was used to a great extent in the construction of buildings and in the manufacture of useful articles. The eucalyptus tree and the primitive form of the giant redwood tree were the principal ones to be found in Lemuria. The indications are that the eucalyptus was most

prolific if not exclusively found in that part of Lemuria which was the first to submerge but a portion of which now constitutes the countries of Australia and New Zealand. However, young eucalyptus trees were transplanted in the far eastern parts of the continent and even brought to portions of the North American continent, and redwoods seemed to grow naturally along the eastern portion of the continent which now forms a part of the continent of North America. Thus we find in California the giant redwood trees acknowledged to be the oldest living things on the face of the earth, for some of these trees rising hundreds of feet into the sky are thousands of years old. But of this I will speak later.

Some very large buildings were built by the Lemurians undoubtedly as temples or places of worship and scientific study. Domes or curved roofs were quite frequent in connection with these larger structures and wherever a building was constructed for religious purposes the main entrance was a portal with the two crescent curves at the top symbolic of the sacred curve which was the basis of their religious-scientific doctrines.

There apparently was no attempt to build their homes close together or create congested communities although there was a very definite community life with definite precincts or districts for homes, temple buildings, and places of manufacture and agriculture. Streets and highways were formed by clearing away all vegetation and leveling a broad path and then covering this with a thick layer of powdered stone that was much like chalk stone in appearance but which when wet formed a hard united mass much like cement. In other places the wet, powdered, stone was merely sprinkled on the path and apparently no vegetation could grow through it and, therefore, such paths were kept definitely open and well defined. Transportation was principally by small boats on the many rivers for all the communities were located along the shores of rivers, but various animals were used to draw or pull what we might call sleighs, along the smooth highways while other creatures were used for individual riding. Many pictures crudely drawn show the native Lemurians riding on the backs of animals which appear to be tall and slender much like the camel, but of an entirely different form. As we shall see later on, there was not the need for

personal contact and transportation in business and social matters that is common today and only those engaged in the transportation of merchandise or products of some kind felt it necessary to leave their communities and go to any great distance.

Gold and silver were plentiful as were other rare materials but these were used purely for ornamental purposes and not for exchange or any form of compensation.

All in all the Lemurians had a very difficult time because of the climate, the nature of the soil, and the continuous dread of unexpected volcanic eruptions, earthquakes, tidal waves, and attacks from hordes of wild creatures that would descend from the mountains or come from the plains or rise from the rivers and Ocean waters suddenly to attack a community. Despite all of these handicaps and difficulties, however, we find that the Lemurians achieved a great scientific comprehension of natural laws and at the same time developed inwardly certain human abilities to a degree much greater and higher than we have attained today, with all of our boasted advancement in civilization.

Chapter V

THE MENTAL AND PSYCHIC DEVELOPMENT OF THE LEMURIANS

ASIDE FROM WHAT we know of the descendants of the Lemurians and through a study of them discover the high degree of development achieved by their ancestors, there are many ancient records which refer to, and fairly accurately describe, the mental and spiritual development of the people at the time that Lemuria was in the height of its power. Ever must we keep in mind the fact that the civilization of Lemuria had developed through aeons of time. Europe may speak of its long periods of culture, and Rome and Athens may speak of the great heritage which was theirs, and even Egypt may boast of a long period of intellectual development, while we in America rejoice in the fact that there are some centuries of culture and development back of our present generation; but when Lemuria was in the height of her power she could boast of thousands of centuries of development.

In addition to the long period of time through which the Lemurians had learned the lessons of life and attained mastership through perseverance, industry, study and cooperation with the highest laws, they had the advantage of being free from the contaminating influence of false knowledge and a material conception of life.

Speaking in a purely spiritual and mystical sense we find that today those in Europe or the Western world who are seeking to comprehend the higher laws and principles of life deplore the fact that so much

which we have learned in the past century or two must be unlearned in order that the intellectual consciousness of man may be cleared and purged and made ready to understand and inwardly comprehend the higher laws and principles. It is quite commonplace for students of these subjects to say that they wished they had come in contact with the real truths of life in their childhood when the mind was open, unbiased, and unprejudiced, and when the eyes had not seen so much through colored glasses and the ears had not heard so much through false trumpets. It is a fact that we are born with not only an inheritance of misunderstandings and false conceptions, but our environment and education from the hour of birth onward are fraught with the pressure and influence of false ideas and untruths. We struggle to separate the gross from the pure, to find truth amid so much falsehood, and to adjust ourselves to a correct understanding. Realize, then, what it meant to the Lemurians to have been free of this contaminating influence.

We admit that if a child born today, could be separated from the present influences of misconception and taken to a distant point and raised and trained in a purely natural spiritual way, with no contact other than that which is consistent with the understanding of higher laws, that such a child would become a great master so far as the highest principles of life are concerned. This was the situation with the Lemurians.

The Lemurians were not surrounded, right from the very earliest days, with any established conceptions of the universe or of the natural laws operating in the universe, and they had no established opinions or orthodox doctrines of life prescribed for them by any special group of scientists or educators, for all knowledge was obtained through the individual observation of Nature at work.

I do not mean to intimate that the Lemurians had no schools or institutions of scientific learning, for these are ample evidence to show that they did have these in abundance and operating with a system that would be most desirable today; but these institutions taught only that which was demonstrable, which had been proved true, and which the students could demonstrate to themselves. We find in all of the writings and records of the ancients that even thousands of years after

Lemuria had attained its greatness in scientific learning and spiritual development the people had not fallen into the error of creating theoretical explanations and establishing hypothetical conditions to explain the phenomena of life. Our scientific schools today are filled with this sort of mental food and it constitutes one of the greater errors of our education.

The Lemurians and their descendants despised guess work and speculation in their learning. They came to realize that there was one dependable source of positive knowledge and this was the Cosmic Mind. It seemed to be common practice with them to resort to concentration and meditation when in doubt, or in search of new knowledge, just as we, today, turn almost automatically toward some printed book, the newspapers, or some specialist in human form, and accept the dictums, the principles, the theories, the ideas, the Personal conceptions and beliefs of these supposed authorities, without question. It is for this reason that in all of the later developments of their sacred literature, which constituted their real books of knowledge, they placed great emphasis upon the value of meditation and concentration, and we should not be surprised, therefore, to find that they became mighty and powerful in their ability to attune with the Cosmic Mind and in their further ability to comprehend, understand, and interpret the impressions they received. From these practices developed all of the sacred ritualistic practices of the various religions that developed among their tribes or descendants who went into other lands and established what later historians called the various religious rites and beliefs.

We may wonder whence came this great faith in the Cosmic Mind and the universal ability to receive information in this manner. Tracing back their own comments in this regard, we find that one very natural faculty which had developed in them was responsible for this great faith and trust in the Cosmic Mind. In order to make plain what this faculty was I must say something about the personal, physical, and mental, as well as spiritual, characteristics of the beings who constituted the Lemurian race.

If I could select a typical Lemurian, truly representative of those of his race who lived in Lemuria at the time of its greatest advancement in civilization, and place this individual before you as an exhibit, you would look upon a creature peculiar in many particulars. The first and most outstanding difference that you would notice between the typical Lemurian of ancient times and the typical man or woman of today, would be the fact that the head was very much larger in proportion to the body than we are accustomed to find, and we would notice that the forehead was very high, or that the distance between the eyebrows and the hair on the top of the head was much greater than in the average individual of today. In fact, the average forehead of the Lemurians must have been about six to seven inches in height. In the center of this forehead, about an inch and a half above the bridge of the nose, there was a large protrusion much like the size and shape of a walnut. We would look upon this sort of growth in the center of the forehead today, as a disfigurement, but with them it was perfectly natural, and such a protrusion was as proper to them as is the protrusion of our nose, or of the chin, or the high cheek bones. This protrusion, however, was composed of a soft mass of matter over which the outer cuticle was drawn tightly and the cuticle itself was of a delicate, soft nature and color like the skin that is underneath our eyes.

In height, these Lemurians were a little above the average of today, with a great many attaining a height of almost seven feet. The arms were much larger, longer, and well-developed in muscle, while the limbs were not so long but fairly well-developed. The hair on the top of the head was short, not through any style of dressing or training, and it grew very lightly and was of a very fine texture. The hair on the back of the head, however, grew very long, and was often braided or arranged in very fancy forms across the shoulders or down the back. If there was any one particular form of ornamentation it was in connection with dressing this long hair, and individual taste was given a wide scope in this regard, if we are to judge from pictures carved in stone or drawn or painted upon leather.

The necks supporting the heads were long and slender and usually a decorative collar formed of beads or stones was the only fancy addition to the adornment of the body. The feet and hands were large and every

joint of the fingers and toes was easily moved and controlled, thereby developing them to a greater degree than we find in the present day races of man.

The women were somewhat shorter than the men and somewhat more corpulent, but their features were far more refined than those of the men. Very few of the men had any hair upon the face and the women protected their faces from the heat of the sun and from the effects of the weather by wearing a veil made of some vegetable fiber through which air passed freely, but the protection against sunburn was evidently sufficient to result in a fairer complexion for the women, throughout many generations, than was found among the men. The ears were much smaller than we find them today but the nostrils were largely developed and the nose was more broad and flattened on the face than we find among the people of the western world of the present period. The eyes were large and very clear, and gave an impression of a piercing gaze and keenness of perception that must have been very impressive. The skin was not of dark complexion but merely tanned, while the hair was very dark and the eyes were brown. The teeth were very small but uniformly even and regular.

The protrusion in the center of the forehead was a result of the sustained development of a faculty of the human body that has gradually disappeared since Lemuria submerged and the races of its people were dispersed throughout the world. I trust that my readers will not compare this protrusion of the forehead with the fantastic stories of Cyclops, but the story of Cyclops is based upon what was an actual fact with the people of Lemuria, for, although this protrusion in the forehead was not an organ of sight of a limited nature nor was it a "third eye" in a limited sense, it did constitute an organ of sense that was equivalent to an eye, and an ear, and a nose, and any other faculty that we now possess for the reception of impressions. It was commonplace for the Lemurian to close his two physical eyes and to stand still at any moment of his daily activities and focalize his consciousness upon the center of his forehead and receive an impression that might have been translated into one of sight or smell, or hearing, or feeling, or tasting. In fact, it was as common for the Lemurians to suddenly turn their concentrated attention to this organ for some impression, as it is for

us today to stop in our conversation or our activities, and concentrate our attention upon our hearing in order to hear some distant or faint sound, or concentrate our eyes upon something we wish to see clearly, or concentrate our sense of smell, or feeling, for a moment in order to analyze some impression. The Lemurian, however, used this special faculty not for local impressions or for purely intimate matters, but for long-distance impressions, for it is recorded that through the use of this faculty he could see or sense by smell or sound, some dangerous animal at a very great distance. In fact, he developed eventually, the ability to communicate with animals in their own language or their own manner of communication, through attuning this sixth sense with their own.

We should not be surprised to learn, therefore, that the art of mental telepathy or the mental exchange of ideas and impressions at unlimited distances became a perfectly natural, commonplace, and regular practice with the Lemurians. They recorded, in a casual manner, the reception of impressions from others who were hundreds of thousands of miles distant, just as a hunter today in recording his story of his hunting experiences would state in a casual manner that he heard the call of another hunter or the call of an animal five hundred or a thousand feet distant. To the Lemurians this sixth sense was not an extraordinary thing but quite commonplace, though they were conscious of the fact that its usefulness had been developed by their ancestors through practice and concentration and that it was a faculty more susceptible of development and growth than any of the other faculties which are common to the human race.

We, today, are conscious of the fact that our eyes can be trained in seeing, as witness the training given to an artist; or that our ears can be trained to hear, as is necessary with a musician; or our taste may be developed, as is true with those who are experts in the tasting of wine, for instance. We are likewise conscious of the fact that our muscles in any part of the body may be developed, or that certain features or functions of the body may be strengthened through definite effort and practice.

With the Lemurians the knowledge was handed down from generation to generation that the salvation of their race and the hope

for mastership in the highest attainments of civilization depended upon the individual and personal development of this sixth sense. Naturally, they did not consider it a special gift and it is doubtful if they ever thought that the time would come in the development of the human race that that sense would become obliterated through lack of use and lack of development to such a degree that its existence would never even be suspected. They did believe and did understand that a lack of use of this faculty in any family for several generations might result in a diminishing of its size or its high degree of usefulness, just as we realize that the discontinuance of the use of the tongue in speaking through several generations might naturally result in an offspring having no ability to use the tongue at all.

That this sixth sense was an organ equal to or in some way connected with the present small organ in our modern bodies known as the pituitary body is quite likely. And, scientists have discovered that in many of the races of man living today in remote parts of the world this organ is much larger than it is in those of more civilized races and that it has unquestionably diminished in size throughout the ages and must have been an important organ in some early races of mankind. However, that may be, this sixth sense also enabled these Lemurians to sense things in their *fourth* dimension, for one of the problems that confronts every student of their ancient carvings and writings is the continued description of things in a manner that shows that they saw or felt or sensed something about everything in nature of which we have no consciousness today. When they saw a tree, or an animal, a stone or a mountain, they saw more than its height and breadth and thickness. They saw something of a Cosmic nature or ethereal nature, to which they gave various terms; and to them it was as much of nature and as important in description as were the other three dimensions.

Now, if we add to this faculty and its abilities the further fact that it enabled them to attune with the Cosmic and to receive direct information of a dependable, reliable nature on all subjects and covering the entire field of knowledge, we will realize at once that the Lemurians must have attained an extraordinarily high degree of perfection, not only in knowledge but in the matter of living and co-operating with all of nature's laws.

Should we be surprised, then, that these people living on one continent, stretching almost half way across the globe, should have been intimately acquainted with the facts concerning the universe, the growth and development, rising and submerging of other lands, and other continents? Should we be surprised at their intimate knowledge of What was going on in distant points of the world far beyond their personal contact? And, should we be surprised that they had solved all of the great problems of life and had found solutions to all of the mysteries?

Their records and writings show that they were acquainted not only with the rest of the world as it existed during their time, but with what had existed on the face of the earth prior to the formation of their continent, and what would eventually happen to their continent. This was their guide in their wide colonization of other lands, and in the dispersion of their people to distant points in various periods. Again, we must take into consideration the fact that for over a hundred thousand years they had an opportunity of developing their knowledge and of carrying out their plans for preserving the race of mankind against the cataclysmic changes that they knew would take place.

To them the spiritual part of the world was the most important, because it was the only real part and the only dependable and safe part in life. Thousands of years of accumulated knowledge had taught them that the very foundation upon which they stood, composed as it was of earthly materials, and subject to the mighty changes that had taken place and would take place, was a most unreliable and unreal part of life.

Their conception of a future existence was quite unique and yet most logical, and probably as good as any that we have today. They were not only firm believers in the doctrine of reincarnation (not transmigration) but they had had ample time, and the faculty with which to prove, that reincarnation was a fact and that there were those living among them who had lived before on the same continent and in intimate contact with them. Therefore, reincarnation was not a matter of *belief* with them, for, as I have said above, they had no beliefs which were not demonstrable truths. They knew reincarnation to be a fact

the same as we know that so-called *death* of the body is inevitable, and that the same body will not be seen on the earth plane again. This is not a belief with us but an established fact over which there can be no dispute. Their understanding of reincarnation was just as well established. But, they did know, also, that in the interim between the passing from this life and the re-embodiment of the personality again, the personality would exist in a spiritual world which they were not foolish enough to attempt to interpret in material terms like the clergy and the religious doctrinaires of today attempt to do.

They definitely stated that the personality of man was ethereal, spiritual, invisible essence and consciousness, which would occupy the fourth dimensional conditions of a purely spiritual world, and that such a world could not be located or described, limited, or compared with material terms relating to the material world. Even the Cosmic Mind which they looked upon as superior and above all human and material things, was not considered as being above them in a physical sense, nor located in the heavens or the clouds, as we think of Heaven today, but was considered to be in all space, everywhere, and for this reason they were apt to picture the Cosmic Mind or Cosmic consciousness as being within their rooms or even in the deeply excavated secret chambers beneath their homes, as in the vast space above the clouds.

For this reason the spiritual personality of one who had passed through transition was just as apt to be close to them and living with them in their homes or in their temples as above the clouds or anywhere else. That they could sense or contact these dis-incarnated personalities through their sixth sense is quite plainly indicated in their writings, but such contacts did not imply that such personalities were either close at hand or at a distant place inasmuch as this sixth sense received its impressions instantaneously, regardless of distance.

With such a nature and such an understanding of universal conditions it was only natural that the Lemurians should have developed a very high degree of appreciation of spiritual laws and principles. Their conception of God was of a *universal principle*, both positive and negative, male and female, and Creative and loving in every sense. They had outgrown any earlier beliefs that their primitive forbears might

have had that storms and strifes, cataclysms and destructive forces, were sent by gods of evil or by a loving God expressing His wrath. They looked upon all of the processes of Nature as constructive, even when temporarily destructive, and considered these as established laws of evolution having been created by a loving God in the beginning of time. Their interpretation of God as analogous to the human individual was much like comparing God with a *Great Master*, as well as *parent*, of all living beings. He regulated or controlled every process of nature with only one thought in mind, that of life and the perfection of the human race.

In another chapter I will speak of their communistic affairs, and their ethical and moral practices, for at present time I am speaking only of the individual as a highly spiritualised being. The refinement in the food they ate (being almost totally of a vegetable nature), the care which they exercised in what they drank, the manner in which they lived so far as hygienic conditions were concerned, coupled with labor, exercise, and rest, produced an unusually healthy body; but there was no attempt to seek a long life as the most desirable asset of the living. In fact, my readers may be surprised to know that they looked upon transition not only with a total absence of fear, but as a valued change and improvement in the status of the individual, and they were capable of deciding *when* transition should take place, and *how*, and it was common for the Lemurians at certain ages to announce to their relatives and friends that three days, or two days, hence they would pass through transition. They and their relatives would then make preparations for such an important event and all material affairs would be adjusted. On the day of the expected transition the devout ones would place themselves on that portion of sacred soil which they had selected to be their burial place, and with due ceremony lie down, bid farewell to all, close their eyes and go into eternal sleep within a few hours. Seldom were Lemurians stricken *unexpectedly* by any disease, and even accidents due to the attacks of savage animals, which was their greatest problem, were generally known to them in advance and every attempt was made to avoid such attacks. The average Lemurian, however, chose transition as the next step in his life after he became convinced that he had accomplished all that he could do or all that was expected of him in the conditions and circumstances in which he

lived. For this reason, many Lemurians passed through transition in what we would call youthful ages, while most of them passed through transition between the sixtieth and seventieth year and a number out of every thousand lived to be over a hundred years of age.

If you, my reader, think that such a thing is impossible as the selecting of a day for transition and the arbitrary creation of such a condition without disease or pain or injury, you should know that there are still some groups or tribes living who practice this system at the present time, and the well-known explorer, Capt Salisbury has recently lectured upon his contact with transitions which he saw in various places. Many ancient records of the descendants of Lemuria show the continuance of this practice for many centuries after the continent submerged, and undoubtedly the pure Lemurian, or the pure descendants of ancient Lemurians who are still living in various parts of the world, carry on this same system as a quite natural solution to many of life's problems. It was not looked upon as a form of *suicide*, for in their ancient writings the willful ending of life by injury or undue risk of the maintenance of normal conditions in the body, is considered sinful, and any attempt to avoid obligations or the solution of life's problems by bringing life to an end was considered a violation of the highest laws. He or she who contemplated transition and prepared for it had to be able to show to relatives and friends that whatever their mission in life, it had been fulfilled, and that there were no uncompleted duties nor obligations, nor any fears from which they were withdrawing in cowardice.

These facts will give you some idea of the Lemurian as an individual, and with these in mind we will make a little study of their community life and of their various moral and ethical codes.

Chapter VI

THE SPIRITUALITY OF THE LEMURIANS

By Dr James W. Ward

(Eminent Disciple of Oriental Monastery Schools)

SOME HISTORIANS TELL us that the Lemurian race was as unconscious of this physical world as we are in our sleep. To me it seems strange that historians having some facts about the Lemurians, will cover those facts with vague and indefinite ideas and statements which cannot possibly be true. In the next breath they admit the Lemurians were so spiritually developed that their consciousness was never concentrated on this physical world. They also vouchsafe the statement that their incarnations were a favorite pastime, laying aside the physical body when worn out and taking on another as naturally as the falling off of the leaves from trees and new ones coming out as beautiful as the ones cast off.

In the face of such contradictory statements they would have us believe the Lemurians were all born and lived without eyes, that they had no need of eyes, because, like animals and fishes in caves and underground, their eyes would atrophy from living in the dark. They go on and say that they had sensitive spots in their heads where the eyes should be and that the reflections of the sun affected those sensitive spots. First they saw they had no need for eyes and could not have eyes in a land of dense fog which the sun could not penetrate, and yet the burning glare of the sun caused great pain, and suffering to those sensitive spots in the head.

Such writings go on to say that the Lemurians never had a language, but they fail to explain how we got historical records almost as complete as that of George Washington. Writers of today say that the Lemurians were taught at the school of Initiation the laws of nature and facts relating to the physical universe, and art. Let me say at this time that the Lemurian of Art was only used in reference to the Deity and, if I remember the wording of the old manuscript correctly, it was spelled *Ord*, translated ART. However, let us give thanks to those teachers for teaching a “blind” race which lived only in the spiritual and had no concept of the physical universe, yet were able to study the laws of nature and all the facts relating to the physical universe and art. Why not tell us where they, our writers, received their erudition? Where did they get their evidence that the Lemurians never had a personality nor an individuality, that they were only a God-guided people? I wonder how many of such writers have established and proved to themselves an individuality, and how I wish they had the divine apperception the Lemurians had. We must, however, thank them for stating that wisdom came to them as a gift. Personally, I wonder if God was not more generous in those days with His gifts than now? But why the argument? Let us establish the true facts and, unless I can prove to you that my friends have no ground to stand upon, you should refuse to accept my statements.

The first thing we were taught in the Oriental Monasteries, regarding the beginning of the human race called man, was that God was first, last, and always; that God was and is a supreme, divine, intelligence, who produced, evolved, and manifested man and every living thing. We were taught how and why man was produced. Our teachings were handed down from the Sages of Antiquity, and had been recorded in various ways and were perfectly understandable. They stated that God realized that every spiritual existence had to have a spiritualized manifestation in transition in order to be consciously conscious of its own existence, God having produced nature and every living thing had an idea of an ideal manifestation of the absolute, and He produced man as perfect as He Himself was perfect. If God failed in one millionth part of the perfection of man, and if our modern writers change that first man in any way, they destroy the existence of one Infinite God.

God's ideal in perfect man was a thousand times more perfect than I am today. I know that the Lemurian people were thousands of years old, the offspring of the original human family coming down through two long and interesting races whose earthly existence was purely immortal, that is, if the divine injunctions handed down from them to the Lemurians were authentic. That history was simply this: that man wanted to be free, he begged for freedom, he knew he was divinely free but he wanted to be a free moral agent; he knew more about liberty than some of us. God endowed man with reason and he lost track of his divinity; then came sickness, pain and death. Lameness and disease came into existence and from this there were millions blind, so many so, that thereafter the Atlanteans called them the blind race. However, there were many times more in numbers who were physically whole and pure as the angels in heaven.

Instead of pinning your faith on the lapel of our modern writers with their superficial knowledge, go with me and let us recognize the perfect man in all his innocence and purity. Their offspring for generations were proud of their ancestors who thought only pure, positive, constructive thoughts, and ever and anon endeavoring to emulate their forefathers and ancestral homes. They were constantly reminding their children of the Lemurian Disciples of God to whom they had vouchsafed the life and conduct of their posterity. Every night before retiring they taught their children to guard with care every action, deed and thought. To pray for strength and wisdom, to live the life taught them by the Holy Lemurians who lived in a world with other people, but not of them. True, they had love and compassion for the blind and diseased, but lived in a different sphere.

I, personally, viewed with interest some historical records of the Lemurians and especially interested was I in the fearless and undaunted adventures of twelve Lemurian Disciples who started out with an airship which looked just a little like our modern blimp. They were old men experienced in flying a ship, also in sailing boats. Their dreams were of exploring other countries or continents. They made some crude maps and some so plain and perfect that we were sure they were maps of Newfoundland and Florida.

These twelve Disciples finally landed in Atlantis where they were received, loved, honored and obeyed, because the Atlanteans called them the Holy Lemurians.

The records show that the Atlanteans knew all about the Lemurians and only referred to them as the blind race because of the great number of blind among them.

The twelve Disciples left a map of their travels, and it was of much interest to me because of the shape of the earth — almost round and resembling a coconut. The countries they discovered were sketched on the outside, similarly to the present day globe of the world. The Atlanteans in looking over the coconut shaped globe came to the conclusion that the home of the Lemurians was about a 30-day trip in a sail boat beyond the setting sun. To them the sun set just beyond the borderland of Atlantis.

I wish I had made a photo of that map as it looked to me. That was fifty-three years ago and I was not so much interested then as now. But there is now a very earnest desire on my part to reconcile the teachings of the Lemurians with the present day history and books, which teach that all was progression, that man at one time was of the lower animals. Some say that man actually walked on all-fours and that we still have the ape-body, etc. Sometimes I am inclined to believe it true of some writers.

Let us go over that old record showing the description, life, teachings, and mystical rites of the Lemurians, who were the most perfectly formed human beings that ever lived; straight as an Indian and as perfect a specimen of manhood as the Infinite Intelligence and the Eye of God could visualize; beautiful as a picture of a Greek God, and a soul as pure as the universal soul from whence it came and in whose image it was produced; as perfect as the Divine Mind could conceive; the highest idea of God produced for the sole purpose of manifesting God, demonstrating the good virtues and holy truths, so pure and sanctified that to observe one slight mistake or transgression of the law by a member of his family would cause him to hang his head in shame. Innately refined, the women were angels on earth; their grace and beauty excelled the most beautiful queen that has ever graced God's kingdom

on earth. For 100,000 years they were as pure and as virtuous as the angels that are now on the Cosmic Plane. The pictures of those men and women showed them to be the color of the sun and equally as bright and shining. The men were nearer the color of the sun at dawn or at sunset while the women were lighter and brighter.

It is unfortunate to blur this picture with a history of those blind imbeciles and fallen angels that our modern writers would have us believe, completely inhabited God's own paradise. I am not going to comment on them for I might reflect some sad truths regarding our own modern civilized world. We still have a few men and women who are as pure and near perfect as is possible to live on this earth plane, while we have millions of old, dilapidated accumulations of ill spent lives traversing every stage of folly until we are getting millions of unclean specimens of humanity. Such degenerates of the Lemurian Race were in the minority, however great enough in number, and many of them lived in swamps similar to the swamps in Florida, before the country was drained. We have, today, in Sweden, cold, damp swamps, dark and dismal sections of country exactly like parts of Lemuria before the greatest upheavals and volcanic eruptions that were ever known destroyed the country and consumed the Lemurian race with the possible exception of a few. In truth and in fact they were not all lost and never will be, because the continuity of life came to their rescue and saved for them a remnant of the greatest, noblest race that ever lived. As a matter of proof of this narrative is the reincarnation of one of those twelve Holy Lemurian Disciples who was known in the Lemurian Age as the greatest architect that lived in that time and who has reincarnated many times, and each time for the love of humanity when man needed him most. He was born a perfect and pure soul, lived a spiritualized and perfect life through each incarnation. This Holy Lemurian whose incarnations have proven him one of God's noblest spirits is today doing God's work under divine guidance. He is dally designing and preparing those heavenly mansions and places of abode for all the elect who chose to *live the life* and become attuned to the "Threshold."

This short notation of the Lemurian Race is as true as the sun that shines and as perfectly narrated as the divine law that governs the divine plan of the universe.

Chapter VII

THE COMMUNITY LIFE OF THE LEMURIANS

ALL THE SCIENTIFIC analyses of the life of primitive man intimate that in the beginning of his earthly existence he lived separately and suspiciously isolated from others in the bows of trees or in caves along the banks of rivers until he learned whom he might trust among all the creatures of the animal kingdom. And we are told that he learned to trust a few animals of species lower than man and learned to trust a few of his companions and that eventually he domesticated the few animals he could trust and made friends of the men and women he could trust and these he gathered together in his immediate vicinity and constituted them as the elements of his community life.

Whether the Lemurians began their greatness in this manner or not we will probably never know. It must be evident to everyone who reads this book that the records from which we quote, including the carvings on many monuments and the traditions preserved in the writings of many races that descended from the Lemurians, began only with the story of Lemuria after community life was established. Men did not learn to think and analyze and had no occasion to preserve their thoughts and their knowledge until after they had learned to exchange ideas with others in the quiet hours of peaceful community life. Thus we find in the earliest records that community life was a well established condition among the Lemurians. When I speak of community life I do not mean the grouping together of individual homes, merely because of a favorable site or because of related conveniences that would bring

a number of individuals and their homes together, for this was a stage that preceded the community life of which I speak. I refer to that form of community life wherein all the individuals in a group constituting a town site or a definite place of homes and dwellings were interested in some occupation, some production, some demonstration of mental and physical effort that made them live and work together as one large family. So united and identical were the interests of the individuals in most of these Lemurian communities that they appointed or elected one of their group who occupied a position much like a mayor, or city manager of today, but who was really their advisor, their chief instructor, and court of last appeal in all disputed points, and their religious and spiritual guide as well.

We may grasp a better understanding of the situation, perhaps, if we realize, first of all, that the Lemurians issued no coins and had no such commodity or device as money. No one received any form of remuneration for his efforts, except the privilege of sharing in all the community interests and each having the friendship and association and guidance of the principal minds in the group and of all the other workers. Their products were not sold and the things they made or grew in the soil of the earth, or which they dug from the mines, were traded with other communities at distant points where different products were available. Their storehouses and warehouses were community ones and there was no incentive to accumulate a vast amount of any of these products as a personal possession. The result of this condition was that each was required to give his very best effort in that direction for which he was best qualified and to that degree for which he was capable in exchange for the necessities of life and the enjoyment of many luxuries and blessings which we do not enjoy today. The natural result of this is plain to be seen. Lawlessness and crime, as we understand it today, was reduced to a minimum. Social distinctions were absolutely without power. The power of personal wealth was unknown and probably could never have been comprehended by the Lemurians. Those who were talented in various ways were given every opportunity to exercise that talent and to devote themselves to it, for if it was productive in any sense it afforded an opportunity for receiving all of the blessings of community life equal to those who produced more material or necessary requirements. This is why the arts and sciences among the Lemurians

progressed to a high degree. The reverse of this condition is true today. Eminent artists and scientists capable of making the most valuable contributions to our knowledge and to our ethical development are forced to abandon their work and their effort because they must resort to some occupation which pays them with money and enables them to live. If all of the truly great artists and scientists in the world today were assured of an equal degree and form of living and the enjoyment of all the necessities of life while pursuing their special professions, we would solve one of the great problems of the present and future development in our ethical culture.

I have already intimated that scientific knowledge constituted the religion of the Lemurians, inasmuch as a fundamental principle of their understanding was that God, or the Creator of all things, revealed to man all knowledge as a process of evolving man to the same degree of understanding as possessed by God. Therefore, the acquirement of knowledge was considered the acquirement of spiritual attunement, and growth and knowledge was looked upon reverentially, instead of as a commercial asset. That the knowledge should be applied in a practical way seemed natural to them, for otherwise there would be no purpose in the revelation of knowledge. Therefore, the religion of the Lemurians contained no doctrinal beliefs and no false gods or principles arbitrarily selected by any council or group of individuals and promulgated as an orthodox system.

In each community a temple of an appropriate size was built, handsome and enduring, as befitting a monument to the glory of its purpose and in which the religious services were of a double nature; namely, of silent or spoken adoration to God, with prayers of thankfulness and appreciation, and the dissemination of knowledge. These temples, therefore, were equivalent to universities and schools of the present day, and it is to be noted that the instruction was classified into various branches of study and presented progressively to the young people and in the form of forums and open discussions with those who had completed the youthful years of study. The education of the youth was compulsory, but the young people also had to contribute to their own support by participating in some of the practical work of daily life in accordance with their individual qualifications, talents, and capabilities.

It is from the records preserved in some of these temples and the carvings upon the walls of all of them that we have learned much about the Lemurians. These temples were typical of what the word temple means. They were buildings enshrined against time for the preservation of knowledge, as well as the giving of knowledge, and upon the walls of these structures, and especially on many large stones arranged in special position to stand the test of time, the outstanding discoveries and proved facts of life were carved for future reference. There are many indications in these writings that they anticipated the future to be very far distant and that much which they carved upon the stones would have to be preserved for many thousands of years in order that future races might learn the truth of these ancient people. We are sure, therefore, that these Lemurians anticipated some great cataclysm that might destroy most, if not all, of their continent, and scatter their people to all parts of the world and almost destroy all knowledge of them. It was this attempt on their part to prevent a complete obliteration of their existence that has resulted in our present day knowledge of them.

The moral standard of the Lemurians was extremely high, even though a modern purist would look upon their code as one of no morals at all, and would consider the Lemurians unmoral rather than moral or immoral. We find, for instance, a total lack of emblems or intimation that any form of phallic or sex worship entered into their consciousness. Our research would reveal that this phallic worship is a much later creation of uneducated men or races of men in distant lands. Among the Lemurians there was no prudery regarding the naked body, nor was there any particular reference to it for there seemed to be neither shame nor glorification of nudity, yet the Lemurians did not dwell in nudity nor do they picture themselves as being undressed or lacking in dress in any degree. They wore loose flowing outer garments, much like the Egyptian and Arabs of today, which was probably as a protection against the sunlight and heat. But they had community swimming pools and bathing pavilions much like the Romans adopted in later centuries in which both sexes bathed at the same time without any consideration of sex or nudity.

There were very definite rules regarding all sex relations and they had a marriage custom that is still to be found among some of their descendants in some of the islands of the Pacific. According to records which have been found, the marriage system was as follows. When a young man and a young woman had found sufficient interest in each other to believe that they desired to become man and wife, they appeared before the official Gu of their community, who was their spiritual advisor, instructor, mayor, and Supreme Court judge. Their appeal was properly recorded and the relatives of both were called in consultation, and if the marriage was found agreeable to the parents a date was set for a ceremony that was preliminary to the actual marriage. On the day of this ceremony the young couple, their parents, and all in the community who were interested, gathered at the large open square or circle in front of the principal buildings and temple and the young couple were denuded of every bit of clothing and every worldly possession of a material nature. They were then escorted in a sort of fiesta parade with much music, flowers, and cheering, to the edge of the city or community bordering upon the wilds of unoccupied and unsettled land. They were then directed to proceed at least fifty miles inland into the wilderness in the company of each other, but without any material things, not even a piece of metal or device of any kind. In part of the ceremony the Gu or his representative suddenly demanded of the young man a piece of metal as a souvenir and token of his departure and the same was required of the young woman. If either of them possessed any thing of a materialistic nature or device of any kind the ceremony was postponed for a full moon period, or they were rebuked in some manner and not allowed to proceed. This test, therefore, was applied for the purpose of determining, in the presence of all witnesses, that neither one of the young people had anything concealed in their long flowing hair or braided locks or in their hands.

They were instructed to go into the wilderness and remain for a given time, usually two moon cycles or approximately two months, and then to return to the temple together and in the company of each other. If, upon their return, the young woman could show that she had some form of clothing, made from animal skins or from feathers and fiber, and had been well-protected against the attack of animals, properly fed and nourished and provided with comfortable sleeping facilities

wherever they were in the wilds of nature, and, was convinced of the tenderness and devotion of the young man, and if he could show that he had provided himself with similar clothing and had secured proper food and protected himself against injuries and attacks from animals and could say that the young woman had been his help meet in every sense and that he was still fascinated by her charms and devoted to her, then a date was set for the marriage ceremony which was held in the temple with a very elaborate ritual, which included the making of an incision in the first or index finger of each of their right hands and the hands bandaged together so that the blood from one flowed into the other and thus became as one blood. The ceremony was a sacred one in many ways and constituted a form of marriage or union that was never to be broken except by transition. There was no such thing as divorce or temporary separation in the marriage relations of the Lemurians. If the young couple returned together or separately and either one claimed that the other had shown an inability to secure and provide food, sleeping accommodations, clothing, or was lacking in devotion or attention, the marriage ceremony could not be performed and the couple were never permitted to make a second application for marriage. In other words, the couple had to prove their individual abilities to care for each other, support each other, and continue to love each other under the most trying and difficult circumstances. We cannot help but wonder how many of the young men of today would be able to go into the wilderness without the least piece of material as an instrument or device and build a protective hut, make clothing, secure and prepare food, and care for another in similar circumstances. If such a test was applied today there would be few marriages, indeed.

All bartering and trading was done in accordance with certain standards and a violation of these standards disqualified the individual from sharing in any of the community interests for certain periods of time.

The young children of the community were cared for in a community nursery under the guidance of those who were specially selected to care for them physically, mentally, and even spiritually. Physicians were appointed in each community who developed a high degree of knowledge and skill in all systems of healing, including the use of herbs

and surgery, and, according to some records found in different places, there was evidently a system of massage or exercise which was used as a part of the healing system for special conditions. Drugs or herbs were not depended upon exclusively, for a form of healing from the use of hands or the laying on of hands and another form of healing through meditation and prayer was in universal use.

I have already touched upon the subject of death, or transition, but we may add that no elaborate ceremonies or graveyards existed among the Lemurians, for after transition the body was considered of little importance. The mere fact that the average Lemurian voluntarily decreed his own time of transition, prepared his own grave, and laid himself into it and was willing to have his body become lifeless, indicates that little thought was given to the physical part of our beings. From some records we learn that three days after the transition had occurred, and it was found to be a true transition, the body was covered with some mineral or chemical much like lime, which ate away the body or destroyed every vestige of it without contaminating the soil. It is to be noted that in digging the grave the one who was to occupy it was always one of two who did the digging and the graves were always in lines running east and west and the head of the deceased was always placed toward the east. After the passage of many thousands of years there seemed to have come a change in regard to burial, for records show that the person who anticipated or decreed his transition did not lie in the grave but knelt or squatted in a position facing the east in a square excavation with his hands clasped in front of him and remained fixed in this position in meditation and concentration until transition came and some chemical was poured over the body three days later which made sure of the preservation of the flesh and bones against contaminating decay. Some graves have been discovered where the skeleton with some flesh is still in this kneeling posture with the dirt of the earth closed tightly around it. Since there were no individual possessions that were not owned by the community there was nothing willed or transferred to others at the time of transition except possibly some little ornament, or personal token, or keepsake, which never had any intrinsic value. Gold and platinum were quite plentiful but had no value except in the making of instruments and devices for ornamentation. There were few references to any minerals that could

be considered precious, except a red stone which may have been the ruby, and if there were diamonds in Lemuria they were considered of no more value than pieces of glass would be. Rare feathers of a brilliant color were perhaps the most valued of rare ornaments known to the Lemurians and marble used in building some of the beautiful temples was the most unusual product taken from the soil and the most carefully used.

The homes were large and airy and sleeping arrangements consisted of a raised platform surrounded by a netting of fiber which afforded a protection against insects and small animals. This screen around each sleeping place was open at the top to allow ventilation. Food was cooked by fire or by the heat of the sun in special sun ovens. There were regular periods for dally worship and study for all members of each community and there were sacred features connected with the early morning ablutions just after sunrise, and again at sunset and at midday there was a community service of concentration and worship lasting for a few minutes.

This, in general, is a picture of the community life. It does not include, however, many of the vast activities of the Lemurians about which we shall learn in another chapter.

Chapter VIII

REMARKABLE ACHIEVEMENTS OF THE LEMURIANS

ASIDE FROM THE unusual psychic development or spiritual unfoldment attained by the Lemurians and which gave them unusual advantages in a purely personal and individual sense, the people as a race and as a nation attained a high degree of development in the arts and sciences and in the mastership of worldly problems.

When it is said in modern writings that the ancient Egyptians attained a degree of civilization and intellectual mastership that was superior to our present day attainments, this is generally said in a relative way, for it is only relatively true. When we say that the Lemurians reached a higher degree of civilization than we have reached, it is likewise meant in a relative sense, although there are some evidences of attainment that were actually beyond the scientific achievements of modern times.

When we stop to consider, however, the natural difficulties which surrounded these ancient peoples, and keep in mind the fact that they did not have the advantages which we now have and that many of our present day achievements are based upon discoveries which they made, we can truthfully say that these ancient peoples did attain a higher degree of civilization compared to the times and conditions in which they found themselves than we of the modern world have attained.

If a man is stranded in his youth on a barren island and during his lifetime is capable of evolving methods of extracting from the earth his necessities and turning gross matter into refined instruments and with these build beautiful homes and create the things he needs for a life of ease and luxury, we can truthfully say that he, as an individual, attained a greater degree of mastership in the arts and sciences than would an individual living during the same century in a modern city with all of the advantages and necessities supplied to him.

It is true that today we have many marvelous scientific achievements that are rapidly becoming commonplace, and which our children and grandchildren will look upon as ordinary conveniences of life. Many of these were undoubtedly unknown to the ancient people of Lemuria, or Egypt, or any other old country. To say, however, that these modern achievements, which we have and which they did not have, indicate a higher degree of advancement, a higher degree of civilization and culture than was enjoyed by the ancient people, might be a serious mistake. The Lemurians, for instance, did not have our modern radio methods, but even these modern methods of communication are becoming cumbersome and every scientist and philosopher dreams of further improvements whereby this cumbersome system may be simplified.

We may find, for instance, that the methods which the Lemurians had for communicating to great distances was a higher phase of scientific achievement than our present day radio, for I have already explained to you that the Lemurians were capable for mental communication, regardless of distance, through the effort of a faculty which we have dubbed "mental telepathy." This would indicate that whereas we have placed our faith in the forces of nature, such as electricity, and have created machinery for the transmission of this energy from one distant place to another, the Lemurians proceeded along much higher lines and developed a faculty within their own beings for the transmission of an energy more refined and higher in its vibrations than the crude electrical energy which we use. Their means for distant communications was not surrounded by cumbersome equipment and by interferences from electrical storms and by rules and regulations and by finances. The ease with which they could communicate and the

dependability with which the communications were transmitted and received certainly represents a higher achievement in this field than our present day radio, just as radio and telegraphy represent a higher achievement in our art of communication.

In many Oriental lands, today, tourists of the thinking class and investigators are frequently astonished at the rapidity with which a story or a message or an important fact is made known to various persons at very distant points. The art of communicating thoughts is still a mysterious art, despite all of our scientific achievement, and is really classified among the arcane mysteries awaiting further scientific development.

In many other respects, however, the Lemurians achieved great fame and mastership. In the art of building, for instance, the Lemurians constructed with plans for greater permanency than any other nation of people. They knew from long experience that their continent, as well as the rest of the world, would be rocked and shaken by earthquakes and volcanic eruptions and that periodic changes in climate would also affect everything that they built. They, therefore, made a careful study of the science of balancing and the art of calculating the principles of stress and strain. When we realize that some of their structures stood for nearly thirty thousand years without being damaged by any of the cataclysmic changes, we see at once how marvelously they had mastered this problem. When we think of how modern built buildings, designed and constructed by architects and contractors who have access to all the facts and figures of the earth's changes, are quickly thrown down by even light earthquakes or temblors, we cannot feel such great pride in our achievements in the art of building.

As we pass by any modern electric or steam power plant and see the enormous amount of material, labor, and money invested in such elaborate equipment solely for the purpose of giving us a form of nature's energy, and then think that the Lemurians used the natural energy without all of this equipment, we see that we have not progressed as greatly in our mastership of the earth as we think we have.

The Lemurians harnessed all of nature's forces in a truly scientific manner and with extreme efficiency. I have spoken of how they were

able to propel their boats in water by using the energy that radiated from a stone. Undoubtedly a similar device was used in the propelling of their airships through the air, for they did use air-ships quite frequently. Since they needed no engine, no gasoline, and no long-armed propellers,, their airships were lighter and much different in design from anything that we have been able to attain at the present time. Furthermore, they were able to have lights in these air-ships and to use a searchlight that cast a beam to a greater distance than is cast by any of our present search-lights. Whatever the nature of this light, its energy was not produced by any revolving machinery or by gasoline or gas, but undoubtedly from some minerals small in size but which could be so harnessed or utilized that their radiations furnished the necessary energy.

We are only beginning to study the nature of radio-active or radiating minerals and we are only speculating at the present time on the possibility of harnessing our natural, universal energies. Scientists tell us that there is sufficient stored-up energy in one atom to cause A terrific explosion, if we only knew how to use this energy and apply it safely. The Lemurians, either by force of circumstances or through a greater understanding of Cosmic energies, were able to use the power in many minerals and apply this power very specifically and efficiently. One of the outstanding features of Lemurian scientific achievements was the utilizing of the energy and power that is constantly bathing this earth in the sunlight. In our present day period of scientific achievement, we are just speculating with this possibility and a few small engines have been constructed which operate with sun power. The Lemurians used this sun power very freely and very universally in all of their communities. It gave them light and heat and energy at night and gave them enormous motive power during the day for the movement of great pieces of stone and wood in their constructive operations.

In botany they were so expert that agriculture with them became like the expert work that is shown at a botanical garden. In art they were guided by their superior knowledge of fundamental Cosmic laws and by certain rules which are taught today only in the architectural

schools, but which they used not only as fundamental principles for living, but in all of the sciences and activities of earthly life.

Many of their homes were carved in solid rocks on mountain sides; on the other hand, others were built of rare stone to represent in symbolical form the great temples of knowledge having spiritual or Cosmic lines and contours.

These Cosmic principles were expressed in many ways by the Lemurians but we find the fundamental law of these principles expressed by the Lemurians as "The Law of the Sacred Four."

The drawing given herewith illustrates some of the forms in which The Law of the Sacred Four was represented either in a very definite form, like the plain cross, or in a decorative form. It will be noticed that generally a circle was drawn around the outside of the symbol of the Four since this circle represented the lines of the universe and carried the intimation that the completed universe or anything in its completed expression, having no beginning and no ending and lasting eternally, was based upon the Law of the Sacred Four. The center example at the bottom of the drawing shown herewith, containing a cross with its sides touching the circle, became known in later years among the descendants of the Lemurians as the Wheeled Cross. While it is true that this form also became typical of the wheels found on the earliest carts or wagons, the *wheel* was connected with this symbol because of the turning of the earth and the passage of earth through Cosmic space. In other words, it represented revolution. This Wheeled Cross later became the first symbol of the mystic Rosicrucians who were the inheritors of the earliest mystical teachings of the Lemurians through the mystery schools of India and Egypt.

SYMBOLS OF THE SACRED FOUR

The four principles referred to by the Lemurians in their legend were the Creative principles of the universe, as well as the four fundamental laws governing the geometrical and mathematical form of everything that was created. Since the outside circle represented the universe, it was sometimes drawn in the shape of an egg, for the Lemurians considered the egg as symbolical of the birth place of all living things. The Sign of the Four, showing the cross within the egg, represented the process of germination. An ancient Lemurian legend said that in the beginning God commanded the four principles to bring forth all life and that the four principles began their work within a Cosmic egg. It may be interesting to speculate for a moment upon the many forms in which the cross has been adopted as a symbol by various races of persons in all ages of time and even as a symbol of religious and philosophical thought. This is just another instance of how A truly sacred or spiritual and philosophical principle, universally recognized today, can be traced to the high spiritual illumination of the Lemurians. The designs shown herewith are drawn from many ancient Lemurian carvings, found not only in California and South American communities established by the descendants of the Lemurians, but on many of the islands of the Pacific.

The Lemurians must have enjoyed life to the fullest extent, for they had invented and devised ways and means of producing all of the necessities and all of the luxuries required by them. Certainly, the present day races of man have not reached this point. We have entered into a cycle of artificialities, bringing forth artificial and unreal desires that can be satisfied only with artificial things. We have developed the stage and the production of theatricals as an artificial means for the study of history and human problems. Having entered into this fictitious manner of study, the stage has rapidly developed until we believe the theater plays and moving pictures are of educational value and Areal necessity as a form of amusement. If we can realize for a moment that the real study of human beings around us and an analysis of things that are actually occurring in every-day life are the basis of all theatrical productions and could easily supplant the artificial productions on stage or screen, we will see that the Lemurians missed nothing of the luxuries of life through not having our present day moving pictures,

despite the fact that we consider any community in which there was no theater or no pictures of this kind as being antiquated and lacking an essential form of pleasure.

The same principle is true regarding many of our other modern accomplishments. The seeming necessity for money and the seeming necessity to save time are two of the artificial standards responsible for most of our modern scientific achievements. We require automobiles and other means to transport us rapidly from place to place in order to eliminate a false valuation of time. Our radio is an attempt to out-do the telegraph and telephone, as well as the post in the transmission and reception of communications, but here again it was the element of time that was given the greatest consideration. We are building great buildings and great communities, not because of the artistic arrangement but because of an artificial necessity based upon an artificial valuation of land.

If we analyze what we have today as representing our advancement in civilization, we will find that we have gained nothing that the ancients did not have and which they enjoyed to a greater extent because of its naturalness. Of the artificial things, however, or the unnecessary things brought into existence by a false realization of life itself, we will discover that most of these could be eliminated from our life if we lived properly, and their lack would not constitute Areal detriment nor an obstacle in the attainment of peace and happiness.

The Lemurians, therefore, devoted themselves very greatly to the establishment of communities in distant lands and to the education and advancement of the races of man which were emerging from the early foundations laid by their own people. In one old record there was found an interesting story of how the later descendants of Lemuria visited a community in Alaska which had been founded by some of the early pilgrims from Lemuria. These late voyagers expected to find these descendants in Alaska enjoying all the advantages of life which the Lemurians had created on their own continent. They were surprised to find that these people in Alaska had retrograded and had become so distinct in color of complexion, in manner of dress, in form and habit, and even in writing and speaking, that they had difficulty in becoming

convinced that they had not come upon an entirely new race of earthly people. Great missionary work was attempted to aid these descendants in modernizing their communities and reaching the same degree of development as those who had remained on the continent of Lemuria. It appears, however, that they never completely succeeded in doing this and abandoned the work because they found that the climate and general conditions had made the people lazy and indifferent in cultural development, and it is more than likely that from this period onward through history, this tribe in Alaska spread into other lands, intermarried, lost most of its racial distinctions, and became a nomadic people probably still remaining in northern zones.

The pilgrimages to other lands were highly successful and records show that the Lemurians kept in contact with their people in Mexico and South American countries, and in Egypt, Asia, and parts of Europe, throughout many centuries, and through this continued contact and comparison of ideas and principles there came to be a universal establishment and agreement in regard to certain points of agriculture, buildings, language, music, art, ritual, and other human activities which are outstanding points of racial identification today.

Chapter IX

THE COLONIES AND DESCENDANTS OF THE LEMURIANS

CONSIDERING THAT THE Lemurians were the first definite races of man known to history and that the continent of Lemuria was the real cradle of the civilization of man, we are confronted with the interesting fact that from Lemuria and its people came all of the present day races of man.

The fact, however, that Lemuria was a very large continent, reaching more than half way around the world, answers one of the interesting questions about the great variation of races and tribes of people found in even the earliest periods of research. As has been stated in a previous part of this book, climate and environment and the desires or exigencies of life are responsible for most, if not all, of the variations we find in the complexion, build, countenance, features, customs, and habits of all of the races of man. Man, as God created him in the original divine image, was of one definite type, and if all external influences had never affected this type, the descendants of the first man and woman would have been of a similar nature, except for the changes of evolution resulting from inner growth and spiritual development.

Considering, however, the enormous size and expanse of the continent of Lemuria which brought its habitable portion into various climates with a great variation of soil and the products of the soil, and considering the great age of the continent and its people, which

included many cycles of cataclysmic changes not only in the material nature of the continent itself but in its climate and in the effects of these things upon the people, we can easily understand how the race of Lemurians, as it spread throughout its own continent, through many centuries, developed tribes of people with varying complexion, varying forms or degrees of development of forms, and greatly varying habits and customs.

Unquestionably, in the early periods of Lemurian civilization pilgrimages were made quite frequently in search of the fortunes of life and the satisfaction of the natural curiosity of the intellect for worldly research. Many of these pilgrimages must have been made to very distant points of the continent and at these distant points colonies of communities were established and maintained. The wide separation of these and the distinct differences of climate, soil, and the requirements of life gradually brought about many changes in the figure and personality of the members of each of these groups of colonies or communities, and in each case a foundation was laid for the beginning of a new tribe or a new branch race of the Lemurian people.

There were parts of the Lemurian continent that were extremely cold and undoubtedly passed through the serious effects of the so-called Glacial Period. There were other large areas of the continent that were within the belt of the most extreme tropical weather. When part of the continent was experiencing the colds and storms of winter another part of it was in mid-summer. These are but a few of the outstanding facts that must be taken into consideration in trying to form a mental picture of the growth and development of the various tribes or races of man that descended from the early Lemurians.

Many of their pilgrimages made to distant points resulted in complete isolation and permanent separation from the original race. Time is a tremendous factor not only in the development of human characteristics but in the gradual blotting from the memory most of the past traditions, customs, and habits. Many of the colonies or communities established by the expeditions of Lemuria eventually lost all trace and record of their earlier connections and developed even a distinctly different tongue and manner of living, adapting themselves

to the conditions in which they found themselves and adapting themselves to the gradual changes that took place in the course of a hundred thousand years.

It is natural, however, that certain elements, certain principles, certain beliefs, or traditional facts, should have remained vague and indefinitely fixed in their consciousness, and that is the one clue found in the search of the races of man which enable us to relate them to a common origin. In those things which were recorded more or less permanently by the earliest members of the Lemurian race there were fixed ideas which were carried forward through thousands of generations. When knowledge is conveyed mostly by word of mouth from father to son, and generation to generation, we expect to find continuous modifications, amplifications, and distortions, as well as unexpected elaborations, but in those matters of greatest concern, which were cut or carved into stone and which remained permanently visible and fixed for thousands of years, we find the permanent similarities and universal agreement in certain ideas which help us to unite one race, one tribe, one people, in various parts of the world with others.

Those things which are considered the most sacred to the individual are the ones which are most apt to become permanently fixed from generation to generation. Among such things are definite holidays or holy days, certain community practices or customs, and certain ideals. As I have already stated in another part of this book, we find, for instance, among the many and greatly diversified tribes of American Indians on the continent of North America and even in South America, certain holidays, certain ideals, certain words, and certain customs which are uniform and universal among all of these diversified tribes of people, and we find similar holidays, customs, ideals, and habits among races of people living in isolated parts of the world who are not physically or mentally classified as being connected with or a part of the Indian tribes. We cannot avoid the conclusion that all of these peoples with such similar and unique agreements in certain points must have had either a common origin or a close companionship and connection at some distant time.

We know, furthermore, from the records that have been preserved, that as the western part of Lemuria, located in the Indian Ocean, began to suffer from the cataclysmic changes and to sink beneath the surface of the Ocean, that the people of Lemuria began to disperse themselves in various directions. Africa was the closest land to this western portion and, in fact, a part of Africa as we know it today was at one time a part of Lemuria itself. But the portion of Africa that overlapped Lemuria or touched its shores in other parts was a vast swamp-land at the time that Lemuria began to submerge and except for a few high parts which eventually became mountains and now constitute islands in the Indian Ocean, the most habitable lands to which the Lemurians could go during the periods of their catastrophe were toward the east, including those high parts that now constitute the islands of Sumatra, Java, Borneo, New Guiana, Australia, New Zealand, and others.

As the continent continued to become submerged those who had located more or less permanently on the above mentioned places found that these were remaining high and dry and safe for habitation and did not continue their eastern pilgrimage but stayed where they were and became founders of new countries and eventually of new races of people.

In later centuries, however, the colonizations and pilgrimages spread to the shores of South America, North America, and through the continent of Atlantis to Africa, which had emerged from its swampy grave and was now a habitable continent. Those who ventured to such distant points found in succeeding years that they were separated by vast expanses of water from their original country and, adapting themselves to local conditions, became founders of other races of man.

I have already explained how the climate and sunlight in vast open areas would tend to darken the skin of some races of people, while those living in colder or in moderate climate with much more vegetation, or in the forest, would have a lighter complexion. The other shades of complexion which are often erroneously used as guides to distinguish races of man, are likewise effects of climate and environment.

If we skip a hundred thousand years or more and take up our study of the races of man at practically two thousand years before the Christian era, we find the races of man widely distributed throughout the world with accumulated and firmly fixed distinctions which were so at variance that if one were to judge them as we would have found them at this time, without any regard for their past associations, we would have to conclude that most of them represented independent races that never had a common origin.

For instance, in the year 2000 B.C., we find eight very definite classifications of peoples which may be called the Aegeans, Egyptians, Hittites, Amorites, Iranians, Indians, Huns, and the Chinese. The latter six constituted the general groups of Alpine, Proto-Nordic, Semitic, Mongolian peoples, while the first two classifications represented the Mediterranean people.

We find that the Aegeans at this time were the sea going Cretans of the first Middle Minoan period who had developed culture under Egyptian influence and built a monumental city at Cnossus, which became the political and commercial capital for trading with Egypt and Babylonia. They evidently became the leading sea power of the Mediterranean and made rapid advancement in civilization, even though their country was destroyed several times. They became competitors with the Egyptians in the development of architecture and art and established colonies in Sicily, South Italy, and Asia Minor. They were finally in conflict with the Greeks and from their contact with these people a new branch race started to develop. The Aegeans entered into Syria and some of their people became the Philistines mentioned in the Bible. From this time, which was about the thirteenth century, B.C., the pure race of Aegeans became mixed with others and in a few hundred years was almost extinct as one of the ancient original tribes, while the Greeks descended from them and developed a new culture and civilization which increased in power throughout the pre-Christian centuries until it began to diminish about the second century after the Christian era.

The Egyptians constituted one of the branches descending from the early colonizations of the Nile soon after the submergence of Lemuria and in the year 2000 B.C., had developed agriculture, shipbuilding,

government, commerce, art, law, writing, and mathematics. Thus, we find the Middle Egyptian period of the 12th dynasty, a time of reunification of Egypt into a strong feudal State under Theban Kings. A century later Egyptian culture was at its zenith and considered the most perfect in the world. The worship of the sun as the god Ra was first established in this country during the 19th century, B.C., but Egypt was then beginning to pass through a period of internal strife and disorder. The situation was saved by the introduction of new blood through the invasion of the Semitic Nomads or Bedouins who ruled over Egypt as the Hyksos Kings. It is interesting to note that about this time hordes were introduced in Egypt for military purposes and this military development became so extensive that it actually laid the foundation for our present-day military rules and regulations and the carrying on of wars in a systematic and supposedly semi-humanitarian manner. A rt suffered as a consequence although the political power had increased to an extent that the resulting wealth and authority produced many marvels of architecture. Finally the Hyksos were expelled with the aid of an army raised in Ethiopia, where an early group had colonized and a dark skin race had developed. The introduction of this blood into the Egyptian valley had a very definite effect upon the future generations.

About 1500 B.C., the Egyptians entered into trade and commerce with Babylonia, and there was a sudden development in literary activities producing many of the famous sacred writings now familiar to us, including the "Book of the Dead." Soon, thereafter, a great statesman, Thutmose III, who has often been called the "Egyptian Napoleon," conquered Syria and Ethiopia, and Thebes, the capital of Egypt, rose to the height of its greatest splendor under the marvelous intellect and power of Queen Hatshepsut. This was the beginning of the rise of the Egyptian empire, and from thence on the magnificent temples at Karnak and Luxor and elsewhere were built, and art and the sciences were at their height; but this power was bringing in its wake a definite moral decline which eventually threatened the prosperity of the empire.

The descendants of Thutmose III and Queen Hatshepsut realized that religion, morals, and ethical culture were required to save the

empire and the races of man, and in the 14th century B.C., the members of the royal family made their first plans for a system of cultural development and for the organization of secret schools and institutions for the spread of such knowledge. The plans culminated in the birth of one unique king, Amenhotep IV, who not only changed his name to Ikhnaton or Akhnaton, but changed the religion, the art, and all of the scientific, political, and ethical foundations of the country. In religion he introduced the idea of a “one ever-living God,” existing above and beyond all the symbols and all the terms for any god, and greater than any of the past gods or any of the living creatures on the face of the earth. This was the first introduction in the modern world of the ancient Lemurian idea of a monotheistic religion. His ideals, however, were criticized and attacked by the pagan priesthoods and he and his followers had to resort to the establishment of secret mystery schools and fraternities for the continuance of their religion, and the furtherance of their moral and ethical codes. In these plans, successfully carried out, we find the foundation of the first secret fraternities with secret initiations, pass words, and means of identification, which later developed into various forms of guilds, crafts, and fraternal lodges.

Amenhotep IV died without a son to succeed him, but he had seven daughters, one of whom became queen in her childhood and who married a scheming politician, by name *Tut-ankb-amon*. This youth attempted to convert the wealth, the art, and power of Egypt to his personal aggrandizement through making peace with the pagan priesthood and converting the official religions and morals of Egypt into the lower standards of the priesthood. His transition occurred while he was still a young man and he was buried in a structure created by him as a hiding place for the wealth he had pilfered and accumulated, and this great tomb was discovered in recent years.

From his time on the power of Egypt waned, and after the 12th century B.C., there was a rapid decline and Egypt was attacked by the Lybians and others, and the final dissolution of the great Egyptian empire occurred in the 11th century B.C. It was just before the fall of the empire that tribes from other lands invaded Egypt and became the tribes of Israelites that later left this land and went into Palestine, Syria, and other parts of the world.

The Hittites were really descendants of Indo-European races who had inter-married with the Alpine races and became the ancestors of the present Armenians. In the year 1800 B.C., they had established a kingdom in Anatolia and developed the peculiar writing known as the cuneiform, as an adaption of the pictorial representation of the Indo-European language. They developed their religion in which they worshiped the great earth as the mother of all living creatures, and their history after the 17th century B.C., is little known. They built many imposing palaces in later years and their king, Hattusil I, expanded their territory into Syria establishing the Hittite Empire. They became politically united with a formidable Iranian power in the east and attained the height of their glory in art and civilization in the 14th century, B.C.

About the time of the exodus of the Israelites from Egypt the Hittite kingdom began to weaken and later on through the invasion of the Assyrians their language was changed, their customs and their habits, and the Hittite Empire faded out of the world picture in the 9th century, B.C., while the Syrians as a distinct race succeeded and evolved from them only to fade out as another world empire in about the 8th century B.C., although their people blended with others and the Syrian ideals and customs and habits continued for many centuries.

The Amorites were perhaps the most spiritual and artistic of all of the tribes or races descending from the Lemurians and they gave most of their thought to the formulation of codes of law and to the development of art and literature. At about the year 2000 B.C., they were beginning to establish the great Babylonian kingdom with the wonderful city of Ur where culture was developed to that of the highest degree in any part of the world. In fact, the word culture itself is derived from words meaning, "the Light of the City of Ur." The city of Chaldea succeeded Ur as a great center and the people absorbed the Sumerians and other tribes until we find a new race evolving which established the Kassite dynasty. Their art and culture, however, began to decline in the 17th century B.C., and they developed a religion worshipping the moon as a god with a great temple dedicated to this god built at Ur. The Kassite power began to decline after the 16th century B.C., and at the time of the entrance of the Israelites into Palestine and Syria the Babylonia-Amorite power was rapidly decreasing. Finally an

evolved race, descending from them, established the Babylonian power about the 10th century B.C. From these descended the Chaldeans as a ruling caste and a controlling power among their people, and after they had attained the height of their splendor in the 6th century B.C., the Chaldean empire gradually faded out until at the time of the 4th century B.C., it was of no consequence, politically or socially.

The Iranians in the year 2000 were composed of groups descending from the early Elamites, Mitani, Cossaci, and the Aryan Hindus. They probably brought the first horses to Asia Minor and Mesopotamia and records show that they were the first in Asia to use the Lemurian bows and arrows as weapons. They were experts in the making of finely painted pottery, and 1800 years before the Christian era, had perfected a pottery wheel that greatly advanced the manufacture of pottery. The centers of their art and culture were located at Susa (Elam) and Anau. The coming of an increased number of Elamites into India in search of gold and copper increased the power of the Iranian Empire and they became famous for well-built palaces and buildings, and for the introduction of unique drainage systems into their communities. The race of Iranians continued to remain strong and definite in character and the power of one of their kings, who destroyed Babylonia and carried away much of its wealth, might have been the beginning of a great empire, but it was, in fact, the beginning of a decreasing and diminishing empire until the coming of that great prophet, Zoroaster, in the 9th century B.C.

His new form of the monotheistic religion of the ancient Lemurians and a revival of the culture and ethics of the people of Lemuria gave his people new life and new power. A great mystical religion and philosophy developed among their people who later became known as Magians. In the 6th century B.C., Cyrus established the Persian empire which included the Iranian races and finally included the peoples of other countries. It was during this period that Zoroaster's great work entitled "Avesta" was compiled and the Persian empire was born.

Warfare had spread to the seas and the Persian empire defeated the Greeks, but a decline of Persian power followed this great victory even though the culture and philosophy of Persia was at its height.

There followed centuries of crime and disorder until their king, Darius III, was defeated and their culture and power were absorbed by the Hellenistic conquerors in the second century B.C. From their people, however, descended many other tribes and races, and once again a new Persian empire came into power for a short time between the 2nd and the 8th century, A. D.

The Indians, or Hindus, constituting perhaps the purest blood of the Lemurians and known as the pure line of Aryan speaking people, were found in a more or less primitive State in India at 2000 B.C., because of their world-wide pilgrimages before having established a group of permanent communities. They finally invaded the Punjab, which had been inhabited by a race that had become so dark in complexion as to be considered the foundation of the black races of man, and in this country the early Indians established the tribal system of government and developed agriculture to a high degree. The Elamites were also absorbed partly into the Indian line and this had a powerful effect upon the religion and art of the Lemurians. Their literature developed to a very high degree and in the 15th century B.C., they began the compilation of over one thousand poems describing their life, early ancestry, and their religion. These were grouped together under the general title of "Rig-Veda." Sanskrit became the national language thereafter and because of the great literary and art learning among the better class of their people there was developed a Hindu or Indian caste system. In architecture they developed the method of excavating into the rocks and in the mountain sides and building cliff temples. This feature of their civilization reached a magnificent degree in the 11th century B.C.

Finally their priests obtained supremacy over the nobles and political rulers and there was an increase in their territorial states and associated kingdoms. At about the time that Zoroaster appeared among the Iranians with his revelations of ancient religions there was developed among the Hindus and Indians the Brahman system of religion.

It is interesting to know that in this same century the Babylonians developed a new form of spiritual understanding and in Assyria new temples and edifices were erected to a more human god. In Palestine,

Judah, and Syria the Jews were evolving a new religion with Solomon building a great temple in which the religion was revealed. The Phoenicians had developed in that same century a new alphabet for the purpose of recording their religious ideals, and from this came the alphabets of all the western civilization. At the same time in Abyssinia, Arabia, and Egypt the development of the religion of Amen was taking a new color and new expression and even in China and among the Huns new religious ideas were revealed. This will give us a little idea of how the religious and the ethical, moral, artistic, and scientific development of man has progressed in cycles just as the changes in the continents have changed in cycles and that at certain definite periods of the past two hundred thousand years, there were world-wide and universal revelations in religious and philosophical thought as though the great Cosmic Mind, which the Lemurians recognized as the ruling system of the world, preordained such revelations as the evolution of man and made him ready or qualified for the coming of new knowledge and new life.

The development of the Brahman religion and philosophy led into the birth and leadership of Buddha among men of his country as an inspired messenger of God. This was around the 5th century B.C., and coincident with this Cosmic or divinely inspired incident of religious life there was born Confucius, as a leader of the Chinese, Cyrus, the leader of the Iranians and the Chaldeans, and others in other lands, including Pythagoras among the Greeks. This would indicate that inspired leaders among men were born and carried on their great missions at certain well defined cycles of time as a universal condition of human development.

After the 3rd or 4th century B.C., the Indian empire developed in strength and power until there were various invasions, changes of religion, and deaths of great leaders in the 4th and 5th centuries A.D. This resulted in the diminishing of the Indian empire and through the invasion of the Moslems the empire continued to weaken in its great strength and beauty.

The Huns were a small race that made a bitter fight in the early centuries to maintain their distinction and power but the continuous raids by the Mongolians and outlying tribes of central Asia greatly

weakened them. Finally many treaties were made by Chinese emperors and these Huns of northern China, known as the Tartars, strengthened their civilization and were able to protect themselves against the raids of so-called Barbarians; but they were finally defeated by the Chinese Emperor Mu-wang about 1000 B.C., and the inter-mixing with the Chinese undermined the imperial authority and the people as a nation almost passed out of existence and power in the 6th century B.C. Finally the Tartars or Huns made raids on China and through the contact with other people, the Huns, the Tartars, and other nomads of the Gobi desert were driven west by prolonged wars. However, about the 3rd century B.C., they advanced across the Volga and forced the Ostro-Goths and Teutonic tribes into central Europe but later united with them against the Romans and Franks. About the 4th century B.C., Attila became their great leader and strengthened their empire enormously. After his death the Hun empire settled permanently in South Russia, Hungary, and Bulgaria. They attempted further invasions in the 5th and 6th century A. D., but for hundreds of years remained relatively a weak power until we find this power developing again in Russia and the Tartars and Mongolians revealing the power of their early ancestors.

The Chinese, as the last of the eight principal classifications of the races of man in the year 2000, were perhaps the most interesting because of the many unique features of their language, customs, habits, and religion. Their empire at this time was divided into nine provinces under the autocratic rule of one emperor. This form of political government was a slight modification of the ancient Lemurian government. Their greatest development was in the form of militarism but this was soon abandoned as the most important power, and philosophy and scientific knowledge supplanted militarism. They had kept, perhaps, the most perfect records of ancient times and valued so highly their well-traced origin among the Lemurians that their religion took on the form of ancestral worship, and this was molded into doctrines by the Emperor Yao in the year 1550 B.C. It is interesting to note that the first handwritten documents of a reliable and dependable nature were possessed by the Chinese and they were already tabulated and indexed in the year 1500 B.C., when a new form of philosophy and cultural development had its birth. The power of the Chinese empire

developed magnificently and became the center of 1700 small feudal states under an imperial sovereign in the year 1200 B.C. From then on their art, literature, and science increased, and their literary writings and scientific notations show that their knowledge foreshadowed many of the discoveries of modern science. They became unusually wonderful workers in bronze, and art in metal. When Confucius was born his teachings solidified all of the ancient philosophies and ancient ideals and became the standard for the customs and politics, as well as religion of the life of China for its entire future. The history of China from that period on to the present, is too well-known to require any comments in this book.

Viewing the races of man today and their empires, nations, and countries, we find that many have descended from these which I have just described. By turning to any encyclopedia and looking up the description of any race of people or any existing nation, one will find references to their origin as associated with the tribes and races described in the foregoing paragraphs.

If we should expect to find, however, any pure blooded Lemurians existing today we would have to seek for them among those who had descended from the first Lemurians and had remained on land and in climate as near like the early continent of Lemuria as possible, and had refrained from intermarriage with many modified tribes that had descended from them in other parts of the world. In other words, in seeking for the purest tribe of Lemurians we would have to seek for men and women who had married among those of their own closest branch of descendants and who had remained in similar environment and conditions of living. There is only one place in the world today where parts of the ancient continent of Lemuria have remained with little change in regard to environment of living. There is only one place in the world today where parts of the ancient continent of Lemuria have remained with little change in regard to environment and climate, and in seeking here for any remnants of the Lemurians we have been fortunate in finding those who are representatives of the purest type and who have lived for thousands of years in the same locality with a minimum amount of intermarriage and external influence. These people we shall speak of in a future chapter.

Chapter X

MYSTERIOUS CALIFORNIA

WE CAN FIND mystery and romance in the lives of nations and countries as well as in the lives of individuals, and, perhaps, of all the strange and mysterious parts of the world there is none that is so filled with the elements of fascinating and alluring mystery as that of the country of California.

I use the word *country* very advisably because the more one becomes acquainted with the State of California, its history, its traditions, its heritage, and its people of today with their inherited customs and interesting habits of living, the more one is convinced that the personal sentiments regarding California as are public are more deeply seated than most Americans realize.

It often surprises those who go from various parts of the world, and especially those who go to this new land from eastern parts of the United States, to find that California is still very proud of the former flag of its Republic and that on every holiday and at every fiesta occasion— which means very frequently, indeed—the flag of the Republic of California is displayed alongside of the American flag.

There is no other State in the Union, perhaps, in which the school children are taught so many songs that praise the glories of California and pay tribute to its ancient and present day virtues and where such songs are sung not only by the children but by the adults in their theaters, by the members of the various service clubs, and by large conclaves wherever they may be assembled. The ancient spirit of gaiety and gala festivities is still so alive in the hearts of the Californians that the least excuse — the visit of some government official, the visit of

some foreign diplomat, or commander of a foreign vessel, the flying through the fair skies of some unusual aviator, the discovery of some new field or mountain of gold, the anniversary of some old Spanish or California event—is the occasion for wonderful parades, gay holiday celebrations with the schools closed, the business institutions semi-active, and the governors, mayors, city councilors, and leading citizens taking part with elaborate, flowered floats, the wearing of Spanish costumes by most of the citizens, the selection of local queens to rule over mythical courts, community dancing on the streets in the evening and every other form of festivity for which the ancient periods of its history were famous. There is a sweet loveliness about the spirit of the people, accompanied by a broad toleration for all view-points, for all religions, all customs, and habits, and a united determination to make life worth living and to make the enjoyment of life a primary motive rather than a secondary one. This has had no detrimental effect upon business but has, in fact, stimulated it; and whereas in eastern sections of the United States the drive for money and big business is considered necessary as a primary objective in order to avoid complete disruption of business, the Californians have proved that the very reverse may be true.

The extreme contrasts in its climate, its scenery, the spirit of its people, so far as present day matters are concerned, and the thousands of variations and gradations that lie between these extremes, constitute a combination of conditions that helps to make California so attractive. While one may bask in warm sunlight on its beaches at any period of the year, one may also journey for a few hours by automobile or train to its mountain tops and in summer attire, with all the attractive clothing of the sport wear of the polo field, enjoy the thrills of snowballing and skiing. From fertile green valleys filled with thousands of varieties of wild flowers and roses, and from plains trampled by herds of thousands of head of cattle, or desert places of wind blown sand that afford the opportunity for the making of pictures with Sahara settings, one may journey in a few hours to the highest peaks surrounded by rugged scenery, or into forests that are so dense that many of them have never been explored and are natural museums of research. Every hour spent in driving or riding, walking or boating on California lands, or in the

streams, lakes, bays or the Ocean, brings continuous surprises and an ever changing panorama of new interest and new thrills.

To the stranger, California is still the land of gold—the golden poppy in the fields and the many other golden flowers, along with the golden colors of peaches, apricots, apples and other fruits, the gold in the sky at sunset that lasts long into the evening, the golden reflections in the waters, the golden tints of the Spanish homes, the golden colorings in the tapestries, drapes, awnings, curtains and other decorative material, and the gold in the soil that seems to have no limit for those who persevere in seeking for it, constantly impresses the stranger with the fact that not one tenth of California has been explored nor converted into the marvelous opportunities that lie before it.

But, what interests those of a scientific or philosophical turn of mind to a greater degree than its gold or spirit of joy and happiness, health and invigoration, are the many mysteries and the stories of ancient times that one hears in every part of this unusual country. As those from the east approach California and ride over the long spaces of almost desert areas or lands of ranches and unfertile valleys to the foothills of the Sierras one feels that one is going to a far distant place that must be different and unlike any thing passed on the way. Ascending the foothills to the top of the Sierra Range one enters into the snow and cold of the higher regions in winter with its barrenness, or into the heavy vegetation and forest growth of the summer. Then begins the decline, minute after minute, in the interesting, twisting, turning, railroad ride down the sides of the Sierra Nevada Mountains to the glories of California. On every hand one sees the remnants and relics of the days of '49 when the miners hastily erected cabins and buildings, while others worked in bringing forth the fortune that proved the ancient stories of California to be true. The snow gradually disappears, the valleys become more fertile, the flowers appear with fields even though the rest of the country that has been left behind is covered with frost. As each minute brings the traveler further west into California and toward the Pacific Coast, he notices that the soil is rapidly changing, the trees are different, the rock formations are distinctive and picturesque, thousands of wild flowers of varieties never seen in the east become more profuse. Blossoms, ferns, palms

and plants that grow only in the hot houses of the east or can be raised only under careful culture are seen growing wildly without any cultivation or special attention. The climate becomes mild, the spirit of the people seems to be one of joy. There is an invigoration in the air which gradually impresses the stranger with a feeling that there are vibrations of some mysterious vitality, of something very old, very antique, romantic and unfathomable.

The stranger, therefore, is never surprised when the first citizen of this western Republic begins to tell him of the uncommon things to be seen or even heard in the day time or the night.

I am aware of the fact that no Chamber of Commerce in any of the very progressive cities of California would think of writing a book about the local allurements of each community by giving any emphasis to the weird sights, strange sounds or peculiar mysteries within its own boundaries. To the public at large these things may have no appeal, and to some they might be objectionable. But to the lover of mystery, the student of the sciences, the research worker, the thinker, and those intellectually inclined, the mysteries of California are not only appealing but never completely solved and never forgotten.

One just passes from one interesting situation, one astonishing condition, one fascinating story or experience, to another, day after day and mile after mile as one rides or walks along the King's Highway of California, called "El Camino Real." And, even where this old trail ends the Indian paths going northward or eastward leading one into even deeper fantasies of interest that equal those found in the fairy tales of our childhood.

Are all of these stories merely traditions handed down from early generations and having no foundation in fact? Are the tales and reports of strange occurrences only the imaginations of a people still moved by the emotions of their ancestors? Are all these things purely fictional and part of the fiesta spirit? A stay of but a month in this wonderful state convinces anyone that all of the stories and experiences are probably true, and that most of them are told with little elaboration and little fiction. The spell of the California mysteries gradually overpowers the visitor who prolongs his stay, and therein lies

the secret of the universal enthusiasm for its land that every native son and daughter expresses so convincingly.

Those who have read the preceding chapters of this book will realize that the State of California actually represents the oldest habited, cultivated, civilized land on the face of the earth that is still in practically the same physical form, and in the same environment, as when God first created it. I have already said that science recognizes the fact that in the forests of California, in the hills and valleys, in the rock and shell of its great mountains, and in the sand and soil of its shores are found the oldest living things in the world; and so far as specimens of non-living matter, relics of by-gone, forgotten, prehistoric times are concerned, California offers the greatest abundance of evidence, and with such fascinating pictures as quicken the emotion of romance, the spirit of imagination, and the heartbeat of weird thrills.

For instance, one may journey to that beautiful little city known as Santa Barbara, where only a few years ago a mild earthquake completed some of the final adjustments of the land upon which it is situated, and which adjustment began at the time that the continent of Lemuria was submerged. Here in a beautiful spot with magnificent homes built along the shore drive, reminding one of the Riviera of France and Italy, and with a busy city constantly in fiesta dress, we have the setting of a very ancient habitation, the mystery of which is yet unsolved. Off the shore of this unique city, modern in its progressive architecture and American beauty and antique in the many Spanish homes and ancient structures, there are several islands whose stories no man can tell in detail but which may some day bring millions of visitors to their shores that they may say that they have seen such memorable places in the western world. For these islands were at one time the fortified preserves of an ancient race whose homes and daily activities occupied the district of the mainland where the city of Santa Barbara now rests. Because, however, of the continued invasions by unknown tribes from South America, unknown people from the north, and, stranger still, the people from far inland, they lived exclusively by themselves with a language, a complexion, a code of living, and an architecture distinctly their own, unlike anything else in the rest of the world.

All that they held dear and all that they could save and gather of worldly value to protect them in the future days of inevitable conquest they stored on the islands and fortified these to a degree that astonishes the creators of our modern forms of fortification. These people, known technically as a tribe with the name Chumash, constituted practically an independent race of people, so far as their ancestry would appear in ordinary records of anthropology, but, as the reader will divine, they were one of a number of groups or tribes of separated communities that were direct descendants of the Lemurians, continuing to live in their own land without intermarrying with other tribes or allowing the blood that flowed in their veins to be blended with any other.

Thus, it was inevitable that the race should disappear, just as the other groups of similar descendants in other parts of California are gradually disappearing. When Cabrillo discovered these Chumash natives in 1542 there were over 35,000 of them, and in 1771 when missionary work entered into their lives and a tabulation was accurately made there were 8,960 remaining, and in 1900 three families constituting nine adults remained, while today but one of these adults is living, and he has been taken by his Lemurian brethren into another community. Science admits that these people were well-versed and well-developed in the art of sea life, and technically expert in harpooning and spear-throwing. Others in their community revealed, even in 1542, a long culture and experience in art, pottery making, architecture, basket weaving, astronomy, the sciences generally, and especially what they called the art of healing and the prevention and cure of diseases. If ever the proper expeditionary work and research efforts are made in the soil of the islands off the coast of Santa Barbara and in the deep soil underlying the present city there will be rich rewards made to the history of man and the history of this great State; but this is only one of the many spots in California that offers the novelist, the scientist, the dreamer, and the artist a golden opportunity.

Of the largest of the groups of descendants of Lemurians, still living and constituting one of the most impenetrable mysteries of the State, I will speak in another chapter; but there are other interesting places in California which one can touch upon only lightly for the complete details of each would fill many volumes.

In the first place, California is really much like an island continent of itself, that is, if we add Oregon and Washington to the State of California and likewise the peninsula known as Lower California, for in ancient times all of this was known as California. The soil, the climate, the products of the soil, and everything in and around the land of these several States are so different and so distinctly unique in comparison with the rest of the United States that we may look upon this group of States as constituting a separate nation or a separate island. We are warranted in this view-point by the fact that this territory was at one time an island separate and distinct from the rest of the North American continent.

The name California itself gives us the first clue to the mystery and romance of the West. For years there were many and varied explanations as to where the name California came from, and how it came to be applied to this western land. We know that most, if not all, of the other names used in the State and which are foreign to the American language, were copied from European languages, mostly Spanish, and the Padres and the missionaries. But the name California has no definite meaning in any European language and is quite a unique name in itself.

It was Rev. Edward Everett Haie who discovered in 1862 a clue to the origin of the name California and how it came to be applied to this western land. He found in his researches that just before California became the goal of foreign expeditions, especially those of a Spanish nature, there was reprinted in Spain a story of chivalry that had once been very popular in the time of the Crusades but which had come down from great antiquity as a story of traditional exploits and scientific research. This story in its new and revised form became extremely popular and in it there was described, with all of the grandeur and romance of the pre-Crusade days, a land in the western waters in the form of a great island ruled by the beautiful heroine of the story known as *Queen Califa*, and the island over which she ruled was called *California*.

The description in the story stated that this wonderful island was on "the right hand of the Indies, very near to the terrestrial paradise." The

description of the people was quite mythical and romantic but there was every evidence in the story that it was based upon expeditions made by those who, in prehistoric times, had been able to reach the shores of this island and studied its people and explored the nature of its country and soil. The reference to it as being near the *terrestrial paradise* is typical of other ancient records which referred to the existing remnants of Lemuria as the early paradise of man, the Garden of Eden, and the birthplace and cradle of all races of man. The references to the vast amount of gold that could be found in this island of *California*, the quiet, peaceful waters which surrounded it, its abundance of fruit and rich vegetation, its wonderful climate, and the cordiality of its people, ever made the story an unforgettable one and was unquestionably responsible for the many hundreds of expeditions from various parts of the eastern and western world which made this island their goal.

In this regard the reader should bear in mind that the expedition of Columbus was very late, indeed, and that long before Vespucci made his discoveries and long before any expeditions were made of which we have any popular record or any definite information at all, there were thousands of expeditions to this western world when North and South America as continents were not in the position now occupied by them, and when the so-called island of California was all that was left of the eastern edge of the submerged continent of Lemuria. As an instance of how the idea persisted through many centuries in the consciousness of man regarding the country of *California* being an island separate from any continent at all, I offer in evidence, a drawing made from the famous *Nancy Globe*. This globe was seen in the town library at Nancy, France, where it has been for many years, and its recorded history dates back to 1531, although the actual date of its making is not known. It is but six inches in diameter and was highly colored, and considered very accurate and complete for the period in which it was made. Such maps or globes as these were made not by navigators themselves but by those deep students of research who specialized in watching and recording the explorations of navigators and of special expeditions. They tried to put into one map the facts and figures, the findings and the dates brought back to the old world by the scores of capable observers and explorers. In studying this map one will quickly notice that although the continent of North and South

America is fairly accurately drawn and represents North America as being the larger Spanish land with the country of New Spain in the Southern part, and eastern Asia and India in the western part, there is no attempt to make the peninsula of California a part of the mainland but rather to show all of California or the western part of the continent of North America as a separate island with a group of small islands at its Southern extremity. In other words, nothing that had been reported by the early explorers at the time that this globe was made changed the opinion and belief of all the explorers and map makers that California was a land separate from North America.

THE NANCY GLOBE

In order to understand why California was considered an island, your attention is called to Map No. 4. This is a sketch of the land that unquestionably constituted the island remnant of the eastern end of the continent of Lemuria after it submerged and as it was being united to the western coast of the North American continent. By examining this map one will find that this island section was composed of a small mountain range along the western shore line and of a larger mountain range, comprising the Cascade and Sierra Nevada Mountains, on the eastern shore of the island, and that these mountains united and again divided near the Southern part forming the peninsula of Lower California and part of the Mexican coast line. In the north the island ended in swamplands, while the island of Vancouver was a swampy marsh in a bay.

Lying between the two mountain ranges of this island of California was a low valley most of which was occupied by a bay, with its center opposite what is now the Bay of San Francisco, near the Golden Gate. This means that the Santa Clara, San Joaquin, and Sacramento Valleys were at one time under water and that even preceding this period the northern part of the island of California, up to and a little way beyond the northern boundary line of the present State of California, was under water forming a very large inland bay. These waters remained for perhaps fifteen or twenty thousand years, but gradually receded through the continued rising of the island of California, and through volcanic and earthquake effects upon the general surface of the land. The present Bay of San Francisco, and much of the swamplands in the Sacramento Valley, are remnants of this ancient bay, while the beautiful and fertile Valley of Santa Clara is a result of the many centuries of watery deposits and earthly compositions resulting from the existence of the great bay and its gradual change, so that, today, the Santa Clara Valley with its sea shells deeply embedded in its soil and the eternal marks of the effects of water upon the hill sides around the valley, gives mute evidence of what once existed; and the marvelous products of fruit and flowers found in this valley and constituting a wealth that is equal to the gold found in the mountains shows how nature can prepare and arrange its blessing for man.

Situated in the center of this wonderful valley is that fascinating city of *San Jose*, where the first pueblo was established after the Padres, and the early explorers preceding them, had selected this site as the most beautiful and most suitable for the building of a great city in the center of perfect climate. This city, then, became the first Capitol of the State and the first center of the great Spanish life and wealthiest estates ever known in California. A visit to San Jose today, and a ride through its brilliantly illuminated, busy, modem, business streets reminds one of a ride through the busy section of the largest eastern cities, for the same spirit of progressiveness, the same leadership in advance of other communities is found, and the representation of many great eastern industries gives a very distinct atmosphere to the business and social life of this old city. Yet, in the heart of it, and its environs, lie many fascinating, alluring and fantastic stories and earmarks of ancient times.

Here we find the very center of the California fiestas, the flowery parades, the celebrations, the gaiety and happy social life of the old and the new world combined. Still, in its progressiveness it has attracted to it more universities and colleges and institutions of learning than any other city of its size in the West, and many of these date to great antiquity. Even the famous *Leland Stanford University*, now located further north in Palo Alto, had its early foundation in San Jose. And, just up on the mountains which adjoin San Jose is located the great Lick Observatory, while on the northern boundaries of the city, in the famous *Santa Clara University* is that other well-known observatory where the Padre of the Rains has made his calculations and his discoveries of world-wide interest.

Not far from San Jose and just across a little mountain range called the *Santa Cruz Mountains* is a small peninsula which stands unique in romantic, religious history, for here is the mountain of Carmel, the valley of Carmel, and the Carmel River. The Carmelites who came here and established a monastery were acquainted with this particular locality long before Viscaino made his expeditions and brought scientists, Padres, and some *Rosicrucian mystics* to this region to unite their efforts in further amplifying the modifications and civilization of the Carmel and Santa Clara valleys. The early expeditions to California

had reported that there was a bay and a small peninsula along the western coast that resembled the Bay of Acre with its peninsula, its Mount of Carmel and the Carmel River running inland; and the further facts were that these two similar bays and peninsulas were in almost the same latitude, with similar climates and similar vegetation, although in almost opposite parts of the world. It was for this reason that the mystic descendants of an early mystery school located in Carmel of the East desired to accompany the expedition to the New World, and named the goal of their expedition Carmel long before they reached its shores. The early records of these mystics, known as *Rosicrucians*, show that the establishment of the Carmelites as a religious order followed the selection of this site for the establishment of the first Rosicrucian Temple on the Pacific shores, equaling a similar foundation laid by the Rosicrucian pilgrims on the eastern shore in what is now known as the city of Philadelphia in 1694.

It is an interesting fact that many of the trees and shrubs found growing in profusion in the valley and mountains of this new western-world Carmel were unknown in any other part of the world several centuries ago, except near the river of Carmel on the Bay of Acre. The valley of Carmel in California and its entire environment is filled with romantic stories and stories of mystery and Cosmic weirdness. It is not surprising, therefore, that the valley contains a little town known as Carmel-by-the-Sea, which holds itself separate from the mad progress of western civilization and shelters cozy little cottages and studios where the best known writers and artists of the world have come and, like Robert Louis Stevenson, have stayed for months or years and written their greatest novels or painted their greatest pictures; for here in this strange village nestled among the pines, and sitting in a veritable garden of flowers, one is easily inspired by the very vibrations of the place, as well as by the stories and historical records which are available in its little cabin library.

Not far from San Jose, close to the sea shore, near the attractive mountains, and practically on the main highway of the State, Carmel with the beaches of Monterey and Del Monte, constitute a combination of attractions where the investigators of historic traditions and archaeological research find the greatest joy of life.

Even in the centuries of long ago when much of this State was wild and uncivilized, so to speak, the ancient people of Lemuria, finding their great continent submerging beneath the water and their people being wiped out of earthly existence by the greatest of all floods and catastrophes, scattered into the valleys and mountainsides of this eastern portion of their continent which seemed to be rising higher. Here they laid foundations, built structures, created conditions, and established perpetual memorials to their highly advanced civilization.

Much of the mute testimony to their knowledge and wisdom is beyond our comprehension even today and many of their accomplishments remain unexplained by science and unduplicated by all of our progressiveness. Month after month visitors and explorers in California come face to face with some great rock of strange carving, some magnificent piece of sculptured work lying beneath age-old shrubbery or some skeleton or the remains of some living creature which awes them and leaves them spell-bound in the realization of our ability to understand.

Whoever the Queen Califa may have been that ruled over a land so full of gold that the poorest and most common of her subjects were found literally covered with gold ornamentations, she must have ruled over a highly illuminated and happy nation of people, and if in analyzing her descendants who still live in California we find any due to that which made this civilization so old and so great, we may find the key to that which still makes California the land of gold.

Chapter XI

PRESENT DAY MYSTIC LEMURIANS IN CALIFORNIA

IT HAS BEEN stated in preceding chapters, the great catastrophes that overwhelmed the continent of Lemuria and caused the final submergence of nearly all of it in more or less rapid time, forced the surviving remnants of the great race of civilized inhabitants to flee to the highest mountain tops and seek there a possible haven.

Whether many went to upper plateaus of high mountains and were eventually thrown into the sea and lost to earthly life, we do not know, except that millions of beings lost their lives in the great catastrophes, but probably most of these were living in the peaceful valleys and plains of the great continent.

The evidence shows that the eastern portion of the continent of Lemuria, or that portion nearest to the North American continent, was very high and naturally appeared to be the best place for those who were given time and opportunity to reach these points and establish themselves in safety. The fact that only a few thousand succeeded in reaching the mountains would indicate that the last great catastrophe of Lemuria was more or less sudden and decidedly complete in its submergence of the land. Even those high eastern mountains that remained above water were greatly lowered in height, for before the catastrophe they were probably as high as any to be found in the world. The nature of the soil around these mountains indicates that for many centuries the lowest valleys on either side of the mountains were high

above sea level, and then for many centuries were lowered beneath sea level and completely submerged. A later series of minor earth changes raised the valleys sufficiently high enough to drain them of the water and leave them in the condition in which we find the valley of Santa Clara for instance, at the present time.

Because of the rapidity of the submergence and the evident extent of the catastrophe those few thousand who were able to reach the hillsides and attain a height of safety were unable to bring with the many great quantity of their personal effects and very little of their stores of supplies. However, the records indicate that anticipating this possibility they had arranged and prepared for the eventual catastrophe by establishing small, conservative, and well-protected bases of supplies in various sections of the high mountains. These protected places were constructed in the typical Lemurian style out of very hard stone and marble, and being built for permanency and to survive the most severe storms and conditions of climate, they are today in their partly ruined condition, the only surviving examples of Lemurian architecture of the pure type.

This accounts for the occasional discovery of strangely built structures found in a ruined condition by explorers in the mountains of California. Often the ruins are of small buildings and so torn asunder by storms and the handiwork of later tribes who used much of the stone for the building of new structures that little of the original design or plan remains. But, in other parts of California and especially in the vast forests and unexplored regions, many moss-covered, shrubbery-hidden ruins have been accidentally found by explorers who have made their first reports in great astonishment, but were later prevented by mysterious forces and strange incidents from returning to these sites and making any further investigations.

I remember speaking to one such explorer who was not given to any degree of romance or emotionalism in his profound scientific work, who said that the frequent frustrations of his scientific investigations by weird and almost uncanny incidents made him think, in one of his moments of reverie, that there was a sleeping personality in the highest regions of the Sierras like the traditional personality of Rip Van Winkle

sleeping in the Catskill Mountains, and that whenever an investigator approached this sleeping personality too closely it awakened and thundered forth its protests. While he was speaking allegorically it reminded me of the fact that it was almost a literal explanation of what had actually occurred in many parts of the State.

There are mountainous parts of California where men go lion hunting or hunting for other wild animals, and where the foot of a white man has probably never trod for many centuries, if at all. It is not uncommon for these hunters, and for lonely explorers in search of thrills and excitement, to come face to face with peculiar conditions, unexpected scenes, and gruesome relics of ancient peoples. Many very valuable specimens of human forms and of animals of all species have been found in remote parts of these mountains and are preserved today in many museums of the country.

More thrilling than these stories of scientific discoveries are the stories of personal experiences on the part of tourists who love to enter into the wild parts of any country seeking the personal pleasure of discovering new things. Their stories when told at the fire-sides of the bungalows or in the clubs of the social classes in the larger cities, sound like tales from foreign lands of ancient times. The accumulation of these stories with a careful analysis and comparison of them shows such similarity of details and such consistency in principles as to convince one that they are founded upon truth. It is interesting, therefore, to spend time in visiting some of the unusual places of the mountains of California and studying the relics of ancient civilization. Even when we go north of California into other states we find similar conditions, proving that all of these western states which constituted the island of California at one time, were occupied by identical people with identical customs and habits.

One of the interesting explorations to be made with safety and pleasure by any visitor to California is in the Basin of Klamath Falls. The great Klamath Basin is in Oregon but this is only a remnant of the great inland sea that one time reached far down into the present State of California, and the present Klamath Lake reaches across the Oregon State line into the northern part of California and occupies

only a small portion of the land in the north eastern corner of Siskiyou County, whereas at one time this lake reached down through this county into the adjoining one. Into this lake there projects at the present time a small peninsula which is the remnant of a high mountain where was located one of the colonies of the surviving Lemurians. On the rocks of this peninsula are carved the strangest marks that modern scientists have ever attempted to interpret. There are thousands of these hieroglyphic characters and I have drawn a few of the principal figures and reproduce them here as samples of the Klamath Falls' writing.

KLAMATH FALLS WRITING

Those who have attempted to interpret the hundreds of feet of these characters on the stones in various sections surrounding the lake have discovered that there is a uniformity to the writing. They have not been able to evolve an alphabet or a code which will reveal the messages written there which were intended to inform future generations regarding the nature of the colony surrounding this lake and the story of their catastrophe and struggles for life. I have found in these characters, however, a similarity to many of the other Lemurian characters to which reference has been made and the important key throughout these writings is the various forms in which the cross appears. Of this I will speak later. It is interesting to note that from ancient times certain parts of this country surrounding the lake and the Klamath Falls Basin have had peculiar names. A century ago these names were believed to be names which the Indian tribes gave to the places and they were considered to be Indian names, but a careful study of them shows that they were in use long before the Indians could have settled in any part of this country and are not Indian names at all. Scientists have decided that the 1,200 feet or more of carved writings are on rocks that have been below and above water at different periods

and that, therefore, the writings were made many hundreds of years ago. Different generations have added to these writings in order to bring the history of their people up to a very modern date, comparatively speaking. One of the other interesting facts is that the Sacred Oak of the ancient Druid mystic brotherhood appears in these writings, in many significant places; and in other places the Sacred Lamp of the Druids appears. The Druids eventually had their center of earthly activities in the British lands about the beginning of the Christian era. In addition to this evidence of relation with the Druids, there is very positive evidence that the writers of these strange characters were those who helped to establish the Sanskrit language and the Roman language and were, therefore, part of the highly cultured and civilized races that spread the most modern of literary culture in various parts of the world.

For instance, part of the lake valley was known to the Modoc Indians who lived there in later generations as "The Valley of Knowledge" because there was every evidence that this place had been the seat of learning for some ancient tribes of people. These American Indians called this valley of knowledge the "Walla-Was-Skeeney." The Indians said that this meant, "Valley of Knowledge" but it was found that these words were not like any other words in their Indian language or dialect,

Then it was discovered that these Indians had inherited this name, or had received it from the descendants of the early tribes who were still living there when the Indians came and that the words, "Walla-Was-Skeeney" was really an attempt to pronounce the Latin words meaning *valley of knowledge* or *Vallis Scientia*. It was also found that these Modoc Indians had inherited the word "wocus" for the name of the lily, while in Latin it is lotus. The ruins of a former walled-in preserve built by the Lemurians on the top of a mountain north of Olene in Klamath County was called "moynia" by the Modoc Indians, and in Latin any walled-in place, or the site of ramparts, is called *moynia*. Some of the hills in this region are called "collil" and the Latin word for hills of this nature is collis. On the other hand, some Greek words appear in the language also for there is another mountain point which the Indians claim was called "Mu-Pi." These two syllables are easily recognized as two letters of the Greek alphabet.

It may be said in passing that when the American Indians were first discovered in this part of California and the writing observed by early explorers, the Indians disclaimed any knowledge regarding the origin of the writing or any interpretation of even a part of it, and students of the various Indian dialects and forms of writing say that this ancient writing is totally unlike anything that any of the American Indian tribes produced.

It has been reported that many years ago the region near these strange writings was illuminated at night with peculiar white lights, and all investigation failed to reveal any origin or source for such illumination. At that time electricity was not available in that district and there were no indications of fires of any kind being built on the soil or on any of the rocks.

This element of strange lights enters very freely in the mysteries of California. In many parts of the State on certain nights of each month mountain peaks are illuminated, or in between the trees of great forests a strange white light almost like the white light of a photographer's flashlight is seen, not in sudden flashes or explosions but in a steady manner lasting for several hours. Every manner of research has failed to trace the real source of these lights. For instance, within the past year a very old white light seen forty or fifty years ago, and considered as gone forever during the past twenty years or more, has suddenly reappeared in the foothills east of San Jose within a mile or two of the San Jose Mission. This great white light, many hundreds of feet below the valley of Santa Clara, appears to be in the midst of a dense forest and rising above the trees. It is clearly seen from various parts of the San Francisco Bay.

At first this great white light was believed by many to be a signal of some kind produced by illegal makers of alcoholic liquors, probably for the purpose of signaling to some small craft in the bay. Investigation made during the day failed to reveal any structure, home, house, or cave anywhere near the area where the light was seen, nor any indication of a fire of any kind. Finally surveyors were engaged and transits were set pointing to the exact location of the white light as seen at night and in the day time these transits pointed very definitely

to a dense group of trees on the mountain side barren of all homes, with no indication of even burnt leaves on the ground. Electricity is not available in this district of the mountains and how such a steady light could be produced for a long time without leaving any trace of itself is one of the unsolved mysteries still occupying the attention of hundreds of keen intellects. On the other hand, as proof that these lights may be associated with some of the mysteries of Lemuria and its people, the weird stories of Mt. Shasta in California remain as an ever-lasting fascination.

MAP NO. 4

Mt. Shasta is located at the northern extremity of the Sierra Nevada Mountain Range. It is, therefore, located in Siskiyou County, not many miles from the Klamath Lake area to which I have just referred. Mt. Shasta is the cone of an extinct volcano rising to a height of over 14,000 feet above sea level. Scientists point out the mute evidence of archaeology, showing that its deep-fluted sides prove that at one time it was much higher than it is now and that the ground around it has sunken, and the mountain itself has been worn away in glacial periods by the action of ice. There are other mountains nearby which are only a little over 9,000 feet above sea level and which bear evidence that today they are mere remnants of their former greatness. Mt. Shasta is still possible of eruption because a true sulfurous furole lies just below the extreme summit and one or two others on its northern slope emit heat, smoke, and other elements, proving that some day there may be one more final, though very mild, eruption from one part of this volcano.

At one time, however, Mt. Shasta was undoubtedly the highest of all the mountain peaks in this part of California. It is a beautiful sight, with its upper regions covered with snow most of the year, and can be seen from many great distances. The streams of water in and around this area are of an unusual quality and the soil is exceedingly productive when irrigated, being of very ancient origin like the remaining parts of California. To the east of this volcano is the well-known Shasta Forest. The heart of the forest is less than thirty miles from the foot of the volcano, and in the area lying between the two is low land, believed to be traversed by a number of fine streams and brooks. Little is known of this region lying between Shasta and the forest, but it is most certainly a marked spot in the minds of thousands of persons who have witnessed the strange sights to be seen from nearby points of vantage.

For several hundred years or more the old timers living in northern California, and many tourists, explorers, government officials, scientists, novelists, artists, writers, and those merely inquisitive, have centered their attention upon the strange happenings in this region. Many years ago it was quite common to hear stories whispered in northern California about the occasional, strange looking, persons

seen to emanate from the forests and the dense growth of trees in that region and who would run back into hiding when discovered or seen by anyone. Occasionally one of these oddly dressed individuals would come to one of the smaller towns and trade nuggets and gold dust for some modern commodities. These odd looking persons were not only peculiar in their dress and different in attire from any costume ever seen on the American Indian, and especially the California Indian, but distinctive in features and complexion; tall, graceful and agile, having the appearance of being quite old and yet exceedingly virile. They gave every indication of being what one would term a foreigner, but with a larger head, much larger forehead, a headdress that had a special decoration that came down over the center of the forehead to the bridge of the nose, and thus hid or covered a part of the forehead that many have attempted to see and study. At other times great fires were seen to be burning in the center of the woods, allowing the blue and white illumination to penetrate the darkness between the trees; between the fire and the observer strange figures were seen to pass at times, silhouetted against the great light.

At other times when the wind was blowing in the proper direction strange chanting and singing, and weird, beautiful music would float or be carried in the direction of one of the smaller cities or towns nearby.

Every attempt by investigators to invade this district and observe what was going on resulted in a similar experience, and the similarity of these experiences related by persons who had never come in contact with those who might have informed them, is one of the outstanding pieces of evidence regarding the truthfulness of the whole story. Invariably the investigator was considered an intruder, and after having reached a certain point in his progress toward the center of the lights and sounds, he would either come in contact with a very heavily covered and concealed person of large size who would lift him up and push him away from the district, as though being forcibly impressed with the idea to hurry away as rapidly as possible, or a strange and peculiar set of vibrations or invisible energy, would seem to emanate toward the investigator and force him to remain fixed in his position and to be able to move in no other direction than away from the place of his inquiry. Thus the conditions and the mysterious facts

were whispered and talked about for many years until that well-known scientist, Professor Edgar Lucin Larkin, Director of *Mt. Lowe Observatory* in Southern California, accidentally discovered a few new facts about this northern California mystery.

While he was engaged in experimenting with a new feature of one of the long distance telescopes used for auxiliary purposes in his observatory, he turned it north and south of his location along the top of the mountain range on which the observatory was established many years ago, merely for the purpose, as he said, of testing its daytime usefulness and to help him in gauging a new standard scale for determining distances. He claims that he had never heard of the mystery about Shasta and probably would have taken little interest in it if he had heard of it. He picked out Mt. Shasta, however, as an object upon which to focus his vision, because through this telescope the high snowcapped top of Shasta stood out clearly against the deep blue sky. After he had consulted the maps of California and determined in miles and feet the exact distance between himself and the peak of Shasta and made his notations for the purpose of comparing these figures with the new scale of relative distances upon which he was working, he moved the telescope so that its field of vision included the lower eastern side of Shasta and, anticipating that he would see only the tops of trees in the foreground, he was surprised to see a glimmering curved surface that was truly unusual in any picture anticipated by him. As the sun shone upon this glittering object among the trees he was impressed with the thought that he was looking at a gold-tinted dome of some Oriental building. At various intervals, twenty minutes apart, he made further notations and as the sun moved in its course he gradually discovered that there were two domes rising above the tree tops near Shasta and that the part of a third one could be seen several hundred feet distant. Moving the telescope once again he found visible between the trees a corner of another structure seemingly made of marble. Knowing that there were no such structures in northern California, and especially in the land around Shasta, he left his telescope fixed to see what these things would look like in the setting sun and in darkness. He was surprised to find later in the night that around this dome were great lights, apparently white, which partially illuminated and made them visible even though there was no moon to cast any light at the time.

In his usual precise way he made careful notations regarding each peculiar thing that impressed his mind and waited for sunrise to make further observations. Another adjustment of the telescope permitted him to see smoke rising between the trees and likewise to see part of another structure. After one week's study of the matter he decided to investigate further, and it was his investigation, personally conducted, that led many scientists to explore the region to such a degree as was found possible. Others began to accumulate the facts known to those who lived nearby and it was found that at one time a very old character had emerged from this district and made some sort of important journey by foot to the city of San Francisco, where he was met by some committee of wealthy men at the Ferry Building and escorted up Market Street to the City Hall, and there some special ceremony was held to which all strangers were forbidden. Comments of those who saw the character being escorted say that never in all their lives had they seen a being of such nobility, humility, and majestic bearing in one expression. Who he was, and what he came to do, has never been revealed and even the date of the incident is denied to all investigators; nevertheless the story is universally told and is consistent with many stories told of similar expeditions on the part of strange individuals from this district.

Many representatives of the community that must live at the foot of Mt. Shasta have been seen on the highways unexpectedly, garbed in pure white and in sandals, with long curly hair, tall and majestic in appearance, but wholly undesirous of public attention. Every attempt to photograph them and get near enough to talk to them has resulted in their sudden disappearance, either, as some have said, by their running into the shadows of forests along the highways, or as others have said, by just disappearing in the twilight.

Those who have come to stores in nearby cities, especially at Weed, have spoken English in a perfect manner with perhaps a tinge of the British accent, and have been reluctant to answer any questions or give any information about themselves. The goods they have purchased have always been paid for in gold nuggets of far greater value than the article purchased, and they have refused to accept any change indicating that to them the gold was of no value and that they had no

need for money of any kind. Those who have seen some of them at their midnight ceremony around the fire claim that they have seen the silhouettes of some four or five hundred figures and that this number represents only a fraction of those grouped on one side of the fire. The origin of the fire or its nature is not known, for it does not appear to be the burning of wood or brush or of even oil or gasoline, for it is a very white light almost bordering upon a violet blueness in its brilliancy. At one part of the midnight ceremony beams of bright lights are cast upward into the trees often blazing the sky and occasionally tinging the edge of a cloud that may be hanging low. These beams of light strike against the upper portion of buildings and particularly on the domes that seem to be plated with gold. Where the buildings are illuminated and can be observed at all they appear to be constructed of marble and onyx. At sunrise another similar ceremony is conducted, attracting a great deal of attention because of the lights that appear in the darkest parts of the forest. The only key to these ceremonies that has ever been found is that which was carved upon a stone and set up near the outskirts of the forest like stelai were erected in Egypt. On one of these there were considerable hieroglyphs and underneath were cut in a careful manner the English words "Ceremony of Adoration to Guatama." The hieroglyphs indicated that the ceremony referred to was performed at sunrise, sunset, and midnight, and that the word "Guatama" meant the continent of America. An adoration ceremony of this kind would be taken to mean a celebration of appreciation, and this, therefore, must be in honor of the time when their forbears were saved from the great catastrophe by coming to this part of the mountainous region of Lemuria as it was submerging.

The stories of mystical powers attributed to these people must be taken with the proverbial grain of salt, although my reader may interpret them as he wishes. It is said, for instance, that on a number of occasions when great forest fires have raged in various parts of California and have approached close to the forest near Mt. Shasta, a strange fog has suddenly emanated from the section occupied by these peculiar people and that this fog has risen from the ground in a circular manner so as to form a circular wall around the entire area, through which the forest fires have never penetrated. Some natives in this region delight in taking the skeptic on a circular tour, pointing

out to them the mute evidence shown by the burnt trees reaching a definite line that forms a circle around the mysterious region. On the inside of this circle the trees rise to great heights, of old age, and without a single scar or blemish from the burning of the trees that were destroyed within two hundred feet of them.

Others speak of having attempted to approach the region by automobile and finding that at an unexpected point where a light flashed before them their automobile refused to function properly, for the electric circuit seemed to lose its power and not until the passengers emerged from the car and backed it on the road for a hundred feet and tuned it in the opposite direction, would the electric power give any manifestation and the engine function properly. Others have said that some strange cattle, unlike anything ever seen in America, have emerged from the woods, but before going very far along the highways or by-ways these animals would be frightened by some invisible signal, and would turn abruptly around and run back toward the places from which they came.

There are hundreds of others who have testified to having seen peculiarly shaped boats which have flown out of this region high in the air over the hills and valleys of California and have been seen by others to come on to the waters of the Pacific Ocean at the shore and then to continue out on the seas as a vessel. Similar boats have been seen by seamen on the high seas, and others have seen these boats rise again in the air and go upon the land of some of the islands of the Pacific. Others have seen these peculiar vessels as far north as the Aleutian Islands. Only recently a group of persons playing golf on one of the golf lawns of California near the foothills of the Sierra Nevada Range saw a peculiar, silver-like, vessel rise in the air and float over the mountain tops and disappear. It was unlike any airship that has ever been seen and there was absolutely no noise emanating from it to indicate that it was moved by a motor of any kind.

Perhaps the most interesting explanation of what is to be found in this locality is that it is not only the ancient seat of hundreds of Lemurians who still live there and manufacture and grow all of their principal necessities and keep themselves isolated, as did the other

group of Lemurians who lived at Santa Barbara many years ago, but that their village itself is only partly on the outside of Mt. Shasta, that there is a tunnel through its eastern base leading to a great enclosure in which there is a city of strange homes, and that the heat and smoke seen arising from the crater of Mt. Shasta is smoke and heat from the interior village. This is not an unusual tale, inasmuch as there are records showing that in Mexico another group of descendants from Lemuria were found living in the center of an extinct volcano, hidden from all possible worldly observation.

Thus we have one of the present day groups of Lemurians hidden in isolation in modern California, if we are to believe the testimony of reliable citizens and many scientists. It is not a story that is beyond human reason or possibility. And it is not the only strange sight or peculiar incident in California, but typical of what this old land may contain if ever it is completely and thoroughly explored.

Whether these descendants of Lemuria, as they are considered, continue to practice their ancient rites and live as they always did, or whether they have adopted some modern methods, is another question that is unanswerable. That they will eventually pass away and become extinct as the last, or one of the last, surviving groups of Lemurians, is inevitable, inasmuch as they do not allow any of their members to marry with other races.

At any rate, if all of the stories and the mute evidence of carved statuary and ruined buildings, be true, America has the honor and prestige of having on its soil the last survivors in a direct line of the first race of man on the face of the earth. Here was the beginning of that race, and here will be the end of that race. This makes America, in fact, the oldest country of the world and yet the newest, and perhaps it is this happy combination, this rare association of the old and new, this unique blending of the spirit of ancient culture with modern progressiveness, that makes the North American continent and its peoples from Canada to the Isthmus a great world of opportunity and golden fortunes.

Appendix I

THE CYCLES OF CHANGES IN THE EARTH

THE FOLLOWING EXTRACTS are from a personal manuscript by John H. Tice, Meteorologist, and published privately by the officers and directors of The Meteorological Research and Publication Company of St. Louis, Missouri, in 1875.

“For half a century scientists have earnestly been laboring to discover such a cycle, but without success; yet every day the necessity for it becomes more evident and the demand for it more earnest and pressing. Professor Lockyer, an English astronomer and renowned as a spectroscopist, expresses himself upon this subject as follows: ‘In Meteorology as in Astronomy, the thing is to hunt down a cycle; and if it is not to be found in the Temperate Zones, then go to the Frigid Zones, or to the Torrid Zones to look for it. If found, then above all things, and in whatever manner, lay hold of it, study it, record it, and see what it means . . .’

“Observation on special phenomena, such as sunspots, solar physics generally, magnetic intensity in the Earth, electric tension both of the Earth and of the Atmosphere, auroras, earthquakes, cyclones, rainfalls and terrestrial temperatures, have been made for half a century, and some for nearly two centuries. Why these observations have not been more fruitful in valuable results is owing to the fact that each observer worked independently, and made the observations of his chosen phenomena a specialty, without ever dreaming that there was a correlation between all physical phenomena. After devoting a period to their work—equal to half the length of what the Psalmist assigns as

the term of human life,— each observer came to the conclusion that his special phenomenon had a periodicity, and repeated itself in a cycle between ten and twelve years . . .

“After having satisfied myself of the existence of meteorological cycles, about eight years ago, I undertook to investigate their cause with a view of determining their length. As nothing can exist without a cause, synchronous and covariant phenomena regularly repeating themselves in cycles of uniform length, must have a permanent cause that is common to them all; and whatever that may be and wheresoever located, it must be ascertainable and susceptible of proof . . .

“In the preceding part of this work I have demonstrated that winds, rain, snow and hailstorms, cyclones, auroras, earthquakes, in fine, all telluric and atmospheric phenomena are electric; and that under what may be considered the normal condition of the Earth and the atmosphere the Electricity necessary to their production is constantly being generated but with varying energy . . .

“The testimony of the facts presented, incontestably establishes these points; that earthquakes have a periodicity in the frequency of their occurrence, and that they show well defined periods of maxims and minima, which alternate regularly as to time with each other. Examinations of the dates of their occurrences show that these maxima and minima are covariants with those of other physical disturbances . . .

“Earthquakes are caused by disruptive discharges of Electricity through the strata of the Earth. Electric currents, at all times, are circulating through the Earth from East to West. In times of physical perturbations, indicated by sunspots, auroras and great oscillations in the magnetic needle, earth currents, as they are called, often become too intense to be transmitted through the strata of the Earth, unless where the strata are unbroken or of good conductive capacity. These currents where the strata are broken up, or of too feeble conductive capacity, become damned up, as it were, until they are strong enough to force a passage, which is effected by what is called a disruptive discharge.”

Appendix II

LEMURIA

For the benefit of those who are analytical and of Are search turn of mind and who would like to delve more deeply into many of the subjects touched upon in this book, the following list of authorities and sources of information is given:

The researches and writings of Dr. Augustus le Piongeon, The records of the Mayan people in Yucatan,

The records of William Niven, Archaeologist,

The records of Dr. Morley of Carnegie Institution,

The *Code Cortesianus*, a Maya book written 5,000 years ago from temple records and which can be found in same institutions of learning,

Manava Dharma Sastra, an ancient Hindu book,

The writings of Lao Tse, The writings of H. T. Colebrook concerning his researches in Asia,

The records of researches of Professor Ellis in Polynesia,

The Egyptian book, The Book of the Dead.

A study of the history of the Inca people and the Quiches,

The researches of Leonard V. Dalton in Venezuela,

Researches at Easter Island,

Plutarch's, *Life of Solon*,

The writings of Plato,

The researches of Dr. Henry Schlieman,

The papyrus rolls from Egypt to be found in the museum in the city formerly known as St. Petersburg, Russia,

Osborn's book, *Men of the Old Stone Age*,

The excavations at Yucatan and various parts of Central America,

Richard Curle's book, *Wonders of the Past*,

The writings of Valmiki, the ancient Hindu historian, The book of *Manu*, containing ancient Hindu writings, E. H. Parker's book on China,

Captain Cook's records of his trip around the world in 1770,

The Rosicrucian records and historical writings,

The records of the Essenes, and hundreds of others.

The publishers cannot attempt to give information by correspondence as to where the foregoing books and others can be found by readers desiring them. Most of these books can be found in the larger of the principal libraries throughout the world, but any librarian or large publishing house will attempt to get these books for any reader, or will state where and how they may be secured.

THE ROSICRUCIAN ORDER, AMORC

Purpose and Work of the Order

The Rosicrucian Order, AMORC, is a philosophical and initiatic tradition. As students progress in their studies, they are initiated into the next level or degree.

Rosicrucians are men and women around the world who study the laws of nature in order to live in harmony with them. Individuals study the Rosicrucian lessons in the privacy of their own homes on subjects such as the nature of the soul, developing intuition, classical Greek philosophy, energy centers in the body, and self-healing techniques.

The Rosicrucian tradition encourages each student to discover the wisdom, compassion, strength, and peace that already reside within each of us.

PUBLISHER'S PREFACE

NUMEROUS WRITERS HAVE glorified the attainment of Cosmic Consciousness. They have in able literary style informed the student of mysticism, of the rewards awaiting the postulant of Cosmic preparation. Elaborately have they depicted the distinguishing characteristics between the two spheres—one, the sphere of Cosmic Consciousness, the complete, the absolute, the state of absorption of personality into the ultimate, the All-knowing and perfect; the other sphere—the mundane, temporal, empirical, lowly and finite, related to the body and its earthly existence. Perhaps it is a compliment to the manner of expression of their concept of Cosmic Consciousness, and its sublimity, that they have widened the gulf between it and the common consciousness of the layman to such an extent that the mind of most of their readers is not able to conceive of the means of bridging the void. Such glorification of a goal to be attained may undoubtedly be an incentive to the layman to plunge from his world of reality into an unknown realm. But it provides no technique. The technique is necessary if the student is not to wander into a maze of terms and abstract theories which eventually detract from the halo and lure of the goal. The student who strives for Cosmic Consciousness and the evolution of his personality without adequate preparation and a precise technique is left suspended between a world of objective thinking from which he ventured, and a world of idealism to which he has no guide.

It is not that philosophical meditation and reflection alone are purposeless and a dissipation of thought, but it is necessary that when the ideal has been conceived of by the mind, that it finds its counterpart in form, in action. True mysticism, like true philosophy, can never be limited to a value in the “business of living” Yet, if an ideal so far transcends the possibility of its application in life, it is purposeless. Resort to philosophy and mysticism is, we believe, for the enlightenment and advancement of man as man. If they but find form in the mind of the student only, they are only partially expressed, as

man is both mind and matter, and the philosophical or mystical idea must relate itself in some way to the progress of man in the exoteric, as well as in the esoteric. A technique for Cosmic attainment is a sum total of numerous actual experiences in reaching the goal. A technique is not the result of a process of reasoning, nor a personal belief, faith or theory. It is the accumulation of knowledge of ways and means appropriate to obtain the end with the least loss of effort, both physical and mental. The technique is the aftermath of an eventual venture of blazing a trail through obstacles of ridicule, criticism and false illusions. It is a critical review of a series of acts, and an accounting of those which have proved to be the best.

No one, we believe, is more ably qualified to give to the student of mysticism such a technique as the author, Raymund Andrea. He has served in the capacity of Grand Master of the Rosicrucian Order for the British Jurisdiction for years. It has been his duty and responsibility to guide on the path of knowledge large numbers of initiates, and to encourage them in their pursuit. The value of his own experiences in preparation for Cosmic Consciousness has been multiplied many times by the accounting to him of the experiences of others. His treatise here is masterful; it is not for those who seek a rapid or simple way. It substitutes a staple and an assured method for the quick practices so commonly advertised by lectures on mystical subjects. The quick process places the initiate in a state of light where he is unable to adjust his psychic nature rapidly enough to appreciate his advancement, and he descends with preference from the light into darkness because he is more accustomed to the latter. The technique advanced by the author recognizes the necessity of the student's comprehension of each stage of his advancement before he can go further. Thus the psychic and intellectual development at all times complement each other. There is no conflict, no irritability, and the harmony resulting is so gratifying to the student that he can conceive of only one movement, and that, upward and onward.

ROSICRUCIAN ORDER , AMORC.

July, 1932

INTRODUCTION

THERE EXISTS, AND always has existed within the Rosicrucian Order, a technique of peculiar value when applied to everyday life; and there are men in every department of life who need nothing more than this technique in order to make their lives eminently productive, and conclusive in investigation and demonstration. In principle and aim they are potentially Rosicrucian. They possess all the characteristics of the pioneer in the mystical and progressive quality of their minds. They are actors, not theorists; but their sphere of action is greatly curtailed because they lack an organized technique which will bring them to a profound understanding of their constitution, enable them to establish a ready response between the psychic and physical organizations, and look to Cosmic sources at once for inspiration and the working power to actuate it immediately and locally. It is these men, who are capable of great work in this cycle, whom we seek to contact, that they may have the opportunity of participating in a technique which will bring them to conscious knowledge and strength, the resurrection of latent faculty, and a soul consciousness and personality equipment truly Rosicrucian in character.

In "The Technique of the Master" I have endeavored to approach this subject of the technique from several related angles and give a comprehensive idea of the use of personality, from the inner and technical point of view, in its progress on the path while qualifying for initiation into Cosmic contact and pupillage under a Master. I have no two opinions about this one fact, that the Masters will use any man who can efficiently use their technique. That proposition is basic to all I have written. What he is by profession, whether he be highborn or humble, of this race or that, as well as practically every other consideration—these factors are incidental. If he can prove himself in the eyes of the Masters as a sound technician on the cardinal lines set out herein, he may be sure that he has reached a point in evolution where important disclosures await him from their sphere. I am not dogmatic in this matter. I am merely suggestive. I express an opinion. If it is considered

of value it can be used; if not, it can be rejected. But my aim has been to offset the idea so prevalent among students that they can obtain to high evolution on the path mainly through abstract meditation, and postponing action until they receive a mandate from a Master, ill equipped as they are, to carry out some momentous campaign. Not by meditation on the Self, but by using the self, is the burden of my theme. I do not emphasize the latter to the exclusion of the former. The Rosicrucian technique recognizes completely the dual aspects of development. But whilst philosophical meditation has been the main feature of countless cults, the path of action, in the most varied and practical sense, has ever been distinctly Rosicrucian.

We have only to glance back over the history of the Order to realize how profoundly true this is. The discoveries and practical works of the Rosicrucians of the past stand as a challenge and an example for all time. It is for us to keep this fact ever in mind and endeavor to apply this technique with all possible urgency and with complete dedication of all our powers in the place where we are. That is what the Masters demand first of all from us. When we have proved our efficiency and attuned our lives to the Cosmic forces, sympathetic response and contact will result and our sphere of service will be correspondingly enlarged.

The aspects of the subject I have sketched in this work are all related to the technique;—its fundamentals, the preparation for it, common delusions about it, its impersonality and magic, the Masters on the technique, vocation in relation to the technique, personal adjustments, the neophyte and his critics, and in conclusion, the vexed question of probation. My hope is that the book will be an inspiration and companion to every student of mysticism.

RAYMUND ANDREA , FRC.

Bristol, England.

NOTE: The descriptions of the *Masters* in this text, and of their willful direction in peoples' affairs is, by Rosicrucian definition, allegorical. The sense of personal contact and communion which a person experiences in Cosmic contacts is simply the form that the impersonal and invisible forces of the Cosmic take in such periods of attunement.

Chapter I

FUNDAMENTALS OF THE TECHNIQUE

THE TECHNIQUE OF the master artist has always been a subject of engrossing interest for the ambitious student who fully appreciates the beauty and rarity of that wonderful ease and facility which characterize the execution of great works in the realms of art. With the measure of understanding he has of the particular art he follows and such practical ability attained in it through conscientious labor, to witness the master projecting with perfect abandon the ideal conception, impeccable in detail and completeness, fires his soul to the limit and resolves him to press on to the seemingly unattainable. As he looks or listens he is carried out beyond himself; he is raised one step nearer this high heaven of invention; certain limitations seem to pass away and the goal appears less remote under the controlling influence of the embodied ideal before him. Nothing is so necessary to the aspiring student as the embodied ideal. Books will never educate him as that can. There is something immediately urgent and compelling in the visible action of the master mind, which takes by violence the faculties of an appreciative soul and awakens it by degrees to clearer comprehension of that unique technique, and enables it to grasp intuitively fundamental principles and methods of interpretation which merely astonish and overwhelm the passive and unaspiring admirer.

Now, in the technique of the Master of Occultism we have a condition analogous to this. Here is a man who is the flower of humanity, with a consciousness universalized and expressing at will a knowledge, multiform and vast, and exercising powers and abilities, various and intricate, so impressively and effectively, that only a comparative few are ready to accept the fact of his actual existence. Yet

it is sufficient that some do believe in his existence and that of those an increasing number can testify to his existence through personal contact with him. But this question is beside my purpose. My purpose is to consider some aspects of the technique as far as it may be discerned through personal study of the subject and from what has directly impressed me during my investigations and reflections, particularly in connection with my own development on the path and generally in dealing with my individual problems of students of occultism. These students are, consciously or unconsciously, reflecting in their occult progress what appear to be manifest signs of certain phases of the method of procedure which I term the technique of the Master. For I hold that in these days of advanced developments along every line of mental and spiritual research, the human mind has evolved such exceptional capacities both of insight and demonstration, and has passed so swiftly and boldly beyond hitherto jealously guarded frontiers of secret knowledge, and made discoveries so momentous, as to justify the opinion that, where these researches are of an occult and spiritual character, those master minds whom we know as the Masters of Occultism, are taking the keenest interest in the upward progress of those who are prosecuting such researches and whose maturity of soul demands a specialized discipline and personal guidance at their hands. Nor is this idea difficult to accept if one observes the confirmed character, trend of life and particular service of many beautiful souls in the occult world who have devotedly followed the path through a long course of years and in whom may be perceived very clear signs of a presiding deity which permeates them with eagerness and self-abnegation and a divine thoughtfulness for the welfare of others in manifold ways, but especially in those things pertaining to their higher evolution. On encountering such souls recognition from the interior aspect is almost instantaneous, since it is a matter of synchronous vibration and of dedicated purpose. Their work on the path has often allied them closely in the past through the medium of meditation and in periods of withdrawal; and where they belong objectively to some special group of aspirants, on the plane of the ego they are one and under the supervision of a Master or his initiates. Indeed, the further we advance in our occult work the more necessary it is and the more natural does it become to measure those we contact from this inner

standpoint. We develop an entirely new scale of values and retreat from the judgment of the objective mind to the certain intuition of the divine monitor whose voice grows clearer and more insistent in proportion as we recognize and trust it. In this way we learn to detect our true compeers on the path. There transpires in them an indubitable response to the cultured and heightened vibration that irradiates and controls our vehicles of expression as it energizes downwards from the higher centers of the inner personality. And this vibration, so active and potent in the physical, emotional and mental economy, as I conceive it, constitutes a distinct development and denotes, it may be, one aspirant only in a whole group of students, as having reached that evolutionary point where he becomes, in some degree, an exponent of the technique of the Master. I make this limitation of only a possible one out of many students all engaged perhaps in similar work on the path because I believe the exponent of the technique is a comparatively rare individual even among earnest students. Yet the attainment of this inner touch of the Master's method of instruction and manifold adaptations in life and circumstances is surely the outcome of no favouritism or simple plea for power and prestige. It is the gradual fruition of a rigorous discipline to that end in the long and continuous struggles of past existences. Such an aspirant will manifest the peculiar influence of this past development in all his life activities. It may become more and more a conscious possession and pass under greater control in the course of his studies in this life and his particular work on the path; but even early in his incarnation the immature effects of the principles and practice of the technique will be observable, and in his later years important results will ensue which will infallibly demonstrate that he is one of that esoteric group of aspirants who is carrying out specialized work under the direction of a Master. It will be understood that I am not writing for those who demand proof in the ordinary sense of the term of this fact of special development in the individual. It is not susceptible of this kind of proof. Moreover, there is no desire to prove the fact in this way. The only proof that can be furnished lies in the personal influence and work of him who has it. It has been averred that the Master himself is often indistinguishable from ordinary men except through a subtle magnetic radiation arising from auric intensity; and it is precisely this radiation which characterizes the man, but in

a far lesser degree, who is magnetically linked with the Master in the occult world of force. Truly, there are manifest signs and enough of this condition recognizable by those who themselves aspire and seek the divine in nature and man. Some of these signs may be noted, since they are intrinsic and stable qualities and are so unvarying in character that they may always be predicated of the men we are denoting. We shall observe great versatility in the character, a ripe understanding of the profundities of human nature, an acquaintance, intuitive if not experimental, with all the crucial depths of human sorrow, allied with a skillful adaptation to the diversities of temperaments and a power of appeal to the soul in men. These qualities characterize the man who is called, in the technical phraseology, a disciple of the Master. He may be a conscious disciple, or an unconscious one. He may be consciously aware of his relationship to and acceptance by a certain Master, or he may be unconscious of these facts: the fundamental position remains unaltered; and it is only a question of time and specific growth until he will become as fully aware of this relationship and acceptance as of his relationship to and acceptance in his own family.

Very variously have been given in occult treatises what are designated the qualifications for discipleship, but fundamentally they are identical in character and expression, and will be found to underlie and indeed to be the basic cause of the development in the man of the above-named qualities. All of these qualifications merit the closest attention and study by the aspirant who is bent upon soul culture and who hopes to equip himself for demonstration of the technique in some phase of world work of the Master. They must be wrought into the very fabric of the emotional and mental life and become as truly a part of the expressive self as are the ordinary and well-known faculties of objective use. On this point hinges largely the whole problem of the technique. It is common to meet with students who are disconcerted because their studies do not culminate in some exceptional crisis in this direction. Knowledge they have; their reading is extensive; yet they are unaware of any special development indicating discipleship, or of any outstanding facilities for putting their knowledge to specific use. The difficulty lies here. The soul has not matured to the point of utilization and demonstration of its content, nor has that content the required measure of fullness and force; and the Master cannot accept and use

it, even through the agency of subordinate initiates, until the necessary maturity is shown. The decision in this matter is not arbitrary; it is based upon occult law. If it were only a question of study there would be little difficulty, the objective would be easily obtainable; but the Master cooperates with his disciples on the basis of inner soul force. “The world of force is the world of occultism and the only one whither the highest initiate goes to probe the secrets of being” Any advancement, then, towards the technique must be made in accordance with the long-established and invariable method of procedure of prolonged and conscientious study of the main subject of occultism, embracing as many branches of related thought as possible, in conjunction with the unfolding in the personality of the various attitudes of emotional and mental culture known as the qualifications for discipleship; and a variable period of experimentation in the use of spiritual forces to be generated through introspection, meditation and service. “Learn first our laws and educate your perceptions”

PREPARATION FOR THE TECHNIQUE

THAT PERIOD OF duration the institution of the fundamentals may occupy cannot be determined. I am anxious not to say anything on this subject of preparation which may appear discouraging to the aspirant who hopes to cover the necessary stages within a short period in the present incarnation. On the other hand, no good purpose is to be served by giving a colourable construction to a subject of such vast proportions and rendered intricate by the peculiar discipline necessary for overcoming those hindrances and obstacles inherent in the texture of the personality, which must be gradually remodeled and exalted to a higher plane of expression. Students often bring discouragement upon themselves in that they are unable to gauge rightly where they stand approximately in the scale of interior evolution. They judge of their growth and assume their immediate possibilities by what a more advanced soul is and can do. This inevitably leads to discontent and discouragement. Nor is it at all easy to impart to others an infallible method of judgment in these matters, since the whole question practically rests upon what grades of evolution the individual soul has already taken before it resumes its studies of the path in this particular life. My opinion is, that the student who enters upon the study of the science in this life for the first time cannot expect to become an exponent of the technique in the same life. There is a hint of corroboration of this in the words of one of the Masters, "If the psychic idiosyncrasy is lacking, no culture will supply it" We shall find that this psychic idiosyncrasy is a distinctive trait in the man who is the recipient of higher influences. It has no relationship with the condition of mediumship known as spiritualistic. It is the polar antithesis of that. The man is not a tool in the hands of intruding entities, or an entranced revelator of the improvised discourses of guides of doubtful authority.

The inspiration which is a feature of the technique comes from within, from a point of ascension in the head, from the sacred precincts of the indwelling divine self, which impresses directly the prepared and dedicated personality of the aspirant with such aspects of the Master's work as he is so far competent to undertake and advance. Therefore it is among those who have early in their incarnation entered upon the path and in whom the qualifications are instinctive and an intrinsic part of the character and temperament, that we shall expect to find some selected, after persistent and consolidating effort to that end, as exponents of the technique.

Let us take the qualities we have specified as particularly connoting the man who has attained that point in soul evolution where he is conscious of certain developments indicative of contact with super-physical influences and is being used in the work of the Master. These qualities, it was intimated, included and focused, so to speak, the various indispensable qualifications for discipleship; not in their fullness and perfection, it may be, yet with so much precision and effect in their use in daily life of the man as to clearly indicate that they are fully recognized and fundamental factors in conduct and are in continual evolution.

Versatility in the character derives from a large mental content, and is obviously of first importance, since the versatile technique of the Master himself is so large and comprehensive, so momentous and imposing in its nature and operation, that without this background of an extensive mental activity and consequent facility in the use, reciprocal and instant response would be lacking. In the man of technique this response is immediate and sure. Hidden relationships in particular situations are swiftly revealed through the unified action and close consent of all the faculties and senses. A subject under consideration becomes a focal point in the mental life, compelling to itself a wealth of associated ideas from the Cosmic repository of thought, so that abundant informations and dictates are forthcoming, imperative and constraining, which impart significance and effect to the prevailing theme; or a human soul comes, burdened and hesitant with a weight of emotion which hinders clear thinking, mystified and perplexed with some problem lying heavy upon the heart, which the

technique sees intuitively and embodies in shapes and aspects which raise and dignify and give mental form, and with it ease and satisfaction, to the incommunicable and oppressive. These are merely indications of the characteristic versatility the procedure of which is intricate and obscure to the uninitiated observer, yet operates with discrimination and exactness and with the promptitude and effectiveness of a divine afflatus from concealed sources. It does so because of a long novitiate, wherein the mind has habituated itself to a deeply occult responsiveness to a higher order of cognition, wherein a path has been made in mental matter by an ascending vibration, leading consciousness gradually upward and polarizing it within that sphere of spiritual impression remotely analogous to, and to some extent recipient of, the finer sphere of the octave of the Master. It will be observed how peculiar and special is this quality in the technician and how greatly it differs from, how much it exceeds in luminousness and force, that versatility which is objective in character and use and commonly met with in everyday life. It is from the exercise of this quality that profound understanding of the human heart becomes more and more a cherished possession of the aspirant. He so regards it because it gives him increasing ingenuity and skill in service. The human soul draws him irresistibly; it has a divine fascination for him; and his constant aim is to “understand the beauty and obscurity of those other divine fragments which are struggling side by side with him” that he may assist their evolution on the path. This quality, too, has its exoteric and esoteric aspects. It is common enough to meet with those who are excellent judges of human nature; they classify temperaments and are acquainted with their manifold peculiarities; and there is satisfaction in feeling that we are easily understood and that there is ready response to our personal expression. But the range of the technique is of a profounder order. It has not to search for motives; it registers them. They rise in all their conscious strength before the observant soul; the silent thought speaks and is answered before it finds utterance. “For as the individual has voice, so has that in which the individual exists. Life itself has speech and is never silent” It is the speech of life itself that the technician has studied; it is the voice of that in which the individual exists to which he has attuned himself during his ascent on the path; and that voice is single and unerring because it sounds in the Master’s presence.

Here, too, it is that his past intensive moral training plays its part. Through the persistent search after reality the soul becomes sensitive and receptive and swift to discriminate in the kingdoms of nature and man. It becomes clairvoyant of the atmospheres of souls, and that which is working at the heart of life is transmitted to and declares itself sympathetically in the vehicles of the man. There is nothing miraculous in this; it is the law of reciprocal response and is indifferent in its action. It may be utilized for evil ends as well as for good. But only in the well-trying aspirant who recognizes the sacred value and responsibilities of this facility will it unfold to the full dimensions of its finest culture. This is a point for special consideration on the part of those who aspire to the technique. Do you aspire to serve, or to bend others to your will? With this quality well developed you can do either; but it is only legitimate for you to use it in service. If the desire to play with human hearts is greater in you than the desire to serve them, you must tarry, because the real technique is not within your reach. You will have but a caricature of it. There is something sinister and cruel in the advancing individual who seeks the power of the Master and uses it in the work of the devil. I recollect a poignant case of this description. A student was entrusted with the instruction of a group of seekers, but betrayed his trust for self-gratification. The law is not mocked in this way. It passes the man back to the world where he belongs, to bitter reflection and sorrow, with the misdeed written by Karma in his vehicles for an everlasting remembrance.

This is an extreme instance; but there are other ways of misuse, less heinous in character, which yet are not permissible in a servant of the Master, nearly all of which are the direct offspring of vanity and the desire for power. Yet the Master's own technique is so searching and discriminative in the choice and use of a disciple, that the aspirant will acquire little facility himself in exercising any distinct phase of it until these undesirable tendencies have been eradicated from the mind and heart. The infirmities of an aspirant are never cause of condemnation, but so long as they exist in him the responsibilities of higher evolution will not devolve upon him, since they would but accentuate those infirmities. There is only one thing which is justifiable and safe and which is imperatively demanded of him as he draws closer to the secret life of human hearts, and that is, a compassionate understanding. A full

and restraining compassion lies at the very heart of the Master's own technique in dealing with a disciple. There is no coercion, no autocratic control, no exploitation of weakness, neither fear, nor intolerance, nor sentiment, in that great and suffering HUMANITY which lifts and frees and dignifies the trusting soul that looks up and gives itself in adoration and love. This is the ideal for the aspirant in his work for and with others. "He must learn to look intelligently into the hearts of men from an absolutely impersonal point of view, otherwise his sight is coloured"

It will be observed how completely these specific qualities ramify through the whole nature of the man, how each includes in itself subsidiary attitudes which must receive attention and be constantly developed. Impersonality is such an attitude. The aspirant must be able to stand back at will from the assertive personal self which craves recognition and aggrandizement, would exercise forbidden power, grasp and hold that which is unlawful yet easily within reach and subject to his influence.

Acquaintance with the depths of human sorrow is a quality closely related to and contingent upon the last-named. We cannot advance far in the study of the human heart without sensing and knowing the almost intolerable burden of pain in every imaginable form which rests heavily upon humanity and cries aloud for deliverance. Here again we note the dual attitude in the aspirant in his bearing toward the pain of life in his fellowmen. It is a condition of the technique that, in the man who is demonstrating it, sensitiveness is continually increasing. "He must suffer, must enjoy or endure, more keenly than other men" In the early stages this condition is particularly difficult to deal with. It is, indeed, a secret cross which perforce he must carry; and the effects in himself are often of so singular and antagonizing a character that he is apt to question the usefulness of submitting to it. But these moods are fleeting and contemporary with those little crises in thought and emotion which ever assail the advanced man on the path. They never really deter him; for there is present the consciousness of persistent right action in the past, of his intense and abiding aspiration to be of service to the Master, besides the many instances of interior development which compensate a hundredfold for the pain-producing reactions consequent upon his self-imposed discipline.

Nevertheless, there is much of occasional difficulty experienced by the aspirant through this fact of increasing susceptibility throughout the whole economy of his expressive self. As it is a concomitant of his evolving soul life, whatever temporary disquietude or dis-concertedness or actual suffering it entails, will be permitted to work itself out, its utilizations and possible applications in the service of others will be fully noted, and a wise submission and resignation to what is inevitable and must be patiently borne will extract peace from many a troubled hour. For remember, the technician is not a theorist; he is, literally and truly, in the depths of his soul a man of sorrow and acquainted with grief. I have no wish to cast a sombre hue over this phase of the subject, but if this thing is true in the experience of the soul it must be faced and expressed. What is the use to stand before a fellow creature who has been wounded to the soul by some untoward circumstances, or is desolated and helpless through loss and deprivation, and quote to him a text from the secret doctrine? I have proved over and over again in such cases that the voice of a compassionate understanding and of expressive affection has been the one and only effective ministration to the soul in affliction. I would go so far as to say that no aspirant, whatever his accomplishments and qualifications, can hope to contact the sphere of the Master without the priceless quality of a great humanity.

The next quality is adaptation to the diversities of temperaments. A man who is mastering the technique gradually includes in consciousness, through the increased momentum of vibration in his vehicles, the vibrational force measures of all other consciousnesses on his own level and of those below that level. In other words, his consciousness is attuned to certain octaves of vibration; he can respond at will to every keynote within those octaves; therefore any other consciousness which responds vibrationally to any keynote therein, he can adjust to and interpret. We are considering the esoteric aspect of temperament. In speaking of temperaments generally we class them simply as the artistic, the scientific, or the legal, and so on. But there is a temperament or atmosphere of the soul. The technique in its operation is esoteric; and its interpretations and utilizations are concerned with and based upon the expressions, the impresses and signatures, of the soul. It never relies wholly in its use upon so misleading a factor as temperament

in its simple exoteric classification. To do so requires no superior development, nothing but a familiarity with psychology and related sciences; whereas the sensitive and developed soul sphere of the technician reproduces within itself the precise soul states prevailing in another. Through the law of receptivity and response the lesser sphere is contracted and known as by an inner sense of touch. No willful effort of the objective self can withhold this transmission of the vibration of its soul sphere from the intuitional observation of the technician. It acts independently of the will of man. It is the man as he stands in the scale of evolutionary influence; and that is what the technician is concerned with, not with the outer personification which is often but a misleading caricature of the self. However involved and theoretical this may appear to some, it is true in the experience of the technician. He knows immediately and fairly accurately—I do not say perfectly, since we are not speaking of perfections, and there are many grades of the technique—the personality and the soul measures of those he contacts and would assist, whether occultly or in any other way, and is able to apply to them that aspect of his accumulated wisdom and experience which they instinctively seek. Nor am I referring to specific methods of mental influence known to psychology. These have their place in certain phases of life experience and may be used for good and legitimate purposes; but the power and efficiency of the technique are neither derived from nor stand in need of them. There is a psychology of the soul which the aspirant evolves within himself for his own use as he advances in the technique; and while the qualifications are the same which produce the cardinal qualities indispensable in every aspirant, the higher psychological procedure evolved in the soul through the usage of the technique is an individual and peculiar one, and will vary in character according to the Master sphere he contacts and the kind of work he is fitted to undertake.

The aspirant who has the above qualities well developed will undoubtedly in some measure have the power of appeal to the soul in men. In the course of his discipline on the path he will have discovered in what way he is to present his knowledge and experience in the service of his fellowmen. The technique has manifold lines of usage, and during the process of unfoldment his particular line will be unmistakably pointed out. It may be in his business relationships or in

THE TECHNIQUE OF THE MASTER

his professional life that the influence of the Master will prevail upon him to work with and upon his associates in higher and beneficent forms; or, if he has that mental constitution whereby he is competent to teach and guide others along the path, he may find a field of action for the technique in a school of occultism or with a group of students, to which he is allocated through Karmic alliance. One thing is certain. The technique will be unfolded only in the man who has throughout been steadily bent upon giving himself unreservedly to the betterment of human lives, who has pledged himself in mind and heart, and studied and struggled with the whole force of the soul to be worthy of the attention of the Master and to become his efficient representative. Such a man will never lack the power of appeal, but will augment it at every step of advance.

DELUSIONS AND THE TECHNIQUE

IT WILL BE at once apparent to those students who have carefully considered the foregoing reflections and are able to grasp intuitively the meaning and potency of this higher experience, that we are dealing with the advent in consciousness of a spiritual force of which comparatively few are aware. I am making no singular personal claims, nor am I depicting the exponent of the technique as one who exercises a prerogative so remote and hidden in character and function as to mystify and perplex the aspirant who is sincerely seeking the Master. Nevertheless, I am dealing with that which is so emphatic and operative in its expression and yet so recondite and disputable to those who are inclined to adopt a critical attitude, since there is much in it that may appear austere and unattractive to those who prefer theoretical knowledge to practical developments, that only in a few among recognized students of the occult shall we expect to meet with its development

A statement of this kind will no doubt lead to a good deal of serious individual self-questioning and examination, which is good and an excellent aid to self-knowledge. Happy is the student who can exercise a just discrimination during the process of introspection and rightly adjudge his position on the path of attainment. That self-appraisal should give him confidence and humility; confidence through the realization that he has made much progress and notes that the qualifications necessary for higher work are steadily ripening within him; humility in the realization of how much is to be done and overcome before he can bear those responsibilities which the Master demands that he shall consciously accept, with all their necessary implications, and be competent to discharge largely upon his own initiative.

A Theosophical leader once remarked that his society was, from top to bottom, full of sponges. I have no wish to cast the slightest reflection upon any body of students. I write dispassionately and uncritically, and introduce the above remark because it throws out in bold relief a profound truth which has a direct bearing upon the subject of delusions which hinders the development of the technique. Indeed, the remark might well apply to many groups of students other than Theosophical. Undoubtedly, there is a large number of so-called occult students who are literally but passive receivers of doctrine which they have neither force nor initiative to apply in any practical sense.

One of the greatest delusions prevalent among students is, that by imbibing doctrine from the lips of a teacher thoroughly indoctrinated they will in no long time be suddenly accepted by a Master and be raised to some nebulous level of sanctity and to the accomplishment of miraculous works. It is sufficient to ask of these students, can they instance any such cases of miraculous intervention and divine exaltation among themselves? If they point to some of the outstanding personalities in the vanguard of certain movements, their delusion is twofold. All such instances of exceptional development on the path are clearly exponents of the technique who have trodden the long and arduous way of soul culture, work and service. It is lamentable to note the one-sided conception that obsesses students in this matter; and the sooner their hope is shattered regarding it the sooner will they begin to take the first serious steps already outlined.

A large percentage of these same students are entirely devoted to what is called the Eastern path of development. No intelligent person having knowledge of that path would decry it. It has produced saints and saviours in abundance. We know that some of the great Masters have taken this path. But a rigid adherence to it by the Western student is fraught with manifold dangers and as often as not productive of unbalanced development. We have only to remember that the Western aspirant is not constitutionally fitted for the rapid demonstration which is comparatively easy of attainment in the East. The ordinary well-known obstacles and hindrances on the path have a far greater range of difficulty for the Western aspirant, since his very constitution is an

obstacle over and above the specific obstructional tendencies to be eliminated by aspirants of any nationality. The grasp of the science is not intuitive in the case of the Western aspirant as it is in the Eastern. So much is evident to those who follow the questionings and endeavours of the former in his studies. If then the aspirant in the West is breaking almost entirely new ground in pursuing the science and needs so much encouragement and prompting and guidance in his study and effort, it cannot be amiss to assert that he should be required to demonstrate unusual facility before he may hope to reap any real benefits from sincere application. And it may be pertinently asked, what chance has a passive imbibor of doctrine of meeting successfully the ordeals of the exacting Eastern path? To think of being able to do so reveals a basic ignorance of first principles.

This applies equally to the aspirant on the Western path, or who combines the methods of the East and West. Every aspirant for attainment must at some stage or other master the technique and become a living exponent of it. There is no compulsion for him to master it quickly. He may enjoy such personal satisfaction as he can from a theoretical knowledge of occultism and leave the practical issues to the future; but if he does aspire to recognition by the Master, this basic ignorance must be thoroughly eliminated. For observe what a vast amount of development, what a range of experience is involved in effecting the necessary discrimination, how full and balanced a conception is requisite in the man who is using the technique consciously even in its rudimentary stages. Any idea of a short cut to the goal is immediately ruled out. The first thing, in fact, towards overcoming ignorance is a clear idea of the work to be done; and if the work is long and difficult there is no virtue in fooling ourselves with the soothing notion that it is a simple matter and of short duration—the passive existence of a sponge.

No student who has given time and labour to the science can say other than that it calls for a soul of distinct calibre and of mental qualities of no mean order. Even the initial intuitive perception of a long task ahead requiring the cooperation of the whole man is of vast importance; because if that is present, is fully accepted, and there

succeeds a strong assent of the mind to achieve and a determination to master the steps of discipline—that, even at the threshold, is the voice of the Self sounding emphatically though inarticulately within the aspiring cosmos of the man and is a prophecy of success. To some this perception comes at the threshold of study with clear and strong and sudden emphasis; others have nothing of the nature of this egoic impetus, but often enough only a very vague and misleading perception of the work before them. In the case of the former there is present a body of latent growth and but little application and preliminary study is necessary to set the aspirant firmly on the path with a surprisingly comprehensive conception of method and line of approach; in the latter, a well-defined plan of study has to be entered upon and the basic facts of occultism assimilated until a sufficient reason for prolonged future effort is seen and an interest strong enough is awakened to steadily pursue the initial stages of discipline. If the assertion of his will is sufficiently powerful to urge him on to the greater discoveries of self, the preliminary settlement which he will experience in the personality will ultimately pass; a miniature spiral of evolution will have been achieved, which will give birth to successive and wider spirals of related experience. A peculiarity of these advances is that they are nearly all concerned with daily life and a keener and more exacting sense of living. The whole process of advancement, it seems, inheres in an increasing stress or tension in the vehicles of expression, until the observant aspirant comes to realize that it is mainly in new and finer contacts, in unlooked-for rearrangements of circumstances, in perplexities and trials of the mental life, in unexpected responsibilities naturally opening upon him, most of which appear totally unrelated to any glory of spiritual conquest, that the path to knowledge and right action and the overcoming of ignorance, in the occult sense, consists. Well is it for him if he can seize this truth quickly and accept and encourage its beneficent working out upon every plane of his being; if he can realize that it is his own individual Karma and none other that compels.

The delusion of inaction as a factor in occult attainment which arises principally from a basic ignorance of first principles, merits a conclusive judgment. Reading alone will not dissipate it, nor, aspiration

alone, nor alone the quiet mind which refuses to engage and participate in the exigencies of life and circumstances, nor yet devotion to an ideal or a personality. It is by continual demonstration of the force of the soul, by the assertion of life upon every plane, by compelling vibration to answer vibration in any aspect of the tumultuous worlds of form, and giving all this in essence back into the playing hands of the inner man as experience known and assimilated, to enlighten and ameliorate and bless.

Another very prevalent delusion is that connected with the overcoming of the sense of personality. Students spend precious hours affirming and willing the personality out of existence. Let the serious aspirant observe, that his early efforts in the science of attainment will increase the sense of personality to an unusual degree rather than blot it out, that is, if he goes whole-heartedly to work. It is obvious that in his first attempts to overcome the basic delusion of ignorance he must take knowledge; and if he does that rightly the range of his personal vibration will extend in every direction. Should he disallow that extension and resort to the common practice of denying reality to his personality, he may ultimately be reborn upon a higher plane, but without power or initiative and with nothing of practical use to give to his fellow men. It sounds trite enough to say that before we can really know a thing we must have intimate knowledge of it; yet there exist countless students of the occult who base their ascent to the spiritual upon a dreamy and weakening denial of that which it is their primary business to investigate and understand from every possible aspect.

I consider it of first importance for the aspirant that he should take an inventory of his mental faculties with scrupulous exactness. He should know their range and strength and the particular line of activity which they naturally follow with ease and facility, and so indicate his vocation in life. If, for instance, he has strong faculties for certain types of literature, art or science, there is the mental foundation and the point of departure which will later indicate his path of approach in occult work. This should be obvious, yet it is not sufficiently observed; and through the lack of this elementary knowledge of self the aspirant will often say enthusiastically that he only wishes for illumination and

sits down to meditate upon the self, while the personality receives no specialized attention. There is only one remedy for this hypnotic and fatal condition. Know the personality and make it a tool of power. When we know a thing and have taken the measure of its action and reaction, then it can be used with telling effect. In this case, it is the mind we have to know, with its faculties of judgment, imagination and reason, the skillful combination of these in resourceful daily action in a multitude of common and original adaptations in life. We want the two-edged sword of the mind firmly in our grip, to advance or retreat on the instant, and to apply to any problem directly and adequately. The action of such a mind is a joy to behold; and it is so because every faculty has been awakened to the limit of its function and operates individually or in conjunction as its developed technique directs.

This idea of the use of the personality may be brought to a focus in the observation of a maxim of a master mind, the Rosicrucian Bacon. He says: "There are and can exist but two ways of investigating and discovering truth. The one hurries on rapidly from the senses and particulars to the most general axioms, and from them, as principles and their supposed indisputable truth, derives and discovers the intermediate axioms. This is the way now in use. The other constructs its axioms from the senses and particulars, but ascending continually and gradually, till it finally arrives at the most general axioms, which is the true but unattempted way" Now the continual and gradual ascent is the method for the aspirant to adopt in recording and studying the accumulated impressions received from the senses and particulars of mental action and reaction, so that his knowledge of personality and its relationship to the worlds of form and mind shall be built up soundly and solidly and yield a reliable experience of his position in the world of men and his evolutionary value as related to other mentalities. The Self must have a powerful instrument to work with, a body of information through realized contacts. For of what use would be the thoughts and intentions of the Self to an unorganized and feeble mind? Where would be the basis for the right discrimination and use of these? I command this reflection to the ardent deniers of the existence of personality. I grant that there are instances on record of brief and intermittent contact with the Self in those of weak and unbalanced

mentality, and I am not sure but that they have been more a menace than a help in the matter of the concepts they have disseminated in the field of knowledge in which they considered themselves authorities. But the orderly unfoldment of the technique which is based upon the science of the soul is calculated to eliminate this kind of spiritual abortion and specifically indicates a sane and practical method leading to that personality completion whereby the Self may be scientifically contacted and the will of the Master be done.

A further delusion is that by forced and profound breathing the Self is to be contacted and known, and long stages of the path taken by violence through athletic procedure. The grave dangers attendant upon this kind of practice should be obvious to every clear-thinking and discriminative student. As an illustration I might cite the lectures of Vivekananda on Yoga. For a long time these lectures were a standard work in the West. The author of them was undoubtedly a practical yogi; but, like a master of his subject, he set out with a stride so bold and with such commanding authority, that at first sight it appeared the easiest matter in the world to enjoy the bliss of Samadhi in a few months. My opinion is that he was an incompetent teacher for Western students. He came to the West with the Eastern ideal of Yoga flaming in his heart, but he failed to adjust his ideas sufficiently to the Western mind. No one could doubt his devotion, his vision, or his sincerity, nor of his own practical realization and attainment in the science; but his pace was too swift, his ideas too general and luminous, to be successfully worked out to safe practical issues. He did not adjust to the measure of Western thinking sufficiently to be a patient and sympathetic educator of students in the West. He dazzled his hearers, and confuses most of his readers, in spite of the enlightenment he brought with him; so much so, that the majority of those who have taken up practical Yoga under his guidance become discouraged by reason of the sheer magnitude of the ideal, towards which, through this or that inability or incapacity, or want of fitting circumstance, they have made scant progress. Other and more recent writers have recommended similar practices for the attainment of Samadhi, or liberation, many of which are totally unfitted for the Western student and if rigidly adhered to would mean positive disaster. One of these

writers counsels his readers to continue breathing practice until a duration for inhalation and exhalation is reached of between four and eight minutes. I have known a student to take breathing exercises and complain of pains in the body and affection in the head. If nature's warning is not sufficient, who can help him? Yet students are foolish enough to force their vehicles to the three-minute indispensable breath of a yogi teacher who finds the task hereditarily easy and therefore advertises it as a passport to the Union.

A famous occult teacher once confessed that at one time he became enthusiastic about the work of Vivekananda and applied himself strenuously to breathing exercises with a view to rapid development; but within a brief time he found his etheric body vibrating to such an abnormal degree that he felt himself being lifted out of the physical and walking upon air. It was some time before he became normal and properly adjusted to his physical body. This is but one instance of the extreme danger of following a teacher like Vivekananda without the strongest common sense as to time, place and values, and a wise discrimination pertaining to the general teachings of Yoga. For the average Western student with a breathing capacity of about twenty seconds for inspiration and expiration before applying himself to any conscious extension in connection with occult discipline, it may be suggested that he can only safely extend his capacity to fifty-or sixty-seconds duration by gradual practice covering a period of between one and three years. I refer entirely to the physical aspect and the effect upon the lungs and chest muscles. From the inner aspect, a breathing capacity extended from twenty to sixty seconds effects many important changes; and unless there is a natural or long habituated mental control, a student will be practically helpless before the host of psychic and mental influences evoked by the accelerated vibration in his vehicles. I see no danger in his attempting such an increased capacity within the limits mentioned, on taking up the discipline, provided he is spiritually aspiring, has a sound sense of mental proportion, and is devoted to the idea of service. The extension in itself is but a branch of athletics.

The effects of scientific breathing upon the emotional and mental vehicles call for careful study and calculation. Some aspirants are of so powerful an emotional calibre that anything in the nature of

stimulation, even of ordinary physical exercise, vivifies the whole personality, and a well-directed suggestion would be sufficient to carry them headlong. So it is with those of very active and acute mentation. Under the exercise of profound breathing, thought forms of increasing magnitude and force possess the mental field, and unless these are consciously held and disposed of under the supervision of a certain degree of Self contact, such students become the easy victims of undisciplined intellect.

We live in an age of short cuts to supremacy, which are none other than a species of hot-house development, lacking stability, fundamental experience, or sincerity as a basic reality. One well-born and self-trained devotee who has laid his aspiring soul upon the altar of life through the years and struggled upward through light and darkness, intent upon being a force on the side of evolution and a blessing to others, will often do more real work for the Master in a day than the short-cut aspirant will accomplish in a lifetime. It is the law. We can only build upon what we have; we can communicate only what we are. The bane of our day is the want of sincerity. The short cut is a form of insincerity; it lacks the force for a true development; it is content with superficial achievement. But insincerity in the occult aspirant is a sin, and failure is its reward. It is living the life of the soul after its own law in the everyday world and taking each step of the path with infinite care and patience and humility, that unfolds in the aspirant the fine art of the technique and initiates him into the sphere of the Master.

IMPERSONALITY AND THE TECHNIQUE

THE FORMULA, “KNOW Thyself,” has been paraphrased into countless other formulas, all of which are familiar to the student of occult literature, and most of which throw more or less light and meaning upon the primary one. These formulas have a deeply cosmic import and often prove a little disconcerting when reflectively analyzed. To know oneself from the occult point of view is a comprehensive matter and one with which most of us will be well occupied for at least the term of our present incarnation. We must realize that true self-knowledge cannot begin until some degree of egoic response has been attained. Up to that point in evolution our knowledge is theoretical and speculative.

The attainment of self-knowledge is mainly the demonstration of an increasing measure of impersonality. Impersonality is the secret doctrine of practically all of the occult classics. No matter how great is the appeal of their beauty and their desirableness to the intellect or to the esthetic sense, we remain but in the outer court until impersonality becomes a factor in practical life. It is usually preceded by a long cycle of development and experience of the most varied and often perplexing character. There is a world of inner experience to be garnered before we can become living exponents of the fact; and only a genuine occult discipline compels that experience and leads naturally and lawfully to a proper demonstration.

Impersonality has many degrees. They range from the minor detachments exercised by the aspirant to that extreme spiritual aloofness so striking and natural in the adept. In whatever degree manifested, there is in its exercise something exceedingly arresting and influential

to those who witness it. Its nature is so unique, so contrary to the well-known laws of personal expression in the world, that the aspirant engaged in its culture is quickly, though tacitly, distinguished from his fellows. It is a departure from the rule of common life; it originates from a plane outside of that of everyday thought and observation; its manifestations are such as the ordinary consciousness almost refuses to sanction; it makes us aware of the divinity overshadowing human consciousness and invites to a heart surrender to its beneficent promptings. It upsets our preconceived ideas of thought and action, rejects the limitations and pride of the intellectual self and falsifies well-grounded maxims of a liberal education. And herein is the reason that so few are able or willing to enter seriously upon a culture the nature of which has a more or less forbidding aspect and is opposed to so much that is firmly established and prized in the personal life.

Yet we are considering a condition, a force, which is of supreme value in the evolution of consciousness and is imperatively demanded in the technician. Nothing so coordinates the faculties and enhances the true prestige of man as this unfolding sense of higher perception and values. A multitude of anxieties and perturbations which hitherto held undisputed sway in the soul lose their tyranny and pass away. Not that we forsake the arena of personality and deny the constant interplay of forces therein, but that we stand at a remove and survey these from a point of ascension, with a new power of self-direction and insight, and have the ability to harmonize opposing vibrations. The consciousness of this descending harmony and peace has a wonderful effect upon the disposition of the mental faculties, and its increasing momentum enables us to achieve swiftly and one-pointedly the tasks allotted to them. Indeed, it is only at this stage of development that we come to realize the true strength and beauty of mental action and create after the law of the spiritual man. Hitherto, we were very much at the mercy of the mind; it reigned over us with the authority of a tyrant; we were marshalled hither and thither at the behest of thought and often involved by it in painful uncertainty and confusion. But the dawn of the sense of impersonality reverses this condition of affairs. We consciously and deliberately impose the will of the Self upon the activities of the various faculties with marked results. The immense possibilities therefore which open before the man who has entered upon this phase of evolution are obvious.

Some of the difficulties which have to be surmounted on the way to the attainment of impersonality have been considered in the previous chapters. We shall feel little relish for the prolonged and conscientious labour necessary for its development, for the struggle with the secret forces ruling our personal life, until we have suffered all too long under their stern domination. There is a definite point in evolution when we become acutely conscious that we must come to judgment within, investigate and understand the opposing factors in our constitution and devote ourselves seriously to the task of self-discipline. Even this preliminary self-cognition brings reflections of not the happiest kind. We have traveled along the path of least resistance and taken life much as it came; we have not felt it incumbent upon us to regard too critically the swift stream of thought and emotion, the action and reaction of these upon self and others. But with this awakening the sense of security vanishes. The stable centre of consciousness around which our life hitherto revolved and to which all our activities were related becomes decentralized. Study and meditation have produced their inevitable consequences. The Self has responded to aspiration and made us aware of its existence and supremacy. The first clear sounding of the note of the Self in the personal life is of great importance. We become conscious of a division, of a painful discordance between the two. The new and stronger vibration causes a certain disruption, a disorganization among the mental faculties, which pass for the first time under the acute observation of a spiritual critic. And, conformably with the maxim of occult science that expansion of consciousness induced by the advent of spiritual truth produces pain and unrest, we realize the responsibility devolving upon us to take up the task of self-conquest and establish the power of the Self as the dominant factor in our life in the interest of the general evolution.

It is not a simple matter to put aside the physical, emotional and mental vehicles of expression, to remain apart and unhampered by their vibration, poised in the clear and undivided consciousness of the Self. Yet the difficulty of the task is a wise provision. It is interesting to note in this connection the method of instruction adopted in the Gita. The method of preparation of the disciple taught therein was not a simple one, at once received and understood, which imparted the qualifications for recognition. The instruction is many-sided, each

presentation lifting one veil after another and causing to pass from the pupil one vice and weakness after another, until we have the final declaration at the moment of realization: "Destroyed is my delusion" Now the point to be noted is this. During the series of presentations of different aspects of the Wisdom the whole nature of the pupil passed under review and discipline, resulting in the acquirement of all the necessary qualifications for initiation. Let us suppose that some magical act had been substituted for that gradual unfoldment in him of all the powers and weaknesses of his nature, whereby he had momentarily realized the Self apart from the perishable vehicles, would that have proved sufficient for the arduous work of the path? Assuredly not. The pupil is shown at the outset the goal to be reached through an organic process of unfoldment of a very special nature, and several grades of the technique are involved in it. It is only as this process is consciously undertaken and the vehicles have taken the depth of human experience and been raised to a higher power that real impersonality is achieved. It takes every phase of personal power into its province and marshals it to the main event. A magic life has to touch the heart and brain even to rightly comprehend it; and only the constantly accelerated pulse of that inner life can meet the demands of it. It evolves naturally in the vehicles of the aspirant who insists upon steady and ordered progress, with a willingness to accept unreservedly all that progress entails. Categorical denial of the personality is an aimless and unprofitable procedure, because very real and persistent are the attachments of the three vehicles in spite of their relative unreality. The surgeon's knife is a danger here. The only safe instrument is a patient and loving comprehension, even a willingness to be in bondage to the contacts of personality for the time being for the sake of a perfected experience. The aspirant in whom the technique is developing is as simple, natural and expressive as nature itself. There is something so intensely human and spontaneously affectionate in him that wherever he goes there is immediate recognition and understanding on his part of every contact, and a certain response of all to him. He confronts the world as a sane and developed personality, with the Self resting in the serenity and peace of the Master's heart. He has a heart full to overflowing with the incommunicable burden of the heart of humanity, united firmly with precision of thought, stable emotion and a hand instant in service.

The technique, then, is not a theory, but an intensely practical thing; and while the whole personality is involved in its use, the technique itself is impersonal in character. "He who is desirous to learn how to benefit humanity," says the Master, "and believes himself able to read the characters of other people, must begin first of all to learn to know himself, to appreciate his own character at its true value" The first thought of many an aspirant on reading this will be: But I do not know that I have particularly regarded my development on the path in this light. I am not much concerned about reading the characters of other people in order to learn how to benefit humanity. I am anxious to contact a Master first so that he may teach and guide me personally and set me some great work to accomplish. That attitude is a common one. Students read and meditate, and wait for the Master. The Master also waits. And I fail to understand how any student can ever hope to obtain any response whose life conforms to the above attitude. The aspirant in the West is not called to a life of contemplation; he is called emphatically, through the unique environing conditions under which he lives, this peculiarly important point of racial evolution, to a life of ever stronger personal action in service. Impersonality is a wonderful thing; but to strive after it through contemplation in a life of inaction is to miss absolutely, through wrong interpretation of the highest teaching of occultism, the strength and beauty of true spiritual culture. I beg the aspirant to turn back and consider the opening thoughts of this treatise on the master artist. Can we conceive such an artist expressing a high degree of mental and manual technique through simply having contemplated his goal through the years, however passionately and one-pointedly, without subjecting himself to the most crucial labors in perfecting every instrument of expression to that end? Can we conceive him as having simply spent his time in contemplating a master artist, with the idea in mind that all the manifold stages of discipline leading up to his fine mastery would be somehow mysteriously covered during the contemplation, and so in a few years, he too, would attain to the same facility and stand in the rank of master artists? The idea is, of course, absurd. One sometimes meets with students who have read voraciously a library of occult literature yet who are profoundly disappointed because, as they say, they are not being "used" On questioning them as to what they are doing in order

to effect any contact as a preliminary to being used, they confess they have no time for practical discipline or work. The obvious comment upon this attitude is: their attainment on the path will measure up to their personal effort, and no more. As well might a man expect to become a first-class journalist through perusing the daily newspapers, as expect to know anything experimentally of the technique of the Master by merely reading books on occultism.

No man can attain and advance in the technique who has not a deep experience in knowledge and life. Says a Master: "Read and study for there is an object" "Study and prepare" Preparation, in relation to the technique, and in connection with doing the Master's work, means experience of life. To serve, the aspirant must know; he is to take knowledge in the fullest sense of the path from those who have trodden it. But this knowledge is not to be regarded as a mere adjunct to his ordinary mental content; it is to be an actual expression of the soul, an impassioned and fervent expression supporting and animating every other mental possession he has, an expression of the soul which is nothing less than a conscious force which spontaneously and promptly infuses itself into every phase of life activity. I put it in this way so as to rule out absolutely the lifeless method so often adopted of simply adding fact to fact for mechanical repetition and to point the utter futility of this for attainment of the technique. A fine intellectual grasp of occult truth is commendable and necessary; thinking and dialectical skill possess a magnetism of their own and may not be neglected; yet these are but one aspect of the first cardinal quality we have considered—versatility of mental character. All knowledge must be translated into life: It must be passed down, figuratively speaking, from the intellectual level into the mystical recesses of the heart, to be felt and lived and expressed as experience in the very life blood of the vestures of personality.

I said that preparation, in relation to the technique, means experience of life. Obviously, I do not mean experience of life in the ordinary sense. A man of big business usually has a vast and valuable experience of life, yet his aptitude for the technique may be less than that of a devotional maiden who meditates daily upon the beatitudes of Christ and dispenses simple blessings to those in need. In every possible

way experience of life must be sought by the aspirant, but it must be appropriated and interpreted by the inner self. For at this stage of his endeavours the man will be working intimately and in a very special way with his accumulated Karma, and it is this fact that gives added importance to his daily experience. Should he fail to keep this fact in mind when meeting experiences of an unusual and perhaps exceptionally testing character, and interpret them from the ordinary worldly standpoint, he would miss the true value of the greatest factors in his development. He would resent and oppose that which his strong initial efforts have invoked. This is undoubtedly where many aspirants fail to equip themselves swiftly for the technique. They demand knowledge of the path and strenuously seek it. They cultivate steadily the occult attitudes in their mental life and feel a certain satisfaction with their growth in knowledge. At length this knowledge becomes a strong and stable mental content which insists upon expression in the personal life. The vibration of the inner personality takes a higher measure and becomes a point of attraction for higher forces. Unconsciously, the man has become the centre of a new sphere of higher mentation which attracts to him a new order of experience necessary for the expression of the vibration which has now become stabilized in his vehicles; and those experiences will have the profoundest significance for him as related to his further advancement. Should he interpret them from the narrow and limited standpoint of the personal self, they will often appear meaningless and cruelly retarding; whereas if they are regarded as the inevitable concomitants of benignant law working for strength and wisdom, he will willingly and expertly make continually fresh adjustment which the higher life-rhythms demand.

If the aspirant can accept this view of the necessity of meeting courageously and dealing firmly with aspects of exacting Karma which his earnest demand for development will surely bring to him, any elements of fearful expectancy, which ordinarily assail him in the face of unusual experiences in life, will gradually be replaced by an attitude of mind akin to that of the scientific investigator who observes phenomena with mental collectedness, intent only upon adding some further indisputable fact to discovered data. What more fascinating field of discovery can we enter upon than this of self-revelation, in which every step of advance equips us to handle more surely the work

of the Master in the world of men? Frankly, it is a task only for the mentally bold. A discoverer must be prepared to accept what comes. There can be no antedating of experience. In this fact alone is seen the possibility of unique personal culture. The invisible impinges more and more strongly upon the visible and forces the pace of life. The even path of the lower levels is transformed into one of rugged yet steady ascent. The old and well-known landmarks disappear and the only guide now is the awakening inner sense and the words of wisdom, fast in the memory, of those who have passed this way. This is one of the hard points of the path where we have to realize more than ever before the value of personal inner growth and reliance upon the lessons of experience. "Seek the way," says the Master, "by testing all experience" It is profoundly true that all experience will also test the aspirant. It will not be some exceptional or miraculous experiences, but just that of everyday life arising out of his immediate vocation and duties and personal contacts; yet a new meaning will be reflected from it, a new value will accompany it, a significant challenge will be offered by it, all demanding a higher adjustment and a unique handling in the light of the knowledge he has attained.

Let us consider a concrete instance of this. The aspirant to the technique has attained a commendable accession of occult knowledge and is using it privately or in group work with others. He seeks to exert his influence in the way of service in assisting those less developed than himself either through correspondence or personal contact. In no way will he more quickly adjudge the precise value of his own attainments and realize his own limitations. It will give him an entirely new understanding of himself and his fellow men. This work of service is absolutely essential to the man qualifying for the technique. He will never know himself or others so long as he simply imbibes knowledge and remains mute; yet the moment he essays to teach and help others on the path he will be thrown back upon his own resources in a surprising manner. He will realize how inadequate is occult reading in itself and the amenities of scholarship. He will find himself face to face with aspiring souls, each with its burning problems of a personal nature and demanding ripe understanding and sympathetic handling. Aspiring souls in evolution hate platitudes, and if these are all we have to offer them we are ill-equipped for leadership and know nothing of

the depth and intricacies of the technique. The aspirant's ability in this respect will be immediately demonstrated when he essays to deal at first hand with the manifold problems of other souls who turn to him for assistance. It may perhaps be said that a man will not be called to a task of this nature if he is not ready for it. It is true that the man who is really evolving in the technique is usually of this ripeness of faculty and does not offer himself except upon an insistent urge for the task. It is nonetheless true that many lack discrimination in this matter and offer themselves either in enthusiasm and without any sound sense of the qualifications needed, or at the behest of others whose discrimination is little better than their own and who are actuated by some kind of personal interest. But the unprepared candidate will soon be undeceived. Those who seek supervision and teaching have an unerring intuition of the relative value of those they interrogate. The method and basis of his response will infallibly declare themselves, since on this level of evolution it is not simply the spoken or written word that signifies, but a psychically perceptible vibration which informs the word and gives it momentum and enduring influence. This need not be insisted upon. It is as palpable as that specific and original content which distinguishes the classic and sets it forever apart from the commonplace.

Let the aspirant to the technique ponder upon this fact. Those who sincerely seek his help and supervision are very often not those who are ignorant of the subject dealt with, but those who have the material before them in one form or another as well as himself, and would therefore appear to be seeking unnecessary assurance. The explanation of this is, that the seeker requires the same truth adapted personally and sympathetically to the then existing particular problem of his life and applied with understanding and insight on the part of the helper, with concrete example and inspiration from personal experience bearing upon the problem. Now there is one kind of helper who sees nothing further necessary in such a case than to consult his books and give back fact for fact what some teacher has said on the subject and then feel that he has made an able response. I have been the recipient of this kind of response from so-called leaders, and have never been disposed to consult them again. It is common to meet with these leaders in the occult world; but little of importance can they give beyond the established and orthodox text of doctrine known and accessible to

practically every student who might consult them. Practically the only qualification they possess for assuming the position of teachers is that derived from the reading of occult doctrine and speaking out of the abundance of their facts. It cannot be gainsaid that there is merit in this acquisition. It is infinitely better to be so informed than to be ignorant. Moreover, there exists a foundation of knowledge to build upon, which the technique itself will demand! But in the technique it is not, nor will it ever inspire the young aspirant to great achievement. He can read doctrine for himself, and a good deal better in his own way.

In introducing here these higher aspects of experience required in the technician I may appear to be digressing. Impersonality and experience are, however, intimately related; since impersonality can only come of a full experience, and experience, in the occult sense, and as the main factor in the demonstration of the technique, derives all its real strength and value from a pure and impersonal attitude. The technique of the Master is a coordinated expression of the inner personality which has assimilated and spiritualized the experience gathered by the several objective selves of past existences, and now, at the point of right understanding and use and having merited certain guidance and inspiration from the divine psychic plane, is able to speak and act for others from its own level of attained ascension and independently of any personal considerations and interests of the objective consciousness. At this stage the technician accepts the problems of his fellow men as his own. For the time being those problems are verily his problems. His sole ambition is to throw his light upon them to the extent that those perplexed may take a higher and more detached view of the relations involved in them in connection with their immediate progress. True impersonality alone enables the technician to do this. And the only infallible criterion of success for him in this task is the unqualified assurance of those he seeks to assist that he has wisely and effectively ministered to urgent need and facilitated their advancement on the path.

THE MAGIC OF THE TECHNIQUE

FOR THE YOUNG aspirant the technique of the Master is often veiled in an atmosphere of glamour and romance. For the man qualifying for discipleship the atmosphere is cleared, and the technique is realized as a force of the soul expressed in the terms of keener living. It is interesting to read the many presentations of writers on the subject of the magical power of the Masters and to allow the imagination full rein in the realm of wonder and miracle; and in good time it is well to put them aside and calculate the present force of the soul in order to discern what range of application it possesses for working upon other lives in the humble way of service. One could almost wish that a good deal that has been written on the powers of the Masters had never passed into the hands of immature aspirants, since it breeds a sense of easy conquest in the most difficult of all sciences and inspires a belief in present personal power which does not exist. It is surprising how much an aspirant sometimes considers himself capable of achieving in the way of magical power, even before the personality has been initiated into the first stages of realization of the force resident in the soul, which makes advance possible. It is a fact in the experience of the older aspirant that once the magic of the soul has been grasped by the personality, the soul steadily dominates and can be trusted to carry forward the training of the man. But the credulity before mentioned—a credulity fraught with danger when acted upon—which is common among those on the early stages of the path arises entirely because the personality has not been self-initiated into the magic force of the soul; and until this point is reached any dominant utility on the part of the soul remains for the future.

The self-initiation of the personality into the magic force of the soul which makes possible the application of the technique is the problem before the aspirant; and the credulity which is often so marked a characteristic in him is due to non-discrimination in that he is prone to apply to this study of the science of the soul the same overbearing confidence, feeling of certitude and expectation of immediate results habitual with him in connection with matters pertaining to his personal or professional life. Here we have a trinity of factors of undeniable value and of first importance in the character, confidence, certitude and expectation of results, all which will be demanded in the technician and in harmonious union, in the utilization of the force of the soul, but which, in the inexperienced aspirant will require to be cultured through a period of long duration in the most ordinary affairs, as well as in the exigencies, of everyday life. It is interesting to note, and it is a part of one's occult education to thoroughly realize it, that these basic qualities in the aspirant which are liable to foster in him all kinds of exaggerated ideas of his personal possibilities, are slowly transmuted under occult discipline through the years and become actual powers in his hands for skillful right action. But this is never so for the mere wishing for it. Indeed, it is a revelation to the technician what keen and profound experience has been necessary in order that the magic of the soul should be grasped by the personality and utilized in the work of the Master. And the point I would emphasize is, that it is the experience of life which has been the main factor in effecting the transmutation, and that this is one of the last things the aspirant is likely to appreciate.

The position is this. The aspirant enters upon a cycle of occult study, no matter in what particular school or under what name, and the inspiring and liberating effect of the new knowledge carries him a good deal further in imagination than his reason has grasped or his soul experienced, and upon this illusion of the imagination is based his expectation of immediate results. I have a case in mind, where an aspirant, having gone a little way in the knowledge of the science, expected to demonstrate per-feet health in the body at will, dissipate the mental ills of others likewise, build a swift fortune for himself almost by a magical word of power, and thereby annul every law of Karma decreed and override all experience to be known in his members and destined to force him steadily forward to self-mastery.

His programme of effort was founded upon an illusion of the imagination. This attitude is very common among aspirants and works out inevitably in disappointment at non-achievement and subsequent anxious questionings and probable doubts about the teaching in hand.

One of the first effects of serious application to the science is a certain clarification of mind and intensification of emotion. It is a call to the soul to declare itself in and through the personality; and according to the temperament and application of the aspirant will be the nature of the response to his demand. It may be said that the swifter and stronger the response at this initial stage is, to a greater degree is the likelihood that the imagination will raise up the illusionary expectation of some remarkable demonstration without prolonged and conscientious endeavour. It is granted that in some few cases there may be no illusion about the matter. It is conceivable, and such cases are known, that an aspirant may possess a latent capacity and all the potentialities of a technician, so that even at the initial stage the force of the soul emerges, is grasped by the personality, and the man becomes both pupil and teacher almost simultaneously. But these are exceptional cases and are noted only for guidance and encouragement. In the majority of instances the aspirant is prone to anticipate unusual developments at very little pains, and the disappointment experienced on realizing the truth of things constitutes one of his first tests.

The clarification of mind and intensification of emotion which result from the initial efforts should reveal the need for a revaluation of experience. The settled rhythms of life are not to be changed in a day. The early efforts on the path do but bring into the conscious field a realization of their measure and force. What is their measure and force? That knowledge will be something of a guide as to what may be expected from either brief or prolonged endeavor. Some aspirants have the psychic idiosyncrasy; others have not: some have a predisposition towards the spiritual; others are entirely scientific in nature and aim. The vibratory measure of the personality and the nature of the soul force differ in each. Very often the highly intellectual aspirant will be far less certain of himself at this stage than the mystically minded devotee, in that he imperiously demands results on a higher plane commensurate with the ease with which he produces them on the intellectual plane;

whereas the patient and aspiring devotee, with the spirit of service in his heart, will come to know the force of the soul quickly and experimentally because of a reciprocal response with the Master's sphere. It has been said that the Master tests out the technician in various ways in order to adjust the measure and force of his reactions to certain circumstances and when dealing with specific problems. This is precisely what the aspirant has to do for himself when he sets out on the path of the occult. The established rhythms of his life, which obviously are but the assimilated experiences of action and reaction in the objective and subjective spheres, must be brought under close scrutiny and their value fully appraised in the conscious realm. These rhythms are largely subconscious in their action and influence; and only when he begins to test himself out in regard to them does he realize what a dominant part they have played in his life. That is one of the early awakenings on the path; he finds that his life rhythms are far too circumscribed for the task he sees before him, since they arise almost wholly from an experience hampered by the thoughts of time and space. It is the content of that experience which he has to adjust to the study and work to be done, and augment and deepen it in perfectly commonplace ways in everyday life.

Here we arrive at the crucial point. It takes an aspirant worthy of the name to rightly assess and wisely adjust himself to the exigencies of the initial stages, so that there shall transpire neither eccentric emergencies in mind or manners, arrogant assumption of that which he does not possess, nor impatient demand for that which the law cannot give; but a steady recognition that those life rhythms can only safely be extended by sane and normal living, here and now, in his own place. I am aware that there will appear to be very little of the magical or the sublime in so commonplace a conception. But the fact is, that there is little of the magical or the sublime for the aspirant at this stage. It is his fault if he adorns the word of science put into his hands with the false colours of imagination and straightway thinks in the terms of transcendental miracles. I recently heard of a lady who became devoted to the study of Theosophy. Previously she had been immersed in church work, and was highly appreciated in that sphere. Now she has retreated from the touch of her friends and insists that her real friends are living on a higher plane. There is an instance of inverted growth, a forcing of the

life rhythms beyond the legitimate sphere through a refusal or inability to take their true measure and force, and a subsequent arrestment of sane and orderly development in the personality. This is an extreme instance; but something analogous is often seen in the awakening aspirant, and if it is not quickly offset he is guilty of an offense against occult law and will suffer the penalty for it.

We are all more or less ignorant of the past career of the soul, even after considerable advancement on the path. It requires a highly cultured intuition to discriminate among the contents of consciousness that which is the expression of the enlarging faculties of the present personality and that which is resurrected from the past and offers itself mature and efficient for immediate use. Nor can it be said at what precise point of endeavour this hidden life will begin to emerge. The measure and force of the aspirant's rhythms directly he enters upon his training will, however, in some degree foreshadow the knowledge and growth inherent in the self and awaiting recognition and use. It is to be remembered that the aspirant is vibrating between the condition of soul awareness and form awareness. It seems to me that certain elements of the past career of the soul, entering into the receptive consciousness through willful endeavour on the part of the aspirant are often the cause of this duality. For directly the soul is becoming active, we may be certain that the life rhythms we know so well and are adjusted to will be unconsciously accelerated. This will result not so much from the facts we are putting into the mind, as from the force we are bringing down from the self. There will often emerge into consciousness an accession of knowledge and impelling force beyond anything we have calculated or expected, since we are as little conscious of its source as we are able to adjust to it with skill or wisely utilize it. And it is this essential faculty of former personalities impinging upon the present one that will give rise in the aspirant to a good deal of speculation, and perhaps misgiving, when he feels himself subject to its powerful influences.

This applies to the aspirant at the initial stage. In the case of the man who is graduating in the technique, whose vibration is raised and stabilized and the force of the soul recognized, I believe that the accumulated faculty of the past will be working very strongly in

consciousness. Discrimination in this matter will be no less difficult at this stage; but there will certainly be marked effects in consciousness and so vast an advance, relatively, in the sweep and content of the life rhythms as development proceeds, that the concentrated faculties and abilities of the past career of the soul rise and plead for recognition and expression through him. I can put it no less poignantly than this. You, the aspirant, may think that this is an entirely enviable condition and will welcome the hour when the assertion of it can be made in your case. It is to be welcomed, because it signifies advancement, and it is inevitable at some time. But it brings with it infinite yearning and large responsibility. This may not be invariably so; but I think it is likely to be so where the man has a fine and full mental life. I will refer to a specific type, which will serve to unfold and illustrate the concept I have in mind. This type is an initiate and is well along the path; and the technique of the path is strong and operative in his personality. He is a force on the side of evolution and is aware of it. His service is rich and demanded by many who feel the influence of the Master through his work. He is well balanced and attuned on the inner side. Nothing can turn that man back from the life of the Masters. His life is an inaudible cry to them to hold him up and per-feeet him in their strength. But this is not all. There are several personalities playing into the man by virtue of the descent into consciousness of the storied past which is sounding forth from higher planes; and while he plays his humble part within the present circumscription of time and space, and in so doing appears no doubt to his fellow men recollected and able and intent upon the one aim of dedication and service—nor are they mistaken in this—he feels that insistent past striving for expression, too, in an environment which does not provide a medium for it. There is an orator in that man who has stirred men to action; there is a priest who has ministered with the multitude in the temple; there is a musician whose transcripts of harmony come back with haunting emphasis for reiteration. These hidden personalities are with him; they possess his hands, brain and heart, and would live in their fullness again. They must not be slain. They give him keys to the soul of the world and for the interpretation of the hearts of men. That is what I mean by infinite yearning and large responsibility. It is a phase of the double vision; and I conceive it to be one of the hardest stages in the initiate's

progress. It may be that a little further on, when he steps right out into the light, a wonderful adjustment will be made. It may be that, with the soul fully dominant, he will have the power to use each of these several personalities at will as a master, and at will put it aside and remain in peace. There are such instances recorded in occult biography and they indicate a condition of high initiation. It is sufficient to note that the above is a possible problem of the graduate in the technique; and that while this strong sense of duality persists, of the present personality grasping steadily the magical technique of the soul and the combined personalities of the past active within the soul and insisting upon a classic expression, there must inevitably be pain and stress and all the manifest symptoms of the highest ambition pressing forth to mastery in many fields of endeavour.

I believe in the fullest endeavour to recognize and further nurture the awakening mature faculty of past personalities. The statement, "Kill out ambition," would seem to run counter to this belief, but I do not accept it in that sense. If our higher work on the path brings into recognition strong powers and evolved faculties, it would be a sin against my deepest intuition to refuse them the very highest possible expression environment affords. And it is just because the environment of the technician is often such as impedes the expression, that is, through inadequate means at his disposal for it, that pain, stress and a divine yearning accompany him at every stage. I certainly believe that this has a highly educative value for the man. It would seem, too, that it is precisely the rapid growth of the soul which is responsible for this cumulative activity in the mental life, that it throws into the conscious field so many lines of splendid possibility that he cannot see the wisdom or the justice of deliberately turning away from them because they will exact some measure of attention and interest in directions which are not purely spiritual in character. On the contrary, I feel he has no right to neglect to give complete attention to any voice that sounds dominantly in the mental life. I am of course referring to voices of a high and idealistic nature, not to any lower ephemeral voice inconsistent with noble living.

The idea of slaying that which is the finished product of past fervent ambition does not appeal to me. I believe in the completest personality

expression; but in the case of the technician I make this distinction. All those finished products of the past, all this beautiful flowering of the mental life, should minister to the highest. Nor do I doubt there will be the slightest doubt on this point of dedicating all to the Master's use in the man who is consciously grasping the technique of the soul. Whatever he may experience of repression through environment not permitting him to build into finer and more expressive forms ideal products from the past, he will not allow this to deflect him in the least from his central purpose of wielding all he is and has into a greater service for others. Indeed, he has come so far that he cannot do other than this. The cries of other souls reach him and demand some note of his evolving wisdom to dissipate the shadow or strengthen the will, some token of understanding affection and sympathetic response; and knowing his own secret travail in the arena of many conflicting forces, the power will be his to minister with certain effect in practically any instance which comes within his legitimate sphere of development.

The magical technique of the soul is life expressing in larger and more powerful rhythms of vibrational response. It is not a reposeful contemplation calculated to put a man to sleep; it is an awakener which increases his auric intensity to an incalculable degree. It makes the man a focal point for the reception and transmission of most potent influences. Seasons of quietude there must be; but if they leave the conscious field void of reactionary tendencies leading to diverse and increasing activity, the soul still sleeps. The necessary thing is, that he should not permit himself to be turned back by these reactionary tendencies because of any unusual elements in them, nor allow the new impetus in consciousness to divert him from the path of sober and lawful action. For a time he has to maintain the old rhythm in conjunction with the new; since it is in sudden and unbridled enthusiasm and from the inclination for drastic change, that illusive imagination reveals itself and relative failure arises. At this point of awakening it is possible for the personality to begin to grasp the magic of the soul. The results of his coordinated efforts may appear small, but if he is keenly introspective he will realize that there is quite enough for him to take care of and adjust to in the increased vibrational measure set up in the personality. Aspirants to the technique differ in mental calibre. For the majority, a long period must elapse before they become

safely polarized in the conditions produced by even the first degrees of magical force response. Remember, it will *work out* in the individual life, and in each man in a different way. It will be like a strong light thrown across the arena of circumstances, revealing the presence of many secret things which prefer to remain in semi-darkness, quickening living entities to assert their right to dominate and hold the sphere of their native habitation, bringing with it new instruments of thought and action which insist upon immediate use for the refinement and culture of the whole personality of the man. It is indeed a day of judgment between the personality and the soul, and the trial will be long, with able witnesses and powerful advocates on both sides.

It is during this time of trial that the aspirant gradually attains to a use of the technique and becomes a recipient of the magic force of the soul. He will then be receptive to the influence of the Master, will have a right intuitive understanding of the impressions received, and be able to project the imparted ideas suitably for service. Unquestionably, the trial will be far advanced before this objective is in view. The keenest contest will have been fought and won before the man masters the elementary technique of the path and renders willing obedience to Cosmic decision. But, lest the elements of trial should loom too largely before the aspirant anxiously surveying the prospect or the more advanced man who has impelled himself into the centre of the arena and is doubtful of the issue, let it be said for encouragement that there is light and leading for the right man, that the austere silence of the onlooking Powers is not indifference to persistent and well-directed effort, and that every step of achievement is a compelling demand upon the magic of the soul to inform his tongue and descend into his very hands in a kindling fire of noble speech and instant action.

THE MASTERS OF THE TECHNIQUE

LIFE AFFORDS NO greater privilege than to be consciously active in some aspect of the evolutionary effort. Yet the technique of the Master is not easy to understand or to translate into life. He knows too well the extreme rigour of its laws to demand from any soul what it has not yet found the power and insight to give. For the first step is entirely a spontaneous one and arises from a soul vibration which is the culmination of a mature experience in psychic response. This experience is usually not an acquirement of the present incarnation, but exists as subjective memory. The history of its direct attainment is hidden in the past and is now chiefly shown in swift and sure response to occult truth in any form and accompanied with exceptional ability of some nature for its expression. Wherever this response exists and is of a pure and powerful character, there we may discern the silent influence of the Master's realm upon an awakening soul in the far time. He is now ready for the technique of the Master. There will be for him in the scripture of wisdom a geometry of the Spirit which he will delight to ponder and apply to the infinite intricacies of life and character. Humanity, passing and re-passing between the two eternities, will no longer appear to him as an uninteresting pageant and unrelated to himself. The power and passion of its living blood will create a mighty music in his soul, often very hard to be borne. Vibrant harmonies will arise within and sweep to celestial heights; strange chords of sombre pitch will mingle with his song of life. The keen breath of a superhuman strength must have touched both heart and brain to enable him to stand before the knowledge that this symphony of a thousand voices of joy and sorrow is indeed his own collective Karma in martial array opening the gates of self-cognition. It is the Master's response to the soul's endeavour. It is the

Master's technique demonstrating within him, whose inexorable law is: that every latent germ of good and evil in the personal life shall be awakened and declare itself.

Many are the misgivings of the aspirant when that law begins to operate in his life. He may well think that, far from making the good progress expected, he is on the path of retrogression. "It is not enough," says the Master, "to know thoroughly what the disciple is capable of doing or not doing at the time and under the circumstances during probation. We have to know of what he may be capable under different and every kind of opportunities" A stern and exacting law of which the world knows nothing. Therefore the aspirant must be perfectly ready and willing to withstand its criticism. There is nothing intentionally mystifying in the procedure; it is simply a procedure which runs counter to all other procedures he is conversant with and for which he has to develop a rare discrimination. It cannot be expected that he will be entrusted with new and altogether higher responsibilities in a totally different realm of mentation and action unless he has been drastically probed and tested by the searching influences proceeding from a higher plane. New faculties emerge under stress, not in the unexercised nature of him who fears the consequences of self-discovery. There is no smooth and easy path of ascent here. With that assurance the aspirant must be prepared to find the confidence which the Master will certainly demand in him for the initial trials.

The aspirant is here dealing with the intangible self, pregnant with undelivered Karma, and the word of knowledge of the right vibrational value may be all-sufficient to precipitate a phase of circumstances, perplexing and painful, but written largely in Nature's great law and which must be met and understood. It is the conscious effort to progress on the path which is the determining factor. Until that moment life moves slowly onward at its appointed pace. There is an established rhythm in the personality which imparts a relative sense of ease and adjustment in the various contacts of life. The furniture of the mind is well known and thoroughly catalogued, the selection considered excellent and becoming, nothing eccentric or revolutionary, nothing at variance with the preconceived scheme to disturb the aesthetic taste of its possessor. But the counterfeit peace of stagnation

and conformity is not for the pioneer. The tidal wave of evolution will surely agitate the still waters in good time and compel advancement. And if, through fervent aspiration the aspirant deliberately seeks the feet of the Master, sooner or later the trial comes to the soul, and well is it for him who, even through disappointments and tears, recognizes the guiding hand and clasps it in firm faith. The Master has said, "The mass of human sin and frailty is distributed throughout the life of the man who is content to remain an average mortal. It is gathered in and concentrated, so to say, within one period of the life of a disciple—the period of probation"

This period of probation is the paramount period wherein the technique of the Master is so unexpected and penetrating, that the aspirant's intention must be at once steadfast, pure and spiritual to intuitionally grasp and personalize it. It is common to be confronted with the lamentations of aspirants who do not realize that occult progress must be slow, that trials met and overcome are of the very essence of advancement. "The iron rule is," says the Master, "that what powers one gets he must himself acquire". . . "He must not even desire too earnestly or passionately the object he would reach; else the very wish will prevent the possibility of its fulfillment" The aspirant is working upon himself, upon the texture of his vehicles of expression, not upon external matter as an artist fashioning material after his own conception. He has been so accustomed in the physical world to impose his will objectively upon men and things and receive an immediate response, that it is long before he comprehends that the deeper laws of the psychic and spiritual are alien to this. There is no time in occultism. The liquidation of Karma transpires in accordance with an inner law which it is not in our will to hasten or delay. That is why the voice of the Masters, though often foreboding and tinged with warning, is ever a voice of encouragement. He knows that a persistent and courageous spirit will ultimately triumph over all. Has he not, as mortal man, himself triumphed? In every aspirant there is that which is akin to the Master's own immortal nature—the vital, dominant, irresistible seed of immortality which is destined to bloom into adeptship. But adeptship is a starry altitude difficult of attainment. At every step of the way the Master has progressed scientifically and spiritually under the stern imposition of iron rule. Obviously then,

no one is better equipped than he to involve and guide the aspirant through the manifold intricacies of that rule, imperative for his complete knowledge and mastery of personal forces. Only through ceaseless application and after pains incredible do the masters of the arts and sciences attain their superb insight and mastery, and inspire and redeem humanity from the commonplace and trivial, and entrance the dreaming idealist into ecstatic yearning for the Infinite. Only through steadfast service and never-failing aspiration, through love and compassion and sacrifice, through success and failure, through lonely vigil and impassioned admonition, through all the heights and depths of thought and emotion of which the eager heart and the awakened mind is capable, shall we gain a true perspective of the pure and perfect action, and become worthy exponents of, the Master's technique.

We may expect a very marked characteristic in the aspirant as the result of consciously passing through such an eventful inner discipline. He will be spiritually positive. A passive character can never hope to handle the work of the Master. It is not in the nature of things. The master of art uses his vehicle or material of expression with power. He will undoubtedly be responsive to superior influences and often appear to be a tool in the hands of the genius of his art. But there is a world of difference between a highly cultured receptivity and a passivity without strength and poise. The Master is very direct on this matter: "It is not enough that we should set the example of a pure, virtuous life and a tolerant spirit; this is but negative goodness—and for discipleship will never do. You should even as a simple member learn that you may teach, acquire spiritual knowledge and strength that the weak may lean upon you, and the sorrowing victims of ignorance learn from you the cause and remedy of their pain" That is one of the hard sayings of occultism, but it must stand. Conventional goodness, and all the qualities which constitute a well-tempered character, are to be prized. But the aspirant who intends to take the stages of the occult path must possess, or must resolutely cultivate, a certain aggressiveness of spirit which compels every difficulty to yield its secret and grows stronger for the struggle. I write for the aspirant who aspires to be a light and guide to others, who feels this deep call in his nature, who can take defeat in the arena of life and yet pass on, that thereby the qualifications for higher service may be born and raised to power within him. And

one of the reasons for this insistence upon interior assertiveness is, that we have to deal subjectively with powers and influences on planes other than the visible which work actively into the personal life. "The aspirant is now assailed entirely upon the psychological side of his nature" . . . "The dark hosts of the Brothers of the Shadow always on the watch to perplex and haze the neophyte's brain," is not an imaginary menace. It is a Karmic heritage ranged along the path for opportune attack, before which the strong survive and the weak fall back. However keenly the sensitive nature may suffer and recoil before the inimical and unsuspected vibrations which impinge upon it, the inner self must have reached that measure of strength which can do and dare and be silent,

Through conscientious study of himself in the light of such reflections as these the aspirant comes to realize the full significance of the outworking of Karma in his life. On this matter he cannot be too rightly introspective and discriminative. The Master's comment is: "To unlock the gates of the mystery you must not only lead a life of the strictest probity, but learn to discriminate truth from falsehood. You have talked a great deal about Karma but have hardly realized the true significance of that doctrine. The time has come when you must lay the foundation of that strict conduct—in the individual as well as in the collective body—which, ever wakeful, guards against conscious as well as unconscious deception" The aspirant's endeavour on the path will develop this discrimination and so clarify his vision that the truth of things will respond to his right mindedness. For the Master is truth. He has no pleasure in the error of the aspirant; nor will he be subject to error if he persistently tries to identify his thinking with the thought of the Master. There is a pregnant admonition of the Master which he will profitably ponder: "My chelas must never doubt, nor suspect, nor injure our agents with foul thoughts. Our modes of action are strange and unusual, and but too often liable to create suspicion. The latter is a snare and a temptation. Happy is he whose spiritual perceptions ever whisper truth to him! Judge those directly concerned with you by that perception, not according to your worldly notions of things" That spiritual perception is the basis of the technique. It will contradict much which the aspirant has always believed to be true. He will experience pain in renouncing that which is so firmly woven into

his world of facts. His greatest help will be dogmatic faith, although his world crumble around him.

From this new strength indifference to opinion will arise. The aspirant must let appearances go. What his inmost heart dictates is the law, not the urgent voices of external authorities. The Master's word is: "He who damns himself in his own estimation and agreeably to the recognized and current code of honour, to save a worthy cause, may some day find out that he has reached thereby his loftiest aspirations. Selfishness and the want of self-sacrifice are the greatest impediments on the path of adeptship" We can rest out cause implicitly on adept assurance. There can be no half measures in occultism. We either want the Master life or we do not. If we do, there is but one law of conformity for us, and the technique of that law embraces every circumstance of life. It does not complicate, it simplifies life, if the necessary preparation has been taken.

The technique of the Master ramifies every phase of experience past and to come. It touches the inmost secret of his own supreme altitude and passes back to the common task of the present hour. Nothing is veiled to the eye of occult omniscience; no circumstance that cannot be divinely adjusted in the evolutionary scheme. We have to make the adjustment, whether in sorrow or in joy, and emerge more purified from the fire. "It is with armed hand, and ready either to conquer or perish, that the modern mystic can hope to achieve his object"

Chapter VII

THE MASTERS OF THE TECHNIQUE

THERE IS AN important and palpable fact about the personal communications of the Masters, and that is, their complete and unassailable expression of the phase of truth under consideration. When the Master speaks for the guidance of the soul, we feel and know at once and for all time the indubitable certainty of his word. There is no need to compare it with any other utterances; no textbook is required to corroborate it. It is a phrase from Cosmic experience and true to the experience of the evolving soul. We may not be ready to accept it now, but the time will come when we must accept it if we wish to advance. This indubitableness of the Master's word in its immediate or remote relationship to our human experience is a fact which always appeals to me as unique in literature. It is not difficult to see why it is never open to question or subject to qualification. There is no hidden depth of the soul which the Master has not sounded; no problem which he cannot instantly detach from every hampering consideration and observe it in the clear, cool light of illuminated intellect. I use the word intellect intentionally. I see no reason for assuming, as many seem to assume, that the Master, because of his lofty spirituality, condescends not to use so poor a tool as intellect. Observe the vexations and perplexities that hedge round our problems because of the ever-fluctuating and darkening shadows of the emotional and mental life, obstructing the clear light of the thinking principle and raising a host of discordant vibrations which involve us in sore distress. The Master is entirely free from that. When he surveys the problem of the soul he stands above, not within it; it is reflected comprehensively and alone upon the clear and illumined mirror of the intellect. He knows just what it means to us. He sees the defect of knowledge or foresight which gives it birth, the keen

struggle of the soul to find a solution, or the resultant reactions upon our future growth. How often an aspirant questions the wisdom, justice and compassion of the Master because the particular burden of life is not at once removed for the asking. But if the Master is a living example of adjusted Karmic forces every conceivable problem must be known to him, and he also knows the beneficent reactions of every Karmic problem which besets us. We cannot behold the Master's countenance, or those of any of his high initiates, without discerning deeply characterized there the blessed memorials of manhood perfected through ancient suffering. It is this immense world experience, this agedness of the soul in the Master, which vibrates in his world of guidance with such sombre emphasis and holds us true to him even in the darkest hour. I have known a trembling soul to hang upon the Master's word when nothing in life or circumstance seemed to justify it; but the soul knew even though it could not understand, and that link of imperishable force and sympathy was all-sufficient.

The necessity for specialized culture of the will in occult work is a matter upon which most of us are in agreement. In all world progress it is the great driving force. But the will to tread the path is of a higher nature. It is in reality the inner spiritual self acting steadily and unceasingly through the personality. And when, through study and meditation and one-pointed determination to achieve master hood, this inner self or spiritual will is gradually released and begins to act powerfully in the personality, only then do the real problems of the path emerge and call for the greatest strength to deal with them. Then it is that many grow profoundly doubtful of their progress and are ready to turn to the former relative security which was theirs. So long as we do not think too deeply or demand too much, the normal rhythms of life remain undisturbed; but to have thoroughly visualized the higher possibilities and sent forth a petition into the Master's realm to share in the responsibilities and blessings of a larger service, is a direct request of the soul to be subjected to that keener discipline which alone will make the greater service possible.

The aspirant who is not yet sure of himself, who has not realized fully the depth and reality of his pledge of allegiance to the Master, is often greatly perturbed at the definite changes occurring in his mental

life and the altered aspect of circumstances. Yet this is but one of the tests which sooner or later confronts every aspirant; and if the general trend of his life has not evolved a measure of strength and ripeness in his faculties, he will be compelled to actively school himself in further world experience in order to successfully meet the test. That life itself is the great initiator is a profound occult truth. It can be observed in the world of men every day. There are individuals around us who have no leaning towards the occult, yet so intense and varied are their labours, so strenuous and devoted are they in manifold works of ideal service for the race, that they have all the mental and inner equipment for rapidly passing the tests of the occult path. For these men the will has reached its strength through long and versatile response in world experience; they stand at the point of mature mentality where they can receive the deeper knowledge of the soul. The sharp conflicts and pain of life have rounded off a whole cycle of minor attachments and give them clear judgment and a high degree of detachment from purely personal issues whereby they are able to bear the accelerated vibration which will eventuate when they take up the discipline of the path.

This is a factor for reflection. If the common experience of life has not been such as to initiate the aspirant into the true value and force of the will in some of its higher aspects, his allegiance to and active work for the Master will surely demand this at no distant time. He will be thrown back upon his own inner strength in the very act of demanding that strength from the Master.

The Master Serapis of the Egyptian Brotherhood refers specifically to this matter of energetic direction of the will. "For he who hopes to solve in time the great problems of the Macrocosmal World and conquer face to face the Dweller, taking thus by violence the threshold on which lie buried nature's most mysterious secrets, must try, first, the energy of his will power, the indomitable resolution to succeed, and bringing out to light all the hidden mental faculties of his Atma and highest intelligence, get at the problems of man's nature and solve first the mysteries of the heart" It is useless for us to attempt to shirk the issue by saying that the human element is lacking in phraseology of this kind. If we are still children and require our disciplinary instruction well sugared, nay, lived for us, the divine admonition of the Master will

certainly prove too much for our human nature, and repel us. It is to be hoped that the aspirant is beyond that stage; that the experience of life has compelled the assertion of his manhood; that he is aware of his deepest need and the need of his fellow men, and is not likely to turn back from the path he has studied and the truth he knows because of what may appear to be a strain of severity in the word of the Master which foreshadows a higher discipline and consequent renunciation perhaps of certain common interests which have had their day and dissipate his energy. There may be many a secret struggle between these interests and the graver aspect of truth which silently beckons us on. It cannot be otherwise in view of the strong momentum of unspiritual mentation established during the past in the subjective consciousness. Those of us who have persistently fought our way along hard phases of the path know well enough the painful misgivings, the harassing doubts, the solitary questionings of the heart, which have beset us. Yet I believe there are few but would testify on emerging from the shadow, that it is well. What matters the difficulty if we have comprehended the way, the truth and the life that the Master offers us? There is no other way by which the will can reach its strength, or the Master would certainly have told us. No matter to what Master we look for guidance, one admonition characterizes them all in regard to passing from our world into theirs. The necessity for the dominant force of the spiritual will is ever insisted upon.

The technique of the Master is pre-eminently active, not passive. Observe the leading thoughts of the above quotation: "Compel, take by violence, try, indomitable resolution, bring out, get out"—The whole process is one of intense inner action. I venture to affirm there is not a great character in universal history in which this supreme motive power is not seen to be a compelling factor. At first sight it may not always appear to be so. According to the manifold types and careers this central force of the awakened will may be strongly objective or more or less underlying, but is there, organized, concentrated and potent. Only, on occult levels, a different order of experience ensues. The great character on the stage of world history does not necessarily enter consciously and with specific intent upon the secret domain of the Spirit. His direction in life is technically unspiritual. Great as are his works in the manifold fields of human endeavour, strong as his ray of

individual genius may be, he is not an occultist in the accepted sense of the term, nor is he subject to the laws of the occult. The faculties of intuition and reason developed to a high degree and directed to worldly affairs make him what he is. He is not engaged in a culture the discipline of which would carry him beyond the frontiers of human consciousness. The purely occult tests are withheld. From such he may as surely shrink as would the average human being.

Now, the Master exercises all the prerogatives of genius. All the faculties of human consciousness in him are raised to their highest potency, and, in addition, the spiritual counterparts, so to speak, of these faculties, are operative and under perfect control, hence his vast authority and supreme value and august ascendancy over the highest manifestations of human genius. It is to the development of these deeper faculties, the spiritual counterparts of the finest faculties of human consciousness, that the attention of the aspirant to the technique is given. Hence the note of severity which characterizes the discipline inculcated by the Master. And in attempting to pass beyond the frontiers of common worldly experience, no matter to what height in any of its varied forms natural genius may have carried him within this experience, in the deliberate, conscious attempt to take the word of the Master and occultly speculate into the silent and mysterious domain of the Super Experience, the will is subjected to the finer and superphysical tests which are the unalterable laws of that domain. No man can offer himself sincerely as a candidate for the technique without setting up within powerful reactions of a peculiar and intimate character which will surely try out what sort of man he is. It is the initial stage of a process of readjustment of all his values.

There is nothing to be feared in the quest. Conscientious study and meditation will fit him for it. Nor has he to prepare to lose that which is dear and valuable to him, or renounce any talent or prestige he possesses in the world of men, or throw up any business or domestic obligations to which he is committed. He has simply to cultivate the strength to realize himself as he is—which implies far more than we usually think. For when the force of concentrated will is focused steadily and over a long period upon the psychic and spiritual self, every motive and tendency buried in the heart of the aspirant is awakened to palpitating

life and activity; all that Karma has written in his members arises and confronts him. That is one phase of the great problem to which the admonition of the Master applies; and *there* it is, before that intimate personal disclosure of the man he is, that the aspirant has to stand firm and undismayed in the face of much that he would hesitate to utter. Is there then any wisdom in averting the eyes from that which the Spirit demands that he should fearlessly confront and steadily overcome? We have called upon the name of the Master and the answer comes in the form of the vital refining fire that descends within to purge and purify every one of us who aspires after the hidden mysteries. Shall we weakly decline what we have deliberately invoked and postpone the blessed work of personal redemption because of the imminent possibility of the mortal self which we love so well being stretched psychically up on the cross which rises mystically on the path before us? Is there any tragedy in life like unto that in which the aspirant, having taken knowledge of the way, retreats from the call of the Cosmic when the dark hour comes in which he must find his own light and press steadfastly on? It has been my privilege to have this problem again and again raised by aspirants who have stood face to face with the shadow of the dark night of the soul to which their strong and persistent efforts on the path had brought them, and one of the greatest inspirations to me has been to note their firm grip on themselves, their philosophical stand in their trial and the deep spiritual assurance they have had that all must be well and the goal would be reached. They are right. The Master's word has not gone forth for naught. We can prove this by taking the austere ritual of the conquering will uttered by the Brother and working it out in the silence, until all that is hidden in the inmost recesses of the heart is brought to light and understood, and the baser metals transmuted into the pure gold of interior illumination.

VOCATION AND THE TECHNIQUE

A SUBJECT WHICH gives rise to a good deal of speculation in the minds of aspirants is that of vocation. It is not uncommon to meet with those engaged in business or professional life who, after certain reading in occultism and association perhaps with an occult group, grow dissatisfied with their chosen career and forthwith think they have a call to devote themselves entirely to occult work. I would not criticize the good intention of any aspirant, but I often feel that this attitude is not justified. In many cases it arises from too little knowledge of the path rather than from a sound and balanced conception of the requirements for authoritative leadership in a school or order. Not seldom it is the desire for personal prestige and an ordinary type of worldly vanity or ambition which prompts this attitude. In either case the strongest indication is shown that the person has no definite call to handle responsible work entailing leadership in occultism. It is well to be frank on this subject because it may save some from unwisely throwing aside a useful task for which they are normally fitted and to which they are Karmically bound, upon the rightful discharge of which their development depends.

In the first place, the technique in itself has little to do with the immediate vocation of an aspirant. It is a condition of the soul and may underlie any type of personal activity in the world of men. Further, the technique, to be of real service, as has been shown, requires the broadest possible basis of practical efficiency only obtainable through contact with some aspects of daily affairs. To the average student the position of leader or teacher has something romantic about it which makes it very desirable to him. That is one of the illusions of appearance. I believe it to be true that practically none of those in such positions

of responsibility and trust asked for or expected them. The Cosmic powers placed them there under the law of Karma because they had all the necessary qualifications and the selflessness to lawfully fill them. And the technique demanded of them to carry that responsibility and discharge its duties is only slowly realized by those who contact them. It is silent and deep in its influence and enables the possessor of it to fulfill his office with a sureness and facility, that the happy effect upon those who profit from it is apt to lead to one-sided conclusions about it.

I am not suggesting that a student who, having made a specialized study of some branch of knowledge in the occult field, such as healing or astrology, should not relinquish a vocation he has outgrown, or which no longer has interest for him, and speculate in a more desirable direction. He may have a call to it and be fully equipped for it. But the technique of the Master, brought to that point of recognition and efficiency where it places a man in a certain privileged position to be of outstanding service to his fellow men, is of a totally different character. Close observation of such leaders and teachers convinces me that they have qualified severely in the past and gravitated naturally to the life of service. I believe, too, that nearly all of these characters have been, early in their present incarnation, more or less unconsciously qualifying in the various vocations they have followed for the work and responsibility they eventually assumed. I could instance several prominent in the occult world today whose early years were spent in business and professional vocations which formed the sound and necessary basis for the greater work of the path that awaited them. Some of them had not the slightest hint of their future possibilities. But they were all serious students in their chosen departments. They felt the inner necessity of self-preparation. Their affiliation with the Master was ripening in the silence; and when the time came they found their election had been made and entered upon their task with assurance.

There is a maxim current in occultism which is very difficult to reconcile with its apparent antithesis, except after a good deal of reflection and experience. We are assured that the Master takes thought for the aspirant; we are also assured that the Master is not concerned

in the least with the details of the personal life of the aspirant, but only in his soul life and in so far as he is qualifying for discipleship. Yet these are not contradictory maxims. They are two aspects of one fundamental truth to which Karma, vocation and the technique are related. The Master is interested in the aspirant in a most real sense, but not personally until the development of the technique affords him an opportunity of contacting the aspirant from that level whereon the technique is operative. The development of an aspirant is a matter of graded ascents in consciousness, and throughout that period, right up to the time when his soul apparatus becomes consciously forceful in the occult sense and capable of original action and initiative, he receives instruction and guidance and many kinds of assistances from appointed deputies of the Master. These deputies are initiates with evolved technique, agents of the Master in the world of men, the leaders and teachers to whom the aspirant is indebted for the steady unfoldment of his own powers. They are men with certain Karma liquidated and so are free to devote their lives to service on the path. They are qualified to inspire and lead aspirants to evolve the technique in themselves that they, in turn, when Karma permits, may be similarly elected to a position of truth under the Master.

It is well to recognize this method of graded responsibility and teaching, from the Master down to the neophyte on the path. It should help to eliminate the false idea so prevalent that because an aspirant is attracted to the path and desires prestige quickly, and influence in other fives, the Master is personally concerned with him and therefore his desire should be granted. Observation and reflection may prove to him that this is not so. He will find that he has much to do for a long time to come even to become reasonably conversant with the technique consciously utilized by the technician under whose influence he has come, before he can expect to be sensitive to the more interior and exacting requirements of the Master working directly with his soul. Yet instances of this mistaken attitude abound among students. If for some reason their ordinary vocation becomes difficult or fails, they straightway seek for what they call an occult position where the task is fight and agreeable, or expect the Master to be personally interested in their welfare in this respect and provide some exceptional opportunity.

If these aspirants were taken at their personal value and immediately thrown into the positions they covet—they would fail, miserably. But there is little fear of this happening. An inexorable law will keep them back from that for which they are not ready, as surely as it will hold them to that concatenation of circumstances through which alone their Karma can be fulfilled. This is where the apparently contradictory maxim, that the Master is not concerned with the details of the personal life of the aspirant, is exemplified. The fact of the inaccessibility of the Master is a sufficient confirmation of this. It has been stated on good authority that the number of accepted disciples of Masters, those who through the most arduous training and trial have won personal recognition at their hands and share consciously in their work, is a comparative handful compared with the number of aspirants who seek them. That work is so vast and complicated that it would be a physical and Cosmic impossibility for the personal lives of these aspirants to receive individual guidance and fostering by the Masters. Doubtless some aspirants who have built up their own pet theory of occult guidance will resent a statement of this kind. It is so easy to wish for a certain condition of affairs and pass on to the belief that the condition exists. I have contacted aspirants of many schools of thought, but I have never met with one who could truthfully claim that a Master had become a physical-plane mentor to him. Observe, I speak of aspirants, not of those who are inwardly technicians, or who preside over and execute the plans of certain schools. Indeed, their personal contact with a Master is the reason for the existence of these schools.

It is surely time that the many misunderstandings about this subject were cleared away and the average aspirant given a chance to find his proper bearings in relation to it. Personal assumptions have been carried to almost incredible lengths with nothing but personal wishes and beliefs to support them. Masters do not visit the rooms of seekers to teach them personally just because they have read and meditated for a little while and believe themselves worthy of all acceptance. One might as well expect the great masters in art to spend their precious time instructing novices before they have had a thorough preparatory grounding under competent teachers, enabling them to be carried on to public work. The vocation of the aspirant is the preparatory

school for the development of his personality to thoroughly practical issues; and if he is so privileged as to be working under an initiate in an occult school, he has every opportunity to perfect in himself those qualifications which will make him a worthy member of the school and extend his influence in service. In this way alone is the technique mastered.

It is difficult to see on what ground the notion is entertained that those who are settled in specific vocations should not have opportunity therein to make progress on the path at the same time. So far from anything in occult literature to the contrary, it is enjoined on a student to utilize his vocation in a very practical way to facilitate his progress on the path. The means to do so are now in his hands. What he does to obtain a living is immaterial to the technique, provided it is honourable. The influence of an unfolding soul cannot be hidden. A student's vocation, whatever it is, provides an avenue for its expression. It is a point worthy of consideration, that some of the most prominent men in big business, as well as artists who are world-famous, are using a measure of the technique and are fully conscious of a mission of service in and through their business and art. The same applies to the unknown aspirant in the humblest vocation. The soul has chosen its field of labour and in fulfilling the task humbly and conscientiously larger fields of service will offer themselves as soon as he is ready for them.

The disciple of the Master whose perfected technique enables him to work chiefly with human souls, is a link in the world of men between the Master and the aspirant. His position is proof that he has served a long apprenticeship in vocations of various types. Without that experience fully assimilated he could never be utilized as an occult force centre in the service of others. I think it may truly be said that he is also one who never covets positions of office on the path. He is too conscious of his own shortcomings and feels too deeply the need for strenuous work upon himself for the efficient discharge of his duties to waste time gazing afar off to the future. It is that man whom the Master can trust to work unselfishly in his own place. In so doing he is making his election sure.

ADJUSTMENT TO THE TECHNIQUE

THE PROBLEM OF adjustment is an ever-pressing one for the aspirant to the technique. No matter what expansion of consciousness he has attained, this problem meets him. Directly he begins to seriously meditate the enemy is in his path. The enemy resolves itself into the new point of view to which he has almost unconsciously advanced. He becomes slightly out of focus with life and experience as he knew and lived it and must consequently restate it in new terms. Once again art will provide us with an analogy. The artist passes from one grade of technique to another with more or less rapidity according to inborn capacity. Each grade has its special difficulty, and requires a fresh adjustment of mind and hand. But there is the sense of difficulty overcome, and that which appeared insuperable in the early grades becomes automatic and can be reproduced at will with ease and certainty

Adjustment and growth in the technique is like that. Meditation is the instrumental means by which the aspirant passes from grade to grade. Each little cycle of growth produces its characteristic unsettlement in the mental life. It has been well said that the first efforts to still the mind preparatory to right meditation has the effect of making it adopt every possible attitude of disobedience and resentment of the restraint imposed upon it. The mind likes to go on its own accustomed way, uncontrolled and occupied objectively with unceasing restlessness with every passing matter of interest and of no enduring value. When the resolve comes to set to work to overcome wasteful activity and confine thought to well-defined channels of expression for higher purposes, the mind takes a determined stand to maintain its old routine. This preliminary difficulty soon passes with practice, and the real problem

is to adjust to the new ideas, the larger views, the increasing force registered by the mind as the inner personality is compelled under discipline to impose its nature upon it.

There is practically a uniform experience among aspirants when this unfoldment is in progress. They receive an impetus to speculate along new lines of mental activity. In many cases entirely new fields of possibility open up to them. The self within, rich with the products of many lives of struggle and development, begins to declare itself and project into the conscious field the mature powers and faculties of the past. The aspirant is aware of these insistent voices of the past mingling with the tones of his personal life, strong, perplexing, only half understood, awakening fervent desire to interpret them rightly and make them blend and harmonize with the octave he knows and in which everything, up to the present, has had its appropriate keynote. But a new situation now arises. That which is coming to him now belongs to a different octave of the Cosmic keyboard and demands its own interpretation. The faculties which he knows and uses may receive a fresh impetus and be strengthened for larger uses; and that is a wholly satisfactory aspect of the matter. But his daily discipline is carrying him steadily into the psychic realm of faculties and forces, and the silent emergence of these, as a new dim, twilight consciousness impinging upon the mind, brings with it the constant problem of acceptance and adjustment to the known factors of mind, life and experience. It is like suddenly detecting in one's abode, in which every article of furniture and ornament is familiar to us, strange objects of curious dimension and character which henceforth must be recognized and their meaning and mission understood. This is not an experience to be met once and finished with. It continues throughout the whole period of the unfoldment of the technique. The problem of skillful adjustment of these incidents of expansion of consciousness is ever before the aspirant. The period will be long or short commensurable with his ability to raise and intensify his vibration and adapt the physical, emotional, and mental life to the resulting disclosures.

The idea may be otherwise expressed. If it is a task of some difficulty to adjust to the life the aspirant knows before occult training, to control and direct the mental and emotional life he has built up in

this incarnation, what kind of task may he expect when he begins to meditate and explore the recesses of the inner self wherein lies latent the experience of many past lives? I am not one who regards occult training as a simple process of meditation and affirmation and thereby entering into possession of unusual sources of power and wisdom at small cost and pains. I know that the enfolded life of the past has to be unfolded into the present, understood, compensated for, adjusted to and thoroughly assimilated with the conscious experience of today. It takes but a moment to read this, but many years to make the word a fact. The burden of the whole theme of the technique is this of conscientious effort and endurance, exceeding in character and scope anything required even in the highly technical fields of the arts and sciences.

I should be frankly doubtful of the progress of any student who did not meet with the difficulties of adjustment in one form or another. Many concrete examples have come to my notice. A very prevalent obstacle encountered is that of the strength and insistence of the passional nature during the probational period. The student is often discouraged and thinks there must be something radically wrong with him because, long after he has set his mind upon spiritual culture, he finds undesirable habits and tendencies which he hoped had passed away from him forever reassert themselves with added strength and the demand for expression. Yet there is nothing unusual in this nor should it be a cause for discouragement or self-reproach. The emotional nature is by far the strongest force in man at this stage of evolution, and it is not to be raised to the spiritual plane of expression without the cost of long aspiration and many temporary resistances to the will nature imposed upon it. What the aspirant is apt to overlook is that the same basic problem confronts everyone on the path, with different modifications, depending upon evolutionary equipment and habituated forms of expression. A large percentage of students at the present time are very strongly polarized in their emotional nature, and their studies will be approached from and related to the emotional aspect. It is one of the main difficulties with students today that they are unable, without considerable study and meditation, to shift the polarity from the emotional to the mental level and work from that level simultaneously in two ways; by holding a steadily receptive

attitude to the inflow of force from the Cosmic plane, and at the same time compel the emotional life to respond in measure and intention to higher inspiration and direction. This is always a variable period for the aspirant, in intensity and duration, comparatively brief for some, all too prolonged for others. Many secret battles are lost and won during this period, with always some increased gain in mental and moral stamina to the aspirant. Little cycles of struggle will succeed those of relative calm and happy progress. This all brings more and more into prominence every tendency and recognized or unrecognized inclination of his nature, whether of strength or weakness. The correct adjustment to this constant self-revealing is the problem of every aspirant.

Let us think for a moment about this intensely interesting and important phase of the subject, the cycles of the aspirant's development and his adjustment thereto. I wish to avoid criticism of anything that appears of value to him, anything in any particular teaching or method of approach which has seemed of importance to him and which he may not feel disposed to consider inadequate for the simple reason that he is fully adjusted to it. I seek to bring him to a deeper realization of the requirements which the technique demands. If he will remember that it is precisely that viewpoint which antagonizes his own which may prove on reflection to be of peculiar value, he will then willingly comply with the fundamental canon of true growth. The one enemy in his path is stagnation of thought; and many are in the grip of that enemy, professed occult students though they be. I refer to textbook students. If there is one thing the aspirant must assure himself of, it is that the technique of the Master is not taught in textbooks. He may study and tabulate them and pride himself upon the assemblage of facts stored in the memory relative to races, planets, and periods, but all this is but the alphabet of the path. I have known students who have steeped themselves for years in such facts, yet before their own problems and those of others they were helpless. They failed to realize that the accumulation of facts is not the development of esoteric power, but only a preliminary to it. The textbooks almost invariably contradict one another regarding these facts. Some writers are frank enough to remind us that their presentations are not to be taken as authoritative, but are merely their conception of the subject. Others assure us that what is imparted is only suggestive, that much of what

is given is problematical. In a word, the student is thrown back upon his own intuition to seek the esoteric power in his own way. That is the point where I endeavour to meet him in this treatise on the technique.

I counsel the aspirant to place in the background for a while the burden of theory and speculation and simplify the issue for himself. Only what he experiences in and for himself is truth for him. The rest can wait its appointed time and nothing will be lost in the waiting. To be unmindful of the supreme value of the experience of the present by throwing the mind back upon the stereotyped records of remote periods, no matter by whom recorded, or forward to perfected conditions out of perspective with the living hour, is to miss the great opportunity of self-knowledge. The technique is a series of cycles of self-revealing, and the swiftness and intensity of these cycles will depend upon the force of the soul. And the question for the aspirant is, what is this self revealing to me? His meditation should be active to that end. "Look for the warrior, and let him fight in thee" The aspirant is affording the warrior, potent and wise, holding the secret of all his future evolution, whose strength is unknown and untried, an opportunity to declare himself on the battlefield of the personality. Through active meditation directed inward and upward he opens the path for the warrior of the ages to manifest his power and faculties in ever-widening circles of knowledge and experience in the personal life.

Therefore the paramount question is, what is the present cycle of growth revealing to me and how am I adjusting to it? When a cycle of sufficient intensity has been reached the reaction of the personality to the increased force of the soul will be very pronounced. The voice of the personality will be stronger and more insistent than ever before. This is often a matter of surprise to the aspirant. He thinks that the personality should become more and more quiescent as he gives attention to the soul informing it. At an advanced stage of the technique this may be expected. It is imperative.

The personality is then known, its measure has been taken, and its expressive life is controlled and directed as an obedient vehicle of the soul. But this is not the case in the early stages of training. Each little cycle of growth brings the latent faculties and recognized ambitions of the personality into greater prominence. Some of these must be

brought to full efficiency through close attention and discipline; others must diminish in force and pass away from the consciously active state in the interest of the larger vision of the soul. This is a twofold problem requiring continuous assertion of will and the exercise of keen discrimination. I have referred to this in the chapter on delusions, where the student is enjoined to take an inventory of his mental faculties with a view to their highest development. In doing this what has been called the "curse of ambition" will confront him. I do not like the term, but it has great significance for the aspirant as he pursues his path to the technique. It means that some lines of personal ambition which were quite consistent with his way of life before entering upon the path, must now lose ground or be transmuted and given a more spiritual direction. It is a problem for each aspirant to deal with in his own way. There are ambitions which will accelerate his progress on the path, others which will hinder. The cultivation of discrimination will enable him to calculate the force and value of each, and to what extent it will serve him in the future in the interest of his fellow men. That is the one standard by which he will ultimately have to judge his mental acquisitions and forces, since the technique in its higher stages demands the whole man in world service. That is why the anxious problem of deeper and deeper adjustment to the requirements of the unfolding soul is of the highest value and cannot be spared him in any single phase of its discipline. The objective is a complete knowledge of the forces of the soul evolving within the personality, to enable him to know experimentally any aspect of that evolution which he encounters in others. With that thought and intention firmly in mind throughout his novitiate, the will-nature will come to its strength, holding him to the task of the steady enlargement of the mental field, the while his discrimination is sharpened to discern what to relinquish and leave behind as no longer worthy of or necessary to the developing technique.

The flowering of the personal life comes before the rare bloom of the technique. The garden of the personality, rich and scent-laden with the choice and cultivated growth of past lives, has served its purpose of pleasure and expression in its own place and time, and must now yield itself in all its force and beauty to the nourishment of the tree of spiritual life to dispense knowledge and healing to those who seek the way.

THE NEOPHYTE AND THE TECHNIQUE

THE NEOPHYTE WHO has made his choice and is steadily working up to the technique, will do well to fortify himself against criticism. Criticism is one of the most prominent features of intellectual life in the West. It is a time-honoured national trait. But a national trait may be also a national evil; and with us, to a great extent, the habit of criticism is an evil. Unquestionably, through every department of culture there runs a strain of noble and helpful criticism which opens the mind to a real appreciation of the highest in human production. There is, too, an accompanying strain, strong and pernicious, which is steadily bent upon a sinister campaign of damnation, the sole object of which is to arrest the propagation and influence of unfamiliar truth and attain for itself a cheap notoriety at the expense of those who will not think for themselves. It is this latter class of criticism which, with a counterfeit air of omniscience, robustly applies its narrow canons to the revelations of occult science, and in so doing becomes the object of well-merited contempt.

It is a truism that the criterion of just criticism is a knowledge of the principles and practices of the subject under consideration. But the main stream of criticism provoked by occult disclosures has its sources in a most profound ignorance of even first principles. We have grown so accustomed to this purblind treatment of advanced research that, for ourselves, we are not disquieted. We recognize its impotence to stay the upward progress of the soul. But there are students who are peculiarly susceptible to the imperious onslaughts of ignorance and who experience no inconsiderable anxiety and doubt when exposed to cross-questioning and ridicule in their immediate circle on account of their occult persuasions. The foothold of these students is not

sure; the period of their probationary study is not far advanced; they have taken but a few steps on the path of self-knowledge. Doubts and questionings spring up at every step, and time must elapse before the mind can thoroughly assimilate the deeper truth. This is the critical period for the neophyte in occultism and he must prepare to deal with it.

If he means to progress he must cultivate a cool indifference to this criticism. He must not fear in the least being proclaimed a fool for his ideas. Not having yet penetrated deeply enough, the edifice of occult knowledge does not stand foursquare in his vision; and because of that lack of growth his thought is infirm and he cannot give a satisfactory account of himself. His opponents will feel his uncertainty and take advantage of it, until he is inclined to believe at times that he is resting his soul on a chimera. There is only one thing about which he needs to be solicitous, his inner unfoldment. As he wrestles with the divine facts his thoughts will grow strong. Defeats may conspire against him, but he must get used to them and draw strength from them. In time he will realize just where he stands in the scheme of things and a new power of speech will be his for all emergencies.

We need to remember again and again that the unfoldment of the technique is different from any other kind of growth. We cannot register our progress day by day like a student in art. It has nothing to do with that culture which is often only a synonym for arrogance. Neither brilliant accomplishments nor social prestige will provide the aspirant with a passport. It is no respecter of persons. Jesus was a carpenter; Buddha was a prince; both became adepts. The thing that avails is a fervent soul. Learn to serve. The adept is a servant. The crucifying struggle of life around you, inscribing the sign of the cross indelibly in the brow of humanity, is it anything to you? Is the sombre panorama of the human soul, passing and re-passing between the two eternities, and feeling blindly and unknowingly after the great secret, anything to you? Because here is the basis of the technique. The human soul must draw you irresistibly. To be, to know—these are the angels of aspiration which must stir the waters of life within and urge you to activity. The suffering of the soul must become personal to *you*. And the initial step lies in the cultivation of the fullness of that broad

humanity of which we have spoken. A head full of theories will make you a tinkling cymbal and known of men; but only from real depths of nature proceeds an understanding sympathy. Your development may cost an incarnation; nevertheless, the true aspirant forgets the price of achievement. He accustoms himself to think in terms of incarnations, not years. The magnitude of that contemplation sets its ineffaceable seal upon his thought; and those who cannot appreciate his ideals will yet be unable to forget them.

The transformation wrought in the inner life of the aspirant, though silent and unperceived by others, will yet affect in many ways his relationship to the world at large. He will mark the change in himself and, whether he speaks of it or not, others will mark and question it. This is where he will meet with criticism. His right to grow will be severely questioned. By whose authority does he aspire to spiritual things? In the opinion of some this departure from the plain path of conformity will be rank heresy, calculated to call down upon him the wrath of heaven. Well, most of us on the path are heretics, and greater heretics have preceded us. Let him not hesitate to deal with these critics peremptorily, if need be, once and for all. Let the aspirant be a heretic and stand out. He will be tempted to argue, pro and con, but it will be of little use. He has gone on before and they have resolved to stand still, and reconciliation on these terms is impossible. He has elected to be a light in the world, whatever the darkness he may have to pass through, and it would be unwise to retreat to the open arms of the majority for the sake of a merely ephemeral popularity and peace.

The aim of the technique is to make the aspirant a spiritual artist, possessed of an exquisite intuitional awareness of inner processes. This will evolve as he gradually molds the constitution to respond to keener and unusual vibrations. He will become receptive to a widening area of psychic influences. One of the earliest signs of this development is the pronounced occult tone of the personality. Responding now to a higher vibrational ratio, the breath of life circulates as a peculiar power. However faintly perceived outwardly, an actual spiritualization of self ensues. Sensitiveness is increased to a remarkable degree; and while it is not to be implied that his aim is to become so etherealized as to preclude the enjoyment of a natural and healthy existence, it is

clearly necessary to take thought for much which formerly did not concern him. Whatever the objections raised by those who understand nothing of the goal in view against the ultimate issue of this process of refinement, one of the chief aims must be the growth of sensitiveness. And in the pursuit of this, any discomforts incidental to the alchemical process will be regarded as inevitable, and not in any sense as a deterrent. He will know that he is deliberately fitting himself for the reception of a greater power of human helpfulness to be used in a career of sublime service.

Let the aspirant fear no criticism. Only when the critics realize that he possesses a more precious gift will they receive the first hint of their blindness. Only then will they realize that all the accumulations of worldly knowledge are indeed a very little thing when compared with an insight which is divine, when he becomes in all simplicity an oracle of the soul and reveals a new scale of values. No higher service can he render than that. No other reward is greater than the reward of that service. Before the contemplation of that ideal the glories of lesser ideals of men will suffer a peaceful eclipse. The voice of criticism will have lost the power to wound, because his thought has blended silently with the Cosmic purpose, in which is no variableness, neither shadow of turning.

PROBATION AND THE TECHNIQUE

SPEAKING OF THE inscrutable mystery of existence, Carlyle, in a moment of true mystical insight, said, "Force, force, everywhere force; we ourselves a mysterious force in the centre of that. . . ." This is the basic fact for the technician in philosophy and practice. The technique is the science of applied force. When a man attains to a scientific use of this force through concentrated will and enlightened understanding in world service, he is no longer an aspirant, but a disciple of the Master. He is a conscious manipulator of the one force of the Cosmos manifesting through the awakened centres of his inner personality. Through the long day of trial and experiment, of comprehensive living experience, he has brought into activity within a subtle apparatus for the reception and transmission of energies infinitely more potent than anything operative on the physical, emotional and mental planes of his being. It is a preliminary attainment on the path of infinite promise—for others.

Is this status of the disciple among men an enviable one? From the worldly point of view, it is not. It is not easy living in this Western World as it is today, surrounded with pressing problems and perplexities, and its imperious demand that every man should not only be in it, but of it, and conform to its ideals and participate in its interests. From the Master's point of view, it is otherwise. It is a blessed thing that there are men who, in past incarnations, have passed their novitiate and now find themselves accepted disciples of the Masters, with a definite mission to their fellow men. Links of old association have brought them once again in this life into the secret occult schools to graduate further in the technique and fill more responsible positions in the Brotherhood of Masters. The world knows them not; but their

compeers throughout the world recognize them by those unmistakable signs of soul development and personality equipment referred to in this treatise.

The world does not know the disciple, but it does know that he is different from other men. A man with the mission of a disciple of the Masters cannot hide his light under a bushel. What he is, is not known; that he is different, is. That is enough for him to be made a target for criticism and for his way of life to be questioned by those who cannot but recognize that they confront a different type of man. "The one who has passed through is unrecognizable until the other and altogether new condition is attained by both" So says the scripture, and it is a fact of experience in the life of the disciple. His life is a paradox, and any attempt to justify it in the eyes of those who cannot understand paradoxes will only result in making his life appear the more hopelessly contradictory. The disciple must accept this condition of his development with complete understanding. Through certain evolutionary advantages, distinctly his because earned in the past, he conforms to a code of ethics and is amenable to laws, foreign to and unrecognized by his fellow men. That is why the technique working through a disciple so baffles astute men who hold sway on the plane of mind. "He has taken on him a duty which does not exist for other men" It is sufficient that the disciple knows this. That knowledge gives him strength and ascendancy over opposing influences.

What, then, has been the main factor in bringing the technician to this point of ascendancy and efficiency in the scale of human evolution? I have given some idea of the nature of the technique, outlined its main constituents, and shown the extent of the discipline which has to be undertaken if its requirements are to be filled. Now, there is a word which is ever present to the mind of the technician throughout the long period of his training. It is the word, probation. It implies a condition which is often regarded with some suspicion by students. Yet it is common enough to hear of a person being under probation, or upon his trial. It simply means that he has to show his fitness for the position he aspires to. He is submitted to a period of trial of his abilities to fill it competently and be entrusted with the powers and privileges that accompany it. And in the occult sense it

means precisely the same thing, except that, in the case of a worldly office, the probation will be relatively brief; whereas the probation of the technique may occupy the major portion of an incarnation.

For years the technician is known to the inner side to be graduating in a secret school in which he is taught the correct manipulation of force. When I say secret school, I do not refer to any special external organization with which he may be affiliated and in which he is working. The secret school lies behind that. He knows nothing of it objectively. His intuition assures him of his alliance with it. In that school he is known, has his place, and is guided silently in his associations in work on the objective plane. Opportunities are afforded him to liquidate his Karma, and the way in which he uses these is observed and recorded. Temptations in the most disguised forms offer themselves to test the stability of his moral and intellectual character. They come to him in alluring personalities and aspects of circumstances, intense in their appeal and with terrible power of fascination. He will be faced again and again with these stern alternatives of self-gratification or impersonal service. The force which impinges upon his sensitive soul apparatus from the Master awakens the whole man to action in every phase of his nature. He has to learn how to hold that force as it energizes through him and draws into his sphere other souls who understand it not and seek response from it on their own level of life. He has to learn how to adapt the various measures of that force to those he contacts in the way of service. That measure which would inspire and raise one would as surely antagonize and overthrow another. For remember, the technician does not deal with personalities as they fall into this or that category; he deals with souls from the angle of their evolutionary standpoint. It is the fact which conditions the entire attitude of the technician towards others in his work. His aim is to do for others on a lesser scale what the Master is doing for him. He permits an appropriate measure of his force to play upon them, that an awakening and recognition of deeper sources may ensue.

Observe then the long and exacting probation which is involved in this simple fact of the reception by the technician of the force of the Master through the years of novitiate, and the transmission of that force by the technician to those pupils associated with him in

occult discipline for their advancement. The psychic centres of the technician will be active and in rapid evolution, and his voltage will be correspondingly tense and high, considerably more so than is the case with the majority in the groups he works with. I have mentioned how this peculiar training intensifies everything latent in the constitution, how strength and weakness are brought to the surface in every possible way, how every faculty and ability is brought to light for recognition and direction. The man stands revealed to himself; and the purpose of the revelation is to see what use he will make of it. It is in his power to use in service, or misuse for self, a sacred trust. Countless opportunities are his to take the easy or the more difficult path, to direct his forces consistently on the side of evolution for others in noble, self-denying service, or deflect it into channels of selfish aims, even to the detriment of others who look to him for example and guidance. The issues are clear to him and the choice is his to make. It is a stem trial. The technician has the opportunity to prove himself and the issue rests with him. In his own heart lies the battlefield, and how few, how very few, know anything of the secret battles fought and won there! He seeks no sympathy from without; he cries for no quarter from the forces ranged against him, whether of personality or circumstance. The magic of his own dominant soul has raised them into life for its own demonstration of mastery, and rather than lose in the self-initiated trial between the spiritual will and the Karmic hosts that would dethrone him, he would lose life and any fortune. That is indeed so. The love of the disciple for the Master who knows him and whom he seeks to know is such, that when these supreme tests of his allegiance and strength come to him, he does not wait to count the loss or the gain, he cares nothing for reputation or opinion, neither criticism, nor misunderstanding, nor opprobrium, or any worldly consideration sways one iota against the clear issue of proving himself a faithful servant and worthy of the trust reposed in him.

These issues, briefly glanced at, arise out of the conscious reception by the technician of the force of the Master. What of those associated with the technician in occult discipline, who are recipients of the force consciously transmitted by him? Their probation proceeds along similar lines, but obviously it is not yet so keen and crucial. In dealing with young aspirants who come under his observation and guidance,

the technician has the task of exercising his educated intuition in such a way in their behalf that a truly esoteric probation is afforded them. It is an intimate matter and difficult to write about. I can only say that the technician, drilled in the intricacies of his own probation, comes to adapt effectively the Master's methods, tempering them kindly and adequately to the strength and need of the aspirant; and there is probably no greater joy known to him than that he experiences in noting how an eager aspirant grasps the intimations and hints of deeper truth and quickly moulds them into his life and development. Appropriate sympathy may be shown here, the imposition of the will in hard admonition manifested there; patient forbearance in misunderstanding, silence and watchfulness where the aspirant must grow in his own way; sometimes almost indifference to the perplexity and pain of mental experience when that is culturing the young soul to stability and the beauty of spiritual insight:— these are glimpses of technical adaptation which are matters of constant personal concern on the part of the technician.

In giving prominence to the fact of probation which is methodically adapted in the case of every aspirant qualifying for the technique, there is this to be added by way of caution. Let the aspirant accept this fact as undoubtedly true and operative in his own development; but let him not perpetually watch himself and everything connected with him in his affairs, whether of thought or action, with that anxious scrutiny and self-questioning, that his life becomes a burden to himself and a nuisance to other people. I have a case in mind of a student who is a victim of this perverted idea of probation and development; so much so, that he is mortally afraid of himself and of every contact with others, fearing that he is losing grace in being a natural human being, and thereby holding at arm's length the conditions that await his embrace and conquest. He thus refuses to be put on trial and defeats the very aim he has in view. The probationary period is not set with traps at every step to make the student walk crooked and act at cross purposes all his days for fear of falling into them. There are definite points of crisis along the way, and in all probability he will meet and decide them in total unconsciousness of their far-reaching esoteric import. These crises are not charted so that he knows beforehand the time of their precipitation. He brings them to his own hands, soon or

late, by his steadily onward and expressive living. The technician will tell him that often the momentous crises in his own life have been met and dealt with, with no thought of the issues other than obtaining a solid conquest in the name of manhood.

That is a point for the profound consideration of the aspirant. Let him observe that the technician with whom he works is a man in the true sense of the word. He fulfills the duties of his manhood according to the laws of occultism. Let the aspirant study those laws and give them practical expression in a well-ordered personality technique such as is outlined herein. The probation he needs for its perfecting and use will evolve naturally and efficaciously without deliberately seeking it. It will come because he has desired with fervent heart and single aim to be an exponent of the technique. He will have the strength to surmount every trial incident to it if he remains steadfast to the ideal of service in the name of the Master.

THE ROSICRUCIAN ORDER, AMORC

Purpose and Work of the Order

The Rosicrucian Order, AMORC, is a philosophical and initiatic tradition. As students progress in their studies, they are initiated into the next level or degree.

Rosicrucians are men and women around the world who study the laws of nature in order to live in harmony with them. Individuals study the Rosicrucian lessons in the privacy of their own homes on subjects such as the nature of the soul, developing intuition, classical Greek philosophy, energy centers in the body, and self-healing techniques.

The Rosicrucian tradition encourages each student to discover the wisdom, compassion, strength, and peace that already reside within each of us.

DR. JAMES HENRY BREASTED

*who has given to the world
so much truth regarding
the antiquities of Egypt.*

Building the Great Pyramid of Gizeh. It is estimated that one hundred thousand men were employed twenty years to erect it. The above picture is a famous artist's conception of the mammoth task.

The Sphinx, guardian of the ages. Between its paws stands an altar before which candidates of the mystery schools, in antiquity, took their obligations prior to being led by subterranean passageway into the initiatory chambers of the Great Pyramid (shown in background).

The illustrious Pharaoh, Akhnaton, of 1350 B. C., the first to conceive and postulate a monotheistic religion. His religious views influenced the religious literature of the captive Jews and put an indelible stamp upon the Christian doctrines centuries later.

PREFACE

There have been so many books and pamphlets written about the Great Pyramid of Gizeh in Egypt that it would seem that one more on the subject would be useless. The great divergency of opinions expressed in these books would tend to lead the readers of them to feel that each new book is but another presentation of personal opinions, and that the multiplicity of opinions leaves the seeker for truth greatly puzzled.

After all, any description of the Pyramid is like a description of a beautiful sunset or of a magnificent painting. Each description is a slightly different picture of what is in the eyes of the beholder. Those who would benefit by such descriptions must take from each what seems to be in agreement with the others and what creates in their minds a logical conception.

Certain it is that the Pyramid *in toto* can be described from many different viewpoints. The architect, the structural engineer, the builder, the laborer, the artist, and the artisan will find in the Pyramid elements to hold their attention, command admiration and respect, and furnish material for elaborate and enthusiastic descriptions.

Then there are the historian, the philosopher, the scientist, and the mystic. Each of them will find in the Pyramid that which he can admire and dwell upon with ecstasy, enthusiasm, or cold mechanical respect.

The thesis of this present book is the presentation of the mystical side of the Pyramid and the support of the contention presented in many ancient traditions that the Great Pyramid was built not as a tomb for a king who sought to aggrandize himself immediately before and long after his transition, but as a place designed entirely, and used exclusively, for mystical ceremonies of initiation and, incidentally, or coincidentally, as a monument for the preservation of wisdom and to be everlastingly a prophet of the future.

For this reason this book does not deal exhaustively with the mechanical, engineering, scientific, or other features of the design and structure of the Pyramid, except in so far as they cast light upon its mystical symbolism and its practical usefulness in accordance with the thesis referred to above.

Even the so-called religious side of its significance is touched upon but lightly because many other books have elaborated upon this phase of the subject, often to fanatical extremes. It is too easy to go astray and allow one's imagination and fancy to associate many things found in the

Pyramid with statements to be found in the Christian Bible in both the Old and New Testaments. This is not due to the fact that there are so many doubtful or unproved elements to be found in the Pyramid which may be explained by extreme resort to the imagination, but to the fact that so many pages in the Christian Bible are susceptible of various explanations and interpretations, often through elaborate discussions of the precise meaning of some word in a sentence—regardless of the fact that many such words were arbitrarily chosen by the interpreters and translators of the Bible without having in mind the unique application that might be made of the shades of meaning attributive to such words.

Because in ancient writings we find references to "the four corners of the earth," we should not assume that the original writers of the words—not the translators or interpreters—intended to imply that the earth was *square* and actually had four corners. But such phrases easily lend themselves to the fanatical, modern interpreters in writing about the Great Pyramid, who would argue that the Pyramid represents the squareness of the earth and that in the beginning of time the earth must have been square because the Bible speaks of the four corners of the earth and the Pyramid itself has four corners.

The same is true in regard to the manner of

interpreting many of the prophetic indications in the Pyramid to incidents related in the Bible. By a little stretch of the imagination and the insistence upon certain shades of meaning attributed to words describing the life and acts of Jesus, the extremists would have us believe that every incident in the life of Jesus is prophesied in the Pyramid, and that the future life of man—as outlined in the Christian dogmas and creeds—is firmly established in the predictions found in the Pyramid. This would make the Pyramid exclusively a Christian monument which must have been, therefore, designed and created by Christians to emphasize the Christian religion and to intimate that only Christians would find wisdom in its revelations. The fact that the Pyramid was designed and built long before the Christian doctrines were presented to man is no embarrassment to these extremists who explain this difficulty by stating that the designers and Creators of the Pyramid knew in advance of the coming of Jesus the Christ, the teachings He would present, the acts He would perform, and the eventual Christianizing of the entire world by "the only true religion."

I choose to leave to the individual readers of this book the personal choice of making such religious interpretations, and the decision as to whether or not the Great Pyramid prophesies the Christianizing of the whole world. This is a matter

that is entirely outside the scope of the present work.

The author has visited the inside and outside of the Pyramid and has studied many plans of its measurements and delineation, and examined for many years ancient and modern records containing the old traditions and the present secret writings and reports regarding the original purpose of the Pyramid and its occupation and use.

Most of the statements made in this book, therefore, are not the mere personal opinions of the author but the personal opinions of multitudes of persons who have been in contact with those associated with the Pyramid in the time of its mystical use, or who have made recent studies of its present conditions. The opinions of some modern writers, scientists, and investigators have been added in support of the ancient traditions and Endings. This book, therefore, is a handbook of the *mystical* side of the Great Pyramid and argues its thesis from the premise of many established facts. If any reader thereof desires to adopt an opposing opinion and to insist that the Great Pyramid of Gizeh was not what this thesis claims, he is entitled to his opinion and the burden of proof rests upon him to support his contentions and at the same time exhaust himself in attempting to negate the outstanding facts, well-established, which support the ideas presented in this book.

The book is consequently a challenge and at the same time an interesting description of the Pyramid as it was and as it is today.

THE AUTHOR

February 1, 1936.

Chapter I

A VISIT TO THE LAND OF MYSTERY

TO UNDERSTAND and appreciate both the architectural magnificence and the mystical significance of the Great Pyramid, one must understand something about mysterious Egypt.

Among various religious denominations of modern times Egypt is still called "The Land of Darkness." To the students of civilization, and cultural and intellectual development, Egypt ever typifies the onetime center of world culture. To the student of mysticism and all that is weird, alluring, fascinating, and intriguing, the banks of the Nile remain increasingly popular and interesting.

Why some should call it "The Land of Darkness" is difficult to understand, unless we look at Egypt in one period of its very long history and wrongly select that period as typifying its spirit. There are many lands in the world today which at one time rose to great heights in culture and intellectual development and then dropped to a

very low place, but none of these is commonly referred to as a land of darkness. From a religious point of view the Christians and those of more modern forms of religion point out the fact that Christianity has made little headway in Egypt in the past few centuries, and from the Christian point of view this would seem to indicate a land of religious darkness. But such persons forget that Egypt was a land in which Christianity developed one of its earliest foundations, and from which it derived much of its culture and ethics.

To the mystic, or those mystically inclined, Egypt does not personify a land of darkness, but a land of sleeping, potent — though dormant — power, with a hidden, secret wisdom and culture that may be fanned to a great flame and become an inspiring source of illumination at almost any period of the present and future years. In its own way it is highly religious, and measured from the broad standards of religion it is not without its beautiful ideals and wonderful contributions to moral and ethical development.

The peoples of the Western World have developed many erroneous pictures and ideas regarding Egypt and its people, and there are two sources of information, or misinformation, which are responsible for these erroneous ideas. The first are the reports of the political situation there, with constant intimations in these reports that Egypt is a

land of people incapable of properly governing themselves and needing the continued surveillance, "protection," and "guardianship" of a more modern nation. The second source of misinformation are the popular stories and tales told about the country in books or lectures, magazine articles, or feature reports prepared by those who deliberately color their opinions and judgment, or ignorantly record incompetent and distorted viewpoints.

The history of Egypt goes back to such great antiquity that actual facts are lost behind a veil of obscurity, and it is only when these facts emerge in their chronological forward march toward more modern times that they take on a form that resembles recognition and establishment. Carefully surveying the history of Egypt, one is impressed with the idea that it is like looking across the country into a dense fog. The more distant the objects we try to discern, the more vague and indefinite they appear to be in form and color, and even in relationship to the earth itself. It is only those things which seem to emerge partially from the fog and come closer to us that give us a correct impression or something tangible to record in our contemplation.

If we were to fly over Egypt in a modern plane, as is being done almost daily at the present time by tourists and those who have important matters to

deal with and must make hurried trips to Egypt and return, we would be impressed with the fact that not only is Egypt a very small section of Africa located near its northeast corner, but that it is just a long valley lying on either side of a wonderful river ending at the Mediterranean and having its beginning somewhere in the rugged mountains of Ethiopia or Abyssinia. In fact, were it not for this unusual river—unusual in many ways—the land of Egypt would be a part of the desert wastes of Northern Africa. But down through this desert waste nature dug a canal, and allowed the rain waters of the Ethiopian mountains to wend their way northward toward the Mediterranean through this twisting, turning canal. For fifteen hundred miles this river carries its life-giving waters to the great sea, and during the last eight hundred miles of this distance we have the historically famous and fascinating valley that constitutes the essential heart of Egypt.

The part of Egypt that is the most interesting to all tourists, and the most attractive in its presentation of ruins and monuments of fascinating revelations covers a distance along the Nile of about eight hundred miles south from Cairo, or in other words, a distance equivalent to the valley located in the Central portion of the State of California. Because of the annual overflow of this Nile, resulting in inundations which Carry

down from the mountains mud and soil, and deposit them upon the sand on either side of the stream, and irrigate this otherwise dry and unfertile area, the civilization of Egypt has centered itself into a narrow stretch of mud and sand land bordering this God-given stream. And because the Nile afforded a cool and very efficient means of navigation, as well as irrigated lands for agriculture and habitations, all of the principal cities of Egypt were built along the banks of the Nile as were all of the magnificent temples, pyramids, and other strange structures.

Entering Egypt by means of the airplane, however, is not the most interesting, nor profitable way to cover any portion of its areas, nor to reach its borderlands. Two very popular methods for Western World visitors are by boat to Alexandria or Suez and thence by train to Cairo, or by train from Palestine. As one arrives by ship at Alexandria, the first sight of land is impressive because of the magnificent bay, the many ships anchored at its docks, and its thousands of small private boats including the yachts of the wealthy with their white hulls reflecting in the waters, and tinted by the variegated colors on the patchwork sails of the poor man's boats. The hustle and bustle at the docks, accompanied by the fascinating costumes of the oriental types among those who handle your baggage and operate the traffic

conditions at the piers, the unusual railroad trains and the methods of boarding them and fighting for seats in the unreserved compartments, make the first few hours of your arrival in Egypt the beginning of a long drama of endless acts and scenes.

The ride through the Delta region with its thousands of small irrigation canals, its flat lands of greens, the strange mud huts of the natives spotted among more modern buildings of stone, the agricultural and dairy industries of this region, and the passing of an occasional ancient landmark, make the short journey from Alexandria to Cairo so fascinating that the few hours pass by almost unnoticed. On the other hand, as one boards the Egyptian train at Jerusalem in the quaint old station where camels are carrying freight and baggage right to the side of the train, and strange signs tell of the departure of the train and its destination in several different languages including Hebrew, and the peculiar looking cars stand with their high-pitched whistles constantly blowing as a warning, the strange looking baggage porters, and all of the other unique features of the trip make the starting an interesting one after one has spent many fascinating days perhaps journeying through Palestine and Jerusalem since arriving on the great ship at Haifa. As the train moves from Jerusalem toward Egypt the constant change in the nature of

the soil and its products becomes so evident as to hold one in a spell at the window of the compartment of the train. Gradually the rocky surface of the land smoothes out into grass and slightly rolling hills, and then as the train approaches the old Phoenician Coast of the Mediterranean, at one time the world's greatest center of shipping and navigation, the fertile soil gradually turns into sand dunes and the trees of various kinds that made Palestine so picturesque disappear, and finally in their place we see groves of palm trees.

The ride from Jerusalem to Cairo is a one day journey beginning soon after breakfast and ending just in time for one to enjoy an evening meal at the hotel in Cairo. But in the interval of ten or twelve hours the sites of ancient, historical places pass before us like a panorama on the motion picture screen. Little by little we leave behind us in Palestine a mixture of ancient and modern civilization, architecture, and industries, and approach the most primitive form of human settlements. Every hour or so the train is halted at gradually modified types of railway station architecture, until by midday we find the stations crudely constructed and peopled by the most primitive types of agriculturists attempting to turn the barren wastelands of sand into some means of sustenance. As the train halts for water and the

delivery of mail and baggage, we see in the distances on either side of the train peculiar mud huts built of stalks of sugar cane interwoven with cloth and plastered with mud, out of which come the dwellers of this strange section of the earth. The natives who surround our compartments and peer into our windows and offer us some of their wares for sale are kindly looking people despite their primitive and poor clothing, and notwithstanding the strange longing that is so evident in their eyes. They appreciate each kind word that is spoken to them even when they do not understand the language. They are appreciative of every business transaction and value highly the Western World money that they receive in exchange for their wares, but seem to resent any idea that they are begging or looking for charity. True it is that a large portion of the natives who flock around tourists at each and every point of rest, paint for us a picture of poverty through their constant solicitations for *baksheesh*, or in other words, coins of any kind either handed to them or thrown to them from the compartment windows. And at each move made by the tourists when entering a car, automobile, hotel, or doorway, or in picking up or setting down a piece of baggage, or in looking for something or someone, these professional beggars slip quietly to one side, and as if by magic seem to take hold of the doorknob and

baggage handles, or whatever the tourist is reaching for, and while offering it with one hand they solicit money with the other, until the process becomes an annoyance and it often calls for drastic action to free oneself from being delayed by a circle of these beggars who would deliberately force one to pay them for freedom of action. But in fairness to the natives of all of these countries in the Near East it must be said that these beggars, often resorting to tricks or imitating lameness, blindness, paralysis, and other appalling conditions and laughing at you later when you discover you have been tricked, represent a very small portion of the populace.

As the train moves on toward the Suez Canal and crosses it at Kantara, we note that the sun is beginning to set in the West, and as we turn our eyes toward Egypt we can faintly see the outlines of the minarets that rise toward the sky silhouetted against the golden colors of the sun. If our journey is made during the winter months—the most appropriate time for visiting Egypt—it is almost dark when our train arrives at Cairo and our baggage is unloaded, and we enter a taxicab or special automobile to be driven to our hotel.

Whether we have come direct from America or other parts of the world to Alexandria by boat and thence by train to Cairo, or whether we have come through Palestine and Syria after having visited the many ancient cities of those lands and thence by

train to the great Egyptian city, we cannot fail to be impressed, as our automobile drives us toward our hotel, with the fact that portions of Cairo with its wide boulevards, its parks, its shady trees, its very modern buildings and offices, hotels and stores, its high structures, its multiplicity of automobiles and modern taxicabs, its many people dressed in Western World clothing, and the nature of the hustle and bustle, the electric signs with many of them containing English words, give us an impression that we are in a Western World city, and not in one of the oldest lands of the earth. Standing in the central plaza of Cairo either in midday or at night, one wonders whether this is the Piccadilly or Charing Cross of London, the Place de la Madeleine of Paris, or the center of any other great European city, or possibly Union Square of San Francisco, New York, Chicago, New Orleans, or almost anywhere. Even the trolley cars and the iron posts holding the trolley wires, the awnings in front of the jewelry stores and other places, the theater entrances, the traffic officers and the signals, the newsboys with their newspapers, the drinking places, the hotel dining rooms with their popular orchestras, all seem to be disappointing, for we as tourists expected—what? It is difficult for the tourist to say why he is disappointed. But the next morning, as he is taken by automobile from his hotel through the great square (named after

Mohammed Ali) to one of the surf beaches, he finds a replica of what he may have seen in the eastern parts of the British Isles, at Ostend, Biarritz, or Atlantic City, with all of the colorful parasols, bathing tents, concessions and amusements, modern bathing suits, with men and women from every country in the world, mostly of the Western and European type, enjoying the sunshine and warm waves in a manner indicating complete indifference to the fact that they are in one of the ancient sections of a mysterious country.

The interiors of the hotels at Cairo impress us because of the great height of the ceilings, the largeness of the spacious bedrooms, dining rooms, and hallways, the balconies and porches with their very helpful shade, the luxuriousness of the oriental tapestries, rugs, and antique settings, and the multitude of servants dressed in long white robes with bright red silk sashes and the inevitable fez as a headdress. Wherever and however one may turn in any part of the hotel—even in the privacy of one's own bedroom or bathroom—one of these silent-moving servants is at one's elbow, or tapping upon the door, or just ready to enter, seemingly anticipating every desire and every necessity. One may step into the hallway to approach the elevator to go down to the lower floor and see no servant in sight, yet before he can walk two feet with baggage in his hands or a parcel under his arm, a dozen of

these servants will seem to approach from nowhere, or from out of the shadows of the niches that are set into the hallways, or from around the corner, or perhaps from the very floor itself, and offer their aid.

The bedrooms are furnished magnificently, but have a strange appearance with their long windows that open onto balconies, with their Venetian blinds, their velour drapes, and their net-covered beds. The dining room appears like a setting for some banquet in a great palace with its beautiful carpets, its spotless linen, its great number of silver pieces upon the tables, its beautiful china, its large number of waiters assigned to each section (often two to a table), its corners spotted with divans in oriental style overhung with canopies of rare materials, its opulent hanging lamps of Egyptian art work, its magnificent chandeliers containing thousands of pieces of crystal, and its soft music constantly being played by oriental musicians. Its printed menu is a beautiful souvenir, and the food is well prepared and impressively served, and the wines and liquors flow more freely than water, for the people of the Western World cannot enjoy the taste of the drinking water in Egypt, nor is it safe to partake of it. Out in the streets we find the boulevards quite modern, with the side streets spotted with antique and souvenir stores wherein everything that Egypt manufactured in the past is

duplicated and everything manufactured at the present time is offered at reasonable prices.

During the winter months the temperature at midday is like that of a fair summer day in New York, Chicago, London, or Paris. The nights often become fairly cool and make sleeping enjoyable. Wherever one goes he finds natives who can speak or understand the English language. Bootblacks—wearing the white robe and sash—are at work everywhere, as are the sellers of strings of beads, souvenir canes and novelties of all kinds.

At the curb we are beckoned to patronize open one-horse carriages in which four can ride comfortably, or modern taxicabs with the tops lowered to make sightseeing easier. In a few minutes and for a few pennies one can be whisked to the musky section of Cairo where the narrow, old-time streets are lined with bazaars where one can see the most beautiful specimens of handmade brass vases inlaid with copper or silver, or silken shawls, cotton tablecloths and scarfs, and every conceivable kind of article made out of wood and metal and other things, from small portable chairs to magnificent service sets for the table.

One soon learns how to bargain with the men who operate these bazaars. Each bazaar is merely a hole in the wall, and seventy-five per cent of the merchandise hangs on the outside of the store—where there might otherwise have been a plate-

glass window—or on tables or chairs, and nearly all of one's bargaining is done right on the street while both natives and tourists stand and watch. The proper procedure usually is to inquire the price of something one desires, but to give it only a casual examination and not reveal one's deep interest in it. Then having received a quotation, or having *been* told the "asking price," one proceeds to divide that price by the date of the month, then subtract the hour of the day, and then divide the remainder by two. This then constitutes your first offer, and it should then be followed by some more division and subtraction until a fourth and fifth offer have been made. Then, refusing to accept the merchant's final and last quotation one turns about and walks away. It is then that the merchant comes and makes his first offer, and then the bargaining begins again.

If you buy the article, and have conducted your bargaining in the right manner, you will have paid approximately one-twentieth of the price originally asked. Believing that you have been very successful in your bargaining you are made unhappy a few minutes later by the rival merchant just across the street offering to you the same piece of merchandise from his stock at one-half the price you have just paid to the other. And as you wend your way along the streets with their bazaars, your unwrapped package under your arm—most things

are carried this way—merchant after merchant will point out to you a duplicate of it possessed by him and which he will sell to you at a lower price, for each one seems to know how much you paid, and before you have left the bazaar district you realize that you might have had ten shawls for the price you paid for one, or ten pieces of brass, or ten other things of similar value. No matter how many times you may go to the bazaars of Cairo, or even of Luzor or Alexandria, and no matter how often you continue to bargain until you have reached what you believe must be the very lowest price, you will find later that you brought your bargaining to a close far too soon.

But all of this is part of the fun, the excitement, the pastime of your visit. You always know that you have received full value for the money you have spent, and you feel reluctant to take articles away from these persons at a price that seems to be unfair and unreasonable for, after all, despite their sharp bargaining and their expressions of resentment at your quotations, they are a kindly lot of people. When you find them in repose as you do at the doorways of the great mosques or universities and schools, or at the doorways of temples and grottos, or waiting in the shadows of the Pyramid, or elsewhere, you see upon their countenances the unmistakable expressions of sincerity, profound thought, deep inner wisdom,

and a mysterious power.

Many scenes are amusing, indeed. It appears to be a custom in Cairo for each poor man who has a harem—a household of more than one wife or female—to take his wives and children for a weekly ride on. Saturday afternoon. The poor man—and there are so many of them in and around Cairo—usually possesses one mule or donkey, and a large two-wheeled wagon that resembles some of the small haywagons or haycarts seen in other parts of the world with their slanting sides and long extended planks in the floor of the wagon. The husband of the harem will place all of his wives in the forepart of this little wagon, and attach a large wicker basket or enclosure of some kind on the rear part of it into which he places children under the age of six or seven. Then, walking and leading the mule or donkey, he will slowly wend his way around the native sections of the city, and partly out onto the highway to give his family a two-hour airing and period of enjoyment. The poor fellow at the head of the procession seems to be as poorly fed and as poorly cared for as the animal that pulls the wagon, and the women in the wagon are always dressed in cheap, black material with black veils over their heads and another one covering the lower part of each face, while the children are but half dressed in the cheapest and poorest material.

Wherever there are harems owned by the

wealthy class such exhibitions of the family are never seen, and so one is apt to gather the impression that all of the harems of that part of the world are owned by the poorest of men, which is not the truth. But in contrast to this amusing sight, and which should never provoke any outer manifestation of amusement, one constantly sees in the shadows of temples and mosques, and even at the hotel lobbies and stores, the silent dreaming figure of the true Egyptian who is always polite and reserved, and always meditative and impressive in the restraint of something that is difficult for all but the mystic to understand. He stands with almost utter indifference, or is seated in his cross-legged posture as though viewing the world and the passerby with keen analysis and con-temptation. You feel that he is wondering why they come to Egypt and leave their modern cities behind them, if in them they have all of the luxuries of life and all of the conveniences of which they speak. You feel that he is wondering why they come to his land to spend so much money, and to spend it so freely and uselessly as the average tourist usually does. You feel that he wonders whether any of those passing by have seen the real things of Egypt, and have sensed its real beauty, its real powers, and its real possibilities. And as you study him in turn you wonder what profound knowledge he has inherited and what great wisdom he has acquired from his

contacts with the mystics and the teachers and the philosophers who still carry on their great work in the hidden parts of each section of this ancient land. You wonder what it will take to awaken suddenly and in the flash of an eye, or the twinkling of an eye, and quicken into action all of the political, mental, spiritual, and mystical power possessed by the learned, quiet, peaceful citizens of Egypt.

They do not appear to be suppressed nor even depressed by political or other conditions surrounding them, and while they do not appear either to be satisfied and wholly agreeable to the conditions which exist, they give you the impression that they are biding their time and are awaiting the clarion call from somewhere. They are peacefully and tolerantly, politely and mercifully anticipating some cyclic action, some dawn of a tomorrow when, as in several other periods of Egyptian history, the great and real power of Egypt shall burst forth like a flash of lightning and illuminate not only its own land but all the world.

One feels intuitively and instinctively that somewhere in the recesses of the ancient temples, in the hidden and secret grottos beneath the sand, in the archives of the great universities, in the underground chambers of crudely formed huts, there are secret meetings held and secret wisdom preserved and perpetuated, but with it all you sense

that what is sleeping and waiting the day of awakening is not a political revolt, a religious uprising, or an expression of intolerance and hatred, but something of peace, something that will manifest in cooperative action giving all the nations of the world cause for admiration and respect, and bringing Egypt and its true sons once more into the limelight of the world as leaders of cultural thought, or unsuspected mystical powers, and of spiritual fortitude.

And as the mystic wends his way through some of the old temples and is escorted by a kind native through mosques and secret places, he feels that his aura has been observed, that his soul has revealed itself to the psychic eyesight of his conductor, and that his love for Egypt, his admiration for the things it once revealed and still possesses, have made an impression. The mystic momentarily expects that he will be taken aside into some secluded chamber where the atmosphere is cool and wholesome, where incense will be burning, where the colors from stained glass windows will make fascinating patterns on the floor, where a great patriarch of the old races of Egypt will be seated as on a throne, where intelligent and cultured natives will be seated in a group, and there behind closed doors the mystic discovered during his journey in the land will be welcomed into some strange brotherhood, or given a key to the

mysteries of Egypt, or told what its people anticipate and are praying for. And such thoughts in the mind of the mystic are not fantasies unwarranted and beyond the pale of possibility. Stranger things than this have happened in Egypt when the true seeker, the true mystic, has gone there in sincerity, and in his understanding of the more sacred things of life has allowed his soul to express itself in his countenance and in his reverential attitude, while others have smiled or scoffed and plainly indicated their lack of understanding and sympathy.

To a large portion of the world the land of Egypt may still be the "Land of Darkness," but once there was a universal darkness when all was black as night, and chaotic, yet in the stillness of that night there suddenly came the decree and command and the Word became a Law, and the darkness was filled with a great light, and with the coming of the light there came order and system, and into the midst thereof there came life and love.

Chapter II

MYSTERIOUS TRADITIONS

THE Great Pyramid of Egypt, aside from its prophecies or any of its secret purposes, is one of the great world mysteries. For ages the Great Pyramid has been surrounded by mysterious traditions which have beclouded the mind of every researcher and made the work of every scientific investigator extremely difficult.

There are several ways in which the investigator may approach the subject of the Pyramid—from the historical, the architectural, the mystical, and the religious and prophetic. In each of these approaches the field widens and the horizon becomes more and more distant as one attempts to reach the goal of ultimate understanding and comprehension.

It would almost seem that with the coming of the dawn of civilization the mystery of the Pyramid was already a topic of world interest and world discussion, keeping in mind that at that time the

world was limited to an area practically surrounding the Pyramid itself.

The earliest historians of the civilizations of man referred to the Pyramid, each viewing the huge structure from different viewpoints, and each stressing his comprehension of its significance. It is little wonder, therefore, that even today with all of the light that has been cast upon the Pyramid, it is still a mystery, and that a complete comprehension of it appears to be as far away as in the days when Western World civilization first gazed upon it and attempted to pierce the veil of mystery which surrounded it.

Let us start with its name as a beginning: The ancient Egyptians were impressed not so much by any secret or religious significance attached to it, or by the size of its base, as they were by its enormous height. Even today tourists from the Western World and those accustomed to viewing the extreme heights of modern skyscrapers with their fifty or more towering stories, are strangely impressed by the height of the Great Pyramid. For this reason the Egyptians chose for a name for the structure a term that expressed their appreciation of its height rather than its dimensions in any other way. The Egyptian word *Pir-em-us* meant to them something of great vertical height. From this the Greek form *Pyramis*, or the plural *Pyramides* was formed. After the seventeenth century the English

language adopted the singular form *Pyramid*.

It must be kept in mind that there are a number of pyramids in Egypt, and that most popular references to the pyramid are to the so-called Great Pyramid, the largest of all.

Many tourists from the Western World, and especially from America are surprised when they tour through Egypt to find that the Pyramid which has always held a fascination for them is but one of a number. The second surprise comes when they have their first glimpse of this Great Pyramid from some rooftop, or one of the garrisoned places of Cairo. The Great Pyramid then appears to be but a small structure indeed, and unworthy of all of the magnificent terms applied to it. As tourists go by trolley car or automobile toward the famous Mena House on the outskirts of Cairo, and then mount camels to take a fascinating zigzagging journey to the Pyramid itself, the expressions of disappointment on the faces of the tourists are a testimony of the high esteem in which the Pyramid is held in the minds and the imaginations of those who have never seen it.

Set out in the desert sands, separated from any other large structures or any part of the city itself, and even without trees close to it for comparison, the Great Pyramid looks like a toy. This is an optical illusion due to two fundamental and interesting principles. First, the absence of any

other structure of common size nearby makes it impossible for the human mind to realize its splendor and magnificence in height or width. one cannot tell at first glance whether the Pyramid is the equivalent of a three-story structure such as one would see in almost any Western World village, or something of ten or more stories in height. Second, the unusually clear atmosphere of Egypt, especially in the winter months when tourists mostly frequent that part of the world, robs all landscape views of that strange atmospheric softness which gives us a sense of perspective and distance. Buildings and monuments in Egypt a mile distant appear as sharp in detail as those a few hundred feet away. Persons from the Western World are accustomed to seeing a violet or blue haze tint the distant trees, mountains, and structures in such a manner as to indicate the distance between the object and the viewer, and by the token of this atmospheric softness we appreciate not only the distance but the real height of the object viewed.

Looking at the Pyramid from the Mena House, it would appear to be not more than one quarter of a mile distant, because of the sharpness of detail and the absence of any atmospheric haze. Judging its height, then, as something that is only a quarter of a mile away, it appears low and small indeed. But as one continues the ride upon the camel, the discovery is made that minute after minute passes

without any apparent decrease in the distance between the viewer and the Pyramid. The length of that ride is another surprise for it takes much longer than the mind imagines, and it is only when the rider and the camel are practically within the shadow of the Pyramid and the eyes are turned upward toward its apex that one realizes its tremendous height; and then the camel, the rider, and the native guide appear like pigmies —like little grains of sand—in comparison to the Pyramid itself.

One of the first mysteries of the traditions of the Pyramid found in all of the ancient records, and still a basis for the accumulation of mysterious traditions that have grown around the Pyramid in the past centuries, is the fact that the Pyramid, in form and nature, in architectural and mechanical design, in location and appearance, usefulness and mathematical calculation, is symbolical of so many things that the list seems almost endless. The early Egyptians themselves discovered that its very form was not only familiar in some way, but suggestive of the laws of nature, for they had seen in specimens of rock, in mineral elements, and even in some grains of sand, the crystal formations that were based upon the triangle or the form of the Pyramid. We know today that there are many elements in the earth that are triangular or pyramidal in crystal formation and that the pyramid

and the triangle are fundamental manifestations of some underlying principle of creation.

The early Egyptians were intellectually divided into two classes—those who were enslaved by the superstitious teachings of the priesthood, and those who were enlightened by the great truths of the mystery schools. In both classes, however, there were those who were familiar by casual observation with certain fundamental laws of nature, and they sought the exemplification and manifestation of these fundamental laws in all of nature. For this reason the very form of the Pyramid as a unit in structure aroused in their minds a realization that the Pyramid was in some way associated with something fundamental in the creation of the universe.

And among both classes of the earliest civilized Egyptians there was an appreciation of the fact that the triangle represented symbolically and mathematically a Divine law or a Cosmic law. Those who were steeped in superstition looked upon the triangle as an emblem of either white or black magic, while those among the illuminated in the mystery schools expressed the equation of Divine law with a triangle, and revered it as a sacred triangle of Divine principles. Without doubt the triangle was the earliest form of sacred symbolism among the intelligent of Egypt, and a symbol of superstitious practices among the

ignorant, while the square or cube was a worldly or mundane symbol devoid of sacredness but paramount in its physical strength.

When it dawned upon these early Egyptians that the Pyramid was really four triangles superimposed upon a square, the combination of symbolism thus made manifest awakened a new interest in the Pyramid and gave birth to more mysterious traditions regarding the Pyramid's purpose and its origin.

Except those Egyptians who participated in its building, and the generation which immediately followed its completion, all the other generations of Egyptians looked upon the Pyramid as something very old and eternally existent. To the illuminated ones the historical records preserved in the Pyramid itself, which they were permitted to visit by virtue of their association with the mystery schools, and the other records maintained in the various mystery temples, revealed the truth of the origin and purpose of the Pyramid; but to the *uninitiated*, the ignorant, and the devotees of the priesthood, the intimations so carefully worded, and significantly offered, became the traditional laws of their beliefs. To them the fact that the similarity between the fundamental crystal structure of earthly elements and the fundamental principle of the triangle and square were things of the eternal plan and had their origin with the beginning of the

universe, indicated that the Pyramid must have existed from all time. For this reason the traditions so prevalent among the ignorant of Egypt—which constituted the large majority—and which became elaborately interwoven in all of the extensive literature or cultural thoughts of Egypt, are filled with stories regarding the age, the antiquity, the origin, and purpose of this old structure. This was indeed a problem to the earliest investigators and the earliest historians who attempted to fathom the mysteries of the Pyramid.

Until the Pyramid was actually entered by the profane world, represented by inquiring scientists, the only established reports or stories of the Pyramid were those which traced the origin of the Pyramid to various kings whose periods and identities were unknown, or to deified personages of great antiquity. To get at the truth of the origin and purpose of the Pyramid was, therefore, a most difficult matter. Because some of the other pyramids, smaller in size and unlike the Great Pyramid in outer finish and interior arrangement, had been built as tombs for kings or monuments to their burial, it was logically believed by the uneducated Egyptians that the Great Pyramid was just another tomb for a king that was greater than any of his predecessors. This idea of the Pyramid being a tomb was so firmly fixed in the minds of the Egyptian populace at the time of the earliest

investigations that it would have been almost like a sacrilege to have dared to say to any of the natives or even their rulers and leaders that the Great Pyramid was something other than a mere monument to personal vanity.

We note today from a study of architecture alone that such structures as pyramids began in the middle period of Egyptian history, or during the period from the fourth to the twelfth dynasty.

Prior to the building of the Great Pyramid when small pyramids were built as tombs, a square chamber or an oblong chamber was sunk in the dry sand of Egypt, generally at a place where the inundations of the Nile would not reach the site, and here the sunken chamber was lined with stone, painted or decorated with symbols appropriate to the political position of the deceased and descriptive of the historical events of the time. It was then covered over with a roof to protect it, and upon the site was built a pyramid slightly larger in its base than the underground tomb. This sort of burial place was an advancement over the former type in which case the underground tomb was covered either with stone, or with piles of brushwood interwoven with stone, or reeds of grass plastered with thick mud and then covered with sand. The passing of years, however, proved that such tombs would not afford the eternal protection that was hoped for.

Following the period when pyramid building was popular, it was discovered that the enormous cost involved in building pyramids might be saved by building stone roofs over the sunken chambers, or erecting a small temple or chapel chambers above them affording protection to the chamber beneath. Many of this type were built, but the shifting of the sands soon covered them up or the sandstorms of many ages cut deeply into the structures that rose above the sand and destroyed them, and it is only in recent years that many of these underground tombs have been discovered.

It may be interesting to the reader at this point to describe something of the nature of these sandstorms, and how and why so many of the magnificent structures of Egypt gradually disappeared from sight, and in more recent years had to be excavated.

On my first visit to Egypt, I discovered that the primitive make of automobile, which was put in an open space at Luxor, Egypt, directly across the Nile River from the Valley of the Kings where the tombs of ancient Thebes are located, soon became covered with a layer of sand. The sandstorms from the Sahara Desert blowing eastward across the Nile toward the eastern horizon carry the sands at certain periods of the year in huge clouds across the vacuumed space of the Nile and allow the sands to settle on the eastern banks. In seven days'

time the sand deposit on the automobile was over an eighth of an inch in thickness. Such storms continuing month after month, year after year, and century after century, deposited mountains of sand in various places along the Nile until the sand was above the tops of the highest structures and temples. The temples of Luxor and Karnak themselves were at one time beneath the sands, and even in the years 1900 to 1920 there were portions of Luxor upon which native mud houses had been built without any suspicion that beneath such primitive homes there existed huge temples. The columns of the Temple of Luxor, over eighty feet in height, were at one time entirely beneath the surface of the sands that had accumulated, and all of this had to be removed basketful by basketful to unearth and uncover the magnificent temples beneath.

It must be kept in mind also that the civilization or population of Egypt centered itself on a long narrow strip of land, from Alexandria to the mountain regions in the south, along either side of the Nile River. This was because agriculture had to be confined to the banks of the Nile. At certain periods of each year the waters rose in abundance, overflowed the low banks and inundated the land to a certain narrow distance on either side. Here, then, were built all of the habitations and native villages, and here all of the agriculture of the

country was confined. All temples and edifices such as homes or schools were built farther away from the Nile, generally toward the west so as not to usurp any of the valuable, fertile soil near the river which was needed for agricultural purposes.

Along most portions of the Nile the eastern bank rises abruptly to a great height principally because of the sandstorms which carried sands across the river and deposited them on the eastern side. Today the Nile River at Luxor, and at many other points, is many feet below the surface of the roadway that was built along the bank, and above this roadway tower the columns of temples seventy to eighty-five feet high. Yet these, too, were at one time deeply buried beneath the sand. At the northern end of the Nile River where it has its outlet into the Mediterranean Sea is the famous Delta, a triangular shaped piece of swampland interspersed with natural and man-made canals and rivulets, constituting one of the most fertile sections of Egypt, and in ancient times this was the site of many of the earliest habitations. Heliopolis, the great mystical city with its three towering obelisks, was just north of Cairo (now about thirty minutes' ride by trolley or automobile). Only one of the obelisks now remains to mark the site of the ancient city adjoining Cairo, which has the largest hotel and modern tourist playground in the world.

Many of the most beautiful of the columns and

architectural features of ancient temples have been cut and whipped by the blowing sands, which in most cases have thinned the columns to mere skeleton form, or carved the great stones into small pieces. It is for this reason that the sides of the Great Pyramid, those facing the most general sandstorms, have been lashed so greatly in the past century that the outer casing, a smooth and magnificent finish, has been cut away leaving to view the crude under-blocks of stone.

Some of the earlier and later pyramids built in Egypt as tombs or historical monuments by various kings, queens, or potentates, were not finished smoothly on the outside but were left in the form of steps. These are called the *stepped pyramids*. None of the pyramids built as monuments was a family monument but each belonged, as do all other Egyptian tombs, to one person, or was constructed to the memory of one person. It was believed that by building a monument in the form of a pyramid the sandstorms would not have the same destroying action upon the slanting surface that they would have upon a building formed in the shape of a cube or an oblong. This would indicate that at the time of the building of the first pyramids as tombs the earlier structures or tombs in Egypt had been built so many centuries before that the sandstorms had already demonstrated their power to destroy them. In many cases a courtyard or

sunken plaza was constructed around the pyramid with a depression of ten or twenty feet below the surface of the surrounding district and with a wall around the plaza of sufficient height to keep the sand from blowing into the plaza and filling it. There are sections of ruined walls in evidence to show that the Great Pyramid was surrounded at one time by such a plaza. When one views the Great Pyramid from an airplane flying high above, the broken sections of this ancient wall around the plaza reveal themselves through the shadows of the sun in a straight line giving a very excellent idea of the large size of the square plaza around the Pyramid.

Among the mystics or members of the mystery schools of Egypt the traditions always explain that the Great Pyramid was great in more ways than one. Despite the fact that no entrance was ever forced into the Great Pyramid, nor the inside of it ever seen in more modern times until the year 820 A.D., the secret schools of Egypt insisted that the interior of it was well known to them and that it was not a tomb of any great king, nor a burial chamber of any kind, except that it did have one chamber for symbolical burial as a part of an ancient initiation ritual. According to these mystical traditions, at which many of the ancient investigators and historians scoffed and ridiculed, there were underground passageways by which the

interior of the Pyramid could be entered gradually and in various stages of initiation with different mystical chambers at the end of each stage of initiatory progress, and that the highest and ultimate stage of initiation was represented by the King's Chamber, which by the way was given an entirely different name in the ancient ritual. Little by little some of these traditional statements were verified as, for instance, when it was discovered that there was some connection between the Sphinx and the Great Pyramid, and that there was a connection between the Sphinx and an ancient underground temple located near the Sphinx. Then was discovered a secret court or open temple before the paws and breast of the Sphinx; but since most of these were still buried beneath deep sand the facts could not be proved or readily demonstrated.

Throughout all of the ages there has been a determined effort on the part of the knowing ones in Egypt to deny to the general public that there were any chambers or passageways within the Great Pyramid, or that there was any proper and architecturally designed entranceway to the Great Pyramid. It becomes apparent as one studies and analyzes the carefully worded denial of these chambers and passageways as found in the writings of early investigators and historians, and as repeated even today by many of the Egyptians, that

there was some sort of ancient curse placed upon those who would reveal to the profane or the uninitiated the existence of these chambers and passageways, or the fact that the Great Pyramid was a temple of mystical initiation and ceremony.

It is amusing to find that even today visitors who are deemed worthy and secure the necessary passes after the proper identification, and are allowed to enter the Pyramid and visit some of its passageways—even the so-called King's Chamber—are warned as they leave the Pyramid to say nothing of their entrance into the Pyramid, and are significantly told, "You see, there is no entranceway to the Pyramid, and there is nothing within it!" Thus the farce—or traditional injunction—is maintained to a certain degree, and one will meet tourists in Europe returning from Egypt who will seriously, and with considerable nervousness, explain that they know there is no passageway to the Pyramid, and nothing to be seen within it. It does not dawn upon these persons that only one who has been within the Pyramid could possibly affirm with positiveness that there were no passageways within it.

That the passageways and chambers have been desecrated in the past is self-evident to one who spends time within the Pyramid, with searchlights and cameras, and records carefully every inch of the walls of both passageways and rooms. One is

reminded of the ancient proverb, "Fools' names like fools' faces are always seen in public places," for there is hardly a square inch of the magnificent walls of the Great King's Chamber that is not injured and mutilated by the carved names, initials, and dates, of persons who have visited there, and the same is true of many of the passageways.

Fortunately, many of the very beautiful and symbolical pieces of equipment that once stood in these chambers and passageways have been removed to secret museums and hiding places where only the initiated may see them.

Undoubtedly, if tourists could have had their way the Great Pyramid today would be scattered throughout the civilized world in little bits cut off and carried away by the souvenir hunters whom one meets everywhere, and who are so easily satisfied by the commercial artisans who continually manufacture and sell pieces of the original cross of crucifixion, the tomb of Jesus, and the alabaster jars of King Tut.

Perhaps we should not attempt to visit the interior of the Pyramid on the day of our first inspection of it, for we may become easily tired by giving sufficient time to the outside. Before leaving its environment, however, to return home by camel and then by automobile or trolley car, we will note that the huge stones composing the walls of the Pyramid are higher than our own height and that to

climb them one must be quite gymnastic, However, little Egyptian urchins challenge us and tell us that for *baksheesh*—*which* means coin in anyone's money—they will climb the steep outside of the Pyramid and reach its towering top in seven minutes, Knowing from long experience just which crevices to use in getting a foothold and fingerhold, we find these youngsters scaling the side of the Pyramid rapidly.

Upon their return they offer for a dollar American money to take us to the top that we might have the great distinction and honor of being one American who has scaled the Pyramid. Being flattered at this possible distinction we begin to climb. By the time we have reached the center of the side of the Pyramid we feel that we have gone higher than we have ever been in any structure in the world, and this encourages us to go to the top, which we see is partially flattened by the absence of the original apex stone. Our guide tells us that when, and if, we reach the top, we may sit there and rest for a while, and have a magnificent view of Egypt, while we ponder over our unique achievement or the rare distinction that will be ours. Continuing our climb from the hanging position in which we rested for a moment, we eventually reach the top and are surprised to find a richly robed Arab awaiting us, and reaching over to give us a final help with an extended hand. Just as

we are about to indulge in a moment's admiration of our personal endurance and prowess, and think of the distinctions we have brought to our race by this unusual achievement, we discover that there is a table placed upon this huge platform of the Pyramid with chairs and all of the equipment for serving tea, and that we are but one of the many who daily reach the top and are looked upon with the same casual interest as the passerby who drops into one of the little coffee shops for a cup of black coffee. We welcome the opportunity to rest and view the country which, because of the clear atmosphere referred to previously, may be seen for many, many miles, and finally make our descent with a degree of rapidity which compares favorably with the rapidity with which we lost all of our esteem and pride in attaining the top.

Nevertheless, as we wend our way toward the hotel in the heart of the busy city which looks much like Paris, or other great metropolitan cities of Europe, we realize that there is still so much mystery about the Pyramid that it will be worthy of all the time and thought we give to it.

Chapter III

THE GEOGRAPHICAL SIGNIFICANCE

THE location of the Great Pyramid, as well as its unusual size which distinguishes it from all the other pyramids of Egypt, very definitely refutes all of the arguments to the effect that the Great Pyramid was built as a tomb for a very ambitious and vain pharaoh.

It is true that a very vain pharaoh might have conceived of building a larger pyramid than any of the others merely to aggrandize his reputation in the future, and it is possibly true that he would have selected an unusual site for it far from many of the other tombs of pharaohs and his royal consorts and relatives, but there are so many things surrounding the Great Pyramid that distinguish it from all other pyramids, and which were wholly unnecessary if it had been intended as an elaborate monument to the record of an egotistical ruler, that

one is forced to examine more carefully all of the historical references to this monumental structure.

Turning to some of the oldest records available, the so-called holy scriptures or spiritual writings of the past, we find the Great Pyramid unquestionably referred to by Isaiah. In Isaiah 19:19-20 we find; "In that day there shall be an altar to the Lord in the midst of the land of Egypt, and a pillar at the border thereof to the Lord. And it shall be for a sign and for a witness unto the Lord of hosts in the land of Egypt . . ." In Jeremiah 32:18-20 we have another reference, which in the light of time can refer only to the Great Pyramid, including the following words: ". . . which hast set signs and wonders in the land of Egypt . . ."

The oldest of the writings of the ancients referred to the Great Pyramid as the "Pillar of Enoch." Turning to the Bible we find references to Enoch talking with God, and we find that Enoch's life is given as having covered 365 years. This being symbolical of the number of days of the year is typical of other references to a *year of years* which was called by the ancients the "Phoenix Cycle." The word *Phoenix* is the Greek term for the Egyptian word *Pa-hanok* which means "The House of Enoch." In this wise and through other similar references we find the Phoenicians identified as the descendants of Enoch, and this gives us the explanation as to why the Great Pyramid was called

by the ancients, "The Pillar of Enoch," having been built by the Phoenicians who were the descendants of Enoch.

Josephus, the ancient Jewish historian, wrote in his famous records a reference to the Pyramid and its significance in which he states that the ancient people planned to build, and actually did build, two great pillars (one in brick and one in stone) upon which the ancients inscribed their discoveries and marvelous knowledge that it might be preserved for the future. Josephus concludes this reference with these words, "Now this pillar of stone remains in the land of Siriad (Egypt) until this day." It is on this point we find that great Coptic writer, Masoudi, whose manuscript is preserved in Oxford, stating that the Great Pyramid contains "the wisdom and acquirements in the different arts and sciences, the science of arithmetic and geometry, that they might remain as records for the benefit of those who could afterward comprehend them." He explains that the Great Pyramid contains the knowledge of the stars and their cycles, along with the history and chronicle of past times and predictions of things to come. He makes it perfectly plain that even in his day the old records which he saw and examined referred to the Pyramid as a monument that had been carefully planned and so constructed that in its measurements, in its location, and in all of its

interior and exterior symbolism it would represent certain fundamental laws of nature, as well as preserve in its inscriptions an outline of the great knowledge which the ancients had achieved.

Now let us look at its location, The Pyramid allegory is referred to in the sacred texts and writings of Egypt known as the "Book of the Dead." In those texts the Great Pyramid is called "The Temple of Amen," which means "the Secret House of the Hidden One." Do not let us overlook the fact that in the New Testament of the Christian Bible, Jesus is referred to as the "Great Amen." Other allegorical terms used to describe the Great Pyramid in the "Book of the Dead" are "The House of the Hidden Places," and "The House of Light."

In considering the fulfillment of the ancient prophecies regarding an altar to be built in the center of the land to remain eternally as a "witness" to the Lord, we must keep in mind the fact that the size of the world, or at least of the land surface or populated surface of the earth at the time these ancient writings were inscribed, was limited in the minds of even the most advanced of the philosophers and thinkers. It is difficult for us of modern times to think of the site of the Pyramid as being the center of any great territory of population except when we stop to consider and realize that the western end of the Mediterranean where it

connects with the Atlantic Ocean was "the edge of the earth" to the ancients, and that the only known populated areas of the earth were those which centered around the Mediterranean Sea; and when we realize, too, that Egypt was in one period of her history the most highly cultured and civilized nation of the small limited area, we can understand why a district near Cairo might have been selected as the center of the earth in the minds of the ancient peoples.

But the truth of the matter is that the truly learned ones of Egypt, those who were members of the illuminated mystery schools and who sought to preserve their accumulated wisdom for the future, were far more advanced in their knowledge of the earth and its size and habitable areas, and of the starry heavens and the planets, than were the mass of the populace. Even our present-day science of astronomy owes its early foundation to the advanced and extraordinary knowledge which these early mystery schools possessed. There are very definite records in the earliest references to astrology—the forerunner of astronomy—that these ancient mystical students and scientists knew of a majority of the planets now known to us, and of the stars, despite the fact that they did not have anything like our modern telescopes. They gave to those planets names which we retain to this day, and they made references to their orbits and

transits and the eclipses, and other astronomical phenomena which definitely prove to us that the mystical philosophers and scientists were fairly well-acquainted with the universe in which they lived, as well as with the size and nature of the earth.

One of the very definite and startling facts about the location of the Great Pyramid is that it is not only in the center of the great land of Egypt, and very nearly in the center of the most habitable portions of the ancient world known to the populace, but it is in the center of the land surface of the earth *as it now exists*, and must have existed at the time the Pyramid was built. In other words, if we take a map of the earth as it exists today and spread it out on a flat surface and draw lines upon it which are in accordance with the land surface areas, we shall find that these crossed lines indicate the center of the land surface of the earth as being precisely where the Great Pyramid is built.

And there is just one other point which may be offered at this moment in support of the argument that the Great Pyramid was erected by those who were familiar with the universe and the great astronomical and geometrical facts. That interesting point is the fact that the great Pole star of the heavens was known to these designers and builders of the Pyramid, for many of the mathematical and philosophical inscriptions pertaining to the

prophecies of the future are based upon the position of this Pole star.

Even in regard to the sun and its daily movement, the Great Pyramid is so located as to have a definite relationship with the sun and its movement, and there are other mechanical relationships to the Cosmic as well as the size of the earth, its surface, curvature, and distribution of land and water.

Certainly all of these symbolical references to the Pyramid that it was to be built as an altar to the Lord, and a pillar at the border of the land of Egypt, and to the signs and testimonies which it would Contain when built, as well as the fulfillment of these prophecies in the Pyramid itself, prove to the unbiased investigator that this great structure was never intended to be a mere monument to the vanity of a pharaoh, nor a glorified tomb for the mortal remains of a king.

Yet there are writers and investigators of the subject who still maintain that the Great Pyramid was built solely as an extravagant sepulcher and a shallow, empty testimonial of the vanity and egotism of an insignificant, unremembered individual.

As we ponder over these very early descriptions of a magnificent altar to the Lord that was to be built in the midst of the land of Egypt, and then find the evidence that it is so significantly situated

and surrounded with so many revealing principles, the real mystery of the Pyramid deepens and we become determined to investigate the structure itself.

Chapter IV

THE AMAZING CONSTRUCTION

THE scientific, and especially the engineering, world of modern times is just as greatly mystified as is the populace of all the civilized countries as to the methods that were used to build this enormous monument of stone, especially in the location where it has stood for so many centuries.

As one stands at the base of the Great Pyramid and looks out over the surrounding territory, or as one stands upon its flattened top and looks into space far many miles in every direction, noting all of the surrounding desert space and absence of great hills, one wonders first of all where the stone came from which was used in building it. Having climbed up its side to reach the top of it, there is left in mind the definite impression of the enormous size of the stones which were used. Most of them being greater in height than our own bodies, and seemingly twice as long as they are

high, the weight of these stones would seem to be beyond human manipulation. We can recall all of the fanciful stories we have heard of a great contractor with thousands upon thousands of Egyptian slaves pulling on enormous ropes and cables to drag these monumental stones from somewhere into position at the Pyramid. And we can recall how these slaves suffered under the lashing of the whip and at the hands of the contractor and builder, and how they toiled for years in building the Pyramid.

But every contractor and every individual who has ever dealt with human labor under any condition, and especially while it was working under the lashing of a whip, knows that there is a limit to the number of human beings that may be attached to ropes or cables, and to the concentrated and efficient power that may be derived from such individuals. There is a point in the scheme of things where a large number of individuals struggling in this manner becomes an interference, and where efficiency is lessened by the increase of the number. Not only is their ability limited in the exertion of power, but the space they occupy, the necessary ropes to be attached, and the manipulation of the work causes a situation in which no real results can be obtained. We might just as well imagine the building of a great wall that was to be composed of a hundred thousand bricks

in one section, and to save time and build the wall quickly, we would secure one hundred thousand men, each to place his one brick in the proper position at the same moment, thus completing the section of the wall in one or two minutes. Even in our modern methods of constructing our homes or office buildings, there is a point in the employment of men where an increase in the number of workers becomes an interference and slows up the progress rather than helps.

In our present century modern contractors and engineers have found it difficult to lift to the top of great arches the keystones to complete the arches, when such keystones represented in weight and size but a corner of one of the great stones of the Pyramid. Yet today we have enormous mechanical derricks and motive power which the Egyptians did not have.

A casual inquiry reveals to us that the nearest point where the enormous stones could have been quarried was many, many miles away from the present site of the pyramid. They could not have floated them upon rafts down the Nile River, for no raft could have supported the weight of the stones. We recall the problem that faced marine engineers in 1879 when one of the obelisks from Heliopolis was to be removed from Egypt to New York. No ship could be found that would carry it safely, and the first attempt to float it upon a huge

raft pulled by a powerful steamship proved a failure. To have dragged these enormous stones over the sands of Egypt from quarries hundreds of miles distant at Thebes seems like an engineering impossibility to the modern mind. Yet the stones were brought from somewhere and lifted into place. We know from an examination of the interior, as well as the exterior of the Pyramid, that thousands of skilled mechanics, artists and artisans were employed in the planning, construction, and completion of it—not all at one time, but over the course of a long period of time. It is doubtful that the Pyramid could have been planned so carefully, the stones and other materials so carefully and critically prepared, the construction work carried out with such precision, and the interior decorating done with such devotion and under such expert guidance as was necessary to make every mark and every line and every bit of color have its scientific significance, and the entire structure completed in the lifetime of any one pharaoh. This in itself argues against the contention that a pharaoh during the height of his regime ordered the Pyramid to be built as his tomb so that it might be completed before his death and be ready for his burial. It was quite customary for the pharaohs to make sure that the final resting places of their mummies would be adequate in splendor and in the protection they would afford against robbers, thieves, and the

curious. In order that their minds might rest easily in this important regard, they saw to it that proper tombs beneath or above the ground were constructed and completed as soon as possible so that there would be no possibility of transition coming upon them before a place of guaranteed protection and glory was completed. Not one of them would have allowed the plan of a tomb which would have required many years to design, many more years to prepare for in the cutting of stones and the making of elaborate mechanical arrangements, and a score or more years for decorating and completing, for they would have known that the completion would have passed far beyond their lifetime and there would have been the possibility of a future pharaoh occupying the place instead.

Because of the mystery of its construction, and especially because of the significance and prophecies that are associated with each measurement, each passageway, each chamber, and each little incident of its design and completion, we shall look into this matter more thoroughly.

Chapter V

SYMBOLIC MEASUREMENTS

SINCE the Great Pyramid was to be a monument of wisdom and prophecy and contain in some permanent form the outstanding incidents of the past, present, and future history of the world, the problem of putting that information into such language, signs, hieroglyphs, or symbols that all future races of men could decipher and interpret must have been one of the most serious of all the considerations surrounding the construction of the Pyramid.

We are reminded of the problems which confronted these ancients when they decided to leave a key for future generations to decipher their hieroglyphic language. The Egyptians rightly concluded that the time would come in the distant future when the carved writings and hieroglyphs—as well as all the symbols and signs of their language and of their knowledge—might remain, but a knowledge of the meaning of these strange

marks might be lost, and, therefore, future generations might look upon the mysterious carvings and engravings on stone and metal and understand nothing of the great wisdom hidden there.

The methods used by man throughout civilization to convey his thoughts, including the spoken languages and the written languages, have changed from century to Century until today explorers often come face to face with unknown, forgotten, and lost languages, and are unable to decipher much that would be of great value. There are carvings and writings upon the stones of the mountainsides in Oregon on the west coast of the United States, in the Klammath section, which by their very nature indicate that they were carefully placed there with some important motive, and intended for permanency and the revelation of great wisdom at some distant time. As to when these writings were carved in the stone and what the carefully executed hieroglyphs mean, no authority has yet ventured to state, and research has led to no clue. Undoubtedly these writings were carved in prehistoric times by a race of people that antedates any of the known races that occupied the United States preceding the American Indians. Because of the similarity of these writings to those in other places in and around the Pacific Ocean, it is naturally assumed that they were made by the

descendants of the Lemurians; but if so, it was a special form of writing not commonly used by the Lemurians and probably chosen to be a classically written language of some kind that might be interpreted in the future.

In the case of the Rosetta Stone, the desire was to prevent the hieroglyphic language of the Egyptians from becoming permanently lost and thus making it impossible for future generations of mankind to interpret all of the sacred writings to be found in the temples and upon the walls and obelisks and other permanent structures of that country. In fact, the hieroglyphic language of the Egyptians was a dead and unknown language until the Rosetta Stone with a carefully planned key was discovered. On this stone certain historical passages were written in three languages, including the Egyptian hieroglyphs and the Grecian. By comparing the one language with the other in interpreting the same passage, the key to all of the fundamental principles of the Egyptian hieroglyphic language was revealed, and the discovery of the Rosetta Stone was one of the most important scientific events of recent history and contributed very greatly to our present understanding of the Egyptian language, Egyptian writings, and Egyptian knowledge.

But the builders of the Pyramid anticipated that the Rosetta Stone might never be found, or any

similar key, and that even those languages then existing outside of the Egyptian, such as the Greek language, might pass into oblivion, and therefore some other method for indicating the events of the future history of the world would have to be adopted to assure a definite and correct interpretation. In other words, the prophetic knowledge and wisdom, as well as the historical facts of Egypt and of ancient civilization, would have to be indicated in certain ways that were not dependent upon any one language or any one system of registering thoughts. It would have to be based upon some method that would be eternally permanent and universally recognized. Certainly this was a momentous problem. But in solving the problem these ancient Egyptians adopted a method which science today would adopt in similar circumstances. There are certain principles in the universe that are universal and will be eternal and these are related to the geometrical, mathematical, and physical facts of the earth and the universe itself. Therefore, geometry and mathematics and the principles of cosmology were combined to use as the fundamentals of a language.

In the first place, the selection of the site for the Pyramid had to be given the utmost consideration since by its very location future generations would be able to determine one important fact: that the Egyptians who planned it

were acquainted with two fundamental sources of knowledge, namely, the exact amount of land on the surface of the earth and its geographical distribution and, secondly, the relationship of that point on the earth's surface to the principal stars of the heavens and certain cosmological or astronomical landmarks, so to speak.

If future generations discovered these two great facts, they would be tempted to determine how much further the Egyptians had gone in the building of the Pyramid to utilize their knowledge of geometry and astronomy to make the Pyramid symbolic. In interpreting such symbolism from both a mathematical and scientific point of view, they would not fail to discover the mysterious knowledge that was concealed in the dimensions and structural details of the Pyramid. This in turn would tempt investigators to be Cautious in examining every minute detail of the structure and in relating it to cycles and mathematical scales covering past history and through this discover the prophecies regarding the future history of man. It was a magnificent and daring idea. It called for the careful and precise application of all the great knowledge possessed by the Egyptians, and for the careful reading of the future by whatever mystical means they had used in their mystery schools for ages, and classifying this prophetic knowledge in a systematic manner so that it might be properly

recorded in symbolism and measurements.

It was soon discovered by those who investigated the Pyramid in later centuries that other pyramids and temples built in ancient times had been oriented to definite astronomical alignments. Sir Norman Lockyer was but one of the scientific investigators who pointed out to the world at large the significance of the relationship between the orientation or precise location of these pyramids and temples to astronomical facts, particularly to the outstanding astronomical facts of the times in which the structures were built. But it was discovered that of all the mysterious and symbolical structures found any place in the world there were but two whose dimensions or structural features, when reduced to measurements by a definite standard, were found to represent certain elements of the functions of the solar circle. These two mysterious structures are the Great Pyramid in Egypt and the Stonehenge Circle in England.

Sir Flinders Petrie discovered, for instance, after much research, that a circle drawn within the interior of the great stone circle at Stonehenge has a diameter of 1163 British inches and is 3653 inches in circumference. These figures approximate the dimensions of the Solar Circle on a reduced scale of 10 inches per day and also approximate the dimensions of the Egyptian Aurora. Since it was known that the Stonehenge Circle, as well as other

mystical circles found in ruins in remote places, had served the early British priest-astronomers and especially the mystics of the strange Brotherhood of Druids as a sundial of the seasons, it was recognized at once that there was a symbolic relationship between the earth's mathematical features and the astronomical elements and these mysterious structures. Also since Stonehenge was undoubtedly erected about one thousand years later than the Great Pyramid, and by representatives of the same race known as the Aryan-Phoenicians, it was believed that the measurements of the Great Pyramid, located in the precise land center of the earth, would reveal many fundamental geometrical and astronomical principles.

As soon as the scientists began to measure the outer surfaces and dimensions of the Pyramid and then all its secret passageways, their width, height, inclinations, and relationship to one another, and to the outer surfaces of the Pyramid and then to the astronomical elements, many interesting facts piled up rapidly until the investigators one after another were astounded at the genius of those who planned the Pyramid and of those who so carefully Carried out the plans.

In the first place, we must remember that the very name Pyramid as given to these great structures in Egypt was symbolic, because the word is really Greek and not Egyptian. In the Greek

language the word *pyra* means fire, or light, or illumination that reveals something or makes things visible in darkness as well as giving heat. The word *midos* means measures. The Greeks had derived these words from the Phoenician word *purim-middob*, which meant "light-measures." Even in the Hebrew language there was a word very similar which meant measures that revealed something, or revelation measures. Therefore, the Pyramid itself meant something that constituted measured revelations or revelations through measurements.

The first problem that faced the architects of the Pyramid was to determine upon a unit of measurement, We of today who are so accustomed in America, for instance, to the yardstick in inches and feet, do not stop to realize that the inch as a unit of measurement was an arbitrarily adopted thing and that even the British inch is not precisely the same as the American inch, and that in ancient times there were units like the inch and to which we refer as an *inch* but which were of a different length than the present American or British inch. The metric system constitutes another arbitrarily adopted unit of measurement.

What unit of measurement should the Egyptians use in building the Pyramid which would be eternal and universal? The scientists discovered that the unit for measurement used in the Pyramid and now called the "Pyramid inch" was adopted

because it was equivalent to a primitive Polar Diameter inch which, by the way, was the unit of measurement adopted by the Hebrews, as determined by Sir Isaac Newton in his investigations. Since the Polar Diameter of the earth is 500,000,000 Pyramid inches or 500,500,000 British inches, the difference between these two units of measurement would be only 1-1000th of an inch. At one time in British history, however, the Polar inch and the British inch were equal. The interesting fact is revealed here that since the Anglo-Saxon race had adopted the ancient Hebrew inch it would indicate that this race descended from the Hebrew. And it would indicate also that the Egyptians in adopting such an inch realized that the Anglo-Saxon races would be the first to recognize the unit of measurement and therefore look upon the messages concealed in the Great Pyramid as intended for them principally. For instance, if the German or the French nations should measure the Pyramid in all of its symbolic mathematics, using some other system such as the metric system with its unit, they would find little symbolical knowledge and nothing of a startling nature.

Thus if we approach the interior of the Pyramid with a tape measure of Polar inches or British inches, the Pyramid begins to talk and bring forth its hidden revelations, telling us the story of

past centuries before the Pyramid was built, the story of the times when it was built, and of many, many centuries to come.

Beginning with our measurements, therefore, we find that the Pyramid rests upon a square, and if we measure each side of this square from corner to corner where the base sockets of the Pyramid are located, we find that each side is 9,131 Pyramid inches in length. If we add these four sides together it would be equivalent to taking a long tape measure and going from one corner to the other until the tape had completed the four sides of the base and if straightened out then into one long straight line, we would find it had a total length of 36,524 inches, with perhaps a variation of a part of an inch due to errors in measurement or dislocation of parts of the outer stone. Now this number of 36,524 will be recognized instantly by any person acquainted with the fundamental principles of astronomy. If we allow $2/10$ of an inch for errors in measurement, which is the average of error as recorded by scores of measurements, we find the approximately precise figure to be 36,524.2. This we see at once is 100 times the length of the solar year or, in other words, 365.242 days.

This surprising fact furnishes us with the first definite key and makes us realize that the Pyramid is not only symbolical in all of its measurements,

but that the Egyptians had a precise knowledge of the solar year and of other important astronomical features which they have embodied in the Pyramid measurements. Therefore, we are tempted to secure an accurate measurement of the Pyramid's height, including the original apex stone. This, science has found, is 5813 from base to apex. Using our geometrical knowledge we find that this is equal to the radius of the circle of 36,524.2 inches circumference. In other words, the height of the Pyramid is equivalent to the radius of the circle of the solar cycle.

We can pause right here for a moment to pay homage to these ancients for their wisdom and knowledge and to think again of the statement made so often by the doubters of the significance of the Pyramid who claim that it was built as the vain attempt of a pharaoh to build a more magnificent tomb for himself than any other pharaoh had ever built. The pharaoh might easily have constructed such a magnificent and impressive pyramid, towering all other tombs in its height and width, without becoming involved in such highly technical and unimportant elements as astronomical measurements and solar units. We are again impressed with the fact that this great structure was not designed as a mere tomb. It has become entirely too significant to have been merely the protection of a secret burial chamber.

Other lines of measurement in the Pyramid reveal the true *orbital year* of 365.259 days and the *sidereal year* by the measurement of 36,525.6 inches. These points and their significance have been revealed and Carefully analyzed by that eminent English scientist, Mr. David Davidson, in his learned articles dealing with the Pyramid which appeared in *The Morning Post* in England.

Another measurement discovered by Mr. Davidson gives in inches the radius of the earth's orbit. Thus far we have found that the measurements of the Pyramid represent the solar Circle and the difference between the solar, sidereal, and orbital years, thereby resulting in measurements that give us the sun's average distance from the earth, the earth's surface displacements, and the displacements of the earth's orbit.* [1](#)

Within the Pyramid all of its halls, rooms, and passageways reveal in their form and relationship to each other and to the Pyramid itself, and its relationship to the earth and the heavens, certain other significant features, and these have to be worked out very carefully using the units of measurement as a scale of years for determining past and future events.

KEY TO THE CHART

BL—Beveled Base Line.

PIT—Unfinished. Symbolizes bottomless pit—no escape, but by well up past Cross of Christ.

AT—Atonement. Symbolized by the well which represents Christ's descent from the Cross into Sheol and back to His resurrection. Up this passage believers can escape; even from the brink of hell.

G—Grotto. Symbolic of Paradise, or the place where Old Testament saints awaited the atonement.

2144—Possible date of erection.

F—Time of Flood, 630 years before the Exodus.

1647—The inch years between Exodus and the Birth of Christ. This passage with its granite plug symbolizes law-way to eternal life, which is blocked by our sinful natures.

33¹/₂—The inch years of Christ's life.

R—Marks the point where the stone cover of the well was burst upward, symbolizing Christ's resurrection.

GA—Gospel Age, symbolized by the Grand Gallery, 28 feet high.

K—King's Chamber.

J—Jewish or Queen's Chamber; symbolizes present blindness and future glory of the Jews.

P—Grand Chamber, thought to exist in upper part of the Pyramid, symbolic of heaven.

1. Davidson's was one of the first books on the pyramid prophecies. There are more recent ones which are authoritative and slightly outdate his work.

Chapter VI

THE PROPHECY OF EVENTS

AS HAS already been stated, the interior of the Great Pyramid, as well as the exterior, in dimensions, length of lines, the crossing of lines, the intersection of passageways, and numerous other details, reveals the time and period of various events in the history of man. In addition to these prophecies, the Pyramid contains in its secret marks and significant elements an outline of the ancient wisdom and mysteries.

Let us examine the prophecies. We must keep in mind that since the Pyramid is very old, a large number of the prophecies it contains have already been fulfilled. We must therefore look in retrospection at most of the prophecies.

Many will say that it is an easy matter to pick out the important dates of past history and then find measurements, dimensions and more or less significant crossing of lines to correspond to the date selected. Critics, and those who doubt that the

Pyramid was a monument of prophecy as well as mystery, will argue that it is well enough to point out now how the various lines and dimensions of the Pyramid were intended to indicate certain events of history. There is no way to prove to these persons that the events have not been selected to fit the dimensions and cross-lines of the Pyramid. Our only argument is that many of these dimensions prophesying future events were discovered and given to the world many years ago before some of the outstanding events of past history had occurred. It was through checking up the prophetic lines and dimensions of the Pyramid with past events that the real key to the prophecies was found.

Among the many persons who devoted a great deal of time to the study of the prophecies of the Pyramid is Mr. David Davidson. He is widely known as an expert on the secret nature of the Pyramid, and a man whose patience and integrity in his chosen field of research have awarded him the highest position as an authority. As an eminent structural engineer, as well as a brilliant scientist, his findings after twenty-five years of study and research in connection with the Great Pyramid were published by him in 1924 in a monumental book of limited circulation entitled, *The Great Pyramid, Its Divine Message*, in which he illustrates with eighty plates and ninety-seven sheets of

archaeological, historical, and astronomical tables, the correctness of the key to the Pyramid prophecies which he discovered.

Others before him had devoted much time to similar researches. Among the earliest was John Greaves, professor of astronomy at Oxford, who explored the Pyramid in 1637; and Colonel Howard Vyse spent a personal fortune investigating the subject. Sir John Herschel, the famous astronomer, interested himself in the same problem, and his astronomical knowledge enabled him to make many important discoveries regarding the significance of the construction of the Pyramid. In 1859 John Taylor, a London publisher and eminent mathematician, issued a book wherein he revealed the significance of some of the Pyramid's dimensions. It was he who revealed an important key in explaining the Polar Diameter Inch in connection with the Pyramid's dimensions. Prof. Piazzi Smythe, in the years 1864-65, found strong confirmation of Mr. Taylor's discoveries. This professor was followed by Sir William Petrie, the renowned archaeologist, who applied new scientific methods in verifying the great structure and compared the Polar Inch to the British inch, thereby furnishing Mr. David Davidson with additional keys.

Those who would like to delve more deeply into the significance of the measurements and

structural details of the Pyramid as related to prophecies are urged to secure and read Mr. Davidson's wonderful book.

Let it be known, therefore, that according to these eminent authorities, all of the outstanding events of the history of mankind are plainly indicated in charts and diagrams based upon the measurements, structural lines, dimension keys, and cross-lines within the Pyramid; as, for instance, where the lines of one floor of a chamber cross the lines of an upright partition, or where the lines of horizontal walls descend and cross the lines of another level. If the spaces between these crossings are measured in the Pyramid Inch and associated with years and months and days—and in some cases with actual hours—significant dates are obtained, and by their association with the lines that rise upward or pass horizontally or drop vertically, certain significance is given to the prophetic date. Also the association of these lines of measurement with certain chamber passageways and strange arrangements within the Pyramid help to reveal the nature of the event that was to occur on the date prophesied by the dimensions.

To give a complete list of all the prophecies contained within the Pyramid that have been fulfilled, including those of recent years, would require a very large volume. And it must be remembered that many of the prophecies outlined

by Mr. David Davidson in his book issued in 1924 have been fulfilled since then in the same precise manner as were the events of the past. Future years will continue to show the correctness of the discoveries and researches made by these eminent men.

PLATE TWO

A Cross Section of the Pyramid

Among the earliest prophecies indicated by the Pyramid are those pertaining to the creation of the earth, the great universal flood, the rise and fall of man's spiritual and worldly unfoldment, and the rulership of various kingdoms by great men, the outstanding wars between nations, and the development of religious and moral movements among men.

Reaching backward into these prophecies, let us begin a brief index of them with the Exodus of

the Israelites from Egypt. This is defined in the Pyramid by the intersection of the floor line of the Ascending Passage with the central line of the Descending Passage, giving the date of the 15th of Nisan (April 4) in 1486 B.C.

Skipping over a number of intermediate historical events, we take the next outstanding one as being that of the birth of Jesus the Christ, which according to the prophecy of the Pyramid was to take place on October 4 (Gregorian calendar) in the year 4 B.C. It must be understood that the actual birth date of Jesus has been disputed and argued for many centuries and there is nothing in the old Scriptures to warrant the positive statement that Jesus was born in December. The calendar has been changed so greatly since that event that it is of little aid in the analysis of this mooted point. Historical records show that in the early Christian centuries the birth date of Jesus was not definitely decided upon until at a great conclave it was arbitrarily set for December 25. The actual period of the year has been set by many authorities as between the first of October and the 23rd of March.

The year also is in dispute, for according to the story in the Bible regarding the census that was being taken at the time of the birth of Jesus, the year of the birth is three or four years in error according to our modern calendar. But since the

prophecies of the Pyramid in regard to all other great events proved to be so accurate, there is no reason why we should not accept the Pyramid date as being the very best authority. The date of the Nativity of Jesus is defined by the intersection of the produced floor lines of the Queen's chamber with the floor line of the Ascending Passage. In this manner a triangle is formed having for its hypotenuse the sloping floor of the Ascending Passage. In measuring this hypotenuse, we arrive at a figure which translated into solar years gives us $33\frac{1}{2}$ lunar years, or the exact length of the public life of Jesus.

Passing over other events indicated during the lifetime of Jesus, we come to a measurement that gives us the date of the Crucifixion, April 5, 30, A.D.

Skipping past many great events of history occurring between the early Christian period and our present centuries, which would require too many pages in this book, we find such interesting prophecies as that for August 2, 1909, indicating the establishment of certain relationships between the Czar of Russia and some of the great countries of Europe, which prophecy was fulfilled.

The next great important date was that of October 27-28, 1912, indicating the beginning of the Balkan troubles.

Then on March 12 of 1913 was fulfilled

another prophecy given by dimensions at the entrance to the subterranean "Chamber of Chaos," indicating the conflicts and sudden reversals in world affairs beginning a second Balkan disturbance and an attitude of depression and fear throughout Europe.

The next date, August 10, 1913, indicated by one drop in the steps of the rough floor of the pit in the Pyramid, predicted the Treaty of Bucharest by which Bulgaria found herself forced to give Greece the territory she had acquired from Turkey, causing European statesmen to become greatly concerned over the new turn of events in the restlessness in Europe.

The next date, August 4-5, 1914, which was indicated by the measurements that lead to the entrance into the first low passage of the Pyramid, foretold the beginning of Germany's activities and was fulfilled by Germany's mobilization. The exact hour of the crisis of that period was indicated by the Pyramid to occur on August 5 at 3:54 a.m. History records that somewhere near midnight on that day (which may mean around two, three, or four in the morning) Germany was notified that Great Britain's ultimatum had not only expired but was finally ended and this was equivalent to a declaration of war.

The date of January 31, 1917, indicated in the Pyramid by a terminal point of the so-called index

in the Pyramid, predicted that the United States would spiritually contact the Great War and that within 65 to 70 days she would be involved. This brought the date of action close to the early part of April, 1917, and it was on April 5-6 of 1917 that the United States entered into the conflict abroad.

There are other interesting dates such as December 11, 1917, predicting that the Jews and their country would have another one of the many experiences which the Pyramid had indicated in the past, and it is to be noted that on this date in December, 1917, Jerusalem was delivered by General Allenby.

The next significant date was January 18, 1918, indicated by a vertical line to the southern end of the wall of the so-called King's Chamber. This date was associated in its prophecies with the preceding one dealing with the interests of the Jews, and it is notable that on January 18, 1918, the Soviet Republic was founded at Petrograd.

PLATE THREE

The Grand Gallery, or "Hall of Illumination

It is interesting to note that we find another date indicated for the same year, that of November 10-11, 1918, which date was revealed by the dimensions and lines at the end of the first low passage. This date figures out as the exact date of the flight of the German Kaiser into Holland,

which resulted the following day in the Armistice and the ending of the World War [I]. Since the date was indicated by the lines at the end of the first low passage, it indicated very definitely the ending of all the tribulations and warring activities signified by the low passage itself. Those who had been following the Pyramid prophecies throughout the period of the World War looked forward to November 10-11, of 1918 as the ending of the essential activities of the war, even if the Armistice had not been signed on that day. But the signing of the Armistice made a very definite ending to the war in its existing form.

Another date anticipated by the students of Pyramid prophecies who are interested in world events was that of December 12, 1919, which was indicated by the lines at the beginning of the red granite floor. The significance here was of some new and steady influence that would be created on the 12th of December that would affect the foundations of nations in Europe. It is to be noted that on this date was held the first post-war conference of the so-called "Big Four" nations; namely, Great Britain, the United States, France, and Italy. The result of this conference is too well known to require any explanation here.

Then came the date of July 11, 1920, supplied in the Pyramid by the projecting inch in the measurement of the face of the Granite Leaf. On

this date the Treaty of Sevres regarding the Allies' final terms constituted another ultimatum of international importance. The following date, August 10, 1920, indicated in the same manner in the Pyramid, was the date of the signing of the Turkish Treaty.

Passing over a number of intermediate dates that had to do with the signing of treaties and the agreements between nations of international importance, and covering such important matters as the first council meeting of the new cabinet held by the Sultan of Egypt, Lord Curzon's ultimatum to the Turks, the Franco-British crisis regarding the Ruhr, the abdication of the Sultan of Turkey, the assassination of the chief of the Russian secret service, and the exposures which followed, the surprising earthquake in Jerusalem that revealed some important matters, and similar affairs, we come to more modern dates.

Following out one of the prophetic indications and measuring it off in inches, the date of October 29, 1929, was obtained as being a date of importance to America and many sections of the world in an economic manner. This proved to be the time of the great financial earthquake that affected the stock market and economic conditions generally throughout the whole world. Every student of the Pyramid's prophecies, following the system outlined by Mr. Davidson and others, and

interpreting various other indications, fully anticipated the world crash which occurred in 1929. Another date indicated the Disarmament Conference in Geneva and all that it represented.

One date in 1932 had a very definite association with another date, that of September 16, 1936. According to these two dates and their indications, it appeared from the symbolism that in America there would be a great change in the spirit of the presidency and in the constitutional form of government. It was plainly indicated that just prior to 1936 the American nation would adopt a moderate form of dictatorship with a definite tendency toward state socialism. The indications were that this modified form of government would run into the spring of 1937 and pass the fateful date of September 16, 1936. This latter date was indicated by the measurements which just reached and began to enter the King's Chamber, which, according to the symbolism of the Pyramid, is the "Hall of Judgment and of Resurrection."

According to these indications it would appear that in September of 1936 a great change is to come into the life and spirit of the government of the United States whereby its former constitutional activities will be judged and from the judgment will arise a new and better form of government based upon modifications growing out of the judgment. Other indications reveal that the people of Israel,

as well as the people of Great Britain and America, shall pass through this Hall of Judgment and Resurrection just prior to September, 1936, and that on that date, the 16th, at 1:40 a.m., there will be some important act performed that will be of international importance, but especially affecting the people of Israel, Great Britain, and the United States.

Other dates indicate that the effect of this important event will show its culminations on the 27th of November, 1939, and on the 20th of August in 1953. Relating these dates to Biblical phraseology, which is very easy to do because of the special scriptural keys that are contained in the prophecies of the Pyramid, we find that on the night of September 15-16, 1936, there will be heralded the Feast of the Trumpets, and that the Seventh Angel of Revelation will sound the Seventh Trumpet. This is referred to in the 10th chapter, 7th verse of the Book of Revelation. The Pyramid prophecies clearly indicate that in various sections of the world there will be a general gathering and great conference, either secret or semisecret, marking the beginning of a very definite period that will not be long in revealing itself to the world.

Looking a little further forward, we find that a prophecy indicated by the southern edge of the apex of the pyramid gives the time of the 31st of

January in the year 1947. This prophecy indicates that the period of resurrection and regeneration will be completed and indicates also a reconstruction of church and state in both America and Great Britain.

Other measurements are being made to interpret the prophecies of the next ten or fifty years and those will probably be revealed within the next few years.

It should be noted that in addition to the relationship of these prophesied dates to world affairs, each symbolized indication is associated with Biblical or Scriptural prophecies as found in the writings in the Holy Bible and other sacred writings of the East.

The elaborate charts that are necessary for the tabulating of these measurements and prophetic indications are impossible to reproduce in a small book, inasmuch as some of the charts cover many square feet and if reduced too greatly the many delicate lines and crossings become obliterated and the significance of the text impossible to read.

However, the brief outline given in this chapter will indicate to what extent, and to what degree of precision, the prophecies of the Pyramid have been discovered, revealed, and eventually fulfilled. What lies still hidden in the unmeasured and untabulated dimensions and significations of the Pyramid is as great a mystery as the Pyramid itself.

Chapter VII

THE SECRET PASSAGEWAYS OF THE PYRAMID

IN ADDITION to the secret passages, chambers, halls, and other features of the main or central part of the Pyramid which were for centuries unknown and still constitute a mysterious study, there have been traditions for many years regarding the other passageways in the Pyramid or beneath it which have not yet been fully revealed, and the passageways that lead to the Pyramid from nearby points. In any real study of the Pyramid and its mystical use, the environs of the Pyramid must be taken into consideration, including the Sphinx, the courtyard in front of the Sphinx, and the temple that adjoined the Sphinx and which has recently been excavated.

According to the traditions and to some of the mystical manuscripts that have been released in a limited manner in recent years, the Great Pyramid

is but the central point or feature of a magnificent symbolical plot or section of Egypt that contains a mystery in each square yard of its surface.

As with every other temple of mystery, there are stories, reports, and traditions which scientists deny and many so-called authorities ridicule. But in the past few Centuries a number of these traditions have been lifted out of the category of mere mystical fiction into fact by the excavations that have taken place. For centuries there was a whispered story to the effect that there was a Ceremonial court or Courtyard in front of the Sphinx, buried beneath the sands, in which court initiation ceremonies were held prior to the entrance into the Pyramid. For centuries this whispered story was ridiculed by geologists and some historians and by many of the natives and officials of Egypt. However, in recent years the sand around, and especially in front of, the Sphinx has been removed revealing a very beautiful pavement of a courtyard between the paws and in front of the breast of the Sphinx, and in the center of this court, a symbolical altar such as had no use in any of the priesthood religions of Egypt but was known to have its place in the temples of mystery for initiation ceremonies. Thus the sunlight has touched upon the ancient pavement by the removal of the sands, and the light of truth has confirmed one of the old traditions.

Another of the traditions was to the effect that a great movable stone or slab in front of the breast of the Sphinx, between its paws, blocked the entranceway to a secret passage that ran beneath the Sphinx and beneath the sands to the center of the Great Pyramid, and that this long passageway was the secret ceremonial passageway from the outer court in front of the Sphinx to the rising passageways and chambers in the Pyramid itself.

Old stories told how this great stone with its symbolical writings, warnings, and laws for the initiate, would move mysteriously upon invisible hinges and open to the commands of candidates standing in the court, or in front of it, upon the pronunciation of the proper word. Then the candidates with the official torchbearer and guardian would enter the passageway chanting, and as the last note of the chant was sounded the great stone door would silently move to a closed position and the world was shut out again while the pilgrimage of initiates moved onward, toward the Pyramid, beneath the sands of the desert, hidden from all the world, and in a soundless passage that was significant of the early period of the universe when the world was without sound. Such stories, of course, have been rejected and scoffed at but still they persist.

The recently excavated temple adjoining the Sphinx was not believed to be in existence either,

and now it is looked upon as the preparation chamber for the initiates before they entered the court in front of the Sphinx. As one looks down into the uncovered chambers of this temple adjoining the Pyramid, one wonders what other use there could have been for a subterranean temple, or any kind of temple, in this peculiar position alongside the ceremonial court of the Sphinx. Still scientists, historians, and officials scoff at the idea that it had anything to do with initiation ceremonies.

In recent years the great stone slab, firmly fixed against the breast of the Sphinx in front of the two paws, has been revealed and uncovered and upon it are symbolical writings and warnings that may be interpreted in various ways, but certainly have significance to candidates of the mysteries and to the expectant initiate. Whether that stone slab, huge in size and weight, is movable or not has not been determined, and whether there is a passageway behind it has not yet been conclusively determined.

Speaking of the impossibility of a huge stone of this size and weight moving of its own accord upon invisible hinges, let us not forget that there was one other court of mystery at one time where such things did occur. Heavy gates guarded the entranceway to this court and they could not be opened until a sacred ceremony was held around

the altar before them. Here, with fire burning upon the altar, and with the chanting of voices, at the crucial moment of the spiritual ritual, the huge gates automatically opened and the devotees were permitted to enter. Within the walls they found a temple there in the courtyard and fountains that would play with streams of water through the effect of music and chanting. Science investigated these mysteries and found that one master mechanician of the time, known as Heron of Alexandria, utilized some of the great knowledge of the laws of physics known to the Egyptian mystery schools and constructed many marvelous pieces of mechanism that operated through laws and principles rediscovered only in modern times by eminent scientists.

If the great gates which Heron invented would move in some mysterious manner through natural laws, there is no reason for us to doubt the possibility of a huge stone gate moving in the same manner before the Sphinx in Egypt.

There are still many stories told and many secret or private explanations, accompanied with diagrams and architectural designs, given regarding the passageways connecting the Sphinx with the Pyramid, and these give color to many strange incidents referred to in the secret writings of the ancient Egyptians. Some of these underground passageways and their connections are shown in

the accompanying diagrams. Until greater excavations are made around the Pyramid and these passageways are actually revealed to the public and to the light of day so that they may be photographed and entered under special permission, their existence must remain as part of the traditions, for this is the law of the mystery schools of Egypt and still in force. That which is not revealed to the public remains a traditional secret and the public is invited to accept the traditions or reject them as it may see fit. The stronger the denial on the part of the various persons of authority in regard to the existence of some of these secret passageways and temples,*¹ the stronger is one's faith in the possibility of their existence, for such also seems to be the law of human nature when dealing with things of this strange land.

-
1. A recent article in the *San Jose News* reports on experiments to be conducted by the University of California at Berkeley and Ain Shams University of Egypt using X-ray and computer equipment to determine whether there are hidden chambers in the pyramid of Chephren. It is believed that cosmic rays will get through harder and thicker material less than

through areas where there are chambers and passages.
[back](#)

Chapter VIII

STRANGE FACTS

BECAUSE of the very mysterious nature of the subject itself, and because of the many weird traditions that have surrounded the Pyramid, many pamphlets, books, magazine and newspaper articles have been published dealing with the Pyramid from various angles; and many of these have been written by those who are extremely fanatical, illogical, and unfamiliar with the real background of the history of Oriental mysticism. For this reason one will find religious and political fanatics using the Pyramid for dissertations and discourses in which ridiculous and farfetched prophecies and predictions are made in the hope of strengthening various religious or political contentions.

The student of the Pyramid should always judge the reliability of anything that is written and published about the Pyramid by judging the author's motive. If the motive appears to be to support some strange religious rite, dogma, or creed, one should beware of any coloring and

imaginary conditions that may be presented in the description of the Pyramid and its predictions.

The motive back of the publication of this book, which the reader now has in his hands, is solely to emphasize the mysterious origin and purpose of the Pyramid, independent of any cult, any religion, or any political support that may be found in the revelations of the Pyramid. In that regard only is this book biased. It is deliberately biased in favor of the idea or postulation that the Pyramid was built as a temple of mystical initiation and of prophecy and not merely as an elaborate tomb to satisfy the vanity of some king.

There are many strange and peculiar facts connected with the Great Pyramid that may or may not have their foundations in truth, or in related facts. It is claimed, for instance, that at the time that the Pyramid was built the sun at noon passed immediately over the Pyramid so that when the sun was at its zenith at noon there was no shadow on any of the four sides of the Pyramid. This is not true today and scientific explanations state that this is because of the change in the heavens and in the rotation of the earth that has occurred in the past centuries. We know that the precession of the equinoxes and the change of the axis of the earth, or rotation of the pole position, have made changes of various kinds which could explain why the sun does Cast a shadow on some sides of the Pyramid

today if it did not do so centuries ago.

Another claim is that one of the passageways pointing upward toward the heavens from the center of the Pyramid was originally directed toward the pole star and that if one stood in the central chamber looking upward through one of these passageways toward the outer opening in the Pyramid, the pole star could be seen. This may or may not be true, but there is a possibility of its having been true. It would further indicate the excellent knowledge which the Egyptian creators of the Pyramid had of astronomical laws and principles, and it would have been natural for them to have planned the Pyramid in this manner since the pole star is even today a central point in the heavens from which to make measurements and locate positions on the face of the earth.

The so-called King's Chamber, in which there remains today a huge stone casket without any lid covering it, was not a burial chamber and could not have been used as such. The stone coffin was not made as were any of the coffins in the days when kings, pharaohs, or eminent people were buried in Egyptian tombs, and the original hieroglyphs that covered the sides and probably the top stone, although hardly discernible now, were not like those that were used on tombs. The other arrangements of the room and the markings on the walls were not like those of other tombs.

The stone that lay upon the top of the casket has disappeared, and today every inch of the walls and low ceiling of that chamber is covered with initials, names, and dates ruthlessly cut into the walls and ceiling by the thousands of visitors who have had entrance to that room in years gone by when extreme care was not used in regard to the admission of visitors. This has desecrated, destroyed, and obliterated most of the original finish and markings of this chamber.

The coffin that still remains in the King's Chamber was undoubtedly used in the same manner that a coffin or casket was used in many ancient initiation ceremonies, and is still symbolically used in the initiations of some fraternities. Around this stood the officers and the candidate and there was a symbolical ceremony involving the laws of transition, regeneration, resurrection, and reincarnation.

One of the ascending passages, the principal one that has been discovered, is called the Hall of Illumination, or the Grand Gallery, because as the candidate ascended, he reached a greater height in his symbolical attainment of mystical Light. This hallway, as shown in illustrations and diagrams, is strangely formed, but this is due to the fact that each of its lines and dimensions and part of its form is involved in the scheme of prophetic indications. In ascending this passageway today one

has to use a torch because of the darkness, while in some other passages the ceilings are so low that one has to crawl on hands and knees.

Structural engineers who have studied the design and construction of the Pyramid point out many facts to prove that the designers of the Pyramid were really experts in the matter. The fact, for instance, that the King's Chamber is not in the precise center of the Pyramid is pointed out as a structural feature of necessity. The manner in which the stones are placed to afford an opening above the King's Chamber is pointed out as a method of giving special support to protect the ceiling of the King's Chamber. The purpose of the various very narrow air vents ascending from the passageways or chambers to protected openings in the outer wall of the Pyramid is considered an engineering necessity that would have to be adopted today.

The existence of the various underground passageways far beneath the base of the Pyramid is still a mystery and is very greatly disputed by various authorities. On the other hand, eminent men have from time to time given excellent arguments for their existence, and in recent years soundings and measurements have been made which have verified the claims made in the past that some such passageways do exist. The entire base and surrounding area of the Great Pyramid

has not been completely explored. other passageways such as that leading from the Sphinx to the Pyramid, and perhaps in other directions, will probably be discovered at some future time, if all of the indications in regard to such passageways are correct, Any claims, however, to the effect that persons have wandered through these passageways, and know that they exist, should be looked upon with considerable doubt.

There are some ancient manuscripts to be found in India and parts of the Orient referring to a Great Master and divinely created earthly being who had his youthful initiation in the Great Pyramid. Most of these statements undoubtedly refer to Jesus, although His name as such is not given. It must be remembered that in many of these Oriental lands and among the writers of mystical literature the name of Jesus meant nothing, for it was purely a local name of significance or interest to the Jews. To the mystery schools he was known as the Christus, or by similar names which were too sacred to be included in their writings. Whether these references to such an initiation in the Pyramid are true or not will probably never be proved beyond the doubt of those who prefer to believe that Jesus the Christ in His youth had no special earthly preparation or initiation of any kind.

Much has been said in times past regarding the

apex of the Pyramid which is now missing. It has been claimed that it was of gold which glittered brilliantly in the sun and helped to make the Pyramid visible and significant at great distances. We know that in centuries past, when warring armies were centered in Egypt, the tombs were raided and gold of all kinds was taken from them to be carried to other countries and used for warring purposes or for the enrichment of the nation. It is claimed that the gold apex of the Pyramid was thus removed because of its value

Napoleon's army is credited with having done more destructive work in Egypt, without Napoleon's approval, than any other army. "Here we must Correct the oft-repeated story that Napoleon's soldiers broke off the nose of the Sphinx when using it as a target for rifle practice. The story is refuted by the Arab historian El Malcrizi (d. 1436):

In our time there was a man whose name was Saim-el-Dahr, one of the Sufis. This man wished to remedy religious matters, and he went to the pyramids and disfigured the face of Abul-Hol (one of the Arabic names of the Sphinx), which has remained in this state from that time to the present." *[1](#)

Other traditions say that the vast amount of gold that was contained in the holy temples, tombs, and sacred places of Egypt represented far more

gold than could ever have been produced through mining processes in any part of the world at the time these temples and places were built. It is argued, therefore, that the Egyptian mystery schools knew the art of transmutation and that thin sheets of lead were transmuted into gold for lining the caskets and for covering mummy Cases or covering the walls of tombs. Certain it is that all of this gold that once adorned these temples, according to ancient writings and carvings on the tombs themselves, has been removed. Whether it was transmuted gold, which would have had the same value as any other gold, is a point that has not been proved. That the mystics in some of the mystery schools knew the art of transmutation is a fact, but whether they could have produced such an enormous amount of gold by their process is another question.

In structure, some of the other pyramids differ considerably from the Great Pyramid. The pyramid at Cholula was flat on top and surmounted by a temple dedicated to one of the mythological gods. On the other hand, the great pyramid of Izamal is unique in that it consists of two pyramidal piles of masonry, one on top of the other. The pyramid at Uxmal is probably the most stately in form and proportion and consists of three stages, and supports an ornate temple.

Another interesting fact is that the cross,

nowadays recognized as the symbol of Christianity, is found in its primitive form in the carvings in the Pyramid and is found in other places associated with the mysteries of Egypt. Even in some of the statuettes in other lands such as Guatemala, Nicaragua, and localities of Central America, the cross can be found. The cross was not originally a purely religious symbol and certainly not a sectarian symbol. It was many years after the Crucifixion, in fact, several centuries, that the cross was adopted as the distinctive emblem of Christianity.

The Crux Ansata, consisting of part of a cross surmounted by an oval, and which is seen most frequently in Egypt, especially in the hands of gods and goddesses, and is called the Key of Life, was invented or designed by the Egyptian mystery schools as a symbol of immortality and as a symbol of life on earth. It was originally meant to represent the male and female sex organs which Carried on the process of reproduction. The reproduction of seed, and the reproduction of living things of their own species, represented to the early mystics the greatest mystery that they could observe and direct in its action. The idea developed that since each species could reproduce itself continually, this was proof of the immortality of something in the seed. Thus this symbol became a sacred emblem of the continuity of life, or immortality. As time passed, the association of the symbol to the sex organs was

forgotten and the beautiful thought of immortality became the paramount idea associated with this "Key of Life." The processes of reproduction, biologically, are still the greatest mysteries confronting the scientist as well as the layman.

Markings on the wall of the Pyramid show that the Pyramid Day, as a basis for all measurements and Computations, begins at midnight, and the Pyramid Year begins at the autumnal equinox. Another claim is that the Pyramid was built in the year 2140 B.C. and that in that year at midnight of the autumnal equinox the pole star, which at that time was Alpha Draconis, or the Dragon Star, shone down the Pyramid's Descending Passage while at the same time Alcyone was crossing the meridian of the pyramid to the south. Such positions astronomically in relation to the Pyramid will not be repeated again until $25,694\frac{1}{2}$ years have passed. Other scientists state that since there is no way of knowing whether at the time of the building of the Pyramid the calender was reckoned as we now reckon it, the date of its construction may have been 2144 B.C. instead of 2140 B.C. while according to other viewpoints (expressed in Chapter X) the time of erection may have been 2900 B.C.

An interesting structural fact about the Pyramid is that its four sides are not perfectly flat but are slightly concave, as though hollowed out in the

centers, to a slight degree that is measurable. When the sun casts a shadow in a slanting angle on the sides of the Pyramid this slight hollowness of the sides is plainly visible. This has been claimed to be an important engineering factor and adds to our admiration of the knowledge possessed by the designers and builders of the Pyramid.

Other scientists claim that when the Pyramid was originally built, its four sides pointed accurately to the north, south, east, and west, though because of the gradual movement of the earth's surface, this orientation of the Pyramid is not absolute at the present time but varies about five degrees of an arc. This would give us additional scientific proof that the crust of the earth is constantly shifting.

One could spend days, weeks, and months studying the Pyramid inside and out from a constructional point of view, as well as from a mystical point of view, and each day would bring forth surprising revelations. Large volumes could be written about the peculiarities of the Pyramid from either point of view and therefore a list of its outstanding, unique features would be too long to include in a volume of this size.

1. ° Quoted from *The Pyramid*, by Ahmed Fakhry.

Chapter IX

THE MYSTERY INITIATIONS

IN CONNECTION with the thought expressed that the Great Pyramid—as well as many of the temples of Egypt—was used for mystical initiation, it may not be out of place to make some comments regarding these initiations and their purpose and significance.

In the Western World today the mind of the average intelligent person is divided between an interest and liking for initiations and initiation ceremony and ritual, and a complete abhorrence of such things. It is unquestionably true that a great many persons have refrained from continuing in their churches as members and participating in all of the church activities because of their dislike of ceremony and ritual, even of a sacred nature, and it is undoubtedly true that multitudes of persons in the Western World have refrained from becoming affiliated with many of the larger fraternal organizations simply because they feel an

antagonistic attitude toward any organization or movement that deals with initiations or claims to perform initiations. On the other hand, there are multitudes in the Western World also—perhaps millions of persons—who seem to have an inner, inherent liking and love for ritualism, elaborate ceremony, and mystical initiations, the more secret, the more mystifying, and the more symbolical, the better.

Very often those who object to joining with any movement that requires or conducts some form of initiation, as part of the entrance to membership, have an entirely erroneous idea of what constitutes the real purpose of initiation and what is its real significance. Many of these persons, if not a majority, carry out many forms of ritualism throughout their daily lives but do not realize that their acts are ritualistic and that their methods of thinking and acting are in themselves a continuous chain of initiation. Such persons often have a very definite procedure in arising in the morning in regard to their method of bathing, dressing, and eating breakfast, and they never allow anything to interfere with each step of the procedure. It has become a *ritual* with them that means something and is of value, but they would actually protest at this ceremonial process of theirs having any strange or unusual significance.

But in the Orient, initiation of some kind, and

ritualism of many kinds, have been so frequent and have covered so many years of the history of civilization that it seems only natural to these persons to begin each new venture in life, each new stage of progress and unfoldment, with some form of ceremony. In the Western World even our Houses of Congress and courts of law, and our schools, open their daily services with a form of ceremony that is more or less fixed and ritualistic in nature. Concerts and public lectures have a ceremonial opening. This may indeed be purely ritualism and shallow in nature, but to the Oriental mind ritualism, when associated with initiation or with anything of a sacred nature, has a significance of an intellectual as well as a psychic, mystical, or religious quality.

In fact, if we trace the history of drama we find its foundation in the earliest forms of initiation ceremonies wherein the principles being taught by the church or the mystery school were dramatized and presented visually and demonstrably with the enactment of what might be termed a play wherein the candidate for initiation took an important part. In fact, in all true mystical initiations the candidate is the central figure and the entire procedure of the ritual turns around the candidate as though he were the pivotal point. It is this feature that impresses him gradually and gives significance to the initiation as well as an intellectual comprehension of the

principles thus being dramatized and impressed upon his mind.

We must also take into consideration that there was considerable rivalry in the Orient in connection with ritualism and ceremonies of all kinds. Just as we have today the churches with their high masses and high feasts of a ritualistic nature, and the secret societies or fraternal organizations with their ritualism of initiation, and certain forms of ritualism in various other departments of life, so in the ancient days the priesthood, representing the various religious movements, had very elaborate ceremonies not only of acceptance of new members but of daily and weekly devotion in their churches or temples. On the other hand, the unorthodox movements of the day, such as the secret societies and the so-called mystery schools of wisdom, had their elaborate ceremonies not solely for the purpose of rivaling or outdoing the elaborate Ceremonies of the priesthood and the church, but for the purpose of impressing their new members with the significance of the purposes of the societies or schools. If we stop to consider also that most of the secret societies and mystery schools of ancient times were organized and formed deliberately for the purpose of opposing the superstitious beliefs and practices of the pagan priesthoods, we will realize that it was part of their program to make the candidate, the initiate,

thoroughly acquainted with the distinctive viewpoint and the differences of opinion held by these secret schools and societies.

In those days every individual who could stand erect, and who could *see* and hear and understand, either had to ally himself with the pagan priesthood and accept its superstitious beliefs, its control over the thinking and acting of the public, or become a heretic and unite with the mystery schools or secret societies that were attempting to free man from the bondage of superstitious beliefs and practices. Very few individuals dared to oppose or criticize the priesthood, and even fewer were brave enough in their opposition or criticism to ally themselves either openly or secretly with the mystery schools, or those groups of individuals who were seeking to overthrow the tyrannical domination of the priesthood. Being under the dominance of the priesthood not only meant being held in Constant ignorance, and under constant influence of superstitious beliefs and practices, but it meant yielding constantly to heavy taxation, to a continuous payment of worldly, material things to the powerful, rich group of individuals constituting the representatives of the priesthood. In many cases the rulers of the countries, the princes under these rulers, and the local governing representatives, were a part of the priesthood, and the poor man's status financially and socially—as

well as his health and happiness—were in jeopardy if he did not openly associate himself with the priesthood and the pagan religious services and give prompt obedience to the dictates of the priesthood. When wars were proclaimed it was often the ruler, the king, the pharaoh, or prince, who selected from his immediate domains those heretics or those persons who refused to become adherents to the priesthood practices as the first to go forth to the front hues of battle, and in this way thousands of them were slaughtered and brought to an untimely end, as though by sacrifice, because of their disbelief in the priesthood teachings. The faithful, so-called, were always given positions of safety in times of war and shown every preference in every other way. It is easy to understand how the accumulating wealth of the pagan priests, with their royal support from the king or ruler, and the protection of all the highest laws of the land, enabled them to build magnificent temples and to squander wealth—taken from the poor people—in elaborate costumes and elaborate settings for their mythological and superstitious religious services. And in order to impress the ignorant followers they had to provide "miracles" from time to time. This tempted them to indulge in so-called black magic and in trickery, and in every form of deception that would be highly impressive and would hold in abeyance the proper analytical reasoning on the

part of the followers. Every strange or uncommon occurrence in human affairs was instantly seized upon by the priesthood as an example of either the pleasure of the pagan gods or their wrath and displeasure. Every illness that befell the heretics, the doubters, was claimed to be a punishment because of their lack of faithfulness, and no proper medical attention and no proper assistance was allowed to these unfaithful ones in the times of their greatest suffering. Unusual storms, cyclones, earthquakes, floods, and other incidents of nature were pointed out as either beneficent gifts from the mythological gods to the faithful or as chastisements visited by the gods upon the unfaithful.

And because of the grandeur of the pagan temples, the richness of their robes and temple ornaments, the wealth that Could be used for such purposes, the ceremonies within the pagan temples were most impressive and most beautiful in every worldly sense. This became a challenge to the secret schools and mystery schools because it was necessary for them to do two things when taking a candidate into their membership and attempting to prepare him to be a good and faithful follower of the higher and more truthful principles. They did not dare to let the candidate think that a school of truth could not reveal the richness of thought and the grandeur of ceremony and that only schools of

error and untruth were in possession of the great secrets and powers of the world. Therefore, they had to seek in all of the sciences and all of the fundamental laws of nature for those elements which, if brought into play and demonstration in a ceremony, would impress the candidate and the followers more deeply, more profoundly, and more lastingly than anything they had ever witnessed in the pagan temples.

It was fortunate, indeed, for the struggles that were carried on for many centuries by the mystery schools proved that truth in itself is always more impressive, more beautiful in its expression, and more mystifying in its demonstrations than untruth. Were this not so, it is more than likely that throughout the world today the pagan priesthood would still be in existence and man's advancement toward the truths of life would have been very slow indeed.

But without the great wealth which the pagan priesthood possessed, and without the support and protection of the governments and their rulers, the mystery schools of truth and ancient wisdom were forced to have their meeting places and their temples of ceremony and instruction in hidden places, and in underground grottos where there was a total lack of beauty and richness in the setting. They were handicapped by the activities of spies and by the constant threat of death and

imprisonment if they were discovered in their activities of opposing the church and giving unto mankind the truths that would make him free.

Considering, therefore, the places in which these mystery schools met and the conditions under which they had to operate, and the lack of funds and lack of sponsorship and guardianship, we must marvel at the progress they made and the magnificent manner in which they protected their teachings and preserved them for posterity. But in their rituals and ceremonies we find the history of their sufferings, we find the picture of their labors and ambitions, their rewards and their ultimate aims. And as the initiation ceremonies were modified from year to year and period to period throughout the centuries preceding the Christian era they became more significant in the dramatization of the lives of those few people in every community and in every country who became the leaders of free thought, of independent thinking, of honest devotion, sincere worship, and advancing civilization.

We can see, therefore, how it may have come about that Amenhotep IV, the great ruler of Egypt in the 14th century preceding the Christian era, had received from his forebears, who were also rulers of Egypt, certain knowledge and truths regarding life that had established in his consciousness a realization of the great facts which would make

man a living image of God. His immediate forebears had become interested in the teachings of the mystery schools and had secretly indulged in them, fearlessly risking the revolt of the priesthood against them. In Egypt and in many lands the priesthood had become so powerful in wealth and in political influence through the large percentage of followers that kings and queens feared them and had to do the bidding of the priests. It was Amenhotep's immediate forebears who ventured to break the power of the priesthood, although this venture was for a long time kept secret and only the foremost workers in the mystery schools knew that they had on their side the approval of the pharaohs and queens, for it was not sufficient protection for them to carry on their great work openly.

It was Amenhotep IV as a young man who dared to proclaim in open manner his allegiance to the mystery schools and his undying opposition to the priesthood. To him had come the privilege of announcing to the people of his country a new religion based upon the revelations that had been given to the followers of the mystery schools. He it was who proclaimed for the first time in the history of civilization an official religion of a public nature based upon the truth that there was not a multiplicity of gods and goddesses as the priests had taught, but only one "Everliving God" residing

in the heavens or Cosmic above and who was the Father of all mankind. This astonishing opposition to the priesthood teachings eventually cost him his life, but in the few years which he might have numbered upon the fingers of his hands, he had not only revolutionized the art, literature, sciences, and the religion of Egypt and destroyed most of its pagan monuments, but sent a flash of the great light of truth throughout the world to be carried in torches into the darkest recesses of semicivilized lands to be preserved to this very day as the true religious concept of our spiritual existence.

But this one fundamental principle of a monotheistic religion—of an only God—was not the sole contribution to civilization that came out of the mystery schools of the Orient. Long before this, scientific knowledge, marvelous knowledge of the arts and literature, profound principles that still form the foundation of our advancing culture, came out of these schools of ancient wisdom, and in their rituals, which they preserved for our use today, we have the dramatization of this important history of man's growth and development.

It was for the purpose of initiating individuals into the great mystery school of Egypt that the Pyramid of Gizeh and its adjoining subterranean halls and passageways were built. We can understand with what pride and joy the great leaders of the mystery schools conceived of

building the greatest of all their mystery temples above the ground and in the open space of sunlight and freedom. After centuries of labor in hidden places beneath the sand, after centuries of existence as fugitives hiding in secrecy, they were happy in the fact that although the priesthood still existed and the pagan forms of worship still continued, the great light of understanding and of truth had given them the opportunity to come out into the open and to build a magnificent temple more beautiful than anything the priesthood ever built and not built with the accumulated wealth that was ill-gotten, but built with service lovingly donated and built with the loving assistance of enlightened followers.

Still it was necessary to examine carefully such candidates as were recommended for initiation into the mystery schools and to put them through a long period of test and trial, of keeping them unacquainted with what was taught and revealed until such time as they were duly and truly qualified to cross the threshold under the guidance of a guardian and enter a sealed and closed place where with proper ceremony and ritual they would be impressed with the significance of their initiation, the importance of their obligation, and the duties which they were to perform.

Thus it was that although the Pyramid as a magnificent temple of initiation and Ceremony rose

to a sublime height in the land where all other structures were much less impressive, still what went on within the Pyramid was carefully concealed and the idea that it might be a tomb was tolerated in the minds of the public while the secret entranceways were cleverly concealed and never revealed except to one who had proven worthy after sufficient test and trial. It is for this reason that the Pyramid, the Sphinx, and the adjoining structures were united by underground passageways with entrances at various places unsuspected and not revealed to the public for many, many centuries. And we can understand also why in this same magnificent structure, towering to the heights that would indicate its lofty ideals and ambition to be a part of the spiritual world above the earth, there were recorded in its lines and measurements, in its form and enclosed spaces, as well as in hieroglyphs and unusual markings on its inner walls, the secret keys to the knowledge possessed by the ancient mystery schools, the history of their activities, and the predictions of the future races of man. Thus the Great Pyramid became in one embodiment a house of sacred ceremonies, a school of great wisdom, an archive of preserved knowledge, and a monument of prophecy.

Today the Great Pyramid is one of the seven wonders of the world as it was centuries ago. It is

doubtful if man will ever build at any time in the future a structure of any kind that will be more magnificent in its symbolism, more revealing in its wisdom, and more influential in its effects upon posterity than the one strange structure standing so silently, so strangely, in the midst of a country that may at some time in the future arouse the sleeping power that still remains in the intelligent, peace loving, spiritual Egyptian and make that land once more the cultural center of the world.

Chapter X

WHENCE CAME THIS KNOWLEDGE?

WE ARE constantly reminded of the tremendous progress man has made within the past two centuries. In comparison with his life in the Middle Ages, the facilities and advantages he has today do mark the present era as advanced. In fact, until the beginning of the nineteenth century, our mode of transportation on land, insofar as motive power was concerned, was the same as in the days of the ancient Romans, Greeks, and even the Egyptians. The horse did not cease to be our fastest and most dependable means of transportation until the close of the eighteenth century. In the early part of the same century, communication was carried on by individual and government in the same manner as had been done during the Roman Empire. Communications were expedited by a mounted courier or transferred from one horse-drawn stage to another until they reached their destination.

That in two hundred years such stupendous transformation could take place in transportation, communication, industry, architecture, and science seems to distinguish the period as an outstanding one in history. Actually in our written history no previous time is marked by such a multitude of achievements, yet these accomplishments are not the result of suddenly inspired visions. The minds of men within the last two centuries were not spontaneously imbued with a wisdom which made these things possible. These wonders of today are the slow development of causes which began centuries ago. The causes, though less sensational, were really more remarkable and attest more to the greatness of man than the results which they brought about. The causes began about 250 B.C., we shall say, at the time of the great school of philosophy and learning at Alexandria, Egypt. There for the first time, so far as we know, began a systematic classification of all physical phenomena known to man. These classifications corresponded in a general way to our sciences of today. The minds of men embraced what were to them virgin truths. Groups of minds clung tenaciously to the revelations, each group believing that the natural laws which they analyzed were the sole key to the universe's mysteries. Few could see far enough ahead to point where the apparently parallel lines of scientific research would converge. Centuries of

systematic and sincere study and probing resulted in an accumulation of workable data.

The knowledge of each field of phenomena spread into every other. Physics joined forces with chemistry; biology with anatomy; physiology with psychology. The interrelating of facts quickened invention. Each science borrowed from the other; the missing principle in one realm of nature was supplied by another. The pattern suddenly took form within the past two centuries. Its design was dazzling in its orderliness, and its usefulness very apparent. Never before in the memory of man had anything been seen like it. Those who have been fortunate enough to live in this period of the last two hundred years have made the mistake of comparing the results as they know them with the beginnings. To them it seemed that man had achieved more in the recent two centuries than in a previous twenty-two centuries. They failed to realize that development, though more impressive than its causes, is a lesser achievement. Causes have an inherent momentum which they carry on down to their eventual end, and results consequently must follow; but an original cause is a distinct departure from one grade, classification, state, or condition to another. A cause is the complete transformation of one nature into the nucleus of another. Thus, the step forward man made from inarticulation to speech was far greater than from

the first utterance of guttural words to flowery oratory. Therefore, though our present civilization is compelled to link its attainments with the contributing causes of the past, there is a period in history when man did in one step advance from barbarism to a civilization embracing arts and sciences, and the interval between is apparently devoid of the causes which brought the great wisdom about.

Preceding 3100 B.C. all structures in Egypt were one-story, built of sunbaked mudbrick. The buildings were ugly and representative of little that could be considered skill or workmanship. Eventually the Egyptians built a second story upon a triangular low first story of the mudbrick. This second story did not quite cover the same area, so it made the structure have a terraced appearance. Finally, many such structures were built, but the number of stories gradually increased, and they were set back slightly as they rose in height until they had the general appearance of pyramids, except that their sloping sides were stepped.

Not long after 3000 B.C. the Egyptians witnessed the building of the first masonry pyramid. The master builder and architect was known as Imhotep, the Wise, and miniature bronze statuettes of him have been found. He erected this great monument for King Zoser. The copper tools employed before this time were incapable of

carving and sawing limestone out of which this stepped pyramid was built. There suddenly came into existence, from where no one knows, tools which made this masonry a realized fact. The tools were not developed by usage, for there were no masonry work or stone buildings which would have required such tools. Immediately following this masonry pyramid, others were erected, and in 2930 B.C. the first pyramid which, when completed, did not have a terraced appearance was built. It rose to a height of 214 feet and had its terraces filled in with masonry so that its sloping sides were smooth. This smoothness was accomplished by the excellent fitting of small stones comparable to the best masonry we are capable of today.

Approximately twenty years later, or 2910 B.C., the first pyramid was built that was intended as a pyramid. Its height, dimensions, and general appearance were conceived before its erection, and it was not built in successive steps, but its blocks were laid according to a mathematical exactitude, and each layer of stones receded just enough to Conform to the proper slope of a perfect pyramid.

Ten years later, or about 2900 B.C., the great pyramid of King Khufu, or Cheops, as the Greeks named him, was begun. Approximately one century and a half was all the time that elapsed between the earliest stone masonry and the beginning of the Great Pyramid of Gizeh. More than highly efficient

tools were required to build that stupendous monumental structure. Great knowledge was also necessary. Chemistry of a sort must have been known, for the cement used between the huge blocks was applied in layers as thin as a sheet of newspaper, and yet, it had adhesive properties far exceeding any cement in use today.

The fact that the Great Pyramid was erected in the center of the land surface of the earth at that time, proves a knowledge of world geography by its builders at a time when we think man knew of no land west of Gibraltar and east of what is now Iraq. Further, the Great Pyramid was in perfect proportion. Its apex was above the exact center of its base, proving its builders were master mathematicians. An aperture in its apex was used for astronomical observations, and the descending passage pointed directly at that time to Thuban in Draconis, revealing that those who designed it had a knowledge of astronomy and the ability to make astronomical delineations. One must not overlook the fact that its builders also were well-acquainted with that phase of physics known as leverage. Every engineer will readily concede that the huge blocks could have been put in place only by a mechanical means employing the laws of leverage. Still further, the exquisitely fine designs and delicate shades of color put upon the walls of some of the passageways and chambers required some unusual

artificial means of illumination. The many angles of the passageways remove the theory of reflected sunlight by mirrors, and if torches, which were prevalent in that period, had been used, the designs would have become blackened with smoke.

Admiration for this great work of the ancients is equalled only by amazement at their wisdom and the mystery of whence came this knowledge. How was it possible in only one hundred and fifty years for man not merely to improve on science, to develop or advance it, but to discover the very laws of which the sciences consisted, create them in other words, and then for the first time employ them in such a highly efficient manner? A little over a century and a half previous these sciences were not known to man even in their most elementary form, according to records left by the ancient Egyptians themselves. Never in any other period in the history of man has he discovered the laws of certain realms of nature, organized them into definite sciences and applied them so successfully within such a short period of time. Was there a sudden influx of Divine Wisdom? Were men given an insight by Cosmic decree into nature's secrets for a brief time? Was there implanted in Egypt during this period a race of supermen who came into being with a fully developed knowledge of the sciences which were used in building the Great Pyramid? These

suppositions are too highly fantastic to be accepted today, and yet, some answer must be given to the question: From whence sprang this knowledge? for it seemed to spring into existence, because no evidence of its accomplishments preceded it.

Though we may scoff at the idea that the Egyptians at the time were suddenly evolved and their consciousness infused with a rare wisdom, we must give credence to that theory which declares that their civilization was enriched by the coming into their midst of members of a strange race of people who had great wisdom acquired from a civilization preceding the Egyptian one by centuries. This theory is founded upon the strange tales the Egyptians told and which have endured with the dust of the ages in their tombs.

The writings of the Pyramid Age of Egypt—that period when most of the pyramids were built, and which lasted from about 3000 B.C. to 2500 B.C.—are very few. All that remains are fragments of stone tablets. The age immediately following is known to historians and to Egyptologists as the Feudal Age, the period of the wealthy and pompous nobles who owned vast, flourishing estates, worked by thousands of slaves. Writing had gradually developed, and papyrus replaced stone for ordinary writing purposes. Many of the notables had great libraries consisting of shelves of these long papyrus rolls, which were comparable to

our books of today. These rolls dealt with current topics, accounts of the noble's travels, and the accomplishments and exploits of his father and immediate family; and they also recorded tales of Egyptian history, which even then were Considered ancient. Some of the noble's favorite papyrus rolls—those he had enjoyed reading the most—were entombed with him after his death in a rock-hewn tomb in a precipitous Cliff on his estate overlooking the muddy Nile which ran through his lands. There, sealed against time and the elements, they kept intact their age-old stories.

In one of the Feudal Age tombs was found a scroll written in the demotic writing of the period, recounting the tale of a shipwrecked sailor who centuries previous had been Cast upon the shores of a strange land of an exceedingly wise people—a land which later sank into the depths of the sea and from which some of its people were said to have escaped to Egypt. This land, it was related, existed beyond the Red Sea at the gate to an unknown ocean, or what would correspond to the Indian Ocean. A page of this scroll reads, "Those who were on board perished, and not one of them escaped. Then I was cast upon an island by a wave of the great sea. I passed three days alone with only my heart as my companion, sleeping in the midst of a shelter of trees till daylight enveloped me; then I crept out for aught to fill my mouth. I found figs

and grapes there, and all fine vegetables, etc. . . ."

He continued, saying he was brought before the great king of this strange land who resided in the interior and at the magnificent court of the king witnessed great feats of magic and phenomenal power. He was kept by the king three months, and then returned to Egypt with great treasures.

This legend could be attributed to an ancient Sinbad the Sailor yarn, if it were not for some very significant facts. First, the time that this land or island was said to have vanished corresponds to that period of the one hundred and fifty years when the Egyptians miraculously acquired a knowledge which made them capable of building the Great Pyramid. Secondly, recent oceanographic expeditions, financed by the Indian government, have disclosed a vast tableland or plateau submerged in the Indian Ocean. On all sides of this submerged plateau are great foredeeps as though it had no relation to the regular floor of the ocean. This and other reasons indicate it was once above the surface. The easternmost end extends nearly to Sumatra and the Malay Straits, in the jungles of which have been found vestiges of once great temples and forgotten civilizations.

We may discredit the tales of sunken continents and vanished races, but we cannot remove so easily evidences of the similarity of disintegrating structures in mined cities separated by thousands of

miles of sea. Also, it is more than coincidence that several of the Aztec pyramids of Mexico are of the terraced type, resembling the first Egyptian pyramids, and that the size of the stones used is also the same, as well as other distinguishing characteristics. Archaeologists admit that in their opinion the Aztec temples and pyramids antedate the Egyptian ones.

Why is there such a resemblance between Aztec, Mayan, and Egyptian architecture? Many of these ruins are found in Yucatan, Mexico, which is not much more than an isthmus. Why did these people settle there when north of them was a much more expansive territory? East of Yucatan lies the big basin of the Gulf of Mexico. Was the submerged land once above water and part of the mainland of Mexico? Was it thickly populated and did it contain magnificent temples and pyramids like the remnants found in Yucatan? If so, when the great catastrophe of its sinking occurred, undoubtedly some of its inhabitants fled to the mainland east of them, to Northeast Africa. Between Yucatan and Northeast Africa lies not only the Gulf of Mexico but the vast Atlantic Ocean. However, the western shore of the legendary continent of Atlantis is said to have nearly embraced North America, and its eastern coast included what is now the Azores Islands. So inhabitants on the eastern shore of the ill-fated

continent would not have had far to journey to Africa.

It is logical to assume that the survivors would have perpetuated the wisdom they possessed, would have clung tenaciously to it and would have avoided slipping back into the barbarism they must have found in Egypt. Whether they passed it from one generation to another of their own kind, or taught it to a certain few of the Egyptians is another enigma. It is possible that they found their kind becoming extinct about 2900 B.C. and built the Great Pyramid as a lasting monument to the great knowledge they inherited from their forebears.

What makes this quite probable is that later generations of the Egyptians looked with as much astonishment upon the mystery of the Great Pyramid as we do today, indicating that they lacked the wisdom which was required to build the Great Pyramid or it would not have so mystified them. If it had been built solely for the vain personal interests of King Cheops, as some think, it would have borne every indication of this fact as do the lesser pyramids which were built by other kings and pharaohs as tombs or personal monuments. The Great Pyramid is free from the hieroglyphs found in the smaller pyramids, and its chambers and passageways are evidence that it was used as a place of assembly and for oral instruction. It is quite

probable also that King Cheops considered himself fortunate to have in his midst those capable of executing such a work, and in consideration of its erection and dedication to himself, was willing to grant its builders the privilege to use it for purposes of their own and to erect it according to their inherited wisdom and secret ideals. Its builders must have realized that future mankind would find in the Great Pyramid a far greater tribute to a lost knowledge than to the personality of a king reigning at the time of its construction.

It is interesting to note that though many tribes and peoples have fantastic legends relating to their origin, and still others have none to explain the reason for their present habitat, the Mayans and Aztecs both have traditional tales which imply that they migrated from a distant place. The Mayans in their traditions claim that they came from a land far north and west, pointing toward the Northwest or the North Pacific. The Aztec traditions carry them back to an origin from an island cave in Aztlan, which has been sought in Northern Mexico and beyond—the word Aztlan meaning "*Aztec's Place.*"

The sinking and migration of continents is sound scientific fact. Modern science has and is detecting and measuring the sinking and movement of continents today. In addition to the slow sinking and movement at the rate of a few inches or feet a year of the larger bodies, hardly a year passes

without some body of land, even though it may be but a small tropical volcanic island, being sucked beneath the sea. If this is possible today, it was possible in the yesterdays of centuries past, and geologists and oceanographers declare that our present ocean basins are the result of such migration of continents.

Professor George W. Munro of Purdue University recently wrote, "If the continental masses moved over the Pacific area riding down the blocks of ocean bottom, it might reasonably be expected that as the continental motion ceased, the down-going blocks would be caught and jammed in places, forming deep holes in the ocean bed. The foredeeps of the Pacific constitute precisely such a system as might be expected. The central position of the Mid-Atlantic swell indicates approximately equal masses of land in each of the traveling continents, or an earlier stoppage of the American side. The general absence of foredeeps off the American shore indicates the former, while the Gulf of Mexico and the eastern Divide point to a collision stoppage of the American fragment. Anyone who accepts as reasonable the hypothesis of rapid continent migration here presented will recognize that the frail isthmus structure connecting the two Americas could never have withstood the hazards of so turbulent a voyage. Clearly, the notch formed by the Gulf of Mexico

and the Caribbean Sea was made after the crossing. The most plausible view of such a happening is that the central part of the American continent encountered an ocean bottom which did not yield and that the inertia of the end was sufficient to break its back."

We must remember that three times definitely in the history of the science of archaeology has the age of civilization been advanced, which proves if nothing else that the present conclusion as to its age may exist, for no other reason than lack of new knowledge to change it; in other words, our present idea of the time that civilization originated is conclusive only in the sense that we have not found new facts to supplant those we now have. Daily we may expect the announcement of positive proof that the prehistoric civilizations of Lemuria and Atlantis existed, and the further declaration that it was the wisdom of their surviving inhabitants which gave the Egyptians not only the Great Pyramid but their first experience in the mastery of nature's laws.¹

1. °See Lernuria, *the Lost Continent of the Pacific*.

APPENDIX

The two diagrammatic drawings shown in Chapter VII depict the relationship of the Great Pyramid to the two other nearby pyramids and the Sphinx, and indicate how these structures are connected with subterranean passageways leading not only to the pyramids and Sphinx, but to long-forgotten reception halls, small temples, and other enclosures.

These unusual drawings were made from secret manuscripts possessed by archivists of the mystery schools of Egypt and the Orient and are part of secret manuscripts telling of the ancient forms of initiations held in the Sphinx and the Great Pyramid. The existence of these subterranean halls, such as the one beneath the Sphinx and indicated in the second diagram, and the passageways and other features, has been denied repeatedly by Egyptian and other authorities and even by eminent archaeologists and investigators from various parts of Europe. So persistent have been these denials that the claims of the representatives of the mystery schools have been looked upon by the public as pieces of fiction, deliberately invented and periodically whispered in order to mystify

visitors to Egypt. In fact, the attitude of scientists is typified by the expression of one of them who said: "No one should pay any attention to the preposterous claims in regard to the interior of the Pyramid or the presumed passageways and unexcavated temples and halls beneath the sand in the Pyramid district made by those who are associated with the so-called secret cults or mystery societies of Egypt and the Orient. These things exist only in the minds of those who seek to attract the seekers for mystery and the more we deny the existence of these things, the more the public is led to suspect that we are deliberately trying to hide that which constitutes one of the great secrets of Egypt. It is better for us to ignore all of these claims than merely deny them. All of our excavations in the territory of the Pyramid have failed to reveal any underground passageways or halls, temples, grottos, or anything of the kind except the one temple adjoining the Sphinx."

It is well enough for these scientists and others to make such statements as the foregoing, but we must remember that many years ago they also claimed that there was no temple adjoining the Sphinx. The claim was made that every inch of the territory around the Sphinx and Pyramid had been explored deeply and thoroughly, yet some years later the underground temple adjoining the Sphinx was found and today it is open to the public. The

scientists may have forgotten this incident but the public has not forgotten, and especially that portion of the public whose interest in the Pyramid and the Sphinx and the territory around them is just as keenly alive today as it ever was.

The claim was once made also by scientists that there was no courtyard or reception court between the paws of the Sphinx with an altar in its center and a great stone slab against the breast of the Sphinx on which was contained secret and cipher instructions. Yet within the past ten years that courtyard has been cleared once more of the sands and today the pavement of that courtyard and the altar in its center and the huge stone slab at the rear are open to the sunlight and the vision of all who stand around the Sphinx.

It is either untrue that in the past centuries every square foot of the territory around the Sphinx and Pyramid had been thoroughly explored with constant excavations, or such explorations have revealed certain things to the investigators who have quickly and deliberately covered up their excavations and Concealed what they have found.

Since the main portion of this book dealing with the Pyramid was dictated, there has come into my hands a magazine edited in Egypt, and more or less privately published in London, dealing with Egypt and its explorations; and we find in this January, 1935, copy of the publication an article by

Hamilton M. Wright dealing with the recent discoveries of the pyramid, accompanied with original photographs by the author, made with the permission of Dr. Selim Hassan. Dr. Hassan, a native of Egypt and one of those scientific investigators who does not take the word of others as law, has been conducting extensive excavations for the University of Cairo. In this recent publication he is quoted as saying:

"We have discovered a subway used by the ancient Egyptians of 5,000 years ago. It passes beneath the causeway leading between the second Pyramid and the Sphinx. It provides a means of passing, under the causeway, from the cemetery of Cheops, who built the first or Great Pyramid of Gizeh, to the cemetery of Chephren, who built the second Pyramid. From this subway we have unearthed a series of shafts leading down more than 125 feet, with roomy courts and side chambers."

Then the article goes on to describe the unearthing of the causeway between the temple of the second pyramid, on the plateau, and the temple of the Sphinx, immediately adjoining the Sphinx, which was unearthed a few years ago. But it states that the discovery of the new subway or passageway underneath the public causeway on top of the sands has occurred within the past three months.

Dr. Hassan explains that the causeway was constructed at the same time that the second Pyramid, or the Pyramid of Chephren was built. He says that evidence he has unearthed leads him to believe it was constructed before the building of the Sphinx. Chephren or Khepren, or Kha-f-ra, was the third king of the 4th dynasty.

The new excavations now lead Dr. Hassan and others to believe that while the age of the Sphinx has always been an enigma in the past, it may have been a part of the great architectural plan that was deliberately arranged and carried out in the early erection of the Great Pyramid.

In 1909 the first subterranean temple near the Pyramids was found and a passageway between it and the Sphinx hitherto unknown was also discovered at the same time.

It should be noted by all students of mysticism and especially of Rosicrucian philosophy and teachings that the year 1909 was the year when more revelations of a mystical nature, and more incidents of the reawakening of the mystical spirit throughout the world as fostered and protected by the secret mystery schools, occurred than in any other year in recent centuries. It was in the year 1909 that many persons journeyed from various parts of the world to Europe and the Orient to secure permission for the re-establishment or reawakening of the Rosicrucian activities in various

countries, and it was in the same year that many tombs of "Christian Rosenkreuz" were opened and many scientific discoveries leading to revelations pertaining to the mystery schools. The present cycle of the Rosicrucian Order in North America dates its authority from the year 1909, due to special high council meetings of international Rosicrucian mystics that were held in various cities in that year.

Dr. Hassan's recent excavations have disclosed that this subterranean pathway is, as a matter of fact, a gigantic stone causeway, 22 meters wide and about 450 meters long. It connects the second pyramid to the Sphinx and to the temple of the Sphinx adjoining. Large numbers of men are still at work on the sandy slope between the second pyramid and the ancient Sphinx. Mr. Derwish, who is in charge of part of the excavations under the guidance of Dr. Hassan states:

"The causeway between the second pyramid is constructed of enormous blocks of localized stone and has three divisions of separate pathways. The middle pathway lies between two walls constructed of fine Turah limestone. These walls were roofed over as is proved by the remains of stones found here and there on the causeway. The reason that the subway was constructed was that the two walls above mentioned prevented passageway from the cemetery of Cheops to that of Chephren. . . The

newly excavated subway was cut through hard sand rock and is about eight feet in height. Two or three people can easily walk abreast in it. In the center of the subway was the deep shaft of which Dr.

Hassan has spoken. . . . This newly excavated shaft is an enormous four-sided hole about eight feet each way leading straight down through the limestone like a mine shaft. This shaft ends in a spacious room, in the center of which is another shaft which descends to and ends in a roomy Court flanked with seven side chambers, some of which contain huge sarcophagi of basalt and granite. In one of these seven rooms there was also cut down a third shaft ending in a side chamber, which is now flooded with water, but apparently contains a sarcophagus. We are hoping to find some monuments of importance after clearing out this water. The total depth of these series of shafts is more than 40 meters or more than 125 feet. . . . In the course of clearing the southern part of the subway there was found a very fine head of a statue which is very expressive in every detail of the face."

We have seen a photograph of this statue and it appears to be in that same excellent form of sculpturing revealed in the famous bust of Nefertiti, and undoubtedly a sample of that rare type of art inaugurated in the Amenhotep regime.

A description of the chambers and rooms beneath the sands, connected by these secret

passageways, reveals that there were inner courts and outer courts and a Chapel of Offering cut into one of the huge rocks with three pillars in its center. The three pillars representing a triangle are highly significant points in the study and analysis of the purpose of these underground chambers.

Another chamber, much like a burial chamber but undoubtedly a room of initiation and reception, was found at the end of a sloping passage, cut deep into the rock in the west side of the Chapel of Offering. In the center of this chamber was another large sarcophagus of white Turah limestone, and there were excellent examples of alabaster vessels found in the chamber.

The walls are beautifully painted and sculptured with scenes and inscriptions and the Lotus flower is an important emblem in the pictures. Other chambers were discovered with pillars in the center and in some of these were Carved figures of a young woman in a beautiful gown, plainly indicating a ceremonial robe.

There are many magnificently carved figures in these various underground rooms and chapels, temples, and hallways, also many beautifully colored friezes. In examining the photographs of some of these we are deeply impressed with the improved form of the art, showing the distinctive characteristics of the period that followed Amenhotep's mystical reawakening of Egypt.

The foregoing facts are but a few of the many contained in Dr. Hassan's latest report. They verify in part at least the things indicated on the two diagrams shown in this book and undoubtedly the passing of time will verify other parts of these diagrams. So once again the strange drawings, manuscripts, and writings of the mystery schools which Claimed to preserve the ancient knowledge of Egypt and other lands, rise to another degree of acceptability. Despite all that has been said by former explorers and excavators, the truth appears to be that every foot of the territory around the Pyramid and the Sphinx has not been explored previously because Dr. Hassan and his associates have just recently taken out of these underground temples, halls, and passageways rare specimens of art, rare relics of various kinds, a few of which we hope to have in the Rosicrucian museum in the very near future. If these things, passageways, and underground halls and temples, had been discovered in the past and then secretly covered up again to prevent us from learning the truth, the explorers would not have hesitated to bring to light the rare relics that remained in them, for these things represent the most precious gifts that Egypt has to offer to the museums of the world and which every scientist and explorer is justified in bringing to light.

Those skeptics and doubters who look with

distrust upon all books dealing with the Pyramid from the mystical point of view, and who believe that the Rosicrucians and others do not possess any knowledge not possessed by the eminent excavators and explorers of the past, may realize now that not half the truth has been told about the Great Pyramid and its environs and what has been revealed by the mystery schools is more than likely to be verified in the near future.

PLATE FOUR

PLATE FIVE

THE ROSICRUCIAN ORDER, AMORC

Purpose and Work of the Order

The Rosicrucian Order, AMORC, is a philosophical and initiatic tradition. As students progress in their studies, they are initiated into the next level or degree.

Rosicrucians are men and women around the world who study the laws of nature in order to live in harmony with them. Individuals study the Rosicrucian lessons in the privacy of their own homes on subjects such as the nature of the soul, developing intuition, classical Greek philosophy, energy centers in the body, and self-healing techniques.

The Rosicrucian tradition encourages each student to discover the wisdom, compassion, strength, and peace that already reside within each of us.

PRELIMINARY EXPLANATION

The *Book of Jasher* is one of the long-lost and long-sought-for sacred books which should have been included among the other books of the Bible but which was omitted as were many other books. In addition to the two references to the *Book of Jasher* that will be found in the other books of the Bible, there are historical references to this lost manuscript, and it is only natural that in recent centuries a great many stories should have been invented purporting to tell how and why the *Book of Jasher* became lost, hidden, or suppressed.

In order that some of the mystery regarding the *Book of Jasher* might be removed, and, furthermore, for the benefit of those students of the Bible who sincerely desire to read another record of the events that are presented in the Old Testament, we have thought it well to reproduce the *Book of Jasher* in its original English translation as given to the world by the man who claims to have found it and preserved it.

In order that our reproduction of this rare translation should be without error or change, we have photographed each page by a lithograph process. This gives us a truly photographic reproduction of each page of the translation of the original book.

The pages as they appear in this book have not been reduced in size or altered in any manner, and only the cover of the book, the first title page, and this explanation are original with us.

Attention is called to the many unique phrases found in the early chapters of the Book of Genesis in regard to the creation of the universe and of man and woman. It should be kept in mind that the original author of the *Book of Jasher* was born during the lifetime of Moses and lived in association and companionship with him. Therefore, the first part of the *Book of Jasher* was written by Jasher from the records and traditions that had been preserved by his ancestors. The latter part of the book is based upon what he observed himself during his lifetime. Consequently we have in the *Book of Jasher* a new witness to many interesting events and a new presentation of ancient records with a more careful translation and interpretation of the matters which were held sacred by his ancestors.

The original introduction and explanatory matter which precedes the text of the book should be carefully read in order that the importance of the book and its translation may be appreciated.

ADVERTISEMENT.

THE following translation of "The Book of Jasher," was discovered by a gentleman in a journey through the North of England, in 1721. It lay by him for several years, until, in 1750, there was a rumour of a new translation of the Bible, when he laid it before a noble Earl. On perusal, he highly approved of it, as a work of great sincerity, plainness, and truth. His lordship's opinion was, that it should have been placed in the Bible, before the Book of Joshua.

He further adds, "By a writing on the outside of the manuscript, it should seem that this translation was laid before our first reformers, because it says: 'I have read the Book of Jasher twice over; and I much approve of it, as a piece of great antiquity and curiosity; but I cannot assert, that it should be made a part of the Canon of Scripture. Signed, WICKLIFFE.'"

Since 1751, the manuscript has been preserved with great care, by a gentleman who lived to a very advanced age, and died some time since. On the event of his death, a friend to whom he had presented it, gave it to the present Editor, who, conceiving that so valuable a piece of antiquity should not be lost to men of literature, and biblical students, has committed it to the press, not doubting but that the attention of the learned will be attracted to so singular a volume.

The Editor cannot assert any thing from his own knowledge, beyond Alcuin's account, but *that* carries with it such an air of probability and truth, that he does not doubt its authenticity. Some account of this volume may be found in Alcuin's works, published in one volume, fol. in the year 1600, in Paris. He died in 804. Should any gentleman possess a transcript, or copy of it, the Editor will be greatly obliged by any communication made to him, through the medium of the Printer.

PRELIMINARY DISSERTATION
ON THE
ANTIQUITY AND AUTHENTICITY
OF
THE BOOK OF JASHER.

WHEN a work of this nature is brought before the public, it is highly expedient to adduce evidence of its authenticity, which must resolve itself into the external and historical, and then, the internal proofs of its originality.

As to the former of these, it is evident, that such a book existed in the days of Joshua, and that it also continued to be referred to in the time of the Royal Psalmist, David. It appears to have been preserved by the Judges, first, and afterward, by the kings of Judah, until the period of the Babylonish Captivity; after which event, it is not referred to, either by the Prophets, or by the Chronologists of the Jewish nation; a full proof that it was not brought back to Judea. It must then, of course, have been possessed by the kings of Persia, in which country it was found by Alcuin, who was the honour of our own country, and the great ornament of the Court of Charlemagne. This great prince, it appears, engaged his attendance on his person, and received instruction in the sciences from him. He also was present with him at the Council of Frankfort; and, as a reward of his distinguished merit, endowed him with three rich abbies. When he left his court and returned to England, he was further promoted to be Abbot of Canterbury. Alcuin founded the University of Paris, in 800.

The account of his pilgrimage to the Holy Land, and to Persia, is given by himself. His object in remaining at Gazna, for three years, was his obtaining this single piece of antiquity, which cost him in wedges of gold, at least £500, which, at this distance of time, would have amounted to four times that sum. He describes the roll on which it was written in large Hebrew characters of the earliest form, as being two feet nine inches wide, and nine feet in length, and, according to his relation, preserved in the original ark of gopher wood, adorned with Mosaic work, though in a state of decay, from the injuries of time.

Nothing can be produced to invalidate this authentic statement, and, consequently, it merits our credence. It could not be brought forward by him, to answer any end of a secular nature, as it appears he never made it public, beyond the circle of his friends, and when grown old, he left it, with his other manuscripts, to a friend, a priest in Yorkshire. Its preservation from one hand to another, for so many centuries, is easily accounted for, both from its intrinsic merit, and its extraordinary character.

Its having been known to our first reformers, is evident from the testimony of that illustrious leader, Wickliffe. Its falling afterward into neglect, might have been caused from the very few learned men who lived in the following dark ages of Popish ignorance; when little was known, even by the priesthood, beyond their missals, litanies, and breviaries.

The manner of its being brought to light, about a century since, was quite accidental; but then being laid before a distinguished nobleman, who appears to have been high in office, on the most important occasion, that of a new translation of the sacred Scriptures, when he delivered his judgment of it, as a work of great sincerity, plainness, and truth, and whose opinion of it was, that the book of Jasher ought to have been printed in the Bible before the book of Joshua.

From that time, it appears to have been preserved only for its antiquity and curiosity, till it fell into the present Editor's possession, who, on perusing it, saw sufficient reason for its publication, especially as it supplies a chasm in the history of the Judges, from the death of Joshua, including the elders who outlived him, and judged Israel. These are Caleb, who judged Israel twelve years; Jasher, who succeeded him, and Othniel, who saved Israel from Chushan Rishathaim; and then the events are recorded in regular succession of the succeeding Judges.

One of the most remarkable circumstances is, that this book is not more frequently referred to, but that I account for on this principle, that it was not regarded as an inspired work, as the books of Moses were. It makes no claim of that nature, Jasher declaring that he received his information from Caleb, his father, and Hezron, his grandfather, and from Azuba, his mother. This applies to the events which occurred before his own times. He afterwards records facts, as they arose, and states them with the simplicity and force of truth. They

agree, in general, with the statements in the books of Moses, and where they differ, it appears that he relates one series of facts, which are not narrated by Moses, although likely to have occurred at the same time. But it is remarkable, that Jasher does not ascribe the causes which gave birth to the events narrated by him, nor does he introduce his commands with the authority of a lawgiver, or proclaim them, as Moses did, with "Thus saith the Lord."

As a book of record, it appears to have truth without mixture of error, for its peculiar object and design. His name, Jasher, or the Upright, seems to stamp all his words and actions, and his counsels and laws are dictated by love to his countrymen, zeal for the honour of God, and a regard to the welfare of his people and nation, and their posterity, for whom he prays with ardour and affection to the time of his death.

I come now to the internal evidence, which verifies the authenticity of this work, and proves it the very genuine production of JASHER. He begins with the creation of the world, and, in a manner similar to Moses, relates the first production of this system. There is a perfect accordance in his account of the formation of light, which he says, shone forth from the firmament and enlightened the abyss; and the abyss fled before the face of the light, and divided between the light and the darkness; so that the face of nature was formed a second time. Then he proceeds to relate the formation of the sun and moon, which he says appeared in the firmament, the one to rule the light, and the other to rule the darkness. His account of the creation of man is truly sublime, and determines a point of the highest importance, the immortality of the soul. The question has long been agitated as to the sense in which the image of God, in which man was made, consisted. Here is a testimony of infinite value in the solution of this point, and worthy of being recorded in every language under the face of the heavens. It answers all the learned arguments of Doctor Warburton, in his divine legation of Moses, proving the great doctrine of the immortality of the soul, and a future state of rewards and punishments, to have been the undoubted judgment of the first patriarchs. The grandeur of this passage exceeds all the strains of human description. "And when all these things were fulfilled, behold JEHOVAH appeared in Eden, and created man, and made him to be an image of his own eternity." This passage proves that the first ages were fully convinced that man is formed for eternity, capable of immortality, and ordained for a never-ending existence, and, consequently, an heir of everlasting happiness or misery.

This doctrine established, all the offices of religion, morality, and humanity flow from it. Man must be an accountable being, and ordained by his glorious Creator to live for ever.

It is to be observed, that the fall of man, the promise of the woman's seed, and the early predictions of a deliverer, are not mentioned by Jasher; nor does he at all allude to any of the predictions in the books of Moses, excepting those of his song, in which the future fates of the tribes are predicted. Shall we determine this to have arisen from his knowledge, that these subjects were designed to be revealed by the Hebrew lawgiver, or from his ignorance of them? It appears to me, that his book is simply a work of record, and not of revelation or prediction, and that the divine mysteries were appointed to be made known by one greater than JASHER, his master and teacher.

The words of **ALCUIN**, which are to be read before
The Book of Jasher.

I* Alcuin, of Britain, was minded to travel into the Holy Land, and into the province of Persia, in search of holy things, and to see the wonders of the east. And I took unto me two companions, who learned with me, under able teachers and masters, all those languages which the people of the east speak; namely, Thomas of Malmesbury, and John of Huntingdon: and though we went as pilgrims, yet we took with us, silver, and gold, and riches. And when we came unto Bristol, we went into a ship bound for Rome, where we tarried six months, and learned more perfectly the old Persic language. Here the Pope blessed us, and said, Be of resolution, for the work ye have undertaken is of the Lord. From Rome we went to Naples, and tarried there three days, and from thence to Salerno, and from thence to Palermo. We went through Sicily, and took Melita in our way, where we abode six days. Hence we sailed for the Morea, visited Athens, Thessalonica, Constantinople, Philadelphia, Pergamus, Smyrna, Ephesus, Antioch, Coloss, Cappadocia, Alexandria, Damascus, Samaria, Bethel, and Jerusalem. Here we stayed six weeks, and the patriarch John received us kindly. And after having visited every part of the Holy Land, particularly Bethlehem, Hebron, Mount Sinai, and the like, we crossed an arm of the Persic Gulph at Bassora, and went in a boat to Bagdad, and from thence by land to Ardevil, and so to Casbin. Here we learnt from an Ascetic, that at the furthestmost part of Persia, in the city of Gazna, was a manuscript, wrote in Hebrew, of *The Book of Jasher*. He stimulated us to this undertaking, by observing, that *The Book of Jasher* was twice mentioned in the *Holy Bible*, and twice appealed to as a book of Testimony, and that it was extant before the writings which are now stiled, *The Books of Moses*. We immediately undertook the journey, going by the way of Ispahan, where we tarried three weeks; at length we arrived at Gazna. Here we laid aside the pilgrims' dress, and I hired a house, where we dwelt during our stay in this city, which was about three years.

I soon became acquainted with the keeper of the library which belongs to the community of this city, and enquired of him concerning *The Book of Jasher*, which the recluse at Casbin had told us of. He said, he had read of such a manuscript in the catalogue of the library, but had never seen it, though he had been custos for

* Alcuin lived in the eighth century. See Biography of Alcuinus Flaccus.

forty-five years, but that it was locked up in a chest, and kept among the pieces of antiquities in a separate part of the library. As I lived nigh the custos, so I soon became familiar in his family ; wherefore one day I took the opportunity to tell the custos, that I was very much obliged to him for the civilities he had shewn me, and particularly for the free access he had given me to the library ; at the same time I made him a present of a wedge of gold, in value fifty pounds, which he readily accepted. The next time I went to the library, I begged the favour I might see *The Book of Jasher*. He then immediately turned to the catalogue, where it was written, *The Volume of Jasher*. He conducted me into a long room, where he shewed me the chest it was in. He now informed me, that the key was in the hands of the city-treasurer, and that, upon proper application, I might see the volume. The custos introduced me to the treasurer, and related to him the substance of my request. He smiled, and said, he was not then at leisure, but he would consider of it. The next morning I sent John of Huntingdon to the treasurer with a wedge of gold of the value of one hundred pounds, by way of a present. By John, he sent me word, that he would meet me at the library about the ninth hour.

The time being come, the treasurer, the custos, and I, met at the library, when the treasurer having unlocked the chest, shewed me the book, which he called, *The Volume of Jasher*. And then he locked the chest, and gave the key to the custos, telling him, that it was permitted that I might read in the volume, as often as I would, in the presence of the custos, and in the library.

The Book of Jasher is a great scroll, in width, two feet three inches, and in length about nine feet. It is written in large characters, and exceeding beautiful. The paper on which it is written is for thickness the eighth of an inch. To the touch it seemed as soft as velvet, and to the eye as white as snow.

The ark is of Mosaic work, finely and curiously wrought, but time and accidents have very much defaced the external ornaments of it.

After this I had free access to *The Book of Jasher*. The first thing which commanded my attention was a little scroll, intituled, *The story of the Volume of Jasher*. This informed me, that Jasher was born in Goshen, in the land of Egypt, that he was the son of the mighty Caleb, who was general of the Hebrews, whilst Moses was with Jethro in Midian ; that on the embassy to Pharaoh, Jasher was appointed virger to Moses and Aaron, to bear the rod before them ; that as he always accompanied Moses, Jasher must have the greatest opportunities, of knowing the facts he hath recorded ; that from his great attachment to truth and uprightness, he early received his name, יָשָׁר ; that it was a common saying in Israel of him, *Behold the upright man* ; that Jasher wrote the volume which bears his name ; that the ark was made in his life-time ; that he put the volume therein with his own hands ; that Jazer, the eldest son of Jasher, kept it during his life ; that the princes of Judah successively were custoes thereof ; that the ark and book in the last Babylonish Captivity was taken from the Jews, and so fell into the hands of the Persian monarchs ; and that the city of Gazna had been the place of its residence for some hundred years.

This excited in me a great desire of reading the volume itself. The work was divided into thirty-seven parts or portions. One of these portions I read at this time, and so two every day until I had read the whole through. The custos then informed me, that there were in the two side boxes of the chest, certain notes or remarks, which some of the ancients had made on several passages contained in *The Book of Jasher*. These also I read.

I had now conceived a great desire of returning to England, with a transcript of *The Book of Jasher*, and of the Notes. Hereupon, I and my companions petitioned the commonalty of the city, that we might have the liberty of taking a transcript thereof. Here we were opposed by the treasurer, and our petition was rejected. Some months after this, it came into my mind, that we would petition to have leave to make an English translation of the said Book and Notes. Accordingly, one morning, having drawn up the petition, I sent John of Huntingdon with it, and a wedge of gold to the treasurer, with a letter desiring his opinion of it. After some days, I received for answer, that he had considered of my request, and would shortly relate the affair to the recorder of the city, and take his opinion thereon. Upon this, I despatched Thomas of Malmsbury with a wedge of gold, as a present to the recorder, together with a copy of the petition I had sent the treasurer. A few days after this, I received directions from the recorder, to attend the next court, and then our petition was granted. The order of court ran thus: "We grant unto Alcuin, and his two assistants, full liberty and power of translating out of the original Hebrew, *The Volume of Jasher*, with the Notes appertaining thereto, now contained in a chest in the public library of Gazna, into English, and into no other language whatever. And we likewise order, that the said English translation be made in the library, and in the presence of the custos at such times of the day as shall be most convenient to the said custos."

We soon began the translation in this manner: The manuscript was laid on a table, round which the custos and we sat. The custos opened the volume, and we read the first part or portion, and were permitted to set it down in the original; from whence we made each a translation, and then the custos burnt the part we had so transcribed. And this was the manner in which we proceeded, but the custos would not suffer us to carry home any of our papers.

In fine, after the labour of near a year and six months, we completed the translation of the Book and Notes, to which translation this is prefixed. The treasurer and custos burnt all other papers wrote by either of us, and took from us the translation we had made.

In this dilemma we remained for some time, till, by a proper application, and by petitioning the court a second time, after having been solemnly sworn, that we had taken no other copy, nor were possessed of any other papers, besides that translation of *The Volume of Jasher*, then before the court, the translation was delivered to us, with a charge, that we should not let any person take a copy thereof in any place we passed through in our return to England; which we solemnly promised; and then we were dismissed, with proper credentials for our return through Persia.

We now re-assumed the pilgrims' dress, and after a stay of almost three years, left Gazna, and came to Ispahan, from thence to Casbin, and so back to Rome. Here we stayed some time, and I had an audience of the Pope, when I related to his Holiness, that I had seen *The Book of Jasher*, spoken of in *Joshua*, and in the *Second Book of Samuel*. The holy father, who was now ninety-five years of age, turned to the places I referred to, and then cried out, *I have lived to the days of forgetfulness.*

After a short stay at Rome, we sailed for England, and landed at Bristol, after we had been absent seven years.

¶ THE BOOK OF J A S H E R .¹

I Heb. THE UP-
RIGHT.

CHAP. I.

1 *The formation of the world. 3 the light shineth. 7 the earth is productive. 11 the creation of man. 13 the birth of Cain and Abel. 17 of Enoch. 23 the death of Adam.*

A. M.
1.

^aHeb. the prime

^bHeb. the desert

^cHeb. the atoms

^dHeb. confused
mass of matter.

^eHeb. the flame,
or, burning.

^fHeb. the bot-
tomless pit.

1 **WHILST** it was the ^abe-
ginning, darkness over-
spread the face of ^bnature.

2 And the ^cether moved up-
on the surface of the ^dchaos.

3 And it came to pass, that
a great ^elight shone forth from
the firmament, and enlighten-
ed the ^fabyss.

4 And the abyss fled before
the face of the light, and di-
vided between the light and
the darkness.

5 So that the face of nature
was formed a second time.

6 And behold there appear-
ed in the firmament two great
lights: the one to rule the
light, and the other to rule
the darkness.

7 And the ^gground brought
1

^gHeb. the earth,
or, nature.

forth grass: the herb yielding
seed, and the fruit-tree after
his kind.

8 And every beast after his
kind: and every thing that
creepeth, after their kind.

9 And the waters brought
forth the moving creatures, af-
ter their kind.

10 And the ether brought
forth every winged fowl, after
his kind.

11 ¶ And when all these
things were ^bfulfilled, behold
ⁱJEHOVAH appeared in ^kEden,
and created man, and made
him to be an ^limage of his own
eternity.

12 And to him was given
power and ^mlordship over all
living creatures, and over eve-
ry herb, and over every tree
of the field.

13 And it came to pass, in
process of time, that the man
begat ⁿCain: and he also be-
gat his brother ^oAbel.

14 And Cain was the first
man who tilled the ground:

A. M. 15 And Abel was a feeder
61. of sheep.

^pHeb. peregrination.

^qHeb. the civilized.

^rHeb. the meanspirited.

^sHeb. the experienced.

16 And Cain went out and dwelt on the east of Eden, in the land of ^pNod.

17 And Cain begat ^qEnoch : then did men begin to build cities.

18 And unto ^rLamech was born ^sJabal : he was the first who taught men to build tents.

^tHeb. the emulous.

19 And unto Lamech also was born ^tTubal-Cain : he was the first who wrought in brass and iron, and who builded up the ^uharp and the organ.

^vHeb. all kinds of music.

^wHeb. the regular.

^xHeb. the despondent.

20 And ^xSeth begat ^yEnos : then began men by name to call on the Lord.

^zHeb. the flesh.

21 And all the days of the life of ^zAdam, there was rest, and peace, and quiet, unto all men.

22 For they listened unto all things, concerning which he spake unto them.

930.

23 And Adam lived nine hundred and thirty years, and he died.

CHAP. II.

1 *The birth of Noah.* 2 *he first buildeth the ship.* 4 *all the people speak one language.* 8 *Noah dies.* 10 *Peleg is born.* 11 *he divideth the land.* 13 *Nimrod opposeth Peleg, and the people are dispersed.*

1056.

1 **A**ND Lamech, the son of ^aMethuselah, begat ^bNoah.

^cHeb. the soil of death.

^dHeb. rest.

2 And Noah was the first who builded the ship : and who sojourned upon the great waters.

3 And he was the father of those who go down into the deep, and who occupy themselves in much water.

4 At this time the whole was of one ^elip, and of one word : and there was peace unto all.

5 ¶ And it came to pass, that men were multiplied before the face of the earth ; and they became mighty, and men of renown.

6 And ^fJaphet, and his sons, and his sons' sons, said unto Noah, Behold, thou art our ^gfather ! permit us, we beseech thee, seeing the land is not able to bear us, our children, and our herds, and our flocks, to pass over and dwell in the plain of ^hShinar.

ⁱHeb. the persuader.

^jHeb. ruler.

^kHeb. vigilance.

7 And Noah said, Be it unto you, as ye list : only this thing I command ye, that ye worship the God of your fathers, observing all things which ye have received.

8 And Noah lived nine hundred and thirty years : and he died.

2010.

9 And from these men of renown rose up great nations, by whom the isles of the ^lGentiles were peopled.

^mOr, strangers.

10 ¶ And it came to pass, in process of time, that there stood up among men, ⁿPeleg, the son of ^oEber.

1729.

^pHeb. the divider.

^qHeb. the wrathful.

A. M.
1750.

11 It was he who first invented the hedge and ditch, the wall and bulwark: and who by lot divided the lands among his brethren.

^k Heb. the headstrong.

12 And ^k Nimrod said, Wherefore should we obey Peleg: and why should we forsake the customs of our forefathers.

13 And the people hardened unto him: for Nimrod was a mighty hunter, and a man of renown.

14 And there arose a great strife among the people: and they were scattered upon the earth.

15 And Nimrod builded him cities: and he gathered together the scattered of the land.

CHAP. III.

1 *Abraham and Sarah. 4 he leaves Canaan. 6 goes into Egypt. 8 his riches. 11 removes to Mamre, 16 circumcises himself. 20 Sarah dissuades him from slaying his son Isaac. 39 his death. 41 Isaac dies. 43 a famine in Canaan. 48 Pharaoh sends for Jacob into Egypt. 51 Jacob goes. 53 his death*

2093.

^a Heb. the multitude.
^b Heb. the discontented.
^c Heb. the fruitful.

1 AND ^aAbraham was the son of ^bTerah: and ^cSarah was the wife of Abraham.
2 And Abraham said, Lo, the nations are full of confusion: and the inhabitants of the earth have perverted their ways.

3 Thus saith Abraham, the son of Terah, I have spied iniquity among the Gentiles, and evil among the sons of Cain.

A. M.
2098.

4 And Abraham departed from his brethren, and passed through the land of ^dCanaan, he and his wife; and he pitched his tent on the plain of ^eMoriah.

^d Heb. delightful.

^e Heb. morose.

5 And as he journeyed still on to the south, he heard a voice saying unto him, ^fI will make of thee a great nation.

^f Heb. Out of thee shall come forth a great nation.

6 ¶ And Abraham went into ^gEgypt: and he abode there, and found favour with ^hPharaoh.

^g Heb. bondage.

^h Heb. the unwilling.

7 And Pharaoh gave unto Abraham, sheep and oxen: and he-asses and she-asses, and men-servants and maid-servants.

8 And Abraham was rich in cattle, and in men-servants and maid-servants, and in silver and gold: and Abraham went up out of Egypt, even unto ⁱBethel did he go.

ⁱ Heb. house of God.

9 And the herds and possessions of Abraham increased exceedingly: so that the ^kland was not able to bear them.

^k Heb. spot.

10 Insomuch that the servants of Abraham, and the servants of ^lLot strove together.

^l Heb. the distressed.

11 Then Abraham arose, his wife, his servants, and his flocks: and he removed his tent, and he came and dwelt

A. M. in the plain of ^mMamre, nigh
2103. unto ⁿHebron.

^mHeb. rebellion
ⁿHeb. charm.

12 ¶ Now so it came to pass, that Sarah, Abraham's wife, had not brought forth her first-born.

13 And Abraham complained, and said ; Unto me thou hast not given an heir : lo ! the stranger, born in my house, shall rule after me.

14 And Abraham heard a voice saying unto him, Circumcise the flesh of thy foreskin, for therefore art thou barren.

15 And Abraham did so : and he went in unto Sarah, and she conceived, and bare a son, and he called his name ^oIsaac.

[•]Heb. the laugh

16 And Abraham was ninety and nine years old, when he circumcised the flesh of his foreskin.

17 And Abraham removed from the plains of Mamre, and went and dwelt between ^pKadesh and ^qShur.

^pHeb. holy.
^qHeb. strong.

18 And Abraham was stricken in years, and his strength failed him.

19 And when Isaac was twenty and five years old, Abraham heard a voice, saying, Take thy son, and slay him, and offer him up a burnt-offering in the land wherein he was born.

20 And Sarah spake unto Abraham, and said, The holy voice hath not so spoken ; for remember thou the words

of that voice which said unto thee, I will make of thee a great nation. A. M. 2144.

21 ¶ And Abraham rose up early in the morning, and saddled his ass, and took two of his young men with him, and Isaac his son, and clave the wood for the burnt-offering, and rose up, and went unto the place of which God had told him.

22 Then on the third day Abraham lifted up his eyes, and saw the place afar off.

23 And Abraham said unto his young men, Abide ye here with the ass ; and I and the lad will go yonder and worship, and come again to you.

24 And Abraham took the wood of the burnt-offering, and laid it upon Isaac his son ; and he took the fire in his hand, and a knife ; and they went both of them together.

25 And Isaac spake unto Abraham his father, and said, My father : and he said, Here am I, my son. And he said, Behold the fire and the wood : but where is the lamb for a burnt-offering ?

26 And Abraham said, My son, God will provide himself a lamb for a burnt-offering : so they went both of them together.

27 And they came to the place which God had told him of ; and Abraham built an altar there, and laid the wood in order, and bound Isaac his son,

A. M. and laid him on the altar upon the wood.

28 And Abraham stretched forth his hand, and took the knife to slay his son.

29 And the angel of the Lord called unto him out of heaven, and said, Abraham, Abraham: and he said, Here am I.

30 And he said, Lay not thy hand upon the lad, neither do thou any thing unto him: for now I know that thou fearest God, seeing thou hast not withheld thy son, thine only son from me.

31 And Abraham lifted up his eyes, and looked, and behold behind him a ram caught in a thicket by his horns: and Abraham went and took the ram, and offered him up for a burnt-offering in the stead of his son.

32 And Abraham called the name of that place Jehovah-jireh: as it is said to this day, In the mount of the Lord it shall be seen.

33 ¶ And the angel of the Lord called unto Abraham out of heaven the second time,

34 And said, By myself have I sworn, saith the Lord, for because thou hast done this thing, and hast not withheld thy son, thine only son:

35 That in blessing I will bless thee, and in multiplying I will multiply thy seed as the stars of the heaven, and as the sand which is upon the sea

shore; and thy seed shall possess the gate of his enemies.

36 And in thy seed shall all the nations of the earth be blessed; because thou hast obeyed my voice.

37 So Abraham returned unto his young men, and they rose up and went together to Beer-sheba; and Abraham dwelt at Beer-sheba.]

38 And Abraham repented him of the evil he purposed to do unto his son, his only son, Isaac.

39 And Abraham died, and was buried; even in the place where Sarah his wife was buried, there was he buried also.

40 ¶ And Isaac begat [†] Jacob of [†] Rebecca his wife.

41 And it came to pass, in process of time, that Isaac was gathered unto his fathers: and Jacob increased in men-servants, and in maid-servants, and in sheep, and in oxen, in he-asses and in she-asses, and in silver and in gold.

42 And Jacob dwelt in the land of Canaan.

43 ¶ And it came to pass, after many days were fulfilled, that there was a great famine in that land.

44 And [†] Joseph, one of the sons of Jacob, in those days ministered in Egypt.

45 And Jacob said unto his sons, Arise, go down into Egypt, and buy ye corn for us, your wives, and your little ones, that we and they may live, and not die.

A. M.
2144.

2190.

[†]Heb. the supplanter.
[†]Heb. the glutted.

2292.

[†]Heb. the added

A. M.
2299.

46 And they saddled their asses, and they journeyed into Egypt, and they hastened to do according to all that Jacob had spoken, for the famine was sore in the land.

47 And Joseph interceded for his brethren: and Pharaoh said unto the sons of Jacob, Lade ye your beasts, and return ye into the land of Canaan.

48 And say ye unto your father, Thus saith Pharaoh, king of Egypt, Come unto me, ye, your wives, your sons, and your daughters, and your little ones; and ye shall dwell in the land of Egypt, and ye shall eat of the ^ufat of the land.

^u *Heb.* the best food.

49 And they returned into Canaan; and they told unto Jacob, their father, all those things which Pharaoh had commanded them.

50 And Jacob accepted the offer that Pharaoh had made him, because the famine was sore in the land of Canaan.

51 And Jacob delayed not, but came down, he, and his family, into Egypt.

52 And Pharaoh gave him the land of ^{*}Goshen to dwell in, which was near.

^{*} *Heb.* nigh.

2315. 53 And Jacob died in the land of Goshen, in the land of Egypt.

CHAP. IV.

2 *The Israelites increase.* 4 *They want to go into Canaan.* 6 *Pharaoh will not let them go.* 13 *Zaphn's counsel.* 20 *The Israelites are taxed.*

1 **AND** the children of Israel sojourned in the land of Egypt many years after the death of Jacob their father.

A. M.
2335.

2 And it came to pass in process of time, that they increased abundantly, and they waxed mighty; and the land of Goshen was filled with them.

3 And they sent messengers unto Pharaoh, king of Egypt, saying:

4 The land in which we dwell is not able to bear us, our children, our flocks, and our cattle; wherefore we pray thee, suffer us to return into the land of Canaan from whence we came out.

5 And Pharaoh said unto his servants, even unto the wise men of his kingdom:

6 How is this, that the children of Jacob say unto us, Suffer us to return into the land of Canaan from whence we came out?

7 Are they not the subjects of the Egyptians? have we not bought them with a price?

8 And the wise men answered Pharaoh, and said: When the famine was sore in the land of Canaan, thy father's father gave unto Jacob and his children the land of Goshen for to dwell in, and with the fat of Egypt were they sustained.

9 Now, know, O king, in those days, thy father's father advanced one Joseph, an ^aHe-

^a *Heb.* the alien.

A. M. 2375. brew, who was the son of ^bJacob.

^b Heb. the exactor.

10 And he was a stranger in the land of Egypt; and he bought Egypt with a price.

^c Heb. rebel.

11 And Pharaoh said, have we nourished them, and shall they now turn up the heel against us?

^d Chald. the hard.

12 And ^d Zapnah stood forth and said: Hearken unto me, O Pharaoh, king of Egypt, let thy servant speak, let the words of my mouth find favour before thee.

13 And Zapnah said, The children of Jacob are become a great people for number; and they increase daily, and they thirst after dominion.

^e Heb. go in.

14 And peradventure it shall come to pass that they shall join themselves unto our enemies, and fight against us, and slay us, and take away from us our inheritance.

15 Send therefore unto Goshen, even unto the children of Jacob, saying, Ye shall number the males according to your tribes, from him that is able to go forth to battle, even to the hoary head; the females also ye shall number, ye shall number the children of Jacob both males and females.

16 And Pharaoh did so: and Pharaoh said: Behold the sons of Jacob are more in number than my own people.

17 Up now, let us set over them task-masters; for the

land of Egypt groaneth, it is heavy laden, it bendeth under its burthen.

18 Now the land of Egypt gave of its increase unto Pharaoh, the fifth part thereof.

19 And Pharaoh said: Of the increase of the land of Egypt shall ye every year bring into my storehouses, the tenth part thereof.

20 And of the increase of the land of Goshen shall the children of Jacob bring unto Pithom and Raamses year by year the tenth part thereof, without waste shall they bring it.

21 So the Egyptians were eased of their burthens; and the children of Israel were grievously oppressed.

22 ¶ All these things which I Jasher have written, received I from ^bCaleb my father, yea, even from ⁱHezron my father's father, and from ^kAzuba who travailed with me.

^f Heb. accomplished.
^g Heb. threatening.

^h Heb. the hearty.
ⁱ Heb. the arrow of joy.
^k Heb. the chaste.

CHAP. V.

4 Pharaoh again oppresses the Israelites. 6 He orders the males of the Hebrews to be killed. 8 Moses is born. 13 Pharaoh's daughter intercedeth for the Hebrew males. 14 Moses becomes her son.

1 **THESE** are the words of Jasher, the son of Caleb, by Azuba.

2385.

2 And it came to pass in process of time, that the children of Israel were multiplied exceedingly.

^l Heb. prevailing.

A. M.
2395.

3 And they said one unto the other, Shall we bow down and serve the Egyptians, seeing we are become more, and mightier than they.

4 And the sayings of the children of Israel were told unto Pharaoh ; and he said, They are wanton, they lift up the heel ; set over them more task-masters.

5 And they did so ; but it availed not : for the more the house of Jacob was afflicted, the more they increased and multiplied.

6 And Pharaoh was greatly vexed, and he said, This people will eat us up ; wherefore ye shall slay every male of the Hebrews that cometh out of the womb, in the day that he is born shall he surely die.

7 Now when the daughter of Pharaoh heard of these things she sought to turn away the evil imaginations of her father against the males of the children of Israel.

8 And it came to pass that ^bMoses the son of ^cAmram, by ^dJochebed his wife, was the first male that came out of the womb after the decree of Pharaoh, king of Egypt, to slay all the males of the Hebrews.

9 And Jochebed the mother of Moses, with ^eMiriam his sister, came unto Pharaoh's daughter ; and Jochebed said, Behold here the son of thy handmaid !

^a Heb. drawn from the water.
^c Heb. the robust.

^d Heb. the comely.

^e Heb. the praiser.

10 And Pharaoh's daughter said, What wist you ?

11 And they said, Thy father hath commanded that this infant be slain ; yea, and that all the Hebrew males as soon as they are born be slain also.

12 And Pharaoh's daughter said, Give unto me the child. And they did so. And she said, This shall be my son.

13 And it came to pass, that the wrath of Pharaoh was turned away from slaying the males of the Hebrews.

14 And the child Moses grew and increased in stature, and was learned in all the magic of the Egyptians.

CHAP. VI.

3 *Moses leaves Egypt, and goes into Goshen.* 5 *Proposes to his brethren to shake off the Egyptian yoke.* 8 *Pharaoh hears of this.* 10 *Moses flies into Midiam.* 12 *Caleb invents the bow.* 14 *Moses comes into Goshen.* 18 *The Hebrews reprove Moses.* 21 *Their burdens.*

1 **AND** it came to pass in those days, that Pharaoh died ; and the daughter of Pharaoh died also.

2 And there arose up a king who knew not Moses ; neither regarded he the children of Israel.

3 ¶ When all these things were accomplished, Moses came up out of Egypt ; and he sojourned with his brethren in the land of Goshen.

A. M.
2433.

2473.

A. M.
2473.

4 And Moses saw the oppression of the Egyptians, wherewith they oppressed his brethren : and it grieved him to the heart.

5 And he said unto his brethren, Let us shake off the yoke of the Egyptians : let us cast away their bondage from us.

6 We be more in number than the people of Egypt, the lesser should always bow down and serve the greater : as it is written in the prophecy of Jacob our father.

7 The fifth part of the increase of our lands will we not give the Egyptians : neither will we serve Pharaoh any longer.

8 Now when it was told Pharaoh, That Moses stirred up the people : and made them uneasy under their burthens ;

9 That Pharaoh sent messengers unto Moses, but they found him not : for he had fled out of the land of Goshen from the face of Pharaoh, into the land of ^aMidian.

10 And Moses abode with ^bJethro, the prince of Midian : and Moses took to wife, ^cZipporah, the daughter of Jethro. And he dwelt with him thirty and nine years.

11 ¶ And it came to pass after Moses had fled from the face of Pharaoh, and had left his brethren in the land of Goshen,

12 That Caleb, the son of Hezron, invented the bow : for he was a mighty man, and a man of renown.

13 He taught the children of Jacob to shoot with the bow : he learnt his brethren to prepare themselves for the battle.

14 ¶ And Moses was eighty years old : and it was told unto him, saying, Pharaoh who sought thy life is dead.

15 And Moses sent ^eGer-shom his son before his face : and Moses came, he and his wife, into the land of Goshen, even to his brethren did he come.

16 And Moses spake unto the children of Israel, and said, Whilst I sojourned in the land of Midian, I heard a voice saying unto me : Arise, go up unto thy brethren, for I will by thy hand bring back the children of Jacob, and they shall possess the land of Canaan from whence they came out.

17 And the elders of the children of Israel knew not Moses : neither regarded they the words of his mouth.

18 And they said unto Moses, Thou hast polluted the house of Jacob : for lo ! thou hast taken to wife one who is not an Israelite.

19 And Moses said : 'I have sinned.

20 And Moses put away Zipporah and her children :

A. M.
2488.

2512.

^eHeb. the peregrine.

^a Heb. judging.

^bHeb. the excellent.

^c Heb. the cause of contention.

2488.

^fOr, I have deviated.

A. M.
2513.

and they returned unto Jethro
in the land of Midian.

21 ¶ Then stood forth Caleb
and said, The Egyptians have
laid on us great weights, bur-
thens that we are not able to
bear, and the necks of the
people are sore through the
pressure thereof;

22 Let us therefore hearken
unto the words of Moses; per-
adventure salvation is on his
right hand.

23 For this fifty years have
we served with great toil the
Egyptians, with the sweat of
our brows we have borne hea-
vy burthens, and they have not
touched them with the little
finger.

24 And Moses said, Trust
in the Lord God of your fa-
thers, for he will bring you
up out of the affliction where-
with the Egyptians oppress
you, unto the land of our fa-
ther Jacob, unto a land flow-
ing with milk and honey.

25 A land whereon my feet
have stood, and mine eyes
have seen :

26 That ye may be a great
people, a people whose num-
ber may be as the stars in the
firmament, and as the sand
upon the sea-shore.

27 Wherefore I will go unto
Pharaoh, peradventure he will
let the children of Israel go up
out of the land of Egypt unto
the land of Canaan, even unto
the heritage of our fore-
fathers.

CHAP. VII.

A. M.
2513.

2 *Moses goes unto Pharaoh. 6 De-
sires that he might lead the He-
brews into the land of Canaan. 10
Pharaoh straightens the Hebrews.
16 They are angry with Moses
and Aaron.*

1 **AND** it came to pass, when
the people saw all the
signs and the wonders which
Moses wrought in the sight of
all Israel, in the presence of
the congregation, that they
believed.

2 And Moses said unto the
elders of Israel, Send also with
me ^aAaron, my brother, that he
may be a spokesman for me,
and for you.

3 And also Jasher, the son
of Caleb, that he may bear
the rod before us.

4 And the elders of Israel
said unto Aaron, and unto Ja-
sher, Go, and may ye, and all
the children of Jacob, find fa-
vour in the sight of Pharaoh,
king of Egypt.

5 Then went Moses unto
Pharaoh, and said, Fourscore
and one years have we served
thee, yea, with rigorous ser-
vitude have bowed down our
necks unto thee.

6 And behold the land of
Goshen is not able to bear us ;
the number of thy servants in-
crease daily, wherefore, let us
now pass through the land of
Egypt unto the wilderness, that
we may go and sojourn in the
land of Canaan, from whence
we came out.

^aHeb. the elo-
quent.

A. M. 7 For behold, O Pharaoh!
2513. thus hath said our forefathers,
Abraham, Isaac, and Jacob:
The land of Canaan shall be
thine inheritance, it shall be
the dwelling of your sons, your
sons' sons, and your posterity
for ever.

8 And Pharaoh said, Are
ye come hither to mock me?
I regard not the prophecies of
your fathers, neither will I let
the children of Israel go up
out of the land.

9 The house of Jacob are
the nurture of the Egyptians:
wherefore do ye, Moses and
Aaron, dissuade the people
from their duty.

10 ¶ Then Pharaoh called
unto him the task-masters,
whom he had set over the
children of Israel, and he said
unto them, Ye are negligent;
bring ye unto my treasure-ci-
ties, Pithom and Raamses, the
fifth of the increase of the land
of Goshen, by the sixth day,
ye shall bring it to the full tale
thereof.

11 And the task-masters did
as Pharaoh had commanded;
and they pressed sore the offi-
cers of the children of Israel.

12 And they were straight-
ened for time, because the
commandment of Pharaoh was
urgent.

13 And they cried unto Pha-
raoh, and said, Give unto thy
servants other six days, so shall
we be able to obey thy voice,
O Pharaoh!

14 But Pharaoh answered,
I will not, hasten therefore,
and bring of the increase of
your lands, your flocks, and
your herds, even the fifth part
of them shall ye bring unto
Pithom and Raamses.

15 And as they departed,
the officers of the children of
Israel met Moses and Aaron
in the way, and they said unto
them,

16 Pharaoh will not hear us,
neither regardeth he the words
of our forefathers, neither hath
the words of you, Moses and
Aaron, any power over him, it
had been better for us you had
never gone forth and spake
unto him.

17 And Moses was angry
because of the sayings of the
officers of the children of Is-
rael, and Moses said,

18 Wherefore should Pha-
raoh evil intreat the children of
Israel?

CHAP. VIII.

2 *Moses persuades the people to go
out of Egypt. 8 Goes again to
Pharaoh. 12 Moses's rod. 17
Becomes a serpent. 23 Turns the
river into blood. 25 The river
brings forth frogs. 30 Pharaoh
will not let the Hebrews go.*

1 **AND** it came to pass on
the morrow, that Moses
assembled together the sons of
^aReuben, ^bSimeon, ^cLevi,
^dGershon, ^eKohath, ^fMerari,
^gIzhar, ^hUzziel, and ⁱKorah,

ⁱHeb. bald.

A. M.
2513. even the heads of the families
of the children of Israel.

2 And Moses said unto them,
The heart of Pharaoh is set
against us, and it cometh to
pass, when we speak unto him
to go three days' journey into
the wilderness, that he oppress-
eth us sore.

3 And now, O elders of Is-
rael, ye this day bear me wit-
ness, how that our fathers,
even Abraham, Isaac, and Jacob,
dwelt in the land of Canaan,
and possessed the same.

4 And they said unto us, It
is a land that floweth with milk
and honey.

5 And this we ourselves
know, that the compass of it
will receive us, our wives, our
children, and our flocks.

6 Remember also the words
which Jacob spake unto us,
when as yet he was with us:
Ye shall go up and dwell in the
land of your fathers.

7 And the heads of the fa-
milies of the children of Israel
said unto Moses: Go unto Pha-
raoh in our names, in the names
of the elders of the house of
Jacob.

8 ¶ And Moses went unto
Pharaoh: and Pharaoh was
walking in his garden, by the
river side, and his wise men
were with him.

9 And Moses said unto Pha-
raoh, Let us, we pray thee,
go through the land of Egypt
unto the wilderness, that we
may serve the Lord.

10 And Pharaoh answered
and said: Surely to make a
nation of thy people, that thou
mayest rule over them, art
thou come! From whence art
thou?

11 And Moses spake unto
Pharaoh, and said, The Lord
hath sent me: out of Midian
am I come.

12 And Pharaoh said unto
Moses, What meanest that rod
that is borne before you, Moses,
and before you, Aaron?

13 And Moses spake out
aloud unto Pharaoh, and said,
Thus saith the Lord: It is the
wand and token of my power,
whereby you, and all the
Egyptians shall know, that I
am sent unto you.

14 And Pharaoh was seated
under a pavilion, he and his
wise men: and Moses, Aaron,
and Jasher, stood there also.

15 And Pharaoh said, Is
that the rod of which I have
been told, that thou, Moses,
didst throw it upon the earth,
before the elders of Israel, and
it became as a serpent?

16 And Moses said, O Pha-
raoh! it came to pass as thou
hast spoken.

17 And the heart of Pha-
raoh was as salt: and Moses
took the rod, and he threw it
down before Pharaoh, and be-
fore his servants, and the rod
became as a serpent.

18 Then the wise men, the
magicians, and sorcerers of
Egypt, threw down their rods

A. M.
2513.

A. M. before Pharaoh : and their rods
2513. became as serpents.

19 But the rod of Moses was as a serpent, when the rods of the magicians and sorcerers were not so.

20 ¶ And it came to pass on the morning of the next day, as Pharaoh walked by the river side, Mosesspake unto Pharaoh, and said,

21 Lo! this will I do; I will smite this river, which thou seest, with this rod, and the water thereof shall become as blood, and all the moving creatures therein shall die, and the river shall stink.

22 And Pharaoh said unto Moses, If thou canst do this thing, thou art able to be a lawgiver to, and a ruler over thy people.

23 And Moses smote the river with his rod, and the river was as blood : and the magicians did so.

24 And Pharaoh laughed at Moses.

25 ¶ And it came to pass on the morrow, that Moses smote the river, and it brought forth frogs in abundance, so that they crawled upon the banks thereof.

26 And the magicians and sorcerers of Egypt with their rods smote the river, and it brought forth frogs.

27 And Pharaoh spake unto Moses, and said : Where are now thy wonders, seeing my servants do the like?

28 And Moses went out from before the face of Pharaoh.

29 ¶ And Moses returned into the land of Goshen, and he called for the elders of Israel : and he told them all that he had done in Egypt.

30 And that Pharaoh would not let them from their burthens to go through the land of Egypt into the land of Canaan, as our fathers had promised unto us, and unto our seed for ever.

CHAP. IX.

1 Caleb proposes to fight their way through Egypt, 9 which is told Pharaoh, 11 who is willing to let them go on certain conditions. 19 the Hebrews sell their possessions to the Egyptians, 23 whom they spoil. 26 the Hebrews go out armed.

1 **AND** in those days it came to pass, that Caleb, the son of Hezron, stood up before the assembly of the children of Israel, and he said unto them :

2 Now know ye, that Pharaoh and his servants will not let us go peaceably through Egypt unto the promised land.

3 Are the Egyptians to compare with us? Can they bend the bow? Can they set forth the battle?

4 Are not they backsliders? Are they not weak? Do not they delight in ease and in soft raiment?

A. M.
2513.

A. M. 5 Wherefore thus saith Caleb, the son of Hezron: Up, 2513. let us take the bow, and on the morrow let us enter the land of Egypt to pass through it to the land of our father Jacob.

6 And let no man do hurt unto the Egyptians, unless Pharaoh and his servants should seek to slay us.

7 And the counsel of Caleb was pleasing unto all the disciples of the bow, who were the followers of the son of Hezron.

8 And Moses said, Caleb, the son of Hezron, hath well spoken: By midnight on the morrow, will we and all the host of Israel assay to go up out of the land of Egypt.

9 ¶ And it came to pass on the morrow, that these things were told unto Pharaoh, and unto those that were with him.

10 And the wise men of Egypt said unto Pharaoh, Let the Hebrews go, lest peradventure they slay us, our wives, and our children, and take away the land from us.

11 Then Pharaoh called for Moses, and for all the elders of the children of Israel, and he said unto them, I will let you, your wives, and your children go: only your flocks and your herds, they you shall leave behind; so shall you go up out of the land.

12 And Moses said, How then shall the people be sustained as they pass through

Egypt, and when they come into the wilderness, if our flocks and our herds go not with us.

13 And Pharaoh said, As you pass through the land of Egypt, I will command my servants, and they shall lodge you by night, and provide food for you by day.

14 Wherefore shall ye leave your flocks, and your herds, and the increase of your lands, behind ye: then shall ye pass through the land of Egypt, and no one shall fight against you.

15 Seeing if you lead your flocks and your herds into the wilderness, there must they perish in the desert.

16 And Moses went forth from Pharaoh, and spake unto the children of Israel, saying, Pharaoh will let us go, our wives and our children, but our flocks and our herds, and the increase of our lands must we leave behind us in the land of Goshen. And the people were moved.

17 ¶ Then spake Moses and the elders of Israel unto Pharaoh, and said, Thy people shall buy our flocks, and our herds, and the increase of our lands with a price, that we may have wherewith to purchase necessities of thy servants, the Egyptians, as we pass through thy land.

18 And Pharaoh said, Now will I let the people go, only

A. M. 2513.

A. M.
2513. this shall you observe, That my people shall give you for your flocks, and for your cattle, and for the increase of your lands, such pieces of money as they shall think proper, and you shall sell unto them all your possessions.

19 And Moses and the elders sold unto the Egyptians on a set-day, even all that they had, their cattle, their houses, the fruit of the ground, yea, all the worth of the children of Israel.

20 Only Miriam begged of the Egyptians a male and a female of every flock, and of every herd, and of every fowl, and of every beast.

21 ¶ And it came to pass, that the flocks, and the herds, and the possessions of the children of Israel were so great in number, that the Egyptians lacked money to make good the purchase thereof.

22 And the Egyptians said unto their wives, and unto their daughters, give unto us your ear-rings, your jewels of silver, and your jewels of gold, that we may pay unto the Hebrews that which we owe unto them.

23 And the price thereof spoiled the Egyptians.

24 ¶ And it came to pass, when the sale was over, that Moses hastened the children of Israel to go up out of the land of Egypt.

25 And the trumpet sounded about midnight, and the chil-

dren of Israel hastened with great haste to go up out of Egypt.

26 And Caleb spake in the ears of the people, and he said, Let every man take his bow in his hand; so shall Israel go up out of the land of bondage with an out-stretched arm.

27 And they did so: and great fear fell upon all the Egyptians.

CHAP. X.

1 *The Hebrews deceive the Egyptians.* 5 *Pharaoh pursues them.* 11 *The Israelites murmur against Moses.* 15 *The people send Jasher to Pharaoh.* 30 *Resolve to pass the Red Sea.*

1 NOW it came to pass on the morrow, that the Egyptians began to count the flocks, and the herds, and the possessions of the children of Israel, which they had sold unto the Egyptians, and behold there lacked in the tale thereof.

2 Then the people of Egypt cried unto Pharaoh, and said: We have done wrong in letting the children of Jacob our nurture go away from serving thee and thy people.

3 For lo! the Hebrews have sold unto us more in number of their flocks and their herds, and their possessions than they had.

4 And Pharaoh said, Arise, let us pursue after them, per-

A. M.
2513.

A. M.
2513. adventure we shall overtake them before they have gotten into the wilderness.

5 And Pharaoh and the Egyptians pursued after the children of Israel : even unto ^aEthem in the wilderness, at the extremity of the Red Sea.

^a Heb. strong.

6 ¶ Now it came to pass, when Moses perceived that Pharaoh pursued after the Israelites by the way of the wilderness, that he turned off, and he and all Israel came unto ^bBaal-zephon, which is on this side of the Red Sea.

^b Heb. secreted.

7 And it was told unto Pharaoh, that Moses and the Hebrews had fled by the way of Baal-zephon.

8 Then said Pharaoh unto his captains, and unto the rulers of his host : Lo ! the host of Egypt waxeth slack, let us remain here for some time, and let us send forth spies ; for behold ! the deceivers cannot escape out of our hands.

9 And Moses sent messengers unto Pharaoh, saying, Wherefore follow ye after us ? Are not the tribes of Israel in number more than the people of Egypt ? Let us go and serve the Lord in the wilderness, we pray thee !

10 And Pharaoh answered those that were sent unto him, and said, Because ye have deceived Pharaoh and his servants : because ye have spoiled the Egyptians. And Pharaoh was exceeding wroth.

11 And the children of Israel cried unto Moses, and said, Wherefore hast thou attempted thus vainly to bring us up out of Egypt, Surely, as sheep appointed for the slaughter are we come !

12 ¶ Then stood forth Caleb and said, Let every man take his bow in his hand : for it is far better that a few of us die, than that we, our wives, our children, our gold, and our silver, should fall a sacrifice unto the uncircumcised.

13 Remember how the Egyptians evilly intreated us : let us not forget the burthens which we have borne.

14 And the people cried out with one voice, We will die here : or we will slay the Egyptians.

15 Then Moses, Aaron, and the elders of Israel, sent Jasher unto Pharaoh, saying :

16 Behold, thus saith Moses, Aaron, and all the elders of Israel, On the morrow, by the break of day, we will restore unto thy people, if so be it shall be found that we have done wrong unto the people of Egypt, thy servants.

17 And Pharaoh said unto Jasher, Say thou unto Moses, unto Aaron, and unto the elders of the children of Israel, that, I, Pharaoh, will abide in this place, and all the host of the Egyptians.

18 But if on the morrow, Moses, Aaron, and the elders

A. M.
2513.

A. M. of Israel shall delay to perform
2513. the covenant they have this day made, then will I and all the host of Egypt follow after them, and slay them: none shall escape; no, not one.

19 And when Jasher had heard all that Pharaoh spake unto him: then returned he unto Moses, unto Aaron, and unto the elders of Israel, and he said unto them;

20 Thus saith Pharaoh, I, Pharaoh, will abide in this place, and all the host of the Egyptians.

21 But if on the morrow, Moses, Aaron, and the elders of Israel shall delay to perform the covenant they have this day made, then will I and all the host of Egypt follow after them, and slay them: none shall escape; no, not one.

22 And the people feared greatly; because they had spoiled the Egyptians.

23 ¶ Then Moses called unto the people, and said, Behold! there is left unto us but one way, whereby we may escape the anger of Pharaoh: and of those that are with him.

24 It is now midnight, and by the time of the cock-crow the Red Sea will be dried up: and peradventure we may cross over dry-shod into the wilderness.

25 And it shall come to pass, that if Pharaoh and his host shall assay to come after

us, the waters shall return and overwhelm them.

26 Then Moses commanded Aaron, saying, About the mid of night, ye shall pass through the Red Sea, you and the people who lie on the bank thereof: ye shall pass through, until all have passed through.

27 And after that, I and the people that shall remain with me will pass through the Red Sea.

28 And Pharaoh and the Egyptians shall not know of our departure, until the hindermost have entered the Red Sea.

29 And the people were between two walls.

30 And they said one unto another: It is better for us to be drowned in the Red Sea than to be slain by the Egyptians.

CHAP XI.

1 The Israelites pass the Red Sea.
6 Pharaoh pursues them to the banks of the Red Sea. 10 Miriam and the virgins dance. 16 Pharaoh follows them into the Red Sea. 19 The sea returns and drowns the Egyptians. 23 Moses' song.

1 AND it came to pass about the seventh hour of that night, in which the children of Israel were encamped on the Red Sea, that Aaron with the people began to pass through the waters.

2 And there went into the Red Sea of the children of Israel, six hundred thousand men on foot, besides women and

A. M.
2513.

Heb. the fury.

A. M. children: and few fell by the
2513. way.

3 And the sun and the moon saw all that was done.

4 And it came to pass on the morrow, that it was told unto Pharaoh, and unto those that were with him, saying:

5 Behold the children of Israel are fled: behold even now they cross the Red Sea.

6 And Pharaoh and his host pursued after them, by the way of Baal-zephon: even to the banks of the Red Sea did they pursue them.

7 And the Egyptians said one to another, We cannot go in after the Hebrews, because of our chariots and our horsemen: for the way is not prepared for them.

8 And moreover should we pass through the sea: peradventure the Israelites shall slay us in the wilderness.

9 And Israel escaped that day out of the hands of the Egyptians: and Israel saw the Egyptians stay on the banks of the sea.

10 ¶ And Miriam said in the presence of Moses, and of Aaron, and of all the elders of Israel:

11 Behold! the waters are as a wall between us and the Egyptians: so that they cannot come nigh unto us, to destroy us.

12 And Miriam said, Sound the trumpet: bring forth the timbrel, lead up the dance.

13 And Miriam, the sister of Moses, with the virgins her companions, danced before the elders of Israel: and they leaped for joy, and they rejoiced exceedingly.

14 [¶ And the Egyptians pursued, and went in after them to the midst of the sea, *even* all Pharaoh's horses, his chariots, and his horsemen.

15 And it came to pass, that in the morning watch the Lord looked unto the host of the Egyptians through the pillar of fire and of the cloud, and troubled the host of the Egyptians,

16 And took off their chariot wheels, that they drave them heavily: so that the Egyptians said, Let us flee from the face of Israel; for the Lord fighteth for them against the Egyptians.

17 ¶ And the Lord said unto Moses, Stretch out thy hand over the sea, that the waters may come again upon the Egyptians, upon their chariots, and upon their horsemen.

18 And Moses stretched forth his hand over the sea, and the sea returned to his strength when the morning appeared; and the Egyptians fled against it; and the Lord overthrew the Egyptians in the midst of the sea.

19 And the waters returned, and covered the chariots, and the horsemen, and all the host of Pharaoh that came into the sea after them; there remained not so much as one of them.

A. M.
2513.

A. M.
2513.

20 But the children of Israel walked upon dry land in the midst of the sea; and the waters were a wall unto them on their right hand, and on their left.

21 Thus the Lord saved Israel that day out of the hand of the Egyptians; and Israel saw the Egyptians dead upon the sea shore.

22 And Israel saw that great work which the Lord did upon the Egyptians: and the people feared the Lord, and believed the Lord, and his servant Moses.

23 ¶ Then sang Moses and the children of Israel this song unto the Lord, and spake, saying, I will sing unto the Lord, for he hath triumphed gloriously: the horse and his rider hath he thrown into the sea.

24 The Lord is my strength and song, and he is become my salvation: he is my God, and I will prepare him an habitation; my father's God, and I will exalt him.

25 The Lord is a man of war: the Lord is his name.

26 Pharaoh's chariots and his host hath he cast into the sea: his chosen captains also are drowned in the Red Sea.

27 The depths have covered them: they sank into the bottom as a stone.

28 Thy right hand, O Lord, is become glorious in power: thy right hand, O Lord, hath dashed in pieces the enemy.

29 And in the greatness of thine excellency thou hast overthrown them that rose up against thee: thou sendest forth thy wrath, which consumed them as stubble.

30 And with the blast of thy nostrils the waters were gathered together, the floods stood upright as an heap, and the depths were congealed in the heart of the sea.

31 The enemy said, I will pursue, I will overtake, I will divide the spoil; my lust shall be satisfied upon them; I will draw my sword, my hand shall destroy them.

32 Thou didst blow with thy wind, the sea covered them: they sank as lead in the mighty waters.

33 Who is like unto thee, O Lord, among the gods? who is like thee, glorious in holiness, fearful in praises, doing wonders.

34 Thou stretchedst out thy right hand, the earth swallowed them.

35 Thou in thy mercy hast led forth the people which thou hast redeemed: thou hast guided them in thy strength unto thy holy habitation.

36 The people shall hear, and be afraid: sorrow shall take hold on the inhabitants of Palestina.

37 Then the dukes of Edom shall be amazed; the mighty men of Moab, trembling, shall take hold upon them; all the

A. M.
2513.

A. M. inhabitants of Canaan shall
2513. melt away.

38 Fear and dread shall fall upon them ; by the greatness of thine arm they shall be as still as a stone ; till thy people pass over, O Lord, till the people pass over, which thou hast purchased.

39 Thou shalt bring them in, and plant them in the mountain of thine inheritance, in the place, O Lord, which thou hast made for thee to dwell in ; in the Sanctuary, O Lord, which thy hands have established.

40 The Lord shall reign for ever and ever.

41 For the horse of Pharaoh went in with his chariots, and with his horsemen into the sea, and the Lord brought again the waters of the sea upon them ; but the children of Israel went on dry land in the midst of the sea.]

1 *The Israelites go three days' journey from the Red Sea. 4 They faint for want of water. 8 Are relieved by the observation of Miriam. 22 She excites them to till the ground. 34 The place is called Elyma.*

1 **A**ND it came to pass, after the children of Israel had rested for seven days, that Moses said unto the elders :

2 Let us go three days' journey into the wilderness, lest

we become an eye-sore unto the Egyptians.

3 And the children of Israel, even all the people, journeyed.

4 And it came to pass on the third day, on the evening thereof, that the people fainted for want of water.

5 And they cried unto Moses, and they said, Give us to drink, lest we die.

6 And Moses was vexed, because of the thirst of the children of Israel.

7 And Moses said unto Miriam, his sister, Lo ! what shall I do, lest the people faint for want of water.

8 And Miriam said unto Moses, Go thou with me, and I will shew unto thee a well of water, which lieth eastward of the camp of the children of Israel : a spring which oozeth under the shadow of a tree.

9 And Moses went with his sister ; and Aaron, and Jasher went also : and they came unto the tree.

10 And when Moses saw the oozing, he said unto Miriam, What is this to the people of Israel.

11 And Miriam said, Dig : and lo the oozing became as a rivulet.

12 And Moses, Aaron, and Jasher were astonished.

13 Then Miriam said, Follow the stream.

14 And they came unto a place, where there were twelve wells of water.

A. M.
2513.

A. M.
2513.

15 And the people sojourneyed there : and the elders of Israel said unto Miriam,

16 Behold ! thou hast refreshed the tribes of Jacob, when they fainted for want of water ; thou hast led us into the valley of the palm-trees.

17 Say now unto us, that which shall be pleasing unto thee ; and that will we do.

18 And Miriam said, Remember now the words of Pharaoh when he spake unto us, Why covet ye to take with you your flocks, and your cattle, for they cannot be sustained in the wilderness.

19 Nevertheless, O my brethren, unto this day have I sustained the male and the female of every flock, and of every herd, and of every fowl, which I brought out of the land of Goshen.

20 And this day do I deliver them unto the children of Israel, them, and their young ones, that they may increase and multiply, and be food for this people.

21 For behold ! the place that we are in is barren, and how long we shall dwell therein is not known unto man.

22 Up then, and let us till the ground : let us cultivate the land, that we perish not.

23 Let us bend the bow, let us slay the wild beasts of the field : peradventure it shall come to pass, that the earth shall bring forth of its increase,

and the beasts of the field shall become food for us, and for our children.

24 Then answered the elders of the children of Israel, and said :

25 All that Miriam hath spoken, that will we do.

26 Only how shall be sustained, we, our wives, and our children, until the earth give of its increase.

27 And Miriam said, With the silver and gold ye brought out of Egypt, send and buy of the nations, on this side ^{• Heb.} Jordan, oxen, and cattle, and corn, for you, and your children.

the
stream.

28 Moreover, as I journeyed on to the eastward, lo, I saw trees bearing fruit, and an herb of the field, of which I took, and did eat.

29 ¶ And it came to pass on the morrow, that certain men of Israel arose, and went eastward, and found all things even as Miriam had spoken unto them.

30 And they brought of the fruit thereof, and the people did eat daily, and were satisfied.

31 And they sent chosen men into ^{• Heb.} Rephidim, and they bought oxen and sheep, and corn and oil, and wine.

the val-
ley.

32 Then arose Caleb, with all those who shot with the bow, and they slew the beasts of the field, even the wild beasts thereof, according as Miriam had commanded them.

A. M.

2524.

* Heb. invigorated.

33 And the place thereof was called 'Elyma, because the people were there refreshed with water, and because Miriam had chosen it for the sojourning of the children of Israel.

34 And in process of time the children of Israel spread themselves from Elyma, even to Dopkah, unto the borders of the valley of Rephidim, and unto the land of Nebaioth.

35 And they dug ditches, and they planted trees, and they sowed corn.

36 But they built them no houses; under tents in the open fields did they dwell.

CHAP. XIII.

1 *Moses sends spies into Rephidim.*

4 *Sends Caleb to fight against Rephidim.* 6 *Miriam her proposal to Moses.* 10 *Joshua pushes the Amalekites out of the land.*

2532.

1 **N**OW it came to pass, that Moses spake unto the elders of Israel, and he said, Behold, I have sent out spies into Rephidim, to search out the land.

* Or, the lick.

2 And lo 'Amalek dwelleth there, and the children of Amalek have built them houses in Rephidim; they have gotten also flocks, and much cattle and possessions.

3 Up, let us drive them out of the land, that we may inherit it: for to drive out, and to take possession of the lands

of the Gentiles are we come up out of the land of Egypt, out of the house of bondage.

4 And Moses said unto Caleb, Go thou and ^bJoshua, with the chosen men of the bow, up unto Rephidim, and fight against Amalek.

5 Behold they are but as a handful of men; Israel shall swallow them up.

6 Then spake Miriam unto Moses, and said, Send messengers unto Amalek, peradventure, when he understandeth the intentions of the children of Israel, he will go quietly out of the land.

7 For it is now upwards of four hundred years since our fathers dwelt in Canaan: these people know us not, neither regard they the claim of us their children,

8 Say therefore unto the inhabitants of Rephidim: I will buy with a price all the flocks, the cattle, the herds, and possessions ye are possessed of.

9 That they may have silver and gold, to buy food and raiment in the lands wherein they shall be strangers.

10 And Moses sent Jasher unto Amalek, saying, Rephidim have I chosen for the habitation of the children of Israel; depart thou from thence, for to-morrow before the sun setteth will I possess it.

11 Only this thing will I do, if it shall come to pass, that you, and your people go

A. M.

2532.

^b Heb. the deliverer.

A. M.
2532. quietly out of the valley: then will I buy with a price all the flocks, the cattle, the herds and possessions ye are possessed of.

12 And Amalek said unto Jasher, What meaneth Moses the stranger! Have I done any wrong unto the descendants of Jacob? Will they take from me that which is my own, the land of the Amalekites?

13 And Jasher returned unto Moses, and unto the elders of Israel: and told them all that Amalek had spoken.

14 And Moses called unto Joshua, and he commanded him, saying: Go out, fight against Amalek, smite them with the edge of the sword.

15 For they have rebelled against us; they have not in the least hearkened unto the words of Jacob.

16 ¶ And Caleb and Joshua, with chosen men of the host of Israel, went up against Rephidim; and they pushed the Amalekites out of that land.

CHAP. XIV.

1 *Jethro brings Zipporah to Moses.*
4 *Who meets Jethro at mount Horeb.* 10 *Jethro advises Moses to appoint judges and rulers over the people, and* 32 *to give them laws and ordinances.*

1 **AND** it came to pass, when Jethro saw that Moses, his son-in-law, was be-

come a prince unto the Hebrews, that he had brought them up out of the land of Egypt into the wilderness, and that he had driven out the Amalekites, and possessed himself of their city, and all the country of Rephidim:

2 That he went out to meet Moses: and there went with him Zipporah and her two children whom Moses had sent back.

3 And Jethro came, and his daughter, and her two children: and they encamped at the foot of mount ^aHoreb.

^aHeb. drought.

4 And Moses departed from the wilderness of ^bZin: to meet his father-in-law at mount Horeb.

^bHeb. ebony.

5 And Jethro said unto Moses, Behold I am thy father-in-law: this, my daughter Zipporah, thou knowest is thy wife, and these are thy two children: take them unto thyself, as thou hast covenanted with me.

6 And Moses and Jethro were friends.

7 ¶ And it came to pass, that Moses told Jethro all that he had done in Egypt: that he had led the children of Israel through the Red Sea, and had brought them into the wilderness.

8 And this I say unto you, Behold, lift up your eyes, for the number of the children of Jacob exceed the number of thy people: and their dwell-

A. M.
2533.

A. M.
2533.

ings are from Elyma, even until thou comest into the valley of Rephidim.

9 And Jethro said, Thou hast spoken truly: thy people are a great people, and their number are without tale.

10 Now therefore hearken thou unto the voice of Jethro thy father: Write thou with a pen all those things which I shall now say unto thee.

11 For lo at this time thou judgeth the people daily: which thing is too heavy for thee, thou art not able to perform it alone.

12 Set over all Israel, rulers of thousands, and rulers of hundreds, and rulers of fifties.

13 And let them judge the people at all seasons appointed to their charge: they shall judge of all the small matters; the great ones shall the people bring unto thee.

14 So shall the weight thereof sit easier on thy shoulders, and the people shall have thee and thy office in greater esteem.

15 For it will so fall out, that all those whom thou shalt make judges over the people, will hearken unto all things which thou shalt speak unto them.

16 And it shall come to pass, after thou hast done all this, that thou shalt teach them laws and ordinances, that thou mayest direct them in the way that thy people should walk, and in the duties that they must do.

24

17 Thou shalt say unto the children of Jacob, even before the elders thereof:

18 Ye shall set apart every seventh day, for a day of rest: ye shall not work therein, neither thou, nor thy wife, nor thy son, nor thy daughter, nor thy man-servant, nor thy maid-servant, nor thy cattle:

19 For on that day, ye shall rest from your labour: ye shall bring offerings of your cattle, your flocks, and your herds, and of your fowls.

20 And the priests shall slay them before the congregation: and the flesh thereof shall ye roast with fire, and the people shall eat thereof.

21 And on that day shall the priests rehearse in the ears of all Israel, all the wonders which ye have received from your forefathers: the mighty things which thou hast done in the land of Egypt: and all those laws and ordinances, thou shalt appoint unto this people to observe.

22 Thou shalt say unto the children of Israel:

23 Ye shall not use Tera-
phim, neither shall ye worship any one of the gods of the nations: the Lord, the maker of heaven and earth, shall ye only worship.

24 Ye shall not speak evil of the maker of all things.

25 Ye shall reverence the hoary head.

26 Ye shall not smite any

A. M.
2533.

A. M.
2533. one man so that he die : he that does, shall die the death, and his name shall be forgotten.

27 Ye shall not evil speak of, nor slander any one of the children of Jacob.

28 Ye shall not covet that which appertaineth unto another.

29 Ye shall not do after the abominations of the Egyptians: your sons shall not uncover the nakedness of your daughters.

30 Ye shall not uncover the nakedness of a woman during her uncleanness.

31 Ye shall not uncover the nakedness of the virgin betrothed : neither shalt thou go in unto a woman who is the wife of another.

32 ¶ And Jethro said unto Moses : Moreover, thou shalt teach the children of Israel such other statutes and ordinances, which thou, and the judges thou shalt appoint, shall find needful.

33 And Jethro returned into Midian : and Moses departed for the valley of Rephidim.

CHAP. XV.

1 *Moses attempts to appoint judges ; 4 is opposed by Miriam. 7 He is angry with her. 8 Miriam is imprisoned ; 9 on which the people rise and demand her. 11 She is set at liberty, and the people rejoice. 15 Miriam dies, and the people mourn. 16 Her character.*

2534.

1 AND it came to pass, that Moses assembled the el-

25

ders and all the children of Israel together, nigh unto mount ^a Sinai.

2 And Moses said unto the people : Choose ye out from among you, seventy men, according to your tribes, that they may judge for you.

3 That there may be rulers of thousands, rulers of hundreds, and rulers of fifties.

4 And Miriam arose and said, Shall Jethro instruct the Hebrews? Are the children of Jacob without understanding?

5 Are the customs of the Midianites to be brought in among us? Are we to forsake the good old paths in which our fathers, even Abraham, Isaac, and Jacob, have trod.

6 And the voice of the tribes of the congregation were on the side of Miriam.

7 And the anger of Moses was greatly kindled against Miriam : and Moses sought to cut Miriam off from the congregation.

8 And Moses hid Miriam for seven days ; and the congregation wotted not what was come unto her.

9 And the people of Israel gathered themselves together unto Moses, and said :

10 Bring forth unto us Miriam, our counsellor, for according to all she hath spoken we will do.

11 Then Moses brought forth Miriam, and presented her before the congregation. E

A. M.
2534.

^a *Heb. watchful.*

A. M.
2534.

12 And when the people saw Miriam that she was well, they rejoiced greatly, with exceeding great joy.

13 And all the days of Miriam, the children of Israel did according to all the words of Abraham, of Isaac, and of Jacob.

14 ¶ And Miriam went and dwelt in Kadesh.

2539.

15 And Miriam died there. And the children of Israel mourned for Miriam forty days: neither did any man go forth of his dwelling.

16 ¶ And the lamentation was great; for after Miriam arose up no one like unto her of the daughters of Jacob: no, not even unto this day.

17 And the fame thereof went out into all the lands of the Gentiles; yea, throughout all Canaan. And the nations feared greatly.

CHAP. XVI.

2 *Moses takes Jethro's advice. 5 He builds an altar. 6 Twelve young men chosen; 7 who slay the offerings. 11 Seventy elders chosen. 13 Moses and the seventy elders go up mount Sinai.*

2540.

1 **A**ND it came to pass after the lamentation for Miriam was over, that Jethro came unto mount Sinai, and he spake unto Moses, saying:

2 Thus saith Jethro, the priest of Midian, Thou shalt appoint rulers of the people, according to all that which I

have spoken unto you at the foot of Horeb.

3 And Moses hearkened unto the words of Jethro, his father-in-law: and he obeyed his voice in all that he had commanded him.

4 ¶ And Moses said unto ^aNadab and ^bAbihu, the sons of Aaron: Go to now, and build ye an altar, even as Jethro hath dictated unto you.

^aHeb. popular.
^bHeb. willed.

5 And Nadab and Abihu builded an altar nigh unto mount Sinai, even as Jethro had dictated: and they set up twelve pillars, according to the number of the tribes of the children of Israel.

6 And Moses chose out from among the congregation, twelve young men; men of strength and renown.

7 And Moses commanded them, saying: Behold the people have brought oxen and sheep for a peace-offering, slay them before the altar, and roast the flesh thereof with fire, that the people may eat of the fat thereof, and be satisfied.

8 And the young men, the priests, did so: and the congregation did eat before Sinai, and the people were well pleased.

9 And Moses stood forth and said, The work is great, and the number of the children of Israel, the Lord, the God of our fathers, hath multiplied exceedingly: and he

A. M. will increase them daily, even
2540. until their number shall be as
the stars of the firmament.

10 It is meet therefore that
ye choose out from among you,
seventy elders, that they may
assist me, and Aaron, and Jo-
shua, and Nadab, and Abihu,
the servants of the Lord.

11 And the congregation did
as Moses had spoken.

12 ¶ And in those days it
came to pass, that Moses spake
unto Aaron, and unto ^c Hur,
saying :

13 Stay ye with the people
here, and judge them, for lo,
I shall go up on the mount
with Joshua, Nadab, and Abi-
hu, and the elders ; and we
shall stay there forty days and
forty nights.

14 ¶ And I, Jasher, the son
of Caleb, bare the rod before
Moses and Joshua, and the se-
venty elders of the people.

CHAP. XVII.

1 *Jethro meets Moses on mount Si-
nai. 5 Jethro's counsel, concern-
ing building the tabernacle.*
9 *Institution of the priesthood.*
10 *Aaron's family is chosen.*
11 *Holy vestments appointed.*
12 *The ark.* 14 *The people mur-
mur.* 21 *Moses, his proposal.*
22 *Nadab and Abihu only dis-
sent.* 24 *Moses descends from
the mount.* 28 *The tribe of Levi
made holy.*

1 NOW it came to pass on
the morrow, that Jethro
met Moses, Joshua, Nadab,

Abihu, and the seventy elders,
on the mount ; and the trumpet
sounded.

2 And Jethro said unto
Moses, Thou hast done well :
in that thou hast chosen out
wise men to be counsellors
unto thee.

3 And Jethro bowed him-
self before Moses, Joshua, Na-
dab, and Abihu, and before
the seventy elders.

4 ¶ And on the second
day, about the ninth hour
thereof, the trumpet sounded,
and Jethro, Moses' father-in-
law, stood forth and said :

5 Behold, thus saith Jethro,
the son of ^a Esau, the priest of
Midian : It is meet, O Israel !
that ye build a tabernacle for
the God, the maker of heaven
and of earth ; even for the
God of Abraham, the God
of Isaac, and the God of Ja-
cob, that ye may serve the
Lord, who hath delivered ye
out of the hands of the Egyp-
tians, and from the dangers of
the Red Sea.

6 Then Moses, Joshua, Na-
dab, and Abihu, and the se-
venty elders, answered Jethro,
and said :

7 The Lord, our God, hath
been merciful unto us : and
the light of his countenance
hath shone upon us.

8 Then Jethro instructed
Moses in what manner, and in
what form, and with what ma-
terials he should build the taber-
nacle of the Lord of Hosts.

A. M.
2543.

^c Heb. clothed

^a Heb. the hairy

A. M.
2543.

9 And thus saith Jethro: When ye have builded the tabernacle, ye shall appoint priests to minister before the Lord: according to the tribes of the children of Israel, shall ye appoint.

10 And Moses, Joshua, Nadab, and Abihu, and the seventy elders, said: Let Aaron and his sons be set apart as sanctified unto the Lord.

11 Then said Jethro unto Moses, Thou shalt put upon Aaron and his sons, the garments which thou hast seen, that they may be a holy priesthood unto the Lord, the God of Israel.

12 Moreover, ye shall build an ark unto the Lord, wherein ye shall lay up before the Lord the testimony; even the writings of the laws and ordinances which ye shall receive.

13 And it came to pass, when the forty days were fulfilled, wherein Jethro communed with Moses, Joshua, and the seventy elders, that all the statutes and the ordinances to be observed, were written in a book of remembrance.

14 ¶ And it came to pass, whilst Moses, Joshua, Nadab, and Abihu, and the seventy elders, tarried in the mount, that the people murmured, and they said one among another,

15 Whether is it better, that we be the subjects of the Egyptians whom we know:

Up, let us return thither, we, our wives, and our children: or become the slaves, and walk after the laws and customs of Jethro, the Midianite, whom we know not?

16 And the people spake unto Aaron, saying: Moses, who, by his cunning, hath brought us up out of the land of Egypt, now seeketh to make himself a king and a ruler over us.

17 And Aaron answered the people, and he said: On the morning of the third day, ye shall assemble according to your tribes, and I will do all that which ye shall then speak unto me.

18 ¶ Then Aaron sent messengers unto Moses, Joshua, Nadab, and Abihu, and the seventy elders, on the mount, and they spake before them, saying:

19 Thus saith Aaron, thy brother, because ye tarry on the mount, the people murmur, and say, Whether is it better, that we be the subjects of the Egyptians whom we know: Up, let us return thither, we, our wives, and our children; or become the slaves, and walk after the laws and customs of Jethro, the Midianite, whom we know not?

20 And when Moses had heard these things he was exceeding wroth.

21 ¶ Then Moses, after he had sent away the messengers,

A. M.
2543.

A. M. spake unto Joshua, Nadab,
2543. and Abihu, and the seventy
elders :

22 Behold, thus it behoveth us to say unto the people : We have seen the Lord in the mount, we have ate and drank in his presence, and the words which he hath spoken unto us, they are those which we now deliver unto you.

23 And the saying of Moses was pleasing unto Joshua, and unto the seventy elders : but unto Nadab and Abihu it was not pleasing.

24 And Nadab and Abihu were cut off from the assembly : and they hastened into the camp of the children of Israel, which lay at the foot of mount Sinai.

25 ¶ And it came to pass on the fortieth morning after Moses, Joshua, and the seventy elders had gone up on the mount, that the trumpet sounded : and Moses, Joshua, and the seventy elders, assayed to come down from the mount.

26 And as they descended, Joshua spake unto Moses, and said, Lo, Nadab and Abihu have joined themselves unto the people : and the voice of the people seemeth as the voice of rebellion.

27 And it was told unto Moses, and unto Joshua, saying, The voice of the people is the voice of shouting, and of great joy : lo, Aaron, Hur,

Nadab, and Abihu stand up before the people.

28 ¶ Then Moses called for Aaron, and he said unto him, The Lord hath chosen thee, and thy sons, to minister before the Lord, in the tabernacle which ye shall build.

29 Separate therefore yourselves, thou, and thy sons, even all the tribe of Levi, that ye may be a holy priesthood unto the Lord.

30 And Moses came down from the mount : he, and Joshua, and the seventy elders of the people.

CHAP. XVIII.

3 *Nadab and Abihu rebel.* 6 *The Levites slay three thousand of the people.* 8 *The people repent.* 12 *They build a tabernacle,* 18 *and an altar.* 19 *Aaron and his sons are to be clothed.*

1 **AND** it came to pass on the morrow, that Moses stood before the people, at the entrance into the camp, and he said :

2 Who is on the Lord's side ? Let him come forth of the camp.

3 And Aaron, and all the sons of the tribe of Levi, except Nadab and Abihu, came forth of the camp, and stood before Moses.

4 And Joshua said unto Moses : Lo, the people have spoken well of Nadab and Abihu ; and they have eaten, and they have drank, and be-

A. M.
2543.

A. M. hold, now they are risen up to
2543. play.

5 ¶ Then said Moses unto the sons of Levi, even unto all the tribe thereof: Gird on each man his sword, and go ye through the camp, and slay ye the froward, even every man his friend.

6 And they did so: and they slew Nadab and Abihu, the sons of Aaron, with three thousand of the people.

7 But Aaron held his peace.

8 ¶ And it came to pass, when the slaughter was over, that the children of Israel humbled themselves, and they said :

9 All that the ^aLord shall say unto us, that will we do.

10 And the people sent messengers unto Moses, and unto Aaron, and unto Joshua, and unto the seventy elders, saying:

11 We have done wrong; we have sinned; intreat ye for us.

12 And Moses said, Thus saith the Lord, Ye shall build a tabernacle unto my name, wherein my honour shall dwell.

^b Heb. according to the pattern of the Lord.

^c Heb. the builder.

13 ^b Bezaliel and ^c Aholiab are endued with understanding, in all manner of workmanship, in cunning works, in works of gold, and in works of silver: lo, they shall build the tabernacle according to all that I shall say unto them.

14 And Bezaliel and Aholiab built the tabernacle for the congregation; with the offerings of the children of Israel, even of gold, of silver, of brass, and of fine linen.

15 ¶ This is my sanctuary: and I will dwell among my people from this day forth, for evermore.

16 ¶ And it came to pass, that Moses went into the tabernacle, in the sight of all the children of Israel.

17 And Moses came forth to the door of the tabernacle, and spake before the congregation, and said:

18 Thus saith the Lord, Ye shall build an altar before the door of the tabernacle: and ye shall offer thereon burnt-offerings, and lambs, and kids of a year old: and Aaron and his sons shall minister before me.

19 ¶ And thus shalt thou clothe Aaron: Thou shalt put upon Aaron, the coat, the ephod, the breast-plate, the mitre, and the crown.

20 And on his sons, even on all the males of the tribe of Levi, who are able to stand before the congregation, ye shall put on coats, girdles, and bonnets.

21 Thus shall ye consecrate Aaron and his sons: and they shall minister before me for ever.

A. M.
2543.

A. M.
2544.

CHAP. XIX.

1 Moses reads the law before the congregation. 17 They promise to observe the ordinances and statutes.

1 **AND** it came to pass on the morrow, that Moses read before the congregation, out of the book of the covenant, the statutes and ordinances which the Lord had appointed unto the children of Israel to observe.

2 And Moses said, Thus saith the Lord, the God of Abraham, the God of Isaac, and the God of Jacob: I am the Lord, thy God, with my outstretched arm have I delivered ye from the bondage of the Egyptians; ye shall worship no other god beside me.

3 The likeness of the Lord, thy God, thou shalt not make, either in gold, in silver, in brass, or in wood: thou shalt not use Teraphim in thy dwellings, saith the Lord.

4 Sacred and holy shall my name be, in the mouths of this congregation: and in the mouths of your sons, and your sons' sons, throughout all generations.

5 Ye shall set apart every seventh day, for a day of rest: thou shalt not work therein, neither thou, thy wife, nor thy son, nor thy daughter, nor thy man-servant, nor thy maid-servant, nor thy cattle, nor the

stranger that shall be within thy gate.

6 For on that day, thou shalt rest from thy labour: and on that day thou shalt bring offerings of thy cattle, of thy flocks, of thy herds, and of thy fowls.

7 And the priests shall slay them before the congregation: and the flesh thereof shall they roast with fire.

8 And on that day shall the priest rehearse in the ears of all Israel, all the wonders done in the land of Egypt, and in the Red Sea.

9 Thou shalt reverence the hoary head.

10 Thou shalt not smite any man, so that he die: if thou dost, thou shalt die the death, and thy name shall be forgotten.

11 Thou shalt not speak evil of, nor slander any of the children of Jacob.

12 Thou shalt not covet that which is the property of another.

13 Thou shalt not do after the abominations of the Egyptians: thou shalt not uncover the nakedness of thy sister, she is thy own flesh.

14 Thou shalt not uncover the nakedness of a woman during her uncleanness.

15 Thou shalt not uncover the nakedness of the virgin betrothed: neither shalt thou go in unto a woman who is the wife of another.

A. M.
2544.

A. M.
2544.

16 ¶ And when Moses had made an end of speaking, all the people cried out with one voice:

17 All these things which the Lord hath commanded, will we observe to do: we, and our sons, and our sons' sons, for ever.

CHAP XX.

2 *The ark is built.* 5 *The mercy-seat.* 6 *The table.* 7 *The vessels.* 8 *The incense-altar.* 11 *The hangings.* 16 *Priests to be without blemish.*

2545.

1 AND Moses said, Behold, thus saith the Lord, Ye shall build an ark unto the Lord, and he shall put the ark into the tabernacle of the congregation: and he shall lay up therein the words of the testimony, which I have read this day in the ears of all Israel, for a perpetual memorial of the covenant which the Lord hath made with the posterity of Jacob.

2 ¶ And Bezaliel and Aholiab made the ark according to the pattern they had received of the Lord, on mount Sinai.

3 And the ark was of Shittim-wood: two cubits and a half was the length of it, and a cubit and a half the breadth of it, and the height a cubit and a half.

4 And they made four rings of gold, two on each side, and they made two staves also:

that the priests might bear the ark of the testimony before the people.

5 Then made they the mercy-seat of pure gold, and the cherubims at each corner thereof: of pure gold did they make them.

6 The table of Shittim-wood made they, and they overlaid it with gold: and they cast four rings of gold, and they made staves to bear the table.

7 And the vessels of the table, the dishes, the spoons, the bowls, the covers, the candlesticks, the six branches thereof; and the seven lamps, the snuffers, and snuff-dishes, of beaten gold were they made.

8 The incense-altar of Shittim-wood was four-square, and the horns thereof of the same, overlaid with pure gold, with rings and with staves to bear it withal.

9 Of Shittim-wood also did they make the altar of the burnt-offering, and the horns thereof, and the staves thereof: and with brass did they overlay it.

10 The pots, the shovels, the basons, the fire-pans, the grates, the four rings, the laver, the twenty pillars with their sockets: all of brass did they make them.

11 And of fine linen were made the hangings of the tabernacle, and the hangings of the gate of the court were of

A. M.
2545.

A. M.
2545.

blue, of scarlet, and of purple, wrought in needle-work, by the virgins of Israel: according to the pattern Moses had received of the Lord, on the mount.

12 For they brought unto Moses, day by day, all the work which they had done: and Moses looked on the same, that it might be done according to all that the Lord had commanded him.

13 ¶ And Moses said, Thus hath the Lord spoken, Thou shalt put the ark of the covenant, the table, the mercy-seat, with all the furniture thereof, into the tabernacle of the congregation.

14 Before the door of the tabernacle shalt thou build the altar, with the laver, and with the hangings thereof: and with oil shalt thou sanctify them.

15 Aaron, and his sons, shalt thou bring before the door of the tabernacle of the congregation: and thou shalt wash them with water, and thou shalt anoint them with oil.

16 Only this thing shalt thou observe, All the males of the tribe of Levi, without blemish, shalt thou consecrate, saith the Lord: the eunuch, whether he be born so, or made so, shalt thou not consecrate.

17 And the burnt-offerings, and the sacrifices, and the offerings of kids, and of goats, and of sheep, and of oxen,

and of purple, and of scarlet, and of fine linen, which the people offered, appertained unto the Levites, even as the Lord had commanded Moses.

18 ¶ Thus did Moses in the sight of all Israel: even according to the commandment of the Lord, did he.

CHAP. XXI.

1 *Korah, his rebellion.* 11 *He and his company destroyed by fire.*

13 *The people fear greatly.* 15 *The priesthood established.*

1 **AND** when Korah, ^a Dathan, ^b Abiram, and ^c On, with two hundred and fifty of the children of Israel, men famous in the congregation, and men of renown, saw all that was done,

2 They said one to the other: This thing which Moses and Aaron have done, is not of the Lord.

3 For behold, henceforward shall the tribe of Levi live on the fat of the land, they shall be clothed in soft raiment; they shall fare sumptuously every day; the plough and the axe shall they be strangers to: and lo! we, and our sons, and our sons' sons, shall they gall with the yoke that this day they have brought upon us.

4 And they gathered themselves together unto Moses, and they said unto him:

5 What thing is this that thou hast done? Are not all

A. M.
2545.

^a *Heb. the rites.*
^b *Heb. the father of deceit.*
^c *Heb. iniquity.*

A. M. the people holy? Wherefore
2545. hast thou separated the tribe of
Levi, to be sanctified unto the
Lord?

6 Hast thou not brought us
into the wilderness? Should
not all help to till the ground?
yea, the hands of the people
are not equal to the task: and
shalt thou take away every
tenth man from the labour.

7 And Moses said, To-
morrow shall the Lord answer
the blasphemies you now utter:
and shew who is holy, and
who is not holy.

8 ¶ And it came to pass
on the morrow, that Korah,
Dathan, and Abiram, with the
two hundred and fifty men of
the children of Israel, assembled
themselves together before the
door of the tabernacle of the
congregation.

9 And Moses spake unto
them, and said, Behold, O
Korah, Dathan, and Abiram,
thus saith the Lord, Ye fight
against me, even against the
God of your fathers, the God
of Abraham, the God of Isaac,
and the God of Jacob, who
hath brought you up out of the
land of Egypt, out of the house
of bondage.

10 And Moses said unto the
congregation: Separate your-
selves from Korah and his com-
pany, peradventure the Lord
will do a new thing.

11 And they did so: and
Korah and his company stood
before the tabernacle.

12 And Moses commanded
the Levites, saying: Up now,
slay Korah, Dathan, and Abi-
ram, with those that are with
them, with fire, even as the
Lord hath spoken unto me.

13 And Korah, Dathan, and
Abiram, with the two hundred
and fifty men of the children
of Israel, perished by fire be-
fore the door of the tabernacle
of the Lord.

14 And great fear fell on all
the congregation: and they
hastened every man to his tent.

15 ¶ Thus did Moses esta-
blish the priesthood in his bro-
ther's house, in the tribe of
Levi: and he committed unto
them, the keeping of the ta-
bernacle, of the ark, and of
the book of the testimony, ac-
cording to all that the Lord
had commanded him.

CHAP. XXII.

1 *Israel enjoys peace.* 4 *They defile
themselves with the women of Mi-
dian and Moab.*

1 **A**FTER these days it came
to pass, that the people
obeyed the voice of the Lord,
by the mouth of his servant
Moses.

2 And there was peace
throughout all the tribes of
the children of Israel.

3 For no man opened his
mouth against Zipporah: nor
against the women of Midian,
her companions, nor against
those of Moab.

A. M.
2545.

2546.

A. M.
2546. 4 ¶ And in process of time, the women of Midian, and the women of Moab, became conversant with the sons of Israel.

5 During all the days of Jethro, Moses' father-in-law, and all the days of Zipporah, Moses' wife.

6 And the children of Israel defiled themselves with the women of Midian, and with the women of Moab: and they learned to walk after all their abominations.

CHAP. XXIII.

2 *Aaron reads out of the book of the covenant divers laws concerning trespasses, and their atonements. 18 The passover and feasts instituted; 23 Shelomite, his blasphemy. 26 He is stoned.*

2547. 1 **AND** it came to pass after many days, that Moses assembled the congregation of the children of Israel together; even all the tribes thereof, to the door of the tabernacle of the Lord.

2 And he brought forth the book of the covenant, and Aaron read it before the congregation, in the sight of all Israel.

3 And Aaron said, Thus saith the Lord, by his servant Moses: If any man bring an offering unto the Lord, he shall bring it voluntarily; it shall be a male without blemish, of his flock, of his cattle, and of the prime of his fowl.

4 He shall bring the male of his flock unto the priests, the sons of Aaron: and they shall slay it before the door of the tabernacle, and they shall cut it in pieces, and they shall lay it on the altar on the fire which they shall make; and they shall roast the flesh thereof, which is acceptable, and a sweet savour, as the Lord hath appointed.

5 And when any man shall bring a meal-offering unto the Lord, he shall offer of fine flour, unleavened, mixed with oil and frankincense; and the priests shall bake it on the altar, and they shall eat thereof; it is a thing done by fire, and is of a sweet savour.

6 And thou shalt bring an oblation of thy first fruits unto the Lord; and with all thy offerings, thou shalt offer salt.

7 The peace-offering, whether it be of the herd, of the flock, or of the field, it shall be the best; without blemish shalt thou bring it before the Lord.

8 If thou dost sin through ignorance, against any of the commandments of the Lord, thou shalt bring before the door of the tabernacle of the congregation, a young bullock, or a kid, or a lamb, without blemish; and the priest shall kill the bullock, or the kid, or the lamb, and he shall roast them with fire, on the altar, without the gate of the camp,

A. M.
2547.

A. M. and thy sin shall be forgiven
2547. thee.

9 If thou shalt touch any unclean thing, whether it be of man, or of beast, thou shalt bring unto the priest, a lamb, or a kid of thy goats, or two turtle doves, or an ephah of fine flour: and he shall make an atonement for thee.

10 If thou shalt commit a trespass unwittingly, then shalt thou bring a ram, without blemish, with the estimation thereof, in shekels of silver; and when thou hast satisfied the trespass, thou shalt add the fifth part thereof, and thou shalt give it unto the priest, who shall make an atonement for thee, and thy trespass shall be forgiven.

11 If thou shalt trespass, wittingly, against thy neighbour, by taking that which is his, thou shalt restore it to the full estimation thereof; and thou shalt give him a fifth part more: and then thou shalt bring unto the priest, a ram, without blemish, with its value in shekels of silver; and the priest shall make an atonement for thee, and thou shalt be forgiven.

12 And the priests, the sons of Aaron, shall eat of the sin-offering, of the peace-offering, and of the trespass-offering; according to all which the Lord commanded Moses in mount Sinai.

13 ¶ Thus saith the Lord,

Aaron, or his sons, shall not drink wine nor strong drink, when they are to minister before the congregation, that they may discern between the clean and the unclean; and that they may teach the children of Israel my statutes.

14 Thus saith the Lord, When a woman hath borne a child, whether it be a male-child, or a maid-child, she shall be unclean thirty and three days; and she shall bring a lamb of the first year, or two turtle doves, or two young pigeons, and she shall bring them unto the priest, and he shall make an atonement for her, and she shall be clean.

15 ¶ Thus saith the Lord, When a man shall have in his flesh the plague of the leprosy, he shall be brought unto Aaron, or unto one of his sons, who shall look on him, and if he be unclean, he shall put him out of the camp, until he shall be healed of his sore; and then he shall bring unto the priest, two he-lambs, without blemish, and three tenth-deals of fine flour, mingled with oil, with one log of oil, and the priest shall wave them before the Lord, and shall make an atonement for him, and he shall be clean.

16 Thus saith the Lord, Whilst a woman is unclean in her flesh, she shall be put apart seven days, no man shall approach unto her during her

A. M.
2547.

A. M.
2547. uncleanness; and when she is cleansed of her issue, she shall take two turtle doves, or two young pigeons, and bring them unto the priest, to the door of the tabernacle; and he shall make an atonement for her, and she shall be clean.

17 ¶ And it shall come to pass, on the seventh month, in every year, when the congregation of the children of Israel hath sinned against the Lord, that every man shall bring an offering according to his estimation; and the priests shall wave every man's oblation before the Lord, at the door of the tabernacle of the congregation, and the priests shall make atonement for the sins of all the people of Israel, and they shall be forgiven their sins, which they have sinned against the Lord.

18 ¶ Moreover thus shall ye do, on the fourteenth day of the first month: at even shall be the feast of the passover unto the Lord.

19 And the next day shall be the feast of unleavened bread unto the Lord, for seven days.

20 And on the tenth, there shall be a day of atonement; wherein ye shall afflict your souls.

21 And on the fifteenth day shall be the feast of tabernacles; with boughs, and with branches of palm-trees, and with willows of the brook,

shall ye rejoice before the Lord, for seven days.

22 Thus did Moses establish the feasts of the Lord; even as he was commanded on mount Sinai.

23 ¶ Then came forth the son of Shelomith before the congregation, and spake unto Moses, at the door of the tabernacle, saying:

24 The Lord hath not spoken these things; peradventure they are imaginations of evil to this people.

25 And Moses commanded the Levites, saying, Lead him forth of the camp, and let the people stone him with stones, that he die, as the Lord hath spoken.

26 And they did so: and the people stoned him to death; because he had blasphemed before Moses, and because he had spoken evil in Israel.

CHAP. XXIV.

1 *Twelve spies sent into Canaan.* 10 *Ten bring an evil report.* 11 *Caleb and Joshua encourage the people.* 18 *The ten are stoned.* 20 *Jethro dies.* 22 *Zipporah dies.* 23 *Aaron dies.*

1 **AND** it came to pass, when the days of the sojourning of the children of Israel in the wilderness were multiplied, that Moses spake unto the elders, and unto all the congregation of Israel, saying:

A. M.
2547.

2548.

A. M. 2548. 2 Thus saith the Lord, Send chosen men to search out the land of Canaan, according to the number of the tribes, twelve men: men of wisdom, that ye may go in, and possess the land which I have given unto you.

3 And the men who were sent, were ^aShammua, ^bShaphat, Caleb, ^cIgal, Joshua, ^dPalti, ^eGaddiel, ^fGaddi, ^gAmmiel, ^hSethur, ⁱNahbi, and ^kGeuel.

^aHeb. obeying.
^bHeb. the judicious.
^cHeb. the re-deemed.
^dHeb. freed.
^eHeb. the expeditious.
^fHeb. girded.
^gHeb. God with me.
^hHeb. exploring.
ⁱHeb. the reserved.
^kHeb. the celebrated.

4 These are the names of the men whom Moses sent into Canaan, to spy out the land.

5 And Moses said unto them, Go into Canaan this way, and go up on yonder mountain; and from thence, see the land, and bring unto me, and the congregation of Israel, word, whether the people therein be strong or weak, or few or many.

6 Whether the land be a land flowing with milk and with honey: and what cities they have builded, their strong holds, their tents, and their houses, shall you note.

7 ¶ Then went forth the spies, and they did as Moses had commanded: and they brought with them of the fruit of the land, and they returned in forty days.

8 And the men who were sent, spake unto Moses, and Aaron, and unto the congregation, saying:

9 Surely the land of Canaan, whether ye sent us, is a land flowing with milk and with honey: and behold, this is the fruit thereof.

10 But as for the people, they be strong, and their cities be walled, and exceeding great: ¹Anak, and his sons, dwell there, with our enemies, the Amalekites, the Hittites, the Jebusites, and the Amorites.

¹Heb. huge.

11 And Caleb, even he who taught Israel to shoot with the bow, stood forth and said, Up, let us gird on the sword, and take the bow, peradventure we shall possess the land, for we are more mighty than the people of the nations; and the Lord is with us, and he will prosper us.

12 And Joshua said, Caleb hath spoken the truth.

13 Then said the other men who were sent with Caleb and Joshua unto Moses, and unto all the congregation, ten were they in number, We cannot stand before this people, for they are stronger, and in stature we appear unto them as dwarfs; the sons of Anak are giants: lo! we shall never be able to go in and possess the land.

14 And they sowed sedition among the people: and the children of Israel murmured, and said:

15 Wherefore hath Moses and Aaron brought us hither, that we, our wives, and our

A. M. 2548.

A. M. children, fall by the sword of
2548. the Gentiles.

16 And they said as one man: Shammua shall be our captain, and we will return into the land of Egypt.

^a Heb. regard-
ing.
^a Heb. the steady

17 ¶ Then spake Caleb, the son of ^mJephunneh, and Joshua, the son of ^aNun, These men, who went with us, have brought an evil report on the land: for the land is good, it floweth with milk and with honey: and the Lord, the God of our fathers, hath delivered the people thereof into our hand.

18 And Moses said, They have blasphemed; they have lied unto the Lord: and the Levites, and the congregation, stoned them with stones, before the door of the tabernacle.

19 Then dwelt Israel in peace, and listened unto the words of the Lord, which he spake by the mouth of Moses, his servant.

2550. 20 ¶ And it was told unto Moses, that Jethro, his father-in-law, was dead.

^a Heb. pulled
down.

21 And ^aBalak, the king of Moab, was king of Midian: now Balak was not the son of Jethro.

22 And Zipporah, Jethro's daughter, the wife of Moses, died also: but the children of Israel mourned not.

^r Heb. steep.

23 And Aaron went up into mount ^pHor, and died there, and was buried.

CHAP. XXV.

A. M.
2551.

1 *Moses exhorteth the people to go into Canaan.* 6 *Balak opposeth the designs of Moses.* 14 *The Midianites, the Moabites, and the Amorites, are smitten, except the women;* 18 *with whom the Israelites defile themselves.* 23 *The Levites hang up the chiefs.* 26 *The women of Midian are slain, save the virgins.* 30 *Moses divideth the spoil.* 40 *The Reubenites desire to have their inheritance on this side Jordan.* 47 *It is granted on condition.*

1 **AND** the trumpet sounded before Moses, and before ^aEleazer, the priest, and before the elders, at the door of the tabernacle: and all Israel assembled to hear the words of the Lord.

^a Heb. the porch
of the Lord.

2 And Moses said, The days of the accomplishment of the promise, which the Lord hath made unto our fathers, that their seed shall inherit the land of Canaan, is at hand.

3 Arm therefore to the war, so many of you, according to your tribes: one thousand out of every tribe, shall ye number.

4 And Joshua, and Caleb, and ^bPhinehas, the priest, with the holy trumpets, shall go before you, and lead you into the land whereof the Lord hath said: Thy seed shall possess the land of Canaan, as I swore unto thy fathers; a land flowing with milk and honey.

^b Heb. confiding

A. M.
2551.

5 The Amorites, the Moabites, the Midianites, the Jebusites, and all the nations of Canaan: they shall not stand before you, saith the Lord.

^c *Heb. incest.*

6 ¶ Now it came to pass, that when Balak, the king of ^cMoab, had heard all that had been spoken by Moses, that he assembled the princes of Moab and of Midian, with those of the Amorites, and he said unto them:

7 Behold! Moses, with the Hebrews who have followed him out of Egypt, draw nigh unto our land to dispossess us, and to drive us out from the heritage of our fathers.

^d *Heb. grave.*

^e *Or, Mediterranean.*

8 Now therefore send messengers unto ^dBalaam, the king of ^eMesopotamia, lest when they have destroyed us, they destroy him, and his people also.

9 And the messengers came unto Pethor, and spake unto Balaam: Lo! the Hebrews, who are come up out of Egypt, have set their faces against us, join thou with us, that neither we, nor thy servants, be slain.

10 Then Balaam assembled the princes of Mesopotamia together, and he said unto them: Lo! Balak, king of Moab and of Midian, hath sent unto us, that we fight with them against Moses and the Hebrews, who have now set their faces against the Midianites, the Moabites, and the Amorites, to dispossess and destroy them.

11 And the princes said, Why should we fight against Israel, seeing we dwell in the land between the two rivers?

12 And the messengers returned unto Balak: and Balak was disheartened.

13 ¶ Then went forth Joshua, Caleb, and Phinehas, the priest, with the holy instruments, and with the trumpets, and it was proclaimed, saying:

14 Smite the Midianites, even all the males thereof: but the females ye shall not touch.

15 And they did so: and there fell that day all the males of the children of Midian, of Moab, and of the nations.

16 Then returned Phinehas, Joshua, and Caleb, with all Israel, that went forth to the battle.

17 And they brought into the camp of Israel, all the wives of the Midianites, of the Moabites, and of the Amorites, with the virgins: even all the females.

18 And the elders, and all the children of Israel, defiled themselves with the women of Midian, with the women of Moab, and with the women of the nations.

19 And children of the women of Midian, Moab, and the nations, were born unto the elders of the people of Israel.

20 And the people did evil in the sight of the Lord.

A. M.
2551.

A. M.
2551. 21 ¶ Then Moses, with Eleazar, the priest, stood forth and said :

22 Ye have sinned, in that ye have saved the women of the nations when ye fought against them ; and the Lord delivered the people into your hands.

23 And Moses spake unto the Levites, and said, Thus saith the Lord : Take the heads of those who have sinned, and hang them up before the door of the tabernacle of the Lord, in the sight of all the congregation.

24 And they hung them up in the sun, in the sight of all Israel.

25 And there fell of the people, twenty and four thousand, and then the slaughter ceased.

2552. 26 Then Moses spake unto the children of Israel, and said, Thus saith the Lord : ye shall slay all the women of the nations with whom ye have defiled yourselves, and the males born unto them ; you shall save for yourselves only the virgin who hath not lain with man.

27 And the children of Israel did according to all that they were commanded.

28 And the number of the women-children, virgins, were thirty and two thousand, who knew not man.

29 ¶ And it came to pass, after these things, that Moses

said, Bring forth the spoil of the Moabites, the Midianites, and of the nations.

30 For thus saith the Lord, The prey shall ye divide ; the one half thereof shall be for those who took the war upon them, and the other half shall ye give unto the congregation of the Lord.

31 Now the half that pertained unto the men, even unto those of each tribe who came from the war, were of sheep, three hundred and seven and thirty thousand and five hundred : of beeves, thirty and six thousand : of asses, thirty thousand and five hundred : and of virgins, sixteen thousand.

32 But of these, the tribute unto the Lord, were of the sheep, six hundred and seventy and five : of the beeves, seventy and two : of the asses, sixty and one : and of the virgins, thirty and two.

33 And Moses delivered the tribute unto Eleazar, the priest, as an offering unto the Lord.

34 And Moses gave unto the congregation their portion : of the sheep, three hundred and seven and thirty thousand : of beeves, thirty and six thousand : of asses, thirty thousand and five hundred : and of virgins, sixteen thousand.

35 But of these the tribute unto the Lord, were of the sheep, six hundred and seventy and five : of the beeves, seventy

A. M.
2552.

A. M. and two: of the asses, sixty
2552. and one: and of the virgins,
thirty and two.

36 And Moses delivered the
tribute unto Eleazar, the priest,
as an offering unto the Lord.

37 So the Lord's portion of
the spoil delivered unto the Le-
vites, were of the sheep, one
thousand three hundred and
fifty: of the beeves, one hun-
dred and forty and two: of
the asses, one hundred twenty
and two: and of virgins, sixty
and four: besides their part as
one of the tribes of Israel.

38 But of the gold, and of
the silver, and of the jewels,
and of the chains, and of the
bracelets, and of the ear-rings,
which the men of war had ta-
ken, brought they unto Moses,
and unto Eleazar: and Elea-
zar offered them up as an ob-
lation unto the Lord.

39 And the sum thereof,
was sixteen thousand and se-
ven hundred and fifty shekels.

40 ¶ And it came to pass
on the morrow, that the chil-
dren of the tribe of Gad, and
of the tribe of Reuben, drew
near unto Moses, and unto
Eleazar, the priest, and unto the
elders of Israel, and said:

41 Behold our inheritance
is fallen unto us on this side
Jordan.

42 And we, our wives, our
children, and the virgins, the
Lord hath given us, are many
in number, and our cattle are
a great multitude.

43 ^sAtaroth, ^hDibon, ⁱJa-
zer, with all the cites and vil-
lages on this side Jordan, in the
land of Gilead, permit us to
possess, that we may build
sheep-folds for our cattle, and
dwellings for our wives, and
for our children.

44 And Moses said unto the
rulers of the tribes of Reuben,
and of Gad, Surely, to excuse
yourselves from the war, from
driving out the Canaanites, do
ye ask of me this thing!

45 And they answered Mo-
ses and said, We, ourselves, will
go armed unto the war, and
we will pass over Jordan: nei-
ther will we return again unto
our wives, and our children,
until Israel hath possessed the
land of Canaan.

46 And Moses said, Be it
unto you even as you have
said:

47 Only observe you this
thing, that ye be ready to pass
over Jordan armed before the
Lord, and before Joshua, his
servant, until he hath driven
out your enemies: then shall
ye return, and ye shall be
guiltless before the Lord.

48 But if ye turn your backs
on the covenant ye have this
day made, behold the sin, which
ye shall sin before the Lord,
will avenge you.

49 And they said unto Mo-
ses: We, thy servants, will do
as thou, our lord, hast com-
manded.

50 And they departed.

CHAP. XXVI.

1 *Joshua is appointed to succeed Moses.* 2 *Moses' charge to Joshua.* 15 *Moses blesses the tribes of Israel.* 27 *Takes the rod from Jasher.* 29 *He goes up Pisgah.* 30 *Views the promised land.* 32 *Moses dies.*

1 **AND** the Lord said unto Moses, Call Joshua, the son of Nun, unto you, before the door of the tabernacle of the congregation, and give unto him a charge; for behold the days draw nigh wherein thou shalt die.

2 And Moses did as the Lord commanded, and Moses said unto Joshua in the sight of all Israel, Thus saith the Lord, Be strong, and of great courage, for thee have I chosen to lead my people into the land of which I swear unto them, that they should possess it; and I will be with thee.

3 ¶ And the Lord spake unto Moses, and said, Write now a song, even the song I shall teach thee, that the children of Israel may learn the words thereof; that they may not hereafter forsake my laws, nor disregard the statutes which they have received.

4 And Moses spake before the congregation all the words of the song, until they were ended.

5 And Moses spake unto Joshua, and unto Eleazar, the priest, saying, Lay up before

the Lord, in the ark of the covenant, the words which this day I have taught the children of Israel, that your sons, and your sons' sons, and your daughters, may learn them.

6 And Moses, and the children of Israel, sojourned in the plains of Moab, by Jordan, over against Jericho.

7 ¶ And Moses assembled together Joshua, and all the children of Israel, and he said unto them:

8 Behold the days draw nigh wherein I shall be gathered unto my fathers.

9 And thus saith the Lord, When ye shall pass over Jordan into the land of Canaan, that ye shall drive out the inhabitants: and ye shall divide by lot, their land among your families: according to the number of each tribe, shall ye divide it.

10 Ye shall surely drive out the inhabitants, none shall remain, lest Israel be corrupted through their abominations, and they be as thorns in your sides.

11 And these are the men who shall divide the land: even Eleazar, the priest, and Joshua, the son of Nun.

12 And of the princes of the people, Caleb, ^aShemuel, ^bElidad, ^cBukki, ^dHanniel, ^eKemuel, ^fElizaphan, ^gPaltiel, ^hAhihud, and ⁱPedahel.

13 And thus saith the Lord, Command the children of Is-

30 And from thence he saw all the land of ^u Gilead, even unto Dan and ^x Manasseh, and the land of Judah, even unto the sea, the plain of the valley of ^y Jericho, and the city of the palm-trees, even unto Zoar.

31 And he said, Now behold I with my eyes the land, concerning which the Lord sware unto Abraham, Isaac, and Jacob, saying, I will give it unto thy seed.

32 And Moses died in the land of Moab.

33 And Moses was an hundred and twenty years old when he died.

34 And the children of Israel wept for Moses thirty days.

CHAP. XXVII.

1 *Joshua exhorts the people to pass over Jordan.* 8 *He sends messengers to Rahab, a princess of Jericho.* 14 *Rahab, her advice to the king of Jericho.* 19 *It is rejected.*

2554.

1 **NOW** it came to pass, after the days of weeping for Moses were ended, on the morrow thereof, that Joshua assembled Eleazar, the priest, and all the elders of the people, with the captains over thousands, over hundreds, over fifties, and over twenties, before the door of the tabernacle of the congregation.

2 And Joshua said, Moses, the servant of the Lord, said

unto me: When I am gathered unto my fathers, then shalt thou lead the people over Jordan into the land of Canaan: and the Lord will be with thee, and will fight for thee.

3 Prepare therefore for your journey; arm yourselves for the battle: for lo! the trumpet shall sound on the third day, and the ark of the Lord shall go over Jordan before the people.

4 ¶ Then spake unto Joshua the chief of the tribes of Reuben, Gad, and Manasseh, We remember the covenant we made with Moses, the servant of the Lord; we will go over Jordan armed, and we will not return until our brethren have found rest.

5 And all the elders with one voice cried out and said, All things wherein we obeyed Moses, the servant of the Lord, and listened unto his voice, will we now do.

6 And whosoever shall turn his back on whatsoever thou commandest, he shall surely die.

7 ¶ And it came to pass on the third day, on the morning thereof, that Joshua rose up early, and the trumpet sounded, and the people gathered themselves together, and they removed from ^a Shittim, and they came unto Jordan, and they pitched there.

8 And Joshua sent messengers unto ^b Rahab, one of

^a Heb. lodged.

^b Heb. gene-
rous.

A. M. the princesses of Jericho, say-
2554. ing :

9 Behold, on the morrow we shall pass over Jordan, and the Lord will deliver Jericho into our hands.

10 And Rahab said unto those who were sent, Speak unto Joshua and say: The Lord, the God of Jacob, prosper you, inasmuch as I also am the daughter of an Israelite, by a woman of Midian.

11 And it was told unto the king of Jericho all the words which Rahab had spoken.

12 Then the king of Jericho assembled together all his princes and his nobles, and Rahab was there also, for she was a woman renowned for wisdom.

13 And the king said unto Rahab, How is this that you confederate with the avowed enemy of the nations?

14 And Rahab answered, and said, Let not the king be angry, and thy servant will speak:

15 Behold thus saith Rahab, I was born among the Israelites, and they are as the locusts for number, and the Lord, the maker of heaven and earth, ^{c Or, whom} whom thou knowest not, he fighteth for them, even for Joshua, for Caleb, and for all Israel.

16 And this, O king, thou knowest, that Moses, with a few chosen men, smote all the

people of Midian, all the people of Moab, all the Jebusites, all the Hittites, all the Hivites, and all the Amorites on the other side Jordan, with the edge of the sword, save only the females, from whom Israel do and will hereafter multiply exceedingly:

17 And hath given their land unto the tribe of Reuben, unto the tribe of Gad, and unto the half-tribe of Manasseh:

18 Send messengers therefore unto Joshua, and say, Thus saith Jericho, Spare us, we beseech thee, you shall go quietly through our lands, you, your wives, your children, your flocks, and your herds, and ye shall eat of our bread, and drink of our vintage.

19 Peradventure the wrath of Joshua will be turned away from destroying thee, and thy people.

20 And the king of Jericho said, It is the counsel of an harlot; and Rahab was shut up in her own house, and spies were set, that they might watch her.

CHAP. XXVIII.

1 *The ark passeth over Jordan.* 8 *All Israel pass over Jordan in six days.* 15 *Rahab sends messengers to Joshua.* 17 *She dwells in Israel.* 18 *Jericho is taken.* 20 *Achan, his rebellion.*

1 **AND** it came to pass on the morrow, that Joshua spake unto Eleazar, the priest,

A. M.
2554.

^{c Or, whom}
thou dost not
worship.

A. M. and unto the Levites, saying,
2554. 2 Let the ark of the covenant of the Lord be borne before the people by the priests, as they pass over Jordan.

3 Only this I command, that the tribe of Reuben, the tribe of Gad, and the half-tribe of Manasseh, shall pass over armed first; even as Moses hath commanded.

4 Moreover, no one shall come nigh unto the ark: fifty cubits shall the children of Israel, except the priests, leave between them and the ark.

5 And the trumpet sounded, and the tribe of Reuben, the tribe of Gad, and the half-tribe of Manasseh, even all the males thereof, from sixteen years of age, and upwards, passed over Jordan, armed.

6 Then followed the ark of the covenant of the Lord, borne by the priests, and they passed over in the midst thereof.

7 And there followed the tribe of Benjamin, even all the armed men thereof, their wives, their children, their flocks, and their herds.

8 And in six days the whole congregation of the children of Israel passed over Jordan, they, their wives, their children, their cattle, even all their possessions.

9 And they encamped on the west of Jordan, in the plains of Jericho.

10 And the wood whereon the children of Israel passed over Jordan, stayed upon the face of the waters six days and six nights.

11 And when the people of Jericho, and the kings of the land of Canaan, had heard that Joshua, and all the children of Israel, had passed over Jordan, and were encamped in the plains of Jericho, great fear fell upon them.

12 ¶ Now after the people had rested seven days, Joshua commanded the captains of thousands, the captains of hundreds, and the captains of fifties, saying:

13 Prepare ye for the war, that we go up and smite Jericho, and the king thereof, and all the inhabitants, with the edge of the sword.

14 And there came forth of all Israel, forty thousand men armed for the battle: and Joshua was magnified in the sight of the Amorites, in the sight of the Canaanites, and in the sight of all the nations.

15 Then Rahab sent unto Joshua, saying: Let me intreat with thee for my nation, that they may live.

16 And Joshua answered, and said, As many as save themselves by flight, may live: but whosoever shall be found in Jericho, shall surely die the death.

17 Then came Rahab, with her kindred, and with all her

A. M.
2554.

A. M. household, unto Joshua ; and she
2554. dwelleth with the children of Israel unto this day.

18 And the people of Jericho fled from the city, every one to the mountains.

19 And Joshua took the gold and the silver, even all the spoil of Jericho; and he brought it into the treasury of the Lord, and it was holy.

^a Heb. wine-bibber.

20 ¶ And ^aAchan spake aloud, and said, Wherefore hath Joshua taken from the congregation, all the gold, all the silver, and all the brass; even all the spoil of the city of Jericho, and given it to the tribe of Levi.

21 Moses, the servant of the Lord, when we slew the Midianites, the Moabites, and the people of the nations, on the other side Jordan, gave the half of the spoil unto the armed men, who went forth to the battle, and the other half he gave unto the congregation, according to their tribes.

22 And the sayings of Achan were told unto Joshua, and Joshua said to the Levites:

23 Bring forth Achan, and let him be stoned, for he hath blasphemed.

^a Heb. tumult.

24 And they stoned Achan in the valley of ^bAchor, in the presence of Joshua, and of the elders, until he was dead.

25 And thus did Joshua punish the rebellion of Achan, even as the Lord had commanded.

CHAP. XXIX.

A. M.
2555.

1 Joshua goeth up to Ai. 5 Five thousand Israelites lie in ambush.

11 Ai is taken. 13 The king of Ai hanged. 17 The Gibeonites become the servants of Joshua.

1 **AND** it came to pass on the morrow, that Joshua arose, with the men of war, even thirty thousand men of valour.

2 And Joshua said, Go up against ^aAi, and smite the inhabitants thereof with the edge of the sword: let none escape alive.

^a Heb. woe.

3 And they went forth, and they abode between ^bBethel and Ai: and Joshua lodged among the people that night.

^b Heb. the house of God.

4 And Joshua arose up early, he, and the elders, and they went up to Ai.

5 And Joshua took about five thousand men, and he commanded them to lie in ambush on the west side of Ai.

6 And when the captains had set the people, even all the host of Israel, Joshua went that night into the midst of the valley.

7 And when the king of Ai saw all that was done, but he knew not of the men who lay in ambush, he sent messengers unto Joshua, saying:

8 On the morrow, about noon, I, and the men that are with me, will give you, and thy people, battle in the plain.

A. M.
2555.

9 Then said Joshua unto the captains, and unto the people: Behold, when the king of Ai, and his people, come forth to the battle, seem ye as if ye fled before them for fear: and flee ye by the way of the wilderness.

10 So shall it come to pass, that the men of Ai shall come forth of their city, and when the trumpet shall sound, then shall ye turn upon the men of Ai, and destroy them. And they did so.

11 And those five thousand men who lay in ambush, arose and entered Ai, and took it, and all the spoil thereof.

12 And when the men of Ai saw all that was done, and that they had no power to flee this way or that way, they were sore troubled.

13 And Joshua, and the people, smote the men of Ai, and chased them in the field, and pursued them into the wilderness, until there remained none of them, save the king of Ai, whom Joshua hanged on a tree.

14 And Joshua went up to Ai, and smote it with the edge of the sword, all the men, the women, and all the children thereof, save the virgin who knew not man.

15 Then Joshua took all their cattle, and the spoil of their city, as a prey for Israel, as the Lord had commanded Moses.

16 ¶ Now it came to pass, after Joshua had smote Jericho and Ai, two great cities of Canaan, that great fear fell upon the Gibeonites.

17 And they sent messengers unto Joshua to ^cGilgal, saying: We are thy servants; whatsoever thou shalt command us, that will we do. ^c Heb. round.

18 Only this we pray thee, do not unto us as thou hast done unto the men of Jericho, and unto the men of Ai.

19 Then said Joshua unto the messengers, This shall ye do, ye shall live, and ye shall fight for us, and we will fight for you: so shall it come to pass, that ye shall live quietly in the land.

20 ¶ And the Gibeonites dwelt in ^dGibeon, which is a great city, and a royal city, and much greater than Ai: and the men thereof, were more mighty. ^d Heb. my town.

CHAP. XXX.

1 *Five kings war against Gibeon. 5 Joshua fighteth for Gibeon; 9 and overcometh the five kings; 14 and afterwards destroyeth their cities. 18 Other kings war against Joshua. 25 Joshua putteth them to flight.*

1 NOW when all the kings which dwell on this side Jordan, and on the coasts of the great sea, with ^aAdonizedek, king of Jerusalem, had heard all the mighty works which Joshua had done, and

A. M.
2556.

2557.

^a Heb. the just lord.

A. M. that the men of Gibeon had
2557. made a league with him, that they were moved.

^b Heb. woe to them.

^c Heb. fierce.

^d Heb. haughtiness.

^e Heb. resplendent.

^f Heb. walking place.

^g Heb. oracle.

^h Heb. rotund.

2 Wherefore Adonizedek sent unto ^bHoham, king of Hebron, and unto ^cPiram, king of ^dJarmuth, and unto ^eJaphia, king of ^fLachish, and unto ^gDebir, king of ^hEglon, saying,

3 Come up unto me, that we, and the kings which dwell on this side Jordan, and the kings of the sea-coast, may fight against Gibeon, and destroy it, because the men thereof have made peace with Joshua, and with all Israel.

4 Therefore the five kings of the Amorites, the king of Jerusalem, the king of Hebron, the king of Jarmuth, the king of Lachish, and the king of Eglon, gathered themselves together, and went up; they, and all their hosts: and they encamped before Gibeon, and they made war against it.

5 ¶ Now Joshua was at this time at Gilgal, with all the armed men of Israel.

6 And the men of Gibeon sent unto Joshua, saying, Because we are thy servants, behold all the nations on this side Jordan have waged war against us.

7 Come up therefore quickly unto us, and help us, and save us, thy servants, that we perish not.

8 And Joshua hasted from Gilgal, with all the men of

war, and the mighty men of valour.

9 And he came suddenly upon them before the break of day, and he discomfited them, and they fled: and he slew them with a great slaughter before Gibeon, and he chased them along the way that goeth up to ⁱBeth-horon, and he smote them even unto ^kAzekah, and unto ^lMakkedah.

10 And Joshua pursued them with great slaughter until the evening.

11 And Joshua said, Sun, be thou silent upon Gibeon: and thou, moon, shine thou on the valley of ^mAjalon.

12 And Joshua returned; and all the men of war with him, to Gilgal.

13 And the Gibeonites returned to their city: and they rejoiced greatly.

14 ¶ And it came to pass, after Joshua, and the men of Israel, had rested themselves at Gilgal, that he sent chosen men up against Makkedah, against Lachish, against Debir, against Jarmuth, against ⁿLibnah, and against ^oGezer.

15 And they fought against them, and they took them, even all the cities; and he did unto them, even as he had done unto Jericho, and unto Ai: and he slew the kings thereof, and all the inhabitants thereof, with the edge of the sword: even all the men, the women, and the children, save the virgin

A. M.
2557.

ⁱ Heb. house of the sun.

^k Heb. walled.

^l Heb. burnt.

^m Heb. strong as an oak.

ⁿ Heb. bright as the moon.

^o Heb. cut off.

A. M. 2557. who knew not man, by lying with him.

16 And the fame thereof went out throughout all the land of Canaan, and the kings of the mountains, and the kings of the valleys, and the kings of the sea-shore, assembled themselves together, and said,

17 Surely as dead men are we before Joshua, and before the men of Israel.

^p Heb. knowing
^q Heb. the granary.
^r Heb. howling.
^s Heb. reproof.

18 And ^pJabin, king of ^qHazor, said unto ^rJobab, king of ^sMadon, and unto the kings of the sea-shore: Up, let us gather together our hosts, our armies, and our chariots, and let us assemble together at the waters of ^tMerom, and fight against Israel, and destroy them, lest they slay us, our wives, and our sons, and take from us our daughters, and our heritages.

^t Heb. high-minded.

19 And the words of Jabin were acceptable unto all who heard them.

20 And they gathered themselves together at the waters of Merom, and they were much people; even as the sand upon the sea-shore for multitude: and they defied the armies of Israel.

21 And Jabin stood forth and said, Know ye this, if it should come to pass, that the Israelites prevail this day, then shall all the nations be slain: or we, and our sons, shall become the vassals and slaves of the Hebrews.

22 For this cause came they out of Egypt, to slay, and dispossess, according to all that the lawgiver, even Moses, hath commanded them.

23 To take from us our cities, our lands, our vineyards, our cattle, our gold, our silver, our brass, and also our pure virgins.

24 And lo! now Joshua, and the people of war that are with him, come forth to the battle.

25 And Joshua, with forty and two thousand men, with the men of Gibeon, came suddenly upon them, and slew them, and chased them to Zidon, and he smote them until there were none remaining.

26 And Joshua burnt Hazor, because of Jabin, the king thereof; for he it was who led the nations to battle.

27 And all the rest of the cities saved Joshua, but the spoil thereof reserved he as a prey for the children of Israel.

28 Then Joshua wared against the Anakims; and he left none of them, save in ^uGaza, in ^xGath, and ^yAshdod.

^u Heb. strong as a goat.
^x Heb. rest.
^y Heb. fire of the beloved.

29 And the land rested from war.

CHAP. XXXI.

1 Joshua is stricken in years. 4 He divides Canaan. 12 The borders of the several tribes 24 Israel enjoys peace and plenty.

1 AND it came to pass after many days, that Joshua spake unto Eleazar, the

A. M. 2557.

2559.

A. M. priest, unto Caleb, and unto
2559. all the elders, and unto the congregation of the children of Israel, saying:

2 Behold I am grown old, and am stricken in years: and peradventure the days draw nigh wherein I shall be gathered unto my fathers.

3 And all that Moses, the servant of the Lord, hath said unto me, that hath the Lord done by me.

4 Unto the tribe of Reuben, the tribe of Gad, and the half-tribe of Manasseh, did Moses, whilst he was yet with us, give all the land on the west of Jordan, the land of the Amorites, the land of Moab, the land of Midian, all Bashan, and half of Gilead; even all the nations which the Lord delivered into his hands.

5 And at that time, Moses spake unto me and said, When ye shall pass over Jordan, and the Lord shall deliver into your hands all the land of Canaan, to possess it, that ye shall divide the land by lot unto the nine tribes, and unto the half-tribe of Manasseh.

6 And Caleb stood forth, and said unto Joshua: Lo! Caleb, thy servant, is now fourscore and nine years old.

7 And these fifty and eight years have I gone forth to the battle, with the bow, with the spear, and with the javelin.

8 The tribe of Judah is a great tribe, and Moses, the ser-

vant of the Lord, hath said, when he sent me to spy out the land, Surely the land on which thy feet have trodden, shall be thine inheritance, and thy children's, for ever.

9 And behold I am as strong this day as I was on that day in which Moses sent me: as was my strength then, so is it now for war, both to go out, and to come in.

10 And behold, though the Anakims dwell in the land, give it unto me, that I may possess it: then shall I be able to drive them out.

11 And Joshua said, Be it unto you, even as thou hast said: and he blessed him.

12 ¶ So the border of the lot of Judah encompassed the salt sea at the end of Jordan, and fetched a compass by Kadesh Barnea: even by Karkaa, unto Hazor, even unto the river of Egypt.

13 And from Gaza, even to Ashdod, were its borders on the great sea.

14 And from Ashdod it fetched a compass: and its borders went out by Gath, even unto Makkedah.

15 And from thence the border went out by Bethshemosh, unto the south side of the Jebusite, even unto Debir, did it go.

16 This is the coast of the children of the tribe of Judah round about, according to their lot.

A. M.
2559.

A. M. 17 ¶ Then spake Joshua and
2559. said, The lot of the children of Joseph shall be from Jordan by Jericho, to Bethel, and Luz, and Ataroth, and Gezer, and all the cities, and plains, and the lands thereof.

18 But the elders of the tribe of Joseph, said unto Joshua, Give, we pray thee, the land thou hast allotted for us unto ^a Ephraim: for we be many.

^a Heb. fruitful.

19 Let us go up to the wood-country, and cut down the trees thereof, that we may drive out the Perizzites, that we may have cities and houses to dwell in, and lands whereon to feed our flocks and our herds.

20 And Joshua said, Go, and do as ye have spoken: and he blessed them.

21 ¶ And Joshua divided all the land of Canaan, to every tribe, according to its number, even as Moses had commanded him.

22 Only to the tribe of Levi did he give no inheritance: for the priesthood is their portion, save the forty and eight cities for them to dwell in.

23 Joshua appointed also cities of refuge for the slayer, throughout all the tribes of Israel.

24 And the children of Israel had peace: and they were filled with plenty, with riches, and with virgins.

CHAP. XXXII.

A. M.
2560.

1 *Circumcision renewed.* 13 *Joshua dismisses the tribes of Reuben, Gad, and Manasseh.* 18 *They return, and repass Jordan.*

1 **N**OW it came to pass in those days, that Joshua assembled together Eleazar, the priest, the Levites, and all the congregation at Shiloh, and he set up the tabernacle of the Lord there.

2 And Joshua stood before the door of the tabernacle of the congregation: and he spake in the presence of all Israel, and he said,

3 Now behold the Lord hath given you rest in the land concerning which he sware unto your fathers, saying, Thy seed shall inherit the land of Canaan.

4 Abraham, our father, heard a voice, when he dwelt in this land, which said unto him: Circumcise the flesh of thy foreskin, for therefore art thou barren.

5 When your fathers were in bondage in Egypt, because of the Egyptians from the time of the birth of Moses, they were uncircumcised.

6 But Moses, the servant of the Lord, commanded me, saying, When ye be come into the land of Canaan, to possess it, speak unto the Levites, and say:

7 Make unto yourselves razors, and let the priests circum-

A. M. 2560. cise one the other: and circumcise ye all the males of the children of Israel.

8 And the Levites did so: and all the people abode in their tents in the camp till they were whole.

9 And Joshua said, This shall be a law and an ordinance unto you, to be observed in all your tribes, and in all your families.

10 Ye shall bring every male on the eighth day after he openeth the womb, unto the priest, to be circumcised: ye shall do this, both ye, your sons, and your sons' sons, for ever.

11 And it came to pass after seven days, that the people were whole.

12 Then Joshua commanded Eleazar, the priest, and he read out of the book of the covenant, all the laws, and the ordinances which Moses commanded to be observed, concerning the servant, whether he be an Hebrew, or a stranger, and the statutes concerning the virgins of the nations, and the children born unto them.

13 And Joshua blessed the tribe of Reuben, the tribe of Gad, and the half-tribe of Manasseh, and he said unto them:

14 Return ye by the way ye came, and go over Jordan, unto you wives, unto your sons, unto your daughters, and unto your flocks, and unto your possessions.

15 For ye have done all that Moses hath commanded you: ye have obeyed me also.

16 But take ye diligent heed to do the commandments and the laws of the Lord; to cleave unto him; and to serve him with all your heart; and with all your soul.

17 Then the tribe of Reuben, the tribe of Gad, and the half-tribe of Manasseh, even all the armed men thereof, departed from Joshua, at ^aShiloh.

18 And they passed over Jordan, to the land of Gilead, whereof they were possessed, as Moses had spoken.

19 And the tribe of Reuben, the tribe of Gad, and the half-tribe of Manasseh, returned into the land of Gilead, with their shares of the spoil they had taken from the Canaanites, with much cattle, with gold, with silver, with iron, and with brass, and with very much raiment: and with their portion of pure virgins; as the Lord had commanded Moses.

CHAP. XXXIII.

1 *The Reubenites, the Gadites, and the Manassites build a tabernacle and an altar.* 5 *Joshua is angry with them.* 8 *Joshua sends Phinehas to them.* 15 *Their reasons.* 22 *Joshua is pacified.* 29 *Joshua and Eleazar die.*

1 NOW it came to pass that the elders of the

A. M. 2560.

^aHeb. disbanding.

2561.

A. M.
2561. Reubenites, the elders of the Gadites, and the elders of the half-tribe of Manasseh, said one among another.

2 Behold Joshua, and our brethren, have set up the tabernacle in Shiloh ; let us likewise build a tabernacle and an altar, as testimonies unto the Lord ; for Jordan is a border between them and us.

3 That the Levites, who dwell among us, may offer up our burnt-offerings, our sacrifices, and our peace-offerings, unto the Lord.

4 And they built a tabernacle, and they sat up an altar on this side Jordan, in the land of their possession, even in Gilead.

5 ¶ And it came to pass, when Joshua and the children of Israel heard thereof, that they assembled themselves together at Shiloh.

6 And Phinehas said, Lo ! the people of Reuben, the people of Gad, with the Manassites, seek to make themselves a separate people ; even as Korah, have they sinned.

7 For they have built a tabernacle, and they have set up an altar, on the other side Jordan ; unto Shiloh will they not come, at the place which the Lord hath appointed will they not appear, to offer sacrifices, and burnt-offerings.

8 And Joshua said, Send Phinehas, Caleb, and Jasher, with the princes of Israel ; and

let them pass over Jordan, and enquire at their hands the cause thereof.

9 And they went, and they passed over Jordan : and they saw the tabernacle and the altar which the children of Reuben, the children of Gad, and the children of Manasseh, had built, and behold they were well to look unto.

10 And they said unto the Reubenites, the Gadites, and the Manassites, Wherefore have ye thus trespassed in making yourselves a people to rebel against the Lord ?

11 Tell us, we pray ye, Wherefore have ye built a tabernacle and an altar, besides the tabernacle and the altar which are in Shiloh ?

12 And the men of Reuben, the men of Gad, and the men of Manasseh, answered, and said, The Lord, the God of our fathers, knoweth, that as a testimony have we built the tabernacle and the altar.

13 For Jordan is between us and Shiloh ; wherefore that we, our wives, our sons, and our daughters, might worship the Lord, surely have we done this thing.

14 And speak unto Joshua, and unto our brethren on the other side of the river of Jordan, and say,

15 Thus say the men of Reuben, the men of Gad, and the men of Manasseh, As the Lord liveth, we, and our sons,

A. M.
2561.

A. M. from sixteen years of age, shall
2561. appear once in every year before the Lord, in Shiloh.

16 Moreover, whatsoever ye shall command us, that will we do.

17 And the words of the Reubenites, of the Gadites, and of the Manassites, were pleasing unto Phinehas, and unto all those who were with him.

18 ¶ Then Caleb, Phinehas, Jasher, with the princes, returned unto Joshua, and unto the children of Israel, in Shiloh.

19 And they said, Thus say our brethren, the men of Reuben, the men of Gad, and the men of Manasseh, We are the people of the Lord: and as a testimony thereof have we built for us, our wives, our sons, and our daughters, a tabernacle, and have set up an altar.

20 And behold once in every year will we, and our sons, from sixteen years, and upwards, appear before the Lord, in Shiloh.

21 And whatsoever ye shall command us, that will we do.

22 And the thing pleased Joshua, and all Israel; and they said, We will not destroy the land wherein the children of Reuben, of Gad, and of Manasseh, dwell.

23 And they said, Their chosen men shall bear testimony also among the elders of Israel, at Shiloh.

24 Now had Israel rest from all their enemies round about: for the people of the nations feared greatly.

25 ¶ And Joshua waxed old, and he called for all Israel, and he said: Behold, I have divided unto you, by lot, all the land of Canaan, as an inheritance for your tribes, possess ye the land, as the Lord hath promised unto you.

26 Now, therefore, fear ye the Lord: and serve him in sincerity, and in truth.

27 And the people said unto Joshua, We will serve the Lord.

28 And when Joshua had made an end of speaking, the people departed, each man to his dwelling.

29 And Joshua died, being one hundred and ten years of age.

30 And Eleazar, the son of Aaron, died.

CHAP. XXXIV.

1 *Judah and Simeon take possession of their lots. 4 Othniel smiteth Kirjaeth-sepher. 7 The Israelites suffer the Canaanites to dwell among them. 15 Phinehas reproves the Israelites for so doing. 21 The people weep. 24 Caleb dies.*

1 **NOW** after the death of Joshua, Judah said to Simeon, Come thou, and let us drive out the Canaanite out of my lot: and I will go with thee up into thy lot.

A. M.
2561.

2564.

2565.

A. M.
2565.

2 And they did so : and they slew of the Canaanites, ten thousand men.

3 ¶ And Caleb said, He that smiteth Kirjaeth-sepher : to him will I give ^a Achsah, my daughter, to wife.

^a Heb. the enchanter.

^b Heb. hour of the Lord.

4 And ^bOthniel, the younger brother of Caleb, took it : then gave he unto him Achsah, his daughter.

5 And the children of Judah said unto the Kenites, Ye are the children of Jethro, who was father-in-law to Moses, ye shall dwell in the land, and ye shall fight for us, and we will fight for you.

6 Then Judah went up with Simeon into his lot : and he took Gaza, ^cAskalon, ^dEkron, and the mountains.

^c Heb. the balance.

^d Heb. enervated.

8 Joseph also in his lot did not drive out the Canaanites : but the Canaanites still dwell among them.

9 Manasseh in his lot did not utterly drive them out : for the Canaanites would dwell in Megiddo, Dor, Taanach, and Bethshean.

10 Neither did Ephraim drive out the Canaanites : but they dwelt with them in Gazer.

11 The children of Zebulun made the inhabitants of

Kitron and Nahaleel their tributaries.

A. M.
2565.

12 The children of Ashur also dwell among the Canaanites, the inhabitants of the land : in Accho, Zidon, Ahlab, Achzib, Helbah, Aphik, and Rehob.

13 Neither did Napthali drive out the Canaanites : nevertheless made they the inhabitants of Bethshemosh and of Beth-anath tributaries.

14 So also the tribe of Dan dwelt among the Canaanites.

15 ¶ And it came to pass, when the tribes of the children of Israel had gone up each unto his lot, that Phinehas, the priest, spake unto the elders of the people, and said :

2568.

16 What is this that you have done ? Moses, the servant of the Lord, said unto you, Ye shall surely drive out all the inhabitants of the land.

17 And behold ye have made a league with the Canaanites, with the Jebusites, with the Perrizzites, and with the Amorites : and ye dwell among them.

18 And the elders of the people said, They were too strong for us : peradventure if we had not made a league with them, we had all perished, we, our wives, and our children, and all our flocks, and our herds, and our gold, and our silver, and our virgins ; even all our possessions, had been a prey unto them.

A. M. 19 For who are they, now
2568. Moses and Joshua are dead,
who can lead forth all the
people to battle!

20 Then answered Phinehas, and said, The Canaanites will henceforth be as thorns in your side, and their customs will be as snares unto you: and the Lord, the God of our fathers, will not go forth with our armies.

21 And the elders of the people, lifted up their voice, and wept: because of those things, which should befall all Israel.

22 ¶ Now Caleb ruled in Israel after Joshua was dead, twelve years.

23 And the people dwelt in peace, all his days.

24 And Caleb died, and was buried: and the children of Israel mourned until the thirtieth day.

CHAP. XXXV.

1 *Jasher succeeds Caleb, his father.*

7 *Jezer obtains leave to build a city.* 11 *Azuba, her complaint.*

1 **A**ND it came to pass after these things were fulfilled, that Phinehas, and the elders of the tribes of Israel, assembled themselves together at Shiloh.

2 And they said, Who shall judge Israel? for behold, now

Moses, Joshua, and Caleb, are dead, the people of the Lord are without a leader.

3 And they named Jasher, the son of Caleb, by Azuba: seeing he is an upright man.

4 And, moreover, this we know, that he hath seen all the wonders, wrought in Egypt, in the wilderness: even all the mighty works, that have been done.

5 And the people shouted for joy.

6 And Jasher judged Israel, in Shiloh.

10 And Jezer builded him a city, in the tribe of Judah: the same is the habitation of the Jasherites, unto this day.

11 ¶ Now it came to pass, when the elders of the children of Israel were assembled together at Shiloh, that Azuba, the mother of Jasher, spake, and said,

2579.

12 Lo! the nations will swallow us up: the name of our fathers will surely be forgotten.

A. M.
2579. 13 For the sons of Israel defile themselves with the women of the nations: they have forsaken the daughters of Jacob.

• *Heb. unity.* 14 And ^bEhud said, Up, let us slay the people of the nations: let us utterly drive them out of the land of Canaan.

15 For so long as they be among us, they will be a snare unto us: and Israel shall be defiled.

16 Then spake Jezer, and said, Separate yourselves from among them: let the Canaanites inhabit their cities, and let us possess our cities.

17 So that they may not come nigh unto us: nor that we, nor our sons, draw nigh to the people of the nations.

18 And Othniel stood forth, and said, Would to God, it was now with us, as it was in the days of Moses, and Joshua, when all Israel went forth to the war: then might we drive out the nations!

19 For behold! now the armed men of each tribe are for themselves, and for the lot of their inheritance.

20 Moreover, it will henceforth behove us, that we permit not all the males of Israel at one time to appear before the Lord in Shiloh, lest the enemy noteth it.

21 Who shall lead Reuben over Jordan: will Gad with Manasseh now fight for us?

22 Then spake Jasher and

said: Hear, O my people, hearken unto the words, of the son of Caleb, by Azuba.

23 Peradventure, the people of the nations, are too strong for us: and who is there now, of the sons of Jacob, that shall conquer.

24 Reject not, therefore the counsels of Othniel, and of Jezer. Suffer ye the Canaanites, the Perrizzites, the Hittites, the Hivites, and the Amorites, to dwell in their cities: and besides the cities we possess of the nations taken in the war, let us build cities for our increase; for our sons, and our daughters, and their children, that they dwell therein, and serve the Lord, the God of Abraham, the God of Isaac, and the God of Jacob, who hath brought us out, from under the bondage of Egypt, unto the promised land: a land flowing with milk, and with honey.

25 So shall we, and those who come after us, be a separate people: sanctified unto the Lord.

26 Moreover, thus hath said the Lord, by the mouth of his servant Moses, Your sons shall not take to wife the daughters of the children of Canaan; lest they be cut off from the congregation.

27 And all the elders of Israel cried out, and said, As Jasher, our judge, hath spoken, so shall it be.

28 ¶ Then came ^aDeborah,

A. M.
2580.

2581.

• *Heb. the word; truth.*

A. M. 2581. the daughter of Jasher, and said unto her father: Behold my husband was slain before Makkedah, when Israel went out to fight for the people of Gibeon.

28 Wherefore that I, and my sons, and my daughters, may serve the Lord, let us build us a city, that we may dwell therein.

30 And Jasher said, Thou hast said it: and call thou its name Debir.

CHAP. XXXVI.

1 *Jasher sends messengers unto the kings of Canaan. 6 He assembles them nigh Bethel. 8 Jasher and the kings make a league. 15 The Israelites serve the Lord, all the days of Jasher.*

2582. 1 **A**ND it came to pass in those days, that Jasher sent messengers unto all the kings, and unto all the nations of Canaan: and he wrote unto them, saying:

2 Jasher, the judge of all Israel, unto the kings of the sea-coasts, the kings of the mountains, and the kings of the valleys, greeting: Know ye, that Moses, the servant of the Lord, hath commanded us, that we should not dwell with you in your cities, nor follow after your customs: and that we should not suffer you to dwell with us in our cities.

3 Seeing we worship the Lord, who made heaven, and

earth, and all things therein: and ye fall down, and worship, Baalim, and the gods of your own imaginations.

4 That we shall not give our daughters unto your sons, nor take your daughters for our sons.

5 Wherefore thus saith Jasher, It behoveth, that ye assemble yourselves together, at Bethel: that I, and all the elders of Israel, may covenant with you.

6 ¶ And in those days, the kings and princes of the sea-coasts, the kings of the mountains, and the kings of the valleys, assembled themselves together, nigh unto Bethel, in the way as thou goest up to Beth-horon.

7 And Jasher, and all the elders of the tribes of Israel, came there also.

8 And Jasher stood forth, and he spake unto all the kings of the sea-coasts, the kings of the mountains, and the kings of the valleys, and said: To live in peace surely, that there be no more war between us, our sons, and our sons' sons, are we now come.

6 Behold, now, O, ye nations! chuse you out in every tribe, the cities ye are willing to dwell in, and all those lands, and possessions, which shall be yours: and be ye unto yourselves.

10 That your families remain inhabitants of the land,

A. M. 2582.

2583.

A. M. and that ye eat the fruit of
2583. your increase.

11 Then answered all the kings of the sea-coasts, the kings of the mountains, and the kings of the valleys, and they said : What thou, O Jasher, judge of all Israel, hath spoken, seemeth unto us good : and all that thou commandest, that will we do.

12 And they bowed down before Jasher ; and before all the elders of Israel.

13 And they did all that Jasher had spoken, and they took them cities, lands, and possessions, in every tribe : even such as Jasher, and the elders of Israel, had appointed for them.

14 And the people of Israel dwelt in their cities, and had their lands, and their possessions ; and the people of the nations dwelt in their cities, and had their lands, and possessions : and they are separated even unto this day.

15 ¶ And the children of Israel served the Lord all the days of Jasher, who had seen all the great works done for Israel, in Egypt, and in the wilderness.

16 And Israel rested from war, all the days of Jasher : observing all things written in the book of the covenant, and Israel did not defile themselves with the women of the nations.

CHAP. XXXVII.

A. M
2594

1 *The Israelites build them synagogues in every city.* 3 *The priests read the covenant therein.* 3 *They build no altar.* 6 *Jasher appoints rulers of cities.* 8 *Various habits to be worn.* 10 *Jasher assembles the elders.* 13 *He reminds them of former things.* 21 *His charge to the elders.* 23 *Othniel is to succeed Jasher.* 24 *Jasher blesses Israel.* 26 *Jasher builds an ark ;* 28 *in which Jasher lays up the book which he had wrote.*

1 NOW it came to pass in process of time, when the children of Israel had built them cities, and had gotten them possessions, in the land of Canaan, that they grew mighty ; and for number, they were as the sand on the sea-shore.

2 And they built little tabernacles in every city ; and in every town.

3 And the priests and Levites, on every sabbath-day, read before the people of every city, and of every town, the law, and the statutes : and they rehearsed, in the ears of all the people, the mighty works that were done in Egypt, and in the wilderness.

4 But they sat up no altar, neither did they offer burnt-offerings, or peace-offerings, save only at Shiloh.

5 But the children of Israel, throughout all their tribes, kept the passover, and the feasts ; as Moses had appointed.

A. M.
2595.

6 ¶ And Jasher appointed rulers of cities; and rulers of towns.

7 And the people dwelt in peace; and they walked uprightly.

2597.

8 ¶ And it came to pass, that Jasher spake unto all the children of Israel, before the door of the tabernacle of the congregation, and he said, The garments of the virgin, of the virgin betrothed, of the married woman, and of the widow, shall from henceforth note them as such, that ye may be chaste before the Lord, your God.

9 Likewise the garments of the young man, of the married man, and of the widower, shall note them as such, that ye may be blameless.

10 And they said, All these things will we, our wives, our sons, and our daughters, observe to do.

2599.

11 ¶ Now it came to pass, that Jasher assembled together Phinehas, the priest, and Othniel, and all the elders of Israel:

12 And Jasher spake unto them, and he said: Lo! the days of my life are many, and the time is at hand that I shall return to the place of my fathers;

13 Hear therefore the words of Jasher:

14 Call to mind the days of old; remember the times that are past.

15 Our father Jacob dwelt in Hebron in this land.

16 And there was a sore famine in Canaan.

17 Now Pharaoh, king of Egypt, had advanced Joseph, one of the sons of Jacob.

18 Wherefore went he into Egypt, and he dwelt in the land of Goshen; and he died there.

19 After the death of Jacob, the Egyptians oppressed your brethren.

20 Then came Moses from Midian, and delivered us out of bondage; and led us through the Red Sea into the wilderness.

21 And now behold this day, is fulfilled the prophecy of Abraham: Unto thy seed will I give this land.

22 Ye are for multitude a great people: and it shall come to pass, that if you observe the statutes, and ordinances, of the Lord, and walk uprightly, ye shall drive out the remnant of the Gentiles.

23 Wherefore I charge ye this day, that ye command your sons, that they do not take them wives of the nations: it is an abomination, it bringeth destruction.

24 And lo, Othniel! peradventure he shall judge Israel after I am no more.

25 And Jasher blessed Israel, and he said, The Lord, the God of Abraham, the God of Isaac, and the God of Ja-

A. M.
2599.

A. M. 2600. cob, prosper your going-out,
and your coming-in.

26 ¶ And it came to pass on the morrow, that Jasher called unto him, his sons, and his daughters; and he blessed them, and he said,

27 The days of my life are one hundred and twelve years: these are the days of my pilgrimage.

28 And Jasher said, This book which I have written, ye shall neither add to, nor diminish from: it is thine, and thy sons, to possess for ever.

29 That the elders of Israel, and the children not yet

born, may read and praise the Lord.

30 ¶ And when Jasher had made an end of speaking, he called unto him Jazer, his eldest son, and he said unto him, Build now an ark, that I may put therein this testimony: and do thou lay it up in the city of Jezer.

31 And Jazer builded an ark of Gopher-wood, and he brought it unto his father, and Jasher put therein the book, which he had written.

32 And Jazer laid it up in the city of Jezer.

A. M. 2600.

NOTES.

IT cannot be conceived that the author who so admirably describes the most High by his name JEHOVAH, could intend to exclude his divine agency in the work of Creation; and therefore, when he says, 'The ether moved upon the surface of the chaos, we must understand the ether as a subordinate agent, under the direction and influence of the first great cause. The term Ruach, signifies spirit, breath, or wind, but when the Elohim is added, it signifies the energetic power and influence of JEHOVAH, and frequently the Holy Spirit. This all-pervading energy first gave motion to the ether, this communicated it to the dull insensible matter of the chaos, put life and motion into it, and produced the separation of the elements of air and fire, from earth and water, so that the abyss fled before the face of the light, and divided between the light, and the darkness. The ether, or firmament above, and the earth below, at first, only a mass of matter, but, by the agency of the Divine Being, using subordinate means, at length, subsided by its various stratas, so as to form the terraqueous globe, the waters subsiding to their proper channels.

The opinions of the numerous theorists, such as Burnet, Whiston, and others, widely differ on the nature of the abyss. The one insisting that there was no visible sea, but that the waters formed the abyss in the centre of the earth; the other, that the waters from the beginning, formed their own channels. The sacred historian, Moses, and the author of this

Chronicle, leave these matters without explanation, only in general terms, declaring the separation of the grosser matter, the earth, from the finer matter of air and water.

It appears, both from Moses and Jasher, that the creation of the sun and moon is a glorious display of the divine power, and that their utility in the system is of the first importance, the one to rule the light, and the other to rule the darkness.

The formation of the earth was followed by the production of vegetable and animal substances; the latter not being created until a provision was made for their subsistence, the beast and every creeping thing from the earth, the fishes from the waters, and the fowl from the ether; each after their kind, with the power of propagating their species, so as to continue their various orders, in perpetual succession, without any new act of creation. Herein the divine power and energy are displayed in a most excellent manner, and may induce a due obedience to that command, Let every thing that hath breath, praise the Lord.

When all these things were finished, although the distinct work of each day is not mentioned, it is evident that Jasher attributes all things to God, as their author. Then having formed this noble theatre of nature, he beheld it with approbation, and having prepared it as the habitation of some superior being to what hitherto existed, he created man. This act, from the expression used, intimates design and coun-

sel; and Moses beautifully expresses it by the important words, "Let us make man in our own image." And again, after his creation, "So God made man in his own image." Both in his spiritual and corporal state, he was made a resemblance of the moral and political image of God, as well as of his immortality and eternity.

It is evident that man knew his Creator, and was impressed with awe of his Majesty, and reverence of his power and glory; but especially of the highest admiration of his bounty and goodness, of his favour and love. The impressions of Deity upon his mind, were those which produced confidence, love, joy, and delight; and rendered obedience, not only rational, but grateful and pleasing; no reluctance, no hesitation, no delay; all was harmony, peace, and love; creation smiled in all its richest productions, man enjoyed them with innocence, and returned his homage, devotion, and obedience.

Editor.

Notes on Chap. I.

ADAM was perfect in his generation, complete in his stature; of the most extensive knowledge, walking uprightly, and eschewing evil. Eve was perfect in her generation, amiable, and lovely to look unto; of modest behaviour, of consummate chastity; beautiful, walking uprightly, and hating iniquity. Between these two, there was no superiority, they were both made at one time, and they both had the same powers of knowledge.

Hur, out of the book of Aaron.

Notes on Chap. II.

NOAH was the first who builded up a ship, a floating house, an ark, to remain upon the surface of the waters. With this he visited the opposite land, and improved fishing; and his sons after him transplanted themselves to distant lands.

Hur.

At this time all the people of the earth spake one language, and lived in common; were of one mode, of one form, and of one way of life.

Hur.

And it came to pass when the sons of Japhet saw that the land was burthened with people, by reason of the longevity of men at this time, and the number of children born unto them, and having now built themselves floating habitations, and invented the sail, they sought distant lands.

Hur.

The sons of Japhet settled in that part of Asia the less, which lieth upon the Mediterranean.

Ben Zaddi.

In the days of Peleg it came to pass, that men first began to inclose lands. He enacted the laws of property. He settled the bounds of families; he first gave particular inheritances; he grew an arbitrator; lands were given by him for cultivation; infringers hence became culpable of his displeasure; punishments, riches, pride, government, poverty, idleness, and rebellion, ensued. Thus, at this time, people, friends, were dispersed; different interests destroyed union; avarice arose. One, from distance of place, became stranger and enemy to the other; contests and local vices sprung up. Leaders, rulers, teachers, arose; new words and ideas took place; so that, in process of time, people who understood one another heretofore, could not converse; hence misunderstandings, misrepresentations, enmities, evil-speaking, war, &c.

On.

Nimrod arose and opposed himself to Peleg. Now Nimrod was a man whose way of life was opponent to inclosures, for he was a hunter; he ranged the lands, and slew the beasts of the field, with an arrow from the bow. He spake against the sayings of Peleg; but it came to pass, that Peleg was mightier than Nimrod. Wherefore Nimrod said unto those that were with him: Let us also build us cities to dwell in, lest Peleg and those that are with him be too many for us. This was the beginning of the kingdom of Babylon, and Nimrod was the first king thereof.

Phinehas.

Notes on Chap. III.

NOW had the world subsisted about two thousand years, and from their dispersion and different views and interests, different modes of worship had arisen; men had forsaken the precepts of the patriarchs, the natural worship of the Deity; set up symbols of the Deity; worshipped in groves, estranged themselves concerning the truth; their ideas became, through vice, circumscribed; the discerning few now got rule; irregularity and punishment stalked. Abraham, seeing the defection of his brethren, counselled them to return to the ways of old; but they had gone so far astray, and had so bewildered themselves, that they could not return

to their primitive way of worship and life. This obliged Abraham to leave their society, that he, and his family, might serve the Lord, persuaded, that if he, and his, walked uprightly, that from him would arise a great people, by whose example the nations would be led to serve the Lord. *Hur.*

Tradition saith, That the patriarch Abraham heard a voice as from heaven, commanding him to slay his son Isaac, as he was in the field alone by himself. Abraham returns to his wife Sarah disconsolate. Sarah enquires the cause, and Abraham tells her, that a voice from heaven had said unto him, Take thy son, and slay him, and offer him up a burnt-offering in the land wherein he was born. Upon this, Sarah, who was a woman of great wisdom and discernment, expostulated with Abraham, and convinced him that it could not be the voice of God; and her argument was very conclusive: If the holy voice has said, Of thee I will make a great nation, the holy voice cannot say *this*, because if thou slayest thy son, how can the former be fulfilled? *Hur.*

Notes on Chap. IV.

JASHER takes no notice why Joseph was advanced in the court of Pharaoh; and therefore it may be presumed, that so many stories were extant, that he could not with certainty adopt one. However, the most probable I will here set down, as a remark on that part of Jasher which concerns Joseph. Joseph was the beloved of Jacob, and obtained leave of his father, to travel into Egypt; for, says he, there will be a famine in the land of Canaan, and I will go and provide corn for you and my brethren at Zoan, that ye perish not. Accordingly, Joseph had not been long at Zoan before there happened to be a great increase of corn in that land; but in the land of Canaan, the earth brought not forth. Now Pharaoh sent and gathered together all the wise men of his kingdom, and he said unto them: Behold, the earth giveth of its increase, thrice told, and there is as much more food for the people than they want, and moreover the hands are not equal to the harvest! what shall we do? And the wise men knew not. And it was proclaimed, saying, Whosoever shall resolve the thing, he shall stand before Pharaoh. And it was told unto Pharaoh, that

Joseph, the stranger, the son of Jacob, who dwelt at Hebron, in the land of Canaan, could unfold the secret. Then Pharaoh called for Joseph, and Pharaoh said unto him, Speak. Then Joseph bowed himself before Pharaoh, and said, The Lord God of his fathers had revealed it unto him, that there should be great plenty in Egypt, and that there would be great dearth in the land of Canaan, which dearth was then actually begun; wherefore, O king, build storehouses in every city, and buy ye of the Egyptians the surplus of their abundance; peradventure this time of plenty will be succeeded by a time of want and scarcity. Then Pharaoh advanced Joseph. *Phinehas.*

There is but one expression in Jasher which points at all the evils which the administration of Joseph brought on the Egyptians, it is this; And he was a stranger in the land of Egypt: and he bought Egypt with a price. The Egyptians, before the advancement of Joseph, was a free people; they paid no tax towards the support of the government, nor of the priesthood. As Joseph had prophesied, so it came to pass: the time of plenty was succeeded by a time of want and scarcity. And then it was, that he sold unto the people at a great price, the increase he had before bought for a very low price. When he had exhausted the money, and the jewels of the people, and brought the wealth of Egypt into the king's coffers, and the people still wanted food, he then bargains with them that they should pawn their lands. And when the dearth was over, then it came to pass, that all Egypt by a perpetual decree rendered the fifth of its increase unto Pharaoh. *Phinehas.*

The Hebrews were oppressed by the Egyptians by a taxation, and which was as a brick for hardness. When Pharaoh saw that they were become a great people for number, he sent unto them, that they should bear some part of the public burthen, towards the maintenance and dignity of the state; he alledged, that when the famine was in the land of Canaan, the corn of Egypt saved their lives; and therefore they should give them the tenth of their increase, of their flocks, of their herds, and of their grounds. The children of Israel, who had lived free from the least demand of any kind, for three hundred years and upwards, regarded this imposition, as

a brick, that is, as a hard thing, and were uneasy under it. *Hur.*

Notes on Chap. V.

MIRIAM was born fifteen years before Moses. She was the daughter of Amram, by Jochebed, his wife; one who to great natural parts added that of great thought and foresight. The decree coming forth, that the Hebrew males should all be slain as they were born, and she having heard how good-natured the daughter of Pharaoh was, proposed to her parents, that she would carry her brother Moses, and meet the princess as she walked by the river side, which was the custom of the princess every morning to do, and seem as though she was going to drown the infant. By which means, says Miriam, when the princess beholdeth the child, peradventure she may enquire what I am about to do with the infant. Then will I answer, and say, I am going to drown it, it being an infant male of the children of Jacob, according to the decree of Pharaoh, thy father, which says, Every male that openeth the womb, among the children of Jacob, shall ye drown in the river. O, says Jochebed, thou art as a sea of bitterness unto me! O my daughter, thou hast ingulphed me in an ocean of perplexity! Be not afraid, says Miriam, whether is it not all one, that he perish by the hands and command of the daughter of Pharaoh, or by the slayers of infants; we cannot always hide him from knowledge. The morn arose, the sun rejoiced to run his course, and all nature smiled, when Miriam, almost by force, takes up the lovely infant, whose innocent looks were enough to engage every eye, and away she carries him to the banks of the river, to meet the princess. Jochebed and Amram follow at some distance, waiting the event. The princess was taking her morning walk, attended by her women. Now Miriam had placed herself under a tree, where she knew the princess would pass by, and was there kissing, and taking, as it were, her last farewell of her brother, and as the princess approached, was swaddling it up, that with the greater convenience she might throw it into the river, and then she kisses it again, and the tears flowed from her eyes. The princess and the ladies stood at some distance, viewing and thinking what the meaning of this

thing could be; and seeing that the young woman looked at the water, and then at the child, imagined that she was going to drown it. Upon this, the princess calls earnestly to Miriam, and asks her, what she was going to do with the infant? Miriam advances, and says, I am about to drown it, even as Pharaoh has commanded. How! says the princess, sure Pharaoh has not said it. Then answered Miriam, Thy father hath said, Every male that openeth the womb, among the children of Jacob, shall ye drown in the river. And this is the first which hath opened the womb since the decree hath been made. And the princess said, Give me the child. Miriam having delivered the child, the princess enquires for one to nurse it. Here Miriam produces his mother, Jochebed, to be a nurse for her brother. And the princess said, He shall be my son, and his name shall be called Moses, because I have taken him from the water, wherein he was to be drowned. Then Jochebed took Moses, and returned unto her house, and she said to her daughter, Behold, now thou art unto me as an uplifting. Aaron, at this time, was three years old. The princess that very day went unto Pharaoh, and got the decree revoked. Thus did Miriam, when fifteen years of age, contrive the revoking of the decree of Pharaoh, concerning the murder of the infant males of the children of Israel.

Hur, out of the book of Aaron.

Miriam from hence became the admired of the Hebrews: every tongue sang of her praise. She taught Israel; she tutored the children of Jacob; and the people called her, by way of eminence, The Teacher. She studied the good of the nation, and Aaron and the people hearkened unto her. To her the people bowed; to her the afflicted came. Israel enjoyed peace all the time of the days of the princess, who succoured Moses. Miriam was ninety-five years of age, when Moses came from Midian. And Aaron was eighty and three. And Moses was eighty years of age. *Hur, out of the Book of Aaron.*

It was a tradition in my time, that the princess carried Moses to her father, and by shewing him the infant, and expostulating with him concerning the barbarity of those who had counselled the decree, prevailed on the king to revoke it. *Hur.*

Notes on Chap. VI.

MOSES, who till now, had lived altogether in the court of Pharaoh, leaves Zoan, and goes into Goshen to visit his brethren, the Hebrews: when there, he encourages them to revolt from the Egyptians. Pharaoh hearing of this, Moses thought it best to fly into Midian, being then forty years of age. There he marries Zipporah, the daughter of Jethro, who was the son of Esau, who was the son of Isaac. Jethro was a great man; one who had given laws to his people, and was both a king and a priest. He was a worshipper of the true God, but did not use circumcision among his people; yet he ordained a priesthood, and appointed the observation of sabbaths, and of feasts, and kept holy days. There was a particular enmity notwithstanding, betwixt the descendants of Jacob and those of Esau; and Jacob had particularly cautioned his children not to marry among the uncircumcised. Jethro, finding that Moses was a man of great policy, and versed in all the learning and magic of the Egyptians, gives him his eldest daughter, Zipporah, to wife; by whom Moses had two sons, Gershom and Eliezar. At the expiration of forty years afterwards, Moses is told by Jethro, that Pharaoh, who sought his life, was dead; is advised to go up into Egypt, to endeavour to bring his brethren from under the yoke of Pharaoh into the wilderness, and there to make them a separate people, under a particular government of their own. Moses, flushed with the thoughts of success, brings out of Midian, Zipporah and her two sons, and comes into Goshen: but the elders knew him not, and tell him, that he had transgressed the precepts of Jacob, in marrying Zipporah. Upon which disgust of the Hebrews, Moses sends Zipporah, and her two sons, back to Jethro.

Hur.

And it came to pass, during the time Moses was in Midian, which was the space of forty years, that Caleb, who was a ruler among the sons of Jacob, and a mighty man, invented the arrow, and the bow, and trained up the males to the use of it, and he, and his followers, became expert in it. This was a contrivance that was more excellent than the javelin: he found he could kill the enemy hereby at a great distance; wherefore the Hebrews in this respect became too mighty for the Egyptians.

Othniel.

Notes on Chap. VII. VIII. IX. X. XI.

MOSES persuades the Hebrews to leave Goshen, and go into the wilderness. They ask of him a sign: he gives them many, which they believe. But Pharaoh, when Moses went to him, would not believe. After many persuasions, with the advice of all his princes, Pharaoh lets them go upon certain conditions, which the Egyptians told him the Hebrews had not performed; at which Pharaoh was provoked, and pursues Moses and the people. Of which Moses having intelligence, he changes his course, and (when at the extremity of the Red Sea, purposing to lead the Hebrews to the foot of mount Sinai, and put them under the protection of the Midianites, lest Pharaoh should pursue him, and in his rage slay the Hebrews,) turns off towards Baal-zephon, in which neighbourhood Moses encamped. When Pharaoh and his host came to Etham, seven days after Moses had left the place, he was informed, that Moses, instead of going straight forward into the wilderness, was gone to Baal-zephon. Here Pharaoh stops, his troops being fatigued with a sudden and hasty march, and sends to demand of Moses satisfaction for what injury the Hebrews had done the Egyptians. Upon this, Moses sends Jasher to tell Pharaoh, that he would search out the offenders, and deliver them up, and such restitution should be made as should be satisfactory to them, and that this should be done by the fourth day. To this Pharaoh agreed, indeed he was necessitated to stay, for his troops were so harassed and faint, that they wanted rest. Moses, having thus gained time, disposes the march of his people over the sands of the Red Sea, in the manner following: He ordered Aaron to lead the van into the sea, at the recess of the water; they went in, a man and a woman; the women carrying and leading the infants, and the men carrying the baggage. Thus did they march; the tribe of Levi and the tribe of Joseph got over that reflux; the next, the tribe of Judah and the tribe of Simeon; the next, the tribe of Benjamin and the tribe of Ephraim; the next, the tribe of Zebulun and the tribe of Issachar; the next, the tribe of Dan and the half-tribe of Manasseh; the next, the half-tribe of Manasseh, and all the women and children of the tribe of Reuben and the tribe of Gad, with their bag-

gage. Moses having thus dismissed all, except the men of Reuben and Gad, about midnight blew the trumpet, and he led the people through the sea with a hasty march, for which he had prepared them by sending away their wives, children, and baggage. Moses had so well contrived to cut off all intercourse between the Hebrews and the Egyptians, that the latter knew not that the former had fled. On the fourth day, in the morning, Pharaoh sends to demand restitution, but behold Moses with the tribes of Reuben and Gad had crossed the Red Sea, in the preceding night. They hastened unto Pharaoh, and told him, that the Hebrews fled by the way of the Red Sea; (for there was a road which led through there, at the reflux, for foot-passengers, but was not at all commodious for horses and chariots.) Now during the time that Moses and the tribes passed through the sea, by night the moon shone; but afterwards, the dark nights came on and the rains fell. Pharaoh pursued Moses to Baal-zephon, and there he was told in what manner the Hebrews passed the sands of the Red Sea. At this, Pharaoh was greatly disheartened, and he said, Let us return from whence we came, for we cannot go over the sands with our horses and chariots; and could we cross with part of the host of Egypt, for all cannot pass at one reflux, the Hebrews will slay us. Wherefore Pharaoh cursed the people of Jacob, he and all the host of Egypt, and returned to Zoan. *Hur.*

Every one knows the famous miracle of the passage over the Red Sea, when the Lord opened this sea, dried it up, and made the Israelites pass through it, dry-shod, to the number of 600,000, without reckoning old men, women, or children. Some ancient authors have advanced, that Moses, having lived long near the Red Sea, in the country of Midian, had observed that it kept its regular ebbing and flowing, like the ocean; so that taking the advantage of the time of the ebb, he led the Hebrews over; but the Egyptians, not knowing the nature of the sea, and rashly entering into it just before the return of the tide, were all swallowed up, and drowned, as Moses relates. Thus the priests of Memphis explained it; and this opinion has been adopted by a great number of moderns.

In the queries of Michælis sent to Niebuhr, when in Egypt, it was proposed to him to enquire upon the spot, "Whether there were not some ridges of rocks where the water was shallow, so that an army at particular times may pass over?" Secondly, "Whether the Etesian winds, which blow strongly all the summer from the North West, could not blow so violently against the sea, as to keep it back on a heap, so that the Israelites might have passed without a miracle?"

A copy of these queries was left also for Mr. Bruce, the traveller, who justly observed as follows: "I must confess, however learned the gentlemen were who proposed these doubts, I did not think they merited any attention to solve them."

This passage is told us by Scripture to be a miraculous one; and, if so, we have nothing to do with natural causes.

If we do not believe Moses, we need not believe the transaction at all, seeing that it is from his authority alone we derive it. If we believe in God, that he made the sea, we must believe he can divide it when he sees a proper reason; and of that he must be the only judge. It is no greater miracle to divide the Red Sea, than to divide the river Jordan.

If the Eastern wind, blowing from the North West in summer, could keep up the sea, as a wall on the right, or to the South, of fifty feet high, still the difficulty would remain of building the wall on the left hand, or to the North; besides, water standing in that position for a day, must have lost the nature of fluid.

Whence came that cohesion of particles which hindered that wall to escape at the sides? This is as great a miracle as that of Moses. If the Etesian winds had done this once, they must have repeated it many a time before and since, from the same causes. It appears however, from the accurate observations of Niebuhr and Bruce, that there is no ledge of rocks running across the gulph anywhere, to afford a shallow passage.

The second query, about the Etesian, or Northerly wind, is refuted by the express mention of a strong Easterly wind blowing across, and scooping out a dry passage; not that it was necessary for Omnipotence to employ it there

as an instrument, any more than at Jordan ; but it seems to be introduced in the sacred history by way of anticipation, to exclude the natural agency that might in after times be employed for solving the miracle. It is remarkable, that the monsoon in the Red Sea blows the summer half of the year from the North, the winter half, from the South ; neither of which would produce the miracle in question.

The tides in this sea are moderate. At Suez the difference between high and low waters did not exceed from three to four feet, according to Niebuhr's observations on the tides in that gulph, during the years 1762, and 1763. It is evident from the text of Moses, and other sacred authors, who have mentioned this miraculous passage, that no other account is supportable, than that which supposes the Hebrews to cross over the sea from shore to shore, in a vast space of dry ground, which was left void by the waters at their retiring. (Exod. xiv. 16, 17, &c.)

In the canticle that Moses sang at their coming out of the Red Sea, he says (Exod. xv. 8.) "With the blast of thy nostrils (or, with the wind of thy fury,) the waters were gathered together ; the flood stood upright as an heap ; and the depths were congealed in the heart of the sea." The Psalmist says (Psalm, lxxviii. 13.) "He divided the sea, and caused them to pass through, and he made the waters to stand as on a heap." He says in another place, "That the sea fled at the sight of God." (Psalm, cxiv. 3, 5.) "That the Lord made himself a path in the sea, that He walked in the midst of the waters." (Psalm, lxxvii. 19.) Isaiah, lxiii. 11, &c. says, "That the Lord divided the waves before his people ; that He conducted them through the bottom of the abyss, as a horse is led through the midst of a field." Habbakuk, iii. 15, says, "That the Lord made himself a road to drive his chariot and horses across the sea, across the mud of great waters." Lastly, the author of the book of Wisdom, xix. 7, 8, 10, 17, 18, says, "That the dry land appeared all on a sudden in a place where water was before ; that a free passage was opened in a moment through the midst of the Red Sea ; and that a green field was seen in the midst of the abyss, &c. : " It is thought the place where the Hebrews passed

by the Red Sea, is two or three leagues below its Northern point, at the place called Kolsum, or Clysma.

Dr. Hales observes, that "It sufficiently appears, even from Niebuhr's own statement, that the passage of the Israelites could not have taken place near Suez : For, first, he evidently confounded the town of Kolsum, the ruins of which he places near Suez, and where he supposed the passage to be made, with the Bay of Kolsum, which began about forty-five miles lower down, as Bryant has satisfactorily proved, from the astronomical observations of Ptolemy and Ulug Beigh, made at Heroum, the ancient head of the gulph. 2ndly, Instead of crossing the sea at or near Etham, their second station, the Israelites "turned southwards, along the western shore ; and their third station at Pihahiroth or Bedea, was at least a full day's journey below Etham ; as Bryant has satisfactorily proved from Scripture. (Exod. xiv. 2.) Hales' New Analysis of Chronology, vol. i. page 388, to 394. : Wells's Geography of the Old and New Testament, vol. i. page 240. *Editor.*

It was at this time, and on the account of the fraud Moses and his people had put on the Egyptians, that they were called יַעֲקֹבִי or יַעֲקֹבִים that is, Jacobites. *Ehud.*

Miriam first stepped into the Red Sea, amidst the thousands of Israel, who thereupon cried out, Behold the queen of the sea. When all her people were safe in the wilderness, she proclaimed a feast, at which Miriam and the women of Israel leaped for joy. *Hur.*

The people of Israel, soon after they had left the borders of the Red Sea, and had journeyed for three days into the wilderness, had exhausted their water, and thereupon was in great distress, and they said, Where shall we now have water to drink ? Moses, in this emergency, assembles the elders. Miriam was one of the assembly, for she being the admired of the people, they proceeded to no business till she was present ; nay, so deep was her penetration, and so exquisite her judgment, that her word was final. She advised that they should dig for water. *Hur.*

The great wisdom and policy of Moses is here very conspicuous, in his selling to the Egyptians, for their gold and silver, all the possessions of the Hebrews. By this means, they

had wherewithal, when they had gotten into the wilderness, to purchase oxen, sheep, and all the necessities of life, of the Amalekites, the Hivites, &c. and also all utensils of husbandry, and horses, &c. for their immediate use. *Othniel.*

The riches the Hebrews carried with them procured them the friendship, at least, the indulgence, of the people of the nations, for the trade of gold for the fruits of their land made them rich. This Miriam perceived would in time impoverish her own people, wherefore she advised them to till the ground, and to tame the beasts of the field. *Jazer.*

It seemeth plain, that the Egyptians intended to buy the possessions of the Hebrews for a very small sum, and thereby to oppress them grievously; but this scheme of Moses and the elders to sell more in number of every thing than they had, outwitted them, and flung their iniquity upon their own heads. Besides, Moses by this means brought his own people the more readily into his designs of shaking off the power of Egypt. *Zadock.*

Miriam might justly be stiled, the mother of the Hebrew nation, in a proper sense, for she taught them first to dig for water. She likewise stimulated them to till the ground, and cultivate the tree. She brought a grain out of Egypt, and sowed the field. The male and female of the flock and herd did she bring. *Tobias.*

Notes on Chap. XV.

THE contest between Moses and Miriam was concerning the establishment of the laws and customs prescribed by Jethro. She argued and reasoned very wisely. Are not the laws and customs of the children of Jacob sufficient to govern the people, seeing they have done so for four hundred years? Surely the wisdom of our forefathers is greater than that of the Midianites. The people took the side of Miriam. *Hur.*

Miriam opposed the introduction of the laws given by Jethro. She well knew, that if Zipporah was suffered to dwell among the children of Israel, of consequence, the customs of Midian would take place, that intermarriages would happen, and that such practices would tend to the engulfing them in the nations. *Jezer.*

All the days of the life of Miriam were one hundred and twenty years. In her time the

Israelites received no other laws and customs, save those from Abraham, Isaac, and Jacob. The patriarchs in every family ruled. *Jazer.*

When the people of the nations, the Moabites, the Perrizzites, the Hivites, the Amorites, the Jebusites, and the Hittites, heard that Miriam was dead, they were moved; and the reason was, because she restrained Moses from destroying them. *Othniel.*

Notes on Chap. XVI. XVII. XVIII.

MOSES, soon after the death of Miriam, orders Nadab and Abihu to build an altar nigh unto mount Sinai, and to raise twelve tables or pillars for each tribe to come unto. When this was done, he appoints twelve young men, of great strength, to slay oxen, and sheep, and lambs, and roast them on the altar: and Moses blew the trumpet, and he proclaimed a feast, and every tribe assembled each to his pillar or station, and they sat down, and they did eat. And this was the first public feast of the Israelites. And now it was, that they chose out seventy elders for to be with Moses, and to judge the people. *Hur.*

Moses, after the contest with Miriam, never attempted to establish the laws of Jethro till some time after her death. He had a design to secrete her, imagining, if it had not been for her humane disposition, he should have been able to have settled the people in Canaan during his life, which would have been for the good of the commonweal: but the policy of Moses was for killing and destroying all before him: the policy of Miriam was the reverse. Miriam dying, they remained for a short time in the method she left them; but as the people could not now apply unto her for wisdom, they were at a great loss, and that loss grew daily more and more perceptible.

At length, the complaints reached the ear of Moses. In order to redress the grievance, Moses advises the people to elect such persons as they should think capable of judging the people. That the people should elect, was pleasing to the multitude; by which means Moses had seventy to assist him in the administration. The first thing Moses proposed, and which they agreed to, was the admission and adoption of Zipporah and her sons. Moses soon after assu-

med the title of king ; and having brought Nadab and Abihu, and the seventy elders who spake for the people, into his plan of forming the Hebrew monarchy, they assembled on mount Sinai, and, together with Jethro, fixed on the rule of government. *Phinehas.*

In the following chapters nothing occurs, but what fully accords with the statements of Moses, the Jewish Lawgiver, only with relation to Miriam, who seems from the statements of Jasher, to have held a very high place in the councils of the elders of Israel, so that no important step was taken without her concurrence. In one instance, she appears to have resisted Moses, on which account she was struck with leprosy, but again restored at his successful prayer ; and although she resisted the adoption of Zipporah into the commonwealth of Israel, she did it from a conscientious motive, dreading the influence of the Midianitish women, and the pollution of the Jews by intermarriages with them, which soon was the case.

The laws and customs proposed by Jethro, she also rejected, arguing, that the statutes and ordinances of Jacob were preferable to them, and that as they had hitherto prospered under the ancient government, by the fathers and heads of the tribes, there could be no sufficient cause for their departure from them. However, at length, the whole of the ceremonial law took effect ; Moses by miracles and signs, and mighty wonders, proving that he acted by divine authority, so that all opposition ceased, and the

government was fully established in a Sanhedrim of seventy elders, Moses being king in Jeshurun.

It appears that Jasher was eminent in his days, not only for the integrity, but for the prosperity of his government ; that his conduct, in every relation and capacity, was unexceptionable ; and that he died in a good old age, full of honour, and much lamented by the nation, being one hundred and twelve years old. The book written by him, was kept with religious veneration, and though not of equal authority with the books of Moses, yet was appealed to both in the times of Joshua, and the great king of Israel, David.

Thus, then, it appears, that as far as such a work can be authenticated, this possesses every proof of being a transcript of the original manuscript ; and, consequently, that it is worthy to be preserved as a collateral evidence of the facts detailed more fully in the writings of Moses, the book of Joshua, and the book of Judges. Let us therefore make a due improvement hereof, by imitating the uprightness of Jasher, obeying the precepts delivered by him, and yielding an unreserved obedience to that better covenant under which we live, knowing that the whole economy of the Jews, adumbrated and typified the better covenant of grace, in the person of our glorious Redeemer, who hath obtained for us a better inheritance than Canaan, even an inheritance incorruptible, undefiled, and that fadeth not away, reserved in heaven for us.

Editor.

EXPLANATORY

The Rosicrucian Order

Anticipating questions which may be asked by the readers of this book, the publishers wish to announce that there is but one universal Rosicrucian Order existing in the world today, united in its various jurisdictions, and having one Supreme Council in accordance with the original plan of the ancient Rosicrucian manifestos. The Rosicrucian Order is not a religious or a sectarian society.

This international organization retains the ancient traditions, teachings, principles, and practical helpfulness of the Brotherhood as founded centuries ago. It is known as the *Ancient Mystical Order Rosae Crucis*, which name is abbreviated for popular use into AMORC. The worldwide headquarters is located at San Jose, California. Those interested in knowing more of the history and present-day offerings of the Rosicrucians may have a *free* copy of the book entitled *The Mastery of Life*, by sending a definite request to Scribe B. O. J., Rosicrucian Park, San Jose, California 95191.

THE BOOK OF JASHER THE SACRED BOOK WITHHELD

What was written in this book of Holy Scripture that caused it to be expunged from the pages of the Bible? To what *veiled truths* were the prophets of old referring when they cried, "Is it not written in the Book of Jasher?"—Joshua 10:13, "Behold, it is written in the Book of Jasher"—II Samuel 1:18?

Read this photographic reproduction of the text whose rediscovery is credited to Alcuin, sage of Charlemagne's court.

THE MYSTICAL LIFE OF JESUS

by H. SPENCER LEWIS, F. R. C., Ph. D.

A full account of Jesus' life, containing the story of his activities in the periods not mentioned in the Gospel accounts, *reveals the real Jesus* at last.

This book required a visit to Palestine and Egypt to secure verification of the strange facts found in Rosicrucian records. Its revelations, predating the discovery of the Dead Sea Scrolls, show aspects of the Essenes unavailable elsewhere.

This volume contains many mystical symbols (fully explained), photographs, and an unusual portrait of Jesus.

SEPHER YEZIRAH—A BOOK ON CREATION OR THE JEWISH METAPHYSICS OF REMOTE ANTIQUITY

by DR. ISIDOR KALISCH, *Translator*

The ancient basis for Kabbalistic thought is revealed in this outstanding metaphysical essay concerning all creation. It explains the secret name of Jehovah.

Containing both the Hebrew and English texts, its 61 pages have been photolithographed from the 1877 edition. As an added convenience to students of Kabala, it contains a glossary of the original Hebraic words and terms.

COSMIC MISSION FULFILLED

by RALPH M. LEWIS, F. R. C.

This illustrated biography of Harvey Spencer Lewis, Emperor of the Ancient, Mystical Order Rosae Crucis, was written in response to the requests of thousands of members who sought the key to this mystic-philosopher's life mission of rekindling the ancient flame of *Wisdom* in the Western world. We view his triumphs and tribulations from the viewpoint of those who knew him best.

Recognize, like him, that the present is our *moment in Eternity*; in it we fulfill our mission.

MENTAL POISONING THOUGHTS THAT ENSLAVE MINDS

by H. SPENCER LEWIS, F. R. C., Ph. D.

Must humanity remain at the mercy of evil influences created in the minds of the vicious? Do poisoned thoughts find innocent victims? Use the knowledge this book fearlessly presents as an antidote for such superstitions and their influences.

There is no need to remain helpless even though evil thoughts of envy, hate, and jealousy are aimed to destroy your self-confidence and peace of mind.

THE SYMBOLIC PROPHECY OF THE GREAT PYRAMID

by H. SPENCER LEWIS, F. R. C., Ph. D.

The world's greatest mystery and first wonder is the Great Pyramid. Its history, vast wisdom and prophecies are all revealed in this beautifully bound and illustrated book. You will be amazed at the pyramid's scientific construction and at the secret knowledge of its mysterious builders.

ROSICRUCIAN PRINCIPLES FOR THE HOME AND BUSINESS

by H. SPENCER LEWIS, F. R. C., Ph. D.

This volume contains the practical application of Rosicrucian teachings to such problems as: ill health, common ailments, how to increase one's income or promote business propositions. It shows not only what to do, but what to avoid, in using metaphysical and mystical principles in starting and bringing into realization new plans and ideas.

Both business organizations and business authorities have endorsed this book.

SELF MASTERY AND FATE WITH THE CYCLES OF LIFE

by H. SPENCER LEWIS, F. R. C., Ph. D.

This book demonstrates how to harmonize the self with the cyclic forces of each life.

Happiness, health and prosperity are available for those who know the periods in their own life that enhance the success of varying activities. Eliminate "chance" and "luck", cast aside "fate" and replace these with self mastery. Complete with diagrams and lists of cycles.

THE TECHNIQUE OF THE MASTER THE WAY OF COSMIC PREPARATION

by RAYMUND ANDREA, F. R. C.

A guide to inner unfoldment! The newest and simplest explanation for attaining the state of Cosmic Consciousness. To those who have felt the throb of a vital power within, and whose inner vision has at times glimpsed infinite peace and happiness, this book is offered. It converts the intangible whispers of self into forceful actions that bring real joys and accomplishments in life. It is a masterful work on psychic unfoldment.

A THOUSAND YEARS OF YESTERDAYS

by H. SPENCER LEWIS, F. R. C., Ph. D.

This fascinating story dramatically presents the real facts of reincarnation. It explains how the soul leaves the body and *when* and *why* it returns to Earth again.

This revelation of the *mystic laws and principles* of the Masters of the East has never before been presented in such a form. Finely bound, and stamped in gold, it makes a fine addition to your library.

EGYPT'S ANCIENT HERITAGE

by RODMAN R. CLAYSON

Much of what we know today began in Egypt! Concepts that are unquestionably ancient show marvelous insights into natural law. From Egypt's mystery schools came rites and ceremonies that dramatize the creative Cosmic force. This book presents a masterly overview of the civilization of the Nile Valley.

ESSAYS OF A MODERN MYSTIC

by H. SPENCER LEWIS, F. R. C., Ph. D.

These private writings disclose the personal confidence and enlightenment that are born of *inner experience*. As a true mystic-philosopher, Dr. Lewis shares with his readers the results of contact with the Cosmic intelligence residing within.

ETERNAL FRUITS OF KNOWLEDGE

by CECIL A. POOLE, F. R. C.

A stimulating presentation of philosophical insights that will provoke you into considering new aspects of such questions as: the purpose of human existence, the value of mysticism, and the true nature of good and evil. Paperback.

MANSIONS OF THE SOUL

by H. SPENCER LEWIS, F. R. C., Ph. D.

Reincarnation: the world's most disputed doctrine! What did Jesus mean when he referred to the mansions in my Father's house? This book demonstrates what Jesus and his immediate followers knew about the rebirth of the soul, as well as what has been taught by sacred works and scholarly authorities in all parts of the world.

Learn about the cycles of the soul's reincarnations and how you can become acquainted with your present self and your past lives.

THE SECRET DOCTRINES OF JESUS

by H. SPENCER LEWIS, F. R. C., Ph. D.

Even though the sacred writings of the Bible have had their contents scrutinized, judged and segments removed by twenty ecclesiastical councils since the year 328 A.D., there still remain buried in unexplained passages and parables the Great Master's *personal* doctrines.

Every thinking man and woman will find *hidden truths* in this book.

MYSTICS AT PRAYER

Compiled by MANY CIHLAR

The first compilation of the famous prayers of the renowned mystics and adepts of all ages.

The book *Mystics at Prayer* explains in simple language the reason for prayer, how to pray, and the Cosmic laws involved. You come to learn the real efficacy of prayer and its full beauty dawns upon you. Whatever your religious beliefs, this book makes your prayers the application not of words, but of helpful, divine principles. You will learn the infinite power of prayer. Prayer is man's rightful heritage. It is the direct means of man's communion with the infinite force of divinity.

THE TECHNIQUE OF THE DISCIPLE

by RAYMUND ANDREA, F. R. C.

The Technique of the Disciple is a book containing a modern description of the ancient esoteric path to spiritual Illumination, trod by the masters and avatars of yore. It has long been said that Christ left, as a great heritage to members of His secret council, a private method for guidance in life, which method has been preserved until today in the secret, occult, mystery schools.

Raymund Andrea, the author, reveals the method for attaining a greater life taught in these mystery schools, which perhaps parallels the secret instructions of Christ to members of His council. The book is informative, inspiring, and splendidly written. It is handsomely bound stamped in gold.

CONSCIOUS INTERLUDE

by RALPH M. LEWIS, F. R. C.

With clarity of expression and insightful penetration of thought, this original philosopher leads us to contemplate such subjects as: the Fourth Dimension, the Mysteries of Time and Space; the Illusions of Law and Order; and many others of similar import.

As you follow the author through the pages into broad universal concepts, your mind too will feel its release into an expanding consciousness.

WHISPERINGS OF SELF

by VALIDIVAR

Wisdom, wit and insight combine in these brief aphorisms that derive from the interpretation of Cosmic impulses received by Validivar, whose true name is Ralph M. Lewis, Imperator of the Rosicrucian Order.

These viewpoints of all areas of human experience make an attractive gift as well as a treasured possession of your own.

THE SANCTUARY OF SELF

by RALPH M. LEWIS, F. R. C.

Are you living your life to your best advantage? Are you beset by a *conflict of desires*? Do you know that there are various *loves* and that some of them are dangerous drives?

Learn which of your feelings to discard as enslaving influences and which to retain as worthy incentives.

The author, Imperator of the Rosicrucian Order, brings to you from his years of experience, the practical aspects of mysticism.

ROSICRUCIAN QUESTIONS AND ANSWERS WITH COMPLETE HISTORY OF THE ORDER

by H. SPENCER LEWIS, F. R. C., Ph. D.

From ancient times to the present day, the history of the Rosicrucian Order is traced from its earliest traditional beginnings. Its historical facts are illuminated by stories of romance and mystery.

Hundreds of questions in this well-indexed volume are answered, dealing with the work, benefits and purposes of the Order.

"UNTO THEE I GRANT..."

AS REVISED BY SRI RAMATHERIO

Out of the mysteries of the past comes this antique book that was written two thousand years ago, but was hidden in manuscript form from the eyes of the world and given only to the initiates of the temples in Tibet to study privately.

It can be compared only with the writings attributed to Solomon in the Bible of today. It deals with man's passions, weaknesses, fortitudes and hopes. Included is the story of the expedition into Tibet that secured the manuscript and the Grand Lama's permission to translate it.

IN SEARCH OF REALITY

by CECIL A. POOLE, F. R. C.

This Book Unites Metaphysics With Mysticism.

Man is not just an isolated entity on Earth. He is also a great world—the Cosmos. The forces that create galaxies and island universes also flow through man's being. The human body and its vital phenomenon—Life—are of the same spectrum of energy of which all creation consists. The universe is you because you are one of its myriad forms of existence. Stripping away the mystery of this Cosmic relationship increases the personal reality of the Self.

BEHOLD THE SIGN

by RALPH M. LEWIS, F. R. C.

Unwrap the veil of mystery from the strange symbols inherited from antiquity. What were the *Sacred Traditions* said to be revealed to Moses? What were the discoveries of the Egyptian priesthood?

This book is fully illustrated with *age-old secret symbols* whose true meanings are often misunderstood. Even the mystical beginnings of the *secret signs* of many fraternal brotherhoods today are explained.

LEMURIA—THE LOST CONTINENT OF THE PACIFIC

by WISHAR S. CERVÉ

Where the Pacific now rolls in a majestic sweep for two thousand miles, there was once a vast continent known as Lemuria.

The scientific evidences of this lost race and its astounding civilization with the story of the descendants of the survivors present a cyclical viewpoint of rise and fall in the progress of civilization.

HERBALISM THROUGH THE AGES

by RALPH WHITESIDE KERR, F. R. C.

The seemingly magical power of herbs endowed them with a divine essence to the mind of early man. Not only did they provide some of his earliest foods and become medicines for his illnesses but they also symbolized certain of his emotions and psychic feelings. This book presents the romantic history of herbs and their use even today.

YESTERDAY HAS MUCH TO TELL

by RALPH M. LEWIS, F. R. C.

A personal account of witnessing primitive ceremonies, conversations with mystical teachers and austere high priests of the Near and Far East. It takes you to rites in the interior of Africa, and to temples in Peru, India, Egypt and other exotic lands. This is no mere travel book; the author was privileged, because of his Rosicrucian affiliation, to see and learn that which is not ordinarily revealed.

ROSICRUCIAN MANUAL

by H. SPENCER LEWIS, F. R. C., Ph. D.

This practical book contains not only extracts from the Constitution of the Rosicrucian Order, but a complete outline and explanation of all the customs, habits, and terminology of the Rosicrucians, with diagrams and explanations of the symbols used in the teachings, an outline of the subjects taught, a dictionary of the terms, a complete presentation of the principles of Cosmic Consciousness, and biographical sketches of important individuals connected with the work. There are also special articles on the Great White Lodge and its existence, how to attain psychic illumination, the Rosicrucian Code of Life with twenty-nine laws and regulations, and a number of portraits of prominent mystics including Master K. H., the Illustrious.

The technical matter in the text and in the numerous diagrams makes this book a real encyclopedia of Rosicrucian explanations, aside from the dictionary of Rosicrucian terms.

The *Rosicrucian Manual* has been enlarged and improved since its first edition. Attractively bound, and stamped in gold.

MENTAL ALCHEMY

by RALPH M. LEWIS, F. R. C.

We can transmute our problems to workable solutions through *mental alchemy*. While this process is neither easy nor instantaneously effective, eventually the serious person will be rewarded. Certain aspects of our lives *can* be altered to make them more compatible with our goals.

Use this book to alter the direction of your life through proper thought and an understanding of practical mystical philosophy.

MESSAGES FROM THE CELESTIAL SANCTUM

by RAYMOND BERNARD, F. R. C.

The real *unity* is Cosmic Unity. No human being is separated from the Cosmic, no matter where he lives or how different his life style may be. Each person is like a channel through which cosmically inspired intuitive impressions and guidance can flow. The *Celestial Sanctum* in general is the universe. No earthly sanctuary is more sacred than the multiple phenomena which occur in the great extensions of the Cosmic. There are no greater Laws than those which operate this phenomenon.

This book explains how you can harmonize yourself with the *Celestial Sanctum*. Also, it reveals rational, sensible, and practical messages which were *cosmically* narrated. They can guide all, regardless of race or creed, toward a greater understanding and a complete mastery of one's life. Allow this book to explain to you how your mind can become like a window through which you can observe creation—and learn from it in a *personal way*.

CARES THAT INFEST...

by CECIL A. POOLE, F. R. C.

With a penetrating clarity, Cecil Poole presents us with the key to understanding our problems so that we may open wide the door and dismiss care from our lives. The author guides us on a search for *true value* so that, in the poet's words, "the night will be filled with music," as the *cares* "silently steal away."

SON OF THE SUN

by SAVITRI DEVI

The amazing story of Akhnaton (Amenhotep IV), Pharaoh of Egypt 1360 B.C. This is not just the fascinating story of one life—it is far more. It raises the curtain on man's emerging from superstition and idolatry. Against the tremendous opposition of a fanatical priesthood, Akhnaton brought about the world's first spiritual revolution. He was the first one to declare that there was a "sole God." In the words of Sir Flinders Petrie (*History of Egypt*): "Were it invented to satisfy our modern scientific conceptions, his religio-philosophy could not be logically improved upon at the present day."

This book contains over three hundred pages. It is handsomely printed, well bound, and stamped in gold.

INTRODUCTION

IN MY BOOK *The Technique of the Master* I outlined certain basic principles of thought and action, and methods of esoteric discipline, which appear to characterize the Master during the training of a disciple. These principles and this discipline constitute the necessary foundation upon which a disciple has to build through graduated development a comprehensive structure of technical equipment in order to attain to high initiation. I tried to sketch the subject from the Master's point of view. I took it for granted that readers accepted the fact of the existence of the Masters as living personalities, actually operative on this material plane as well as on the cosmic plane, having full knowledge of the activities of the Order to which we as members are attached, and inspiring certain advanced initiates in carrying on those activities.

Obviously, for those who do not accept this fact of the existence of such Masters, the technique of the Master and of his disciple can have little significance. Rosicrucianism, in its esoteric aspect, is grounded upon the fact of Cosmic Attunement, a personal alignment with cosmic forces, by means of which its disciple enters the state of superconsciousness. The technique of the Rosicrucians has its origin in the superconscious realm. Therefore its laws and principles must emanate from perfected technicians who are conversant with that realm. We say there exists a Rosicrucian Hierarchy, a section of the Great White Lodge, consisting of Masters specially deputed to promulgate a technique in which these laws and principles in here. In its outer aspect, the Rosicrucian Order is an organization disseminating a systematic teaching, thoroughly practical and of approved utility in the world; and, in its inner aspect, of a deeply mystical and esoteric character. It is in this latter aspect that the operative force resides and indeed gives direction and stability to the manifold applications and

THE TECHNIQUE OF THE DISCIPLE

uses in the everyday world. It is herein also that the technique silently acts and reacts through its chosen channels and is brought to bear with knowledge and understanding upon the lives of those who enter and work in the Order. Without this technique, working silently and understandingly from the inner fraternity of the Order in and through the outer organization, the latter would cease to be; and the technique, wanting this field for its action and use would remain an isolated and unapplied possession of its proficient.

In this work I have endeavored to treat the subject from the point of view of the neophyte as he seeks to qualify from the outset of his studies, knowing little of the path before him, or how his new departure in life will react upon himself and his environment. It is not an easy task to embark upon; but I propose to write from my own experience of the path and take the young aspirant step by step along with me, until light and knowledge dispel doubt and hesitancy and he finds the technique unfolding in his mind and soul and expressing skillfully in his hands in the one great service to which we have dedicated ourselves, the service of the Master.

Chapter 1

THE NEOPHYTE ENTERING ON THE PATH

A MASTER SAID to his pupil: "But you have to remember that you are at a hard school and dealing now with a world entirely distinct from your own." No better admonition could be given to the neophyte entering upon his studies. It is an admonition of warning and encouragement. He is invited to remember that he is entering upon a condition of pupillage in which thought and action are to receive a new direction and intention; that he is taking a path totally different from the worldly path he has trodden hitherto and must be prepared to conform to new principles none too easy to accept perhaps at the threshold, because some of them will oppose firmly rooted personal beliefs and opinions. But there is great encouragement in the fact that he is placing himself under the tuition of teachers who know the path experimentally which he proposes to take. They know the difficult stages of it. Just where he will falter they have perfect confidence and can lift him up.

The admonition reminds one of the impressions experienced in school days when we were warned of the difficulties awaiting us on passing from the junior to the senior classrooms, and we were encouraged to persevere in them. It was truly the entering into an entirely different world, and the first steps in it were difficult. Promotion to it came in the natural course of events; it was inevitable if we were to attain to intellectual manhood. But in the case of the neophyte, entering upon the path is a matter of personal choice. He elects to advance from intellectual to psychic and spiritual manhood. He may

do this as unconcernedly as he changed classrooms, in which case the admonition will have far more warning in it, but no less encouragement than in the case of the man who passes on with the strong resolution to make the most of a great opportunity to equip himself with a fine and useful culture. Whatever happens to the former type of neophyte, the latter will find in himself the patience and perseverance which the higher school of life will demand of him.

Entering upon the path means a new departure in life; in a sense, a parting of the ways. If it is regarded by the neophyte as just another interest, desirable because others have taken the step, that attitude of mind may soon fail him. It cannot be taken as a pastime with others and with indifferent purpose. He can only make headway on his own native strength. Exceptional strength is not required in the beginning, but there must be courage and initiative to use that which he has. His studies will soon demonstrate to him what measure of strength is his. And if he wills to advance, he will apply it confidently to the new task of soul culture and find it developing and preparing him for the higher grades.

The first thing the neophyte has to realize is that his studies will initiate him into a different world from the one he knows. The failure to recognize this fact has caused many a neophyte to cast aside impatiently the very knowledge and discipline he most needed. If the studies offered him had in view only the extended information of a senior classroom, they would obviously be a superfluous institution. But this is not so. They comprise well-tried systems of scientific teaching and technical instruction designed to turn the neophyte's attention inward upon himself, his complex constitution and innate possibilities as a spiritual and psychic being, and they necessarily explore avenues of mental procedure excelling in promise anything he knows and accepts in everyday life. Observe then, that the more firmly adjusted, the more confirmed he is in his adherence to the worldly standard of knowledge and achievement, the greater may be the initial difficulty he will experience on his first encounter with the new scale of values the studies will disclose to him.

Let the neophyte assure himself of this fact that the studies he enters upon hold the key to a new world of progress. No matter what his sympathies may be with accepted standards of thought and action, or what his achievements in any field are, he is circumscribed within the relatively limited frontiers of those sympathies, nor can he extend his achievements beyond those frontiers until he consciously concerns himself with the soul factors that remain latent but unrecognized in the background of his activities. There awaits him a new world of thought, emotion, and action which can only be possessed by giving his well-known factors of expression a subordinate position and looking to the soul for the unfoldment of those super-faculties which in time will enlarge the whole mental horizon for him.

The neophyte may be a student of literature, art, or science. All the accepted canons of his branch of study may be familiar and comprise the main portion of his mental content and be applicable by him in commendable demonstration, of the highest pleasure to himself and of much utility to others. Nevertheless, through his training on the path he will find it possible to raise all these activities into a new dimension of added power and influence. Art may become more expressive, enshrining itself in more beautiful and diviner types; literature may become a sublime pageant of the biography of the soul, invested with secret meanings hitherto undreamed of; and science, instead of being the dull record of irreconcilable facts, may disclose an illumined avenue of approach to contact with invisible and magical forces.

This is a wonderful truth for the neophyte to ponder at the threshold. The adumbrations of a unique career on the path may fall silently upon the mind like a celestial vision. Let him hold it fast and resolve to demonstrate the possibilities of it. Whatever he has and prizes dearly can be re-created, clarified, and oriented in spiritual vision, and become a thing of sheer beauty in the light of the soul. Nothing of value which he brings with him on to the path will be taken away. No ideal he has striven for, no work he has fostered through the years, need be renounced. These mental possessions are his present strength, and on that he will make his way. Now, for the first time, all his acquirements of mind and soul are to be rightly understood and

assessed and their range of service and use in all probability increased through an understanding of the laws of transmutation.

It will be interesting to ask, what is it that causes the neophyte to gravitate towards and take up the studies of the path? The answer of many will be that it is entirely for the purpose of spiritual evolution. In a large percentage of cases this is not so. There is undoubtedly no small percentage who have no such object in view. A careful observation of the lives of various neophytes and their subsequent work and progress proves this conclusively. If every neophyte taking the path were bent solely upon spiritual evolution, the world would probably lose in no long time some of its most promising and able workers and pioneers in the realms of practical activities. At first sight this may appear an unwarranted statement. But experience is stronger than prejudice.

Many a neophyte - and observe, the neophyte is not necessarily a young person, but may be and often is of mature age - enters upon occult and mystical studies for the sole purpose that his chosen profession or life activity may be further advanced by relating it more intimately and forcefully with the secret source of power and revelation which those studies unfold. The purpose is a wise one and fully justified; and if there were more in the occult ranks with the same purpose in view, the world would be richer for their presence.

The purpose is justified for this reason: such a neophyte will find that the creations of art and the discoveries of science originate in the minds of exceptional men and are the offspring of high inspiration. It is the super element in them which attracts the neophyte and makes him a lifelong devotee of these master minds. And if he ever hopes to emulate them, or indeed to understand their work rightly, he must approach them from a higher level than that of the everyday world.

These creators work from the world of mystical and occult forces, whether they know and acknowledge it or not, and to that world the neophyte must look for a full understanding and appreciation of them. The finest things in life are wrought out in a hard school whose laws are entirely distinct from those operative in the school of the world. These laws await the neophyte's discovery and application in the studies of

the path; and he is as fully justified in seeking their assistance to make him a greater artist or scientist, or professional man, at the point of evolution where he stands, as for the purpose of the highest mystical and spiritual research and demonstration.

I have known clever students in many lines of activity whose complete outlook and grasp of the truth and principles relating to their profession have been widened and reorganized through a period of mystical training. The discipline was strange to them and appeared to promise little at the outset; but their keenness and conscientiousness, and the desire to be of practical use in the world, enabled them quickly to surmount the initial difficulties. The soul began to awaken to its possibilities, and an influx of strength from a larger consciousness soon extended over the whole life.

There is nothing mysterious about the process of such an unfoldment. It is as natural as the opening of a flower. The neophyte enters upon the work with a feeling of curiosity as to where it will lead him, and in a little while it often happens that he finds himself upon strangely familiar ground. The seed has been sown in a former life, and in contacting others seriously bent upon the studies, the strong vibration of their concerted efforts, working silently upon his life and thought, does as much as the work itself in his hands in quickening latent growth and bringing him to a feeling of security as a unit in the group to which he belongs.

That is a factor he must keep firmly in mind. Although the early stages of his study may present him with principles foreign to his habit of thought, the neophyte does not progress on his own unaided strength. Directly he links himself with others on the path, he comes more and more to feel the reactive influence of these students upon himself. The law of mental attraction at once comes to his assistance, and a process of attunement with many working to the same end augments his forces and proves to him the great value of cooperative evolution as a guarantee of future advancement. In this way he finds his place on the path, and those who supervise his training will see that he receives encouragement and assistance commensurate with his need.

Chapter 2

THE INITIAL TEST

WHATEVER THE PARTICULAR reason may be that attracts the neophyte to the discipline of the path, the real objective should be that of service. His aim may be new creative ability and increased influence in his profession or other activities, or it may be, as said, entirely for mystical and occult purposes. In any case his power for service will undoubtedly be extended and, when all is said and done, world service of some kind should come to influence his researches on the path. Some, we know, enter upon occultism out of mere curiosity, and they usually quickly fall away. My concern is not with them. I have in mind primarily the neophyte who behaves in the existence of undiscovered powers and abilities in himself and is resolved to awaken the sleeping self within and follow in the footsteps of the great teachers who stand in the forefront of evolution. Nothing less than that will satisfy the aspiring soul who is aware of the perplexing conditions of modern life, the peremptory challenges and unique opportunities which evolution is forcing upon us, and the great need for able men to meet and use them.

The neophyte who recognizes this need will regard himself as a volunteer to a life of discipline, the object of which is to give him skill in service. As a preliminary in this discipline he is to cultivate a responsiveness of the personal self to the soul which is to ultimately dominate all his activities. He will seek to transfer the emphasis he has placed so completely upon the objective self, to that informing entity within which will gradually assert its control and initiate him into new areas of consciousness through a growing responsiveness to subtle vibrational measures hitherto unrecognized. That is really the whole

problem: the centering of attention upon the indwelling self and the expression of its powers in service, as distinct from the emphasis, relatively selfish, hitherto placed upon the objective personal self.

Terms should not confuse the neophyte here. Whether through previous study he has come to think of himself as soul and body, ego and personality, or the master within and his vehicles of expression, the problem is the same. The divine fire is within, and it acts and vibrates throughout its own subtle apparatus; and the mortal self seeks through all experience and self-imposed discipline to unveil the hidden glory that it may shine forth and illumine the temple. The conscious ascension from the objective plane to that of the divine self is the path of discipline which the volunteer elects to tread in order to qualify for service which is the first step in the evolution of the superman. This should be the objective of the neophyte.

But even if all neophytes recognize it, there is, as in other spheres, a diversity of types; and while a few of them will settle down quickly and knowingly, with a clear conception of the work to be done and make that kind of progress which compels recognition, the other types, worthy of all acceptance, will have to ponder every step and proceed with anxious questionings and partial assurance. The few take the path boldly, with a feeling of intimacy, and with the objective clearly outlined in mind. The others take it hesitantly, because they are on unfamiliar ground.

This marked difference between the types of neophytes is a fact of much importance for those who supervise their work and progress. There is nothing in this discrimination to deter or discourage those who are new to the path. It should rather inspire them to the necessary effort to grasp a great opportunity. But the swift advance of the few over the preliminary stages of discipline is a happy indication that they are rapidly unfolding latent occult capacity. Among these we expect to find those to whom the Master referred when he said: "We will always find volunteers to replace the tired sentries."

That is why a powerful occult organization is the most wonderful institution and the most promising in the world today, far exceeding in reality and technical equipment the universities of miscellaneous

knowledge and influence. To such we have to look for the flower of our present humanity. Souls who have passed through the fires of crucial experience, who know the strong vibration of life and now stand at a remove from it, not because they have renounced it but because they understand and can impose their will upon it, who find peace and inspiration in the silent high places of the soul within and draw secret strength thence, as a charge and responsibility not as a mere personal satisfaction, and give them back in manifold forms of service - these souls stand and serve in solid and mindful cooperation, and from them the neophyte is sure of a ready response. To feel themselves destined at no distant time, but possibly within their present incarnation, to take their place among these teachers, with the ability to exercise an evolved technique in the lives of incoming neophytes, should be sufficient to inspire the promising few, if not the others, with strong purpose and levelheadedness to pursue their studies with unusual seriousness and a sense of increasing responsibility both to themselves and to their fellow students.

At this point of a preliminary recognition of his value as an awakening soul, with an expansive vista of attainment ahead, it is as necessary for the neophyte to exercise a reasonable restraint so as to foster the eager aspiration for advancement. In one form or another fanaticism usually besets this type. On coming into his own on the path everything in the economy of life calls for a new valuation. He is thrown a little out of focus with things as they are. He has to adjust himself to many subtle changes transpiring within.

Life expression in the personality does not like to be diverted from its wonted course. Psychology furnishes a reason for this. The mentation and action of years have fashioned the mind and molded the texture of brain and body to able response and the requirements of environment, and a growing attunement with the soul can have but one result. The old rhythm must give place to the new; and the more rapid the attunement and the released force and knowledge of latent growth into the conscious field, the greater will be the need for alertness and flexibility in adjusting to the personal life.

Many neophytes are acutely tried just here. They ask for advancement and compel it, and straightway the law of attraction brings them

into the midst of the battlefield with a host of opposing influences confronting them. Some immediately recognize the situation and welcome it. Others display weakness and cry for deliverance from that which their own efforts have invoked. But there is the test for the volunteer. The right man will stand his ground however circumstances turn round upon him. He knows that this revolution in the personal life is precisely the point at issue and will risk anything to master it. He knows he cannot pass up to the higher levels of consciousness without meeting the exigencies of the ascent. Even the senior classroom has a new master and a tough curriculum and punishment of a sterner quality. But they mold youth into capable manhood.

It is the same all through life. We cannot gain the greater things on the same terms as the lesser. Yet that is what so many students expect to do. They have to learn that the soft inducements which enabled them to assimilate the alphabet do not accompany the mathematics of life. I confess that sometimes when I have seen a neophyte grappling with the initial difficulties incident to the swift recovery of latent faculty stimulated by the forceful demand for progress, I have momentarily doubted the kindness, but not the wisdom, of pressing him forward. This reflection arises from the indelible memory of one's own experiences and a solicitude as to whether the neophyte will have the strength to meet what awaits him.

Hitherto he understood himself tolerably well: he was at peace with himself. His strength he knew, because no unknown elements had tested it. Confined views directed to personal ends have a gratifying strength of their own, self-sufficient and intolerant of interference; and when the narrow barriers, which alone support him, are suddenly removed through the neophyte's own efforts, the resulting experience is often a humiliating one. He does not altogether welcome the process of disillusionment. Yet this is what his discipline has in view. It teaches a true self-awareness which leads to attunement with higher forces; and from that time onward the personal life must adjust as best it can to the potencies which gradually unfold into consciousness the biography of the spiritual man.

The neophyte can never hope to know himself until his strength

has been sharply tried as to what sort it is. It will be well for him if the days that are gone have held their full portion of aspiration, struggle, and suffering on the plane of purely personal forces. For a weak and timid spirit, nursed in the soft lap of the good things of life, unexercised in the cardinal virtues of patience and compassion, and knowing nothing of the healthy antagonism that measures itself against opposing forces, will have much to overcome and much to build in that personality which has now to exert itself. This is the crisis which quickly segregates the different types.

Once again let it be said, there is no cause for discouragement in awakening to the truth of things. The awakening must come. Why not let it come now and use the opportunity it gives? The neophyte who is ready for it, and can bear the revelation of himself as he is, will not falter when the Karma of the past projects itself into the present in many mysterious shapes and challenges his initiative and courage to deal with it.

A word must be said about the type of neophyte who fails the great opportunity. He certainly does exist and is well known. One sometimes wonders how he came to venture upon a new path in life at all. The fact is, he is bound hand and foot to his past. On no account must a single strand of that sweet bondage to what he knows and can do be snapped in the name of mental freedom and spiritual orientation. No assurance or promise can endow this type with the eagle instinct. I have known him to drop preliminary occult study as if stung by a scorpion. The fundamental cause of this is fear of the future. It strangles the very life out of all advancement and great work and makes a man a slave to the end of his days.

Others stand ready to help him, from their knowledge and experience fully understanding the problem that besets and hinders him, but they can do nothing. They cannot drag a man along the path; neither will they attempt to coerce him. The law works here perhaps more rigorously than anywhere else in life. The neophyte must leave the home of the personality from free choice if he is to traverse the kingdom of the soul. Until he is ready to make the choice, he is safer where he is for this incarnation.

Chapter 3

THE NEOPHYTE AND SERVICE

ONE OF THE reasons why the discipline of the path has been termed a “hard school” is because the ordinary motives for action have to be reversed and given more impersonal direction. The neophyte has to think in terms of others as well as of himself. He finds it difficult to accept the condition wholeheartedly of pledging himself to service as soon as he enters thoroughly upon self-development. This is not the case with the neophyte only; it is often so with those who have sought advancement for many years on the path. When it is suggested that they should throw their influence into other lives, think wisely for them, and extend to them their knowledge, they fail to see any connection between self-development and interest in the development of others.

I believe this arises largely from the fact that, although they know the Masters are spoken of as the servants of men, they imagine the law of service does not apply until they themselves are well advanced on the path. They are scarcely to be blamed for this, because many schools and systems of occult education do not particularly stress the importance of service, but concentrate almost exclusively upon methods of self-development or self-importance, with personal power as the sole objective. Within certain limits this objective is quite possible. It is also legitimate and free from objection if one is thinking only in terms of the material plane. It is possible to make some occult progress without any special consideration of service to others, but only within very narrow limits.

The time comes in the progress of a man of any commendable quality when this kind of exclusive program proves to be a most unsatisfactory affair. Psychic development is quite compatible with the selfish attitude towards life and in some instances has been carried so far as to enter well within the confines of black magic. The modern press has furnished many instances of this in the publication of authenticated cases - some even extending to the hellish practice of compelling money and property from weak minded persons through hypnotic influence. Soul development is impossible on these terms. Study well the two paths. They run very close to each other up to a critical point, where they separate widely forever. Then it is seen that the true path resolves itself into the narrow and flaming way of service.

Why must the neophyte learn to serve? Because the Master whom he aspires to know is perfected in service, and there can be no intimate association with him in world work until the neophyte has learned through long probation to likewise serve, and serve efficiently. Service is not however necessarily of an occult character. We have a corroborative hint of this from the Master when he says: "Nay, but what better cause for reward, what better discipline, than the daily and hourly performance of duty?" That is characteristic of the teaching of the Master. He points the neophyte back to first principles, to the place where he now stands, and bids him be productive in that place. That does not appear very inviting to the neophyte. He looks for something important at the beginning, something different from the occupation of the average man, if only to have himself remarked as a notable character.

How typical of this age is that attitude of mind in occultism as in other directions! It merits the harsh criticism often dealt out to it. Our noble-minded ancestors, of only a generation ago, were not possessed with this provincial spirit to any the like degree that is common around us today. And to go further back, the Masters who figure in my mind as belonging to an old and classic humanity, to whom the masks and mummeries and triumphs of our day pass for nothing, stand as an inspiring example of reality and durableness and self-effacement which makes our little ambitions and desire for effect unworthy of serious notice.

Small wonder is it that the Master has to wait, even through incarnations, for us to awaken from this sleep of the senses. Small wonder that the neophyte is compelled to open his own eyes just where he is and shake off the hypnotic sleep of unreality and false values that hang heavy about him. I believe one's affection for the Master grows most as he realizes more and more the infinite patience exercised with the children of the path during this awakening process. It can only be a patience grounded upon supernal wisdom and perfect compassion. Nothing less could exercise it.

Neophytes are sometimes of that turn of mind that they lust for power over their fellow men. Their objective in this study is to win the reputation of being notable characters. This attitude slays the soul for real achievement. It is forbidden ground, and the man who treads it is soon lost in the swamp of illusion. He has a long way to go before he can hope to lord it over the souls of men. But when he can really do that on the path, the sense of lordship loses its worldly attributes. He then has a new definition for it - ascendancy over others through having given himself in service for their sakes. He will then be as careful in imposing that supremacy abroad as in surrendering his own personality to foreign influence.

The neophyte can lord it over others to his heart's content on the physical and mental planes if he has cultivated force to that end, but not on the spiritual plane. He requires a greater and purified force there, and this he will gain only when the objectionable voice of personal superiority has been made dumb through probation. So long as this speaks he is on the mental plane, and his service will be vitiated because of its initiation from that plane. It will be service actuated largely by self-interest and will pass with others for what it is worth.

Service on the path means service because one wants to and must serve. If that ideal carries with it too strong a note of self-effacement, it is not the ideal that is wrong, but the conception of the neophyte of the work before him. There is one aspect of life on the path which is exactly similar to what obtains in the world: there is a price for everything worth having. Strangely enough, many believe this law has no place in occultism. But the law is more exacting there than anywhere

else. The occult path is an individual one, and every step thereon has to be cut by the neophyte's own hands and trodden by his own feet.

This is not an arbitrary law made by his teachers. It is an unalterable condition in the sphere of the Masters that to receive he must give. It is a severe and mortifying condition for the personality that loves to grasp and live for itself; but because there is no other way for one to gain even a preliminary measure of true self-knowledge, to advance himself only to the minor initiations of the path, service must be recognized by the neophyte as synonymous with development. From the Master's point of view development is service, and service means swift advancement in understanding of the technique of the path.

The neophyte's service is not necessarily occult in character. One might say it is not necessarily occult in character in the case of the advanced man. Pause for a moment on that statement. St. Paul's comment upon the diversities of gifts applies here. The recognition in their fullness of his innate gifts will determine the neophyte's mission in life. Years may pass in different spheres before those gifts are recognized. And one of the most striking results of service is the peculiar power of its discipline in initiating him into the sphere of the soul and unfolding faculties hitherto unperceived, or but dimly recognized and partially expressed.

The process is in nature occult: the awakening of the soul resulting from it may lead him to minister to the sick, inspire him to some mechanical invention of practical utility to the people, or take him into church or city to assist youth or foster schemes of child culture. This idea is strongly marked when the neophyte is bidden to remember that the disciples of the Masters are just as likely to be found engaged in political, social, and economic fields, as in spiritual and religious.

There are perhaps no examples so powerfully indicative of this as are to be found in the history of the Rosicrucian fraternity. Their influence can be traced throughout the civilized world in literature, art, and science; in church and state; in mystical illumination and occult achievements. That being so, the neophyte should enter upon his training with an open mind in the matter of what line of service his studies will eventually disclose as fittest for him. As the training

goes forward, one thing is certain, - that which he can best do will be brought into prominence and matured, and it will not be long before he finds ways and means of applying his abilities along lines satisfactory to himself and of value to the world.

I fully sympathize with the neophyte who may pause here as a shadow of disappointment settles upon him on meeting with so emphatic an insistence upon service as the key to high development. I know well that he enters upon his studies with hopeful ambition for personal conquest; and the idea of service savors too much of the religious observance inculcated in youthful days. But he has to remember that he is passing now within the domain of an exact science, the technique of which consists of inexorable laws of thought and principles of action which cannot be abrogated with impunity.

The act of service on the path releases the power of the soul. Unfoldment is not contingent only upon the absorption of material gained from the studies. The athlete is not made by the most comprehensive study of anatomy and reflection upon works of physical culture. He has to translate these into the terms of muscular training and scientific body building, combined with manifold mental adjustments relative to the feats he desires to accomplish. So with the neophyte. The forces he seeks to know and manipulate are resident within and existing around him. What he needs is the key to enable him to tap these infinite sources that await the call of the will to bring them into active combination and use.

Faith plays a far more active part in the neophyte's unfoldment and use of power than he is inclined to believe. He may obtain many hints of this in times of emergency and stress if he is observant of his deeper nature. The steady and continuous effort to use himself in service, in any way that circumstances suggest or afford the least opportunity, will teach the neophyte far more than extended reading in occultism. He has no idea of what he is capable until he rises confidently in the face of human need and compels the response of the soul's innate power in meeting it. If he can force the issue with himself and act with this confidence, the soul aspect will be brought powerfully into prominence without loss of time. Everything will depend upon the type of mind

the neophyte brings to the task; but if he can summon that force of will and clear the ground early in his novitiate for strong and decisive effort, and make the necessary adjustments in his life, perhaps at some personal cost to himself, the future years will applaud his courage and resolution and justify the past.

There is no room for the lukewarm neophyte on the path, nor have the exigencies of life any room for him. On the path men of action are needed. There are enough cults, societies, and circles in existence which will afford the lackadaisical ample hospitality to dream life away. But the man we have in mind must leave these things to those who need them, or use them himself as a diversion or relaxation from hard personal effort to make himself a first-class technician. Then he will be of some use in the world and others will emulate his example.

Chapter 4

THE NEOPHYTE AND INITIATIVE

THERE IS ONE quality imperatively demanded in the neophyte who essays to make good his position on the path. That quality is initiative. It is that quality in the character which, in itself, is almost a guarantee of success in whatever direction it is judiciously exercised. There is one neophyte who has it - it is a part of his natural equipment, and he will show it in everything he handles. There is another who has it not - it is not a part of his natural equipment, and he will have to labor assiduously for it. The first will quickly make the studies his own and apply them in a personal and ingenious way. The other will find even the rudiments of the science strange and revolutionary, and every line and precept will have to be hammered into the mind and ruminated upon again and again before there is full acceptance and understanding. But it should mean much to him that he is on the path and started upon the conquest of difficulties which cannot be encountered elsewhere and which will ultimately have such momentous consequences for him. But I pass on to consider the neophyte with initiative.

A peculiar interest attaches to the neophyte who displays marked initiative in his occult work. He is not new to the path and is therefore a potential character which cannot be fully anticipated and must be allowed a certain margin of freedom. This does not mean that he is at liberty to override his teachers or ignore the rules of discipline. Nor do we expect this attitude in him, but the reverse. Nevertheless, the failing often observable in this type of aspirant is an impatience for advanced

work and a shortcut to it. A little more advancement in self-knowledge will rectify this. It is as necessary for him to be scrupulously exact in making sound the foundation for future work as for the veriest tyro, although he may dispute this point. But those who offer him their assistance know, and ripe experience is not to be discounted.

In the schools of painting an implicit obedience to the rules of the art is enjoined upon the young student. Possessed, as he usually is, with a vivid imagination and fired by the contemplation of the works of the great masters, his mind runs far ahead of his hand. The fluent execution of the perfect model inclines him to overlook the painstaking novitiate during which the master in the making compelled untutored nature to follow with slavish exactness the ancient rules which his matured work reveals to the seeing eye in every line. Here is a hint for the neophyte. No matter what his power of instant appreciation may be of the work and service of the finished occultist, he must apply himself humbly and with deep sincerity to the rudiments of the science. No matter what his inborn initiative may be, it is not for him to criticize, but to obey. A margin of freedom is permissible to him, but not before a reasonable period of personality culture, in the occult sense, and of strict obedience to the rules of discipline has been passed.

This first cycle of basic preparation is of importance, if only to teach him patience and humility. His first contemplation of the Masters, and their easy ascendancy and manipulation of force, is something of a revelation and not a little staggering to the ambitious mind. Consequently there is a tendency to lose a sense of perspective and a resolution to reach this level at a bound. There is also sometimes a tendency to indulge a natural slothfulness and neglect some of the stages of early discipline. The labor required to attain exactness is unacceptable, and the neophyte is opposed to conquest by slow approaches to the goal. The vivid imagination, so valuable in its place, is responsible for this mistaken attitude. It is imposed upon by the vision of perfection and forgets the tedious process of becoming that precedes it.

Those who lead have most faithfully followed. Nothing is lost by bending the will to take the preliminary stages of discipline with

crucial attention. This may appear to leave little scope for initiative, but even initiative is subject to the law of growth. The failure to realize this is the reason that students of occultism, with multifarious reading to their credit, are unproductive in the way of service. One can only teach and assist others by knowing theoretically and practically every step of the way in his own living experience.

I have known many instances of both types of students. The one has been encyclopedic in occult knowledge, yet pessimistic and doubtful, with a pathetic helplessness in the direction of throwing his influence into other lives for unfoldment. The other has demonstrated his painfully assimilated lesser knowledge step by step and compelled recognition by a well-directed application of it. That is the beginning of real initiative, and the more advanced stages will be taken by that student with a facility and power in demonstration which the other never knew.

Through obedience the neophyte develops and accumulates force for original work. From a solicitousness that he shall not fail in applying any detail of discipline, definite qualifications are gained. Perhaps the most important is that he learns to *trust himself*. Above all things the Master requires that quality in a technician. The Master will never trust the man who has no confidence in himself. That self-trust fully established, the work before him assumes a different aspect to the neophyte. He is no longer only a copyist; he begins to initiate. With a sure eye for progress, cultured by a diligent survey of the studies at his disposal, he will now have a well-filled background of the worthy examples of his teachers upon which to reflect. He will appreciate more truly the value of these examples through an understanding of the discipline which raised them to eminence.

It is but a step further when, through a critical examination of the master minds, he will unconsciously express somewhat of their virtue and skill in action in his own life. Still heedful, even to a greater degree, of the accredited rules of discipline which have brought him so far, he will come to exercise a kind of authority over the rules themselves. He will use them with a freedom and extended application suitable to his own individual need. Obeying the rules now unconsciously, he

will lose the sense of restraint imposed by them and feel free to press on upon his own initiative. He is a faithful neophyte still, but also an aspirant who has passed successfully through the preliminary cycle of development, aware of his weaknesses, yet feeling his strength and able to serve.

It must not be thought that this transition from a careful and conscientious dependence upon the rules of discipline to a conscious elevation above and partial independence of them is to be easily and swiftly made. The stage of progress I have concisely depicted admits of amplification. A familiarity with the rules of occult procedure is the first period, and it necessarily comprises a thorough understanding of the occult doctrine which it is the object of the rules to demonstrate. It is to be remarked that a deep and discursive reading in occultism is not absolutely necessary for the neophyte. This, I do not hesitate to say, may exercise a peculiarly hindering influence upon some types of students.

There is, for instance, the very practical type who quickly tires of doctrine, but has a marked facility for putting every theory to the test. It is not that he is ignorant of the value of and the necessity for understanding thoroughly the theoretical groundwork which must precede experimentation and application, but it is naturally difficult for him to divorce action from study and find satisfaction and repose in omniscient tirades on the possibilities of man. He believes in the demonstration of possibilities, instead of endless and stupefying visualization of them. The principles and practice of the technique grow apace in the mind and soul of that kind of neophyte. Initiative with him is a daily development. He is one who approves himself in the eyes of his teachers, because he has that in him which is much sought for by them: the ability and eagerness to work himself into life and circumstances at every step of the way. A hint will prove more prolific in him of results than a library to the type lacking initiative.

Another type, no less commendable than the above, will have a fine aptitude for combining extensive study with a versatile use of it. Discursive reading is a necessity to him. He feels the need of ranging widely over a number of presentations of doctrine. He has a definite

line of application in view which the basic rules reveal, and he brings all his varied knowledge to bear positively to that end. But this is contingent upon the possession of a well-balanced mind, a power of keen discrimination, and an ability to grasp intellectually many varieties of occult doctrine without being perplexed by the different angles of vision of their authors, or weakening in the main line of advance in a practical objective. In this matter the neophyte will therefore wisely consult his peculiar mental disposition and the guidance of his intuition. Whichever line he adopts, let him hold fast to the central aim of applying the rules of discipline and experimentation continuously and exactly to the unfoldment of his personal powers and the alert and energetic projection of these into some field of labor to justify his presence on the path.

Under this procedure he will enter upon the second cycle of the novitiate. Through the strenuous application of his present knowledge and personal influence in his vocation and in service, his interest in the science will bring within his purview the work and achievements of many Masters of varying degrees of technique who have trodden the path. His aim will be to gain a right perspective of himself in relation to these Masters. Their superiority and excellence will fire his imagination to greater effort as the ideal man comes more and more to possess it. Those perfections which he observes in each will gradually take shape in one dominating idea of the Master life, and narrow and one-sided conceptions will be displaced by a full and rounded impression of the character he emulates.

The master minds of occultism have their individual peculiarities and mental predilections and, as we have seen, in their statements of doctrine and personal methods of demonstration there is a great deal of apparent contrariety which has led to much useless controversy among those of narrow outlook and limited sympathies. The path is one; the master minds who have taken it are many. Truth is one; but can we conceive the truth of the great cosmos being capable of expression through one illumined soul? That is a thought for the neophyte to ponder and allow to influence his entire attitude of research. His objective is to become a representative of the Brotherhood of Masters. He will find that the members of it are exponents of a technique which

is as diverse in its tenor and application as the individual minds and personalities of the Masters themselves.

As I am writing primarily for the Rosicrucian neophyte, we are thinking specifically of the Rosicrucian technique; but let him not, for that reason, shut out the allied rays of the technique that shine down beneficently upon his path from the one great center of illumination. The path is one; truth is one; the Masters are one in the Cosmic in perception and illumination, yet each with a perfected technique peculiarly adapted to the mental, psychic, and spiritual constitutions of the several authentic schools of discipline and initiates who seek their aid for the purpose of accomplishing their work. That is what I mean by the elimination of a narrow, one-sided conception of the truth of divine science and the comprehensive technique expressing through its perfected Masters, and the substitution of an expansive and growing mind that aspires to take all knowledge for its province and use it to the end of a full and balanced development for the salvage of human lives.

The third cycle of the novitiate is a culminating one and should find the neophyte well along the path with well defined mental qualities indicating that the groundwork of the technique has been laid and is operative in his life. I say nothing specifically here of his particular studies; those are of his own choice and persuasion. I am concerned with the technique of the path and have indicated that phase of it which I consider of vital importance in the accomplishment of practical works in the world and which is preeminently needed today.

During the third cycle the neophyte has presumably prosecuted a discriminating study of many exponents of the technique. He will have observed their individual peculiarities and their diverse applications of the technique in original departmental work; and from these examples he will have gathered to himself and combined into one composite conception a compelling individual technique which allows his constitution full expression in personal initiative. He will put himself to the trial by a powerful endeavor to act from the altitude of vision and achievement of those master minds who have for so long been the object of his study and emulation until through a sympathetic attunement their dignity and strength become his by participation and

enable him to command increasing recognition from cosmic sources through fulfilling the law which is pledged to gratify the deepest aspirations of the dedicated soul.

Some of my readers may think that I am demanding a measure of efficiency not to be expected during the comparatively brief term of the novitiate. I can only say that I am constrained to this view of the task because I have worked it out steadfastly and unfailingly in my own case, and I impart my experience for their encouragement. Moreover, I have always regarded the task with the utmost seriousness and spared no pains to fulfill in the spirit and the letter the austere demands which confront every aspirant who essays the great adventure. Therefore I am assuming in the neophyte all those basic qualities of character which, when once he is launched upon the path, will urge him to bring his whole life into line with cosmic purposes, undeterred by any personal weaknesses or temporary failures, holding ever steadily in mind that conception of masterhood which he has built up in the interludes of study and contemplation, and compelling every power and faculty to respond obediently to that grand conception.

Chapter 5

THE WILL OF THE NEOPHYTE

IF THE NEOPHYTE complies with the rules of discipline over the required period he will come to recognize in himself the development of distinct qualities in the personality. He has brought an inventive mind to his work and sought new ways in which to apply it. He has initiative; and at the back of initiative is always found the developing will. The central power to be and do drives him on to exploit himself; then we have the neophyte alive to his task and already working on the side of evolution. His service has grown purposeful and effective, and the reactions upon himself from near and far are carrying his unfoldment steadily forward.

The responsible factor in this cycle of advancement has been the awakening will. This is the key to all his future progress. Every faculty is related to it; self-expression upon every plane revolves around it. Observe how pregnantly the will is referred to in the writings of the Masters. From one aspect the life of the Master may be regarded as organized will. From whatever aspect of his work we regard the Master, we cannot ignore this finely tempered cosmic attribute expressing with mathematical precision the resourceful technique to which we aspire. Wisdom, compassion, knowledge, they would lose their name without that irresistible, directive force which gives them form and potency. The neophyte may be assured that, in the last analysis, it is according to his will that he is known and valued. His development is a spiral ascension in will consciousness.

In early years I was much impressed by the peculiar phenomenon of genius. I quickly set apart the favored few who possessed it from the brilliant and clever who did not. I paid deep homage to these characters, although I did not understand the source and meaning of the precious gifts they displayed. I believed simply in inspiration and knew they were the recipients of it. Now I regard genius as a phase of discipleship, in most cases, of unconscious discipleship, and rooted in the occult world of force. And I suggest that if the neophyte wishes for some idea of the technician's will in action, he should study the world's great characters, in whatever sphere they have moved.

I am not concerned with their virtues, or vices, or eccentricities. Let him study the awakened man in action and driving his influence across the world; because when he becomes a disciple, he will have to demonstrate just that quality of the concentrated will, forced into avenues of unique activity, which compels recognition by virtue of its inspirational content and value in evolution. Thus, in an indirect way and through examples of imperfect because unconscious discipleship, he will realize vividly what he may expect to find coming to fruition in the technician on the path. Through the contemplation of these characters he will gradually acquire the flavor and ultimately touch the essence of that divine inspiration which is the secret of their ascendancy. His contemplation will be of the vital, energizing force in genius which has that appealing quality in it of a new creation, untiring, initiating, and inspiring others to reach up to it and surpass themselves in the effort.

True, there are diversities of genius, and not all manifest the energizing and masterful quality of action. But genius is always new, always original, and touches with apparent ease some level of achievement and expresses almost unconsciously that kind of faculty which is the despair of the merely clever and assiduous. How often it baffles and depresses the ambitious! That is an incident of its nature, not its aim. Its mission is to carry the world on and lead humanity up from the sordid and commonplace to the beautiful and noble in nature and man. It leaves in the hearts of men a disquieting dissatisfaction and pathetic longing for that which in their best moments they claim as their own but cannot reach.

Observing the effect of the magnetism of the will of genius impressing itself irresistibly and indifferently upon the learned and illiterate alike, it is not difficult to understand and give complete assent to those forceful words of the Master: "He who gets knowledge by certain intuition lays hands upon its various forms with supreme rapidity, by fierce effort of will." Let us revolve that statement a little in its application to the genius, apart from any particular occult significance, since it is so truly representative of him; for in considering this worldly phenomenon of the will in commanding and original action, the impression I seek to convey to the neophyte will be enhanced.

The genius by certain intuition seizes upon the hidden secrets of mind and nature, and by fierce effort of will drags them forth to the light of day, giving them uncommon application and enriching some department of life in his singular handling of them. There is a divine extravagance in the way he does this, an autocratic procedure which fools criticize and wise men rejoice at. For the thing is good and ravishes the appreciative eye and heart. Indeed, there is nothing that so truly apprises us of the presence of divinity in human life. We may recall what was said by a scholar of his reading of Homer: his whole form appeared to himself to be enlarged and all nature which surrounded him diminished to atoms. Such is the effect upon men of a divine faculty informing a perfected and responsive personality resigning itself with perfect abandon to the overshadowing afflatus.

So is it with the disciple who stands near to the Master. He may not possess the fiery quality of notable achievement. He may walk in humble paths and remain unknown. His will may not have that direction which attracts public attention; but awakened it must be and demonstrated actively in its sphere. To call a man of weak will a disciple is a misnomer. If this is questioned, why do the Masters lay such emphasis upon the highest development of the will? It is the indispensable pivot of the structure of technical training they inculcate. And remembering how important is the will in the achievement of anything of value in the world, the necessity is at once seen for its superior education when a man begins to work upon himself in an interior way. The will must be brought to that tension and glow at the heart of life which nothing on any plane can damp or hinder.

I said that compliance with the prescribed rules of discipline will bring to the neophyte a sense of awareness of a forward tendency throughout the personal economy. He has acquired the habit of self-direction, of imposing the will upon the activities of his vehicles. He will not make the mistake of thinking he thus creates will, but that through strong intention in study and meditation he gradually organizes his faculties, coordinates his activities, and so affords the omnipresent cosmic force resident in the soul an opportunity of expression.

It is the organization of the outer personification which affords an avenue of release of the divinity within, the energizing, creative force underlying all manifestation and which, the more powerfully and purely we see it informing a personality, the more we feel that here is great will in calm possession and ensuring unobstructed expression. And looking beyond genius to the perfect example of the Master using his many-sided technique with freedom and exactitude, the effect upon the neophyte will be one of profound veneration and the desire to take with all possible and legitimate speed the stages of discipleship.

He will not overlook the need of perspective in this self dedication and resolve. The genius, we know, disdains to look abroad for help from others. He is powerfully developed, usually overdeveloped, from the occult point of view, in one specific area of consciousness and its use. Supremacy in his chosen field is sufficient compensation for him for ignorance, eccentricity, or want of balance in other departments of his constitution. The world thinks so, too.

But the neophyte cannot afford to think so. He will quickly realize this if he studies both intellectually and intuitionally the fine and gentle poise, the illumined and gracious speech, and the exquisite application of spiritual technique of the Master in human evolution. As with the reader of Homer, he will find his entire nature enlarged by the contemplation, but nature around him will not be diminished to atoms. It will acquire a new significance in his eyes of beauty, rhythm, and law; and he will strive unceasingly to express these attributes in his own personal life.

Is it necessary to add that this fine discrimination and balanced conception of the neophyte is contingent upon his having made the third period of the novitiate a full and productive one? This period of study and of coordinating his knowledge must be characterized by all the ardor and enthusiasm of the true artist. A strong incentive of the will does not emerge from a mere desire for it. Genius is indefatigable in ranging over the world of knowledge pertaining to its personal exercise. It has that reach of mind which draws into its sphere everything good and useful accomplished by its predecessors.

From the queerest and most hidden sources it brings to its hands the secret signatures of power and wisdom with which to measure its technique against the greatest achievements of men. It collects material with an avidity known only to those possessed of a boundless passion towards a fixed aim. It is not a copyist; it scorns imitations. It does not collect for the purpose of imitation. It discerns in its material a unique possibility and evolves a combination of sterling value consistent with and only possible to its individual technical foresight. What is it that works this miracle of a new creation that sometimes suddenly surpasses all the plodding labor of generations of men? It is the vision of an aroused soul and the commanding will, polarized steadfastly to its aim, congregating with dynamic intensity all the ingredients necessary to the objectivation of that vision.

Let the neophyte not be deterred by the magnitude of the ideal held before him. I give it this shape with deep intent to bring him to that enlarged and masterful view of his calling, whereby the powers of the soul will be incited to express themselves and ensure the needed cosmic contacts essential in developing his technique. He builds upon the finished works of his predecessors on the path. During the third period of novitiate he makes these works his own through sympathetic understanding, not the sympathy of fact but of spiritual atmosphere. He rises imperceptibly into the thought sphere of these regal minds; if it be so, nature has qualified him for this classic appreciation. His life becomes saturated with the genius of the path, permeating him with will impulses divine and irresistible in character, and tutoring him to that conception of beauty and simplicity which is ever the appanage of genius and super-eminent in the disciple of the Master.

Chapter 6

THE DEMANDS OF DISCIPLESHIP

PART 1

IN BRIEF COMPASS the stages of novitiate have been outlined. In the majority of cases it is a long and exacting period of study and preparation during which the fundamentals of the technique have to be thoroughly understood by the neophyte and find practical expression in his daily life. When this objective has been reached, he will have the assurance within himself, through signs clear and unmistakable in character, that he has entered upon the stage of discipleship. He will have brought himself to that point of development where the Master will be interested in his value as a factor in evolution, and the Master will, unperceived and unknown perhaps to the disciple, afford him means of knowledge and progress, through recognized teachers on the objective plane, whereby he may qualify for accepted pupillage in time under that Master.

Many disciples there are in the various schools of occultism who are engaged in this task of qualification for personal acceptance; but comparatively few have undeniable proof of such acceptance. Why is this - especially in view of the fact that thousands of earnest aspirants of every conceivable type of occult persuasion, some of large and commendable mentality and equipment, are on the path? It is because they lack certain immensely important elements of technical skill in the light of the Master's judgment and need for specialized work. Some who have read *The Technique of the Master* have said that the book at

once inspired and discouraged because, whilst their deepest intuition responded to its teaching which probed to the heart of their individual problems and gave them new strength for advancement, there was a note of austerity in the requirements demanded by the Masters in those who were admitted to their confidence. I do not think this can be denied. But let us look at the matter from the everyday point of view, since if we are to have a sound and sober conception of ourselves as occultists, we must constantly seek for analogies among the forces and circumstances of the outer world to rightly interpret the laws and conditions of the world of the soul.

I consider it desirable that the neophyte should be a man before he is an occultist. I will explain what I mean. The hallmark of men of light and learning, in whatever sphere of achievement, is perfected faculty and faultless execution within the limits of that sphere. I do not speak merely of men of genius whose works always shine with this twofold luster, but of men of lesser magnitude; men of laborious, patient, and scrutinizing ability, self-denying to the last degree in the interest of their chosen aim, severe and implacable critics of themselves and their work, imperturbable in the face of opposition and criticism from circumstances and men. Whatever amiable qualities they manifest to others, whatever their kindness and consideration and adaptability to their fellow men, to themselves they are hard and inflexible taskmasters. I am not thinking of automatons, but of men who give themselves heart and soul to great purpose and conform their lives to serve and follow that purpose.

I do not speak beyond what the facts of such lives daily reveal, if one takes the trouble to read their written and unwritten biographies. The pioneer work of the world rests upon the shoulders of such men. This being so, what are we to expect that the Masters, who are perfected men in the highest and noblest sense, require of their disciples who offer themselves and aspire to share in the most momentous task possible to man: the culture and utilization of occult forces in the evolution of souls? There is not the slightest doubt that the demands of the Masters in the selection and use of a disciple are based upon preparation and personal demonstration in accordance with occult laws, which are entirely outside the categories of culture

and experimentation inculcated and applied in any of the schools of ordinary knowledge. The neophyte may assure himself of this fact from personal observation of exponents of the technique. He will find that these technicians and their methods of execution defy all ordinary classification, simply because the underlying laws and principles have their source in a sphere beyond the circumscribed bounds of ordinary knowledge and usage.

This is why it has been said that the rules of occultism have significance for the disciple only for those who take knowledge in the true and mystical sense - that to none but those who are disciples are they of any use or interest. The pith of that statement is that until the student has thoroughly prepared himself during the period of discipline as a neophyte, the said rules will not convey to him their intended significance. He will read them as a fact of science, instead of luminous aphorisms epitomizing a body of intimate spiritual experience. So many students read in the former sense and ask others to give them what can only be lived.

No one can give them the power to read in the occult sense. Depth and intensity of living alone give it. The neophyte who shrinks from the profoundly meaningful words *depth* and *intensity* had better stand back for a while. The path of discipleship will lead him into deep waters. Fear has held many a man back at the first glimpse of these waters. Perhaps this is well. It is not easy to pass on alone. It is wise to try out one's nerve sufficiently before stepping off the ground he knows well. Once beyond the frontiers there is no going back. In passing he will lose his hold of many things he has grasped firmly through life. The issue for him now is whether he can trust the soul to find a new path that will lead him to something infinitely more enduring to replace what he will lose.

The path of the neophyte merges almost insensibly into that of the disciple. Yet they are sharply distinguished in discipline and purpose. There is gentle and persuasive encouragement for the neophyte. He is led by an easy approach from the way of the world to think in terms of the soul. It is an experiment in higher culture, and he will succeed with it according to capacity and guidance. But the path of the disciple

is marked by a note of severity. He has chosen a vocation for life, and what eminence he will reach in it lies chiefly with himself. Hence the concise declaration of the scripture, that the rules pertaining to this life are of use to none but those who choose this vocation with a clear understanding of the nature of their choice and the demands it will make upon them.

First, a word as to the more stringent conditions which obtain on this path. It is the high school which the man enters with certain definite acquirements of his novitiate. He has a good deal of self-knowledge and knows how to use the mind with concentrated effect in study and meditation. Now he has to compel that mind to initiate experience in a deeper sense and upon an ever-widening scale. There is only one thing which will ensure this: decisive action within the personality and without.

I have known students who, during their novitiate, rejoiced exceedingly because they had found a new peace and tranquility through a preliminary detachment from many worldly interests; and their chief aim as they passed on to higher work was to increase this quiescence of the personality which they felt to be so desirable. They had yet to learn that undisturbed tranquility is not for the disciple. If the disciple wants that above all things, he will do well to stay where he is until he tires of it. He certainly will tire of it. I have also known those who tarried so long in this first heaven of quietude that it became a hell of unrest to them, and they entreated to be in action. Perhaps that is a sure sign that they are ready for discipleship.

Once again, I have known students who no doubt felt much elevation because they had accomplished so arduous a task as a short period of novitiate, and their quiescence and profound calm have been disconcerting. They had attained a condition of peace and repose through mental concentration and there they remained, self-hypnotized, awaiting the contact of a live soul to awaken them. This is not the mark of a disciple. There are countless businessmen in the city who have a repose far deeper than this, and to some purpose. The trouble with these students is that they have read the scripture literally instead of spiritually and have made a heroic attempt to kill

out ambition and cease from sensation before they had measured themselves against the force of the one or sounded the depths of the other. Their quiescence and peace arose from absence of experience instead of from the knowledge and use of it.

The crime of slaying urgent ambition and denying the insistent desire for sensation, the two most natural forces in a powerful organization, means one thing - the impoverishment, not the completion, of personality. It is an attempt, through perfect misunderstanding, to do first that which remains for conquest almost last, or at least a long way ahead on the path of discipleship. I fear no criticism I may incur on this theme. There are too many concrete instances of the truth of it in living, breathing students who are the victims of wrong teaching or narrow self-instruction in the canons of occultism relating to it. If they could realize the kind of force and faculty which dominant ambition and vivid response to sensation throughout the worlds of form would breed and develop in them, they would willingly allow the greater task to await its proper time.

The case is somewhat different with the mature student in whose life ambition has played a great part and response to sensation has been versatile. The distinction is vital and gives point to the above comments, and perhaps alone justifies them. Two instances may be cited in explanation. A young student of many promising talents proceeds to the discipline of the path. It is not long before he encounters teaching enjoining the negative doctrine of killing out; this, with the example of advanced students devoted entirely to the work of the path, inclines him to question the legitimate fostering of the very faculties which alone will make him a full man, capable of understanding and interpreting the experience of others when he reaches more critical stages of the path. These emphatic teachings and personal examples psychologize the young soul, and before the most precious plants in his personal life have begun to live, he embraces the pernicious doctrine that they are but weeds which, if allowed to flourish, will stifle the very soul within him.

Does the aspirant think that those gifts which he has cultivated with such labor in the far past, whose content forms the substratum of his

mental life, the vibration of which pulsates silently in every vehicle, expectant of its appropriate karmic contact - does he think that this lifeblood will willingly renounce its force and passion and be slain at the threshold of occult study and discipline by a mere word? If he adopts a policy of willful repression, let him gauge the psychological effect of this before he goes further, and the penalty that awaits him. If he still doubts, let him stifle that wherein resides the basic strength of his character and makes him a man, and press on to discipleship. Then he may expect one of two results, negative or positive, contingent upon the type of man he is. He will either take his place among those who are nothing more than disciples in name, simply because they are engaged upon the academical instruction of discipleship, but in occult action and service they are but negative in the measurement of their values; or, in marked contrast with this, the hidden fire in him, not dead but sleeping, will in good time assert itself with startling intensity, overturn all the bibles and occult maxims in creation, and carry him back to primal sources and the voice of God and nature within him, much to the consternation of himself and his fellows. That is the positive type.

I write in the name of the natural man; for it is infinitely preferable to be a natural man swayed by high ambition and responding to the sensation of the whole living creation, than a puny, make-believe occultist, the soul in bondage to occult creed and dogma, lacking virility and inspiration, and of less value to his fellow man than an average human being. The neophyte might reflect that the time will come when he will have to encounter strong individuals of force and character, known of men and valued by them for the extensive experience they have acquired through great ambition and emotional response, and for whom the hour has arrived for them to take knowledge of the path. How will he meet these men, having nothing of their power and passion in him? How can he hope to influence or lead them? They will have far more to teach him than he can hope to teach them. Deep calls to deep all through life. The disciple must have depth. He must be able to pass to any depth in others, without being submerged there. He must prepare himself for that by hard and prolonged struggle on the mental and emotional planes and a record in his soul of the most searching probation through contact and response in the utilization of self.

The second instance applies, in my judgment, almost exclusively to the man who has taken knowledge and is entering upon discipleship in the fullest sense. Here we encounter men who are highly mental and emotional. Their vehicles are full and vibrant. Ambition has done its great work and still has vast strength and direction in them. In them its flame can be sensed as having all the brilliance of genius. And when to this is added the new accession of force resulting from occult discipline, then a condition of tension, through the opposing factors of soul and personality, evolves out of all proportion to the unexercised ambition of the ordinary individual. The soul is recognized; its fire is felt; and the divine call descends upon the mental plane and challenges the fierce fire of supremacy there.

But observe in this case the marked contrast with the former one. Here, ambition and response have carried the man to the heights of mental achievement in the past. He is no weakling endeavoring to kill out, paradoxically, what does not exist, denying response to that which he has never felt. His supreme task is to transmute that which is mature, splendid, and enthralling on the plane of mind, into the greater fire of the soul that can no longer wait for complete union. All here is power, force, ripe faculty, the limits of which have been reached and must now surrender its form to spiritual illumination.

In portraying briefly the two types of aspirants essaying the definite stage of discipleship, I think we arrive at the root of the vexed question of the acceptance by the Master for intimate personal work of the few instead of the many. It explains the rigorousness of the demand of the Masters pertaining to acceptance. If the material offered has not reached maturity and strength, has not versatility and responsiveness and fullness of experience and understanding upon the several planes of life; if the incipient elements of the technique are not present as a result of the systematic cultivation of every aspect of the constitution, through secret vigil and worldly warfare and the ceaseless wrestling of flesh and blood and cosmic emotion in the world of form, of open-eyed encounter with high and low, and the steady ascension of the whole life inwardly to the plane of the soul - that does not signify defeat, is not a cause for discouragement, provides no basis for honest criticism. It means that all these factors must be present in the subtle

THE TECHNIQUE OF THE DISCIPLE

apparatus of the inner man before a Master can avail himself of its use; and the aspirant himself will be the first to realize and acknowledge this when the time comes to accept the responsibility and accomplish the work which falls to the lot of the tried and accepted disciple.

Chapter 7

THE DEMANDS OF DISCIPLESHIP

PART 2

I SAID THAT a man entering upon discipleship has to address his mind, with such force and skill as his novitiate has equipped him, to the deepening and extension of experience, and that this can be done only by decisive action within the personality and without. This will carry him rapidly beyond the surface aspect of life. He will not have to deliberately force this new angle of vision; it will transpire all too effectually if he is intent upon the work of his vocation and with a determination to attain his goal.

There is perhaps one thing more certain than anything else which will initiate this cycle of experience for him, and that is the intensified thought of the life of the Master. Just as soon as his idea of the Master, as the goal of his aspiration and effort, becomes a living, warm reality in consciousness, magnetically drawing him upwards, then will eventuate crises in his personal experience which will either bring him to a firm standing for further advance or throw him back upon the world to gain in common ways of life the necessary strength for it. I mean that the man with an ample and well organized mental background will be the one ready for advance and take it with resolution and courage.

If the neophyte has taken the hint and narrowly observes genius and its action, he should not find it difficult to extend his conception and focus veneration and affection upon the super-genius, the Master.

Imagination and intuition must be the means to this conception, for the obvious reason that he cannot see the Master face to face and witness his action in the world of men. But that is one of the tests for the intuition. He has to walk and live according to the magnitude of the conception he holds of the Master in consciousness, and how long that will have to suffice for him no one knows. But he has the assurance that there will come to exist between the vivid concept he holds and the Master himself a bond of affinity and, in time, of subtle communication, all the more wonderful and potent because physical barriers are done away.

There is therefore a renewed dedication of himself to the Master by the entrant upon discipleship, the result of which is that he passes within a circle which leaves ordinary humanity outside. There is no room for personal inflation in this fact. It does not imply superiority, but redirection of life and purpose. Moreover, it is so fraught with doubts and misgivings that only the strength and ability derived from a serious novitiate will enable him to proceed. The personal history of aspirants places this beyond question. It is not a somber theme, but a serious one; and that which has been written upon it shows conclusively that discipleship means keener living from every point of view, a new assessment of pleasure and pain, losses and gains in friendship, upheavals, silent or otherwise, in environment, - in a word, an entire change of front.

One of the earliest books I remember to have read on occultism put this pointed question: Can you do without human sympathy? For a student on the threshold of life and the path that may sound ominous and forbidding. But the writer of it had trodden the path; the student had not. Not literally has one to do without human sympathy on the path of discipleship, but it is true that many sympathies he values and which have meant much to him will be eliminated as he passes on within the inner circle. The position, from a strictly technical point of view, is this: the simple process of daily concentration for mental control, the more interior process of alignment of personality and soul, gradually and imperceptibly weakens the disciple's interest in many hitherto strongly objective activities which have used or dissipated mental energy, have served their purpose, and must be regarded as

hindrances to progress. He will have to face with open eyes the fact that a changed attitude is creating breaches in his environment.

This is often a great surprise. His progress in the science may be silent and hidden. He may have a fine tact which enables him to withhold views that he knows would jar and create opposition in others associated with him. He may think, wanting experience, that the presence of deeper knowledge within, jealously guarded not selfishly but foreseeing that its utterance would make his path more difficult, that the consciousness of increasing force playing within the personality can proceed unknown and unmolested from without so long as reticence holds the precincts. He may think so, but to little purpose. A disciple cannot hide his light, strive as he may.

Discipleship is a condition which will utter itself though not a word be spoken; and it is that silent and searching vibration which stimulates for good or ill those among whom he moves. Questioning and cross-questioning, unexpected antagonism from those with whom he has long lived in the bonds of affection and friendship, keen criticism aimed with direct intent to unsettle the growing assurance in a larger life and break down the secret strength and serenity which the world cannot understand and consequently hates - what disciple has not faced the insidious attacks of friend and enemy alike when once he has declared with the voice of the soul his eternal allegiance to the Master?

Well might it be asked whether he can do without human sympathy! He will sometimes so crave for the right kind of sympathy that nothing but the consciousness that he is qualifying for a definite mission in life will sustain him. There will be some near to him who would go with him to the bitter end if they could - but they cannot. He, too, would take them with him - but he cannot. He will feel the gulf of separation between, widening as surely as he lives onward, until his voice is no longer heard by those on the other side. It is a painful experience, but of incalculable value. He is to minister to those who stand inert, stricken with the grief of loss in one form or another all along the way. He must understand that loss, not theoretically but actually. He must answer to it with mind and heart and have the power to speak the word and do the thing that shall change the very character of it in the eyes and heart of the afflicted one.

That is one of the least of things the disciple must be capable of. The force that rises within him as the result of the conscious upward breathing of the soul must flow from him as naturally and fervently as the breath that pulsates to his heart to do it and find avenues of expression created only by his own initiative. That is an inward experience of discipleship and symbolizes a technique of action. Reading may be a preliminary to it, far back in the past; but this I speak of transcends the written word. Nay, the disciple in action is alien to books. The soul in its right mood, aligned with the Master, forgets books and teachers and believes in its own comment and expression. It exults in projecting its fire into a neophyte and raising him in his own strength. He acts unquestioningly under the irresistible emphasis of his whole constitution. It is the genius of the spirit which is perfect vision.

The disciple must have this power in other lives. He must have a congeries of faculties, a peculiar knowledge, or a distinctive force, which lesser men need and will gratefully receive from him. This brings us to the central thought of our theme: that the occultist should stand out from the rank and file of men and be good for something. Academic occultists have been prolific for half a century; whereas the occult practitioner is so comparatively rare that he is regarded by those who have to deal with him as either a fanatic or a phenomenon, and among occultists themselves he often passes as an innovator or a revolutionary. Yet sensationalism is totally foreign to the man. That is the mark of a small mind and never graces a disciple.

There is nothing more beautiful, or so transcendent in nature, than the holy ghost inspiring a man and taking him he knows not whither. That is why he does not wait upon or regard the opinions of men, but speaks with abandon of the Son of Man. If his development proceeds according to tradition, - that is, in accordance with a discipline, searching and arduous, - and is able during some cycle of life to assert himself wholly with understanding and power, influence in other lives will be a concomitant of that. Any willful attempt to force himself to such an issue is useless. It is a divine obsession that transpires unbidden after certain frontiers have been passed; he knows not when or how until he has it. It is organized faculty and force, sure of itself, certain

in its direction, largely unconscious of its own influence, which is only realized in the reactions, often very unexpected, from near and far.

What is the nature of these reactions? Those from the disciple's immediate environment have been hinted at, and I think they are usually more troublesome than assistant, because they arise chiefly from criticism based upon misunderstanding from those who resent anything of the nature of a new departure in life, or anything that augurs special or secret knowledge and influence. That is why experience of a sound and general character is essential, a fine and ready tact, to traverse the steady waters, a profound knowledge of human nature, its depth and possibilities, to swiftly use it against itself, and pass on undaunted though wounded.

The disciple is a battle-scarred warrior. He is perpetually on the offensive, an attitude that commonly makes for trouble anywhere in life; but since he has entered upon an advance into unknown territory and has to hold every vantage point gained in the face of any odds, all the elements of the true fighting spirit of the hard warrior must be strongly in evidence. It may be said that there are many types and not all have this quality of aggressive advancement. I grant it; but I write from my own experience. That alone avails for me, not the experience of others. Let the disciple try out his own measure of force and see what experience will teach him. He may prefer to act on the defensive only and thus save his own face and reputation. If so, I really do not see how he will ever know the force of the Masters on those terms.

He may expect reactions from afar if he is declaring himself in some definite way in service. The work of a disciple, along whatever line he may act, should have that peculiar quality of strength and impressiveness and usefulness which compels recognition. It should have a value which creates a demand for it. The resulting reactions therefore will usually be of a favorable character. They will come from those sources where his work meets with proper appreciation because it is rightly judged and assessed. That is some compensation indeed for the inimical reactions which come upon him near at hand.

I do believe that the disciple who works through to this point will realize within himself, emanating from his own soul or group, a

quickening of life and consciousness which will gradually give him the ascendancy over all the pain and distress which the swift outworking of his Karma is bound to bring. If I dwell on a note of struggle with forces of the personality hard to be overcome, it is only because it is true in the disciple's experience. Many times I have found that the written word of this experience has answered to the letter the secret experience of the solitary aspirant's soul. Life had either done its best to strip them of everything it gave them, except a living heart, or placed beyond their reach the things they were royally born for. Yet they were disciples, potential masters of the technique of form, noble and patient in defeat and deprivation. It was only their discipleship that held them upright.

Just so; but what is the inestimable result of these rapidly increasing reactions in the personal life? Nothing less than a steady graduation in the technique of the path. There is one truth which, I think, may be taken for granted. The multiform experience accruing to the disciple from these reactions now taking place upon every plane of life will have a special significance for him, since they have been initiated by an intenser living incident to his treading the path. That which befalls him now will be reflectively related to his status of discipleship. No longer is life a meaningless jumble of haphazard events which carry him hither and thither with no determinative signature upon them. It is a ritual of the soul in which the tones of Karma are seeking their appropriate setting, to which the personality must attentively listen and bring its own activities into worshipful response.

Many of these tones will not be understood. Some will bring doubt and hesitation because they are new to the sensitive ear; some will challenge, others will soothe, yet all are to be related to the basic harmony of the individual self, self-revealing and sympathetically revealing the lives of his fellow men. This will be so because all experience is to be viewed now from a higher level of vision and cannot be permitted to pass by with indifference uncoordinated.

Commenting upon the valuation of experience peculiar to discipleship, a critic once wrote: "It is immaterial to our higher selves whether or not one is so many millions of years ahead of another,

or merely thirty years. Nor can one assume to be in advance of the other merely because he has undergone experiences which to him are profound. No minority of individuals can constitute themselves authorities in experience.” When an occult student can seriously write that, one can only say that he has a right to his opinion but it is not the opinion of a Rosicrucian. There are obviously degrees of hearing and understanding occult truth. Some of us hear very partially and understand superficially. And the only hope for this critic of the valuation of experience is that he gives a few more years to careful hearing of the truth in order to attain the experience of understanding it.

One only need ask, if there were not a minority of individuals who constitute themselves authorities in occult experience, none other than the venerable Brotherhood of Masters, the inspiration and guide of every true occult student throughout the world and the hope of struggling humanity, why waste our time on a forlorn quest? The veriest tyro must realize that the Masters, whose profound experience in the laws and technique of occultism is the most arresting fact in human existence, constitute precisely such a minority of individuals whose authoritative knowledge and wisdom we can no more reasonably discount than the common experience which enables this critic to earn his daily bread. Moreover, there is a lesser minority of individuals well known throughout the world as disciples of these Masters, who are undoubtedly authorities in the experience of discipleship and who are competent to speak from the knowledge gained from personal discipline under those Masters, whether a student is prepared to accept their word or not.

It is a curious trait in human nature that a student will often accept the truth of experience of one authority and will deny and reject the same experience, presented in a different form, when proceeding from another. This is not true studentship, much less the attitude of a disciple. In fact, it is just this quick recognition of truth under any form that distinguishes the latter. There is only one remedy for this want of perception and personal bias, and that is the civilization of a responsive hearing of occult truth from divers sources, apparently unrelated and contradictory, perhaps revolutionary, and a personal respect for the

sincere expositions of writers of various occult persuasions, even if one cannot accept them.

This attitude is imperative in a disciple. Let who will belittle the relative value of his growing experience in the laws of life, mind, and soul. If the Master is all things to all men and understands man because he has all knowledge, and if the disciple must be as his Master, and if he cannot hope to be so unless he can show that temper of mind, the fruit of deep study and experience, which ensures pupillage, then the latter can only profit a full man who has reached the limits of the personal self and waits for the Master's guidance because he anticipates it..

Chapter 8

THE DEMANDS OF DISCIPLESHIP

PART 3

THE MAN WHO is technically known as a disciple of the Master is one who has indubitable proof within himself of contact with the cosmic or occult world of force and is applying the inspirational results of this contact in everyday life in effective service. A man who lives in and for himself, whatever his academical occult knowledge may be, is totally foreign to this definition of a disciple. Disciples necessarily differ in caliber and in their range of personal activity, but the status of discipleship implies the skillful use of a scientific technique to specific ends in the service of the Master.

There is no such condition as discipleship exercised either for self-aggrandizement or from motives of personal ambition, wherein such ambition has for its object prestige and advantage in the worldly sense. There are vast fields of demonstration in which every kind of ambition may be legitimately exercised and in which a man may allow himself full and wholesome expression of his faculties. But discipleship has its own rigorous laws which either negate these forms of ambition or convert them into adjuncts of power and efficiency to be used in the interest of the general evolution of consciousness. The long probation and crucial preparation incident to discipleship would be lost labor and lacking in significance were the disciple to become, through his training, just one more servant of ambition engaged in the competitive race of making a name and carving it upon the pillar of fame one

niche higher than his fellows. That, in its place, is laudable and reacts for good, but discipleship has nothing in common with it.

The disciple seeks neither name nor prestige. He is often an unconscious candidate for loss of name and prestige as commonly understood, and finds himself engaged in a single-handed combat with prejudice and adverse influence which threaten the very ground he stands on. Hence discipleship is a consummation in development not devoutly to be wished unless there is an irresistible bias in the nature toward it and the requirements necessary for it are fully calculated and resolved upon.

Discipleship, fundamentally speaking, is the exercise of a structure of mental, psychic, and spiritual technique founded upon organized character and applied to specialized work under a Master. It is the basic character organization which demands so much attention from the aspirant during his novitiate. This foundation for the technique appeals to me as so important that, while I can well conceive a man being used as a disciple in a special sphere of labor for which he has a peculiar aptitude, and therefore the available material cannot be overlooked by those who have decision in these matters, at the same time discipleship in its true form demands, in my estimation, an unusual strength and consistency of character for the execution of its office with complete independence and full responsibility in the work attached thereto.

It may be asked whether I am not taking upon myself too much in demanding, and assuming an authority unwarranted in determining, so much excellence to be indispensably necessary for discipleship. I am not demanding or determining anything absolutely or arbitrarily. I have observed discipleship closely; I have analyzed discipleship in the making in many; and I affirm the results of these observations. There may be exceptions, as above said, to meet special conditions. There have been such exceptions, where the disciple has been doubtful in points of character. There have been marked idiosyncrasies, erratic departures, temperamental disturbances, manifest weaknesses from a normal observer's point of view. Nevertheless, a kind of technique has been in evidence of such value that all deficiencies of a general nature have proved of little hindrance except in the disciple's own

personal adjustment in life, and the Master has used that technique with pronounced effect.

I am not orthodox or rigid in assessing human character; quite the reverse. I am not happy in the presence of immorality, or mental aberration, or temperament defeating itself; but when I see a man achieving a fine work in conjunction with or in spite of either, my attention is fastened upon the work, not primarily on the man. Am I then demanding too much in expecting that an aspirant under training for discipleship, in the course of which he should be molding and disciplining mind and temperament and organizing character, should measure up to a commendable level of mental and temperamental stability and force of character to guarantee his ultimately taking his place among those who have achieved this standard and share in their labor?

There is one thing we have to look to today, when occultism is overstepping its former bounds, so to speak, and compelling us to new applications of its technique, and that is not to place orthodox and exclusive interpretations upon it. Narrow and exclusive interpretation and application of occult truth have given it bad names in the past. If an occultist hopes to be of any use in the present day he will need as much to orient himself as those he aims to teach. It has been intimated that there is a strong forward movement among thinkers in the world. No intelligent student can doubt it. But exclusive interpretation is not their watchword. They are interrogating all and everything, even the occultist.

What I appear to demand and determine regarding the standing and authority of a disciple is by no means in excess of what they will demand of and determine about him. He will have to stand well in advance of those he proposes to assist, or he will be discounted. And rightly so. We should not expect to gain the ear of men of large mental growth by reiterating homely platitudes, even occult ones, of which they have forgotten the phraseology but have acted upon all their lives. If my suggestions about discipleship appear too exacting, it is not that I expect others to accept and conform to them, but because I feel the necessity of sketching in bold outline the conception I entertain of

discipleship. I could sketch a much softer outline, in half lights and uncertain tones, but, like many other things seen in half lights and of doubtful meaning, the outline would for me be a false one. The truth is, I have no soft and soothing outline for my conception of discipleship. On the contrary, I have no outline bold or forceful enough for the perfect depiction of it.

I do not say this to perplex or baffle. Perhaps I am obsessed with the truth of a great idea and write chiefly for those likewise obsessed and who can bear to see its formidable contour overshadowing their whole life, the conception of a technique of a thousand facets embracing the experience of many incarnations. A conception of this kind always compels the soul to declare itself, whatever reception it may receive. Those who have it not are inclined to think there is a straining aftereffect when they see it, a passing beyond one's depth and falling into exaggeration. Discerning only one aspect of truth they interpret a full and balanced conception as an abortion. "The history of Beethoven's life," says one of his biographers, "is a record of struggles, a fraction of which would have exhausted and emptied an ordinary man." If the reader will substitute the word *disciple* for Beethoven, he will approach my conception of the history of discipleship.

The great man himself said: "In my instrumental music, I always have the *whole* in my mind." There you have my conception of the objective for the disciple. The real leaders and teachers of men are all of that quality. Deep down in the soul they have a gigantic grasp of the technique of their art or science. The true disciple should be no exception to this first magnitude of values. In him we look for the paramount soul, perceptive at the center of a radiating and compelling technique, observing with impartiality every avenue of knowledge. We look for an austerity of thought which can withstand the onslaught of ignorance and evil entities, whether embodied or emanating with malicious intent from unseen sources. We look for an emotional responsiveness which can answer to all that man can say and do in the worlds of form, without losing its moral integrity.

This is my interpretation of the canon of occult scripture. The precise terms of it may be objected to, but the fact is embodied in the

text. "To be able to stand is to have confidence." Upon that confidence is based the Rosicrucian technique. It is equally true in the worldly and occult sense, but the occult significance is far removed from the worldly significance. Each has its acknowledged area of experience and force. Standing in confidence, worthy of the name in the worldly sense, always implies character. Occult confidence is built on that, and I maintain that it cannot be built upon anything but that. We cannot impart occult confidence unless we have that. The difference between occultism proper and pseudo-occultism is fundamentally just the difference between character and the absence of it, because true character has insight which will not permit itself to be made a fool of by false values.

The men we are proposing to contact and inspire in these days will be men who have a respect for character, and unless we can impress them first with character in solid form, they will pass by. Evolution during the past twenty five years has compelled men to respect and desire character as never before. The European war helped to do this more effectually than anything else. It brought the true values of life to the fore and gave a death blow to insincerity and make-believe. I remember how moved I once was when a businessman of fine culture, whose wife had been murdered abroad, asked how he could learn to go into the silence. That is a great moment in life and makes all the years of endeavor infinitely worthwhile. That is the kind of man we shall contact today, and only the disciple can deal with him. Character he has and confidence in the worldly sense. The disciple must have confidence in the occult sense, and it must be built upon character that compels the respect of others because he has the highest respect for it himself.

How marked, for instance, is this character in Beethoven. It is an arresting fact that many of his utterances are instinct with spiritual passion and have a most profound occult application. The critic will point to the want of balance and control, the tragic emotional chaos in the man, the uncompromising, headlong driving against personalities and through circumstances, leaving a memory so keen and poignant of pathos and regret behind him. It was so; and in these respects the disciple cannot accept him as an exemplar. But he said this: "The only

good thing is a beautiful, good soul, which is recognized in everything and in the presence of which there need be no concealment. *One must be somebody if one wishes to appear so.* The world is bound to recognize one; it is not always unjust. To me, however, that is a matter of no importance; for I have a higher aim” It may be asked, why I introduce Beethoven here? I do so, not simply because he is one of the most eminent instances of sublime genius in the world of art, and was an unconscious disciple and working under cosmic direction, but because he stands out as a classic example of that greatness of character upon which I am insisting. Nor is this example in any way irrelevant; for the time must come when the disciple will feel a marvelous affinity with such men of character and vision. Indeed, I go so far as to submit that he will never fully understand or master occult technique until he can glance over the field of evolution at once and meet these characters, spirit to spirit, just where they stand and participate in what they did by virtue of a sympathetic alignment with the same rays of cosmic forces which animated them.

Occult exclusiveness is the one barrier to this access to the world soul. The force of this statement will have significance only for the disciple who is taking the higher stages of his vocation. The aspirant may well miss its value and bearing in his life. The disciple must be aware of and interpret understandingly the force of the Cosmic Hierarchy using with tremendous effect characters in the most diverse spheres of world evolution, totally unrelated as they appear objectively to any occult nomenclature. He must pass to and fro at will sympathetically between their world of thought and his own and feel the synchronous vibration that underlies both. He must not stand isolated within his own circle of light and leave outside as foreign and unrelated activities the art, music, and literature which resound throughout the universe. These are the Master’s own measured tones of expression and blend harmonically in the creative Word. They are voices of the Divine to which he must listen and respond to and immensely love, until his life trembles with the fullness of comprehension of the whole inspirational life of man.

The disciple creates his own temple of meditation, the invisible circle within which he retires at will to contact the master in the

soul. But if those precincts become a concrete barrier which induces isolation and unresponsiveness to the myriad expressions of technique manifesting through the souls of the great army of master spirits, past and present, on the broad highway of evolution, who have lighted up the whole path to the present hour with a splendor of character and genius so noble and impressive that we sometimes wonder whether they were indeed men, then not only is the heresy of separateness, that cardinal sin that besets every aspirant, upon us, but we pass on blindly and oblivious of the greatest gift of the Masters to aspiring men. It is this isolation which the aspirant has with pain created and in which he seeks to remain, shielded from the intrusion of all influences likely to disturb its serenity, yet whose mission it is to extend his sympathies and contacts in every possible direction, that becomes the barrier to further progress.

During the early years of novitiate the aspirant is prone to pride himself greatly upon the acquisition of new knowledge, and the temptation to build and hold for himself is strong. I have observed this attitude in many a young Rosicrucian student. But it has been gratifying also to observe that as he passes on to higher grades of instruction, a reaction to this attitude takes place. He finds himself inevitably drawn gradually by the strong vibration active within the sphere of his acquired knowledge to seek for some way in which to project his increasing force and influence for the benefit of others. Not until this change of attitude manifests is it possible for him to think in terms of discipleship.

The entire tendency of the life of discipleship today is toward group cooperation and effort. The Masters are cosmopolitan in thought, work, and influence. There are no barriers to their seership, comprehension, and bountiful compassion. Let the disciple attune his mind to this large and dignified conception. "The divine give; they demand that you also shall give before you can be of their kin."

Chapter 9

THE ORGANIC STRUCTURE OF THE TECHNIQUE

WE HAVE CONSIDERED some of the attitudes and discipline which enable the aspirant in good time to pass successfully the novitiate and take the first steps on the path of discipleship. We have to consider him now in his status of a disciple who, in the words of occult scripture, is able to stand, able to hear, able to see, able to speak. The experience gained during his novitiate enables him to stand firmly and with confidence in his own place, to hear the voice of the soul above the insistent and distracting voices of the personal life and to follow it, to see the meaning and purpose of his life in the light of the technical unfoldment within him, and to speak with authority to those who seek. His mission, as a disciple, is to be an interpreter and exponent of the technique in the vocation of discipleship. He cannot regard that vocation too seriously or be imbued too deeply with the responsibility of it.

The novitiate perfects his manhood; discipleship must unfold and demonstrate his super-manhood. Only upon the rock of mature manhood can the divine superstructure be safely built. Our conception of manhood for the novitiate is that which has reference primarily to the mental life, wherein all the various faculties have been systematically disciplined and coordinated, are under the control of the will, and can be applied ably and effectively to general life activities. There is the sense of organization and basic structure in the mental life

which can assume the responsibilities of larger vision and knowledge, a groundwork of power and ability which is subject to no possibility of losing its integrity or proper management in the face of emergencies, or liable to disruption from the onslaught of inimical influences from circumstances or men. Those who have observed disciples in the making and know them personally can testify to the presence in them of this basic structure of mental power and ability, and those who know what discipleship really means know how indispensably necessary is this structure for the adequate fulfillment of the duties of its vocation.

Upon this foundation evolved during the novitiate the fourfold organism of the technique of the disciple comes into being: ability to stand, to hear, to see, to speak. Wisdom gives the ability to stand, *reverence* is born of hearing, caution comes of inward sight, integrity is necessary for speech. It will be proper to consider this somewhat in detail. It should be unnecessary to affirm that the disciple must have wisdom in order to stand in the occult sense. If there is one thing more than all others that compels the admiration and allegiance of the disciple to the Master, it is the sublime and inclusive knowledge of the latter and the mathematical exactitude with which he can apply any phase of his technique generally to any situation, and particularly in his tuition of a disciple.

We read much of the compassion of the Master, but it is not the sentimental emotion which some are apt to regard it. That compassion derives from his profound and searching knowledge of and insight into the mind and soul of humanity. The personal element is not in evidence in the dealing of the Master with his disciples. The rigorous laws of discipline in his training should teach us that. This is not said from underestimation of the value of the affectional life, but to point the truth that the higher mind and spiritual will are the prime channels of expression and use in the life of the Master and disciple.

Through those channels alone do we approach to the heart of things and gain true knowledge and insight into the sphere of causes. Contact with that subtle atmosphere will almost invariably unfold the flower of compassion in the heart. The disciple need only penetrate

deeply enough into the life of the soul to feel all the compassion he is able to bear. The heart and passionate life are active enough in the majority. The art of devotion is a comparatively easy attainment. It has considerable attention during the novitiate. But devotion alone will never comprehend and exercise the technique of discipleship.

Wisdom therefore must be the disciple's most powerful aid at this point, and by wisdom I mean the essential knowing derived from specialized study of the science of the soul. The disciple must know and be able to apply his knowledge. His mind must be replete with principles of technical adaptation to the infinite problems of development that will confront him and demand his aid during his life of service. He will never trouble to look back and observe how far he has come, or pride himself upon some little advancement beyond a previous condition of relative ignorance, but forever in his mind's eye will stand the image of the master mind with its perfect equipment and amazing resourcefulness, and the compassionate understanding and power of assistance which the Master has already vouchsafed to him. He will seek by every possible avenue to augment the principles of knowledge revealed to him, whereby his technique may be brought nearer to perfection.

During this steady unfoldment of the technique he will gain the ability to hear truth in the occult sense. Impersonality here is of first importance. This subject has been considered in a previous book, and is now approached from a different angle. The diversified knowledge imperative for the disciple must be obtained from authentic sources, from traditional sources of acknowledged value and utility. Not neglecting the discoveries of the moderns but testing their value in his own life, he will ground his knowledge upon the approved theory and practice of the Rosicrucian and other proficients which have stood the test of time and are destined to enlighten all the realms of knowledge of the future.

These expositions of the science will prove the great transforming power in his life. Through constant and inward brooding they will become the very content of his soul and awaken a deep reverence for all teaching that proceeds from reliable seership. I say reverence, because all the possibilities of his advance in the technique arise from

the sincere and selfless assimilations of these transcripts of illumined experience set down by those who have trodden the way and write for his guidance. Reverence for the universal applications of truth from whatsoever sources of acknowledged authority is a very special quality in the disciple, since in his work with others he will certainly meet in time with the most diverse applications of occult wisdom, and he must not be wanting in due reverence for their personal persuasions nor lack a proper responsiveness thereto.

The attitude of the disciple to others must be: What is this soul saying to me and how must I respond for its enlightenment? It is not simply what the disciple thinks of the specific problem from his own point of view; it is what it means to another and from what angle of vision it can wisely be approached and resolved that has to be taken into consideration before advice is offered. The disciple may exercise in caution by applying a too advanced phase of his technique to a problem for its solution, a grade of force quite beyond the possibility of acceptance, as surely as he might speak incautiously through the want of adequate personal detachment and selflessness. The due and attentive exercise of these latter qualities will inevitably sharpen the sense of inward sight into the soul life and lead in time to an instantaneous and intuitive comprehension of the status of another soul and its immediate need. I consider this one of the highest and most inspiring aspects of the technique of the disciple.

The power of right speech demands integrity in the disciple. I define integrity of speech here as an entire correspondence with the concepts of occult truth as intuitionally apprehended. The disciple has the vision of and access to the truth of things, and from thence arises the power of speech for the helping of others. However much he may have dissembled before he entered the path, perhaps in legitimate self-interest and to avoid criticism, the technique of the disciple will compel the truth of life to shine through him. He must declare the truth that is in him, forgetful of or indifferent to the opinions of others. It is the very condition of discipleship that he has attained a new altitude, and what he sees from that altitude must be declared, if only for the few who need and will profit of it. This point scarcely needs to be enlarged upon, for the technique, in its true form, is of that force

and courage that it cannot postpone itself. Rash or untimely speech is foreign to it, but the quest evoked by it vibrates across the space with dynamic purpose. It laughs at enemies and criticism and rejoices in the possibilities of its own glorious service. It is satisfied if it can coin the true word for the Master's thought and hallow the ether with it.

Wisdom to stand in confidence, reverence for the truth of the science, caution in the exposition of it, and integrity in what is uttered: this is the basis of the fourfold organism of the disciple's technique. The experience which will accrue to the disciple who acts conscientiously upon these sound and well-tried principles of his vocation will enable him to exercise that tolerance and gravity which are so becoming and attractive when faced with points of difference in the presentations of truth issuing from many sources of authority. If he takes the Rosicrucian path, I do not think there will be much fear of delinquency in this respect, because, for one thing, he will be conversant with the history of the great characters of the past, philosophers and scientists, school men and reformers, all followers and exponents of the Divine Arcana, but approaching the secret science from the most various standpoints, many of them so markedly original and inspired and professedly Rosicrucian in character and belief, that he will receive the strongest incentive to take a universal and inclusive view of all tendencies in modern thought, scholarship, and technique towards the evolution of consciousness.

This breadth of vision is characteristic of the disciple, and it especially marks him in these days when the clash of sects and philosophies and religions is still holding so many back from a cosmic understanding and enlightenment. Nor is the occult field any exception to intolerance and light-mindedness in this respect. Occult sects fight as bitterly for their little platforms of truth as the orthodox Christian bodies. The disciple must stand above this. He must be able to hear all, understand all, and speak to all. He must learn to be silent in the presence of the thinking mind struggling with the expression of its inspired gift of cosmic truth. He cannot afford to ignore the voices of the messengers as there are none too many of them and they will help him to understand himself. And his aim must be to stand with them upon equal terms of knowledge and power.

The attitude of patient hearing and comprehension of many presentations of master minds firmly established, the disciple will develop in his vocation the ability to approach the problems of the path from a wide and understanding basis of knowledge. He will thus avoid the pathetic and discouraging attitude of those teachers who can only speak to an aspirant from their own restricted platform of particular belief, while he approaches them very often from a far more catholic conception of truth than their own. The disciple will not assume to know what he does not in order to hold a reputation for knowledge beyond his scope; but it is expected that he will, through conscientious and prolonged personal effort, and having taken the full term of the novitiate, not be ignorant of any general problem of development that is likely to be presented to him.

He will find that he will be able to handle far greater work and responsibilities connected with the path than he at first imagined possible. The reason for this arises from a fact of the technique itself. For the technique is not of a fixed and stable measure, so to speak; it has a native resilience and adaptability and discloses reserves of knowledge and force, under pressure of need, of unexpected capacity. In the case of faculties operating entirely upon the mental plane, we know as a rule that present extent and possibility of their use; we know approximately what we can and cannot do with them. This kind of limitation does not apply to the exercise of the technique. And I conceive this is so because it does not originate upon the mental plane, but fundamentally and directly in the world of occult force. It derives from a sphere of unlimited possibilities; and a disciple who has developed and is using the technique understandingly as above outlined is not subjected to more or less arbitrary limits in the exercise of it as in the case of the purely mental faculties within the spheres of science, art, or learning.

Under pressure of need or emergency for service, its vibration may be so extended and augmented, may become so inspired and potent, that he will be truly humbled by the cosmic response that has been accorded to him; and, having once responded to this exceptional measure, beyond anything he hitherto considered possible to him, the incentive will be firm to deliberately work towards making this extension a normal feature of the technique. Nor is there any limit to

such extensions. Indeed, it is such extensions of personal vibrations which impart uniqueness to the disciple's experience and render it so valuable to others. It is not that an extension in energy simply confers ability to meet the emergency. It is a true unfoldment into a higher grade of sensitivity to world vibration on every hand. It is an advancement in individual knowing and insight over a large field in world contact. It is an advance in world telepathy, by which I mean that the disciple ensures for himself a mental radio sensitiveness to the thought and purpose of his compeers throughout the world.

He will become conscious of attunement with other disciples working at his own level as their thought and force will amalgamate with his own. He will become unconsciously at one with deeper strata of intelligence and illumination upon which he will draw in his work. He will find himself assimilating unconsciously the inner values of the technique used by all disciples everywhere. Is there not more than a hint in this conception of the rapidity and facility with which the technique grows spontaneously, augments itself, and becomes so amazingly inclusive of knowledge and projective of influence when once it has reached a certain momentum in the disciple's life? It is a divine and classic adventure, only possible to a great soul able to subjugate all lesser aims and pledged to the Master life.

Within the radius of this attained measure of technical sensitivity and responsiveness, extending, be it noted, from the first step of the novitiate up to the present point of organic and instrumental equipment, lies a vast field of possible service for the disciple in the lives of aspirants attracted to him by karmic affiliation and in whose lives he is destined to play a part. In this work he will have an opportunity to try himself out in the most intricate ways in correct diagnosis of individual need. Occult diagnosis is comparable on the mental and spiritual planes to that of the physician on the physical, and it should be no less exacting. Now, it is a special feature of the technique when well developed that it has an immediate perception of the mood or truth behind the written or spoken word. This insight is so immediate and penetrating that I have known a technician often to respond not so directly to what has been spoken or written, but to the facts unintentionally withheld or with intent concealed, and unfold the

seeker's problem with minuteness and accuracy, much to the surprise of the latter.

Unusual, if not uncanny, as it may appear to the seeker, the technician is to expect this feature of his science to become very pronounced as he carries out his diagnoses patiently and untiringly on a wide scale, and so enters into the very soul sphere of those contacted. The diagnosis characteristic of the technique is not the result of logical procedure; it is not a calculated process of mental ratiocination. Ratiocination upon the subtle elements of human character and conduct, their singularities and combinations, agreements and conflicts, their involutions and evolutions observable in many individual types, may be a thoroughly digested subconscious content in the disciple, resulting from severe mental training in the past. In fact, all this is a part of this preliminary technical equipment, but the diagnostic feature of the technique in its pure form is nothing less than a fine spiritual sagacity which discerns the recurring complications in students' lives and denotes the corresponding solutions to them, based upon successive evidences of them, clear and luminous, in his own soul memory.

The technique of the disciple gives him direct access to this repertoire of experienced knowledge or reminiscence, and upon it he draws at will with confidence and certainty in the work of ministry in his vocation. Being able to do this is compensation for all the pains of discipline and growth that lie behind him. These are now forgotten in the calm consciousness of dispensing knowledge and healing to those still in the throes of the novitiate or lost for a while in the darkness of the obscure night, crying for a word of wise assurance that the quest is not a hopeless one and needing the sure touch of an understanding guidance to pilot them over the threshold into larger life. And this and more is within the scope of the early stages of the technique. Knowledge and influence are within the disciple's grasp, but never to make an exhibition of, or to strike a note of superiority, or to mark the distance between himself and the humblest aspirant, or for the imposition of personal opinion rather than timely and inspiring suggestion. These are perilous negatives absolutely forbidden in discipleship.

THE TECHNIQUE OF THE DISCIPLE

It is not suggested that the disciple's service to others should consist of a tame and bloodless platitudinism. The technique is in the highest sense positive, virile, and masterful. It is the developed diagnostic element in it that tempers and adjusts the whole technical adaptation to the appropriate measure of expression and exercise. It enables him to stand aside, to become selfless in the presence of another's difficulty, that the conditions of it brought to him may appear in their right setting and character, unobstructed by the personal opinion of the disciple about them. It is not what *he* thinks about the matter from his point of evolution, but what it means in the life and circumstances of the one who presents it to him. That is a fine point, and the disciple is on trial as to how he deals with it. He is to lead and suggest, enlighten and inspire, penetrate the hidden associations and ramifications of a difficulty, reveal a way of ascension over it so much so that he himself, or any personal predilection, scarcely appears, but only the revealing of a new way, a larger thought, a subtle flavor of that blessed influence entrusted to him by the Master for self-effacing dispensation.

Chapter 10

THE DISCIPLE IN ACTION

THE ASPIRANT WILL have taken many important steps on the path from his entrance upon the novitiate to the point of conscious discipleship sketched in the preceding chapter. It is a period requiring the hard study and concentrated effort of many years. I may incur the charge of repetition in dwelling again upon this aspect of the theme. It will bear repetition. The hypothetical aspirant I have taken with me through these pages may be on the verge of true discipleship, and this serious communion between us may precipitate and bring into action the mature faculty of past lives hitherto unrealized. Let him focus all his powers of mind and soul upon the task, confronting himself with steady circumspection, and resolved upon a new cycle of unfoldment. It is a task only for those who have counted the cost, are of a settled and determined temperament, fearless in investigation, and of that quality of spirit which can wrestle with difficulty and meet a challenge.

I sound the note of the conquering will in the domain of mind and spirit - not the iron will, but the will of steel, keen and bright in its native luster, driving straight as an arrow to its appointed goal. I must again quote the noble Beethoven, as he is so magnificently impregnated with the supreme spirit of conquest. "Power," he wrote, "is the morality of men who stand out from the rest, and it is also mine." Not the power of a tyrant, but the conscious strength of a soul inspired by the Spirit of God. It is that power which, in the words of the Rosicrucian ritual, is offered to the true initiate: "God alone will be your inspiration; the philosophers will be your equals. The highest intelligence will be ambitious to obey your desires; the demons will not

dare to approach the place where you are; your voice will make them tremble in the depths of the abyss." I commend this ideal religiously to the disciple.

The disciple in his ministry will soon be able to testify to the endless perplexing problems and sufferings in human lives, to which there is neither answer nor hope of healing in the outside world. They repeat themselves daily in almost monotonous succession and will continue to exercise the same cruel tyranny and cast the same cloud of hopelessness upon the soul in travail unless the Karma of knowledge replaces that of ignorance or worldliness. Let no aspirant think that, in qualifying for discipleship and rising to the larger conception and issues of life, these things will no longer trouble him. Not so - discipleship will make him aware in a keener sense than ever before of the cross laid upon humanity.

He, no matter what his growth and knowledge, cannot escape it. He will understand life and know how to adjust to and live it, scientifically and wisely, and he will reap the spiritual joy of his labor. But he can never rest in peace and inaction - for the voices of the world soul will strike upon his sensitive ear with poignancy a hundredfold greater than before his novitiate, and he will be constrained by the compassion active in his soul to throw himself earnestly into the company of those who have answered his petition only that he shall partake of their holy service. For to deliberately work through the novitiate and on to the path of discipleship, with the consequent unfolding of the organism of the technique within the natural man, is nothing less than projecting into the Master's world an ever-sounding, voiceless petition to live after the laws and principles of that world. And having attained to such a commendable exercise of the technique as has been described is the surest proof he can have that his petition has been heard and answered.

"When the disciple is ready to learn, then he is accepted, acknowledged, recognized. It must be so; for he has lit his lamp, and it cannot be hidden." That is precisely where the disciple now stands. His present technical organism is the lamp he has lighted through the bold adventure of his dynamic will. Its radiance shines in the Master's

presence and is reflected back as a beam of knowledge to enlighten the darkness of the world. That is the simple issue to which all the storied past has led him. He has kindled the light of the soul, and his mission is to kindle the light in other souls. His contact with the Master is sure. It exists, unknown to the world, in the deeps of his wholly aspiring and dedicated life. His aura is tense and radiant with the force and luminosity of the fire of this contact. There can be no failure, no diminution of that silent bond of fellowship, only expansion and augmentation of the vital elements in it, so long as the disciple remains true to the sacred ritual inscribed by it in his members. It will grow as the flower grows, but not to fade. Its many-petaled radiance will increase in glory with every access of influence directed upon him from the inner plane of ascension to strengthen his life of service.

One of the many paradoxes in the disciple's life, which experience will have brought home strongly to him, is that although his development must perforce acquaint him in the deepest sense with the fact of loneliness, yet he cannot work in isolation. His unfolding technique takes him further and further from the common worldly interests of men insofar as personal participation in them is concerned, but this inevitable retreat means a corresponding advance towards cooperative interest and action with those of his own plane of knowledge and purpose. The need of this cooperation will be forced upon him by his growing experience, and if he is fully awake to the possibilities of it, he will not hesitate to accept it.

This is mentioned because there are some who have been compelled by the circumstances of their development to work so utterly alone, with no sympathy or understanding from others in their environment, that on reaching at length certain objectives they have felt that the alliance of their forces with others was a matter of more or less indifference. I have the greatest sympathy for one whose circumstances of development have induced that attitude of mind. To him who can say, "I have trodden the wine press alone; and of the people there was none with me," my heart speaks in perfect brotherhood. It is a condition of the path, and the solitary trial of the obscure night may just as likely as not cause him to forget that brotherhood exists. But that trial passed, he will discern emerging from the shadows others who

have passed and understand and await his cooperation for momentous work. He must not fail that call, but give his "aid to the few strong hands that hold back the powers of darkness from obtaining complete victory."

But is there need to sound this word of caution? It seems to me that the kind of aspirant I have been communing with in these pages will not need it. To him, as to me, the path and the responsibilities and duties of it are very life, and only death can put a temporary period to the assumption of those responsibilities and the fulfillment of those duties. He will be surprised when the technique comes to work smoothly within him and brings a deeper insight into souls and enables him to interpret the lives of those fellow disciples who need his cooperation. He will be surprised beyond measure to note how similar to their own has been the long day of his trial and discipline. This is the foundation of the co-nature existing between them. They have all stood alone, aspired alone, fought the secret battle alone, until the light of the soul shone in the Master's presence and, reflected back into the world, attracted the vigilant eyes of those other disciples, working each in his appointed place.

He will realize that, throughout all the searching discipline of discipleship he has really been allied with the brethren of the spirit in the four quarters of the earth; that he has been but one of an invisible fraternity of aspiring souls, selfless as himself, chanting the same litany, intoning the same sacred word, infused with the same vibration of revealing fire, and knowing every soul that passes within the precincts of the temple of their consecrated service. This is not fantasy - it is a fact of the ascent of consciousness. And the successive dawns within him of what is transpiring upon spiral after spiral of the ascent is one of the climaxes of experience. The awareness of this fact of the simultaneous effort of many in comparative individual isolation to a common level of spiritual co-partnership brings to the disciple a new accession of strength, courage, and purpose. No matter in what condition of loneliness he may live and work, the illusion of isolation no longer overshadows him. He will now be in a position to see how many of the things which have held him back and forced him on have been more of the nature of illusion than fact.

It was said that the laws and principles of the technique which the disciple is learning to comply with and use emanate from perfected technicians who function in the superconscious realm, and that these technicians compose various sections or groups of the Great White Lodge. Now anyone who observes closely the trend of modern evolutionary thought cannot fail to perceive the very conspicuous fact that this advancing thought is expressing itself more and more noticeably and powerfully in cooperative and group form. In every direction is to be seen the amalgamation of individuals, the consolidating of forces, the concentration of knowledge through organized channels for swifter and more potent results, all which has ultimately in view a larger and more expressive life for the individual unit - but not for him alone. I do not refer to the masses of average human beings, who care for nothing beyond the day and seek the greatest pleasure in it. I refer to those in whom the *mind* is awakened, those who feel deeply the problems and responsibilities of existence and are sensing somewhat of the purpose of it. They are to be found within the occult field and outside of it, of all kinds of belief and profession.

It is towards these thinking, progressive men and women that the disciple gravitates in his work. They are really seeking each other. The disciple knows this, while the others do not; and it is only a matter of time when the attractive force of synchronous vibration will unite them in work and service. But this can only transpire, or it will transpire much sooner than otherwise it would, through the synchronous and high-powered vibration of disciples working in cooperation. I write from personal experience of this all-important truth; but confirmation of it may be found in many of the writings of the initiates. "Let us establish," it is written, "our relations towards Rosicrucians, Masons, and other organizations, where the general good is approached. Many Mahatmas have participated in them. And when we remember the altruistic principles of the foundation of these organizations, we must not deny them. When it concerns sincere motives, then all workers for the general good must unite. Especially when the spirit is developed and the consciousness does not sleep."

This is a direct call and petition to the technicians of the schools of occultism for the amalgamation of forces, the sharing of knowledge

and experience, the surmounting of personal inclinations and mental and emotional differences, and the united concentration and projection of esoteric force, and every ability which the unfolding technique has awakened into activity, into appropriate channels of expression that will reach and invite the progressive mind of the age. Recondite and ideal as this may appear at the first glance, there is nothing so eminently practical and sure of response as the united force of discipleship. Subjective as it is in its technique and unusual methods of application, amalgamated and enlightened esoteric force possesses an irresistible potency and is responsible, under the direction of Masters, for the masterly advancement of the thinking mind to the conception of a new life in this exceptional cycle.

That is one aspect of the need of cooperative work by the disciple. It indicates a special duty he has towards the progressive thinkers of the world who are not actually within but are approaching the occult field of thought. But he will observe that if these thinkers are to be inclined to an acceptance of occult thought and experimentation, they must be impressed with the weight of evidence of truth and the unimpeachable technique of those who proclaim this thought and by the appeal of the experimental work done by them. The disciple working alone will not accomplish this. He will undoubtedly be powerful in his own place and within a very limited sphere, but the impression of evidence needed of the truth declared and demonstration achieved must emanate from the strong and irresistible cooperative forces of discipleship.

The progressive mind of today has a range of knowledge and a personal prestige, and in many directions is of that self-centered opinionativeness and self-sufficiency along its own lines that it is not very susceptible of change or open to the appeal of isolated evidence. It has that settled personal persuasion which can only be influenced through the amalgamated knowledge and forces emanating from the sphere of cooperative discipleship. If we look back to the early cycles of the Rosicrucian activities, we find this cooperative idea strongly in evidence. The initiates of the various periods worked in the closest secret contact in all parts of the world. And whatever the particular work each did for humanity, it bore the mark, the strength and character, the immortal seal, of the united influence of the fraternity to which he

belonged. Some of them labored under the most difficult conditions and in circumstances of imminent peril. They were in danger of being apprehended by the authorities of church and state as charlatans and a menace to society.

Today remnants of this peril survive, not indeed from church or state, but from some sections of society which appear to be veritable reincarnations of the spirit which actuated those authorities in the past times. And then, as now, to these evil tendencies, ever vigilant to thwart the progress of man towards spiritual freedom, the initiates would have succumbed had they not been closely knit with their compeers in many places. Supported and inspired by psychic contact and conversation in the spiritual domain, they lived and worked, as it were, invisibly and passed their noble treasures of thought into the stream of general learning, to be seized upon and honorably used by the few progressive thinkers of the time. But in the main they remained hidden, even in the open light of day, for those who should come after them. History repeats itself here, as elsewhere; but in each succeeding period a new spiral is achieved, and these forces of evil, so far as physical plane encroachments are concerned, are sensibly diminished.

The group activities to cultural ends of all kinds prevalent around him should be a powerful, visible inducement to the disciple in this cycle to heed the call to cooperative effort. But a greater inducement and of paramount importance to him is the fact of the corporate character of all sections of the Brotherhood of Masters to which he has given his allegiance. There is no ancient tradition so jealously guarded as that which comprises the laws and principles, the rules and procedures, of the one Great Lodge. The disciple should honor that tradition. It has an imposing gravity and wisdom, because it derives from those elders of the ages who sustain in collective understanding and with unsearchable responsibility the all-knowledge of human evolution. As above, so below.

The Masters will have the corporate idea become a working factor in the disciple's life if he would know that tradition as a living organism of light, inspiration, and power. The Masters are not interested primarily in his personal development for himself alone, but in centers of esoteric

force consisting of efficient units working in harmonious combination and alignment. Such centers of skilled occult technicians have been the secret of accomplishment in all the fraternities of occultism of the past. This law of corporate demonstration holds good on the high plane of hierarchical activity, on the interplanes of Masters and initiates, and among disciples engaged in physical plane action. It is through this close interrelationship and amalgamation of centers of esoteric force that the Brotherhood of Masters wields its great influence and affords the disciple who is ready a unique opportunity of qualifying for higher service.

Chapter 11

THE INQUISTION OF FIRE

THE STAGES OF the path and the requirements for discipleship have been set out again and again in the textbooks. There is a good deal of similarity between them - so much so that they appear to be mainly paraphrases one of another. The requirements usually resolve themselves into the well-known cardinal qualifications of a mental and moral character, and while these qualifications are undoubtedly necessary and must be regarded as foundational principles in discipleship, they nevertheless impress one as a formal structure which lacks the living content of individual experience.

Why is this? Not, presumably, because the compilers of textbooks on discipleship are without experience of it, unless they choose to adopt the role of copyists. If they write from knowledge, they must have experience of the technical training involved in discipleship. Perhaps some of them felt that this experience was not suitable for publication. This is understandable, because the actual experience precipitated while under training is of so searching and intimate a character that there may be a disinclination to impart it or no feeling of necessity to do so. Or, indeed, the very nature of the experience, subtle in texture and more like fleeting reminiscence than the luminous conceptions of objective consciousness, may elude the conscious grasp of thought and refuse embodiment in formal language.

In my opinion, the embodiment of this peculiarly intimate, individual experience in formal language is of the highest value to the neophyte. It will enable him to interpret the unfolding of his own soul life and realize that the technique is a living and very personal matter. This

particular value I have had in mind from first to last in these books on the technique. I have written without reserve and from deep conviction what this development means to me. I have not sought to depreciate the value of genuine textbooks or the views of others. I have been constrained to unfold my own mental and spiritual conception of the truth of this development as experienced in my own life. And I have found, through its reactions upon others, that this is a true way of service and one which is much needed and appreciated.

No one more values traditional teaching and method than I do. There is nothing we need to be so much reminded of if we are ever in danger of forgetting it in the present day, when innovations of every description crowd upon us, threatening the dignity and stability of life and action, and inviting us to compete in the questionable race for this and that dubious material conquest, which will no more satisfy the soul than the swinish life of the prodigal son. This is not a digression, for the aspirant will need to make discrimination in this respect, or the temptation to divert his energies to a quest unworthy of his original purpose may prove too strong for him and valuable time will be wasted. The important thing is that tradition shall not blind him to the necessities of the hour.

Bacon said: "With regard to authority, it is the greatest weakness to attribute infinite credit to particular authors, and to refuse his own prerogative to time, the author of all authors, and, therefore, of all authority. For truth is rightly esteemed the daughter of time, not of authority. It is not wonderful, therefore, if the bonds of antiquity, authority, and unanimity, have so enchained the power of man, that he is unable, as if bewitched, to become familiar with things themselves?" The day is yet remote when the authoritative word of Bacon will lose its value. True to the Rosicrucian tradition, he has written for all time, and these words of his are apt to my theme. The textbooks on discipleship have given us the skeleton outline of the necessary qualifications for it. The skeleton requires the vital body of living experience of the disciple to render it of utility to the aspirant.

"The real order of experience," says Bacon, "begins by setting up a light, and then shows the road by it, commencing with a regulated

and digested, not a misplaced and vague course of experiment, and thence deducing axioms, and from those axioms new experiments.” “For as in ordinary life every person’s disposition, and the concealed feelings of the mind and passions are most drawn out when they are disturbed - so the secrets of nature betray themselves more readily when tormented by art than when left to their own course.” These acute aphorisms afford a basis for my concluding remarks on the disciple and his technique.

We respect traditional occult teaching and method because they have stood the test of time. There is not a working disciple who is not indebted to them. He can no more deny their influence in his development and work than the author can repudiate the influence of literary tradition upon the language in which he creates. Tradition has this of good in it, that it comes to the student’s hand with the impress of countless master minds upon it since the time of its original and spontaneous birth. These minds have assimilated it, retaining yet adapting it, to the various cycles in which they lived and taught. It has never been lost sight of, no matter what the particular adaptation of it in any cycle has been, but has continued to be a basis of intellectual security, a corrector of personal aberration, a guide for honest endeavor, and the very hope and guarantee of future discovery.

It has taught us the amenities of intellectual conduct and opened the book of universal knowledge for all succeeding generations. It is the initial means by which the student gathers to himself a body of attested truth about his science. Were the tradition an isolated and solitary one, it would not have this unassailable authority and importance, or merit the reverence of generations of thinkers. But in occultism there is a multiplication of traditions converging in one body of accepted doctrine, and the reason why the disciple must respect it is because the imprimatur of the Great Brotherhood is upon it.

But the cycles of the present differ from those of the past in this respect: the unparalleled progress of the thinking mind compels the vision of new processes and unexpected adaptations of the knowledge transmitted to us. We stand today before the advent of a new instauration of far greater importance to us than that majestic

instauration magisterially proclaimed by Bacon. The broad bases of knowledge and method laid down by him remain a luminous guide in the present cycle in the unveiling of the heart of things. If ever man had a perfected form of technique, Bacon had it: "The real order of experience begins by setting up a light." Note the application of this axiom. The disciple must kindle his own light and unfold by means of it his own order of experience, which alone is a real guide for him; and that light will show him the way, commencing with a regulated and digested groundwork of laws and principles of occult tradition, thence to a deduction of axioms of personal development, thence to an application of experiments for the demonstration thereof.

Bacon, writing from profound knowledge of the human constitution and its behavior, says that a person's disposition and the concealed feelings and passions of the mind are truly revealed under the pressure of unusual conditions. Now the technique constitutes a recurring initiation into unusual conditions of mind. The training of the disciple sets up a powerful interaction between the personality and the soul, and when alignment is established, the mind and brain are recipient of an increasing influx of the force of the soul. The mind receives new accessions of knowledge from the soul, the brain areas are stimulated by the heightening vibration to respond thereto, and the field of cognition is sensibly enlarged.

This process creates that disturbance referred to by Bacon. The emotional life is accentuated, the mental life is awakened to unexpected strength and venture, and both in conjunction militate at times against the soul which has brought them to trial. And it is no inconsiderable part of the technical training of the disciple to make this alignment a stable and wholly praiseworthy one in the conduct of life, and to subdue and overcome those unavoidable tendencies incident to the process which constitute a veritable inner battle between the hitherto dominant personal self and the spiritual man who is rising in the ascendant.

This unveiling of the real nature of the disciple is of surpassing importance and comprises a major portion of his training. The purpose of it is summed up in the words of the Master: "It is not enough to

know thoroughly what a pupil is capable of doing or not doing at the time and under the circumstances during the period of probation. We have to know of *what he may* become capable under different and every kind of opportunities.” How is this to be discerned? By the way in which a disciple conducts himself in relationship with other disciples to whom he is karmically attached in group work; by his motive, speech, and action in relationship with those who pass within his sphere of occult service; and by the selfish or impersonal use he makes of the knowledge and force automatically passing within his control as a consequence of his fully conscious dedication of himself to the Masters.

It will be obvious that a disciple working in comparative isolation cannot be put fully upon trial in this way. He can only be brought to know himself through a most searching inquisition of his emotional and mental life; and this can only take place within a sphere of active occult service in which his life is urged to expression in ordinary and exceptional circumstances of relationship with and adjustment to others. The Master’s word is very plain on this point: “of *what he may* become capable under different and every kind of opportunities.” The aspirant may think he knows full well what he is or will be capable of when opportunities present themselves, but no trust is so perilous as new force in new hands. When once the door to the Master’s world is opened, to but a slight degree, influx of force to the personality is the consequence; and this force can destroy as easily as it can build up. It can demoralize the disciple as easily as it can add to his human nature another Christlike quality. It is impersonal in action and descends upon him from within, in response to his reiterated petition, to search and test the strength and weakness of his constitution, indifferent whether he stand or fall.

The issue rests absolutely with the disciple. If he has chastened himself aforetime in mind and heart, cultured his emotions, developed his analytical faculties, sharpened his intuition to a point of instant seizure of implicated motive and suggestion, the tension of a fiery force released in his economy, accentuating these developments, will cause no unpropitious reactions, because the opportunities which it opens

to the disciple in his relationships will have been largely anticipated during the period of technical discipline. He will stand firm as a rock in his own place, discerning the possibility of ignominious failure veiled within the fair form of insidious temptation which suddenly rises before him as a ministering angel, inviting him, in the name of friendship and sympathy, to abate for a season the stern aspect of moral rectitude and unwelcome impersonality, even to a forgetting of his common manhood.

The fire will descend and stimulate latent ambition to an astonishing degree. The single path to the Master will become twain, leading as surely back to worldly prestige and exploitations, as onward to otherworldliness; and if the disciple has not already definitely made his choice, there will be cause for long delay, until the call of the soul emerges clear and dominant over the alluring voices of personal desire. Yet again, the descending fire, wonderful and clarifying in its motion, will invest the personality with something of its own arresting magnetism and show the disciple ways and means, unlooked for and intriguing, to exploit the little ones who are weak and helpless before its masterful influence. Never let it be that the disciple will so use it. He will find no greater hell and no swifter fall into it.

The history of discipleship is not without its records of failures. Power has sometimes been sought in the name of the Master and for his service, but the inquisition of it has proved too strong for a faulty mechanism, and the disciple has fallen in his own weakness before the portal of initiation. The tempter may be vanity; it may be sexual gratification; it may be intellectual pride; it may be other manifest weaknesses, only brought out and emphasized under the inquisition of fire, and which the Master in his compassion cannot condone. Prevalent as these failings are in the world of men, even adding influence to some in the common way of life, in the disciple they appear as sorrowful aberrations which disfigure and thwart the whole purpose of his ministry.

He may think otherwise because of the veil of illusion which the form of the temptation casts upon him. The circumstances surrounding it may appear to have so lawfully and unavoidably led to

it, the setting in which it appears may so effectually metamorphose the deleterious aspects of it, that the issues are confused in the disciple's heart and the personal dictate triumphs. Nevertheless, there is the test, and the novitiate proposes the exact training whereby the heart shall know itself by the patient scrutiny of motives and the mind become apprehensive of the causes and effects of these through the multiform intricacies of the technique unfolded by discriminating experience in human contacts.

In my previous book on the technique I said that I did not believe in the killing of ambition as generally understood by aspirants; that the idea of slaying that which is the finished product of past fervent ambition did not appeal to me. In its connection with the theme then under consideration I adhere to that statement. But in the present view of the technique there is another aspect of the matter to be mentioned. When the disciple has worked his way to the point of recognition and acceptance and enters upon what I have called the cooperative group work of discipleship, he will have to make a decisive choice between living over again for his own personal satisfaction the ripe product of past ambition which is now so powerfully influential in his consciousness, and renouncing this for the higher and impersonal work to which his group affiliations invite him.

I have spoken of this as one of the most poignant stages encountered during graduation in the technique. And so I consider it. No sooner is the alignment of the soul and personality established than the hidden culture and ability of the past begins to enter vigorously into the mind consciousness and emphatically demands recognition. There is ample data available among disciples to testify to the truth of this fact. The two paths open to the vision: the one, brilliant and inviting, from the past to the present, revealing what has been heroically sought and hardly won in the realm of mental achievement; the other, dimly sensed ahead, the only guide thereon the disciple's own light set up, leading to a surrender or conversion of all to the service of the Master. The swift play of the two-edged sword of the inquisition of the descending fire divides the storied and speaking past from the untrodden and virgin future that promises technical comprehension and use of super-experience.

The disciple stands alone at this midway point. Both paths are seen: the one offering personal power and enviable reputation in the eyes of men; the other, a passing selflessly into the hiddenness of subjective activity and a surrendering of all powers and faculties to the silent leading of the divine voice that breathes forth from the deep recesses of the flame. Once again, the aspirant may think, in the access of his enkindled enthusiasm, that a right choice would present no difficulty to him. But the fire of the soul will test him to a degree unknown to the unperturbed and reasoning mind. It is a far different matter to remain in calm possession of power and ability, to be exercised and enjoyed freely to our own personal advantage in any way we elect without question or hindrance, and, on the other hand, to have that possession, not questioned or condemned, but the exercise and enjoyment of it diverted almost exclusively to the service of others in world work. The fire, working energetically in a powerful organization, will make the choice not an easy one.

I do not say that a true disciple will fail to make a right choice and without loss of time. The choice, I believe, will be made immediately it is presented. But while the soul unhesitatingly takes the onward path, the mind will dispute the justice of the renunciation it is compelled to make. It will demand to add further laurels to its past achievements, because they are seen to be so easily within reach. It will protest that its personal satisfaction for greater expression is surely allowable in conjunction with its speculation into the unknown. And the fuller the man, the more comprehensive the experience that has been accumulated and is now being released into consciousness through the process of alignment, the more insistent will be this demand and the protest almost pitiful in its intensity.

I am not dealing here with theories, with intellectual abstractions, but with the actual operation of the technique within the mind and heart of the disciple. He is brought to trial before the bar of the soul. The life of discipleship is at stake. There are no advocates on either side. The disciple stands alone before an invisible tribunal. It is the inquisition of fire. If he can bear it and pass on, it will be only upon the accumulated knowledge and strength he has brought with him. The portals of the temple remain hidden behind the flame. He may

even doubt their existence and demand proof of them. There is no response, only silence, from which his own voice must arise. "We have to know of *what he may* be capable", - whether he will hold fast to the coveted flower of the mind and add to its beauty and luxuriance with intellectual pride and self-gratulation, or pass on within the temple with ambition stilled by the peace of devotion and with empty hands, that the Master may place in them such instruments as he sees fittest for the greater work before him.

Whatever the disciple thinks about having to make this choice, however, he may question with himself the justice of it, a little reflection will reveal the perfect wisdom of it. The mind will continue to be the greatest instrument in any work to be done, but in dealing with phases of the technique in others the ordinary faculties of the mind will prove totally inadequate. It is only by making a right choice to follow the call of the soul that extensions of these faculties can be entrusted to the disciple. These extensions open out new ranges of cognition and enable him to sense vibrations and register rhythms entirely outside the ordinary mental level. He can never perfect the technique on that level, nor attain to Masterhood upon it.

The technique is of the soul and spirit. The Master's inspiration derives from the superphysical. Why then should the disciple hesitate to pass on from that with which he is familiar and a complete master of, yet so relative in character, to that divine tuition to which his whole training has prompted him and which only the Master can impart? Blessed indeed is the disciple to whom the inquisition comes in all its intensity and subtle challenges in response to his consistent and sustained petition. It is the Master's solemn offer of acceptance.

The choice is made. The disciple has proved his impersonality and power of self-effacement. The inquisition of fire has not slain ambition: it has revealed a more excellent way to apply the fruits of it. The fire of the mind no longer agitates and craves for further conquests to hold as an isolated possession for self-aggrandizement and worldly reputation. The fire of the spirit permeates the whole economy of the mortal man, bathing, tranquilizing, and healing the grieving nerves; stilling the discordant voices of desire; and transmuting every adjunct of culture

into a spiritual force for its service. This is a major conquest of the technique and surpasses anything hitherto achieved, for it places the disciple in a dominant position on the spiritual plane.

He has yet to prove his strength in maintaining that position. The forms of temptation he has stripped of their illusion and mastered on the objective plane have been the means by which he has attained this ascendancy. They reappear now to test him in a far more subtle form. As a dominant and self-constituted spiritual force working for evolution, he is a menace to those psychic entities who are so interested in his advance as to desire his defeat and spare no means to secure it. He will be subjected again and again to psychic impulsion from the dark side of unseen forces. They will endeavor to turn the disciple aside from his chosen path by most ingenious devices of glamour and illusion. So insidious are these attempts at any cost to thwart the disciple's progress through personalities and circumstances that he will need all the circumspection and wisdom inculcated by his training in order to discriminate between deception and reality.

This point need not be elaborated here. It is true in the experience of discipleship and merits special investigation. One-pointed devotion and the power of fearless challenge against all odds give the magical key to the situation. The disciple will remember the promise of the ritual: "The demons will not dare to approach the place where you are; your voice will make them tremble in the depths of the abyss." It is for the disciple to now demonstrate all the fine technical qualities which, by the grace of the Master, have been conferred upon him and, through steadfast and patient onward living, evoke the whole force of the soul to transcend every hindrance and counteract every opposing influence and initiate him into the presence of the Master.

THE ROSICRUCIAN ORDER, AMORC

Purpose and Work of the Order

The Rosicrucian Order, AMORC, is a philosophical and initiatic tradition. As students progress in their studies, they are initiated into the next level or degree.

Rosicrucians are men and women around the world who study the laws of nature in order to live in harmony with them. Individuals study the Rosicrucian lessons in the privacy of their own homes on subjects such as the nature of the soul, developing intuition, classical Greek philosophy, energy centers in the body, and self-healing techniques.

The Rosicrucian tradition encourages each student to discover the wisdom, compassion, strength, and peace that already reside within each of us.

CHAPTER 1

HYPNOTISM OR BLACK MAGIC?

THE strange deaths that came to so large a number of the explorers taking part in the excavations of King Tut's tomb gradually awakened throughout the entire world an interest in the ancient beliefs in black magic and magical curses.

The periodic addition to the number of individuals who thus fell victim, seemingly, to the "secret curse of the tombs," has served to intensify public interest in this subject until, today, a very large portion of the civilized population of the world believes that the mystery of those deaths has been deliberately protected by science and religion, and by the inconsistent, contradictory, and carefully colored statements of those who know more about it than they care to profess; while a large portion of the uncivilized people significantly shake their heads and intimate that they are entirely too familiar with the subject to risk the displeasure of invisible demons by daring to make any comment.

While feature writers in the Sunday newspapers and in the more or less bombastic magazines have overexaggerated the historical traditions and well-recorded references to such magical powers, and attempt to frighten the unthinking into strange beliefs, the attempts on the part of prominent scientists and leading spiritual or religious educators to make us believe that the weird, unexpected deaths present

MENTAL POISONING

merely a chain of coincidences, without any connection with the tomb whatsoever, are just as ineffective in quelling the increasing interest in the possibilities of magical power and its results.

However, some of the foremost mental and psychological experts tell us that if there were any connection whatsoever between the very strange diseases of which each one of the twenty or more explorers passed away suddenly, and the opening of King Tut's tomb and the removal of its mysterious and sacred contents, then that connection was solely mental and consisted of a form of hypnotic suggestion by which each victim created within his body the strange malady from which he died, while still trembling in fear of the thing that he held in his mind as an inevitable punishment for his participation in a violation of an ancient Egyptian law.

Thus an attempt is made to take the mystery out of the category of supposedly ancient magical formulas into the modern category of hypnotic or psychological phenomena, as though this would reduce the whole matter to a readily acceptable and feasible explanation and leave no questions unanswered. If the deaths were due to hypnotic suggestion created in the minds of these explorers as a result of the first and second incidents in the strange chain of mysterious deaths, the cause of the repeated manifestations to the number of twenty-two or more would be wholly within the period of modern times.

In other words, if hypnotic suggestion accompanied by fear is the true explanation of the concurring deaths, the cause had its beginning not later than the occurrence of the second, or possibly third, sudden and unexplained death. We

MENTAL POISONING

might even admit that this psychological cause had its beginning immediately after the first death, but certainly we would not trace this psychological cause to any other incident or fact antedating the strange passing of the first victim of the process.

But the astonishing fact which remains unexplained in such a theory is that the weird circle of mysterious deaths was the precise fulfillment of a prophetic curse uttered and cut into the wall of King Tut's tomb thirty-two centuries ago!

The question then is: what unknown form of magic could carry a curse down through the ages and psychologically produce the physiological results in modern times? Hypnotism or black magic? Necromancy or karmic law? What have we here that science has not explained, and the lay mind cannot comprehend, but fears?

Another very plausible, though certainly disturbing, explanation has been offered in the suggestion that some chemical poison of a real, tangible material was placed within the sealed tomb of King Tut and deliberately spread upon every article within the tomb and every inch of its walls, and that all of the excavators, explorers, and inspectors who entered the tomb or who handled the funerary articles within it came in physical contact with this poison, which was readily absorbed by their systems, and thus infected them in a manner to produce the almost uniform results in the case of each of the twenty-two victims resulting in the sudden and tragic deaths.

The unthinking mind readily seizes upon this latter explanation as being not only logical but so simple and free

MENTAL POISONING

from the elements of the supernatural as to be unquestionably correct. But the analytical mind will quickly discover the faults in such a theory.

In the first place, experts who have been consulted and who have made the most minute chemical analysis of even the dust on the surface of the smallest and largest devices still remaining in the tomb and on the walls of the tomb, and even on parts of the sarcophagus, have failed to find the slightest trace of any poison. And in answer to the question whether some unknown ancient poison might not be hidden in the minute substances tested under the microscope, the experts in the nature of poisons and the pathology of poison claim that there is no poison known to them that would retain its virtue and potency through so many centuries, or which could be so easily absorbed into the system through just the casual contact, with the things in the tomb, made by those who did little more than measure or photograph some of the objects and yet fell victim to the strange disease.

One other outstanding fault, however, makes the foregoing theory of chemical poisoning unacceptable. It is the fact that although all of these excavators and explorers, research men, photographers, artists, and associate observers and witnesses entered the tomb of King Tut at practically the same hour of the same day, and came in contact with the articles within the tomb on the same day, and completed their activities in the tomb on the same day, not all twenty-two were stricken with the disease on the same day nor passed through transition on approximately the same day.

MENTAL POISONING

Only one by one, with many days, weeks, and months intervening, submitted to the strange malady that brought about the unique deaths. Each one did not manifest the same symptoms except in general classification; each one did not have identically the same pathological or physiological conditions, and each one did not suffer in the same manner. But each one did have precisely the same mental attitude and uncontrollable fear and premonition from the first moment of disability! And, accompanying the hysterical and uncontrollable fears and as the companion to the horrible premonitions, there were similar visions, hallucinations, and highly illusory psychic states.

What manner of organic or inorganic poison could be manufactured thirty-two centuries ago and so placed in a tomb that it would insidiously affect and inoculate healthy, normal human beings in a few seconds on the same day, and produce in various types of individuals similar physical conditions and precisely the same mental conditions, accompanied by an unusual class of psychic impressions and premonitions, ultimately resulting in incurable physical abnormalities producing horrible deaths, and only one at a time with an indefinite number of days between each?

It is because this last complex question is unanswerable by modern science that the idea or theory of physical chemical poisoning must be abandoned. If, then, we turn to psychiatrists and the experts in psychological and metaphysical problems and submit the same question, we receive this astonishing answer: "There is but one insidious poison that could have been invented thirty-two hundred years ago or more, and counted upon to carry out the direful results we have seen, and that poison is mental poison!"

MENTAL POISONING

Throughout the ages mental poisoning of one form or another has enslaved millions of human beings and tortured the souls of men and women in all climes and conditions.

Mental poisoning has been the weapon of the earliest and most primitive human creatures. It has been the insidious, invisible, undetectable instrument of torture and death in the hands of the unlearned and the learned, the rich and the poor, the high and the low, and even of those who pose as saintly beings and holy men. It has been the “means to an end” in the hands of evil-minded potentates and rulers, physicians and magicians, priests and clerics, schemers, racketeers, blackmailers, and pretending friends. It has been the scepter of power in the hands of self-appointed leaders of social reforms and organized plunderers.

It is still the subtle, devilish device of millions of men and women who may or may not be wholly aware of its power and its death-dealing potency.

And all of us, from day to day and hour to hour in every walk of life, in every circumstance, are possible victims of mental poisoning unless we understand its nature and can quickly recognize its infectious inoculation and use the only known antidote that will effectively react upon it and leave us uncontaminated!

CHAPTER 2

IS BLACK MAGIC POSSIBLE?

THROUGHOUT the ages there has been a superstitious belief in the power of the evil eye, the black magician's subtle power, and the hypnotist's dominating mind.

As one journeys through such lands as Egypt in these very modern days, one is impressed with two strange facts. Nearly all of the old native homes or living structures, regardless of their primitive or dilapidated form, have one blue shutter on some window, or, in the absence of any shutters, one blue patch of paint on an outside wall, and there hangs on a cord from the neck of every living creature, including donkeys and camels, and from the neck of most natives, a blue bead. And always the blue is of the same shade—turquoise.

The other fact is that most of the men and women in these lands have one of their eyes either totally blind, scarred and injured, or horribly distorted, and this is the case even of little boys and girls. At first one may not realize that there is any relationship between the blue shutter, the blue patch of paint on the wall, the blue bead on the string, and the injured eye. But investigation reveals that all of these things are believed to be absolute protections against the influence of “the evil eye,” or the magical influence of some invisible but omnipresent, omnipotent, evil mind.

For centuries the believers in such a superstition took their little infants a few hours or days old and had one eye

MENTAL POISONING

gouged or burned out with a blunt instrument or even with the fingernail of the left hand so that throughout the lives of these children, even into old age, their horrible appearance would frighten away the evil power, as would the blue shutter, the blue paint, and the blue bead.

When we can find such a belief as this still active in uncivilized and semi-civilized lands of today, whose people come in contact yearly with millions of tourists from civilized lands who do not resort to such forms of magical protection, we can understand how difficult it is to remove from the minds and consciousness of human beings any belief that was born in ignorance, fostered by traditions, and seemingly proven by strange coincidences.

In other lands, various forms of incantations, the burning of brush, the sacrificing of little animals, the bathing in strange waters, the torturing of the parts of the body, the wearing or carrying of some amulets or talismans or the drinking of peculiar potions are regarded as sure protections against magical powers of all kinds.

And even in our most modern of civilized countries, among our most intelligent of evolved human beings, we have superstitious beliefs that are just as extraordinary, just as fantastic, and just as inexcusable and unsound as those I have mentioned. Among these strange and superstitious beliefs of the highly educated and evolved nations is that which attributes to certain human individuals the power and the ability to use some magic formula whereby the evil thoughts, the destructive ideas and desires, held within the mind for a brief moment or two, can be radiated or transmitted invisibly and intangibly to the mind and body of another

MENTAL POISONING

individual at any distance or in any place or circumstance, and take root, become infectious, and proceed to carry out the destructive portent and process of their conception.

According to this still very prevalent superstitious belief, the evil-minded individual of any type or calibre, of any social position, high or low, of any degree of mental and physical prowess, when possessing a wicked heart and some secret formula can deliberately, maliciously, and knowingly, send forth from his mind to the mind, brain, or heart of another being, a stream or ray of thought power that will proceed to destroy the cells of the blood, the cells of the tissue, the cells of the bones, and produce diseases or instant death, or cause the victim to suffer from obsessional ideas that turn into hallucinations, break down and destroy the integrity of the brain, and leave the individual a victim of incurable insanity.

It is almost unbelievable, but nevertheless a fact that within the cycle of the 20th century, as in that of the 19th and earlier centuries, more new and horrifying books and pamphlets, treatises and lectures, have been written and published, dealing with the practice of black magic, than in all of the centuries of the Dark Ages.

It is also unbelievable that in recent years certain occult and supposedly white-brotherhood organizations have written and produced in radio stations for nationwide hearing in America, plays and dramas based upon the practice of this black magic, and giving to them all of the atmosphere, all of the dignity, and all of the seeming integrity of truthfulness and logical possibility.

MENTAL POISONING

But to the mystic and to the student of cosmic law and order the belief in such a process of destructive power controlled by any individual is inconsistent, impossible, and truly sacrilegious, and the true mystic and student of cosmic law is alone capable of rendering judgment in such a case in such a manner. His knowledge and his experience with the divine cosmic principles enables him to realize and to understand thoroughly that no such process of transmission of destructive energy or power in any thought form between one individual and another or between one individual and a group of individuals would be possible without the conscious approval, aid, and dependable assistance of the universal consciousness and divine spirit that pervades all space and acts as a medium for the transmission of thought waves, light waves, energy waves, or waves of any kind.

The belief, therefore, that this divine, cosmic, godly-created universal consciousness, put into the universe by the Creator of all that is good, loving, and constructive, for the purpose of unifying all of His harmonious, constructive principles, would lend itself to a process of destruction wholly abhorrent to the universal constructive and creative forces of the universe, and wholly inharmonious to the loving, merciful nature of that consciousness, is a sacrilege as well as an inane and absurd superstition.

In the world of invisible and ethereal radiations of mental concepts, only that which is constructive and truly compatible and harmonious with the nature of God and His consciousness can be transmitted through space from one human consciousness to another, or from the Divine Consciousness to the human consciousness, or from the consciousness of one living cell to another living cell.

MENTAL POISONING

Any destructive, incompatible, and inharmonious thought radiation attempting to leave the mind and consciousness of one individual to reach another meets with instant repulsion and immediate dissolution. Its potency is neutralized by the constructive forces and powers of the Divine Consciousness, and the evil thoughts are forced back into the consciousness of the transmitting mind where the reaction is upon the evil-minded individual, and not upon the intended victim.

The mystic and student of divine and cosmic laws knows that God, in the very beginning of His scheme of creation, made provision that the human should be free from mental dominance and control by any mind other than his own. God's whole universe is built upon the principle of creative forces having sole potency in the vibrations of consciousness. The very consciousness of the human mind and body, in every organ and cell, is a part of the consciousness of God, the Creator of all living things.

Not a single fact of the belief in the processes of black magic has ever been proved or demonstrated. Why, then, should any human beings or group of them desire to postulate and promote a belief in black magic, or tempt human beings to have faith in such a diabolical agency? The answer is found in the fact that by the promotion and spread of such an idea, accompanied with invented and imaginary demonstrations of it, unthinking persons will voluntarily develop in their own minds and in their worldly objective consciousness a horrible fear of an unknown power, and thus become victims of the fear and of their own self-created destructive thought forms.

MENTAL POISONING

He who fears black magic through a sincere belief in its existence and potency, automatically, through self-suggestion within his own mind, becomes not only enslaved by the fear but a ready victim of the evils his mind invents. While the consciousness and cosmic ether that intervenes between all human beings and fills all space between the souls and bodies of God's creatures on Earth will refuse to carry and convey the destructive thoughts held in the mind of one who would use them to injure another, within our own bodies, our own worldly mortal nerves and sensory constitution and physical consciousness will carry from our own minds throughout our own bodies those destructive, inharmonious, infectious, and poisonous thoughts that our own minds created out of fear and superstitious beliefs.

Thus we, as individuals, can become the victims of our own poisonous thoughts, but we cannot become the victims of the poisonous thoughts of another. What we may conceive in our minds in fear and through false belief, and allow to become a law and a command to ourselves, constitutes one form of mental poisoning. All of us are more or less victims of this self-poisoning from the beginning of earthly life to its end, unless we have learned how to protect ourselves against the whole satanic scheme of evil thinking.

But this form of mental poisoning is not the one that is causing and creating, producing and manifesting, throughout modern civilization, the horrible, unfortunate, and unnecessary suffering that makes millions of human beings victims of it hour by hour and day by day. It is with this second form of mental poisoning that we shall deal in the following chapters.

CHAPTER 3

THE PSYCHOLOGY OF MENTAL REACTIONS

NOT many years ago specialists of various kinds were seriously engaged in studying and analyzing reactions to certain nerve stimuli and mental stimuli. In the field of psychiatry and in the field of neurology the common and uncommon, normal and abnormal reactions to the stimuli of various classifications, both physical and mental, or nervous, enabled specialists to diagnose and properly index the physical and mental status of persons who were suffering either from chronic conditions of an unknown origin or strange complexes resulting from suspected causes.

As a result of the many years of analytical study tabulated in minute reports which were gradually brought together and put into a cumulative index of discovered facts, there appeared to be certain forms of reactions which, by their continued manifestation in more than the average case, warranted specialists in calling these reactions the standard or the normal or natural, while all other reactions were looked upon as abnormal, subnormal, extraordinary, or unique.

The actions and reactions of minute animals and household pets were finally involved in the program of scrutiny by the specialists, and we were made acquainted with the psychological as well as the physiological reasons for the

MENTAL POISONING

little dog striking out in proper method to swim in the lake upon the occasion of his first contact with water. The mystery of his ability to know what to do without any previous instruction and without ever having been in the water before was explained on the basis of reaction to uncommon or abnormal stimuli applied to his nervous system by the sudden contact with the wet and cold water. We learned that the same reactions to unusual stimuli caused the little bird to spread out its wings and attempt to fly when it was pushed away from the edge of the nest for the first time. We gradually learned to understand why children called out in fright at seeing some horrifying picture, or why they so naturally ran to one parent or the other in a moment of seeming danger.

A careful reading of the books dealing with this matter would lead one to think that all of us as human beings, and with the same kind of consciousness in all of our cells, lived and acted and did our thinking and reasoning wholly in accordance with the automatic reactions aroused in our physical, psychic, nervous, or mental systems. The seeking of food when hungry is but a reaction; the desire for drink when the moisture of the body is causing a stimulus upon the part of the nervous system is really another reaction. The pleasure we derive from music or from a ride in the open country or from the taste of some wholesome food or from the smell of a pleasant odor are other forms of reactions resulting from certain specific stimuli.

All of this brought to our understanding certain fundamental actions on our part that were previously looked upon

MENTAL POISONING

as primitive, natural instincts. But psychology made plain to us that some of these, such as the automatic attempt to preserve our own selves and our own well-being, were not purely subconscious instincts held over in our present consciousness from the days of our primitive existence. The claim was made by the new school of reactionists that whatever endangered us momentarily acted as a stimulus upon the mental or nervous system and this in turn produced the automatic reaction that manifested itself as an attempt to protect or preserve ourselves.

We have always believed that self-preservation was the first law of conscious existence, and that every living conscious creature from the lowest cell to the most complex group of cells known as the human body would express this instinct when in the face of danger, and do it without having had any special stimulus to bring it about.

But we learn from the psychology of mental reactions, apart from the study of physiological reactions, that there are certain other natural or normal instincts common to all human beings, that may or may not derive from ancient primitive periods of living, but may be a new product of our present higher form of evolved existence. In other words, some such universal instinct among civilized beings may be the direct result of higher evolution of the human consciousness. It may be something born of our modern progress and unfoldment and not of our primitive life.

One such almost universal instinct is to refuse to accept and obey the command of another person without careful analysis and ultimate agreement with the intent and purpose of the command. We do not have to delve deeply into clini-

MENTAL POISONING

cal psychology nor spend months and years analyzing the conduct of children in kindergarten and throughout the years of public school attendance to note that the human mind is reluctant to accept a command from another mind. The natural normal reaction to any external command is most often manifested by the immediate exclamation of the question, "Why?" If two men are walking along the street in opposite directions, and as one approaches the other the one says to the other, "Get off this sidewalk, and let me pass!" the other will react normally and naturally by drawing up his body to its full height and with a glaring look of the eye, manifest this normal instinct of refusal to obey by asking, "Why should I?"

I have used a very unusual illustration to make plain my point, and it is more than likely that if the above incident were to occur in certain places and among certain types of people there would be more reaction than the mere demand for an explanation. Nevertheless, while this illustration is very bold and uncouth, and lacking entirely in subtlety, it does illustrate the principle involved.

Psychology teaches us that the only successful way by which to make another mind or a strange mind obey a wish of our own mind is to present that command or desire in such a subtle manner that it will be either unconsciously or willingly accepted by the other mind and acted upon with cooperation and approval before it has had time to analyze it and resent it. But the instinct to resent a direct command is always present, and this natural and normal resentment must be overcome if we would have other persons do our bidding. That is why, probably, we have gradually devel-

MENTAL POISONING

oped certain polite formalities in expressing our desires, but even so, a direct command worded in the very finest of polite language would not wholly overcome the natural resentment manifesting itself in a hesitation to obey.

If the one man had said to the other, "Will you kindly, my dear and respected sir, venture to step entirely from the sidewalk and allow me ample space to progress on my way!" it is doubtful if the other man would hurry himself out of his position with any more agreeableness than he would have done if requested by the former command. There would be a difference in his reactions undoubtedly, or he would pause a moment to analyze the unusual formula and verbosity of the request, polished with an extraordinary degree of politeness, and come to the conclusion that the individual making the request was either mentally unbalanced or suffering from a superiority complex. In either case, his pause for reflection and analysis of the request would terminate with the same ultimate reaction of resentment and refusal to move without a further explanation.

But the fact remains as a psychological law that as soon as the average human being is old enough to feel that he is a living entity with certain rights and privileges of his own, he resents almost automatically and most stubbornly any command from an external source that appears to abrogate or take from him or modify his established rights and privileges. Even when these rights and privileges are mistaken ideas and are merely assumed and based upon nothing but personal belief, or even when these rights and privileges are not his at all but are fictitiously assumed for the moment

MENTAL POISONING

and they are known to be false and unwarranted, still the one who is commanded will resent the right and privilege of the other to make such commands.

A man may step from the graveled paths of a well-kept city park and trample upon the well-cared-for grass lawn with a sign before him to remind him to “Keep off the Grass,” and if a civilian like himself approaches him and commands him to “Get off the grass” he will resent the command from the stranger, even though he knows that the command is not an attempt to make him abrogate any of his proper rights, for he knows that he has no right to trample upon the grass lawn.

On the other hand, if a police officer or one who is dressed like a park official or caretaker, or someone in higher authority in the city government, for instance, approaches him and gives the same command, he may obey, and obey instantly, but not without the natural resentment that rises up within his consciousness. Recognizing a superior authority does not take from the command the sting it has nor soften the resentment that rises in the consciousness. It simply urges immediate compliance because of that other natural instinct, the *preservation of self*.

We can understand, therefore, why little children when told not to do, or to do, certain things, quickly react and reply with the age-old question, “Why?” The child may not be conscious of the fact that one of his fundamental principles of free action is being jeopardized by the command he receives, but he does sense that the command is a challenge to the conclusion he has reached or the desire he wants

MENTAL POISONING

to express, or the instinct that he senses, and wishes to carry out to the fullest expression.

Psychologists who have focused their knowledge of mental laws upon the problems of business, such as the problem of advertising and the problem of selling, have taught the astute businessman the ultimate and final psychological lessons that he requires. The businessman—the advertising man and the salesman—has learned that you cannot command potential purchasers to buy things without first anticipating the inevitable question, “Why?”

Regardless of the merits of the Steinway or Chickering piano, you could not expect a salesman or advertising man to succeed in building up the merits of such an instrument by publishing in newspapers or magazines or in circulars the forcible command to buy a Steinway piano. If the question of *why* has previously been answered by public statements describing the superior quality of the instrument, the advertising man and the salesman may attempt to rely upon that established knowledge and feel that they can ignore any further explanations of why the piano should be purchased. But it is poor psychology to trust in any person’s correct understanding of the merits of any proposition to such an extent as to hope that he will obey a command without further investigation.

A well-known product sold throughout the United States for years was advertised on billboards and in newspapers and magazines solely and exclusively by the statement that, “Eventually (you will buy it) why not now?” This new form of advertising was expected to increase the sale of the good product greatly. But where the advertising appeared in

INDEX

new sections not previously made acquainted with the product, the expected sales did not materialize because it was found that thousands of possible users of the product naturally and unconsciously reacted to the command by asking, subconsciously of course, "Well, why?" What was there about the product that would make an individual inevitably buy it, and why should that individual buy it now?

With these two questions left unanswered, the human mind felt the resentment of the command and almost challengingly decided that it would not buy the product. This mental decision, born out of a natural resentment of the command, became a more powerful psychological factor than the original sales command, and was very difficult to overcome except after many years of different advertising.

And so the human race, especially in civilized countries, has proven to be easily affected by its normal and natural instincts and by the psychological processes of its mental reactions. The most successful businessmen, advertising men, psychologists, physicians, surgeons, instructors, teachers, attorneys, and professional people in many fields have found that the easiest way, the most efficient way, and the most dependable way to bring about a desired reaction or to have another individual or group of individuals follow a course of action previously outlined for them is to *suggest* it instead of *command* it. And there has risen in the professional fields, especially in the sales and advertising fields, which include part of nearly every art and profession of to-day, a new school of psychology devoted to the careful study of human reactions and the subtle preparation of forceful suggestions that carry with them all of the potency of a royal

MENTAL POISONING

command, but all of the agreeableness of a kindly suggestion.

And this school of unique forms of applied psychology has discovered some very fundamental principles. It has found that there are several ways in which very potent commands or suggestions can be given or conveyed by one mind to another, and that there are several ways in which such potent suggestions or actual commands can be and are readily accepted by another mind and almost unconsciously acted upon.

In the long reports of the experts of this new school of applied psychology we come to realize that our daily lives, our daily affairs, our personal, private, intimate, and public actions and reactions are almost hourly, and certainly daily, affected by the unsuspected commands and subtly potent suggestions of a horde of highly trained specialists who are working in every field of human interest solely for the purpose of making the rest of us do what they want us to do.

They show us that what we eat for our breakfast has been carefully suggested to us but nevertheless commanded. They show us that the articles of clothing we wear and particularly the novel devices from garters to hatpins or types of shoes to cuff links are purchased and used by us, not from any desire born within our own consciousness, but as a result of and reaction to a command subtly created in our minds and acted upon voluntarily. They show that the kind of homes we build, the professions we select for our children, the theaters we attend, the books we buy to read, the kind of medicine we take, the terminology for the identification of

MENTAL POISONING

our physical complaints, and even the kind of operations that we demand in hospitals and the final form and type of funeral service are the result of desires magically created in our minds without our least suspicion. Reading these reports, one begins to wonder whether any one of us ever has an original idea of his own, or a desire uniquely conceived and born in his consciousness without the fatherhood of some mental trickster.

But the analysis of their classifications of methods of producing subtle and effective commands shows us that there are three methods whereby the commands or ideas can be conveyed from one mind to another and accepted by the other mind almost unconsciously and turned into a law or a power that instantly sets into motion reactions that are uncontrollable. The first of these methods of conveying such potent ideas is by cleverly worded phrases uttered in unsuspected garb, and offered with the most agreeable candy coating. The second method is by offering the same idea or the same thought, with all of its potency, in the form of an unspoken suggestion, usually by gesture or silence when spoken words were anticipated. The third method is a combination of the first two, but presented in pictorial form either through a drawing, a painting, a motion-picture, or photograph, a diagram, or a list of statistical figures or other symbols.

In fact, the psychology of the process seems to be this: If you can offer a potent idea to another without letting the other person suspect for a fraction of a moment that you are anxious to have him adopt the idea, it will be more readily adopted and accepted and acted upon than if a suspicion is

MENTAL POISONING

aroused that you are trying to transplant an idea of your own into the other's consciousness. Another very subtle point in connection with this psychological process is that if you, in presenting your carefully veiled command and carefully worded or formed suggestion, can involve it, decorate it, and clothe it so that the other person's mind will hear it or recognize it or see it without immediately understanding its real nature, but will later on evolve it and mature it into a living, vital idea of the individual's mind, then that individual will think or believe that the idea is one of his own conception, his own logical and reasoning conclusion, and (vanity of all vanities) because it is his own conceived and developed idea it must be true and correct and therefore worthy of immediate acceptance and highly enthusiastic adoption.

Reducing all of the foregoing wanderings through the highways and byways of modern psychology—perhaps no more modern than the psychology used by Eve in her explanation of how she came to be serving apples at an afternoon tea in the Garden of Eden—we find that the principle is simply this:

If the individual, Mr. A, wishes to have another individual, Mr. B or Mrs. B, do certain things, believe and feel certain things, and act according to certain fixed ideas, he—instead of going to Mr. or Mrs. B and commanding him or her to do these things, or even politely suggesting them—presents the idea in a roundabout way, perhaps in an allegory, parable, analogy, a citation from something he has read or heard somewhere, or by indirectly referring to a news item in the paper or a wonderful scene in some motion-picture drama now current. He then drops the matter without

MENTAL POISONING

any indication that he was more than casually interested in it.

If, however, he has used the proper psychology in presenting the idea to Mr. or Mrs. B, we will find that a little later on when the two persons are separated and no longer in contact with each other, Mr. B will begin to recall some of the incomplete thoughts given to him by Mr. A and will analyze them, probably trying to solve the mystery of the missing link in the story or trying to find an application of the analogy to present circumstances, and will gradually develop the idea in his own consciousness to a far greater extent than Mr. A presented it to him.

Finally—after an hour's time, a day's time or perhaps the passing of a week or a month—Mr. B will discover, as now being interesting to him, some point or some part of the idea that had been presented to him and which he evolved in his own mind to a greater extent, or that may have suddenly quickened into interest by some new incident that had just occurred in his own affairs or his own life or his own body, and instantly he becomes fascinated by the idea and analogy and relationship that he has created in connection with this idea and he reaches a conclusion about it, a decision, and finds in it some essence of a truth.

This pleases him and causes him to give more thought to the matter and finally to decide that he has made a discovery or he has evolved an idea that must be of value to him and certainly of significance to him or his mind would not be so occupied with it.

MENTAL POISONING

Here is the point where the potency of Mr. A's process reaches its grand climax, for now the command and idea is no longer that which came from Mr. A. The command is no longer something created in the mind of A and passed on to B. It is now the magnificent command of Mr. B's own mind, and of course there can be no rejection and no resentment when the idea is one's own and so gloriously evolved through one's own clever analysis and rational reasoning. So at once the command of A becomes the command of B, and B is within its grasp, within its influence, and unconsciously its victim whether it be for good or evil. This, then, is a part of the psychological process of mental reactions.

CHAPTER 4

STRANGE PROCESSES OF THE HUMAN MIND

IT IS no longer necessary to argue with any sane and thinking person the question as to whether the mind in the human body has any control over the matter that composes the body or the various physiological processes going on within the body. Nor need anyone be a follower of or a devotee to the metaphysical, mystical, spiritual, or religious teachings of any sect or cult to recall incidents which constitute proof of the fact that the mind in the human body can be the creator of many strange and peculiar mental conditions.

In the clinical study of the psychological processes formerly called *hypnosis*, it was proved long ago that a person put into an induced state of sleep either by a psychological hypnotic or a chemical hypnotic, and having faith in the integrity and wisdom of the one who induces the sleep, can be made to believe that a cold fountain pen or lead pencil is a red-hot iron. With this cold instrument held before him, and with his believing eyes seeing in it an instrument of torture, it is easy for him to believe also that if this glowing hot piece of metal is touched against his arm for a fraction of a minute, he will suffer intense pain and later have proof of the burn in the form of a water blister on the arm. And in fact, in every test made in this manner during a true state of induced or hypnotic state of belief and susceptibility, the

MENTAL POISONING

patient in the clinic or science lecture hall has suffered all of the physiological and mental agonies of a burn, even those which would register upon cardiographs or the recording devices of other sensitive electrical instruments.

Sometime after the patient is restored to a normal waking state, although truly unconscious of what has taken place, a water blister of the size and form of the supposed hot metal that touched his arm will form in a very normal and natural manner upon the arm. This may be opened and the water removed from it in the usual manner without any indication to the observer or to the patient that the very evident water blister was not the result of an actual physical burn made by contact with an actual hot piece of metal.

We have in this laboratory demonstration that has been made thousands of times in psychological clinics in hospitals in Europe and America, and witnessed hundreds of times by the writer of this book, an excellent example of how a mental idea, having no actual or physical basis for its effects, can create within the human body a truly physiological result. In other words, this demonstration proves that an idea or a thought in the mind can translate itself and transform itself into something that is not merely mental but something as actual as any actuality that ever affected the human body.

Hundreds of other similar experiments tested on children, and on adults of all ages and of both sexes, prove that if the human mind accepts an idea without question, without doubt, or without suspicion of any kind, it becomes not merely an accepted idea but a law, or a command, or a principle that

MENTAL POISONING

will logically fulfill its purpose and its nature without any further support in actuality or in psychological processes.

To make this more understandable, let us recall the fact that when an actual hot iron or piece of metal is placed against the arm and we look at it touching our flesh, we do not have to create in our minds the idea that it will burn us and will send torturous impulses of pain up the arm to the brain, and that we will sense the terrific pain to such an extent that we will not only feel it but see it reacting in contractions of the muscles of the arm and an attempt of the arm to draw itself away from the iron. We do not have to create the idea of withdrawing the arm from the hot iron, for that idea as a command to the arm is born in the mind as a result of the pain and suffering that automatically follow the burning of the flesh.

When the iron has been removed from the arm—or rather, when the arm has been removed from the presence of the iron—we do not have to give a mental command to the flesh to form a blister, the shape of the burn, nor do we have to think of the process that will follow the burning, such as the forming of a blister, and so forth. All of these things—the burning of the flesh, the terrific pain, the contractions of the skin and muscles, the jerking of the arm, the forming of the blister—follow automatically in due course as logical steps in the process *after* we see the hot iron or feel the hot iron touching the flesh.

It cannot be said, therefore, that the keen twinges of pain, the twitches of the flesh, the contractions of the muscles, the jerking of the arm, and the forming of the blister are individual and separate ideas created in the mind and forced

MENTAL POISONING

into manifestation in the body. Each of the separate steps in the whole process follows successively, automatically as a matter of course, in accordance with nature's laws. The fact that if one hundred arms of one hundred various types of individuals are burned with the same hot piece of metal in the same manner and for the same length of time, we will find similar scars on the tissue caused by the heat and similar water blisters on each of the individuals, shows that nature works very uniformly in these natural processes.

The only difference, therefore, between the whole process of burning the arm with the fountain pen and having it result in a water blister, and burning the arm with an actual piece of hot metal and having it result in a similar water blister, lies in the difference between the concept in the mind in each case.

In the one case, the mind of the individual accepted the existence and truthfulness and actuality of the burning metal touching the flesh solely upon the basis of its faith in the integrity of the creator of the idea, and thereafter left nature to carry out its processes in due manner; whereas in the other case the mind accepted the actuality, the truthfulness, the physical existence of the hot iron against the flesh, not upon faith in the integrity of another's mind or another's statement, but upon its own past observation of the iron in its red-hot form, and therefore, the idea of burning being accepted as true, nature's processes were automatically carried out.

We see, therefore, that in both cases the actuality in the existence of the red-hot iron was accepted upon observation. It is generally conceded that "Seeing is believing!";

MENTAL POISONING

that if we see a thing we have the very best evidence of its nature, quality, and potency to do certain things. In the one case, the patient in the laboratory sees the hot iron through the psychic or psychological eyes of his mind, which are within the mental control of the hypnotic operator. In other words, what the hypnotic operator sees in his own mind and wants the patient to see in his mind is seen by the patient without question or doubt or the least suspicion of deception. Therefore, as far as the psychological processes are concerned, the patient in the induced sleep or hypnotic state does “see” the red-hot iron when the operator tells him that he is holding before him a red-hot iron.

Right here it may be of interest to students of psychology, and perhaps helpful to those who challenge any of the statements made herein, to know that various tests have proved that while a patient is in an induced sleep, or hypnotic state, his eyes are not blinded as in normal sleep, but are open to physiological perception and to the transmission of light waves or sight waves as in a normal state. However, the interpretation of these impressions is affected by the acceptance of the statements of the hypnotic operator. In other words, when the operator holds before the person who is in the hypnotic state an ordinary bakelite fountain pen or one made of black rubber or one made of silver metal, and tells him it is a red-hot piece of iron and suggests to him that he notice its glowing redness, that he notice the little smoke and heat radiating from it, he can feel the glow of heat against his face as he stares at it. The hypnotic subject does see psychologically a change in the black rubber or silver metal which he saw a few moments before, or in whatever impression the fountain pen made upon his mind.

MENTAL POISONING

There is no change made in the impression made upon the retina of the subject's eyeball. Physiologically and in accordance with all of the laws of physics, a perfect image of the innocent, cold fountain pen is truthfully cast upon the retina of the eye. But in our normal waking state as well as in any hypnotic or psychic state, the process of "seeing" does not end at the retina of the eye but really is only beginning there, for nerve stimulations created by the image on the retina have to be transferred to the psychic or psychological and mental area of the brain and consciousness where "seeing" becomes more than mere nerve impulses.

Any injury or abnormal physical condition that would disturb the normal psychological functioning of this area of the brain and consciousness can cause and often does cause erroneous interpretations and translations of the impression created on the retina of the eye. A person who is not in a hypnotic sleep or not in a state of suggestibility, or not in the hands of any psychologist, could look at a piece of black rubber the shape and size of a fountain pen and "see" a black piece of metal becoming red hot or glowing with red heat.

If some cause other than the suggestions of the operator had led the individual to anticipate that he was going to be burned with a red-hot piece of metal, or that there was such a piece of metal in the room, or that it might be brought before him for examination, or if he had read and believed for a long time that on certain occasions individuals were branded with a hot iron on a certain day of the week when they were found to be in certain cities or countries and without employment or home or money, he could react to these impressions.

MENTAL POISONING

If he found himself in a hospital or institution on such a day of the week or year and in such an economical and social condition and was taken into a room and from some mysterious box the end of a black fountain pen was brought before him and he was asked what he was looking at, he might truthfully say that he was “seeing” a branding iron. Just as a child of two years of age who had never seen a fountain pen might look upon the fountain pen suddenly held before him and call it a piece of licorice candy, simply because while he was actually seeing the same thing that the adult saw, his mind was unable to properly translate the impression on the retina of his eyes into a truthful interpretation.

This matter of accepting an idea and having that idea carry out its natural process is one of the strange laws of our human brain and consciousness. Whatever idea may be accepted by our brain and our inner consciousness or psychic consciousness or psychological processes of reasoning becomes a law unto us. But that law does not have to be consciously carried out by us through any further conscious efforts that include thinking, analyzing, or reasoning. Our inner consciousness or psychic consciousness may do such reasoning and analyzing, but if so, it does it so rapidly, so instantaneously, that we are unaware of it and it is a part of the processes of the subjective or inner consciousness and not a part of the objective or outer consciousness which we use in other forms of reasoning and analyzing.

It is perfectly obvious that if one of us, in our normal, natural waking state, should be shown an ordinary black fountain pen, or let us say the end of the cap that covers the fountain pen, and we were told that it was a red-hot iron,

MENTAL POISONING

our objective reasoning faculties of the brain would immediately begin to work and by analogy and comparisons determine whether the fountain pen was a red-hot iron or not. The reasoning that the objective brain and outer consciousness would do in such a case would be dependent upon what education the brain had in the past.

Of course, if the brain of the individual had never observed or seen a fountain pen before, and if it had never seen a hot piece of iron or any piece of metal that was red hot, or even a piece of wood that was red hot, the objective brain would have no means whereby it could determine by comparison or analogy whether the black object held in front of it was a piece of red-hot metal or not. If he had no knowledge of what was meant by a red-hot piece of metal, he probably would not be disturbed in the least when told that the object was going to be placed against his skin. And even if he were told that the skin would burn, and he had never had any previous burn of any kind, he would not show any reaction to the suggestion or the idea. There would not be the indications of pain and the twitching of the muscles as in the case with the individual who was in the hypnotic sleep.

Certainly he would feel the fountain pen against his flesh and it might be of such a moderate temperature that even that impression would be very mild. And if he were blindfolded he probably would not be able to tell just where the rubber shell of the pen was touching him. If, on the other hand, the device was a piece of hot metal, regardless of whether he had ever been burned before or knew anything of the experience of heat against his flesh, the metal would proceed to burn the flesh and there would be all of the

MENTAL POISONING

twitchings and anguishes of pain as manifested in the case of the cool fountain pen when touching the arm of the one in the hypnotic sleep.

We see, therefore, that an idea implanted in our mind either through observation or through suggestion in the form of words or gestures or otherwise is interpreted by us in the light of our knowledge and past experiences. This was remarkably illustrated in the case of that famous explorer, Livingstone, who went into Africa and on one occasion highly amused the natives by telling them that their heavy, ponderous elephants were able to walk on the surface of frozen water in North America, or in other northern lands.

Since even well-trampled ground sank beneath their tread, they could not conceive of a creature weighing many tons walking upon the surface of water without sinking a quarter of an inch into it. Since Livingstone's constant reference to frozen water meant absolutely nothing to natives who had never seen frozen water or "hard" water as they interpreted his words to mean, they simply could not believe that water ever became hard enough or solid enough to hold such heavy creatures, and therefore they could not accept his statement. The words "frozen" and "ice" meant nothing to those who had never seen or experienced these things.

So we find that one of the other strange laws of our human mind and consciousness is that which relates to our individual interpretation of ideas, including things we see or hear, feel, smell, or taste. We know when a thing is hot only by our experience with things that are colder, things that are very cold, and things that are very warm. We know

MENTAL POISONING

what hard and soft may mean only by having had experience with variations in density of articles and variations in the qualities of hardness and softness. It is not true that two individuals will look at the same object and “see” precisely the same thing. Even if there were no variation in the physical impressions cast upon the retina of the eye through light or sight waves, there would still be a difference in the interpretation of those impressions due to a difference in understanding of them because of a difference in education, training, reasoning, and so forth.

But when an idea is accepted by the inner consciousness or the mind and is translated into an understanding of its own, in accordance with its own education and experiences of life, it then becomes to that individual a living, actual thing, in nature and quality, according to the interpretation that the individual’s consciousness has given it. From that moment on this living thing is a reality and an actuality, or an actuality with all of the realism that it is possible for it to have in the mind and consciousness of that individual. And this living thing will then produce in the consciousness of the individual all of the actions and reactions that the individual believes and understands should follow thereafter or therefrom.

All of science’s investigations and studies of the mental actions and physiological reactions in the human body have shown that nature’s regular processes are carried out logically and to the proper conclusion in every case where the idea has been accepted by the mind regardless of whether there was an actuality or a mere illusion or hallucination back of the idea. In other words, if the mind accepted the idea that the fountain pen was a red-hot iron that would burn,

MENTAL POISONING

that idea became a law and it became a law not only to the consciousness of the individual but to all of nature's physiological processes, and so long as a red-hot iron will burn the tissue of the human body, the process of burning will be carried out, whether the instrument of cause or the instrument of the idea in the mind was an actuality or an illusion.

As just one more illustration of this wonderful process of the consciousness in the human body and the power of the mind regulating and controlling the physiological processes of the body, or the matter of which the body is composed, let me cite the long list of experiments with water made in various psychological clinics in America and abroad.

With various types of individuals placed in the satisfactory middle stage of hypnosis, the temperature of the mouth of each individual was taken with a two-minute thermometer and carefully established by verification on the part of a number of witnesses. Then an empty glass was held before the patient's eyes and he was told that it was filled with cold, refreshing water. After a moment's pause in which to allow this idea to become accepted and fixed in the mind, he was told to take a drink of the water and refresh himself.

The patient would then lift the glass to his lips, bend the head backwards a little, and proceed to swallow the water. A careful counting would show that a swallow was taken about every two and a half to four seconds, and that all the muscles of the throat would act in the typical manner of swallowing water, and one could also see the enlargement of the throat where the water was passing downward in action as in genuine cases of swallowing real water. If you are unaware of the uniqueness of such a test, hold an empty

MENTAL POISONING

glass to your own lips and try to imitate a person swallowing water in the normal way, and you will find that it is very difficult to operate the muscles in such a manner and that there is a long pause between each swallow.

After the patient had what he considered a sufficient drink he would hand the glass back to the operator and smack his lips and in every other manner express and show his appreciation of the cold drink. To prove that his appreciation and experience were not wholly imaginary, based only on the statement of the operator, the thermometer was immediately placed in the mouth again and another two-minute reading taken, resulting in a showing of a lowering of the temperature of the mouth, sometimes as greatly as twenty to twenty-five degrees, but always more than ten degrees. Tests were made at other times to show and conclusively prove that a person in the normal waking state, holding an empty glass to the lips and trying to drink imaginary water, would not draw into the mouth cooling air currents sufficient to reduce the temperature of the mouth more than possibly two degrees.

Whence came, therefore, the drop in temperature or the cooling effect on the tissues and air in the mouth of those persons who drank water from an empty glass? The only possible answer, and one which is in harmony with all of the experiments that have been made in psychological institutions, including those of the Rosicrucian Order and the Rose-Croix University at San Jose, California, is that when the individual accepted the idea that he held in his hand a glass of cold, refreshing water and proceeded to drink it, the idea of cold water coming out of the glass was not merely an idea but a law to all of the natural processes of nature,

MENTAL POISONING

and to all of the laws controlling the matter and material of his body. Therefore, the law of the idea in his mind proceeded to work in its logical steps and manner of procedure. The muscles carried the water down the throat with the same periodic rhythmic motion with which they always function when actually drinking real water.

The lowering of the temperature in the mouth was but another logical step in the process and not a secondary thought on the part of the patient or the operator. The degree of temperature, however, was affected by the patient's interpretation of what was meant by "a glass of cold refreshing water." If to him the only refreshing drink in the form of water was one of ice water, with perhaps ice floating around in it, then that would be the kind of water he would drink and that would be its temperature, with a resulting reduction of the temperature in the mouth to a very low degree. If, on the other hand, he was not particularly fond of ice water, but enjoyed a drink of cold water just as it comes from the average faucet, then that would be the standard and quality of the idea of water which he would drink. And that would also be the determining factor of the degree of temperature that would register in his mouth.

Here we are face to face, therefore, with some of the strangest laws of God and the universe, but not laws that keep the planets in their courses or cause the Earth to move so rhythmically and steadily on its axis or the comets to fulfill their cycles to the precise hour and minute; nor are these the strange laws that govern and control the cosmic rays and the persistency of certain characteristics in the complex processes of human biology. They are not laws that relate to the unfathomable mysteries of distant space, but

MENTAL POISONING

laws that relate to our inner selves, our own bodies, our own lives, our very existence. They are laws with which we have to deal minute after minute, day after day, throughout our lives. They are laws that we ought to be more familiar with than any other laws in the universe.

While scientists and explorers may go searching for facts about human existence on the planet Mars or the Moon, or while other explorers may excavate and delve deeply into the buried tombs of Egypt and the forgotten temples of Mesopotamia, few indeed in comparison are giving thought or time to the exploration of the human consciousness and the divine mind in man. We seek mysteries in remote and distant places, and we love to fathom the strange and veiled things of the past and the possible future, but we overlook entirely a marvelous field of exploration that lies within us, and which we can open easily by sitting down comfortably in our own homes and turning our thoughts inwardly and just analyzing the objects that we bring from within the tomb of the self that constitutes the real being.

This is the strangest of all laws within the body of man! Whatever idea is accepted by our minds and consciousness without suspicion, without doubt, without challenge or without question becomes a law unto our bodies and proceeds to carry out its nature, its purpose, and its natural processes. Whatever idea is acceptable to us translates itself from a purely mental state into a dynamic physical power and force that carries on, unfolds, develops, and proceeds in accordance with principles beyond our control unless we use the same psychological processes to frustrate its activities that were used to bring the idea into existence.

MENTAL POISONING

We see, therefore, that man's life and happiness, his health and enjoyment of the things that God has provided, are dependent upon his acceptance of ideas, his understanding of them, his interpretation, and his unconscious submission to their natural development.

Therein lies the secret of mental poisoning!

CHAPTER 5

METHODS OF ADMINISTERING MENTAL POISONING

THE human mind has many strange characteristics and many astonishing tendencies. Two of these have a direct bearing upon our subject. The first is that the human mind or consciousness has a tendency, a very definite impulse, to believe and accept as truth what it wants to believe, or what it feels is a compliment to its ability to reason and reach correct conclusions. The second is an ever-present inclination to accept as a belief, as a truth, as an unquestionable principle, an idea or a conclusion that agrees with another idea or group of ideas previously established in the mind or consciousness from personal experiences.

Either as a part of these two tendencies, or perhaps constituting a third inclination, is that weakness on the part of the human mind and consciousness to prefer to accept and adopt no extraordinary or an uncommon, unique, or distinctly different idea or belief about certain matters, if this unusual idea or belief is compatible with or in harmony with the previous beliefs and ideas held by the mind. In other words, this third tendency, which is really a weakness, is one that seems to give the mind or consciousness of an individual a sort of vainglorious satisfaction in feeling that the individual's previous reasoning and analysis of ideas was better than that of others, or superior to that of others because it has reached a unique conclusion that is different

MENTAL POISONING

from the opinions held by the mass mind. It is a sort of satisfaction that is born out of such reasoning as: My opinion is right because it is different from the mass, and proves that I am better in my reasoning, keener or more astute in my logical analysis of things, and broader in my mental conception of facts and principles.

Taking this last or third tendency and uniting it with the other two tendencies, we find that the human mind, even in the most uneducated, illiterate, and poorly prepared individual, likes to think of itself as being superior in many respects to the mind of the average person with whom it comes in contact. Such persons love to read the kind of mystery story or detective tale that deliberately reveals between the lines of the first chapter the real personality of the criminal, and yet pretends to include sufficient veiling to make the reader believe, when he astutely discerns the criminal in the first chapter, that the discovery was due to his superior intellect and ability to analyze, and not to any trickery on the part of the writer. But this sort of psychological legerdemain compliments the reader, and when he discovers in the last chapter that his astuteness led him to the right conclusion at the very beginning of the story, he is ready to compliment the writer and acclaim him a clever storyteller and to want to buy and read no other mystery stories except those written by him.

This same weakness tends to make the individual attribute supernatural causes as the explanation of the most common events of life rather than natural causes, solely because the mass mind will look upon the matter differently and cast aside all supernatural considerations. Even when his conclusion of supernatural causes and conditions is sci-

MENTAL POISONING

entifically upset, he is ready to denounce the scientists as ignorant, prejudiced, and acclaim himself the better judge. Such persons are otherwise normal in all of their personal daily affairs and in all of their casual thinking and acting, but they love the mysterious because it is so easy to attribute puzzling situations and conditions to unknown, arcane, archaic, or supernatural laws and even to miracles.

In matters of health or business, they are more ready to believe that their trials, troubles, and tribulations are the result of some vague, indefinite, psychic, cosmic, spiritualistic, or mysterious law or principle at work rather than of any natural law set into motion by their own ignorance or indifference or interference with natural law. They would rather believe that the cold which has been hanging fast and giving them an annoying pain in the chest for so many months is not the result of neglect and indifference on their part, nor due to their having tried to medicate themselves with patented concoctions which they have decided upon after the exercise of their superior reasoning abilities, nor to their having failed to secure proper medical advice and treatment, but to some mysterious moon ray, sunspot beam, planetary conjunction, or psychic visitation.

When they are not believers in these sorts of superstitious principles and powers, they are prone to believe that the “unusualness” of their cold—insofar as it has lingered longer than usually, and has persisted in the face of all forms of self-medication—is due to some strange and weird phenomenon of nature. This may be an unsuspected poison escaping from the illuminating gas used in the home for cooking, or the unsuspected odor or other vibrations from some growing plant that has been within the living rooms

MENTAL POISONING

for a year or more, or an unnoticed or undetected escape of sewer gas that pervades their home although producing no effect in adjoining homes.

Such persons love to read newspaper advertisements describing patent medicines or commercialized therapeutic specifics that outline the strange symptoms of peculiar maladies. And when they find a suggestion in these advertisements to the effect that some very unusual or uncommon cause, supernatural or mysterious, may underlie their illness, unsuspected by physicians or scientists, they are prone to accept such ideas because they are compatible with ideas previously adopted through their own reasoning.

Whether we like to admit it or not, all of us are prone to think that our own minds, even when we admit that we have not had all of the schooling and education that some have had, are just a little better in certain ways and particularly in discerning the truth behind the veil of mystery. We hesitate to accept the common opinion, the general opinion, the universal conclusion, the most popularly adopted idea, because doing so is not any compliment to our own reasoning and it is never a demonstration of superior thinking. In fact, accepting the general opinion and conclusion regarding any matter always seems to be a frank admission of mental weakness on our part. Therefore, if out of the density and mystery of the complex principles of the universe we can suddenly reach out and pluck a new idea that seems logically to explain the problem at hand, and which grows in its possible correctness the longer we think of it, we like to do so because this is a compliment to our ability to fathom the mysteries of life and to secure and obtain truth through an independent channel. We feel that we are achieving great-

MENTAL POISONING

ness of mind, and incidentally attuning ourselves with the marvels of the unrevealed universe by having stolen from its starry diadem one of its jewels in the form of a unique and original thought.

But these very weaknesses and tendencies on the part of the human mind and consciousness constitute an open portal, an open doorway to the influx and the incoming of strange ideas, and these fertilize the soil of our consciousness and make it highly susceptible to mental poisoning. Unfortunately for the human race, the various kinds of mental poisoning that can ruin and wreck a human life do not have to be administered violently, nor does the individual about to be poisoned have to become hypnotized and placed in an induced sleep nor physically and mentally drugged or overcome in order to have the mental poisoning enter the innermost recesses of the consciousness and begin its destructive work.

It may seem like a paradox and a horrifying incongruity, but it is the truth, that the most violent and virulent of poisons possible to introduce into the human system, into the human mind, consciousness, and body, are more easily administered, more readily accepted, more thoroughly absorbed, and more quickly set into disastrous operation than any of the material or chemical poisons known to man, and against which man has spent centuries of time and thought in seeking antidotes and methods of immunity and abortion. He has consistently fought against the germs, microbes, bacilli, and all of the destructive elements that might affect his body slowly or moderately, but he has not spent even a few minutes' thought in making himself immune to the worst of all poisons.

MENTAL POISONING

If it were not for existence of the weakness and tendencies explained above, and for man's readiness to accept mental poisoning, he would not be the victim of the most serious injustices ever committed by man upon man.

Now let us examine some of the types of mental poisons and the manner in which they are administered. First we have the mental poison that produces diseases of the body or certain physical and mental handicaps in the form of chronic conditions. We might call this type of poison *Class A*—not because it is the highest type, the most popular form, or the most universally administered, but simply because it stands foremost in the ease of administration, and is the most horrible in results.

The methods of administering this poison are many, but they fall into three forms: audible suggestions and comments, visual suggestions, and the pictorial and mental. We will proceed with a few typical illustrations.

Number One is a woman nineteen years of age, so normally healthy that any standard insurance company would willingly and readily take a risk on her life by issuing a policy for \$20,000. She has never been seriously ill, has not inherited anything of a serious nature, is living a normal natural life, and her chances of living to an old age are excellent. She has been riding to work on a trolley car every morning for thirteen months, often catching the same car each morning and becoming familiar by sight with a large number of passengers who have been taking the same car in the same direction day after day.

She has noticed for a number of months that a young man who generally sat in the same corner of the car reading

MENTAL POISONING

the newspaper had found it necessary for some reason to get up from his seat at the end of the first half-hour of the ride and stand on the rear platform, taking deep breaths. At first she wondered whether it was purely physical culture exercise, but her reasoning, always seeking a more mysterious explanation than a common-sense one, told her that he could do the exercises at home and would not have to do them on a streetcar. Her astute reasoning, again seeking for the unusual cause and the unique or original conclusion, decided that perhaps he was afraid of infection and preferred to have better air entering his lungs. This thought brought from the memory storehouse of the young woman, as a recollection, the fact that he had always risen and gone to the rear platform after the car was full of passengers and really overcrowded.

With this suspicion in her mind, she seemed to notice—with that mental ability that wants to build up a mysterious and agreeable conclusion to the previous thoughts—that he was becoming a little paler each day, and seemed to be a little weaker when he rose from his seat and forced his way out to the rear platform. And did he not seem to stagger a little with weakness on several occasions when he stepped from the trolley car platform at the end of the trip?

Then one day a woman of about forty years of age seated at the opposite end of the trolley car fainted. Her face appeared to be as pale as that of the young man on the rear platform. She was taken from the car to a nearby drugstore to be revived and cared for, and the trolley and its passengers went on. The next day she was back in her usual position in the car, but did she not seem to be a little paler than on previous days?

MENTAL POISONING

Then one morning our young lady noticed that both the young man and the woman of forty were absent. What could have happened? The desire to solve a mystery arose in the young girl's consciousness; the desire to have a real mystery come out of a problem rose to supreme heights. The absence of these two persons *must* be connected with all of the preceding incidents that had been noticed. Illness of some kind had overcome them, and that illness had been something contracted in the car, slowly but surely.

The young woman reached her office and began to reason. Was it true that overcrowded places were incubators of germs and disease? Were the editorial writers and health writers in popular magazines correct in their contentions? Was she herself becoming affected by this very injurious and unhealthful ride every morning? She rushed to a mirror to observe her complexion. Yes, she was paler than she should be! Should she go and see a doctor? What could she tell him? She had no symptoms, no aches or pains, and of course he would not believe the strange and mysterious fact that she had developed in her mind from careful observation. He might even laugh at her idea. She would wait and see if anyone else became ill.

Three days later, on leaving the trolley car, she determined to settle the mystery by asking the conductor if he knew why the two persons no longer rode with him on that car. His answer: "The young man died two days ago from a gradual weakening of his heart and lungs. His brother, a policeman who rides sometimes on this car, later in the morning told me that the young fellow died before they could determine whether it was tuberculosis of an unsuspected nature or heart disease. The only thing they were sure of

MENTAL POISONING

was that he had picked up some germs during the day while going to or from work or while at work.

“The woman, I understand, is sick with scarlet fever which she contracted somewhere during the past few weeks. The Board of Health was very much concerned over the fact that she was riding up and down in this car for many days while she was in the early stages of the disease. The car has been disinfected three times.”

Horrors! The young woman’s worst suspicions were confirmed. Riding in the trolley car was more than dangerous. It was suicide. No wonder she looked so pale. During that morning there were three distinct times when she felt a sort of swimming sensation, a dizziness, a weakness in her head and body.

At noontime she spoke to a woman friend about it. Said the woman friend: “Didn’t you see in the papers that there was an epidemic of scarlet fever in the Fulton section of the city, and isn’t that where your trolley car starts from each morning with some of its passengers in it? Don’t you know that more diseases are picked up in subways, elevated trains, and trolley cars in New York and other cities than anywhere else? Why, these terrible germs are picked up so gradually that you never notice you are becoming sick until finally you see a little paleness coming in your face, and then some day you begin to feel a dizziness and a weakness of the brain and body. That weakness means that the disease has attacked the brain, and then it is too late for anyone to do anything. Even inoculation cannot save you when the brain becomes affected through your breathing and inhaling the germs in such crowded places with such foul air.

MENTAL POISONING

“I hope that you never contact any of the germs, because you are so young, and young people between seventeen and twenty generally die of scarlet fever. I ought to know, because I lost a sister who was a school teacher, and who developed the germs in just that manner from some of the pupils in her class. They were saved, but my twenty-year-old sister died.”

Three days later the young lady began to have daily fainting spells and spells of dizziness. Hoping that she might be saved without the painful process of inoculations and spinal or other injections, she went to a physician, merely telling him of her symptoms and not of her suspicions. Finding no real cause for dizziness, he said: “There seems to be some mysterious or subtle influence affecting your nervous system, and I must wait until something more develops before I can give you a correct diagnosis, but in the meantime I will give you this prescription which will purge your system and cleanse your blood.”

As each day passed, the fainting spells became worse, the face paler, the body weaker. In two weeks the young woman was worrying her family by being bedfast, with fever, a wandering mind, delirium, and a rapid pulse. Finally, in one of her spells of delirium, she muttered, “I know it is scarlet fever. I got it in the car, but I must not let anyone know. Don’t tell the doctor! Two of them have died; I will be the next.” The family told the physician of the strange words they had heard her utter. The next day the girl heard the physician say in a whisper, just outside the door of her room: “If it is scarlet fever, it is of the brain-fever classification, and at her age may be fatal. She must have reached the

MENTAL POISONING

crisis by this time, and if she has, she may become worse every minute and must be carefully watched tonight!”

Within twenty-four hours the young woman was in such delirium that the family became frantic and sent for a specialist, who recognized in her mutterings the symptoms of something psychological rather than physiological. He saw the symptoms of the form of mental poisoning that obsessed her. It was like a demon within her consciousness bent on destroying her from within. It was like some evil spirit that had come upon her which must be destroyed in the same way as used by Jesus when He enjoined His disciples to cast out evil spirits and demons in order that the sick might become healed and cured.

The specialist secured the cooperation of an eminent psychologist, and with the help of the physician, the three were able to bring the young woman gradually back to health. For months there lingered in the mind and consciousness of the young woman the horrible picture of germs floating around in the trolley car entering her body through the nostrils and the mouth, destroying the blood cells, attacking the brain tissues, gradually casting her mind into a state of coma from which she was rescued by what was called a miracle.

When was the mental poison administered, and how? The first dose of the poison was administered by the conductor, by his casual, logical story that seemed to fill in the gaps in the mystery that she had created in her own mind. Everything the conductor told her fitted in magnificently with her own conclusions. Therefore, his story must be the truth! The second administration was a visual one of her own appearance, then a sensuous one of her own weakness

MENTAL POISONING

and dizziness. But the most overpowering draft of the mental poison was administered by the woman friend who cleverly (though certainly not maliciously) described the manner in which the scarlet fever “germ” can attack the brain, and how it can be picked up in trolley cars and subways and how it was already spreading in the city, especially that part from which the trolley came, and how her sister had died because she was twenty years of age! And then the final dose of the poison was administered by the physician who uncautiously, unthinkingly, made statements in the presence of the keen hearing of the suspicious girl. Few persons realize how keen is the hearing of the sick patient who is fearful that the truth has not been told to him, or that there is some mysterious element about his condition.

The one whose mind is weakened, or the one whose mind is broken down, who appears to be mentally stupid, unsound or insane, is keenly aware of every sound, every motion, every gesture, every suggestion, every thought.

And so the young woman was about to go to her grave, not from imaginary conditions but from actual ones. Her weaknesses, her fevers, her deliriums, were not hallucinations, not mere mental states that psychological suggestions would wipe out in a few hours or that mental affirmations would correct in a few days. They were physiological, pathological conditions that had a real histology back of them, and yet could not be corrected by the ordinary or usual medical system of therapy. There is no known drug or herbal extract or material essence or compound that is a true antidote for mental poison. It can be neutralized and overcome only by an antidote of a sane mental nature, divinely inspired, properly administered by sympathetic and loving

MENTAL POISONING

minds who understand and are prepared to fight the processes of mental poisoning.

Sometimes the efforts of those who believe that they can overcome this poison with countersuggestions, with joking and laughing attitudes, with statistics and arguments, simply cause the administration of more poisoning. They lead the patient to think that they suspect the mind of the patient is weak or unsound and that such arguments and methods of counteraction are necessary; or they cause the patient to think that the case is more serious than it appears and is therefore beyond the hope of medicine or surgery and that some unusual or mysterious mental process must be used to fight it. So the most loving and sympathetic and kindly of friends and professional people with the best intentions may become poisonous, and administrators of mental poisoning, without intention.

Another illustration, quite common and universal, is that of an actual physical weakness of more or less common cause, existing in the body of one who does not suspect the real nature but reads advertisements and health articles in an attempt to diagnose the conditions and discover a real cause for the occasional pains or symptoms. The longer the search for a correct diagnosis, and the longer remedies are tried without success, the more sure becomes the opinion that the illness is of a very deep nature and wholly uncommon, and the result of some strange or peculiar combination of conditions.

This conclusion is accepted by the mind and causes reactions, as explained in the preceding section of this book, with the result that actual physiological complications are

MENTAL POISONING

set up that are difficult to analyze, and more difficult to treat. The patient then begins to seek for an understanding by searching among the accounts and records, the explanations and pictures of rare diseases. Suddenly a series of symptoms are presented in some patent medicine advertisement or some health article that wholly agree with the symptoms which the patient has suspected, and immediately there is established a conviction that the disease referred to in the advertisement or news article is identical with the one from which the patient now suffers. The acceptance of such a thought establishes a law of action in the body, and the mind proceeds to build up and create the identical symptoms which have been mentally accepted.

In the still further search for more light and information, the patient rejects every explanation that attributes the pains and conditions to natural causes easily overcome, and looks only for those causes and conditions which are deep-rooted, mysterious, and always serious and vital. Hour after hour the mind of the patient is concentrated wholly upon that area or that part of the body where the disease is suspected of existing. The pains may be general throughout the torso of the body. They may at times seem like cramps. There may be cutting sensations like those produced by gastritis, or so-called gas in the intestines, or by cold and inflammation of the intestines, or by any number of other temporary or common abnormal conditions or causes of abnormal conditions. But the mind is concentrated upon the gall sac with the conviction that there are stones in the sac, and that these are solely responsible in accordance with what the patient has read and then concluded in her mind.

MENTAL POISONING

Every ache and pain in any part of the body is immediately traced mentally to the gall sac. Every flush of the temperature of the blood, every little mental excitement that causes a change in the pulse, is immediately attributed to the gall sac and the presence of stones in it. A search is made through medical books in libraries, through all the health magazines sold on the newsstands, through every patent medicine circular or pamphlet that may be secured, for more light on the subject of gallstones. Every unusual word or every word susceptible of having a double meaning is created into a definition or term for gallstones. Every symptom described that the patient does not have is cast aside as inconsequential. Every symptom mentioned that is somewhat like those which the patient has is enlarged and magnified into a symptom of an identical nature. The descriptions of the gallstones in their process of formation are visualized and re-created in the mind and finally by mental reaction actually created in the gall sac.

The gall sac does become affected, not in the manner that the patient believes, not to the extent that the patient has suspected, but through mental poisoning, with all of the symptoms and all of the pathological and physiological conditions and actions and reactions that any patient has ever suffered from gallstones. Day after day the stories of other persons suffering from gallstones, the sudden deaths of persons suffering from unknown conditions, the pains of years ago, the unusual diseases of the grandfather and the grandmother, and hundreds of other things are focused into one point within the patient's body — the gall sac, with the stones in it.

MENTAL POISONING

And day by day the mental poison is administered by reading, hearing of stories and reports of statistics, and by the illogical reasoning of the patient. The patient becomes a chronic sufferer, and the fact that physicians can do nothing for her, can find no actual gallstones, or can find nothing that will affect the pains in the gall sac or the rest of the body, constitutes more proof that the condition is serious and therefore deeply hidden. A chronic condition is established, and it grows and grows, and as long as the mind of the patient is capable of accepting and receiving more mental poison, the patient will become worse and worse until transition results.

But the worst cases of mental poisoning are those that are either deliberately, maliciously, or unsympathetically administered by friends or acquaintances, who pretend to have knowledge or who pretend to have a keen insight into the mysteries of health and disease, and who are so glib and voluble in their explanations and so ready to tell another person why he has a slight pain or a slight ache, or a slight abnormality.

When we realize that there is no such thing as a perfectly normal body at any age, or that there is no time at any hour of our lives when every part of the body is in a perfectly normal condition, and when there is no congestion, no clogging, no lack of anything, no overabundance of anything, no pressure, no strain, no unnecessary tenseness, no weakness; when we realize that each and every one of us has some part of our body just on the verge of resenting some violation of nature or kicking back at some wrong that has been committed, or protesting against some food that has been eaten or some liquid that has been drunk, and when

MENTAL POISONING

we realize that there is hardly a week in the year when some part of our body and our system is not fighting some germs that have been taken in through breathing, drinking, or eating, and that this tax upon the bloodstream and the heart may cause peculiar sensations that are neither serious nor important, but which can easily be interpreted as something wrong and direful, it is not to be wondered at that the human mind with its constant concern for health, with its fundamental desire to maintain and preserve the body and all of its faculties and powers, is a fertile ground for any idea or thought that may be administered without careful analysis and mental filtration.

It is, therefore, easy to understand how an individual, anxious to know why or how certain light or casual disturbances within his body may have occurred, or what they are leading to, may be wrongly directing his thinking and have his whole process of analysis poisoned by the administration of mental poisoning at the hands of some friend, relative, acquaintance, or even physician or scientist who speaks unguardedly or unthinkingly, and who may accidentally and innocently administer the most virulent and destructive dosage of mental poison in a casual remark or in a long speech intended to illuminate the mind of the patient.

Then there are those kindly women who love to tell the expectant mother what dreadful days await her, and of what serious complications are likely to set in overnight, and of what unexpected consequences may follow her perfectly normal and natural condition! They delight in recounting to the new mother, the inexperienced one, the hopeful and optimistic one, how serious a mistake it is to be too optimistic

MENTAL POISONING

and to count too much on the assurances of the physician or to put any reliance upon the family history and ancestry.

They love to dig out of the misty, shadowy alcoves of the past the few extraordinary and most unusual cases that should have long been forgotten, and most of which perhaps never happened, wherein the healthy, normal expectant mother was suddenly visited by horrible complications that brought about blood poisoning or injury to the mother and child resulting either in the birth of an abnormal child or a monstrosity, or the death of both mother and child. They love to emphasize the fact that in the last fifty years there have been several hundred strange deaths at the time of confinement, without even mentioning that in the same period of time there were perhaps millions of births that were perfectly normal, or without mentioning the fact that in the unusual and disastrous cases the mothers were of an abnormal structure or of long-diseased blood condition or of most unusual inherited tendencies.

These administrators of mental poison seem to be jealous of the possibility that the young and innocent, trustful and hopeful expectant mother before them may have that beautiful, normal confinement that the average woman has. They seem to take a delight in seeing the brow of the expectant mother wrinkle, the eyes sadden, the lips quiver as they predict the horrible possibilities that may await her.

And woe be unto the poor young mother if she admits to one of these mental poisoners that the day before yesterday she hit her left elbow against the faucet in the kitchen sink, or that in going down the steps her left heel caught and for a moment she stumbled, but never fell or never struck her

MENTAL POISONING

body; or that the other night in the midst of her sleep she awakened by feeling a peculiar pain for the first time between the ribs of her left side, or that the little toe of her left foot had a cramp in it, or that one of her teeth seemed to ache a little the last few days. Each and every one of these innocent incidents, wholly unconnected with the process of gestation, are instantly magnified and pointed out to the young hopeful as sure indications of a serious situation, and incidents are related where persons of their acquaintance who had similar pains, aches, knocks, or bruises had the most horrible results in the confinement room of the hospital.

They love to see the young mother walking away burdened as with a heavy cross from the dose of mental poison they have just administered. And if that poor mother does have a little more pain or some little unfortunate incident connected with the birth of her child that neither physicians nor nurses think seriously enough of to tabulate in their reports, one of the administrators of the mental poisoning is sure to seize hold of it and say, "I told her so, and she will have even worse than that with her child!" And the story will go around to other expectant mothers, with the astonishing claim that her previous predictions to other expectant mothers had been verified, and thus the dose of poison to the second one is strengthened by little incidents that occur during the birth of the child in the first case of mental poisoning.

And there are on record plenty of those other cases of mental poisoning where a malicious mind, a demon incarnate if ever there were such a thing, has gone forth to ruin and destroy the life of a friend or foe, of an acquaintance, of

MENTAL POISONING

one who has crossed his or her path. Both men and women have deliberately concocted dosages of mental poison and have gone out of their way to administer them to the innocent victims. They have not only sown seeds of distrust in the minds of those who have had faith and confidence in employees and friends, but they have deliberately served mental potions of virulent poison in the form of suggestions that had all of the semblance of truthfulness, and which would find some verification in plausibility in the mind of the victim until he or she would say unto himself: "He is right! I have never thought before of that fact and this fact and the other fact as being connected, but now I see how they are, and I see now that I have been and still am a victim of conditions over which I have no control. This will guide me into the gutter, wreck my life, disgrace me and my family, and bring complete ruination. It is too late; I am done for."

In twenty-five years or more, during which men and women of all types, of all walks of life, of all professions and social standing have written me of their problems and have had interviews, seeking as the last straw a way out of their horrible dilemmas, I have found that fully seventy-five percent of them were suffering more from conditions that did not exist, except in their minds, than from anything else. Even when their situations or conditions were founded upon some actual occurrence that was in itself more or less direful, the way out of the problem, the solution of it, the logical, reasonable correction and alteration of the conditions, was wholly held up, completely inhibited, and fearfully suspected, because of some administration of mental poison on the part of someone who wanted them to be hopeless, de-

MENTAL POISONING

spondent, pessimistic, and hesitant in attempting to redeem themselves or bring about any change in the unhappy conditions. I have found them held in the grasp of false beliefs administered in a poisoning manner to such a degree that they could not even see their own problems in the proper light, that they no longer had any faith in kith or kin, in friend or even in professional and expert guidance and advice. Yes, some have even doubted the existence of God, or that there was any mercy or justice in the world.

While it is true that many of us with the most kindly, loving, and eleemosynary natures may at times make a remark or offer a suggestion or send forth a thought or an idea or a mental picture that is immediately misunderstood or misinterpreted and turned into a dose of poison that begins at once its process of inhabiting and affecting the mind of our listener, it only illustrates the necessity that exists for our careful consideration of the thoughts we create in our own minds, and which we allow to escape in the presence of others in the form of words or gestures or subtle suggestions of one form or another.

I recall having once been at the bedside of a woman who had been ill long enough to suspect that her heart was weakening, and that the end was close at hand. She insisted that the nurse call for a physician at once to test her heart and her breathing. As I stood by I saw the physician enter the room and take from the pocket of his large white smock a folded stethoscope. I saw him try to adjust it rapidly and put it into working condition and hurriedly apply it over her heart while he tried to listen. But I saw that one of the pieces of rubber tubing was hopelessly twisted, and as he tried to listen he suddenly saw that himself and rapidly

MENTAL POISONING

jerked the stethoscope from his ears and from the body of the patient. He threw it toward the nurse with a whispered request that she go out of the room and get him another one.

The patient, who had been watching the physician with that extreme anxiety that bordered on the verge of ultimate mental strain, saw him jerk the instrument away and turn toward the nurse with a dissatisfied attitude, and she immediately exclaimed: "O my God, is it too late?" And she immediately went into a mental and physical state that bordered on a coma, and she had so shocked and poisoned herself by accepting a dose of poison that was not intended to be such that it was many weeks before she was restored to a normal condition, and she might very easily have passed through transition at the moment she threw herself into the hysterics.

The kindly physician did not know that his unfortunate action in pulling away the stethoscope and casting it at the nurse behind him was a mental suggestion to the patient that her heart had stopped, that he could not hear the heart, and that there was no use in trying to hear it. Such is the readiness of the human mind not only to accept subtle suggestions, but to misinterpret them, and to adopt them as a law, a command to the physical body to abide by the conclusion of the suggestion.

For these reasons and many more it behooves every person carefully to guard his thoughts, words, gestures, and actions. The human mind is more sensitive than either the most sensitive of photographic films or the most sensitive of microphones. Care is taken on every motion picture lot that automobiles on its streets are stopped, that persons who

MENTAL POISONING

are hammering out of doors or walking on graveled paths or whispering on the set, become silent while outdoor scenes are shot, until a whistle is blown or a bell is rung indicating that the microphone is no longer in operation. It will pick up delicate sounds from hundreds of feet away and ruin the scenes under production. The new candid cameras with their ultrasensitive lens and films will register in one-hundredth of a second the slightest motion, even in shady or dimly lighted places.

But the quickness of the lens and the film and the sharpness and keenness of the microphone are as nothing compared to the power of registration possessed by the human mind. It can see in the look and glance of one eye toward another, in the quivering of a lip, in the trembling of a hand, in the tone of a voice, in the choice of words, in the connection of ideas, expressed or gestured, a meaning, an interpretation, a suggestion, that may be like unto the most powerful of destructive winds.

On the other hand, we also possess, through these same mental powers and faculties, the abilities to send forth good, constructive, cleansing, re-creating, regenerating ideas, suggestions, or commands—which are presented in the same sincere and subtle manner so as not to arouse suspicion of their purpose—that will bring health and happiness, hope, ambition, and determination even to the most afflicted and weakened human beings. We can dispense cheer instead of sorrow. We can administer hope instead of despondency. We can pour into the mind and consciousness of another a smiling attitude, an increasing determination of will power, a picture of a bright future, an open doorway to opportunity, a cleansing power that will reach every part of the body and

MENTAL POISONING

a divine effulgence of spiritual joy that will rejuvenate and redeem the most hopeless of creatures.

And when, over thirty-one centuries ago, the wise psychologists and Magians, whose duty it was to protect the tombs of their beloved kings, carved upon King Tut's tomb the warning, the command, the positive statement, that whosoever wilfully violated the sacred laws of Egypt and maliciously forced themselves into the sealed chamber should suffer the curse of the gods and die, they administered then and there a dose of mental poison to unknown future victims, who, by their own wilful acts after having read the warning, deliberately accepted the poison and allowed it to become a law and a command unto them, even unto death.

AFTERWORD

DOES FEAR ENSLAVE YOU?*

MANY persons today are actually controlled or directed in all of their thinking and acting by the emotion of fear without being directly conscious of the degree or extent of the influence, while on the other hand there are multitudes who thoroughly realize that the greatest and most enslaving problem which they have to face is that of the Frankenstein of fear.

Many of our members, and hosts of our friends and acquaintances and thousands of individuals not connected with our organization, have written to us from time to time asking whether we could help them to escape from this subtle and ever-present influence of fear. Do not be too sure that fear is not affecting your life. You may be like millions of persons who glibly state that they are not affected by any superstitious beliefs, and yet a casual inquiry of their thoughts and practices in life will show that they are more or less guided by superstitious creeds or dogmas, ideas, or practices that they have almost unconsciously adopted.

Perhaps the greatest element of fear that is almost universal in human beings everywhere is *fear of the unknown*.

Among psychologists and psychiatrists fear of the unknown is classified as a fundamental emotion and as a logi-

*Originally published in *Rosicrucian Digest*, April 1936.

MENTAL POISONING

cal and reasonable emotion. But the strange part about this fear of the unknown is that it increases with a certain degree of intelligence or with a certain degree of acquired knowledge. The very ignorant, unthinking, unintelligent person has less fear of the unknown than the one who has a smattering of knowledge and a small degree of wisdom. The little child who has not learned much of life has less fear of unknown things and is affected less by his lack of knowledge than the adult who has acquired some knowledge and has dabbled inconsistently and improperly into a lot of subjects which have given him a false or incomplete idea of many important principles. The child who knows nothing of fire does not fear it. The person who has had only a little experience with fire becomes enslaved by the fear of it, while the one who has learned much about it and has had much experience with it has little fear of it, and the same is true of many of the elements and principles of life.

It has been found that as we become better acquainted with the fundamental principles of all natural laws, we become less fearful of the unknown—the unknown principles, the unknown actions of these principles, and the unknown conditions and situations. The greatest expression of the fear of the unknown is made manifest by the average person when he realizes that he is on his so-called deathbed or face to face with the possibility of imminent transition. The realization of the fact that the future state and future conditions across the borderline are unknown creates the most horrifying fears and makes the prospect of transition the most dreadful picture, the most terrifying realization, in the human mind on the part of those who look upon the future state as an unknown condition.

MENTAL POISONING

Despite the fact that every branch, every denomination, and every division of the Christian religion teaches that life beyond death, or the life that follows this existence on Earth is a magnificent and beautiful experience filled with all of the possibilities of joy and happiness, and despite the fact that all of these Christian denominations sing songs of joy in anticipation of their spiritual contact in the future, the average Christian on his deathbed is like the average person of no religion at all in fearing the unknown beyond the grave.

This is not meant as a criticism of the Christian religion, but a criticism of the weakness of human faith. Faith seems to sustain the average human being in matters that are of passing or temporary value, but when it comes to matters that have duration and continuous influence, faith seems to be of little value in the face of a lack of positive knowledge. Only those who feel that they have convincing knowledge of what the future holds in store for them or whose faith is sublime and transcendental, are unfearful of the change that takes place at transition and of what lies just beyond the borderline.

We see this trait of fear of the unknown made manifest when normal persons enter a building or structure with which they are unacquainted and find themselves in the dark and about to cross the threshold into a room that is unknown to them. The fear of what lies just beyond the threshold in such a case is identical with the fear of the future. And there are those who fear taking a journey on a steamship crossing the Pacific or Atlantic because, never having traversed the ocean and having no conviction or positive knowledge of what lies beyond the horizon, they are fearful of it. I have talked with scores of persons who began to express this fear

MENTAL POISONING

the moment the great steamship had been freed from its dock and had pointed its bow toward the eastern or western horizon of the sea. Immediately they began to question what the evening and the morrow would bring, and what would happen in the dark of the night or in case of a storm, or what would happen when one's foot was placed upon foreign soil.

But we have noticed that little children will rush into a dark room or into empty places unconscious of any fear or any hesitancy that might take hold of their actions. Yet after a child has been told something of the dark and given some little knowledge of its dangers or possible dangers, or fictitious dangers, this little knowledge makes him conscious of the fact that there is more knowledge which he does not possess and it is this lack of knowledge that constitutes the elements of the unknown.

Teaching a little child that he must not go here or there because of the bogeyman—a habit that was quite common thirty to fifty years ago—made more children fearful of the unknown than any one other thing, and it had an influence upon them throughout their lives. The fictitious, mythical, fairylike bogeyman of their childhood grew as they grew until he was a Frankenstein of monster size in their adulthood, always just cross the threshold, or just behind a door, or hidden just beyond a veil or curtain and ready to seize hold of them if they ventured too far.

And this leads us to the second analysis of the complex of fear. It is a hesitancy which unconsciously affects us and seizes hold of us in our thinking and acting when we are venturing into new lines, acts, and fields of thought. It affects people in both their business and social affairs, and in

MENTAL POISONING

their home life. It affects young and old alike. Experiences in life which beget wisdom and knowledge are the only things that eventually free such men and women from the influence of fear.

The emotion of fear is not always on the surface and it is not easily recognized as such. Many persons, if not most of the educated and intelligent men and women, have different names for this bogeyman of fear. The most common name for it is *caution*. Other names are *reasoning*, *consideration*, *analysis*, *preparation*, and *forethought*. Those who claim that they have no superstitious beliefs will tell you that the hesitancy they manifest is due to a hunch, whereas in fact it is a superstitious belief that fear is warning them.

There is a vast difference between the hesitancy that results from real cautiousness and the hesitancy that comes from subconscious or conscious fear. One may be thoroughly adventuresome and free from any fear at all even in entering into an unknown field or taking part in an exploration of the unknown conditions of the wilds and explored portions of any continent, or even of entering the mouth of a sleeping volcano, and yet one can be cautious. Being cautious does not inhibit our actions and delay our procedure as much as it causes us to be on guard in consideration of the known things or anticipated possibilities.

Caution, preparation, analysis, and study are excellent matters of procedure in all the affairs of life. They beget progress and are the handmaids of adventure. Fear, on the other hand, frustrates our plans and turns our footsteps backward or enslaves us to our present position and makes us unable to proceed, advance, grow, expand, or develop.

MENTAL POISONING

It is claimed by some that fear is an inherited quality of nature, particularly when the fear complex is strongly developed and not of a subtle, subconscious nature. I will not argue the point, for it may be true that some degree of fear has been inherited through frights and fearsome situations experienced by the mother during the prenatal period, or through the inheritance of cowardice from either one of the parents; but whether inherited or acquired, fear is an emotion that can be overcome and for which we have no excuse, least of all the alibi that it is the result of some experience on the part of our forebears.

Fear is the very antithesis of bravery. It causes us to default in making of ourselves what we should be. It robs us of a divine inheritance far greater than any inheritance far greater than any inheritance from our earthly parents.

Life is a conquest continually from the hour of birth to the hour of transition. Life is not merely a period of acquirement. We do not come into life empty handed and empty minded like a blank book with its unprinted pages ready to be filled with human experiences and with lessons and wisdom which we must learn bitterly or with joy. We come into existence fortified with an inner, divine, omnipotent wisdom that is ready as well as qualified to enable us to master every situation and to lift ourselves beyond those experiences in life which must come to those who are not brave but are fearful. Therefore, our lives are conquests resulting from the challenge of the wisdom and self within to the ignorant and superstitious earthly conditions around us. Only to him who is fearless is the conquest a success and only to the brave is given the palm of reward.

MENTAL POISONING

The divine and cosmic laws sustain us in our bravery while God's consciousness and mind in us provide us with every means to overcome the germs of disease, the frailties of life, and the weakness we have acquired. Without fear in our consciousness and with an open mind and a willing attitude to let the laws of God and nature prevail, our battle against the odds of life is easy. But when fear is given its opportunity to influence us or when we allow its subtle influence to affect us unconsciously by our refusal to cast it out of our being, the conquest of life becomes a long and tedious battle in which the odds are against us to such a great degree that the average human being cannot possibly win the rewards that he should win.

In the first place, the average individual in his lack of understanding and in his wilful refusal to investigate and study the more fundamental principles of our existence does not realize that the fear of a thing animates it, strengthens it, and enthrones it until it becomes a master which whips us and holds us in humble position and inactivity. The moment we allow our consciousness to form a realization of a thing through our fear of it, we create that thing into a reality where before it was nonexistent. By giving credence or consideration to our fear of anything we immediately tie upon our ankles and our wrists the shackles and the chains which the fearful thing has created out of fiction or out of imagination, or out of the superstitious beliefs of the day.

I have seen persons in perfectly healthy and normal condition go aboard a steamship and immediately rush to their cabins to undress and go to bed, out of fear of the possibility of seasickness. I have seen them a few hours later in the night suffering all of the unpleasantness of *mal-de-mer*, and

MENTAL POISONING

I have heard them speak of the disagreeable effects of the rocking and tossing of the ship when, in fact, the ship was still at anchor attached safely and steadily to the pier and had not moved one inch from where it had been for days.

The belief that the ship was to leave at midnight whereas in fact it was scheduled to leave after midnight had caused many to become seasick within an hour after midnight while the boat was still waiting for the rising tide to take it out of the dock in the morning. I have seen persons enter an airplane fully anticipating that the moment they stepped into it they would become airsick, and the influence of this fear made itself manifest before there was any real physical cause for their condition.

Men and women have approached business propositions with a timidity, hesitancy, and an attitude of mind based upon the emotion of fear within them, and from the very start the success of their plans was doomed and each and every failure, each and every incident that delayed them in their progress, and each and every unfortunate incident was easily traceable to the fear that dominated their thinking and their acting. More fortunes in money and in the material things of life have been lost by those who hesitated out of fear than by those who ventured too quickly and without caution. Bravery and fearlessness beget power and a venturesome, optimistic, constructive attitude of mind, and this in turn attracts favorable conditions even when these are some unfavorable ones to be overcome. Fear creates a pessimistic attitude inwardly if not outwardly. And this attitude of mind attracts failure and it inhibits constructive thinking and it makes the mind cynical, doubtful, and creative of

MENTAL POISONING

unfavorable anticipation which in turn become realities that enslave the individual.

There is only one way in which each individual can eliminate from his consciousness the influence of fear. It is first of all by becoming familiar with the fundamental principles of life and establishing a firm conviction in the mind and heart that all of the activities of the universe are essentially constructive and good, and that it is only our angle or viewpoint of some of these forces and operations in the universe that make them have the false appearance of being destructive.

The second point is to establish in our minds and consciousness the absolute and eternal fact that all of these good and constructive processes of nature are the result of the constructive, beneficent, merciful, loving consciousness of God, and that God is love and goodness and that all seeming unkindnesses and injustices are due to our misunderstanding, misinterpretation, or miscomprehension of things as they are.

The third is to become convinced of the fact that man is possessed of the creative power of God and that he is master of his own career and can create, both mentally and physically, the things that he requires, the things that he can image, and the things which will make him what he should be or what God intended him to be.

The fourth is to practice the principles of this faith or belief in the omnipotence and goodness of God and the creative power within man by refusing to visualize that which is unfortunate, destructive, unhappy, sinful, or inharmonious to our best interests.

MENTAL POISONING

The fifth point is to be venturesome and brave in the realization that we can overcome the evil more easily than we can escape the conclusions and creations of our own thinking; that poverty, ill health, unhappiness, misery, and failure in the conquest of life are things that we create if we give life to them, power to them, through our fear—our belief—of them.

The manifestation of fear—even in the guise of hesitancy and caution because of analysis and study—is a sign of weakness and never of strength. The strong are brave and the brave are venturesome. The weak are hesitant and the hesitant are fearful and the failures are of this class inevitably.

Each new venture into the unknown, whether it be the unknown of finances, the unknown of business, the unknown of study and investigation, the unknown things of life, the unknown principles of religion, the unknown labyrinth of mental power, each venture into these unknown things is a victorious conquest and each brings strength to the character, fortitude to the emotions, and encouragement and progress to the mind and heart. Be brave, therefore, and make sure that your hesitancy, your extreme carefulness, your doubts, and your delays for investigation are not the alibis of fear and therefore the balls and chains that hold you in a false place in life and let only the dazzling picture of success and happiness pass before you as a parade upon the horizon while you are entombed in your false position and must watch the parade go by.

THE ROSICRUCIAN ORDER

Purpose and Work of the Order

The Rosicrucian Order, AMORC, is a philosophical and initiatic tradition. As students progress in their studies, they are initiated into the next level or degree.

Rosicrucians are men and women around the world who study the laws of nature in order to live in harmony with them. Individuals study the Rosicrucian lessons in the privacy of their own homes on subjects such as the nature of the soul, developing intuition, classical Greek philosophy, energy centers in the body, and self-healing techniques. The Rosicrucian tradition encourages each student to discover the wisdom, compassion, strength, and peace that already reside within each of us.

CONTENTS

Introduction

Foreword

- I. Divine Alchemy
- II. The Endocrines and Their Hormones
- III. Location and Action of the Glands and Endocrine Substance
- IV. An Introspect—The Mystical Laws
- V. Types of Endocrine Persons
- VI. Continuation of Types
- VII. Methods of Developing the Endocrine Glands
- VIII. Examples of the Inhibitions and Exhilarations of the Glandular System
- IX. Helpful Items

INTRODUCTION

Every activity of Nature is within Cosmic Laws. There are no miracles. The author and the publishers hope to bring to the lay mind, in simple language, many of the truths now known to science and philosophy and thus pave the way for more truths and knowledge that may be woven into Wisdom.

Surely every thinking mind will realize the need for truths and knowledge. It is only through these that wisdom may be attained.

Falsehood, superstition and ignorance can never lead us to wisdom, nor to moral, mental and spiritual beauty.

There is no standing still in our evolvment. We either progress or retrogress. This law is Nature's edict, not man's.

Man's evolving as far as he has is due to cosmic intuition or poetic genius that has driven him ever on, and mostly upward. All through the ages he has been seeking more light, more power, more happiness and more love.

Science is opening the doors to a more positive advancement for man. It is proving that life's processes for man lie almost wholly within himself and are amenable to control and up building.

In the past man has been taught by exhortations, by affirmation, by superstition, but now we have teaching by proven and demonstrated facts.

Science now knows that the building and evolvment forces within man operate almost wholly through the glandular structures of the body. We hope to bring the known facts of the glandular activities to the reader so that he will understand them and thus be able to live a fuller and more beautiful life.

This volume is dedicated to all who seek more truth, knowledge and understanding.

M . W . Kapp, M . D.,
San Jose, California

FOREWORD

The one great unanswered Question is:—WHAT IS LIFE?”

We are not foolish enough to try to answer that profound question.

All we know is what lies within our consciousness. Our consciousness tells us that each of us is a “Being” or in a state of “being.” If I am a being now, I must have been in a state of being before I arrived on this plane of being, or I must have been created from nothing.

While we may not know what life is, we may study the manifestations of life and profit thereby. From the oldest of philosophies and from modern science we learn that Man has four primitive urges.

The First Urge is for POWER and is manifested from the time the child begins to move about, and through development as a child, and an adult, and even unto old age. In games, in fights, in social preferment, in politics, in finances—always seeking more power.

The Second Urge is for POSSESSIONS and is fostered from the time the child reaches out for a colored rattle on to the possession of estates and all forms of wealth and bodily comforts.

The Third Urge becomes the Love of Life and the Creative Urge. This is the differentiating force. It is the manifestation of the male and female. It includes the urge for parenthood, the love of humanity, the intellectual uplift.

The Fourth Urge is for Spiritual Uplift and understanding of moral beauty and the advancement of human relations and the “God Within.”

If the reader will constantly keep in mind the Four Urges, he will better understand the building and driving forces of the ductless glands.

The study of the ductless glands though a comparatively recent study is a very vital one. These urges are impelling and are only slightly influenced by the voluntary mind forces. A calm nerve or mental state

will aid normal activity. A worried or harried state of mind retards the glandular activities. The emotions of the body come from the endocrine or gland activities.

In the study of these forces and urges within Man, one must always keep in mind the Law of Action and Reaction, or the Law of Cause and Effect.

My knowledge and understanding of the ductless glands and their activities has helped me very much in my 43 years of active medical practice. I wish to express my appreciation of the debt I owe to the work of such men as Sajous, Crile, Cannon, Loeb, Lorand, Berman, Bandler, Milliken, Soddy and many others. These men have brought us a vast heritage.

To play the game of Life well, one needs to know the laws and rules of the game.

Alexis Carrel in his wonderful book "Man the Unknown" calls for scientists, philosophers, economists and teachers to awaken, and to give freely of their knowledge and efforts to uplift mankind. His call has inspired us to bring out the second edition of this story of the ductless glands and our evolvment.

M.W. Kapp, M.D.

Chapter I

DIVINE ALCHEMY

By H. Spencer Lewis, Ph. D.

I AM VERY GREATLY pleased to be able to offer to our members and our friends this unusual manuscript dealing with the glands of the human body. Not only does the matter deal exhaustively with the subject, but I believe it only fair to state that the author of this manuscript, Dr. M. W. Kapp, has had a very remarkable career for many years in Santa Clara Valley and Central California, where his confrères and brethren of the medical fraternity hold him in the highest esteem for his efficiency and his unusual diagnostic abilities and his keen insight into the invisible mechanism of the human body and its functionings.

Admittedly Dr. Kapp has had unusual success with his patients, and admittedly he has had a very definite viewpoint regarding health and illness, and this manuscript of his dealing with the glands of the human body and their functioning reveals why he has been able to assist his patients in receiving the natural, curative operations of nature. He has given not only nature, but the divine forces throughout the human body a greater opportunity to do their normal, creative work, and has been able to point out to his patients why and how they have been doing those things, or thinking those things, or permitting those things in their lives that interfered with this normal, natural, divine functioning in their bodies.

Originally, Dr. Kapp called his manuscript "A Story of How the Lives of Human Beings Are Controlled." In a large sense his title was indicative of what he has really learned and observed. While he has not been a member of the Rosicrucian Fraternity, and he has not received the secret Rosicrucian instructions regarding the functioning of the

various glands throughout the body, he has been by nature and by insight mystically inclined to such an extent that he has been able to observe by carefully studying the lives, and especially the abnormal conditions, of his patients how these glands have actually “controlled” the normal functioning of the entire body. The Rosicrucians have maintained for centuries that these glands act more like “guardians” of the lives of human beings than as “controllers” and yet it must be admitted that a true guardian is also a controller.

When we stop to realize that man in his earthly existence is functioning as a dual being, and that there is a spiritual self within a physical body, and that the spiritual self is there for the purpose of giving man intellectually a sense not only of divine wisdom and divine mastership over earthly conditions, but to guard and control the perfect operation of the physical body, we must realize that there must be also some means of exchange or communication between the spiritual self and the physical self. In other words, there must be some places or points within the human body where the spiritual power, self, and intelligence can transmute its power, authority, and control into the grosser elements of nerve energy, blood, vitality, and human mechanism so that the higher, finer, almost intangible and imperceptible forces of the divine self may be brought down to a rate of vibrations and a form of power crude enough, or material enough, to function through the flesh and bones and other material, chemical elements that constitute the body of man.

The glands have been found to be these intercommunicating instruments, these transformers, or transmuters between the spiritual, divine, Cosmic self and the grosser, earthly and physical self. They bring about within man a divine alchemy. For many centuries the most eminent mystical scientists, who made a very serious study of the rhythmic, synchronous functionings of both the divine and physical self in man’s body, believed that the pineal and pituitary bodies, now known to be glands, were the only actual physical, material organs for such transmutation of a higher force and energy into a more material force. On the other hand, there were those who believed that the solar plexus was the sole gland of importance, and that its function was that of interpreting and transmuting the higher, inspirational,

Cosmic, or spiritual emotions within man into the grosser, material, emotional reactions, and for a century or more the solar plexus was somewhat worshiped and adored as the seat and soul of all of man's higher activities. But when it was discovered that the spiritual element within man is to be found in every living cell of every part of the bone tissue and blood, and that the soul and emotional nature of man is not located in one organ or one part of the body, it became necessary to study man's physical anatomy more carefully and then the many other glands were discovered and given proper attention.

In this book, which we are happy to present to our members and friends, Dr. Kapp has explained, as a medical man and as a medical scientist would explain in psychic and mystical terms, the location and functioning and purpose of each one of these main glands. He has done so in a manner that is not only consistent with what is contained in the Rosicrucian teachings, but is free from the more or less limited technical phrases and definitions of Rosicrucianism so that medical men, scientists, and laymen alike who have not been versed in the Rosicrucian terminology and principles can understand the importance of these glands and their functioning and the other necessary conditions of keeping the body normal in every possible way so that these glands can perform their divine purpose without earthly, material, physical interference.

Speaking of the emotional centers of man's body again, we have found, as have scientists and medical men, that the spleen is just as reactive and just as demonstrative of the emotional functions of man's mental, psychic, spiritual and physical existence as is the solar plexus. This, too, was discovered many centuries ago, and for that reason many popular phrases were invented by the more or less ignorant laymen whereby they expressed the idea that one who was despondent or unhappy or cranky was manifesting a bad spleen. But it is also true that no part of man's spiritual and physical composition can be out of order or out of harmony with the Cosmic rhythm or with the Cosmic flow of vibrations without man's emotions reacting and manifesting the inharmonious attunement.

From many mystical or spiritual points of view the pituitary and pineal bodies or glands may be quite important in certain so-called “psychic” reactions. No one knows better that do the Rosicrucians that these two glands or bodies should be given careful thought in connection with many forms of development of the latent spiritual, or Cosmic abilities of the human being. But then again there is the thyroid gland which, while it does have a considerable importance in connection with the development and growth of the physical human body, and from the physical, medical point of view may be closely related with certain forms of malignant or toxic conditions that are subnormal or abnormal, on the other hand, is important in certain forms and degrees of psychic or spiritual development.

But all of the glands have some relation not only to the emotions within the average human being, but also to the mental tendencies. We are now learning that certain types of criminals are unquestionably victims of certain gland conditions and should be classified as “gland criminals.” The endocrines offer an opportunity for criminologists to definitely foretell the tendencies of a criminal nature on the part of those who have just passed through the adolescent stage and are approaching adulthood.

It is not necessary for every individual to become mystically inclined or to be given to the study and reading of mystical, mysterious, spiritual or religious subjects in order to be benefited by a very careful study of the glands within the human body. Undoubtedly certain forms of extreme religious fanaticism are due to an abnormal or subnormal development, or an atrophied condition of certain glands. But do not allow this to give you the impression that to be devoutly religious, or even to put religion above all other things, is necessarily an indication that you are overdeveloped in regard to some of your glands. The atheist, like some foreign and American medical writers, would have us believe that an enthusiastic belief in, or an enthusiastic adherence to, any doctrines or practices indicates a subnormal or abnormal mental and glandular condition. This is not true. The truly normal, natural person is one who does express and manifest certain very definite, enthusiastic principles, ideals, and desires, and the really abnormal or

subnormal person is one who “takes life as he finds it” and who from day to day finds no ecstasy, no joy, no happiness, no enthusiasm in any one thing that interests a part or all of human civilization.

That those who are enthusiastically inclined toward mysticism and psychic matters may be abnormal is only true if we take a cross-section of the entire world population and make comparisons, because thereby we find that those who are enthusiastically inclined in such subjects are in the minority. But should we assume that the minority in any case is subnormal or abnormal? The line between perfect sanity and the slightest degree of insanity is so flexible, intangible, and indefinite that no one, not even the greatest psychiatrist, can attempt to define it and establish it. It has been facetiously said that all of us—meaning you and I and the rest of the world—are insane on some subjects. By that is meant that a majority of us are more enthusiastic, react more easily to some ideas, some ideals, and interests than do other human beings. But this is not an indication of an abnormal attitude of mind, or an insane attitude or faulty development. It is simply a manifestation of the complexity of human nature, and human emotions, which complexity makes human existence interesting and gives us the manifold manifestations of art and the creative abilities and the beauties of man-made things of a material or spiritual nature.

Even our human countenances, our human attractiveness, and most essentially that intangible something called “human personality” or “personal magnetism,” are the result of the normal and proper functioning of the glands. And that which attracts one person to another is something more than the mere definiteness of the hand-clasp or the deliberateness of the smile, or the wiles of the pleasant words that are spoken.

By knowing our glands and how they function, and by knowing how to live properly, which includes eating, drinking, and breathing properly as well as thinking properly, we can permit these glands to do their very best, and give us every advantage of their divine functioning. Dr. Kapp has very beautifully outlined these ideas in his manuscript, and I especially urge each reader to pay very strict attention to the first twenty or thirty pages of this book wherein many very excellent ideas

are presented for the first time by a man who is above everything else a very strict and careful medical practitioner of many years' experience, and secondly, a keen and excellent student of human nature. With this introductory chapter, therefore, I recommend this book to our members and friends and their friends everywhere. Many books have been published recently dealing with the various glands of the body, and some even dealing with the effect of these glands upon the human personality, but most of them have been too technical, too much like reading a book on physiology or anatomy, and have missed or entirely ignored or negated the divine and Cosmic functioning of these glands and the spiritual side of nature.

I am glad, therefore, that one physician of truly scientific training, and especially one living so close to us here in this beautiful valley, and so greatly in sympathy with the work of the Rosicrucian Order, its research departments, and its Rose-Croix Research Institute and Clinic, is able to add to the bibliography and literature of Rosicrucianism a manuscript and book that will undoubtedly remain in its archives for many centuries to come.

Chapter II

THE ENDOCRINES AND THEIR HORMONES

MAN WILL EVOLVE when he no longer craves the bestial, the barbarous and more physical gratification. When the time comes that he feels the spiritual urge, the intellectual enlightenment which leads to a feeling of exaltation, of elevation and elation (which must and will come to all men at some stage in their evolution), then there comes a quickening of all the moral senses and a consciousness of immortality and goodness.

The superiority of really great or illumined souls, or egos, lies in (1) intellectual acuteness, (2) moral elevation, (3) all embracing optimism, (4) the sense of immortality—or to express it more tersely, Cosmic Consciousness, or the more familiar phrase, realization of “the kingdom of God within us.

Cosmic sense will give us the power over good and evil.

Man has been a long time evolving from his lower states of being. There is still a long upward climb ahead of him. It may be that we have all eternity to evolve in, and the slow method may be the best, but when once one glimpses the beauty ahead—even for a few illumined moments—one becomes eager to evolve rapidly to a higher plane. One cannot stay forever in the state of self-consciousness alone. One must eventually evolve into the Cosmic Consciousness.

Our egos or souls (or whatever you choose to call that which we are) must have the physical body to function or perform in. This can be as pure as the mental or spiritual. We doubt, however, if a clean soul can remain in a bestially inclined body.

To keep the building forces of the body and soul clean and in normal activity is our great hope and aim.

The building or constructive power of man comes through the endocrines and their hormones. The endocrines are the glands, mostly ductless, that secrete and distribute the substances called hormones which control our constructive powers, both physical and mental.

The story of the ductless glands or endocrines and their hormones is the story of the human race in its evolvement and unfolding. This story is not all told. It is just in the telling and cannot be all told until man reaches perfection or complete evolvement.

We hope to bring to the lay mind some knowledge and help in the constructive processes of everyday life.

The main endocrines or ductless glands of the living body are:—the Pineal, Pituitary, Thyroid, Adrenals, Gonads (sex glands) and Spleen. A few glands which have ducts also secrete and distribute hormone substances. They are the Liver, Pancreas, Kidneys, Salivary and Lymphatic glands. We are also learning lately that the Vitamins that are so vital to the nourishment and activity of the body are budded through the glands just mentioned.

The study of endocrines and their hormones is of but little more than forty-five years standing, although about 170 years ago a French savant, Theophile de Bordeu, made some study of the subject but it was not continued long. The Brown-Sequard life rejuvenating elixir made quite a furore 45 years ago. This "Elixir" was an extract of the testicle injected under the skin of the patient. We ll do I remember a trip to the slaughter house with the old family doctor under whom I was studying medicine, and the selecting of a ram's testicle. From it we made the "elixir" and then made injections under the skins of three old men. The old men did not rejuvenate. From the Brown-Sequard furore resulted a more careful study and experimentation, with wonderful gain to humanity.

The human body is built and vitalized by definite chemical processes, well described by science. We do not yet know all the processes of

construction yet we may profit greatly if we study what has already been discovered.

Life forms are an expression of consciousness. As cells evolved, various consciousnesses became active, thus it became necessary that some control of conscious activity be formed, so centers of control developed.

The cells needed control of light reaction, of pigment, brain growth and sex ripening, and so there became a center for all this which we call the Pineal gland. Also there developed the need of nourishment and a center of control for the body building and proper food intake, so the Pituitary gland was evolved. This gland controls the sense of taste and smell by which we select proper foods and reject putrid or unwholesome foods. The size of our bodies and mental power is controlled by the Pituitary gland.

The cells of the forming body needed iron, phosphorus and arsenic and to meet this need came the Thyroid gland.

All this evolving body needed energy control, and a rhythmic movement producer, so the Adrenals were formed.

The single cell was immortal and had power to renew itself perpetually, but when the cells began to try to work together they lost the power of everlasting life and had to resort to reproduction and general creative power. To produce this center for reproduction and creative power, the sex glands (Gonads) were formed.

The growth of the young individual needed care, with a check on some of the glands of later evolvment, especially the sex glands, and there became created the Thymus gland.

A storing place for food, a renovating system and a circulating and distributing system became necessary so the liver evolved and the blood circulatory system and the lymphatic ducts and glands developed.

Thus Nature, or whatever you wish to call the Creative Force, built according to law and order with an intelligence that is astounding to a careful observer. No wonder the ancients said God was “Spirit”, for this

subtle unseen force that builds is so powerful and yet invisible. When a man studies deeply these unseen forces he becomes unconsciously religious.

These glands must work in harmony or balance and to do so they needed methods of intercommunication. The chemical intercommunication is the oldest, we think, but soon another method evolved. This we call nerve action. We doubt, if, even now, we know all the processes of conscious relation of the glands and body. There may be vibrations so subtle that the senses do not detect them as yet. When we have learned the method of building and the relation of the glands of the body, then we shall be masters of our whole consciousness.

We had long supposed that the brain was the source of energy and the place from which the will and wish acted, but now we know that the brain is only the depository of memories, communicated to it by some method or process that leaves its records somewhat as the producing needle of the phonograph leaves its record in the wax or composition.

The vegetative system (the gland system) is the seat of the impulses and urges of man. Love is not a result of the thinking mind. It is an endocrine urge. A reasoning mind can help to stabilize love but the impulse of love does not come from conscious thinking. So with hates, fears, etc. Man does not start war by his reasoning mind. It is the primitive urges due to the endocrines that start wars. No sane reasoning mind will ever wish to kill. You can see why we need to build the conscious or reasoning mind. We need to study the sub-conscious mind, which is our building consciousness, so that we can direct the building forces constructively and helpfully.

Rear View of Location of Body Organs

Chapter III

LOCATION AND ACTION OF THE GLANDS AND ENDOCRINE SUBSTANCE

Pineal Gland

The pineal gland lies near the center of the brain. It is very small, not much larger than a grain of wheat. Mystics tell us that it is the bridge between the higher planes of consciousness and the physical plane of expression. Tradition tells us that it is the remnant of a *third eye* used by man in his earliest development. Descartes claimed that it was the seat of the soul. We know that there are cells in the pineal gland like the retina of the eye.

Life is built around lime salts and the X-ray reveals that the pineal gland contains small grains of sand or salts. In disease the amount of sand in the gland is largely increased. In cases of tumors of the pineal gland there have been wonderful developments in sex and mental attainments and even in spiritual and loving affection. This gland helps in holding the sex in abeyance in childhood and aids in the ripening process of sex after puberty. In childhood it probably acts with the thymus gland. This gland seems to be the balance of control for the action of light upon the pigment of the skin. "It is the light within that reflects the light without." The pineal acts in conjunction with the adrenals in skin pigmentation. It also acts in conjunction with sex glands and brain.

Pituitary Gland

This gland is about the size of a pea and lies at the base of the brain behind the root of the nose in a little bony cup or cradle called the Sella Turcica or Turkish Saddle. If this cradle is too small the development of the gland is retarded and the person is very apt to be one of moral and intellectual inferiority. The condition of this cradle can be demonstrated by the X-ray. The gland is composed of an anterior and posterior part. Each part has a distinct and separate origin, history, function and secretion. It is a sort of male-female combination. The anterior portion is a proliferation of the mouth area—the taste and smell sense area. The posterior part is an outgrowth from the oldest part of the nervous system.

The pituitary gland is often called the somatic brain for it seems to be the center of the subconscious action. The pituitary gland can be traced from the most primitive form of life to man, and is the same in all planes. This gland and the salt of the blood we have brought all the way in our development from the sea to our present state. They dominated us then as they do now. The pituitary gland is a veteran in the ductless gland class and probably the most important in man's development. Its extirpation means death in a very short time. It has been called "Nature's Darling Treasure" because it is provided with a skull and within a skull for its protection. Here we have an intimate meeting or mingling of the internal secretions and nerves though little is known of its nerve supply. We doubt if much of its fineness of action is as yet understood. Experimentation has proven that the secretions from the anterior lobe of the gland stimulate growth of bone and connective tissue. The posterior lobe secretion controls the tone of the tissues of the intestines, bladder and uterus. It also controls the salt content of the blood.

Salt aids in the electrical conductivity of the system. Pituitary extract raises the blood pressure and causes action of the kidneys and milk secretion of the breasts. If given hypodermically, it causes contraction of the uterus, aiding in expelling the child in childbirth. No other gland can take the place of the pituitary gland.

The anterior lobe has a balancing power over sex and creative force. The skeleton is dominated by the anterior pituitary and we have giantism or dwarfism depending upon the development and secretion of this lobe. Excess of anterior lobe secretion and lack of posterior lobe secretion makes the giant. An excess of anterior lobe secretion with an excess or increase of posterior lobe secretion makes the mental giant. This type is usually tall, bony and strong. The sub-pituitary person is usually fat, lethargic, short and dull and sexually impotent. Also apt to be an epileptic.

The pituitary controls the periodicity of sleep. An active pituitary means alertness and wakefulness. A tired or dulled pituitary means sleep or hibernation and general dullness. Feeding of the gland products is not yet as satisfactory in results as we might wish. There is something about the chemistry of it we do not yet know. Hypodermic medication seems to be rather active in results.

In pituitary excess the person is typically tall, lean (cannot fatten him), with a tendency to high blood pressure and sexual trends and great mental activity and initiative. Sometimes irritable but of great endurance. The pituitary is the gland of continued effort.

When the cradle (Sella Turcica) for the pituitary is too small we get under development of intellectual and moral sense. Persons so afflicted are called pathological liars for they have no sense of truth. This condition also aids in producing Morons.

The Thyroid Gland

Is located just below the larynx and is composed of two lobes lying on either side of the wind pipe and connected by a "bridge" just below the Adam's Apple. It arises from the same tissue and almost from the same spot as the anterior lobe of the pituitary gland. It has a great controlling force in the growth of man's body and its sustaining power. The thyroid acts upon the growth of the inner and outer coverings of the body—skin, hair, glands, and mucous membranes. It is the builder of the nerves and brain tissues. It is essentially an energy producing organ. It forms the greater part of the iodine or iron and phosphorus

and arsenic of the system. Iron for the general system and to aid in the electric energy and conductivity of the system; phosphorus for the nerve and brain centers; arsenic for the skin.

In the lower forms of life the thyroid was a sex gland. It is now a link between the sex glands and the brain. It is so intimately connected with the sex glands or gonads that it is influenced by sex excitement, or menstruation or pregnancy. The thyroid is the gland that produced land animals and is very important in the evolution of forms, and also progression. The feeding of a thyroid to a Newt transforms it into a Salamander—a land breathing animal. Tadpoles will not develop into frogs if their thyroids are cut away, but the evolvement of tadpoles into frogs can be hastened by feeding of thyroid substance.

The thyroid is also very necessary for the development and evolvement of a higher consciousness and psychic powers. Thyroxin, the active principle of the thyroid is pure iodine. The thyroid secretions are the controllers of the speed of living. The more thyroid the faster one must live. That is, there is a greater intensity and capability of living when the thyroid is active. The Cretin is a person with a great lack of thyroid secretion and is slow of movement, clumsy and awkward and stumbles when going up stairs. The Cretin seems to have no soul or at least it does not develop until the thyroid develops. (By soul we mean a mental and spiritual condition). Many Cretins would become fine adults if they were fed thyroid extracts and given proper food and had good surroundings.

The pituitary gland keeps the salt proportion of the blood the same as that in the sea. The thyroid keeps the iodine proportion of the blood the same as the iodine of the sea. These proportions and elements have come all the way in life's evolvement from the life in the sea and still hold the balancing or stabilizing power of the body, physical, emotional and mental. The proportion of iodine is one drop to four and a half barrels of blood or of sea water.

The Liver is the greatest user of iodine of any organ in the body. Without thyroid secretion there can be no physical unfoldment, no function or faculty, no complexity of thought, no learning and no responsive energies.

Excessive thyroid secretion as a disease is called Exophthalmia and a lack of thyroid secretion is called a strumous or cretin condition. Thyroid secretion increases gastric peristalsis and hastens all metabolic changes. Fine teeth usually indicate good thyroid activity. Dry scaly skin usually means inferior thyroid activity. When the activity of this gland is normal the person's ability to throw off poisons or infections is much greater than when the thyroid is defective. Thyroid is the great energizer. Its normal presence makes life worth while and its absence takes all the joys out of life.

The Adrenal Glands

The adrenals are two in number. They are cocked-hat shaped glands just over the kidneys, about as big as the end of one's finger. Like the pineal, pituitary and thyroid they have no ducts but are very vascular so there is much blood carried to them and the adrenal secretion is carried away in the blood stream to all the tissues of the body where it is used.

Each gland is composed of a cortex or outer portion and the medulla or inner portion, called the core. The cortex is derived from the same tissues that formed the sex glands. Vigorous or fighting animals have a large cortex or outer part of the adrenals as for instance the lion, tiger, buffalo, etc. Timid animals, such as the rabbit, have a small cortex. There is a very close relation between the adrenals and the gonads or sex glands. Before birth, disturbances such as tumors in the adrenals, are supposed to be the cause of hermaphroditism (both sexes in one). After birth tumors, or disturbances in the adrenals, cause premature sex development. Children of three or four years of age with such disturbances often appear as 14 or 15 with the characteristic sex conditions of that age: voice, hair growth, strong muscles and general virility. There is a close alliance between the brain cells, sex cells and adrenal cortex cells.

Adrenal secretion (called adrin or epinephrin) energizes the muscles of the body and very especially the muscles of the circulatory system and the digestive tract. The adrenals seem to get their potential energy from the thyroid output of iodine. In excessive action of the thyroid we

get excessive adrin or epinephrin and, from that, excessive stimulation of the muscles and especially the muscles of the heart and the rest of the circulatory system. The heart will pound like a trip-hammer in an exophthalmia case. Adrenal secretion is often called the enzyme of enzymes (an enzyme is a digestive ferment). It supplies the base for saliva, pepsin, hydrochloric acid, liver, pancreatic and intestinal juices. The adrenal cortex acts upon the pigment cells of the body. In diseases of the cortex of the adrenals the skin becomes dark or pigmented or bronzed. This is called Addison's Disease.

Death follows quickly upon the removal of the adrenals. There have been found cases of apoplexy of the adrenals and the action was similar to the action of apoplexy of the brain. Adrin or epinephrin is the product of the inner portion of the gland, the medulla. The secretion promptly raises blood pressure when injected into the system. Adrenal secretion tenses all the tissues of the body. The adrenal flow is brought to excess by pain, fear, excitement, rage, or any of the painful emotions. (Every one has at some time in life felt the tenseness of body under great stress of emotions.)

The adrenals are glands of combat. They are the evolvement from the "Fight and Flight" age of man. Nature has evolved all the glands and tissues as they were needed, but as man developed individuality and with it selfishness and greed he arrived where he no longer ran with "the pack" to hunt. He wanted the best of things and separate from the rest of the individuals. To get the best of the other fellow he was always ready to "steal a march" or "put one over" on his fellow-man and this led up to the "Fight and Flight" condition. That is, he had to fight with all the fury of his power or run away with all his power. It was "tooth and claw" or fleetness of foot, that was the law of self-preservation or rather self-satisfaction. Excessive adrenal secretion was absolutely necessary for activating force in the "Fight or Flight" condition. Excessive use of any of nature's forces will sooner or later pauperize those forces.

In spite of our boasted civilization we are still in the "Fight and Flight" age. Our fighting and running away may not be as crude as the cave man's but it is still as destructive to the body and soul of

man. Our jealousies, hates, fears, struggles for wealth, power, position, our lusts, and superstitions all call upon the reserve supply of adrenal secretion—the fighting or energizing secretion—until the glands are exhausted and we wonder why so many die of heart disease (over heart action), Bright's Disease, diabetes, tuberculosis, cancer, and other diseases of diminished resistance. "Americanitis" is the result of our rapid living, or our refined "Flight and Fight" era. The system is under constant shock and the reserve energy is under call all the time. Shock is a blow to the emotions from fright, anger, worry, surgical operation or injury or some unpleasant experience. Under too long continued stress the ductless gland system or endocrine system ceases to function and the adrenals stop sending out the supply of epinephrin, which is the tensing fluid, and the heart slows, the blood vessels relax and the brain loses its blood and unconsciousness follows. The skin turns white because the blood is no longer driven to the surface and a general condition of collapse ensues and if adrenal secretion is not supplied by artificial means or the latent forces within the person given a chance to recuperate, death will follow.

Unconsciousness has been the turning point for the recovery of many a patient. The emotions and fears were for the time cut out and their inhibiting power was dispelled and the latent powers within the endocrines had an opportunity to assert themselves. Joy, hope, love, religious fervor and other inspiring emotions have freed the endocrines and given them an opportunity to act harmoniously and constructively. Life is too strenuous and, when we learn the things that the endocrinologists are trying to teach, we will play fair with the forces within us. When we live so fast, we are in a constant state of shock though we may not be in a faint or unconsciousness. We are in a lessened state of consciousness because of our tenseness than we would be if we knew how to be calm and harmonious in our being. Our tenseness of living causes us to suffer with fatigue, nervous exhaustion, sensitiveness to cold, loss of appetite, cold hands and feet, and a loss of the zest of life. We have mental inability, tendency to worry and weep and, as we said before, a general condition of "shock." All the glands are involved in shock but the adrenals are the specific glands of shock. The person with insufficient adrenal gland action is very apt to succumb to diphtheria and severe fevers.

Men who have an excessive supply of adrenal secretion (not exophthalmic) have great energy and unless well balanced by the pituitary are apt to be cruel and dominating and are often given to great sex excesses. The excessive-adrenal persons are among the politicians, bankers, captains of industry, and leaders of men. They are the men with terrific driving force. When there is a good pituitary balance with strong adrenal supply we get the great thinker and man of fine power, with gentleness and fine ideals.

Excessive adrenal supply in a woman makes her masculine and neutralizes her ovarian secretion. Such women become the leaders and command responsible positions. It is a safe bet that the first woman President of the United States will be of this type, or at least an anterior pituitary-adrenal centered woman. This type of woman is also prone to growth of hair on her face and body.

After all wars the nations involved are always in a state of shock. Men and women are not normal. Waves of crime and excesses follow every war. Women become more masculine from the constant shock of their adrenal endocrines. The adrenal arousing of the men turns them to sex excesses for expression of force or even to crime. Advocates of war say we need wars to arouse the evolving forces within man. We do not believe it necessary to arouse the brutal to evoke the poetic and spiritual side of man.

The Gonads (Sex Glands)

The gonads of the female are the ovaries, breasts, and uterus and in the male they are the testicles, the penis and prostate gland. They are the generative or reproductive glands or sex endocrines. They are of external and internal secretion. The ovaries produce the ovum but they also produce an endocrine substance that vitalizes a woman and makes her feminine. The testes have as their external secretion semen which is the spermatozoon carrier and which is stored at the prostate gland. The internal secretion of the cortex of the testes is the male energizing force and that which makes him really male. It is the male endocrine.

Early life was reproduced and perpetuated by budding or fissure. That might have been enough to perpetuate life and mankind but the Great Consciousness seems to have created farther for some purpose. Something more was needed to evolve individuality and differentiation. From some Great Wisdom came the evolvement of sex individuality and sex differentiation with characters of negative and positive expressions. Sex urge has caused some of man's extremest individualistic or selfish traits.

Before the advent of sex, food was the only urgent need of life. Now more is required; sex pleasure, sex selection, finer foods, the sense of beauty, personal adornment, the urge for ever more and more expression. Sex has produced ideals. There are different characteristics for male and female. Sex has lifted man above the commonplace, but it has also been the greatest source of brutality. "Man has always been most brutal to himself in the name of the ideal." Castration was one of the first surgical operations and most often done in the name of religion. In early ages children were castrated and thus prepared for the profession of eunuchs or slaves. In all ages it has been a religious rite by some fanatical sects. Even at this day there are cults in Romania and Russia that practice castration. To a scientific mind it is mighty hard to conceive of a Creator that would love the handiwork of His consciousness any the more for being mutilated. Yet in all ages there have been fanatics that believe in perverting the natural expressions of the Great Creative Force.

In a person castrated before puberty, no sex characteristics develop. The male voice stays high pitched, no hair grows on the body and obesity and mental sluggishness prevail. The eunuch is lazy, suspicious and undependable. In the female that is castrated before puberty the pelvis does not develop, the breasts do not swell, the voice is low pitched, the mind is dulled and the masculine type is produced. The castrated male become female and the castrated female becomes male in type. Experiments on these beings have shown that if an ovary is implanted in a male eunuch his general characteristics become female to a great degree. If a testicle is implanted in a female eunuch the characteristics will soon become male. If an ovary is implanted in a female eunuch the person will take on the whole appearance and

characteristics of the female. If a testicle is implanted in a male eunuch the functioning of the male will be brought into expression.

The normal man is one with normal male gonads. The normal female is one with normal gonads of the female. The manly man and the womanly woman are the normal functioning man and woman.

Eunuchs have more brittle and weaker bones than normals. The ovaries regulate the lime distribution in the female. Excessive pregnancies cause the terrible cases of osteomalacia or soft bone deformities that are so common in the densely populated districts of Europe and Asia. The frequent pregnancies use all the lime reserve and the bones suffer. Many women suffer with teeth trouble during pregnancy. In the males the testes (also called interstitial glands) regulate the lime of the bones and strength and stability of the bones. The powerfully boned male is usually very virile sexually.

Some of the endocrines act as accelerators to the sex glands and some act as inhibitors. The thymus is said to hold the sex in abeyance and the adrenals accelerate the sex expression. The thyroid and pituitary also play a great role in the expression of sex.

The prostate gland, which is the storehouse for the seminal fluid, lies at the base of the bladder and surrounds the neck of the bladder. Its complete function is not understood, but it must have some influence upon the nervous system for when it becomes inflamed the man becomes irritable, despondent and even suicidal. The author has restored many men to normal activity and function by treating the prostate. Sexual excesses are supposed to be largely the cause of enlargement of the prostate, as also is gonorrhea with its after effects.

The ovaries are supposed to erupt an ovum every 28 days which is taken up by one of the fallopian tubes and conducted to the uterus where it must meet the male germ (spermatozoon) if a new life is to be started. There is no stronger urge expressed in life than the effort for the male and female germs to meet. The breasts play an important part in the female expression. They form the food for the newborn child and they have an endocrine faculty that aids or normalizes the menstrual function.

The uterus is the female sex organ where the fetus (child) is developed and prepared for its advent upon this sphere. Just what the endocrine influence is, science has not yet found positively, but we do know that when a woman has an inflamed uterus, she is irritable and usually depressed and generally neurasthenic. There is an intimate alliance between the post-pituitary and the uterus. A few drops of post-pituitary extract injected in the circulation will cause intense contraction of the uterus. This knowledge has been of great value to the obstetrician in the delivery of the child and holding the tone of the viscera. The reasoning mind cannot yet conceive how or why at just the correct moment there is freed in the system an excess supply of this post-pituitary endocrine substance that finds its way to the uterine cells and causes rhythmic contractions and thus expels the child and contracts all those blood vessels of the uterus that have been doing such big work for nine months.

The Thymus Gland

The Thymus gland lies just below the thyroid gland and behind the upper chest bones. There is not enough known, as yet, of the action of the thymus but it seems to be the dominating gland of child growth before the time of puberty. It inhibits the activities of the testicles and ovaries. Castration causes persistent growth of the thymus. Removal of the thymus or its inhibition by the X-ray hastens the development of the gonads. The continuance of the thymus after puberty causes peculiar actions of sex expressions. Repulsive and degenerative practices come invariably from thymus-centric persons. The thymus prevents differentiation and stops the transforming into positive sex expressions, either of male or female. Feeding tadpoles thymus substance prevents the evolvment or differentiation of the tadpole into a male or female frog. In thymo-centric persons we get the homosexual cases. The male does not become fully male and as there is so much of him still potentially female he will care more for the society of the male than for the female. The female will still be potentially male and so enjoy the society of the female most. The thymus seems to be the child bodybuilder, supplying many of the elements that build the structure. The thymus begins to regress at puberty so it is supposed

that the gland is the gland of childhood growth. In animals whose thymus has been removed the lime or calcification processes become retarded. The thymus seems to dominate the lymphatic system.

The Parathyroids

The parathyroids are composed of four tiny glands, as large as wheat seeds, in or near the thyroid gland. Removal of the parathyroids is followed by great excitability of the nervous system. The action is much as if an overdose of strychnia had been taken. They are called the glands of tetanus. The chief function seems to be to control the calcium metabolism, or the lime salts of the system. These glands seem to be necessary to the steadiness of nerve and muscle control. They seem to be the agents of detoxification. There is always a lack of parathyroid endocrine secretion in lockjaw, epilepsy, paralysis agitans and convulsions of epilepsy.

Other Glands

The Pancreas is the controller of sugar metabolism. This gland has a duct that carries its secretion to the intestines where its enzymes control and complete digestion.

The spleen is a ductless gland of which little is known except that it plays a great part in the detoxification of the system.

The liver is one of the most important glands of the system. It is the storehouse and the clearing-house. It is here that the food is finally prepared for its advent in the circulatory system and where the broken down particles of the system are renovated and again made fit for use if possible. It is a gland of internal and external secretion. The external secretion is bile and is thrown by a duct into the digestive tract. The internal secretion is sent direct into the circulation.

The kidneys are glands of excretion, mostly, as far as known. There are some investigators who claim that they also supply an endocrine substance that affects the general system.

GLANDS—OUR INVISIBLE GUARDIANS

The lymph glands are chains of glands connected by lymph ducts and are scattered throughout the whole system. The lymph ducts are a system of vessels that carry the broken down particles of tissues and the food lymph back to the liver where the final renovation takes place. The various glands along the chain of ducts have a renovating power and evidently have activities that are not well understood.

Too much food and refuse, with poisons of some kind, often cause enlargement of these glands and make good foci for tuberculosis and cancers. The writer has seen many cases that seemed like tuberculosis of the lymph glands entirely recover from regulating the food supply and stopping auto-intoxication.

The salivary glands are the glands of the mouth that pour out the saliva and start the starch digestion of the food and maintain moisture of the mouth and throat.

Chapter IV

AN INTROSPECT—THE MYSTICAL LAWS

WHEN ONE STUDIES the action of the physical expressions of man it almost makes one feel that man is purely animal or physical or mechanistic, but more careful analysis proves that man is more than merely physical. To play, to work, to reproduce are common to man and animals. To create is human only and is the link between the human and the Divine. As we said before we cannot conceive of a creation without a Creator. How could we have all the immutable laws that control all creation without a consciousness greater than our own to evolve all this? We have, as yet, sensed no human consciousness that seemed able to evolve all the vast universe. That it was all chance is equally impossible to conceive. We cannot help sensing that some vast force or consciousness is expressing itself.

Man seems to be a consciousness within this vast consciousness that is ever trying to express himself, sometimes intelligently and more often blindly. We know that there is an intelligence or consciousness within man that is higher than the mere animal. To find that higher consciousness and intelligence is man's supreme work at present. "Know thyself" has been the adage for centuries. Our great desire should be to know and when we know, to transmit the knowledge to higher planes of expression.

As we learn the laws of the lower forms of life we are learning the actions of the higher forms, for the teaching "As above so below and as below so above" becomes very vital as we gain more and more knowledge and wisdom. The deeper we peer into the mysteries of Nature the more we are reminded that the four fundamentals mentioned in the foreword are true and that every phase of life's expression is within the fundamental laws.

Man is linked by the tie of cell, blood, bone to every expression of life in the sea, jungle, forest, plains and cities. Man is a branch of the tree of animal or beast nature. But there is more than beast there. Every cell of the body has its consciousness and knows what to take as food and what to eliminate. The liver cells have the liver-cell consciousness. The muscle cells have the muscle-cell consciousness. The skin cells have a consciousness quite different from the liver, muscles or any other cells and know how to act as skin-cells and would be lost if transferred to the liver or the muscle. Man is a differentiation from other animal forms and consciousness. He is all right as a man but all wrong if he tries to be a lion, or a horse or fish. Man must be true to the impulses or consciousnesses that have built him so far in his development. He is still bound by his needs and the needs of his ancestors which function through his endocrines—the ductless glands. His hates, loves, superstitions, food desires, lusts still dominate him largely. Slowly, oh, so slowly, he is seeking freedom from his limitations. Reason and spiritual guidance take long to establish. That something called the Spirit of Christ is so slow in developing in man.

As we begin to understand the full evolving force of the endocrines we will gain true freedom and soul growth. Reason and the Divinity within must become the guiding force of man. Man must have freedom for himself and for his fellow man. In the ages past man has enslaved his fellow man and lived a predatory life. There have been those high up and those far down. It is time for the law of normals and this will come as we gain knowledge of the laws of building normals in physique, mind and spirit. We must know the laws of involution, evolution and continuous life. As we study the endocrines we know that man can be the architect of his own destiny. Mystical Science will do more for the up-building of man than has been done by the religions of the world. Religion is the expression of but one phase of man's existence. Mystical Science, such as Rosicrucianism, reaches all the phases of man's functioning and being.

Science has taught us positively that man's physical form and mental attainments are controlled by his endocrines which are the products of the ductless and other glands of the body. The length of limbs, the kind of face, the shape of the pelvis, the color of the skin, the tone

of the muscles, the mental activity, the inheritance, all are because of the endocrines. Races are small or large according to the actions of the endocrines which in turn are influenced by environment.

Napoleon shortened the stature of the men of France by the killing off in wars of the biggest men so only the smaller men could breed and reproduce. Also the nervous strain on the adrenals and other glands of both men and women inhibited the proper growth of the offspring.

How shall we build the bodies and characters of men? Do you know of a better way than to study and know the orderly arrangement of the forces expressed in man—which is mystical science—and being guided by the truths there found?

So far we have treated the glands as if each stood out separate from the rest, but they *never function separately*. Each influences the rest of the chain. A physical shock or mental shock will soon involve all. The endocrines are the directors in the corporation of organs and tissues and consciousness of the being called man. There are sub-committees that control certain organs. The growth of the brain is presided over by the adrenal, thymus, thyroid and pituitary. They decide the size, the number of cells, convolutions and speed of its chemistry or action. The sugar metabolism is presided over by the pancreas, adrenals, liver, thyroid and pituitary.

These glands or directorates may be co-operative or antagonistic. The thyroid and thymus are antagonistic. One inhibits the other (this is illustrated by feeding the tadpole thymus to prevent differentiation and the feeding of thyroid to speed his development).

The thyroid and the pancreas are antagonistic.

The thyroid and the ovaries are co-operative. The pituitary and the thymus are antagonistic. The pituitary and the adrenal cortex are co-operative on the brain and sex cells.

The ideal condition of mind and physique is when all the endocrines have a correct balance. This is called “Harmonium” by the Rosicrucians, when their interplay is normal. That would require normal environment. While normal environment would seem like

Utopia yet we must have the creative mind to try and develop the correct environment. We have no other way of function or expressing self but through the body and mind. Mind is but a consciousness. It is not something separate from our being.

We have two minds in our being: One is the reasoning mind and is called the conscious mind; the other is the sub or unconscious mind. It functions when the reasoning mind is at rest and is the building force of the body and mind. This subconscious consciousness is the positive impelling force of man and is expressed in the endocrine system. It is called by scientists the vegetative system, and is supposed to be a lower form of action. The vegetative or endocrine system is the consciousness of the ages of involution and evolution of man. The impelling forces within man come from these endocrine expressions. Our emotions are the actions of the endocrines. The reasoning mind has no emotions. In fact it is a question if a man's mind is as yet capable of any great reasoning, for all his reasoning is so tinged by the impulses from the endocrines that they overshadow the supposed reasoning. Most of man's reasoning is but seeking proofs to go on thinking as he has in the past. If he is a Christian he seeks proof for his belief and finds the answer in the impulses of the past recorded in his endocrines. If he is a Jew the process is the same, as also it is if he is a Buddhist or Mohammedan. He loves and hates not by any reasoning power of the mind consciousness but by the deep impulses of the endocrines. We unconsciously absorb the arguments that come in our every-day contacts. That is environment.

We must make a new era. An era where we will know that as we have evolved we were dominated by bodily processes, animal impulses, savage traditions, infantile impressions and numerous traditional and conventional reactions, and now we must use clear reason and clear thinking and transmute the knowledge of the past into wisdom and spiritual life for the future. We must leave behind the exhortations of the past as to the impurity and baseness and vileness of the physical body. We must learn that a clean soul must have a clean body to function through, if the functioning is to be clean. Men, like animals and plants, go on, generation after generation, living as their progenitors have lived, for the vegetative system has reasoned very slowly and has acted

only from necessity, but we have arrived where we know that the past is not the sole standard for the future. Our past is too full of fears and hates. We need to become truly mystical and seek more light.

We said before that the brain is not the exclusive seat of the mind. It is only one unit of the intelligence system of the body. The glands are the tuning keys that lighten up or tighten up the driving forces of the system. This tone or driving force of the system is called the kinetic drive and is registered in the consciousness of the glands which is the so-called subconscious mind. This system is interrelated by chemical processes and through ganglia of nerves of the sympathetic nervous system to the solar plexus and other plexuses and the brain. Your wish or your will is not a thing of the thinking mind, but is a matter of the standards of the glands or endocrines, or the so-called vegetative system. If we know a man's internal secretory composition we can predict very accurately the physical, mental and spiritual makeup of the man. Also the general lines of his life, disease, tastes, idiosyncrasies and habits.

The past action of a man will give his endocrine standing. Customs, morals, ethics are the endocrines. Our evolvment is the story of the ductless glands, and the Cosmic mind will be raised only as the power of the individual mind is raised through the functioning of the endocrines and the reaction upon the mind. Our thoughts affect the endocrines as also the endocrines affect the mind or brain. Foul thoughts affect the endocrines. Foul and decaying products of digestion act upon the ductless glands or endocrines and may plunge the person into deep melancholia. Narcotics may for a time transport the person to realms of bliss through exhilarating action upon the conscious and subconscious forces. A sudden word or shock may act as poison. Loves, hates, fears have their depressing effect or exhilaration as the case may be. Diseased endocrine glands will affect the thinking mind of man and color his thoughts. Diseased gonads will cause the mind to dwell on matters sexual. Diseased gonads will cause irritability or a state of fear. Diseased thyroid will cause depression if hypo-thyroid, and a greatly excited condition if the thyroid is a case of hyper-thyroid.

TYPES OF ENDOCRINE PERSONS

THE NORMALLY BALANCED endocrine human being is rather rare: There are as many different types of unbalance as there are endocrine glands. Our environment and possibilities for expression are still too inhibitive. When man finds the freedom he is ever seeking, then will he find balance.

The Thyroid-Centered Personality

The normal thyroid personality has bright eyes, good clean teeth, symmetrical features, moist flushed skin and a temperamental attitude toward life.

The hypo-thyroid or lack of thyroid personality is usually below the average in height with a tendency toward obesity. The complexion is sallow and the hair dry and the teeth irregular. The extremities are cold and bluish, the circulation poor.

The intellect is pretty sure to be dull unless the pituitary is large; the mind may be fine but the energy will be always lacking.

The hyper-thyroid (excessive thyroid) person is the ruddy, live wire type. Active and energetic, fair complexioned and magnetic. The thyroid regulates the speed of living. It promotes the activity of the adrenals and in that way produces the activity of the system. The thyroid centered person is usually the restless, active, perpetual worker who gets up early, works all day until late at night, then goes to bed and plans the work for the next day and then complains of insomnia. These persons are very susceptible to shock and worry or grief and their friends will be surprised that such energetic persons should so

quickly become invalids and subject to various forms of psychosis, especially melancholia. Shock inhibits the endocrine secretions, iodine, phosphorus, and arsenic of the thyroid, and with it goes the break of normal interplay between all the other endocrines, and an especially live wire becomes derelict on the ocean of emotions.

Pituitary Centered Type

The hyper-pituitary or the sufficient or dominant type is usually large with large, long bones and the frame is dominantly "bony." The eyes are wide apart, face broad, teeth broad, large and unspaced. The chin is usually square and protruding. Large feet and hands and early growth of hair on the body and a thick skin. Usually well sexed and aggressive and precocious and self-contained. There is usually an acute sense of rhythm. The features are not usually symmetrical. Abraham Lincoln is the extreme type of the pituitary centered person.

The hypo or inferior pituitary type is small, sometimes with very delicate skeleton, rather prone to fatty tissues and weak muscles, with prominent or protruding upper jaw, dry skin, small hands and feet, abnormal desire for sweets, subnormal temperature, pulse, and blood pressure, with poor control of the vegetative (ductless gland) system, mentally sluggish, dull, apathetic and backward, losing control quickly, crying easily, discouraged quickly and having no stamina.

In the pituitary centered person much depends upon the sella turcica or the cradle of the gland, whether large and roomy or small and restrictive. Also the other glands' development aid or retard pituitary development.

Much depends on whether the anterior pituitary or the posterior pituitary is dominant. In the male the anterior should be dominant, and in the female the posterior. Also with the anterior pituitary the testes should be allied and with the posterior pituitary the ovaries should be conjunctive or allied. The anterior pituitary and the ovaries dominant would not be a good combination. It would make the masculine woman. The posterior pituitary and the testes dominant would make the feminine man.

When the posterior pituitary dominates in a woman and there is good ovary support, the build will usually be rather slight and delicate, the skin soft, moist, roseate. There will be a fondness for children with rather an emotional tendency, in fact the ideal feminine type of woman. The unstable post-pituitary female is unstable in all of her expressions. Craves excitement, constant change and a new pleasure every minute.

Wars, excessive excitements, excessive sex sensualities, improper dress, improper foods have produced many unstable post-pituitary types.

Many men are post-pituitary centered and are often the poetic type, the musicians and very emotional. They are usually short, round and stout. Here we have the henpecked husbands and lovers. They often are beautiful characters, but lack aggressiveness. They should be understood, not bullied. Many women are anterior pituitary centered and so become the aggressive type and fill men's places in the business world. They too should be understood and not abused.

Adrenal Centered Type

Hairy, dark, masculine, primitive and strong. Here we have the slave driver for he has such a sufficiency of driving force he can drive others. Among the high salaried persons and men of great energetic positions we have the adrenal centered type. The adrenals, in conjunction with the pineal, control the pigmentation or the darkening of the skin. The dark skinned and red haired persons are typically the fiery adrenal centered persons. In persons that lack adrenal secretion influenza or diphtheria are most easily contracted. They have a lack of immunizing force. The person that has a good adrenal supply with good thyroid and pituitary action can lead the world. He can be a master among men. Brain fag is often due to adrenal fag. The adrenal type among women is masculinoid.

Moles on the skin are the product of the adrenals. The adrenal insufficient is weak, irritable, lazy and apt to be neurasthenic, and has loss of appetite and a general lack of response to stimuli of all kinds.

Growth is slow in an adrenal insufficient and he cannot be driven or hurried. Children that lack the adrenal secretion before puberty often awaken to good energy when the rest of the endocrines develop—especially the sex glands. This fact should be understood by the educators of the land. The children that have not a sufficient supply of adrenal secretion cannot learn well and cannot be driven to learn. They will lack also the iodine and phosphorus supply of the thyroid endocrine secretion and thus the brain conductivity or the registering force in the brain will not be there and you cannot expect a child to register impulses unless the medium for impression is supplied. You would no more expect the phonograph receiving horn to register the vibrations of sound without the wax or composition plate for the needle to act upon than you would expect a mind to register without the material on which to register. Educators have much to learn from the endocrine system. The educators have acted upon the supposition that the brain was a recording disk upon which they could pour impulses and have them register. The iron, the phosphorus, the lime salts, and all the subtle agencies of the endocrines must supply sufficient balance or the brain and general kinetic forces cannot act. Schools, like churches, have been places for inhibitions instead of activities along the natural paths of expression. The hope for the future in education and religious expression is for the doctor, teacher and the preacher to pool their knowledge and forces and educate along the lines of least resistance, which is nature's way toward full expression of consciousness.

Gonad Centered Type

This subject cannot be adequately handled in a book for the general public until the general mind is less sensual in its outlook.

It is the sex glands that make the male and the female types of person. Masculinity and femininity are expressions of the interplay of all the internal secretions. The testes and ovaries only give certain tendencies. There is no absolute masculine or absolute feminine, for there is still much of both within us. This will be understood if the reader will remember the action of the pituitary gland in its anterior and posterior aspects. The testes and the anterior pituitary make the

dominant masculine person and the posterior pituitary and the ovaries make the dominant female. When the thymus gland has prevented the full development of the differentiated sex glands then we get continuation of the two sex expressions within the one person. Here we get the homo-sexual person. (See thymus gland.)

Sex seems to be due to chemical reaction, and depends upon the number of chromosomes in the cell of the egg. The male has 22 chromosomes and the female has 24 chromosomes. Also lime salts play a great or dominant role in the development of man and woman. The male is more stable in lime salts action. The female is more unstable because of the periodicity of her life—menstruation, pregnancy and lactation. These draw on the lime salts reserve. The male is bigger and stronger because of these facts. The eunuch is one in whom sex has never developed because of castration, and he is always childish in feature and mind yet reaches senility when yet young. He does not have the lime salts that go to making stability. There are also infantiloids, who are persons that have not been castrated yet are infantile in sex development. They are much like the eunuch. We also find infantiloid tendency is invariably toward homosexuality. Homosexuality is defined as the desire to associate with one's own sex or where sex pleasure is most greatly expressed with one of the same sex.

History tells us of various cults of homosexuality. In many cases homosexuals were produced by unnatural means of inhibitions and sex irritations until all natural sex expressions were impossible. These were used in religious orders or as prostitutes for orders or sects. Even to this day there are religious orders that consider it a part of their religion absolutely to inhibit every sex impulse, and while these orders contain many brilliant men, for they work off their sex energy in mental attainments, the average person of the cults is nervous, suspicious of all men and women, and becomes very self-centered and very rarely becomes a great leader of men. Real "he" men do not readily follow a feminine or suppressed type of man. Neither will really feminine women follow or respect the feminine type of man. Men with strong anterior pituitary, strong adrenal glands and weak sexual glands are apt to be very cruel and destructive in their expressions. Repression in the male will often start the feminine trend and in females start the masculine trend.

The ideal normal man is the man with strong sex power and a well developed anterior pituitary with the balancing power of the post-pituitary normal, and strong adrenals. This is the man that will be creative in his work, kind in his actions and yet have a driving force that will meet and break down all barriers to his progress. This is the type of man that will be loved by both men and women. He will be a man's man up to higher planes, for he himself will be constantly man and also a woman's man. He is the type that will live striving for that which is best and highest. In him will be the poetic genius that drives him ever on and on. He will be able to realize the four great principles of life and can transmute his knowledge into building his physical, emotional, mental and spiritual expressions to the very highest. He will become the super man and then the master.

And similarly will evolve the woman who is truly feminine and well balanced in the sex and other endocrine glands. This truly feminine woman will be the medium for unborn lives to enter this sphere and through her, in conjunction with the perfect type of male, the incoming life will not be handicapped but will be free to evolve as the Creator has directed.

The history of man's expression on this earth has been one of cycles of profligate abandon to excesses followed by periods of terrific inhibitions. After an age of wanton excesses there went forth from Mt. Sinai the command of "Thou shalt not," and due to misinterpretation there followed a period of asceticism and inhibitions that we are still suffering from. These thunderings from Mt. Sinai have been interpreted to mean that all physical expressions were impure and unpleasant in the sight of God, and yet this same God by the same teachings caused all the impulses that drove men on to expression. Science will soon step in and by natural teaching will bring mankind to a realization that every expression of consciousness may and must be pure and uplifting. Man's creative force is essentially a pure force and just as necessary and sinless as the eating of food. Eating of food may be as unclean and excessive as the sex force. The young men and women have not been taught to know and live their creative lives. They have learned to sneak and steal and abuse their God-given forces. We have treated our hogs and cattle better than our children. To teach children simply to

suppress all their lives is as productive of results as to try to blanket the crater of Vesuvius to keep it from erupting. The eruptions will come and the cities will be destroyed.

Science will teach how to stabilize man's excessive vegetative (endocrine) system and produce a race of balanced men and women. Our instincts, which are the subconscious intelligences of the ductless glands, will lead us on to normal expression if they are not wrongly inhibited. We have been taught to live "by faith alone" and I do not belittle faith when I also demand that I may be led to live by the law of all life, which is the law of action and reaction, or the law of cause and effect. Rosicrucians call this "Karma." Man can understand the creative laws if he will only study and learn. The secondary characteristics of the male are: Hair on the face, skin coarse and lean, muscles powerful, bones heavy, bass voice and generally aggressive.

The secondary characteristics of the female are: Hairless face, skin fine and plump, relatively weak, bones light, treble voice and usually reserved. Woman's expressions are rhythmical. They act with the tide and moon phases. This may be traced to the posterior pituitary which in turn may be traced to the time when the pineal gland was an eye.

That creative force of man is largely centered in the sex endocrines is proven, for in all eunuchs that were so made before the sex ever developed, there has been no creative energy ever developed. In the past there have been many cults to inhibit sex expression but for the future, science will teach that he who inhibits all the endocrine impulses of his being will be as impure and unholy as the being who indulges in excesses. The mind and higher spirit of man cannot develop when the prime creative force is destroyed. (In a later chapter we will show that sex expression is not mere copulation.) All the endocrine expressions should be pure and not excessive. Man cannot evolve through lusts or excesses nor through inhibitions.

Just at present there is a frantic effort being made by some men and some doctors to find the perpetual fountain of youth and some think they have found it in the gland transplanting process. It is the usual fool effort of men to outwit the laws of nature. Transplanting of an ovary or a testicle may give added impetus to the sex expression, but

in the long run it must only wear out the general system the faster. It will be the plaything of the idle rich and sensational doctors for a time, and it may possibly add a few months or even a year or so to the sense pleasures of the few who can pay for the mutilation of some poor unfortunate, but the immutable law of “Karma” will not be made sport of, nor can it be cajoled by money. The “Temple of Myself” is holy ground to our way of thinking and the effort to find ways to continue mere sensuality is very disgusting to us. The endocrines that are not abused will stay fine until very old age.

We do not wish to say much about treatment with endocrine products which is getting to be the rage at present by doctors and by quacks or proprietary concerns. We wish to give this warning that it is best to go very carefully. If you have any endocrine trouble consult a man or doctor who really has made a study of the subject. The mere feeding of a gland product cannot correct the trouble. There is some law of life being violated when the supply is not normal. The thing to do is to find what law is being violated, then correct that and then find the best method of arousing the forces within the glands. It may be that all that is needed is mental or emotional calm. It may be that exercise or more sunlight and air is needed, or it is just possible that you are using your vitality too fast and are in the state of “Fight and Flight.” It may be that you do need some endocrine products, but it is not safe to use them indiscriminately. The science of supplying deficient endocrine substances is not fully developed. The object of this story of the endocrines is to make the laity a little more familiar with the building forces within the human temple and the sacredness and the possibilities of life’s evolution.

Thymus Centered Type

Up to the time when the permanent teeth are through, the thymus is the dominant gland. This age is to six or seven years and here the child form is very alike in both sexes. Then slight differentiation begins though no marked changes take place until the time of puberty. At this time the thymus functions less and less and the sex and other glands begin a greater development. When the gonads are fully

established, the thymus is supposed to have become inactive. But often the thymus goes on functioning for some unknown reason (probably some inherited trait or lack of sex growth) and then we have a person whose whole life will be dominated by the thymus gland (Thymo-centric). The features will stay rounded and child-like. The ruggedness of the sexual or pituitary type will be missing. In this type we get the "angel children" that are so delicate and fair of skin and features that they seem to be not of this earth, and their movements are all grace. Novelists seem to delight in describing this type of child. It is not a normal child.

The thymus centric is handicapped for life's stress as the body is usually not strong and is subject to being easily shocked.

It is the proverbial "good" child that "dies young." They often die suddenly and without apparent reason. They do not stand operations well. Puberty is hard to be established in one of this type.

There is still some disagreement as to the action or lack of action of the thymus after puberty. The most common opinion seems to be that a persistent thymus after puberty tends toward producing the feminine expression in the male and the masculine expression in the female that is, a partial castration takes place. Increasing the interstitial secretion of the male thymo-centric will establish a better masculinoid, and supplying the female interstitial secretion will establish a better balanced female. The thymo-centric is to be pitied and science will soon come to his aid. The thymo-centric will often wonder, and so do all his associates, why he is not like others. There is the peculiar complex that the male thymo-centric will want the society of the male more than the society of the female which is not the case with the normal male. The normal male naturally seeks the female companion. The thymo-centric female will have the complex of preferring the female society to that of the male. The normal, fully developed female will naturally desire that the male will seek her and desires male companionship.

Homosexuality (desires for one's own sex) may be concealed, but it often is frankly conceded. This sex complex complicates the social adjustment of the person. It often and usually makes it difficult to train the boy in the male expression of his life, be it play or work, and

the girl stays hopelessly "Tom boy." The pituitary also seems to be unable to function properly to assist the person to correct reactions. This child will be apt to be a late childhood bed-wetter and will have a very small sense of the proprieties of life. In this class we get the pathological liar or unconscious liar and the child that will steal and promise not to do it again and in a few moments do the very thing again. There is no sense of responsibility. He may not be vicious but is just generally irresponsible. Even the tissues are unstable and subject to tuberculosis, meningitis and all children's diseases. The author personally knew a lawyer who was a typical thymo-centric case. Even in common conversation the man would lie when the truth would have been far better. He had the typical rounded child features though of rather tall stature. He was well developed mentally and a good talker, but irresponsible. He was quite the Oscar Wilde type. His irresponsible habit of life caused him to be sent to the penitentiary. We now know that the man was not really criminally inclined, but this undeveloped side of his life was his downfall. The time will come when we will treat as sick, the morons, the endocrine deficient and most of the men that we now condemn to prison for life and make brutes of. The spiritual vision will give us the insight to the actions and reactions of life expressions.

We will some day know how to develop the sex and pituitary glands and endocrines so as to cure the thymus dominant case. It is in these thymo-centric cases that we get men that love men, and women that "marry" women. The thymo-centric is apt to be generally weak and knock-kneed, flatfooted, fragile, with poor circulation and handicapped for life. It is claimed that alcoholics, drug addicts, criminals and degenerates belong largely to this class or type. There is no stability and so an ever restless seeking for something to satisfy and nothing satisfies. They are the misfits of life. They do not fit into the normal scheme of things.

If the pituitary and the thyroid become well developed the thymo-centric person may become rather brilliant. This lawyer we mentioned was very brilliant but very eccentric. We find a great many epileptics among this type. Napoleon was somewhat the thymo-centric type though his anterior pituitary gland was his driving force. When that

failed him he failed. Napoleon was an epileptic. He had small sex development. He had no real love for women. They were merely a convenience. His posterior pituitary was not well developed and his adrenals were, so he was cruel in makeup and brooked no sentimental interference. He was not religious. Many of the great adventurers and restless experimenters of the world were thymo-centrics. Mohammed was an epileptic.

It is claimed that our murderers and suicides come from this type of beings.

Oscar Wilde was another type of the thymus centered person. He was brilliant and wrote some of the most beautiful things in the English language, yet he was sent to prison for his homosexual practices among boys.

Most of the thymo-centrics are not brilliant. They are more commonly the common brutal type of misfits of life.

Improper mating of parents often is the cause of the thymo-centrics. As two positives will usually produce a negative, so if two pituitary centered persons mate and reproduce, the offspring is very liable to be thymus centered. This may explain why so often the offspring of two very brilliant people will be so common and irresponsible. Or two money-mad adrenal centric persons will have a puny, weak (mentally and morally), degenerate child. The normal offspring can only come from a mating of the normal male and normal female.

Chapter VI

CONTINUATION OF TYPES

AS WE STUDY the actions of the endocrine system we realize that it is due to their unbalance or abnormal action that we have the various abnormal human beings. When the building and activating forces of the ductless glands (endocrines) are normal we have normal human beings. We will note some of the outstanding peculiarities of unbalanced endocrines.

Pituitary centered persons are liable to headaches and eye trouble, for in mental activity the blood is sent to the brain more intensely and the pressure on the pituitary is the result.

Nietzsche was very brilliant but unstable pituitary-centered and was subject to intense headaches and later in life was mentally unbalanced.

Darwin was a neurasthenic pituitary-centered person. His adrenals were very lacking in power. After his gonads became less active his adrenals became more active and he was able to do more work. Men and women often are more vigorous after the menopause.

Many neurasthenics are pituitary-centered with failure of normal balance of the thyroid, adrenals and gonads.

One of the finest pituitary-centered persons of history was Abraham Lincoln, but he was endowed with wonderful balance in all the other glands. He was strong and powerful, yet gentle, tender, patient and kind. It is the unbalanced person that is erratic, cruel, coarse and undependable.

The time is not far distant when criminals, degenerates and the outcasts of society will be understood and taught to take their places where they can function in harmony with their surroundings or be reclaimed so as to take their place with normal men and women. A man or woman who is suffering from lack or excess of the endocrines

that cause terrific urges, is sick and needs an understanding doctor, not a jailer. They spread disease as a typhoid or a diphtheria carrier spreads disease. Would you put a typhoid carrier in prison? No! You would cure the trouble.

So with people that have unnatural urges and tendencies. The cause of the unbalance will be found in the endocrine system. The cure will also be found there, and not in prison. Life is action and will be expressed. To find normal expression is man's duty and pleasure. Abnormal expressions of life do not tend to pure happiness. Normal expressions do. Every step of the daily routine of life, every phase of happiness, of thought, or feeling is an episode in the endocrine reaction of the individual. How can the mind work normally when the factors that build the mind are defective? The endocrines build the mind. The endocrines build the physique. Your evolvment depends upon the activities of the endocrines. You are building for eternity now. If physical science is true in its claim that nothing is ever destroyed, that it only changes form, and if metaphysical science is true in its postulate that life is continuous, then we must go on, reasoning from the law of action and reaction or cause and effect, that the causes that we start now will be the effects of the future. Who can tell us positively where the effect ends?

Our teachers and preachers need to know the laws of the endocrines as well as the doctors. The teacher that can understand the cause of the impulses or lack of impulses of the children in the school room can lead and control the children through a grind that was not unlike the old cider-mill where large, small, wormy, bitter and sweet apples were ground to a homogeneous mass and squeezed until dry. We need a system that will grade the pupils much as a prune or orange grader, where every grade will be put where it belongs and can be properly handled. Under the correct system the culls can be taken care of and put to such use as they are fitted for. The analogy is not absolutely correct, for children are not like apples or oranges, they have souls that need developing and must have a chance. If the thymus gland is at fault it can be helped by shrinking the gland with X-ray or feeding gland substance. If there is sex irritation the cause should be found and removed. If the cradle of the pituitary gland is too small (the

X-ray will reveal it), then feed tissue salts or better foods for developing endocrines. Study the thyroid for excess production or lessened supply of iodine or phosphorus or arsenic.

The psychoanalysts claim that all our urges come from the sex complex. There is still a doubt if this is true. But it has been proven amply that it is the sex forces that produce the creative and imaginative qualities of mankind. Also the judgments. A castrated person has no will power or energy. He also has no judgment, so we know that the gonads play an important part in will and judgment.

The constructive imagination is due to a good balance between the anterior and posterior pituitary gland, with correct sex balance. We have thyroid moods, adrenal moods, ante and post pituitary and gonad moods. When we get absolute balance of the glands we will no longer have these special moods.

There must be forces as much more subtle than the endocrine as the endocrines are more subtle than the mind and physique. May we not hope to find some day the subtle forces that cause us to catch the thought forces that impel us onward and then learn to build ourselves with positiveness? We are still too unstable.

Man has evolved through the unconscious but it is now time to aid by using the conscious. A wish is never born in the brain alone for the brain has no power to charge itself with energy. It can only store and transmit, for the source of energy is in the endocrines. The ancient philosophies taught that Devachan (Heaven) was a place where the physical and emotional part of man had been cast aside and where man lived in the mental state alone. All desire was cast aside and life was just a contemplation. Thus man contemplated until the desire came to enter again the realm of expression for more knowledge and experience, and he again took on an emotional or astral body and a physical body and descended to the earth plane where he again mingled with the evolving people and gained knowledge and wisdom and learned to help his fellow men and become a master among men. Thus he took numerous rounds on the "wheel of necessity" and through vast cycles of experience he became as one that had all knowledge and knew God.

One cannot contemplate the workings of the human in all his phases and expressions without feeling that there are some vast forces beyond the things that science has yet demonstrated, and that we, as human beings, have a very intimate connection with the ALL EXPRESSION.

We believe that we have come closer to solving the connection between the here and there, through the knowledge of the endocrines, than through any other source. We get nearer to the soul of things. "Acuteness of perception, memory, logical thought, imagination, conception, emotional expression or inhibitions and entire content of consciousness are influenced by the internal secretions." (Berman) Soul consciousness lies just beyond.

Though no wish is born in the brain it is through the thinking mind that we will have to find balance and the final uplift of this plan of action. When the thinking mind is fully built then we will be ready for meditation and transmuting the knowledge we have gained into wisdom. Through wisdom we may gain adept ship, which is real self-mastery. The brain or thinking organ is built and made active through iodine, which gives electric conductivity, and through phosphorus, which is one of the most vital ingredients of the brain. These are furnished by the thyroid gland, so it must be healthy. The creative energy is furnished by the sex glands and the pituitary gland, so it is important that these be healthy and normal in action.

Fear, anger, hate and love, courage and desire for service are of visceral and endocrine origin, but the brain or thinking mind is the recording place or the transmuting organ, and like the phonograph record it can only register the impulses that are sent to it and can only send out what it has recorded and meditated on.

Hunger is not a cerebral manifestation. It is visceral. Fear and anger involve the adrenals. They are the glands of combat. Courage comes from a good anterior pituitary and strong adrenals. The maternal instinct comes mostly from the post-pituitary as also do the social and some of the creative instincts. Sex libido and passions are related to the testes and ovaries. Sympathy and curiosity are functions of the pituitary. The instincts of self-display and self-effacement and pride and shame are of thyroid origin. Thyroid is an energy producer and

we live fast or slow according to the state of the thyroid. Memory is due to a good iron content of the brain, and iron is a product of the thyroid. The pituitary seems, however, to be the preserver of memory. A child may have a good memory but poor judgment, for its pituitary and gonads are not yet fully developed.

METHODS OF DEVELOPING THE ENDOCRINE GLANDS

THE PITUITARY GLAND can be stimulated by deep nose breathing. The Rosicrucians have taught this for years and have proved it by their mystical exercises. The blood circulation of the nose and the base of the brain are intimately connected. Singing that vibrates the base of the nose and brain will vibrate and stimulate the pituitary gland. The ancients pronounced the sacred word so as to stimulate their vital forces. (The Rosicrucians still use definite “vowel sounds” for this purpose.) They even warned against pronouncing of the sacred word by one who did not understand the potency of its power.

The thyroid is the organ of emotion, so calm and poise is essential to its development. Lately we have found that static electricity and the X-ray can do much in stimulating and inhibiting the action of the thyroid. We ll-balanced tissue foods are necessary, such as fruits and vegetables.

As the driving force of the adrenals derive their power from the thyroid iron, it is necessary that the thyroid be normal and the fear and anger element be controlled.

There are two ways of remaining young: One is by keeping the thymus and pineal glands dominant and so being juvenile and undeveloped, and the other way is to keep the sex glands normal and able to function, and being fully mature. When society will attain a pure mental attitude toward life's functions and when the subject of normal health can be taught in the schools so the children will get a comprehensive view of the building forces within them—the

endocrines—then will the oncoming races become more mental and spiritual, for they will understand their impulses and control and use intelligently the God-given forces within themselves. No progress can be made, however, until the masses will understand that the physical part of man and the physical functions of man can and must be as pure as any mental and spiritual expression of man. A pure soul can function better through a pure body than through an impure or foul body.

The human body in its development unveils and reveals the records of your past lives. What does your body reveal to you? Purity, love, high-minded aspirations, sweetness of contact with your fellow beings, or lust, greed, hate, sensual gratification and ignorance?

If a child is well born and has the liberty to express itself, its endocrines will most likely be normal. Of course, the child must have normal mental and physical food. A judge said recently that it is physical energy that drives lads into mischief and crimes. Certainly it is physical energy that drives on any child or grown person to self-expression of any kind. The judge himself would not be a judge if he had not had a superior energy that helped him to claim the place he now occupies. See to it that the lads and lassies have a normal way of expressing their energies, for they are God-given and they too may be judges or occupy prominent places. Do not throw inhibitions about them until the forces within them drive them on to criminality. Boys and girls are wonderful imitators and they express life very much as their grown-up brothers and sisters do. They are often not so discreet and thus get into trouble.

Glands can only develop normally under normal conditions. Energies pent up within a person will have expression either openly or secretly.

Next to the food impulse is the sex impulse. Sex is the creative force as we have said before. This creative force WILL NOT be denied if the person is to stay alive and active. To suppress it would make a race of eunuchoids. We want a race of active, virile men and women. How can we attain this? By giving the race ample opportunity to develop its creative energies. Sex is expressed not only in copulation. Sex expresses

its energies in multitudinous ways. Play, fight, study, painting, singing, decorating the body, religious fervors and catalepsies, football games, baseball games, bridge parties, gambling, hard work, home life, etc.

Children and grown-ups that are denied all healthy forms of expression will seek expression in secret, and that invariably leads to the wrong use of the sex expressions—masturbation and liaisons. These facts we know as true, for they come from living in several communities where the young were denied all dancing or any form of amusement, but going to church twice on Sunday and sitting still for two hours of tirade, and all getting together of the young was by sneaking when the old people were asleep, and the result was just as we have stated.

There will be mighty few young people who will not be eager to live splendidly, when they are taught the actual truths of life and their driving forces that are trying to express themselves. They will give heed to the laws of cause and effect and will hold their sex expressions to normal expressions, and thus gain control of themselves and their lives, and live beautifully. We must learn control and proper sex use. Ignorance and complete inhibition or complete abandon will not bring happiness. Knowledge and poise will do it.

All nature at this age is keyed to the law of sex. The flowers, the plants, the insects, the animals and the human animals are all living under this law. Why should we not study the law?

“The science of sex is to know how to produce the most perfect bodies. The philosophy of sex is to know the purpose of bodies and make the best use of them. The religion of sex is to lead quality to intelligently become unity.” Science, philosophy and true religion teach the purity of sex and by this is our only hope of regenerating the race.

A scientist was once asked why he knew so much about the fly. He said it was because he put himself into the consciousness of the fly.

When we put ourselves into the full consciousness of man we will know more of man. We have been putting too much consciousness into Gods, angels, fairies, genii, and supernatural states and in lands,

houses, food, fame, honor, clothing and GOLD. All these are good in their places but they are not the most vital things of our expression. We plead for a fuller consciousness of TRUTH, KNOWLEDGE, WISDOM and LOVE that will lead us on to greater unity with the INFINITE INTELLIGENCE. We must learn to correlate all the forces within ourselves. The endocrines are our building forces and through these we develop mental and spiritual or creative power and all those who have knowledge along these lines will be able to build themselves to a finer state and help all the rest of the hungry humanity to evolve. We must evolve. It is the law. Why wait to be driven to evolvement, why not be aggressive in evolving?

We must learn the effects on us all (as individuals and as races) of hate, fear, anger, jealousy, business worry, quarrels, shocks; and of hope, faith, happiness, laughter, service, interest, religion; and of alcoholics, tobacco, teas and coffee, drugs that are not foods; and of all pure thoughts and evil thoughts and lusts and indiscretions and of a well-poised life. We must learn to be honest with ourselves. You cannot fool the endocrines. You can radiate what you wish. The power is within you.

The Temple of your Soul should be a pure temple. It should be holy ground. It should be a temple of joy and happiness. YOU can make it the Cathedral of your soul.

We must get away from the destructive forces of the "Fight and Flight" evolvement. We cannot build the human system and consciousness unless we learn to stop inhibiting our natural forces. Sickness is but an inhibition of the natural forces of man. There will be no sickness when man finds mental and physical freedom. Wars brutalize men and stop the normal interplay of the endocrines. The endocrines will do their constructive work when the personality of man gets out of the way. To construct building forces we must use all the forces at hand. We need to study the food problem and the clothing and housing problems. If we are to utilize all possibilities to evolve super men we need to know the constructive qualities of the endocrines substances as food, of medicines that are constructive and surgery that is helpful. Also the electrical and light, constructive and

stimulating forces. We must learn to put aside the inhibiting forces of wrong thinking. Many cults have within the last few years been built up on the need of freeing the mind forces. The medical man has fought these cults, not recognizing that the urge for the freeing from thought-inhibitions was deeper seated than any cult has yet expressed. The cults have done much good by their teachings and yet (as ever within a creed) there have been limitations fastened upon these cults themselves by personalities that have all but destroyed the really good effect of the teachings of the cults. Spiritual and mental healing have very often caused a calm within the person and in this great peace the endocrines did their normal work, and so the person became healed. Functional as well as organic diseases have been cured by the calm of mental and emotional exaltation or peace. The ideal doctor is one that knows all the forces of the physical body and also the activities and power of the mental and spiritual and emotional planes. The perfect doctor or healer is like the perfect man—still in the evolving.

To recognize that the healing or building forces are within man and all they need is freedom for expression and maybe a little stimulation from outside forces, is a vast step in advance. The doctor or healer can only help clear the way for the forces within to work. The medical man has by his teachings in sanitation and his scientific findings of the action of the physical and endocrine forces and psychological actions, given to mankind more than he can ever be repaid for. The mental healers have given a new impetus to truths that were lying dormant. All the findings of science and metaphysical science need to be weighed and used when good. We need to develop good, common sense and reasoning force. Good sense is the result of a good interplay of the endocrine forces.

Disease may be inhibited by drugs and also by mental processes. But when the inhibition ceases then the disease is still there. Just now auto-suggestion is the rage. In some cases it may do good, but when it says there is no disease or there is no pain, the pain may be inhibited, but if the laws that produced pain are not corrected, the pain will manifest again. A person can suggest to himself that he is on top of Mt. Hamilton and keep suggesting for ever, but if he does not obey the laws that take him to the top of the mountain he will never get there.

He can suggest to himself that he will go to the top of Mt. Hamilton and thus start the forces that will take him there. Here common sense and reasoning force are needed.

We need to learn the art of loving, for love is the great constructive force, and so forcibly expressed by the great teacher the Christ. Most expression of so-called love is but sex sensuality. The art of loving, the art of being kind, the art of giving service, the art of being, need to be taught in the homes and schools and in the churches. The Rotary Club, the Lions' Club, the Progressives and all the business men's clubs need this teaching and realization as much as the art of booming business and selling the town for publicity, etc. Heaven could be started right here. All the needs for heaven are right here.

Show us a man's mystical philosophy and we will show you how far that man has evolved. A man's mystical philosophy is his highest conception of life.

Chapter VIII

EXAMPLES OF THE INHIBITIONS AND EXHILARATIONS OF THE GLANDULAR SYSTEM

IN THE FOREGOING chapter we mention some of the inhibiting forces such as hate, fear, etc., and love, service, etc., and some of the narcotics. This book does not pretend to be a classic or an exhaustive treatise. It only hopes to stimulate further research in the subject. To those of the laity who wish to pursue the subject farther I would suggest Berman's "Glands Regulating Our Personality," Macmillan Co. Also Lorand's books, and the writings of Soddy, Cannon and Crile.

We will here show a few specific cases of the actions of the glands under abnormal conditions.

One of the most pernicious influences upon the glandular system is the excessive use of the cigarette, cigar or pipe. The normal action of breathing or inhaling air is to supply the iron of the blood with oxygen. Oxygen is absolutely necessary in all the digestive and reconstructive processes of the body. Scientists claim it is the life-giving force or the substance that IS, or produces life. All slow-burning fires or incomplete combustion fires produce carbon monoxide gas, one of the most deadly gases known. One part in eight hundred parts of air will cause death to a person in one-half hour. The exhaust from the automobile sends out large quantities of this gas and in the early years of the use of the automobile many deaths were caused by starting the automobile in a closed garage. The slow combustion of the tobacco produces carbon monoxide gas and this is inhaled by the smoker and as this gas has a greater affinity for iron than has oxygen the oxygen is pushed aside and

the carbon monoxide enters the blood in combination with the iron and this combination has a very deleterious action upon the glands of the system. This is why the boy or girl who smokes excessively rarely has energy. He or she is lazy as a rule, yet nervous and excitable and lacks real driving force. The special gland affected is the gonad. The oncoming race will positively be weakened by excessive smoking. Experimentation with animals has proven that animals subjected to smokes (simulating the smokes of the human animal as much as possible) will after a certain period of smokes, no longer breed. The time is coming when men will no longer sit in smoke-laden rooms and inhale and re-inhale time after time smoke that has passed through other nostrils and mouths and think it is the correct thing. Any smoke that is inhaled whether cigar, pipe or cigarette has the same effect.

Alcoholics have an action within the system because of the action on the glands. When a man takes a drink of alcoholics he may feel exhilarated. Why? Because it is a poison and the one gland that is ever on the alert is the gland of taste and smell—the pituitary, the subconscious brain. It sends out an alarm or hurry call to all the rest of the glands to get to work to expel the invader of the sanctuary. What is the result when all the glands send out all their forces to strengthen the citadel against the foe? An exhilaration. The glands and cells of the body, that is the subconscious cells, have a greater preserving sense for the man than the man's thinking consciousness has. If the man took only this one drink maybe there would be no serious results, but the ignorant fool takes another, for the first seemed to do him good, and another and greater call is sent out and so on, drink after drink until the glands can no longer work fast enough and become overwhelmed, and the man becomes overwhelmed with the poison and we say he is drunk. The glands are like a faithful dog and no matter how they are abused they will ever strive to save the system from serious harm. They even may get so used to the alcoholics that they will refuse to work until prodded by a drink or two.

So with all narcotics and drugs. There are times when drugs and narcotics may bridge over a crisis, but curative medicine must have a food value or stimulation that urges the reconstructive forces of the body, which lie in the glandular system, to do their normal work.

Over-feeding and wrong feeding will produce a self-poisoning within the digestive tract (auto-intoxication) that will do about the same to the system as alcoholics and narcotics. The beginning of Bright's Disease usually comes from an abused digestive tract that has to throw off so much poison through the kidneys that the kidneys become diseased and can no longer function.

This form of trouble is very common with the business man of America. Remember that hate, fear, excitement or any strenuous depressing or fighting emotion stops the peristalsis of the digestive tract (the wave motion) and the food is not carried on and digested as it should be. There is fermentation and putrefaction and the product of this fermentation (auto-intoxication) is carried through the system and all the glands and tissues suffer and the friends often write about an Inscrutable Providence that has carried a brother away. An "Outraged Providence" would be a better sentence. When business men learn a little about the wonderful forces within them and maybe a little less about the fleeting dollar that cannot bring health or happiness unless some simple laws of Nature are observed, then we will have more life and still enough dollars. Money cannot bring happiness. It can only clear the way for happiness. Knowledge and wisdom only can bring real happiness. The peristalsis of the bowels and the constructive and regenerating forces within the liver are controlled by the adrenals primarily, and any shock or over strain, physical or mental, especially mental or emotional, will stop the actions of the whole chain of forces.

Drinking, smoking and excesses of food are not a good combination to take to a business where a clear head and fine decisions are necessary. The example of the cat under the fluoroscope will illustrate the condition of the business man's case. Feed a cat a barium meal and put her under the fluoroscope and you can watch the wave motions (peristalsis of the bowels and as long as the cat is kept purring the peristalsis is not interrupted. But then pull the cat's tail or prick her with a pin and get her angry or distressed and the wave motion stops at once and is not resumed until the cat is quiet and happy again. It is the old "Fight and Flight" story. So with the man or woman who is happy and contented, the wave motion of the digestive tract will be normal, but as soon as there is grief, fear, anger, worry, or any

of the inhibiting emotions which stop the glands (adrenals, thyroid, and pituitary) from acting then the peristalsis stops and we have putrefaction, fermentation trouble, liver trouble, constipation, etc. As long as the business man works under hurry, anger, hate, fear, jealousy, etc. he will not be at his best. He needs to learn to “purr.” It is time for man in his evolvment to sacrifice the beast within himself and learn to utilize the possibilities within him. There are too many “Goliaths” (evil minds) clothed in brass armor (materialism) trying to conquer the world, and we need more “Davids” (pure minds) with five perfect stones (five perfect senses) in their girdles ready to use in their slings with which to destroy the “Goliaths.” Man needs to slay the Goliath within himself and develop his five senses and still higher senses.

The business world is very slowly learning the power and usefulness and beauty of cooperation. The slogan has been that “competition is the life of trade”, but cooperation is the only salvation of trade. Suppose all the ductless glands vied with each other in competition, what would be the result? Death of the individual. The glands of the system are ever striving to act in harmony. It is man’s ignorance and superstitions that keep him from working with this vital force that lies within the glands. Man must learn to act in harmony with the forces within himself. This is so trite it seems foolish to say it, yet the vast majority of people are absolutely ignorant of the vitalizing forces that allow them to express life. Not only man as an individual, but man as constituting communities, states, countries, nations, etc. Man meets man in business. They still fight or flee. Man meets as nation against nation. The same fight and flight action. No cooperation. Always competition. Always in high emotion of fight, fear, worry, competition, trying to destroy the other one and getting destroyed. Animals seem to live in greater harmony than men and nations. Men, communities, nations, cannot evolve and grow finer when they are not only trying to destroy each other physically, but they are destroying the finer forces within themselves that would build them to be finer communities and nations.

The ramifications of the actions upon the glands of the system that build us are so subtle that it is necessary that we know more about them. Every action of life of man is connected with the glandular or

constructive force of the system. The fight between capital and labor is playing a very great score in man's evolution. Capital is determined to control the activities of business. It gets hard and calloused in its attainments. Excessive money in families or groups tends to dissipation, sex excesses and a general dwindling of the vital (endocrine) forces of the family. These groups soon die out, that is within a few generations. It also produces egomania, that is an exalted opinion of self and families, and autocracy. Here we get the old autocracy of kings and the nobility. The history of all these has been degeneracy.

On the other hand we have just now the autocracy of labor to contend with. Another factor in labor and capital is the efficiency craze that turns out as much as possible. This has led to the attitude of the laborer taking no personal pride in his work. His work is simply slavery to him.

No man can be absolutely healthy, physically or mentally, if he has no joy in his work. Work without joy in the work brutalizes man. The pituitary, adrenal and sex glands will become less active and general stagnation of the whole system will develop. Under these conditions man's lusts will become aroused and as the higher creative force of man is not aroused, the lower will dominate and idealism will cease within the man. This may go on for some time, but eventually man must evolve and the awakening will come and woe to the forces that meet this aroused consciousness.

Some day we may get leaders of both capital and labor that will have vision enough to know that their interests are mutual and that work must be as joyous as the commanding of industries, and then will the endocrine forces of man again have the possibilities to evolve supermen.

Wars brutalize men and stop the play of endocrines. There is always a wave of crime and brutality after a war. The balancing forces of the endocrines have become disturbed. All Europe is in a constant fear of war right now. Wars never really decided any great matter. Wars are the result of man's endocrine unbalance. His lusts, his greeds, his superstitions and hates. The emotional and mental state of Europe is in complete unbalance.

A religion that teaches fear inhibits the endocrines and the finer expression of the ideal. The teaching that man is born sinful tends to make him so. The Temple of man is within his body. Here he expresses what is good and what is bad. This "Temple of Myself" is sacred. Within this temple the physical, emotional, mental and spiritual parts of man express the glory of the Creator. We repeat, we cannot conceive this creation not having a Creator. Man is inherently pure and his endocrines will build purely if allowed to do so. We are here to learn to correlate the forces within us for they are Divine forces. We are also to learn to co-operate with the forces within our brother man and all our environment.

Scientists tell us that man uses only about one-tenth of the cells of his brain. They are all there to use. Man is not more than one-tenth civilized. The endocrines have built us so far but it will be the use of the brain that will complete man's evolvement into full consciousness. The endocrine glands will build us normally when we learn to use our minds so as to inhibit fear and all depressing emotions.

Under the higher attributes of life the vibrations or the life expressions are normal and constructive. Under a hopeful religion, a religion of peace and joy, the endocrine forces are up-building. In a happy and peaceful home the child will develop normally. In a home of quarreling and fighting, children cannot develop properly. Eating should be done under happy conditions for, as we have explained, peristalsis and correct digestion cannot go on under fighting or quarreling. In the average home of today the meal time is the clearing house time for all the troubles of the family. The time when children are scolded and even punished. The writer once had a very sickly and nervous child to treat and could not find the reason for the condition. Happening to be in its home at a meal time for a few minutes we saw the child eating nicely and it leaned over toward the mother and asked a simple child question and the mother instead of answering the question nicely, said "Shut Up" to the child and hit her over the head with a cup she had in her hand. We then knew where the trouble came from. We also found that the husband and wife were constantly quarreling and fighting and that was due to sex incompatibility. We told the truth to the family and got discharged for the effort though we

found later, through a relative, that telling the truth had good effect. In both the child and the parents the endocrines were constantly abused and with terrific results. Many a child is “Called Home” under such treatment.

Coffee and teas in excess disturb the endocrine function in a similar way to alcohol and tobacco. Many a coffee drinker has to have the stimulation of a cup of coffee in the morning before the vital forces (the endocrines) wake up to work.

Thoughts are very vital things and have been amply proven to be of constructive or destructive influence upon the building and activating forces of man. Thoughts receive their impetus from the endocrines and again react upon the endocrines either for good or evil as the thoughts may be. The first great urge within man is for food. This thought remains dominant throughout life. This urge includes not only actual things man puts into his mouth and stomach but it includes the comforts of life as clothing, home, dainties and all the refinements of eating. Much of man’s thinking is about the getting and enjoying of food. The next great urge is for sex which includes the union of male and female and all love, parent-love, love of companionship, love of art, and all emotional and physical activity. The Creator surely created or evolved man in this way and so the original intent must be pure. We evolve fastest by giving service, by helping each other. By expressing harmony, idealism, order, beauty.

The Human Temple is sacred. We must learn to build well physically, mentally, emotionally and spiritually and thus learn the Fatherhood of God, the brotherhood of man, the continuous life and law of action and reaction—completely expressed life.

Our endocrines are making our personality and the development of our mental and spiritual expressions will make our individuality. Too much of our teaching, in every line, makes for suppression of individuality. The child at school must learn and master or memorize many thoughts of other men or teachers. In Sunday School or church the child, or even grown person, must accept and believe the things told by the teacher or priest or preacher. In the factory the worker must do as instructed. All this kind of teaching makes automatons, not

thinkers. INDIVIDUALITY WILL NOT BE DEVELOPED UNTIL THE PERSON CAN THINK. Many persons think they think, but they really only think the things they have memorized. Many educators, preachers, doctors, lawyers, bankers can quote you the writings of great writers and teachers and authorities and seem highly educated and yet they never really thought an original thought nor emanated an initial idea. We believe in much reading but only for new food for thought and individual expression in an individualistic way. No person is educated until he can think for himself. To have been through college is no indication that the person can think. Abraham Lincoln never went through college yet he was one of the world's foremost thinkers. If much of the junk that is being poured into the heads of our pupils of the present day could be ditched and forgotten and the pupils taught to develop the endocrine powers within themselves and taught to develop the thinking along the lines of their natural bents, then we could get a race of thinkers. Our pupils are mostly poor imitators at present. Purity of purpose and expression of life will come with freedom and naturalness of expression. The limitations that we put on life distort and cripple the natural expressions.

Every man must learn to speak the language of his soul. He will learn the language only as he learns the forces that are building him and learns to interpret the urges within him. It takes a big vision to become a fine man. The world needs men of big vision, men that are virile and have fine endocrines. Men that have creative force and can visualize and build for the future as well as for the present. Men of master minds.

We can think of no finer reward for the effort of writing this book than the knowledge that some one was helped to a little finer thinking about his evolvement and a greater effort at self-expression, by reading what has been written here. To evolve together harmoniously is joy enough for all.

Chapter IX

HELPFUL ITEMS

BOYS AND GIRLS entering puberty need a plentiful supply of calcium and phosphorus to develop their endocrines, especially the sex, thyroid and pineal glands.

The “Fair, fat and forty” women entering the menopause period very often and usually need thyroid extract.

A science report just came that cows who have been fed extract of pituitary increased the milk flow from ten to three hundred and fifty per cent. Why not also the human. We have long known that X-rays have an especial affinity for the destruction of abnormal or fast-growing cells and germs, and are particularly destructive to germs in their mitosis stage. Now science further finds that X-rays kill living cells by suffocation. The action of the X-rays on the tissues destroys the oxygen-getting power of the cells and so they die.

The X-ray is becoming a great aid in stimulating or inhibiting the endocrines and especially the lymphatic ducts and glands, in certain types of persons. Ulcers of the stomach will yield more quickly to the change in divine vibrations than to any other method of treatment. The author has proven this many times in his daily practice.

All living humans must have air in their stomachs and intestines. Too much quack advertising has made the race flatus conscious. It takes from 48 to 50 hours for the food to pass from the mouth to the rectum. Constant physic does not give the food time to digest and absorb. Give the bowels a chance to do their work. In most cases the endocrines with their auxiliary ducts and glands will do their work if they are left alone and have simple foods to act upon.

If a man becomes irritable towards middle age, despondent and suicidal, and can only see the dark side of life he should be very

carefully examined for prostate trouble. Many a man has committed suicide just because he had an inflamed or enlarged prostate.

If a woman is emotional and cries easily and is despondent and even suicidal, she has an inflamed or diseased cervix of the womb and especially of the inner neck of the womb. This condition may have been brought on by bad care at child birth, or she may have colon bacilli infection. Or she may be the victim of her husband's dose of gonorrhea that he had when a boy or before he was married. Most slaughtering of the ovaries and tubes comes from gonorrheal infection. This destruction of the female sex organs must be stopped and will be when men and women are properly examined before marriage and the public knows the full truth of the sources of gonorrhea and syphilis.

Both the long and short wave diathermies when properly used are great factors in curing infections in the female and male sex organs.

Normally healthy sex activities build up a man and a woman and are their idealization, their imaging and creative power.

The man or woman with normal endocrines will be able to resist most diseases.

Sinus and antrum troubles are being absolutely cured by the long and short wave diathermy. Our best results have come from the use of the old auto-condensation current.

We are built through the forces of Light, Heat, Moisture and Movement. Should we not then study these forces in relation to our well being? All these forces have direct bearing on the endocrines. The endocrines make us what we are. The understanding of helio and electro therapy has been a great help and still needs deeper study.

The highest life-growing foods are those that grow on trees or bushes.

Second best, those that grow above the ground as leafy vegetables, celery, lettuce, spinach, etc.

Third best, the underground or roots as potatoes, carrots, turnips, etc.

The best food can be made useless by bad cooking or bad preparing.

Milk and cheese contain large quantities of calcium and phosphates. Liver contains copper and iron. Eggs contain sulphur. Cod liver oil and shellfish contain iodine. Vegetables contain cellulose as it is their cell membrane. These are very necessary for cell-building, even as necessary as the vitamins of food.

Vitamin A is an anti-infectious substance. The condition is generally low where it is needed. It seems to have an especial affinity for eye, lung, sinus and skin diseases. Vitamin A is found in cod liver oil, yellow foods, milk, butter, yellow of eggs.

Vitamin B is anti-neurotic and is required in gastric intestinal diseases, in neuralgia, neuritis and constipation. Vitamin B is found in Brewer's yeast, germs of wheat, vegetables cooked without salt. Salt may be added after cooking.

Vitamin C is anti-scorbutic (scurvy tendency). It is needed in proper bone and teeth maintenance. Vitamin C is found in alkaline vegetables, lemons, and oranges, grapefruit and pineapples.

Vitamin D is anti-brachitic. It regulates the mineral metabolism, the bone-forming elements, calcium and phosphates. This is very necessary to the pregnant mother that she may have a perfect supply of calcium and phosphates. The lack of Vitamin D produces rickets. Vitamin D is found in cod liver oil, milk, butter, yellow of eggs and by body chemistry of the sun or ultra violet rays. Persons subject to arthritis should beware of large doses of Vitamin D.

Vitamin E is necessary in the reproductive functions of the body. Vitamin E is found in the germs of wheat.

All diseases have vitamin and endocrine deficiency.

Sanitation goes hand in hand with civilization.

One of the greatest aids in sanitation is the lowly "patent toilet." In recent unearthings in Mesopotamia they found that the people of that age dumped their offal and refuse and slops just outside of the tent or

house and as the space became filled they shoved it under their abode and started all over again. Think of the stench and the diseases from such methods. Yet to this day are peoples still living like the ancient Mesopotamians. Sanitation is advancing quite rapidly and the patent toilet is no longer just for a city dweller. Farming communities are installing cess pools and the patent toilet.

If you are not feeling in normal health consult a doctor—one that will teach you about your condition. The word “doctor” means “teacher.” Every case is a law unto itself. Every case must be studied separately.

Health is not something that can be handed to you in a pill or a surgical operation or in a light or electrical treatment. All these may help if intelligently used. The cause and effects of disease must be carefully studied. Read and re-read this book and you will find great help in understanding your life forces.

You and all humanity can be uplifted by studying the creative and spiritual forces within yourself.

Humanity never has been and never will be uplifted by stepping over the dead and mutilated bodies of children, women and the flower of our manhood. Humanity must study and know the higher forces, within, that are related to the God or Creative forces from without.

THE ROSICRUCIAN ORDER, AMORC

Purpose and Work of the Order

The Rosicrucian Order, AMORC, is a philosophical and initiatic tradition. As students progress in their studies, they are initiated into the next level or degree.

Rosicrucians are men and women around the world who study the laws of nature in order to live in harmony with them. Individuals study the Rosicrucian lessons in the privacy of their own homes on subjects such as the nature of the soul, developing intuition, classical Greek philosophy, energy centers in the body, and self-healing techniques.

The Rosicrucian tradition encourages each student to discover the wisdom, compassion, strength, and peace that already reside within each of us.

TO MY FATHER

Whose humanitarian spirit and genius made
me not alone proud to be his son but
also to have had him as my
preceptor and ideal of
accomplishment
in life.

I DEDICATE THIS BOOK

As a humble reminder of the light and
comfort he brought into the lives
of thousands of men and
women throughout
the world.

CONTENTS

	Introduction
I.	We Begin Our Journey
II.	Our Mystical Initiations
III.	A City of Strange Contrasts
IV.	Mother Nile
V.	Prophecy Day in the Great Pyramid
VI.	Temples and Tombs
VII.	The Valley of the Kings
VIII.	Strife in the Holyland
IX.	The Unknown Conditions of Palestine
X.	Ancient Phoenicia
XI.	The Oldest Inhabited City of the World
XII.	Crossing the Mesopotamian Desert
XIII.	The City of the Arabian Nights
XIV.	Amid the Dust of the Ages
XV.	I Relive a Life
XVI.	The Vineyard of Wisdom

ILLUSTRATIONS

Temple of Thutmose III
Filming Stonehenge
The Garret Laboratory of Cagliostro
Temple-Tomb of Queen Hatshepsut
The Well of the Magi
Once Mighty Babylon
Windows of the East

TEMPLE OF THUTMOSE III

The cartouche of Thutmose III, used in North and South America as part of the Rosicrucian emblems, is clearly shown in the carving around and above the center portal of this Temple. The benediction and adorations to the “God of all Gods, ruling forever and ever eternally” are clearly seen.

INTRODUCTION

NO ONE PEOPLE or race in the world's history stands alone as civilized. If any single nation or people is to be designated as representing civilization, then all organized society since the advent of reason must likewise bear the same distinction. Civilization is neither a state into which humanity is suddenly precipitated, nor is it indigenous to a location or race, nor confined to a period of history. Further, it is not attained by a people as a consequent reward for some conduct or sacrifices made. It is a gradual growth, more appropriately an *evolutionary process* that has existed since the beginning of all human society.

The underlying factors of civilization are to be found wherever people have striven together and exchanged the results of their efforts. To point out a people as civilized is not to proclaim what they have materialized, but whether the factors existed in their society. If, for example, it is agreed that a man is in motion when he runs, because motion, by its nature, no matter what its extent, differs from inertia, then by the same reasoning, when man walks or even crawls he is likewise moving. This evolutionary process of civilization is one of refinement—a refinement of human existence. The refinement in its aspects is twofold. One phase is the *external* and the other we may term the *internal*. This external refinement is brought about by man's relationship to the world in which he lives. In its rudest form, this relationship consists of utilizing the elements and resources of nature to satisfy his elemental desires and appetites. In other words, a primitive mind does not appraise the things of earth because of their inherent beauty or because of any realization of the majesty of their underlying natural laws. They are seized upon or avoided only as the fundamental urges of man's being cause him to be aware of their effect upon him. Thus a savage will climb a tree when hungry to pluck wild fruit, but

neither the tree nor the fruit suggests anything else to his mind than appeasement of his appetite.

The use of nature's resources requires exertion and expenditure of effort. This exertion to which man is put is likewise of two definite kinds. The first may be classified as instinctive. This is defined as that exertion which is without volition, without decision, and not of the influence of our will. It is a reflex action, a simple, inherent method of response to a stimulus unconsciously formed. Such exertion is displayed when we jump when startled by a sudden loud noise or touch upon the back by one whose presence was not known. The other kind of exertion is that effort which is *intentionally expended* to accomplish an end. Such efforts are causative. They are expended to produce something desired. We consequently have control over such exertions. They constitute our willful acts. The satisfaction we may derive from the expenditure of such efforts is but an incidental to that expected from the result. The savage, moved to climb a tree to pluck an apple, is not concerned with the pleasures, if any, to be derived from climbing, but in eating the apple when it is secured. In fact, most efforts expended to gain an end prove to be, in themselves, annoying, irritating, sometimes fatiguing, and more often just endurable. These willful efforts are just *necessary exertions*.

The aspect of external refinement of which civilization consists, then, is the reduction of the effort necessary for any accomplishment. A people which is said to be displaying signs of being civilized will reveal in its habits and ways of living a gradual departure from the crudest methods for gaining an end. This external refinement is a process of improvement of man's relationship to the physical world. Material civilization, by this reasoning, is found to be a simplification of the methods of living, combined, however, with an expansion of its joys. Concisely, then, the results of material civilization are found to exist in a *minimum* of effort to live, and a *maximum* of the fruits of living. When this is applied to the former analogy of the apple tree, we find the civilized man having easier access by a ladder, for example, to the higher limbs of the tree, and further, being able at the same time to obtain more apples.

Whether this external refinement of man's relationship to the world, namely, physical civilization, as we shall call it, has made any progress,

need not be a matter of conjecture. It can easily be determined by a comparison of the events, habits and customs of today with those chronicled in history. The advancement of twentieth century civilization in this respect is quite apparent. One cannot help, for example, but be fully cognizant of the great advantages of conserving effort in tilling the soil when using a tractor, as compared with the hoe culture of the ancient Sumerians. However, hoe culture in itself is a trend and product of civilization; it is a definite advance over those centuries of darkness when man was incapable of even that simple form of earth culture. The spirit that moved men forty centuries ago to erect great stone temples along the banks of the Nile, with their majestic hypostyles, is no less or ruder than that which causes men today to construct the steel skyscrapers which tower heavenward.

If we think—and if, in fact—our modern achievements excel those of the ages that have gone before, it is only because men of today have had the added advantage of a vast heritage of experience upon which to draw. These experiences, when added to the natural resources of an area in which people dwell, are an asset that their progenitors did not possess. A boy cannot be called a poor specimen of a man, for the latter has attributes which are not natural to the former. The technique of living, the methods of refinement of man's relationship to nature, comprises a valuable and very useful asset which is the added advantage an intelligent man in every age has. If this were not so, native intelligence alone would be sufficient in each age for man to rise higher than the preceding level of civilization, and there would not need to exist the assiduous attempt to preserve the arts and sciences, to hand them down to future generations. He who laughs at the efforts of men before his time is indicting them for having been born in their age. The minds of each age began where their predecessors left off.

The scientists of today, closeted in physics laboratories and wrestling with the complex technical problems of television, display no more native intelligence than did Archimedes, the mathematician of the third millennium B.C. The Archimedean screw which he devised and which, by rotating on an inclined axis, raised water from one level to another by a mechanical means for the first time in the history of the world required a profundity of original thought equal to what the best minds of today may offer.

The other aspect of civilization, which we chose to call the internal, is the refinement of man himself. Civilization is more than physical environment. A savage may reside within the shadow of a great cathedral or library, and his temperament and comportment be untouched by their influence. Likewise, a civilized man may reside in a savage environment, as, for instance, if he be marooned upon an uninhabited island. Civilization consists of the unity of internal and external refinement. When one exists without the other, it is incomplete.

Physiologically there is no quality or attribute that distinguishes the savage from the civilized man. Mechanically and structurally they are the same. Physically, one may be superior at one time or another; this is dependent upon prevailing topographical and geographical conditions. Thus a modern athlete may be in better health and a more superb specimen physically than some of the present-day savage tribesmen who periodically suffer from malnutrition and ignorant abuse of their bodies. On the other hand, some aborigines, as the primitive Ethiopians for example, are excellent types of virile manhood and put modern civilized men to shame physically.

Psychologically, however, there is a vast gulf between the civilized, cultured individual and the savage. The savage is at all times moved only by the most primitive and powerful forces of his nature. He obeys only the waves of passions and appetites engendered by his instincts which surge over him. Each act is egocentric. If it will not culminate in a personal gratification, it is not entertained. In fact, only negative efforts are expended. Such acts are not committed because of their own merit, but because of a need to quiet a disturbing sensation of some kind which provokes them.

Civilization, then, in its *internal refinement*, as in its primitive external phase, is closely bound to individual exertion. Every effort expended is principally required among primitive people for the preservation of life, the providing for sustenance and shelter and the protection of self against the ravages of the elements, beasts and man. Life consists of a series of cycles of intense pains and pleasures. One is always contiguous upon the other. Life is hardly ever upon an even plane. Consciousness is precipitated from one extreme of sensations to the other. The world of sensation, to the savage mind, is like a great

symphonic orchestra in which the brasses are played so loudly that the soft and sweeter tones of the other instruments become inaudible. The lesser emotions of the savage's being are completely submerged and unexpressed. They can never rise with strength enough to reach the threshold of consciousness. Because of this, none of the finer sentiments which the reason attaches to these more delicate emotions are ever developed; consequently, the very savage human is never aware of such feelings as loyalty, justice and pride. The consciousness, being at all times agitated only by the grosser sensations of the appetites and the instincts, is incapable of sensitivity to those impulses which form our sentiments and our estimation of the good.

A reduction of the effort to cope with environment or the gradual development of an ease in living makes for leisure periods, periods of mental passivity, free of exhaustion or any intense sensations. It is during such states that the mind has receptivity to the finer feelings which bring about the *refinement of self*—civilized man. A human who is not obliged to endure hours of rigorous hunting and fighting while experiencing gnawing pangs of hunger will not drop from sheer exhaustion, neither will he gorge himself into a soporific stupor. There will be intervals when his consciousness will respond to new and perhaps, to him, strange feelings aroused by conditions within and about him, to which, hitherto, he never gave his attention.

It must not be presumed, from this, that a prolific nature, where life naturally thrives, is essential to civilization. In fact, the combination of an ideal climate and lush vegetation with its plentitude of natural foods is really an obstacle to civilization. A people whose existence began in an extremely favorable environment, where little or no effort is required to gain sustenance, and where no dangers or rigors of life are encountered, even though it is afforded greater leisure, is incapable of an appreciation of those finer emotions which rise to the border of its consciousness. Where life is offered resistance, but where the struggle for life is not continuous or too severe, the faculties of the individual are challenged, and by their use are developed. Opposition to desires sharpens the wits and develops the reason. The consciousness becomes more acute, and is consequently more susceptible to those impressions of the finer emotions. Where there is not a sensitive mind, there is not the ability to evaluate the delicate emotions, to form the sentiments,

even if they were experienced. In the South Seas are to be found people who, though primitive in their method of living because of the abundance and conduciveness to life of nature, are quite amicable and peaceful in their conduct. However, there is no advancement, no refinement of self or of their external world that could be considered the factors of a civilization. There is no attempt to expand the benefits of life, which we have seen is one of the characteristic achievements of a civilized people.

It can be seen, therefore, that through external refinement, the modification of environment, precedes internal refinement, one is never truly a civilized individual until he is moved by the higher sentiments which can more rightly be called the morals. In a true state of civilization, where there is that lessening of the expenditure of effort to preserve life and provide its fundamental needs, there is also an increasing moral effort. The morals establish ideals which become ends sought, just as food is sought to satisfy hunger. Effort is expended to realize these ideals, and the individual's nature is refined, as were the things outside of himself. Whereas external refinement was principally motivated by necessity, a transition takes place and man chooses to pursue the moral ideals. One may, for example, find it necessary to devise a better means of trapping game, but it cannot be said that when he beautifies his dwelling he is actuated by necessity. It can be positively declared that the decadence of a civilization begins when the effort to obtain the necessities of life is diminished to a minimum and there is no corresponding effort to attain moral idealism.

A strong civilization is one where the rise of moral effort equals the reduction in effort for physical existence. This becomes more of an individual or family responsibility than one of society's. A man who in his youth or early manhood experiences some of the rigors of livelihood has the opportunity to develop a moral sense and a strength of character by the demands made upon his faculties and moral self. When, then, a state of prosperity or greater ease of living is acquired, he is then fortified so that he may divert his efforts into the higher channels of moral idealism which make for the cultured, civilized, the self-restrained man. Where great wealth is inherited, and the individual is born with the proverbial silver spoon in his mouth, the intelligence is never apt to be really stimulated and the mind never

fully appreciates or rightly evaluates the sentiments, and consequently a savage disposition may be clothed in silken raiment. There are, of course, exceptions to this. Riches too easily acquired in early life are equivalent in their harmful influence to a large inherited wealth. The individual has not, in such cases, had sufficient time to develop concepts for the governing of his life, based upon his morals. The great influx of wealth brought about by the conquests in which the individual himself did not participate or expend effort brought about the decadence of the Roman Empire.

There can be no inertia for man. He cannot be physically, mentally, and morally inactive alike, without becoming degenerate. A *corrupt civilization* is far worse than savagery. The former finds pleasure in perversity, while the other is compelled to action by forces beyond its control and understanding. When moral idealism falls in a higher state of civilization, the lower nature of the individual becomes dominant. Passions and appetites reign supreme and the individual has in addition the power of the highly organized means of society to satisfy them more ruthlessly. He has, in other words, all of the attributes of civilization at his disposal, the products of its arts and sciences, and they are used not in further refinement of self or the world, but in self-destruction—in war. When moral idealism declines, the products of civilization are eventually turned against it.

In going back “Along Civilization’s Trail” We find the refinement of man’s world and the refinement of self-ying with each other for supremacy instead of keeping pace. A great military, industrial and economic strength have often been eventually acquired at the expense of the character of a people. Wherever this has occurred, the trail has been eventually marked by the ruins of another *fallen civilization*. There will be seen a debris of a people, as well as their monuments. In this book it is hoped the reader will observe the historical evidences of the cause of this rise and fall of character as well as nations.

Chapter 1

WE BEGIN OUR JOURNEY

WE WATCHED HER turn slowly and steam majestically in the direction of the French Coast and Havre. Standing on the rolling lighter being towed to the Plymouth docks, a ten-minute ride, we were suddenly conscious that we were now “on our own.” For seven days we had traveled on the great ship, but it seemed for the first time that we had truly left America. There had clung to the ship since we left New York a distinctly American spirit, an atmosphere that was quite like home.

We were not alone in this feeling, apparently, for the joyous exclamations with which our fellow passengers had greeted our arrival at the Plymouth harbor had ceased. They seemed contemplating the severing of past ties and the assumption of new ones. Finally, as one body, the several hundred passengers, crowded between stacks of baggage, turned and looked toward the shore which we were rapidly approaching. Here was England, and cliffs that looked chalk-like. They were not high, but precipitous, and fringed with a green that was pleasing to the eye after days of the blue-black of the Atlantic. Immediately before us was a V-shaped cleft in the abrupt face of the cliffs, in which nestled the city of Plymouth, from which the famous Pilgrims to America had departed. Perhaps it was because it was a sudden relief from the monochrome of the sea that the roofs of the homes that spread up the incline of the cleft appeared so brilliantly red.

We were soon milling up the gangplank behind our porters who were heavily laden with our personal luggage and special equipment. As we looked about, a thousand strange sights caught our eyes. The things were different, but not necessarily inferior to things of our own

land which served the same purposes. There was the waiting express that would take us to London. The individual exterior door of each compartment, and the side aisle of each car, made them different from our end-door, center aisle American cars; but there could be no question of their equality to ours in many respects. Again, we noticed in the railroad yard a congregation of freight cars of various heights, widths, lengths, and types of wheels, to accommodate different kinds of cargo; they were strange in comparison to our nearly uniformly designed box—and gondola—cars, but this did not mean inefficiency or imply a lack of modernity.

Unfortunately, the American has acquired the habit—perhaps because of his geographical isolation—of thinking that what he is accustomed to is the standard by which the rest of the world should be measured; he fails to realize that other peoples have needs in common with his own, and have developed systems for meeting those needs as satisfactory as his, although different in manner of application. America is a symbol of modernity to the American because there are no monuments of the old order of things about him. Foreign modernity does not appeal to him because he believes the New Age is exclusively an American development. This is mainly due to the fact that the American's interest in Europe has been aroused by stories of the quaintness of its past culture. Because of the exploitation of customs and styles of from two to five centuries ago, that are nearly as strange in Europe today as they are in America, the American imagination becomes actually shocked by the reality of European nations displaying a modernity equal to his own. He vaguely knows it exists, but prefers the picturesque conception of a Europe of the twelfth century. Psychologically, such a conception gives him a feeling of superiority which he tries courageously to cling to when traveling abroad by purposely avoiding the new Europe whenever he can.

Ours was more than a tour; it was a serious venture and a responsibility. We were to represent the AMORC at a conclave including the highest officers of the oldest arcane societies of Europe. Momentous questions were to be discussed that would shape the future course of these organizations. We were signally honored, for we were the only representatives of any occult, mystical, or metaphysical society in North or South America to be invited by virtue of our credentials to

participate in such a conclave. Hundreds of societies in America claim and have claimed world-wide connection of long lineage, but none could produce the necessary authentic proof to receive the coveted recognition.

I was to be tested, and, if found personally qualified, to receive the honor of initiation in one of these esteemed brother-hoods which traces its origin back into the centuries. The prospect was thrilling, but there was always the sobering thought of what might be demanded of me. I thought of the Emperor's first journey abroad, when he was given the authority to reestablish the work and teachings of the Rosicrucian Order in America; and I felt with pride that in minor capacity I was following in his footsteps. How high his hopes must have been. How he must have felt that destiny was his guide!*

*This refers to the late Emperor, Dr. H. Spencer Lewis.

I must confess that our greatest trepidation was for the success of the other purpose of our venture; we were to capture on film the spirit which had moved men and women to found and carry on the Rosicrucian Order and its teachings. We were to find its early landmarks, the places which harbored its temples and shrines, and the site of civilizations and cultures which added their wisdom to the glory of its teachings. We were to trace the development in wood, stone, art, and religion, of the consciousness of man which led to the conceptions we hold sacred today. The search for light, for knowledge, and the mastery of life had carried man westward through the centuries. We were to photograph the milestones of his trek across continents. Mechanically, we were well-prepared for this phase of our venture; we had a 35-millimeter professional-type Debie motion-picture camera with extra-heavy tripod, equipped for tilting and panorama views. In addition to a complete assortment of light filters, meters, reflectors, and other necessary accessories, we had an array of fast lenses, including a six-inch telescopic lens for enlarging distant objects. Realizing that we needed an excellent still camera to reproduce scenes which we hoped to take for magazines and books published by AMORC, we took along a Graphlex. Not trusting to the possibility of being able to secure the type of films we needed in foreign lands, we took with us thousands of feet of super-sensitive panchromatic film for the motion-picture camera, packed in hermetically sealed cans to

resist dust and thermal changes. Our film supply also included dozens of packs for the Graphlex camera. Our equipment luggage numbered ten pieces, varying in weight from fifteen to fifty pounds. Our total baggage was twenty-one pieces. Before we departed, Kendal Brower, fellow Rosicrucian, Courier Car technician and member of the party, who was familiar with photography and motion-picture equipment, had spent weeks in becoming accustomed to the special equipment he was to use; but how different his preparatory conditions were to those he was actually to encounter!*

*Kendal Brower Former Curator of the Rosicrucian Egyptian Museum.

The gods of fortune smiled on us, for after only a slight delay in the customs we were comfortably seated in a compartment of the "boat train," rushing through pastoral lands to London. Our party was not large; yet it was representative of the activities of the AMORC in San Jose. It included Frater Harry Shibley, president of the Rosicrucian Press, Ltd., which separate corporation is responsible for the tremendous task of printing millions of pieces of literature yearly to supply the Rosicrucian Order's needs; Mrs. Shibley; Frater Kendal I. Brower, to whom I have referred; and Mrs. Gladys Lewis, member of the Board of Directors of the Supreme Grand Lodge.

As we fixed our eyes on the fleeting landscape, which was bathed in the golden glow of a late summer day's setting sun, we commented on the intensive cultivation. Everywhere were fields of grain, patches of vegetables, pretty gardens, and meadows. There were no barren wastes, bad lands, and salt beds such as we had seen for hours in crossing western United States. How fortunate that England could utilize so much of her small island home! The shortage of native timber was brought to our realization by numerous hedge fences instead of rail or post-and-wire ones to which we are accustomed in America. It seemed a combination of utility and artistic grace.

Rushing along now through the twilight, we looked out into the gathering dusk at twinkling lights in the distance. I recalled bits of early English history; I thought of baronial halls, great manors, intrigues against the crown, the three-cornered contest for supremacy, with crown, barons, and churchmen aligned against each other. It was not difficult to understand the contempt this great nation must have felt

in its state of security, with its centuries-old customs and well-ordered society, for the demands of a handful of colonists thousands of miles away in the frontier country of America. What Englishman, secure in English society and comfortably bolstered by the home land's reassuring traditions, would have given an inch of England for the future of the religionists and self-exiled subjects who made up most of the population of the New World in the eighteenth century? Certainly the attitude must have been strongly expressed by the majority as, let them have America.

Our first morning in London was sparkling in sunlight; California-like blue skies were given motion by an occasional lazily floating white cloud. For a moment, as we stood on the Strand directly in front of the entrance to our hotel, we had a pang of disappointment. This was not the London that novelists portray for the American imagination. Where was the yellowish, smoke-like fog through which, we were told, even in the day only the yellow aura of the street lamps is visible—a fog that gives all passers-by a wraith-like form? Reason then told me how fortunate we were that such a condition did not prevail today, and how fortunate we would be if it did not exist during our stay in England; for we were here to photograph.

Every large city throughout the world, it is said, has a personality—certain characteristics; not physical form, but environment—which makes it distinctly different from every other city, regardless of how similar they may be in skyline, industries, customs, and general appearance. Every world traveler has felt this and yet cannot definitely point his finger at the contributing factor of a city's personality. It is undoubtedly, as it is in human beings, the aggregate of unseen differences in character which constitutes the personality. As a city has a personality, so, too, does it have a soul. In every city there is some site, some edifice, historical monument or structure, which symbolizes it which fairly breathes the spirit which it represents. Flash the Eiffel Tower on the cinema screen and people do not merely know it is of Paris; but it somehow fits into the niche of the subconscious visualization they have of Paris. We were now to visit the soul of London, England.

A traditional high, box-like London taxi, with its odd luggage railing framing its top, stopped with screeching brakes before us. The driver

poked his head through the window in our direction and said. See the sights, sir? Somehow this knowledge which natives of every country have in some peculiar fashion—or that at least seems peculiar—that you are a foreigner, and, worse still, a tourist, is very deflating. One likes to imagine he is quite at home, in appearance at least, in every land. No matter how carefully, in your own opinion, you mimic the dress and mannerisms of the citizens, in some mysterious way they see through the camouflage.

While I held the cab, Brower, with the assistance of several very curious porters, loaded the bulky cinema equipment into it. Nowhere, except perhaps in California, is professional motion-picture paraphernalia taken casually; the farther one gets from California, the more intense is the fascination for the devices that make the fairy-land of the silver screen possible. We rode for ten minutes along crowded thoroughfares, winding in and out between London's famed, giant double-decked omnibuses. We discussed the confusion we would personally experience if we were to drive on the left side of the road, as we were now being driven, just opposite to the side on which American traffic travels.

Suddenly we were riding along the Thames with its low, gray, stone retaining wall. A moment later we stopped with a jerk at our destination—Westminster Bridge. Piling our equipment in a confused mass against an abutment of the bridge, we turned and gazed from our position of half-way across, straight ahead. There they were—a compact unit: the Houses of Parliament, Westminster Abbey, and Big Ben, the mammoth clock whose chimes had resounded around the Empire. The slender turrets which graced the sides of the Houses of Parliament impressed me as being like the delicate filigree wood carvings of some Swiss antique; yet, with this finery, there was about them an atmosphere of strength and solemnity.

Slowly, steadily, the Thames flowed by under our very feet. Time, periods in English history, decades of strife and of prosperity had also moved by as unceasingly as this river; but there, unchanged by it all, existed this soul of the British Empire. From this dot in the world, millions of people at the far corners of the earth were governed. New ideas, radical tendencies, unstable influences, were all tempered and steadied by its spell. The spirit that was England's dwelt within those

gray walls. Church and state, figuratively and literally, stood side by side. Here was an example of the true value of tradition. No one can deny the progress of England or its place in the foremost ranks of civilization today; its advance has been sensational in many ways. Yet, when upsets came, as they did at times, it slipped back no further than the traditions which were bred in the bones of its sons and which constituted the last high level to which it had climbed. Traditions which do not retard but which act as a bulwark against decadency in eras of weakness are the safeguard of a people or of a nation.

Simultaneously we stopped our musing and proceeded to seek the best position for a shot, cinematographically speaking, of what we saw. Our foremost thought was to reproduce on film, if possible, enough of what we saw with our eyes to instill into the minds of an audience the impressions we had received! But therein lies the secret of the true art of photography. Why, we may be asked, were we filming the Houses of Parliament and Westminster Abbey, and what relation had they to Rosicrucian landmarks and personalities of the past? In reply to this, we need go no further than the eminent Sir Francis Bacon, past Emperor of the Rosicrucian Order and also Lord Chancellor of England in the seventeenth century. Philosopher and mystic, he was also an important factor in England's political life, officiating on many occasions in these same dignified edifices before us. As for Westminster Abbey, it is more than a church, a place dedicated to worship, or even a monument; it is a pantheon. Beneath its flooring lie England's great. They are more than England's; they are the world's noble dead, for they made contributions to humanity, to civilization's advancement. Among them are those who were identified with past activities of the Rosicrucian Order. What simpler respect could we pay them than to film the place of their last rest to be viewed by their brethren of today?

They were a good-natured crowd these Londoners—as they jostled one another to get a vantage position to watch Brower grind out several hundred feet of costly film as we recorded this soul of England. Big Ben was not to be forgotten; through the telescopic lens we brought it to within a hundred feet, visionally, of where we stood. We photographed the hands in the position of the quarter hour and half hour so that the sound of the chimes could later be synchronized with their position.

In a series of short, rapid trips about the heart of London, we took several views of prominent squares and circuses, at one time mounting our equipment on the great library steps and filming the noted, busy, noisy Trafalgar Square.

We were to leave London next day for a hundred-mile journey northward to Salisbury Plains. The mysterious Stonehenge was to be our destination. As we expected, we had to first obtain permission from His Majesty's Department of Public Works before being allowed to take professional cinema pictures there. Still-camera pictures were not ordinarily prohibited. A preliminary investigation revealed that upon application by mail, after a ten-day delay, we could expect a reply to our request. Ten days! How disheartening! We were scheduled to leave England before that. Must we fail at the very beginning of our journey? What could be done?

There is no maze like the entwined activities of government departments. It may seem strange, but in endeavoring to locate His Majesty's Department of Public Works, bobbies, guards, and attendants at public offices gave us conflicting directions. This condition is almost always experienced in conducting business with departments of the leading governments of the world. Each petty official or assistant is not made to familiarize himself with the relationship of his department to any other, and usually is in ignorance of the administrative structure. This condition prevails in America as well. His isolation of departments makes it exceedingly difficult to locate the required official unless you know exactly the title of the department to which he is attached. British officials are at all times courteous and respectful, and unlike those of many other countries, are not unduly impressed with the authority delegated to them. Presentation of credentials showing that we represented a fraternity devoted to the study of the sciences, and which maintained a free museum of antiquities, and also disclosure of our connection as individuals with internationally known societies of research, accorded us the needed exception to routine procedure. The Department of Public Works immediately take cinema photographs in Salisbury and we were actually to begin photographing the Order. We were highly elated at this, our first success.

There is something so gratifying about a rural motor trip in England. The low, rolling hills with occasional wooded strips, all intersected with

winding streams, are enchanting. Everywhere were wild shrubs which seemed so perfectly trimmed and artistically arrayed that it was as if man had undertaken a gigantic landscaping project. However, it is not Nature which lends England her greatest enchantment; it is the quaint villages with which the country-side is dotted, with their century-or-more old churches and slender steeples. The public squares which once formed the hearts of these villages are framed by sloping, two-story structures with high peaked roofs, tall windows, and superimposed balconies. The limber ends which protrude from their fronts, and the lattice-like strips which form a design on their faces, blackened with age, contrast with the grayish white of the stucco-like plaster with which they are sealed against the weather. One sees, side by side, on the lower floor of these structures, the crisscross leaded window of a bake shop with all the appearances of Dickens' time, and the modern large plate glass front of a branch of England's popular-priced merchandise chain store—a contemporary of our own American Woolworth's. How incongruous the modern automobile seems when parked before tea rooms in buildings obviously of the seventeenth and eighteenth centuries! Many of these old dwellings and buildings have long since ceased to serve any real usefulness, although still occupied. They remain to mellow the harshness of the New Age and to remind one of the quiet elegance that was once Old England's. Thoughts of a great wood fire in an open hearth, planked floors and the wooden benches of an old town tavern were engendered by a driving, cold rain which caused us, although in summer, to pull our light top coats about us as we drove rapidly along smooth, narrow highways.

Leaving behind us the historical town of Salisbury in Wilshire, with its renowned cathedral, we headed out over the great Salisbury Plains for Stonehenge. These were typical plains, much like those one sees in Western Canada and the United States. They indicated the plentifulness of England's rainfall, for they were covered with a plush of vivid green. There were to be seen no villages or farms—even few fences.

“There it is!” our driver suddenly exclaimed, pointing to the left. It was still quite distant. We looked intently at what appeared to be large, oblong, grayish objects standing on end and leaning against each other at rather a sharp angle. Candidly, I was disappointed with my first view. This disappointment was not shared by Brower.

“Just as I visualized Stonehenge,” he declared. A minute or two later we were outside the high wire enclosure which surrounded it. One of England’s strangest antiquities, now a government monument. Its setting was quite incongruous, for a short distance away was a modern military airdrome.

Our proximity had not changed my first impression. The giant, roughly-hewn monoliths stood upon a level plain surrounded by grass, cropped as closely as that of a golf course. There was no approach to them, no fallen stones or fragments of an ancient structure to quicken one’s imagination and draw attention to the principal antiquity as the climax of some great achievement of a forgotten race. There was lacking that dramatic setting one expected from so mysterious a relic of the past. In effect, it was as though these gigantic stones had been transported from their natural surroundings and deposited here solely for exhibitional purposes.

What remains of Stonehenge is an inner semi-circle of huge stone blocks which were crudely shaped by hand by some unknown race. Each of the four-sided sandstone and bluestone pillars penetrates the soil for a depth of about four and a half Feet, and towers for a height of fifteen and a half feet, and weighs approximately twenty-six tons. Nine still stand, and eleven are recumbent. Several of the massive monoliths are joined at the top by horizontal stones of like nature, forming cross ties or beams. The uprights have a conical tenon which dovetails into a mortise at each end of the horizontal stone. Some distance from this inner circle there is the remains of an earthwork which formed the foundation of an enormous outer circle of pillars. Not aught but the bases of this once great outer circle are now to be seen. At the northeast of the inner circle, two of the uprights with their cross beam compose a crude pylon. Standing in the center of the pylon one looks out at a distance of about 100 feet at a great slab of recumbent sarsen, one end of which is partly buried, and which is known as the Slaughter Stone. An equal distance beyond, standing upright, is the Heel Stone. Tradition has it that when the rays of the rising sun struck the Heel Stone and cast a shadow on the Slaughter Stone, at that moment an animal (some say a human being) was offered to the Sun God as a sacrifice. Large avenues of stone columns, as roughly hewn as these monoliths, once led to it.

FILMING STONEHENGE

Kendal Brower, the expedition photographer, taking professional motion pictures of the mysterious Stonehenge pillars on the Salisbury Plains. England.

Speculation is still rampant as to the origin and age of Stonehenge. It has been a battle ground for archeological theories. One theory is that it was erected as a temple of worship by the Romans during their occupancy of England two thousand years ago. This is not logical for various reasons, primarily because the workmanship lacks that mastery of masonry that was as the Romans'. Again it is said to have been built by the ancient Druids as a place of worship, or as a sepulcher. This theory also lacks authenticity and has little to support it, even in imagination. The most acceptable explanation is that it was built during the latter part of the Stone Age and at a time when civilization was dawning in Egypt. It is presumed that the great circle constitutes the hub, and the radiating spokes or colonnaded avenues led to the primitive huts of the Neolithic builders. Fragments of pottery and reindeer picks of that age were found in the debris of the ruin. It was

quite evidently used as a place of mystical ceremony. Elementary as it is structurally, it is not, symbolically. The great outer circle, the inner circle, the massive altar, the entrance to the East, the stones erected to block the sun's rays and cast significant shadows at a specific time, reveal a worship not necessarily of the sun but of Nature's phenomena. The Slaughter Stone is named not by fact but merely by speculation. May it not have marked the place of initiation into mysteries long since lost to man? Perhaps the shadow of the Heel Stone fell upon the brow of some humble neophyte who knelt, with head bared and arms crossed in supplication, facing the mighty globe of power, illumination and life-giving force which gradually ascended from below the distant horizon. It was no casual undertaking the building of Stonehenge. It represented some tremendous expression of inner feeling—a people reaching upward for something not quite comprehensible to them. The task, with the very crude tools which they must have had at their disposal, was enormous. It reveals that the place that was to house the spirit of man's God always excelled in splendor and majesty the edifices he constructed solely for himself. Even the non-religious must admit this virtue of selflessness which religion instills in the breast of man. It unites men to serve a common ideal in a manner that private interests could not inspire.

Brower took several Graphlex or still-camera photographs of this impressive place from different angles. Then he frantically assembled his cinema equipment and maneuvered for a position which would reveal, photographically, a picturesque view of a portion of the strange structure, while casting his eye upward at the menacing rain clouds. Just as he began to crank his camera, down came the rain, and we scurried to shelter. Between showers, and after shifting the camera equipment to various positions in the center of the great circle and beyond it, he succeeded in obtaining several hundred feet of worthwhile scenes, which, when viewed weeks later, we considered compensation for the effort in obtaining them.

It was several days later and we were resting in our hotel after arduous photographic labors in London and environs. The room telephone rang. I answered it, and was informed that my visitors had arrived and were waiting for me in the lounge below. I mused, as I descended in the elevator, that only a few days before we had looked

with the keenest of anticipation toward the filming of Stonehenge and had thought of little else; and now all that was past and we were on the eve of our departure from England. Only one more act of importance required my attention; that was to confer again, after several years, with our good Frater Raymund Andrea Rosicrucian Grand Master of the English jurisdiction, and author of several popular Rosicrucian works—and his London associates. They awaited me now.

I stepped into the spacious reception room, and they arose to greet me. One cannot help being impressed by Frater Andrea. Physically he is not large, but yet one is not conscious of his stature. His eyes hold one's attention; they are keen, penetrating, and in a quick glance he seems to probe completely the depths of your feelings and appraise you. As piercing as they are, there is dancing in them the light of merriment and kindness. Soft spoken, he speaks only to convey a worthy thought, preferring to listen and weigh words. His quiet manner wins confidence by the friendliness that radiates. One is impressed with the thought, "*Here is a modern mystic.*" He wears no strange costume and has no peculiar habits, and neither does he resort to odd conduct. Dressed in a conservative business suit, moving about in a twentieth-century world, he is able to accomplish in a modern way among present-day peoples the things we think of as having been possible only among the robe garbed mystics of the middle Ages. However, strange rites and queer methods of living, we know, do not make the mystic; such things are practiced for the credulous who have a fantastic conception of the mystic as a weird being, dropped from a place far above the earth, to descend among mortals and by some magical process elevate their consciousness.

The other Fraters—one an active and the other a past officer of the London Rosicrucian lodge—could have, in appearance, passed anywhere in either America or England as professional or prominent business men, as they were, in fact, in private life. Only by engaging them in conversation would a stranger realize by their remarks that they had a far deeper philosophical conception of life than that held by the average professional or business man.

This meeting was truly a hands-across-the-sea. It made me realize and feel proud of the extent of the Rosicrucian order, AMORC, and its influence. Here, thousands of miles distant from San Jose, California, I

was received as a friend and a brother, because I was a follower of the Rose and Cross. Nationality and religious differences, if any, melted away into a great, common understanding. It was beneficial to us all to discuss the hopes and ideals of our respective jurisdictions which embraced continents and nations as well as millions of souls, many of whom were already traveling the path of light with us. The early morning hours were beginning to crowd the night before we bade farewell and parted.

It was only a matter of hours when we were once again on shipboard; this time we were standing on the crowded deck of a small channel steamer, plowing her way from Dover, England, to Ostend, Belgium. The Channel, at one time a safeguard to England and an assurance against surprise attacks from a hostile power on the Continent as long as England flung a cordon of men-of-war about her island home, no longer conveys that reassuring feeling of isolation. In less than an hour there can roar over London, from European capitals, a mighty air fleet of destruction, screened by fog, which could blast out—so English air authorities advise—the nerve centers of England. The Channel itself is but a ten or twelve-minute crossing by air, and therefore is neither a means of defense to England nor a barrier to a hostile air fleet. It is of little importance in this age. The nationalistic fences of a century ago are toppling. Trade and industry, communication and transportation, are uniting the powers of the world. The nations must either become a commonwealth of humanity, or be destroyed by their own avarice; for there is no wall they can build about themselves that can resist the ingenuity of this scientific age, if that ingenuity is to be used as an instrument of destruction.

The coast of Belgium framed the white-capped waves on the horizon, and we knew that we were soon to land. We were to have, in this small, once blood-drenched country, experiences which, though we did not now realize it, were to be unforgettable and the beginning of strange yet illuminating mystic adventures.

Chapter II

OUR MYSTICAL INITIATIONS

WITH SIGHS OF relief we sank back against the cushions of our seats, attempting to make ourselves as comfortable in the overcrowded compartment as possible. After a delay which nearly caused us to miss the special Brussels Express we had finally located our missing baggage on the dock and with little opportunity for proper arrangement were obliged to pile it about our feet and in the racks over our heads just as the train, after a series of convulsive jerks, pulled slowly out of the domed sheds. A sudden startling clatter of the door, and there stood on the threshold the attendant or, as we term him in America, the conductor. His expression was quite apparently one of displeasure. He glanced at the baggage and at us, and said nothing. His silence and looks combined were more abusive, I am sure, than any remarks he might have made at the moment. He was, we were certain, not approving of this excess baggage in a passenger compartment. We were not left in doubt long as to his annoyance. In a loud voice, mingling French with English, and gesticulating freely, he informed us of our wrongdoing, but permitted us to keep our delicate equipment in the compartment. We were well pleased that we did not have to subject it to the rough handling of the baggage attendants.

The weather was delightfully warm. The late summer sun seemed to have given the fleeting fields and pastures a mellow appearance as though we were looking at them through an amber glass. The countryside was level and but a few feet above the sea. Artistic, rustic thatched-roof barns and houses flashed by. Patient and plodding oxen pulled crude two wheeled carts laden with hay. Picturesquely dressed peasants

with wide baggy trousers walked slowly alongside with one hand resting on the rack of the cart and the other holding a with wooden-pronged fork which seemed to lie heavily on their shoulders. Frater Shibley remarked that it was an animated painting, like a masterpiece from some famous gallery suddenly become a reality.

A series of sharp, high-pitched blasts of the engine whistle informed us we were approaching a station, and a few seconds later we heard and felt the grinding of brakes as we pulled up to a small red brick depot with a stone flagging platform. Small town train watchers and station hangers-on do not differ much throughout the world. They are brothers under the skin regardless of their difference in costume and nationality. A number of them seated on cases and crates were leaning languorously against the wall, wearing wide-brimmed hats pulled low in front to shade their eyes. They formed a soporific picture. Rosy-faced children, with well-patched clothes, went through a pantomime act attempting to interest passengers in their wares. The passengers, behind closed windows, did not respond.

We heard it coming—the distant faint tweet of the whistle of the guard of the last car, followed by louder and shriller tweets of the whistles of the guards of the successive cars, until finally the engineer, who must have been counting each whistle corresponding to the cars of the train, acknowledged them with a shrieking blast from the engine. We were off again. To get a train underway was indeed a ceremony. Frater Brower remarked that the delay in starting a train in Belgium must certainly be a boon to late commuters.

It was dark when we finally roared to a stop in the great metropolis of Brussels, a city having a population of more than seven hundred thousand. We were pleased to learn that our hotel was a few steps from the railroad station; in fact, located on the same great cobblestone square which the station itself faced. Several times before large parties of Rosicrucians from America and various sections of Europe had gathered at this hotel while attending important conclaves in Brussels. The Rosicrucians were well known to the management as an orderly, congenial group of guests and his hospitality was accordingly responsive. Our party had adjoining suites, ones that had been occupied by the Emperor's party but two years previously.*

* A party consisting of Dr. H. Spencer Lewis, late Imperator. and certain other high officials of the Rosicrucian Order of America.

I was late for an important engagement, how important I did not fully realize. I called Mademoiselle Guesdon on the telephone. She was residing at the same hotel, having come from Paris for the same conclave and to kindly act as my official interpreter. She excitedly asked that my wife and myself meet her in the main lobby at once. To meet Mademoiselle Guesdon, Grand Secretary of the AMORC in France, is to know an exceedingly intelligent and highly efficient woman with much administrative experience. With all of her firmness and ability to accomplish what seems the impossible at times, she is refined, kindly, and most considerate. Years of intimate association with the commercial world in an executive capacity have not lessened her mystic insight and her philosophic trend of mind. She has performed innumerable services for the AMORC of America and its Supreme Officers.

Speaking in perfect English and in a hushed voice, she told us that Hieronymus, the Rosicrucian Imperator of Europe, could only attend that night's secret conclave of the FUDOSI, the great federation of the arcane mystic Orders of the world. He must leave early the next day for another city in Belgium. In fact, he had been in conference for a day before we arrived and had waited and was now waiting for us. We felt grieved that we had been a cause of delay, but Mademoiselle Guesdon hastened to assure us that our schedule had been proper, but that sudden unexpected affairs made it necessary for Hieronymus to depart sooner than he had anticipated.

Since we must leave at once, there was not time for preparation. My wife and I hastily informed the other members of our party where we were going and then hurriedly joined Mademoiselle Guesdon at the street curb. We frantically signaled a taxi, and in my excitement I called to the driver in English, which amused the early evening sidewalk cafe patrons. To them we were running true to form, like all Americans, in a constant rush. We feel that the speed with which we travel through life is the cause of our accomplishments, and that these accomplishments are the worthy ends of life. Our Belgian friends shrug their shoulders and admit that Americans accomplish stupendous things, but are these things the true end of life?" is their query. Do they bring the American

any greater happiness and contentment than the quiet enjoyment of every hour of living which the Belgian ordinarily experiences? Speaking rapidly in French to our rotund chauffeur who looked none too comfortable crammed into the very limited space between the wheel and the hard, upright seat back, Mademoiselle Guesdon gave directions for reaching our destination.

Concerning exactly where we were going, and what was to occur, I was still very much in the dark. I ventured to quiz Mademoiselle Guesdon and finding her non-committal on this point dropped the matter. This attitude only quickened my imagination and further stimulated my enthusiasm. No further words were spoken. We, my wife and myself, sat in suspense, each keeping to his or her own thoughts. We drove across great plazas walled in by massive stone buildings having medieval looking turrets and high iron gates. Walking rhythmically before them were uniformed sentinels carrying regulation rifles with bayonets fixed. I could only conjecture that they were guarding public buildings. The dignified solemnity of these settings was broken by the clanging bells of high, narrow, but short length electric trams which rocked from side to side as they clattered along.

Suddenly Mademoiselle Guesdon tapped loudly on the glass partition separating us from the driver. Bringing his cab to a stop, he inquired in French as to her desires. After much hand waving on the chauffeur's part he was finally convinced by Mademoiselle Guesdon that he was not taking us in the right direction, and he turned to travel in a direction from which it seemed to me we had just come. I did not know what to look for, but I was surprised when our cab stopped in a semi-residential shopping district. I hesitated before leaving the cab. "Do we get out here?" I inquired. "Yes," Mademoiselle Guesdon replied, smiling at my bewilderment.

We walked rapidly about a block, passing many attractive little shops. Mademoiselle Guesdon stopped in front of one, and looked in the doorway. I walked closer and looked into the large plate glass window front. There were platters of cakes and large green bowls of delicious-looking salads. I looked at the large block letters painted on the glass above me. The establishment was a restaurant catering to those who preferred vegetarian and fruit dishes. "But why are we stopping here?" I wondered. I turned, and looked in the direction of Mademoiselle

Guesdon. She beckoned to us to enter. "This is strange," I thought. She had been anxious to reach our destination—was in a hurry, in fact—and now we were dining before proceeding. She apparently realized my confusion and enlightened me. "We are here," she said. "The conclave"—I began, and she motioned for me not to speak for a genial hostess with a voluminous colored apron was approaching us. The hostess was about to accept us as patrons, usher us to a table in the large room in which there were several tables already occupied by diners. But Mademoiselle Guesdon stepped up to her quickly, and in a manner that attracted no attention, spoke to her in a whisper which I could not overhear. The woman turned, looked at us intently for a moment, and then nodded her head in the direction of a small door at the opposite end of the room. We followed her in single file toward it. Upon reaching the door she bowed, turned, and left us. Mademoiselle Guesdon, turning to us, said: "Wait here, please; I shall return shortly." The patrons, eating in the leisurely manner which is the custom of the country, paid us no attention, for which we were grateful, for our faces must have revealed our pent-up emotions.

It seemed an age, but in reality the passing of time must have been but three minutes before Mademoiselle Guesdon returned. "You shall follow me," she said solemnly. We did. We entered a short dark hallway. As I recall, it had a turn in it, because I could not see the other end until suddenly I was standing in an oblong chamber. The room was about thirty-five feet in length and about eighteen feet wide. It had, if memory serves me well, a plank floor and a low-hanging plastered ceiling. It was lit by candles located at the far end of the room. Shadows danced about us on the wall with each flicker of the candle flames, adding to the enigmatic atmosphere of the occasion. Our eyes were rooted to the scenes which the candles illuminated. There was a long but narrow U-shaped table with the open end toward us. The table in reality consisted of a series of small tables placed together and covered with a crisp and brilliant white (in contrast to the yellow candlelight) table cloths. Around the outer side sat a group of impressive looking men. None was eating, although they obviously had been. They looked straight at us. Their faces were expressionless but not cold and steely. We felt, standing there in the part shadows, as though we were apparitions being looked upon by a solemn committee of investigators

into psychic phenomena. I stepped forward and then stood hesitating. As though this had been a given signal, the gentlemen all arose at once, stood erect, motionless, waiting. Waiting for what, I did not know.

Again Mademoiselle Guesdon came to our aid. In a low voice she said, permit me to introduce you. I was fascinated by one personage. He stood behind the closed end of the U-shaped table in the exact center. His position was directly in front of me. I had tried turning my eyes from him. I did not wish to stare discourteously, and yet, as if magnetically drawn, I would become conscious that I had turned again to hold his eyes. He would have attracted attention anywhere. He was tall, stately, well-groomed, conservatively attired. He had a neatly trimmed white beard which gave him an air of distinction without being conspicuous. His complexion for a man of his age—and he must have been sixty years—was startlingly youthful, a healthful pink. I could not detect the color of his eyes from where I stood. They were to me two radiant, scintillating gems; points of light would perhaps better describe them.

Slowly Mademoiselle Guesdon led us down the center aisle formed by the opening of the “U,” directly toward him. When but three feet from him she stopped. Slowly, and in a quiet tone of voice, Mademoiselle Guesdon spoke to him in French. She was introducing me; then he spoke. I do not recall his words; in fact, I did not, as I now recollect, remember hearing words at all but it seemed as if I were hearing a voice calling from a great distance, indistinct but melodious, soothing, somewhat like a chant. I seemed to understand inwardly what was being said, rather than objectively perceiving it. He was extending greetings, then he smiled and put forth his hand in welcome. As he smiled, his whole face lit up with a beautiful glow. I realized then what the master painters sought to capture on canvas when they wished to have their subjects saints, mystics, and great philosophers of old—appear to radiate the esoteric light which had dwelt within them. It is something which the chemical elements of paint and pigments can never portray. In fact, it is more sensed than seen.

This man before me was the Emperor of Europe, known only by his symbolic name, Hieronymus. He was one of the three Rosicrucian Emperors of the world, of which Dr. H. Spencer Lewis of our jurisdiction is one.* I was not awed by the occasion, but rather a great

wave of humility swept over me. I felt a keen sense of devotion to the Order which it is my privilege and honor to serve. There flashed in my mind a vivid picture of my obligations and duties, and the thought of the many who had gone before me and had made possible what we hold so sacred today.

* This occurred three years before the higher initiation and transition of Dr. H. Spencer Lewis.

We were now led to our places at this table; then each of the gentlemen filed by us and was introduced to us in turn. We played with our food, hungry as we were and delicious as it was. Somehow we thought that giving time to eating on such an auspicious occasion would be nothing short of profane, though it would have been in proper order. A few moments later, all arose at the sound of the gavel, and quietly retired from the room. I was about to leave when a young man of about thirty-three or thirty-four years of age slender, wiry, with high forehead and the facial characteristics of one who is distinctly a student and devoted to a mental life, came forward and said in English, "Kindly wait with Mademoiselle Guesdon. You shall be admitted later." I felt a strong liking for this Frater. He was personable and understanding. He was our noted Frater Mallinger, prominent in the legal profession of his country and a moving spirit in the administrative affairs of FUDOSI. I had corresponded with him on numerous occasions relative to official matters of our Order. In fact, I had with me at this time secret and confidential documents to deliver to him. He was exactly as I had visualized him—a human dynamo of energy and accomplishment. He left us and joined the others.

Once again we were alone—Mademoiselle Guesdon, Mrs. Lewis and myself. I turned to Soror Guesdon questioningly. Before I could speak she anticipated my thoughts. "You are about (referring to Mrs. Lewis and me) to be inducted into the thirteenth traditional historical degree of our Order." (Referring to AMORC.) "Only a few members of every jurisdiction are eligible to receive its honors, secrets and wisdom. We were more than elated and grateful. A few moments later a Prater came through the portal which led to the chamber into which all the others had retired. He spoke hurriedly in French to our interpreter and guide, and returned. Once again Soror Guesdon bade us follow her, which we did. This became an unforgettable evening in our lives. We crossed

the threshold and dwelt within for nearly an hour, though we were not conscious of time. What transpired there must be sealed in my heart and mind. I can only impart my experiences to those who are prepared to receive them, and like me, they will never know when they will be considered prepared until the invitation has been extended to them to receive this knowledge at a proper time and at a proper place.

My next day was an exceptionally busy one; no time for sightseeing, no tours or ramblings. There was too much to be accomplished. By appointment met Frater Mallinger at his office, to which Mademoiselle Guesdon took me. There important documents concerning the welfare and extension of AMORC, the Rosicrucian Order in America, were signed and sealed. Official communications from the Emperor of AMORC in America were personally delivered to Frater Mallinger for consideration by the FUDOSI officers. The mutual plans and problems of the Rosicrucian Order of the North and South American jurisdiction and the Order of Europe were discussed, and constructive ideas exchanged. For the first time I heard the phrase. "And it shall be the duty of America to preserve this for future generations." I thought it strange but passed it by without question.

Later, Mrs. Lewis, Soror Guesdon and I were luncheon guests of Frater and Soror Mallinger at their home. A delicious repast was enjoyed in most pleasant surroundings, Soror Mallinger being an excellent hostess. Immediately following luncheon, Frater Mallinger, Mademoiselle Guesdon and I attended the meeting of a special FUDOSI Convention Committee some distance from the former's home, for a further consideration of organization matters of importance.

Several days had elapsed since our arrival in Brussels, but this night was to be an eventful one in this very eventful city. Mrs. Lewis, Frater Brower and myself were to be inducted into the Order of the M one of the oldest arcane Orders of Europe. For centuries it had been a contemporary of the Rosicrucian Order, a body of preliminary training and preparation for the higher degree studies of the Rosicrucian Order, perpetuating many noble traditions and ideals. It had numbered among its membership many learned men throughout Europe whose names are milestones in history. Frater Brower, who had never been abroad before, and had not previously had the pleasure and privilege of meeting the dignitaries of these august Orders of Light, was in a

high state of expectation and enthusiasm. For him the hours of the day slowly waned as he waited for the evening, when we were to go to our place of initiation. We had been advised to dress semi-formally for the occasion, and we were dressed considerably in advance and waiting with undue impatience in the foyer of our hotel for Mademoiselle Guesdon, who, as usual, was most punctual.

It was dark and rainy when we left in a chugging taxi for our destination. The streets, for so large a city, were quite deserted. The evening was one that induced a melancholy mood. Reflections of the odd-shaped street lamps cast grotesque patterns of light on the slippery pavements. No one spoke. Each treasured silence. To me it was an intriguing adventure. Some of the streets through which we passed were so narrow that the shadows of the houses on either side intensified the darkness so that we seemed to be riding through deep canyons. The streets twisted to such an extent that neither end could be visible, which added to the realism of the impression.

I could not help but think of the sagas of the neophytes of our beloved Order who, in the Middle Ages, seeking light as we, crept from their homes in the dead of night—such a night as this — and pulling closely over their heads the cowls of their cloaks so as to partly conceal their faces, flitted along in the shadows like things of another world, seeking others who would, in the deep shadows of the eaves of some home, meet them. Together they would secretly enter and surreptitiously conduct a conclave of our Order, fearing any moment to hear the crash of the door and find in their midst officers of church and state who would arrest them for daring to go beyond, in their studies and thoughts, the prescribed confines of the ecclesiastical and state laws of what should constitute knowledge. Though I was to experience no such danger, I thrilled with the thought of the danger they experienced to gain what we, of the jurisdiction of North and South America and the allied jurisdictions, enjoy so freely and sometimes unappreciatively.

After a ride of about ten minutes we came to an abrupt stop on a slight hill. Stepping from the taxi so as to avoid pools of muddy water, we stood on the sidewalk in front of a brown stone building that resembled the mental picture one gains from the descriptions of homes in French novels, architecture of the sixteenth and seventeenth centuries. It was quaint, intriguing—the sharp pointed roof, the garret

windows, the well-worn steps leading to the main entrance, and the small doorway at the left, below, with its heavy wooden door and small grated windows.

Presuming that this was the place we were to enter, because it seemed to have an atmosphere of mystery and secrecy, I started in advance of the others to walk up the steps toward the large doors which were closed, and through small glasses in the upper portion of which was shining a faint light. Mademoiselle Guesdon called out to me to return. I said, upon reaching her, "Is not this the place?" "Yes," she said, "but not the entrance." She turned, and we followed her. She approached the small door at the left. In fact, to reach this door we had to go down two or three steps. To me it had seemed like a servants or delivery entrance. We stood behind her, our coats drawn about us tightly. It was still raining, and miserably uncomfortable. Not a soul was to be seen on the street. It was exceptionally dark because there was only a faint street lamp on either end of the long block. She knocked three times. I recalled the symbolic knock in one of our own rituals.

We waited what seemed to me a great length of time. No one spoke. She made no further effort to knock. Finally I heard a bolt being drawn in the door, and the door must have been heavy and not used frequently for it opened slowly as though the one who was opening it found it an effort to do so. It creaked. We looked in. There was a hallway, a short one, well illuminated by an odd electric fixture hanging on the high ceiling, casting a peculiar pattern on the floor. To the right of the entrance in front of which we stood was a stairway that led upward, only one flight of it being visible. The hallway was inviting. It radiated a spirit of friendliness, warmth, light, cheerfulness. Immediately before us stood a Frater, tall, well proportioned, and wearing a flowing white gown, and a black mask which concealed all of his face but just a slight portion of his forehead and his mouth and chin. He said but one word—"Enter." We did. We filed in and lined ourselves against the wall of the hallway. He closed the door, bolted it, spoke nothing further, turned at right angles, walked slowly up the long stairway, we following him with our eyes as he did so. Again silence reigned and no one made the effort to speak. Speaking seemed to be out of order. No one seemed to want to shatter his impressions with words.

In a few moments this Frater returned, and smiling, and speaking in English, asked us to please follow. Mademoiselle Guesdon led. The robed Frater took up the rear. We climbed the flight of stairs to another passageway identical with the one below, except that in this hallway were two doors. We waited outside one. The robed Frater opened it just enough to pass into the chamber, but we could not see in and knew not what to expect. He returned a few moments later and had in his hand three large white silk handkerchiefs. We were asked to remove our coats and hats and then each of us was blindfolded, and each of us was led through the open doorway into the chamber of initiation.

Gently we were taken by the arm and led a few steps forward and then turned at right angles and caused to move forward in another direction. This was repeated several times in the direction of each point of the compass. It was not a capricious act, nor was it intended to confuse us. It was, I knew from my experience with ritualism, part of some solemn ceremony. I had by now lost my orientation. The stillness, the quiet, was intense; it had the feeling of heaviness; it seemed to be pressing in upon me. I felt as though eyes I could not see, how many I did not know, were not merely looking upon my form or my partially concealed face, but were searching my soul. My heart thumped and a flush of warmth came over me. So carefully had I been blindfolded that even no light penetrated to my sight. I felt not as one whose vision was temporarily obscured, but rather like a person groping in the dark of night, in a wild, unknown terrain, not knowing but half sensing that perhaps a precipice lay just ahead, over which one could plunge into oblivion. Strangely I had no tear, my emotion was one of excitement instead, that anticipation of some great revelation that would thrill and amaze me. I heard a voice; I knew it was close to me, yet it had that faintness of distance. It was not in a tongue that I at first recognized; in fact, I was not attempting to understand it. Its melodious tone enthralled me; it was that to which I was listening. It was unmistakably a man's voice, yet there was something not mortal about it. Perhaps I was overwrought; perhaps again my imagination dominated my reason, yet as I look back upon the experience now, calm, collected, I cannot help but feel the same about it today. I was being told and asked something. Certainly they must have known that I could not understand the tongue or what was

being said. Suddenly I was startled—I amazed myself—*I did know!* I did not actually comprehend words, but the inflections, the rise and fall of the voice, the reaction of my solar plexus to the vibrations of their intonations engendered within me sensations which caused me to have a consciousness of their import, as thoroughly as if I had understood the language. The voice stopped as suddenly as it had begun. I was now breathing heavily with intense excitement. The sound of my own breath disturbed me for it was disturbing the peculiar state of tranquility existing in the room, of which I was so conscious. To my surprise I quickly regained my composure. Then I had a sensation of numbness come over me like that one experiences who is slowly being frozen. I felt drowsy. It became an effort for me to concentrate, I so wanted to relinquish consciousness, to sort of slip off into an effortless state, into comfortable oblivion. Something, however, kept me from doing that. What it was I cannot recall—something within me perhaps. There flashed into my mind the command to answer. They were waiting and I must answer the charge given me, the questions asked of me. I was, however, powerless to speak; I could not even move my tongue—it was an inopportune time to be inarticulate. The answers, as thoughts, welled up within my consciousness. It seemed as though the very words themselves which I was mentally framing choked me. A titanic struggle was going on within me, yet I was aware that outwardly I remained motionless and perhaps gave no indication of this conflict. Then a voice spoke in English; it was a woman's. She said: "You have answered aright." It did not occur odd to me then that they were aware of my answer, which was unspoken, and which had become nothing more than an intense thought within me. I felt bands tugging at my blindfold. A few seconds later I looked out upon my surroundings.

In point of time, only a short period had elapsed since we had entered the chamber and finally left these quarters on the Rue . . . , but in that interval and after the removal of our blinds we had such experiences as made it seem that we had lived for centuries and traveled to other worlds. And this concluded my first initiation in the Order of the M..... I was to have still others.

The next night was to be our last one in Brussels. It was to be one of merriment, sociability, brotherhood. During the next day Mrs. Lew

is and Mrs. Shibley were free to visit some of the excellent shops in Brussels, noted for their fine laces and needlework. They had to return early, however, to prepare for the official FUDOSI banquet, a banquet which concludes all these official sessions.

At 7:00 P.M. on that evening, Mademoiselle Guesdon again acted as our guide. Our party, however, was increased in number this time. We drove along one of the main boulevards in Brussels, well illuminated with sparkling, scintillating electric signs as modern as any we find in America. Along this boulevard there prevailed the typical continental atmosphere. There were blocks dotted with little sidewalk cafes, little tables over which there were awnings, and about which people sat sipping wines, drinking coffee, and watching humanity file by.

We eventually came to our destination, a well-illuminated and fashionable-appearing restaurant—a large place. We entered, and the maître d'hôtel escorted our party to the second floor where, in a large dining hall, the convention tables were spread. There were hosts of representatives of the various occult, mystical, and arcane Orders of Europe and the world gathered there. Some were in full dress, wearing their emblems of office, and some wore their ritualistic capes. Among those present was the eminent Grand Master of the Order of M....., into which I had just been inducted—a man of prominence in his own country, an outstanding figure in the political world. More about him will come later. I was introduced to a kindly old soul, well over eighty years of age. Grand Master of the hermetic brotherhood, a master of occult lore. He spoke English, and I spent a very pleasant half-hour discussing the work of the AMORC in North and South America with him.

There were also many others there who were distinguished personages. I had the pleasure of meeting our good Frater Greuter of Southern France, who holds a prominent AMORC office in that country, and who is also active in the work of the FUDOSI. A delightful banquet was served. There was entertainment, and there were speeches in various languages. I had the pleasure of addressing this congregation, and Mademoiselle Guesdon interpreted my address to those present who could not understand English.

We returned to our hotel in the early hours of the morning feeling that we had concluded a very successful stay in Brussels, and had had an experience that made life worth living. Late as was the hour, or rather I should say, as early in the morning as it was, we were obliged to pack and prepare for an early morning journey to France—to Paris.

Chapter III

A CITY OF STRANGE CONTRASTS

THERE IS A charm about Paris that is part imaginary and part actual. Many Americans think of Paris as synonymous with Europe, and their first trip abroad is centered in and about Paris. Actually, however, Paris differs only slightly from many of the other great cities of Europe. Of course, its customs, language, and historical background are different, but in reality there is little more of interest to the traveler or even to the tourist than one would find in London, Berlin, or Rome for example.

France, it is said, is a nation that desires to live in the past, in the glory of past achievements and accomplishments, the romantic settings of previous centuries, to dwell upon her great personalities of yore, and thus she turns reluctantly to the present, and to the future. It has also been said that the average Frenchman devotes himself to the things of the day and to modern affairs by necessity, but prefers living in the memories and glory of the France of the past. And since France has been a battleground for centuries, and a prize which various powers of Europe at different times sought, the French people are instinctively on their guard, and one gathers the impression that many of them are suspicious. They are constantly, it seems, on the alert for those who would take advantage of them. This suspicion affronts many visitors, though the effrontery is unintentional on the part of the Frenchman.

This suspicion is manifest in national affairs. It casts a burden on her industry, finance, and full cooperation with other powers. Time after time France has been trampled upon, her national honor insulted, her people enslaved, her institutions destroyed by the greed and avarice of

hostile powers, and each member of a family has taken an unexpressed oath that it shall never happen again, and this obligation colors their views. France is, therefore, a militaristic nation, not because of a desire to conquer or even to expand herself, but for self-defense alone. She feels that if she can command the greatest air force and one of the best equipped and manned armies in Europe, as well as having the most extensive fortifications, she will be safe from the crushing blow which she feels other powers are waiting to give her to further their own ends. The people as a whole are extremely emotional, but this emotionalism is not evidenced except in emergencies, in crises. There are other peoples of Europe as emotional and they display their emotion more frequently in the commonplace affairs of the day. The average Frenchman is quiet, peace loving, even tempered, except when extraordinarily provoked. Then the emotions, like pent-up furies, break loose, and perforce they sweep away the usual very logical reasoning of the people.

The impression the visitor gets is that Paris is a city of two classes only: those who are wealthy—or at least have a very substantial income and are able to enjoy the better and finer things of life, the luxuries—and a great multitude who are struggling along, barely able to provide the necessities of life. There does not seem to be that dominant class which we, in America, say is the *great middle class*, or the *bourgeoisie*. That is particularly noticeable in the material aspects of the city. On the great boulevards we find every evidence of wealth and prosperity, large buildings with marble and tile fronts and chromium plating, modernistic lighting effects and decorations, broad streets and sidewalks, shops displaying articles of every conceivable kind, exquisite jewelry, clothes—both men's and women's—of the latest fashion, rare perfumes, gems, restaurants and cafes whose cuisine caters to the epicurean. The passers-by are well dressed, alert, cultured, refined; but if one steps off the boulevard, in many of the side streets he finds squalor, dust and dirt, congestion, old buildings with old plumbing and light fixtures, crowds, suggestions of poverty or at least want. There is not the same sparkle of life, and hope, in the faces one sees. There is more of an indication of drudgery and life without the light of culture. Of course, there are many sections of Paris which have beautiful apartment houses, and private homes, but these again represent the

opposite class, the other extreme. There is, apparently, no intermediate class, or at least a dearth of it.

One is also impressed by the comparatively few Frenchmen that speak English, or in fact any other language than French. This is noticeable in contrast to London, Berlin and Rome, for the people of those cities almost all speak another language in addition to their own. It is not that Frenchmen cannot be linguists, because many of them speak several languages, but the Frenchman has an exceptional pride in his language, a traditional pride, and many feel it beneath their national dignity to express themselves in any other language than their own, except when obliged to by commercial reasons or some other equal necessity. Thus we find that in the French colonies, the mandated territories of France, the Frenchman does not make it his business to learn the language of the native but attempts to oblige the native to learn French. England, on the other hand, takes a distinctly different position. She feels it is her duty and obligation to become thoroughly conversant with the language of the people of her colonies, and every public servant is obliged to do so. Thus we find that England has a better understanding, generally speaking, of the problems of the people of her colonies than has France.

We had arrived in Paris early in the afternoon. The day was bright and warm, the sort of a day one looks forward to experiencing in Paris. We loaded our luggage in three taxis (and I might add that in the last few years Paris has done away with her traditional taxis which seemed like relics of the past, and has adopted a style of taxi which is more like the American one than any others to be found in Europe) and were soon on our way. Visitors to Paris five years ago know it was the custom for taxicabs to have mounted on them the early type rubber bulb horn in addition to their modern electric horns. Taxis were forbidden to operate their electric horns within the city limits, and were consequently continually obliged to blow the bulb horn at least two or three times in each block, and each one had a different pitch or note. At first the visitor would find it amusing, and finally extremely annoying and irritating. With the increase of motor cars and taxis, the noise became a menace and finally was done away with. Actually the visitor senses a quietude which is unnatural for Paris. After a short winding trip through the streets of Paris from the Gare de Lyon, then

along the Rue de Rivoli, we pulled up at our hotel opposite the famous Tuilerie's Gardens, which were palace grounds for centuries and now form a beautiful park.

The balance of that day and part of the next day were to be free. We were to devote them to our own interests before we began again filming historical sites and continuing interviews with officials of the Rosicrucian Order and allied mystical organizations in Paris. We hurried from our rooms after arranging our luggage, and decided at the curb that we would visit the majestic Notre Dame Cathedral on the little island in the Seine River which flows through the heart of Paris. As we rode toward the Seine, I recalled how this little island in the heart of Paris, according to traditional history, was at one time all there was to Paris; that the Roman generals in their accounts to Rome, when they occupied France, told of a tribe of people, barbarians, who lived on the islands in the Seine. Then again I thought of that medieval philosopher, Abelard, who had numerous controversies with the Roman Church during the eleventh century and who, because of his advanced ideas, jeopardized his life, and how he went to Paris to study logic and rhetoric and finally his teacher, William of Champeaux, admitted to him that he could teach him no more. Abelard then established his own school, and it is said that from the nucleus of his school, which he also established on the island of the Seine, later went forth students who took part in what finally was the establishment of the famed Oxford University.

It is said that everything we see, every scene or place or thing leaves a color impression on our minds, suggests either two or three pronounced colors or combinations of them; that aside from the details of the thing we have a memory of it in color; that it suggests color or light shading to us aside from its form. We all agreed that the grey stone walls along the Seine with their points or bridges of stone which have been there for several centuries, and the other stone, grey, cold, uninviting buildings on either side, gave us an impression not of form particularly, but of just black and white. We later seemed to have the memory impression of our experiences as darkness with just patches of light representing the blue sky and the sun's rays which found their way between the mass of buildings and walls and were reflected on the muddy waters of the Seine.

Man's works are mighty when they can instill within him the same feeling of awe as do the great things of nature. The Notre Dame Cathedral does that. Its great height, rising hundreds of feet over the Seine, the massive stones, the height of the center nave, the diffused lighting caused by the beautiful stained glass windows, the great flagging, the grotesque gargoyles looking as though they were leering down at you, leave one feeling small, insignificant. And yet the greatness of the structure, the stability and beauty of it, causes one to realize that with all that we are able to accomplish today, we cannot greatly improve upon this beautiful example of Gothic architecture. When one realizes that this great edifice was built without the use of steel or girders and that the great arches which press against them are the flying buttresses or oblique, separate outer walls supporting the inner ones, one marvels at the ingenuity of these early builders. Everywhere there are, in this great edifice, suggestions of wealth, power, and strength. The early church had need of such lavish display, for strung about these great cathedrals in Europe in the Middle Ages were the squalid shacks, one might call them, of the populace. In them people led a sordid life; gloom, dirt, filth, fear and superstition existed in them. The average person's clothes were not much more than just what was necessary to cover his body. There was nothing that represented beauty. People had no beautiful furniture or jewels or paintings. They had no musical instruments except a few of the very crudest kind. Everything in life was dull and uninspiring. Life itself seemed to be hardly worth living. There was nothing that could awaken within people who lived at that time an appreciation of the magnificence of God, of the beauty and splendor of the things which he had created. Naturally before they could appreciate the divine, they had to realize something which suggested, by its very nature and difference from their ordinary life, that it was divine. Therefore, the church, collecting the pennies, the coppers, the sous of these people, was able to build in their midst a temple of such splendor and magnificence and majesty as depicted the God to which it was devoted. And on religious holidays or when the people gathered in these big temples for worship they truly felt that they were in a sacred sanctum of God, for the world of the church was so different from theirs. There was beautiful music, such as they never heard elsewhere, magnificent paintings and murals

they could not see anywhere else; there was a structure, stable, strong, representing eternity, and the reliability and dependability of God Himself in contrast to their frail structures which were like unto the life of man. And so, though we may condemn the early church, on the one hand, for taking the few miserable coins that these people had and using them to build such lavish structures, yet they received in return more spiritual benefit and more of an awakening of their inner natures through that means than they could have through the expending of their pennies, their coppers, in any other way. So we can say that the church was justified in its expenditures for these beautiful cathedrals.

The hour was late before we returned to our hotel, and we were glad to retire.

The next day was not so pleasant a one. The skies were leaden, and the smoke of the city was more visible against them than the day before. There was a slow rain, one that seemed ceaseless, and it had a depressing effect upon the mood. However, we determined to visit another historical site. This was the so-called Temple of Justice on the opposite side of the Seine. Again we set out in a taxi. The taxi is the most dependable means of transportation in Paris with the exception of the subway, and as taxi fare is so cheap, the average visitor prefers it to traveling in the congested subways, which, like most subways, usually do not have terminals or stations within the vicinity of the place you wish to visit.

The Temple of Justice is visible for quite some distance before you arrive at it. It is a large, imposing building. Each corner of it is flanked with a tower-like turret so that it looks like a medieval castle. It apparently has never been cleaned by sand blasting as are many of the old stone buildings in America, for its walls are extremely black, as though they had been coated or painted with a black pigment. One gets a chill in looking at it, a sort of dread feeling. In the center of the square building between the two large turrets or towers is a great gateway, massive and composed of an iron grill. The bottom of the grill has spikes, and the whole gate itself is studded with bolts which are apparently hand-riveted. This Temple of Justice, as it is now called, was used during the French Revolution as the place where royalty was confined, where aristocrats were imprisoned, before their trials or, as we might say, 'mock trials, and before they were led to the guillotine. As

you approach the large gateway, you feel your spirits ebbing; whether it is the suggestion of the building itself, its cold atmosphere, or whether it is knowledge of the fact that thousands were confined there before they lost their lives through political upheaval. Many were tortured there. Most all were led from there to their deaths. Political prisoners during the French Revolution who were led into that gateway knew it meant the end of freedom and the end of life. It was like crossing the threshold from this life to another.

We passed through the gateway into the courtyard. The courtyard consisted of cobblestones irregularly laid, and not even uniform in height. About the small quadrangle were the four walls of the structure, all of the same cold appearing stone. One felt so physically oppressed that it seemed even difficult to breathe, though of course the courtyard was open to the sky. The only openings in the walls of the building were long narrow apertures about three feet in length and perhaps eight or ten inches in width. Behind these slit-like windows were little alcoves in which a man could stand and look out, and shoot from them if necessary without exposing himself too greatly. If one looked up at these apertures which were dark, because of the shadows of the interior, one almost felt as if eyes were piercing him, as if he were being scanned by an invisible person. We quickly crossed the cobblestone courtyard to a low arched door-way typical of Gothic architecture. We stepped down three well-worn steps and pushed heavily against a plank door with its strap iron braces, which creaked on its rusty hinges as it swung open. We looked into an enormous subterranean chamber with a vaulted ceiling, with many squatty columns of great circumference. These columns supported the entire structure in the manner of Gothic buildings. The columns were joined at their tops by arches forming a series of pockets or vaults in the ceiling. It was very dark, except for the yellow light of a small gas jet. One could easily see that the gas light had been added some time later for the pipe was strung between and fastened to the columns. The flame was flickering considerably because of the drafts that came from this great underground area. We closed the door behind us, which left us alone in this great chamber.

For no reason whatsoever we spoke in hushed voices as though we were afraid of awakening someone or attracting attention to ourselves. Finally, realizing that there must be an attendant in the place, I called

out. The echo of my voice seemed to spring back toward us from every corner as it resounded throughout the stone chamber. It was flung back at us from the vaulted ceiling, from the stone floor, from the many pillars. It was as though we had awakened a thousand demons who were jeering at us. It was a startling effect. However, it had the desired result, for there approached us an attendant in a tattered uniform who, though he was there for that purpose, and must have received visitors frequently, seemed rather curious because we were there. We explained the best way we could in rather broken French what we desired: that we wanted to be shown about; particularly did we want to see the famous cell of Marie Antoinette. He motioned us to follow him, which we did, and we wended our way among the forest of massive columns to a circular stone staircase. At the bottom of the stone staircase was another heavy plank door with an enormous bolt and chain, crude but very substantial. In the upper center of the door was a grill or aperture about ten inches square with three stout bars in it. They were so rusty that the metal was crystalizing or flaking away. Over the grill opening was the remains of a small shutter, apparently so that it could be closed and the prisoner in the cell could not see out. This, the attendant explained, was the cell of the famous and beautiful Marie Antoinette. She was confined for quite some time before she was taken from the cell and led in a rough, high wooden-wheeled cart through the streets of Paris before the shouting, screaming throngs to the guillotine. There was her stone couch, and the little shrine at which she prayed daily. The vibrations were intense, acute. We had engendered within us in that cell, mingled feelings of fear, hatred, and of remorse. There in the cell also were big iron rings driven into the stones, to which unruly prisoners could be chained. Then we were led to another cell, and still another, and finally again back into the great subterranean chamber, the dungeon-like vast hall. It was in this great chamber that the aristocrats, the ladies and gentlemen, the counts and the countesses, sat about playing cards, talking in low voices, weeping, consoling each other, praying, hoping, while several times a day the bolts and chains would rattle on the outer gate and in would come officers of the Citizens Guard who would read from a long scroll the names of those who were next to be tried in a court composed of the Revolutionaries. When their names were read, shrieks would rend

the stone chamber, for all knew that when they were led before the tribunal they could expect no mercy and no justice, for there was no trial. They were all condemned to death, and it was just the formality of passing in review before the judges—the butcher, the baker, and the candlestick maker—and almost before the name of a defendant left the lips of the clerk of the court a cry would arise from the court, “Guilty—the guillotine.”

There is a fascination about a gruesome place such as the Temple of Justice. One would imagine that he or she would be anxious to leave, flee from the place, seek the fresh outdoors, or that even the rain would be welcome and refreshing. But instead you are drawn to investigate further. The horror of it seems to grip the mind; draw you on and on.

We finally returned to our hotel, and Frater Brower and I prepared our photography equipment, for the next day was to be a busy one for us. The third day was in our favor, photographically speaking. The sun shone bright and the atmosphere was unusually clear of the customary smoke. We set out in search of the quarters of the famed Count Alessandro Cagliostro, prominent in the annals of the Eighteenth Century. We could not describe to our driver that we wanted to go to the former residence and garret laboratory of the renowned alchemist and mystic Cagliostro, for Cagliostro is not even known to the average Frenchman except to those who have studied mysticism and philosophy and the history of that period thoroughly. So we had to give him the name of the rue or street. It was quite a drive; it took us approximately half an hour to reach there. We found ourselves in the heart of bustling, noisy Paris. It was a light wholesale district. The houses of the street were all one hundred to two hundred and fifty years old. Most of them had been converted into factories for manufacturing of fabrics. It was now strictly a commercial center. We immediately found the place we sought because of its unusual appearance. The building was recessed, surrounded by a high cement wall. On top of the cement wall, which was about twelve or fourteen feet in height, was an iron railing, and back from that iron railing we could see the upper two stories of the building. The garret story was quite eerie looking. It consisted of a series of super-imposed windows, that looked as though they were fastened or attached to the stone building, and extended from the face

of it. But what principally caught our attention and definitely identified it as the place we sought was the garret balcony. It was a little porch that extended out from the edge of the top story, and over this porch which had a simple iron railing about it was a low narrow roof, and projecting from the edge of the roof was a metal bar about four feet in length from which hung a pulley, and from which dangled a strand of cable. It was from that balcony that Count Alessandro Cagliostro hoisted from the cobblestone courtyard below his kegs of chemicals and boxes of instruments used in his secret alchemical experiments.

THE GARRET LABORATORY OF CAGLIOSTRO

In the heart of bustling, noisy Paris, this solemn, attention-arresting residence of a famed mystic of nearly two centuries ago. Onto the superimposed garret balcony, the alchemist philosopher, Count Allesandro Cagliostro, hoisted from the cobblestone court below his kegs of chemicals used in his secret experiments.

Cagliostro in his youth had gone to the Orient and studied in the mystery schools there, and became well versed in the secret laws of nature. Returning again to Europe, he became renowned as a healer. He effected miraculous cures. He seemed always to be in possession of great wealth, jewels and gems, and he was lavish in his contributions to the poor and needy. His demonstrations of natural law gained for him the reputation, on the one hand, of being an astute philosopher and alchemist, and on the other hand he was accused by those who feared his powers of being a black magician and of practicing the arts of Satan. From where his tremendous wealth came, which seemed endless, no one quite knew. It was said that he had discovered the means of transmuting the baser metals into gold and thus could make gold at will. Because of the great cures he effected, it was said that he had also found the elixir of life. Kings and potentates sought his counsel and his help, but as his fame spread, so did also jealousy and fear of him. It is said he entered Paris riding in a great gold coach laden with gems, and with chests of gold. He was charged with many crimes and successfully defended himself against them. Some of his greatest accusers were those who held high positions in the church. The persecution became more intense, and finally he was dragged bodily from his garret home and wrongly imprisoned for life. For years the only historical accounts were those which came down to us from prejudiced persons, declaring him to be a charlatan, a mountebank, a fraud, and an imposter. Since that time other facts have been found which reveal that he was not a charlatan, not a fraud, but a true mystic—one who used his wealth for the benefit of others and most certainly had a mastery of natural law which he sought to teach and which caused mingled feelings of respect and fear toward him.

With these thoughts in mind we entered the courtyard and looked about. Everything was disillusioning. A long the three sides of the courtyard were doorways that originally had perhaps led into private chambers of his residence. Now they were doorways leading into shops, and over the doorways hung either brass or wooden signs, and through some of the partly open doors we could see women working at sewing machines manufacturing garments. From some of the windows overhead Wearing apparel was hanging and modern household utensils were evident. There seemed to be no appreciation of the fact that they

were living in what was at one time the center of the greatest mystery of Europe—the residence and the garret laboratory of Cagliostro, the man who held the respect, fear and admiration of the crowned heads of Europe. Most of them did not even know that this old building had been the property of Cagliostro. As we stood looking about, a man approached us from one of the shops. He appeared to be the superintendent, and asked us what place we wished. We explained that we were merely visitors and desired to take a few photographs. He seemed puzzled as to why we wished to photograph these small places of business or shops. We explained that we were here because of its historical interest; that we knew, in fact, that this was the former residence of the mystic and alchemist Cagliostro. He looked quizzically at us for a moment and replied that it was, but that no one except himself and one other of the attendants knew anything about it, and they said nothing about it as they did not want to attract visitors who would interfere with the business activities. He said we could not enter the garret because it was occupied by a tailoring establishment and the tailor himself had never heard of Cagliostro and did not, of course, know that he was occupying the laboratory of the alchemist. It seemed such a travesty, that nothing was done to respect the memory of this character. At least—we thought—a brass plate could have been erected to his memory somewhere in the courtyard.

I had known from my studies and from our Rosicrucian archives that there was a secret passageway and stairway which led to the garret, and that the passageway also led out from this court for several blocks to some other residence in the city that Cagliostro would use when desiring to evade the curious throngs who used to collect about the outer wall either waiting to see him or to solicit his gold. My attention was attracted to one of the doors in the corner of the courtyard. It was a little smaller than the rest, but particularly was it noticeable because it was not wooden like the others, but was all metal, a solid sheet of metal. It looked like a fire exit, such as we use in buildings today, with a metal door to prevent the spread of fire from one building to another. I pointed to it, “And that?” I said.

He seemed to sense what I thought and he said. “That is not in use any longer. It used to be a tunnel or passageway that led out somewhere into this district, but long ago a portion of it caved in and so it has

fallen into disuse, and we keep the iron doorway closed so that it will not be used by anyone, thus they will not be injured.”

“Cagliostro’s?” I asked. He replied, “Most likely, as no one remembers when it was constructed and apparently it was made at the time this building was erected several centuries ago.” We had all the information we needed and we immediately took photographs.

On the final afternoon of our stay in Paris I met Mademoiselle Guesdon at a prearranged time. She accompanied me to an appointment with Frater B...., Sovereign Supreme Master of the Order of M into which I had been duly initiated in Brussels. Frater B holds a prominent position in France. He is Secretary of the Archives of the French Government, a department containing the records, manuscripts, books and papers, and documents of State—a most responsible and important position. The Library of Archives is located in the Chamber of Deputies Building in Paris, an historical place, once a palace. After a short ride we arrived at the Chamber of Deputies and Mademoiselle Guesdon and myself were escorted into the private office of Frater B....

Frater B.... is a very dynamic and forceful man, a man of approximately fifty years of age but with the vitality, stamina and energy of a much younger man. He speaks quickly, he acts quickly, he thinks quickly. Life holds two principal interests for him besides his family—his work, the responsible position he has in the French Government, and his mystical philosophical studies and office in the FUDOSI and the Order of M..... Our exchange of ideas was a little difficult as Frater B..... spoke no English and I no French. So again Mademoiselle Guesdon came to my aid. We discussed at length the work of the AMORC in America, and the work of the Order of M..... in Europe. Frater B..... explained that he had conferred upon the Imperator of the Rosicrucian Order of AMORC certain authority to establish in North and South America the Order of M..... and that before I left France I, too, would receive authority to assist the Imperator in the establishment of this Order.*

* This reference to the Imperator refers to Dr. H. Spencer Lewis.

Seeing my great interest in the Chamber of Deputies because of its historical significance, and because it is one of the important departments of the French Government, he personally escorted me

throughout the old building into what formerly were the ballrooms and library and music rooms of the nobility that occupied it before the Revolution. Then he took me into one of the alcoves of the archives and there were great bound volumes, scrolls, manuscripts, dating back for centuries. Many of these volumes and manuscripts are priceless because of their historical value. For example, he showed me the handwritten court record of the trial of Marie Antoinette, whose cell we had visited but two days before. He pointed out in this old manuscript how every time any defense was raised in her behalf, the jurists would cry out. "Guillotine, Guillotine," and there in black and white appears this blemish on justice. It was a strange sensation to look upon such a manuscript and to visualize the scene that took place when these events were recorded. Things of the greatest historical importance seem commonplace to Europeans, for there they have so much that is of the past—surrounded with history. Any one of the things would demand considerable attention in our new America. The very chair which Frater B..... used as his personal office chair was an antique that would gladden the heart of any dealer in America or elsewhere, and would have brought an enormous sum in sale. The chair came from the private library of King Louis VIII of France, yet Frater B..... was using it as just another piece of office furniture, and he smiled at my amazement at his commonplace acceptance of this antique.

When we finally left it was dusk, and we were caught in the throngs returning to home from work. The jostling, pushing, scurrying crowds at 6:00 P.M. in Paris are no different in their anxiety to return home after routine affairs and enjoy their firesides and their personal interests than the office and work-a-day crowds one finds in any city in America or Canada. This night we could not enjoy strolling along Parisian boulevards, up the Rue de Rivoli or along the Madeleine, nor could we sit at the Cafe de la Paix where it is said the world passes by, and which, it is also said, is the most cosmopolitan spot in Europe, for we had to pack and prepare for a long journey. We were truly to start Eastward on the morrow—Egypt was beckoning. Our trek along the trail of civilization was to begin in earnest.

Chapter IV

MOTHER NILE

THE WATER FRONT of any large port of the world is fascinating. The bustling, the clatter of carts, trucks and dories over cobblestones, the deep-throated whistles of chugging tugs, the raucous cries of longshoremen and teamsters, all add to the undercurrent of excitement. Sham, hypocrisy, and shallow conventions drop by the wayside. The stark realities of life are revealed. When men go to sea they are compelled to struggle with one of the earth's greatest untamed elements. Preparation for its conquest requires strong will and matter-of-fact conduct. Passengers may have idealistic illusions about traveling the high seas, but the men who load cargo and make the great vessels ready for departure know that with all the safety devices provided by modern science, the event is fraught with dangers.

The port of Marseilles in Southern France, a city of nearly a million population, impresses the traveler with the fact that it is more than a shipping center or a great port of call, but a gateway to the East. Here the flotsam and jetsam of North Africa, and from East of the Suez, meet with the backwash of Occidental Europe. As we stood on the pier surrounded by large cases which, from their size, may have contained airplanes or automobiles, and leaned languorously against bales of cotton from French Morocco, we studied the flow of humanity past us.

Through one of those unexpected events of travel, the ship we were scheduled to take was called suddenly from the service and we were forced to delay our sailing several hours. We were the only ones waiting who looked strictly, shall we say, like passengers. Tall Algerian blacks, with tattered, ill-fitting French army uniforms, shuffled past. Their eyes stared vacuously ahead. What did life hold for them? Plucked from

their native environment, these simple souls were enlisted in the French army; fed poorly, and paid badly they existed, aimlessly following the orders of white masters. Trained to use modern arms and methods of warfare against European white armies if necessary, they could be a menace to France, if ever it dawned in their consciousnesses that they were being made puppets for the avarice of white men. Children of their appetites, they are content if these appetites are regularly appeased. To maintain the necessary quietude among them, liberal France does not even draw the racial line. In cafes and on streets, Algerian native officers and French white girls enjoy each other's company without apparent social detriment to either.

Scores of unkempt and gaunt priests gathered in knots, talking profusely, gesticulating freely, their personal belongings in black cloth bundles at their feet or dangling from their hands at their sides; solemn faced plump nuns wearing frayed grey tunics, methodically climbed the gang-plank. Each looked, even before departure, as though sorely affected by nostalgia. These were Christian missionaries, their dangling crucifixes, and well-thumbed Bibles which they clutched, were to them torches, to be carried to dark Africa to—as they believed—a heathen people. Such a simple faith carried to an irrational extreme has been the unfortunate cause of untold deaths, bloody orgies, and gruesome massacres. The ideal of spreading Christianity is noble, but the attitude of damning the beliefs of others to further it is ignoble. To most of these missionaries, as to thousands of others of different Christian denominations, their duty was the condemnation of the beliefs of simple-minded natives, and then the substitution of Christianity. To rob a man of his God, and his belief in the nature of divinity, is to throw him on the mercy of his own resources until, if and when, he can accept a change.

To term the God of the Buddhist, Confucian, Mohammedan, Brahman, or even that of the primitive African a false deity, is to them a sacrilege equal to making a like statement to a Christian. It arouses resentment, that another may dare to name his God as superior and suggest abandonment of one's own. Others than Christians are lovers of sacred traditions and have Bibles and temple teachings which they cherish as the words of the Omnipotent. The order or request that they lay these aside is an effrontery which is not taken lightly. What

end does Christianity serve by this? Education, sanitation, hygiene, culture, can be advanced equally well by other methods and by non-sectarian movements which do not antagonize. If Christianity is to gain converts in non-Christian countries, let her do it by examples of tolerance, mercy, and understanding, not through ridicule and the undermining of sensibilities. The former traits are, after all, the true implements of Christianity.

Hilarious voices, loud laughter, attracted our attention. Open, smiling faces passed. There were several families; rotund fathers heavily bearded, with funny round caps and tight trousers—mothers in voluminous skirts which they held outstretched to sweep along before them dirty-faced, wide-eyed youngsters, much like mother hens gathering in their chicks—peasants bound for Syria and colonization. Syria offered them lower taxes, more land, fewer conveniences, the same labors—life the same, but the scene changed. Mingled feelings arise in the breasts of the more fortunate who watch such parades as these. Vanity struggles with compassion, but reason tells us that the gulf between was bridged only by the flimsy structure of opportunities which the past afforded us or our progenitors.

A shrill blast awakened us to the need to scurry aboard. Our baggage had been loaded some time previously. The prospect of our journey on the S.S. Providence of the French Line was not promising. Frater Brower, having had nautical experience, observed that the exterior of the ship was quite lacking in orderliness. Her steel plates were well-rusted; the former white of her upper hull and super-structure was now a dirty grey and badly chipped. Her stacks were smeared with soap and her stanchions bent in several places. With an air of contempt, he murmured “a tub,” which to him was a sufficient expression to convey conclusions of his appraisal of her. We stepped on deck and looked about. Everything was confusion; no stewards to direct us to our staterooms, no signs pointing out directions. Ropes, cables, blocks and tackles and piles of weather-torn canvas lay strewn about. In contrast to the clean and efficiently organized British liners, this made one think of the old Atlantic cattle boats. The lack of cleanliness was only to be equaled by the discourtesies of the crew who were sullen, and accustomed to herding about passive peasants and clerics.

It was the third day out. The sea rose and fell with a slight quiver, like gelatin. I have never seen it so glass-like. The sky was a magnificent blue, without the flaw of even one white cloud. The sun was on our starboard side, and shone warmly, but not uncomfortably, upon us. It encouraged rumination. On this same sea, this great Mediterranean, men had ventured as early as thirty centuries B.C. What crude craft they must have possessed, what indomitable courage, to push out into a vast area like this not knowing what lay beyond, or even if there was a beyond. Many fathoms below us in this blue black, fringed with white frothy foam, were perhaps the remains of the early Greek vessels that plied between the homeland and ancient Syracuse. Perhaps, too, there were fragments of proud Roman galleys, sunk in conflict with their mighty Carthaginian foes. What a story the Mediterranean would tell if she regurgitated all she had swallowed during the centuries! This sea must have looked the same to the admirals of many armadas and to conquering Caesars. Nations and civilizations had crashed and fallen upon her bosom, but she gave no sign of the centuries she had witnessed. Ceaseless and unchanging, she was an example of how little man's puny efforts affect nature.

Though land was nowhere in sight, I thought of the favored spot of the land surface of the earth toward which we were bound—the cradle of civilization, as historians refer to it—the *great fertile crescent*; that fringe of grass land that extends from the northern tip of the Red Sea to the mouth of the Nile. North of it are mountains, and south of it a great bay of sand, as the eminent archaeologist, James Breasted, described it. At its southwest extremity is the great Nile River Valley, and at the eastern end of the crescent, the Tigris-Euphrates River Valley. In these two valleys began the oldest civilization of which we have any record. How and why they began there we can only conjecture, but nature apparently arranged her forces and elements to make them conducive to the development of man. This is obvious, as we shall later see.

One tires of sea journeys, especially after several days of mal de mer or, in other words, seasickness. The sea had suddenly changed one night to a plunging, swirling fury which tossed the fairly large ship about with ease; raising it to heights, the sea would let it slide with a sickening shiver, wallowing in a deep trough, the next moment to

boost it up, suspended, it seemed, in mid-air, and then to let it fall again, it rolling dizzily all the while as if trying vainly to steady itself. All this was now past. The sea had quieted except for choppy waves which were whipped by a brisk breeze. We were recuperating, finding pleasure in the thought that in a little more than an hour we were to come in sight of the shores of Egypt. The very word Egypt electrified us. Fratres Shibley, Brower, and myself went below to prepare our baggage for custom inspection, expecting considerable difficulties with the customs because of the great amount of cinema equipment and films. After tedious packing and a lapse of considerable time, we returned to the deck. The ship had slowed her speed. We peered southeastward and thrilled at the sight. There was a long sandy strip of land hardly above the surface of the sea. It was the entrance to the port of Alexandria. On this sand strip there stood a moderately tall lighthouse. It was in this vicinity that the famed island of Pharos was located. On that island in the entrance to the mouth of the Nile, during the Hellenistic period about 300 B.C., was erected the first lighthouse of the world. A great structure, it rose to a height of some 370 feet, or about thirty stories, equaling many of our skyscrapers. The ancient mariners could see its great light far out at sea, and were guided safely in with their strange cargoes. Its Oriental design later became the basis of the Mohammedan minarets commonly seen today as a part of the architectural structure of their great mosques or temples. It finally fell in 1360 A.D. It was the last of the great tower structures influenced by the Babylonian tower builders.

We thought of the thousands of ships through the centuries that must have approached this port as we were doing. We imagined Cretans laden with finely carved earthen vessels and vases, and beautiful necklaces and bracelets of gold and of bronze; Greek ships with statuary and marble; Egyptians returning after trading hardwoods from up the Nile, and papyrus from the delta, and copper from the ancient mines on the peninsula of Sinai. At that time, Alexandria was not only a seat of learning but was, as Breasted puts it, the New York or Liverpool of the ancient world—a great shipping or trading center.

As the ship maneuvered into position for tying at the dock, a motley crowd gathered to welcome it, shouting, screaming, jumping up and down, waving their hands. Chamber were anxious for their prey—

the passengers. Egyptian fellahs who served as porters, Nubians, Arabs, Jews from Palestine, and Syrians, either wishing to act as guides or assistants, jostled each other for vantage positions. Some wore tarbooshes (fezzes), others low turbans of loosely wound and much soiled linen. Still others were bareheaded. Some were clothed in awning-like striped gowns and barefooted, and the majority wore what appeared to be open necked flannel nightgowns which nearly trailed in the dust of the waterfront street. Native police were finding it difficult to maintain any semblance of order though they were freely applying bamboo-like canes to heads, backs and shoulders. After much explanation, annoyance, and a liberal distribution of baksheesh (native vernacular for present or money), we were seated in a modern, comfortable railroad coach which sped southward along the great Nile toward Cairo.

The Nile is one of the greatest rivers in the world. It begins three degrees south of the equator, and flowing northward attains a length of some four thousand miles. It, the White Nile, is joined by two tributaries the Blue Nile, its affluent, from the east, and one hundred and forty miles below this union, the Atbara joins it. The volume of the Nile is not great, but it has influenced the destiny of man more than any other river in the history of the world. For centuries it carried its alluvial soil to the sea from equatorial Africa, each season periodically overflowing its channel and depositing on either side, on top of the parched Libyan and Arabian desert sands, a black, smooth film of the most fertile soil of the world. Inch by inch, year by year it grew deeper, pushing the desert back from the river channel itself. Vegetation flourished in this black rich soil; it grew right up to the edge of the desert itself.

Here in this valley the early Stone Age man, who in some manner crossed the Mediterranean from Central Europe ahead of the great glacial descents, found himself in an ideal environment. Egypt is not visited by any severe storms. There are no frosts or snows. Having once arrived in Egypt, he was protected from the ice, from the glacial movements, by the great natural barrier of the Mediterranean; and on either side of this Nile strip were great almost uncrossable deserts which protected him from enemies, and he was at peace with the world for a considerable time. What he was able to accomplish within

each decade and century remained. Civilization was able to build on the accomplishments of those who had gone before, instead of having all torn asunder by ravishing hordes or the destruction of nature, and being forced to begin again. Thus civilization prospered, flourished, at a time when the rest of the world was either wholly barbarian or extremely primitive.

As we sped southward, we found that in many respects the customs of these simple people had not changed with the years. On either side of us was a network of small canals, irrigation canals. Irrigation began in the Nile Valley and was developed to a science at a time when men in other parts of the world were still chipping flint hatchets. We could see small brown-skinned men standing knee-deep in the water close to the banks and working lifts—long poles, each having a mud basket fastened on one end, and on the other end a mud ball as a counter weight — and by manipulating this sweep or pole they would lift baskets of water from the Nile up to the level of the irrigation ditches, keeping a steady flow running through the intensely cultivated lands.

Further on we could see the application of the simplest mechanical form of pumping water, water wheels, to which were fastened buckets which would scoop up the water, and which were kept in motion by docile water buffalo—the great beast of burden of the Egyptian—walking about in a circle, blindfolded to keep from becoming dizzy from the incessant circular motion. In the days of the Pharaohs taxes began with this system of irrigation. It was an intricate system. The ditches and dykes had to be constantly protected and maintained. The Pharaohs and the nobles maintained a corps of what we may call engineers and constructors to build new irrigation dams and ditches and to maintain those in existence. They in turn exacted taxes from the peasants in return for the use of the canals and the water. These taxes amounted to a certain portion of their crops which had to be delivered at a given time. If they were not, officers of the nobles or the Pharaoh would seize the peasant and bring him to the royal or feudal court for reckoning.

Frequently we passed beautiful groves of tall, swaying palm trees, native to the country. All about us was green, though not many miles away on either side was the lifeless glaring desert. All this life, this coolness, this vegetation, was dependent upon this one source, the Nile.

It is not surprising that the Egyptians worshiped the Nile. They regarded it as the god of fertility and life itself. It provided them with food, with drink; its rise and fall made it possible for them to tell the passing of time. It carried them to the sea. Their whole existence was bound up in it.

The Egyptians were not always a united people, however. There were at one time many little kingdoms that spread along the Nile. Then, in a later period, these kingdoms united into two great ones—the kingdom of the Upper Nile and the kingdom of the Lower Nile. Many wars were waged for the conquest and sole control of this fertile valley.

Occasionally as we concentrated on what we were passing, we would have a fleeting glimpse of native mud villages, houses constructed much like the early California adobe ones, bricks made of the thick alluvial soil, reinforced with straw, which would become baked by the sun, hard and resisting. As Egypt is never subject to rain they were quite durable, and an insulation against the terrific heat of the summer months. Domesticated animals, poultry, and children freely walked in and out and around the houses of the village. The streets were but deep ruts in the mud. Soon we were to reach Cairo. It is said that before reaching Cairo and just as one is approaching, the great Pyramids of Gizeh can be seen rising above the flat table lands of the desert. However, we were not favored with seeing them.

Cairo is a tremendously large city and is affected greatly by European customs, architecture, dress, methods of transportation, etc. In modern Cairo one feels as though he were in a city such as Paris, Naples, or some other metropolis of the world. Street cars jangle by, taxis are honking, people are well dressed in the Occidental sense, streets are well paved. One finds a tremendous modern influence in architecture. Beautifully designed apartment houses, towering several stories, are to be seen in various sections of the city. The designs show the invasion of German architectural ideas and are of a style that is just making itself known in the bigger cities of the United States. It must be quite deflating to American egotism that considers American structures and buildings the most advanced. Here were apartment buildings equal, in their exterior part at least, and superior in many ways to those in our American cities. They are mostly occupied by wealthy persons who spend two or three months of the year in Cairo, taking advantage

of its salubrious climate. The only suggestions in modern Cairo of the Orient are the robes and tarbooshes worn by native Egyptians and by the Arabs. Most of these robes are worn by the dragomen or the Egyptian guides who adopt native costume in Cairo to attract the attention of tourists and travelers. Their robes are highly ornamental, made of heavy silk, with beautiful linings, and artistically embroidered brocades. Most of the Egyptian business men in Cairo have adopted the western style of dress. A few still cling to the tarboosh because it is a symbol of Mohammedanism. It is more than just a hat; it designates one's religious belief.

After locating at our hotel, we immediately proceeded to make inquiries about the city itself. The first point of attraction is naturally the native section of the city. One feels that he must not be disappointed. He must not remain in the modern section of Cairo for it is too much like his home country, his own city. He does not want to spoil the mental picture he had of Cairo, and so he quickly seeks the native section, which more conforms to his concept of what Cairo should be like.

The native bazaars are little changed by the years. The shops—on either side of narrow streets, many of them covered by dome-like roofs—are but small cubby-hole-like rooms, in front of which are suspended on chains and ropes, or stacked on wooden shelves attached to the wall on either side of the doorway, samples of all the merchandise which the shop-keeper has for sale. Naturally, as you walk through the streets you are immediately recognized as a foreigner, as a European, if not an American, and the hawkers begin crying their wares and their prices, rushing out to grab you by the elbow, trying to escort you into their shops, proclaiming to you that their wares are the best if not the most reasonable. How unfortunate one is if he makes a purchase at the first price quoted. Unlike our merchants in this country, they have no fixed prices for any of their wares. Their price is whatever they can get from the buyer. Usually there are from four to five reductions before a sale is consummated. The visitor does not learn this at first, and he usually pays six or seven times the value of an article. These Cairo bazaars, because of the influence of England and the modern Egyptian government, are quite clean and neat in contrast to bazaars in Asia Minor, Damascus, and Baghdad, about which we will

have more to say later. The visitor to the Cairo bazaars does not realize this. He thinks them quaint and untouched by modern civilization as he naturally has not seen anything by which to make comparisons.

We returned quite late to our hotel, dining on the terrace and watching Cairo move by. Tomorrow was to be a busy day—a thrilling one. Tomorrow was the eventful September 16th, 1936, the day recorded in symbolism in the Great Pyramid itself, the day that might shape the destiny of the world. And we were to visit that edifice upon that day, after arranging for the special concession. The sense of responsibility that rested upon us, the realization that the world, through the press, was considering the significance of this date prophesied in the Great Pyramid, occupied our thoughts until we lost consciousness in restful sleep.

Chapter V

PROPHECY DAY IN THE GREAT PYRAMID

THOUGH AN EXTREMELY inviting breakfast had been prepared for us, we were not in a mood for the consideration of food. What lay ahead of us occupied our thoughts. All through our travels there had been in the back of our consciousness the thought of the Great Pyramid and September 16, 1936, the eventful day prophesied by the Pyramid itself to have a tremendous future effect upon the races of mankind and our present civilization. Even as we hurriedly ate and glanced through a Cairo newspaper we observed that the press of that city had taken cognizance of September 16 and, in a long article, quoted different authorities' interpretations of the symbolism of the Great Pyramid with respect to this particular day.

Sheikh Abdul, our personal guide, called for us in a modern automobile of American make in which we placed our various cinema equipment, tripod, camera, accessories, lens, films, filters, and then crowded ourselves in as well. We were soon speeding toward the Great Pyramids.

Of course, from what one has read and pictures one has seen, one realizes that the Pyramids are the greatest edifices ever built by ancient man—as far as we now have knowledge of the past—and that they are massive structures today, even in comparison with the skyscrapers and big buildings of our modern cities. But this realization is nothing to the actual experience of seeing them. As one approaches they grow monstrous and seem to loom out of the very sands upon which they are erected. Most paintings of the Great Pyramids make them seem very colorful, yet in the glaring sun, even in the early morning, to the

eye they are white with just a slight tint of yellow. They reflect the brilliant sunlight on the sands.

The Pyramids are built on a great high plateau—the plateau of the Sahara. They are not in the Delta region of the Nile. In a sense, in their present state of preservation they appear crude, like an enormous pile of gigantic blocks tumbled upon each other and assuming, it seems, by accident the general shape of the Pyramid. But this impression is only gained when one is close to them. From a position close to them there seems to be little difference in size between the Great Pyramid of Cheops and the Pyramid of Chephren.

As one starts to walk about the base of the Cheops Pyramid there soon dawns upon him the realization that it does, as estimated, cover an area of some thirteen acres. The great sandstone blocks of which it is composed are about the shoulder height of an average man. For a height of about fifty or sixty feet around the entire Pyramid, the great blocks are quite jagged and protrude. Above that, with the exception of the one corner or side of the Pyramid which is exposed toward the open desert, the sides are quite smooth and almost inaccessible. The exposed corner, however, has been whipped by the elements and the sands for years, and it is so jagged that its blocks form a natural stairway or steps to the apex. It would seem as though it would be quite simple to ascend the Pyramid by this means, yet to the inexperienced it is a tedious task. Native Arab boys for a few piastres willingly race to the top and return in the short time of seven minutes.

The top of the Great Pyramid is now flat, but originally is said to have had a gold apex, portions of which were removed at different intervals in the past. From below one can see a slender mast rising from the top. This steel mast, it is said, was affixed to the top of the Great Pyramid by Napoleon and from it flew the French flag during his occupation of Egypt.

One of the mysteries of the Great Pyramid for a considerable time, even in late centuries, was the location of its entrance. There was nothing visible from the outside to indicate the proper entrance to it. The Caliph, El Mamoun, made a false entrance, and this false entrance is still used today as the main entrance to the Pyramid. It was through this false entrance that we made our entry, climbing up to it over two

or three of the large blocks, each weighing two and a half tons, which is the average weight of all of them, and of which there are some two million, three hundred thousand in the Great Pyramid—enough to form a stone wall, four feet in height, from New York to San Francisco and half way back.

We entered the jagged aperture of the mammoth structure, and then our party of four cautiously walked along a semi-dark and narrow stone passageway which led to the ramp of what is known as the Grand Gallery. After walking along this passageway for a short distance we were obliged to stoop and crawl through a circular-like tunnel for a distance of about twenty five or thirty feet. When we stood erect again we were at the beginning of the Grand Gallery. It was a most awe-inspiring spectacle. We thrilled to the thought, as we looked upward along this steep narrow passageway and saw above us and on either side massive highly polished limestone blocks, that we were in the Great Pyramid of Egypt. Mystery of mysteries? One feels helpless, surrounded by this wall of stone. He feels insignificant; humble. It is peculiar but true that the Great Pyramid inspires in man that same feeling of humility as do some of the great works of nature. Slowly we began our ascent up the rough stone ridges which are in the form of steps, and which are the only means of reaching the top of the Grand Gallery. It is a steep ascent and you feel, after five or ten minutes of climbing, that the height of the Great Pyramid is under-estimated and certainly must exceed by several hundred feet the nearly five hundred feet accredited to it.

Suddenly your attention is called to an almost obscure hole-like aperture to your right as you ascend. As you look at it, it seems as though it was not an intentional opening but perhaps the result of dam age in later years, but you are advised that this is the true entrance to the Great Pyramid. As you peer into the inky blackness and feel a cool draft of air upon your face, you think of the hundreds of neophytes of the mystery schools of the past who were led up from the Chamber of Darkness below after taking their original obligation at the altar between the paws of the Sphinx and after having performed certain rites in the allegorical world of darkness depicted by the lower chamber. They were then permitted to ascend the very narrow and low passageway into which we looked and to enter the Great Pyramid

itself through this jagged opening. How pleasing it must have been to them to know that they had attained that degree of illumination and understanding and worthiness which permitted them to travel further, physically, mentally and spiritually!

So with the most solemn spirit and in utter silence we proceeded. The entire experience invited silence. Ordinary conversation and comments would have seemed so absurd, so meaningless in contrast to the thought that was put into this stupendous structure, the wealth of knowledge it represented, the experience of those who had gone before us in this same place. Finally, with gratitude, we came to a rest at a level stage. Walking along this level pathway, which was considerably more narrow than the Grand Gallery, we entered a portal—an opening seemingly cut through a sheer block of limestone, of about seven feet in height and three feet in width. Passing through this we came into a large chamber known as the Queens Chamber, about twenty-five feet in length and sixteen or twenty feet in width, with a comparatively low ceiling, absolutely plain, no inscriptions, no symbolism, nothing to indicate either the life or death of its builders.

It must be explained at this point that the prophecies of the Great Pyramid are not based upon inscriptions found on the walls or in papyrus scrolls, for there was practically nothing left or found in the Great Pyramid to reveal anything of the times of the Pyramid itself or of the future which the Pyramid prophesies. The prognostications are based upon the dimensions and the arrangement of the dimensions of the Great Pyramid, its passageways, their height, length, and breadth, the height of the Pyramid, length and breadth of the stones, the distances from one passageway to another. There is a numerical uniformity to the dimensions, and this uniformity has given mathematicians, scientists and others a mathematical key, and with this key the different proportions and mathematical arrangements of the Great Pyramid have been used to reveal events of the future. This is not merely speculative or fantastic, because the events have definitely come to pass, one after another. It is one more indication of the fact that the Great Pyramid was used not only as a temple of learning but as a monument of learning to inform future generations of the knowledge of the basic sciences had by the mystery schools at that time.

Other facts are that the Pyramid is in the exact center of the land surface of the earth; the fact that the weight of the Pyramid is the same as the weight of the earth in proportion to its size; and further, that it was used as an astronomical observatory, showing knowledge of astronomy. Any engineer knows that the builders of the Great Pyramid must have been possessed of exceptional engineering skill and ingenuity to build the structure. Its great blocks of stone are perfectly mathematically proportioned. Their ends are fitted together so perfectly and held by such a thin and yet exceptionally adhesive mortar that not even a sheet of paper can be inserted between them. Chamber were hewn out so accurately that each block of stone does not vary from a straight line and an accurate cube more than a hundredth of an inch in a length of six feet.

After leaving the Queens Chamber we returned to the Grand Gallery once again and continued our ascent for a few minutes longer. Except for the feeble torch-like lights every fifteen or twenty feet, fastened by metal brackets to the smooth stone sides in recent times, the passageway would have been inky black. Finally the uneven flooring, which really consists of stone blocks of which the Pyramid itself is built, with niches to keep one from slipping because of the steep incline, leveled out and a few feet ahead of us it appeared as though the passageway with the walls converging to a width of about four feet was blocked by a huge stone, one of the masonry blocks upended. As we approached it we noticed that (here had been carved through it also a tunnel-like passageway, the deeper shadow of the entrance not having been noticeable further back. The height of this tunnel-like passageway was not sufficient to allow us to walk erect and we were again obliged to crawl on hands and knees. We crawled a length of about sixteen feet, then stood upright in a large chamber, the height of which was about twelve or fourteen feet, length about thirty feet, width about twenty feet. This was the King's Chamber, known as the Hall of Illumination. It too was perfectly bare of all furnishings, inscriptions, hieroglyphics,—in fact, everything with the exception that at the end opposite from which we entered was a large sarcophagus of stone. The sarcophagus, in fact, was one of the blocks of masonry of which the Great Pyramid is constructed, and it was lying in a horizontal position in the center of the end of the chamber.

The upper portion of the block had been sawed or cut away, and the remainder had been hollowed out to conform to the general contour of the human body, and thus it formed the sarcophagus or coffin of some pharaoh or eminent person so relate the sagas. Many believe it was the burial place of the Pharaoh Cheops. However, there is nothing in the sarcophagus at this time, nothing inscribed upon it that would confirm this theory, and there never has been found anything that would definitely establish the fact that the Great Pyramid was built solely as a burial place, with this tomb-room as its final purpose. One immediately gains the impression, which supports legends that have come down through the ages as well as the more recent discoveries of which we will speak later, that this sarcophagus was used for initiation.

In this Hall of Illumination, this King's Chamber, there met at intervals only the highest adepts and the most highly developed and learned of the members of this mystery school, this early Egyptian Brotherhood of learning. It was in this King's Chamber that the council meetings were held, where policies were decided upon which shaped the course of many human lives at that time. It was in this chamber that all the facts of reality, all the knowledge which man had acquired by virtue of experience and investigation, were classified and related and made into an understandable, livable philosophy of life. In the lower chambers the students were taught facts, the result of inquiry and investigation, made to prove the laws, made to apply them to their own lives, and as they learned these lessons they advanced, degree by degree, chamber by chamber, until eventually they were permitted to share in the council meetings of the Hall of Illumination, and from there they went forth in the world to spread the knowledge they had learned, to gather about them other neophytes whom they sought out and to teach them as they had been taught. All around this great temple of learning, this Pyramid, at that time greed, fear, avarice, ignorance and superstition prevailed. These dual conditions have always existed. The learned men of that time—those who had attained the Hall of Illumination—could not go out among the multitudes and immediately convert them to understanding. They would only have lost their lives if they had attempted it, and nothing would have been gained.

So the real purpose of the Great Pyramid was kept secret. To

many at that time it was considered merely a place of worship where mysterious religious rites took place, and the ambassadors of light and wisdom of that period were forced to seek here and there one who was ready or worthy to take the vows at the altar between the paws of the Sphinx at a certain hour at night, and then be led through the secret passageway—discovered in recent time by Selim Hassan, eminent archaeologist, to have led into the Great Pyramid itself.

We stood about, none of us speaking, just thinking, each within the world of his own thoughts trying to visualize what had occurred in this very stone chamber, in this heart of a past civilization centuries ago. There also flashed through our minds the fact that many occult and mystical organizations, so proclaiming themselves, had prophesied a dire event for the world upon this very day, September 16, 1936. Chamber had contended that it meant, if not the end of the world, a serious catastrophe which would shatter civilization; that it would mean the ruination of humanity, or perhaps the very atoms of the Great Pyramid itself would fly asunder. We recalled, all of us, to ourselves, articles we had read within the last forty-eight hours in magazines, in newspapers, setting forth these prophecies by leaders of various sects and cults from every part of the world.

I recalled in particular some of the absurd articles I had read not more than a month ago in various magazines issued by American and English occult societies, telling at length what was to take place on this day. The authors even went so far as to describe the King's Chamber, just what it would look like at this time, as though something or other was going to change the appearance of this Hall of Illumination. Their description was fantastic imagination of the weirdest sort. Not one article that I had read accurately described the interior of these chambers. What the authors had written consisted of borrowed facts from other writings, which they distorted in order not to disclose that they had borrowed them. Each one of these schools of occultism professed to be perpetuating in some way or another some of the ancient rites or teachings of the ancient mystery schools of Egypt. Each also inferred that the world catastrophe which they told their readers was to occur on this day would not affect the followers of their particular school or society, but rather give them some power or influence withheld from others. I further recalled reading an article by

the leader of another occult society who declared that his society had been waiting weeks, months and years for this moment—it was the most sacred occasion for them—yet neither his nor one of the other organizations had a single representative within miles of the Great Pyramid on this eventful day. *The eyes of the world were on this Pyramid.*

It gave me a sense of satisfaction that We had been chosen as representatives of the Ancient, Mystical Order Rosae Crucis, the authentic, world-wide Rosicrucian Order—the largest mystical order in the world with an authentic historical background, and which had its traditional origin in this ancient land—to be present in this Hall of Illumination on this September 16, 1936. We were, for AMORC, to see the fulfillment of a prophecy of the Great Pyramid. AMORC had long contended, based upon its heritage of knowledge which included truth about the prophecies of the Great Pyramid that this was not to be a day of disaster, ruination, and destruction, but the beginning of a world transition—a new era. There would be cycles of evolution and devolution again, the world would again know war, pestilence, poverty, and strife: but out of it all, within the next century, would come *the greatest sincere understanding between nations and peoples*—the greatest world unity civilization had ever known. What greater faith could AMORC display in its ancient records than that we be here in this chamber, *the very soul of the Great Pyramid*, at this fateful moment, when thousands, perhaps millions, elsewhere in other lands waited fearfully—for what? they did not know!

There was no feeling of depression, but a feeling of elation, of intense excitement, like the minute of lull before a great storm when the boughs of trees are motionless, when not even a leaf can be seen to move, when all nature seems in suspense, waiting for a signal to release her fury. This suspense did not instill fear, but rather expectancy that something stupendous of a Cosmic nature was taking place, or would, shortly.

It was then that there was performed a ceremony that none of us shall ever forget, and it was the first time that it had been performed since the days of the activity of the Great Pyramid itself—the time when the mystic brotherhoods held their regular ceremonies in it. I assumed the office of Master of the Temple. As if in one of our modern Rosicrucian lodges throughout the world, I directed by the

motion of my hand where the others should be stationed in the chamber. I was here for the first time, in this incarnation at least, and fully cognizant of the import of the moment. Yet, it was with a strange ease that I proceeded with the brief arrangements for the ceremony—this initiation for that is what it truly became to me. Had I officiated here before? Had I been honored over 3000 years ago by being permitted to induct some other fratres or sorores into the highest degrees of the Order Rosae Crucis within these very stone walls? Had I once before been an instrument in this chamber, by which another attained the highest state of Illumination—Cosmic Consciousness? Perhaps I sensed a time in centuries past when my own eyes, for the first time, were permitted to rest upon the walls of this Sanctum Sanctorum. As I looked about me, I realized that the great stone blocks before, back, beneath, and above me were unchanged. The eyes of hundreds of ancient neophytes who struggled to attain, who studied and labored, and who evolved mentally and spiritually, had received identical visual impressions to mine in this chamber, for time had not altered its physical appearance. From where I stood the centuries fell away. There was nothing more here to suggest the Twentieth Century than the Eighteenth, the First, or one 2000 B.C. A candidate of 1350 B.C. during the reign of our Illustrious Grand Master, Amenhotep IV, standing where I now stood, thirty centuries ago, would have been occupied with about the same thoughts as mine as he looked about. There was nothing here to suggest the era or the events occurring outside of this mass of masonry. Myriads of changes in civilization had taken place since these chambers first assumed their form, yet they still reflected the concept of their creators, resisting the influences of nature and man. Here, then, was a timeless, eternal environment in which all men found themselves in a like state of consciousness, regardless of temporal changes. A Hall of Illumination it truly was, for in the state of Cosmic Consciousness, which it depicted, all other things drop away or are absorbed as one.

I next directed that each of us assume the symbolic positions of forming a Rosicrucian Lodge. This was accomplished by the manner in which we placed our hands in relation to our bodies and the position of our feet. We offered a silent prayer to the Cosmic, and then, in accordance with the time-honored Rosicrucian ritual performed here

in ancient times, Frater Brower stepped forward for the intonation of the mystic vibratory vowel sounds. Standing with his back to the center of the great sarcophagus, symbol of earthly transition, he proceeded to intone the sacred vowels, the vibrations of which have a definite effect upon the emotional and psychic natures of man. The vibrations under ordinary circumstances are intended to, and do, excite these centers of man's sympathetic nervous system and have a tendency to elevate his consciousness, to exhilarate him, transcend him above the ordinary mundane feelings and sensations which he experiences daily. But none of us expected the result. We heard, not alone Frater Brower's intonations, but it seemed the chorus of a million voices besides. With the very utterance of the first vowel it seemed as though he had struck a key which unlocked voices that had been imprisoned in stone for centuries awaiting a magic word or tone for release, and the sounds came back to us from the walls and the floor and the ceiling like a chorus of cries of freedom, as though we had liberated imprisoned beings. It was startling. He continued the vowel sounds for a period of at least five minutes. We seemed to sway. We lost sense of time and space. We were swept along with this strange current of psychic emotionalism, and it seemed that for several minutes (it must have been just seconds) after he ceased his intonation the sounds continued to reverberate from wall, ceiling and floor. Then all was quiet; the silence was deeper and more obvious by contrast than it had been before.

We felt rejuvenated. Fatigue from the ascent was gone. Any fear that any of us may have had with respect to the stories of what was to occur in the Great Pyramid seemed absurd to us now. We felt secure, and a sense of contentment and peace came over us as though, unwittingly, we had accomplished a great good, which we may come to realize in this lifetime or we may not.

Our guide was waiting for us outside the low circular passageway. As we started through it, he begged me to stop in the middle of the passageway in my crouched position until he crawled through, reaching me. We could not pass each other. He looked into my face from this position on his hands and knees and said, "At this particular point where you are you can safely arise and stand erect." I twisted my head into a position so that I could look above, and there to my surprise immediately above me was a small shaft just large enough

to accommodate my body. I moved into position so that as I arose the upper portion of my body would rise into the shaft overhead. It was inky black, because I could not then see the light of the circular passageway in which I stood. It was as though I had a hood of stone over my head. He said, "Reach above you with your right hand as far as you can." I brought my right hand up close to my body until I eventually stretched it far above my head. He said, "Now place your hand against the stone wall immediately in front of you." This I did. He continued, "Now, move your hand until you feel a projection of stone, about the size of your hand." I moved my hand slowly against the cold, smooth, stone surface until it struck against an oblong projection. He said, Place your hand upon it. I did. I noticed that it fitted my hand as though it had been shaped to be held in a closed hand like something that was intended to be carried by the hand. I pulled against it to see if it was loose. I commented on this. He explained. What you feel has been shaped out of the stone block of which it is a part. The block has been cut away from the raised portion. Your hand now rests on the exact center of the Great Pyramid. It is the mathematical center. The distance from the point of your hand to the apex of the Pyramid and to the base and to the various sides is exactly the same. Furthermore, you are now grasping what is known as the *Pyramidal inch*. That stone, that particular size, was the unit of measurement used by the Egyptians in building this very edifice, and to commemorate that unit of measurement it was carved on the side of one of the blocks of the Pyramid and placed in the exact center where it now rests.

What master mathematicians, what genius in a time and an age when the world likes to think of mankind having dwelt in utter ignorance! With a feeling akin to reverence, I rejoined the party, and soon we had left the coolness of the Great Pyramid with its constant temperature of 68 degrees Fahrenheit for the now blistering desert outside. This temperature of the Great Pyramid is what is recommended by air conditioning engineers today as the ideal temperature for human comfort. Is it coincidence or did the genius of the Pyramid builders foresee it?

The party then returned to Cairo with the exception of Frater Brower and myself. We proceeded to locate one of the huge exterior blocks of stone of the Pyramid, in the shade, and there we sat and ate

our lunch overlooking the plateau of the Sahara Desert and the green Nile and Delta; also looking down toward the mud huts on the site of the old city of Gizeh.

Early in the afternoon we sought out the recent excavations of that eminent archaeologist, Selim Hassan. We climbed down and through the Pyramid Temple. This Temple was quite some distance from the Great Pyramid itself, and originally was connected with it by a long ramp or causeway. Many preliminary ceremonies were held in this Temple, and then from there the participants, candidates, and neophytes, in a picturesque procession walked along these ramps and causeways to the Great Pyramid and concluded their rites. Just recently, in this Pyramid Temple, there was excavated the sarcophagus and mummy of a princess, a daughter of Cheops. We photographed hundreds of feet of film of the more recent excavations of the Sphinx, showing how the paws were not hewn out of a promontory of stone as is the upper portion of the body, but consisted of flat stones about four inches in thickness, laid one upon the other, forming layers, and then shaped as we now see them. We commented upon the great crime committed by Napoleon when he ordered his men to fire upon the Sphinx, defacing it, to show his disrespect for the Egyptians veneration of it.

After filming with professional cameras, by special permission from the Egyptian government, many other structures in and around the Great Pyramid, we went closer to examine and photograph with still camera the colonnaded court or entrance to a newly excavated temple, at the base of the Pyramid. Of a different type stone than the Pyramid itself, it seemed marble like against the background. We commented upon the fact that this very ancient structure had Doric-like columns, the architectural form credited to the much later Grecian period. We were to discover, however, that the Egyptians used this type of column quite commonly, and it is still believed by some archaeologists that there is no connection between the Doric column and the column to which we have referred.

It was late in the day when we prepared for our return. We departed by camels to where the roads began and again loaded our equipment into a modern motor car. We looked up at the Great Pyramid. It had changed. It was now colorful. The setting sun had given it a golden glow. Its ragged contour, caused by the exposed blocks of masonry,

cast patches of deep shadow, purple in hue. The shadows seemed to be creeping from the desert itself, rapidly approaching, soon to engulf it in darkness.

We retired to our hotel early, for tomorrow the Nile was to reveal another chapter of civilization's tale. Each mile almost, as one travels along that great river, one has unfolded to him a story of man's past accomplishments, glory, power, failure, hopes and misfortunes. Therefore we now looked forward to Luxor, or the ancient city of Thebes, once glorious capital of Egypt when in all her power and splendor.

Chapter VI

TEMPLES AND TOMBS

I HAD, IN my semi-conscious state of half sleep, a sensation of choking. It was undoubtedly this laborious breathing, with the addition of stifling heat, that awakened me at an early hour. I lay still for a moment trying to swallow; my mouth was parched, and a deep inhalation made me sneeze. The compartment was filled with fine dust. I could feel it in my ears and on my hands.

Kicking off the remaining cover, I sat up and, leaning forward, raised the blind at the window. The sight that greeted my eyes made me forget the discomfort of an Egyptian train in the late summer. Paralleling the track, one hundred yards distant, was a twisting brown ribbon of water. Bowing gracefully on either side of it were palms, bending far over the embankment as if admiring their beauty in the water below. Beyond, the sand stretched into the distance and finally disappeared at the horizon into the rosy radiance of the morning sun. It was a scene that would tax your credence if it were upon canvas. Egypt was beautiful in a wild sort of way. Its beauty lay in its extremes; there was no attempt at compromise. Each element gave vent to its powers, and the aggregate was the majestic splendor of uncontrolled nature.

As we rushed and swayed along, eddies of air sprayed the window-pane with sand, which clung for a few seconds and then dropped away revealing new charming vistas. Beautiful islets dotted the center of the Nile, crowded to the water's edge with tall palm trees. Water buffalo looked lazily up at us as the river lapped at the ridges of their backs; and little naked brown skinned boys pulled at ropes fastened to the animals' nostrils. Little girls stopped in their tracks and, turning, unconsciously posed with earthen water-jars on their heads, to stare

with mingled expressions of curiosity and perplexity at this modern invader of the land of their ancestors—ancestors of which we, from another land, knew more than they.

On either side of this road of steel upon which we traveled, the scene was little changed from the time the pharaohs had thundered over the same sands in chariots, or haughtily surveyed them from royal barges which were leisurely propelled along the Nile. What little inroad the centuries had made—the progress of five thousand years was symbolized and embodied in this metallic, speeding serpent this Cairo-to-Aswan Express. Like a single thread of different color in a great fabric, it was noticeable, but other than that, there was little effect upon the surroundings. The deluxe trains of Egypt are as yet untouched by such improvements or embellishments as air-conditioning, ice-water, or club cars. You either remain confined to your own red-plush, heavily-laced, and French mirrored compartment, or stand swaying in the narrow aisle outside. It was with welcome relief that we arrived at Luxor.

The platform of the Luxor depot paralleled the train for only the length of one car. If you were fortunate, you stepped from this one car onto brick surface; otherwise, into the soft, powdered dust of the ground. Each step, no matter how easily taken, sent a puff of the flour-like substance over shoes and trouser legs. We had become accustomed to being besieged by dragomen (guides) and natives in soiled, long, flowing robes with bare feet and shaved heads, who wished to carry luggage or perform some actual or imaginary service for baksheesh (money). At first the pitiful state of their appearance—which was often heightened by their dramatic gestures and poses—had invoked our sympathy, and as an act of charity we would engage a retinue of “boys” from six to sixty to do trivial or unnecessary things for us. Time, and the experience of having our generosity taken advantage of, had hardened us, and we coursed through the group around us, saying, “Imshi! Imshi (Begone!).”

We were escorted to a row of four or five waiting, dilapidated, single-horse and team-drawn surreys. It was not the state of the conveyances that attracted our attention, but the wretched condition of the animals themselves. They were a greater evidence of the poverty and deplorable state of welfare of the Egyptian fellah than his own

personal appearance, The horses were not all aged, but were mere frames, covered with tightly drawn flesh. The whole skeletal structure was, it seemed to us, visible. Most of the unfortunate beasts suffered from mange, and large areas of their bodies contained cankerous sores over which the large, leech-like flies of Upper Egypt hovered. The spirit of dejection of the animals was contagious, and it was several minutes before we felt inclined to comment on our surroundings.

After riding for a few minutes, we stopped before a high stucco wall in which there was a large arched portal. We literally had to push our way through a throng of mendicants and peddlers of scarabs, necklaces, beads, counterfeit amulets, and relics. Once having passed through the gateway, we were free, for apparently a well-established law or custom exacting some severe penalty of which we were not aware, forbade them to enter. We were in a charming garden and grove. Tall, stately palms, grouped closely, cast a pleasing shade. Strange foliage offered relief from the glaring white of the sandy road outside. We recalled the story of "The Garden of Allah," the site of which existed but a scant mile from where we were. The ground was moist, having been watered recently. The hotel hallways were like those one imagined the hostelrys of the tropics would have—irregular-tiled floors and glazed-tile walls, with exceptionally high, white plastered ceilings. The crepuscular lighting made them invitingly cool. Behind us a native attendant glided silently. The manner in which he appeared suddenly, seemingly out of nowhere, and almost anticipating our needs in advance, was uncanny. In contrast to the natives of the village—and those who waited outside the courtyard below—these attendants were immaculately groomed and spoke excellent English. Their pay, though a paltry sum, exceeded by far that of their less fortunate brothers, and they were envied. The heavy, white fly-netting which was suspended over the beds, and the large balcony in each room, from which one could look over the gardens below, gave ample suggestion of insects and heat to be endured here at this season, both day and night.

Our first duty was to obtain the necessary permits to take professional cinema photographs of the monuments. ("The Monuments" is the official term given to all ancient ruins now supervised by the Department of Antiquities in Egypt.) The one who held supreme authority here was the Inspector of Antiquities of Upper Egypt—

Labib Habachi. After a brief respite, we drove to his office, — a low, one-story, gray stone-and-stucco building, exceedingly quaint, surrounded by a spacious garden in which stood statuary, busts of Egyptian figures of different dynasties. They, of course, immediately aroused our interest.

This personal office consisted of a random-sized-plank floor, high ceiling, and French windows. At the opposite end from which we entered, seated behind a well-worn, flat-topped desk, and framed by book-cases, facing us, sat Inspector Labib Habachi. He was a surprisingly young man, in his late twenties, medium height, close-cropped black, curly hair, deep-set, dreamy eyes; and the heavy, dark-rimmed glasses he wore gave him the look of a scholar—which we found him to be. He was so different from the others we had met that in our minds we likened him to the ancient Egyptian nobility, or the scribes of the past. Lying open before him were text books on Egyptian hieroglyphs and archaeology, and apparently he had been identifying inscriptions on small bronze statuettes which stood before him on the desk when we entered.

He was exceedingly gracious, and spoke in the soft, mild voice of the cultured Egyptian. He was a graduate of the University of Cairo, spoke several languages fluently, and was specializing in the study of archaeology, which made it possible for him to hold his present responsible position. It was, however, more than a professional interest; this one could easily ascertain from his conversation, for he had a deep reverence for the achievements of his ancient progenitors.

When he learned that we, too, had a love for the accomplishments of past great Egyptian personalities, and were not there to exploit his country, but to make her former glories known throughout North America by means of motion pictures we hoped to take, he was exceedingly congenial. He spent nearly an hour in comparing for us certain hieroglyphics with the later Hieratic or Demotic writing. In addition to his studies, he had, fortunately, the hobby of photography, but he was just a beginner, and the science of photography was still quite a mystery to him. Our complex equipment interested him immensely. He had apparently never before had the opportunity to examine sound cinema apparatus. This interest made him, after a careful examination of our credentials, enthusiastic in his desire to

obtain from his superiors in Cairo the permits which we needed.

After the custom of an Egyptian host, he had us served with cold lemonade by one of his slippered attendants. When we left, he bade us return early in the morning to learn whether he had received a telegraphic order to issue the coveted permit.

The following morning we were presumptuous enough to have our guide instruct the native porters to load our cinema equipment in the old-model American automobile which was to serve as our conveyance to the Inspector's house. We hoped the permission had arrived, and if so, we were prepared to proceed immediately. The morning light was best for photography, affording more contrast than the glaring midday sunlight. Inspector Habachi met us in the court-yard and, smiling, said in a quiet manner, "Your wish has been granted. The Minister of Antiquities, my superior in Cairo, has granted you permission to photograph all the monuments with your cinema equipment. I have here the official permit." We gratefully accepted it and our spirits were jubilant.

Turning to Frater Brower, Inspector Habachi said, "I ask of you one personal favor. May I accompany you on your expedition? I feel I could profit by watching you operate your equipment and in turn I may be useful in explaining more thoroughly the monuments to you and reading different inscriptions which have not been generally translated."

We were elated, and gladly accepted this most satisfactory arrangement.

The present city of Luxor is located on the East side of the Nile. Eastward, looking toward the horizon, one sees the distant Arabian desert, and beyond lies the Red Sea. Westward, one looks toward a range of limestone mountains—the mysterious and famed Valley of the Kings. Where are now located the city of Luxor and the temples of Luxor and Karnak, there was once the major portion of the great city of Thebes, the former capital of the great empire. The city of Thebes also spread over the West bank of the Nile.

Our first site to be photographed was the mammoth Karnak Temple, which beggars description. The actual significance of the word, Karnak, is not definitely known; it is said the literal translation means

windows.” This splendid edifice was built from the wealth accumulated from the early Egyptian campaigns in Asia. The entire length of the Temple—or shall we say, series of temples—is a quarter of a mile, and it took some two thousand years to complete construction. The oldest portions of it were begun by the early kings of the feudal age of Egypt. Later portions were completed by the Greek kings, or the Ptolemies. The first Ptolemy was a former general in the army of Alexander the Great. Originally, the entire structures were done in magnificent colors and gold. They were the most beautiful and decorative of all the architectural works of ancient man.

In the center of one of the temples stands the enormous obelisk of Egypt’s most famous queen, Hatshepsut. Its size can better be realized by the fact that its base is eight and a half feet thick. The most impressive edifice of this collection of edifices is the great colonnaded hall or Hypostyle. This hall is 338 feet wide and 170 feet deep. Each one of the enormous columns rises to a height of 69 feet; and the capitals of the columns, which are ornamented after the shape of the lotus flower, are sufficiently large to accommodate on their tops, 100 men standing in close formation. The entire floor area of this colonnaded hall is equal to that of the Cathedral of Notre Dame in Paris. The center aisle, or nave, consists of twelve columns in two rows, seventy nine feet in height. Chamber rise slightly higher than the rows of columns of the aisles on either side and thus really form the first clerestory which was finally incorporated as part of the later Greek basilica, and which style comes down to us in our Gothic church architecture of today. This clerestory, by rising higher than the walls on either side of it, permits light to enter through the elevated sides and thus enter the lower halls.

The walls around this colonnaded hall are deeply etched with inscriptions and reliefs dealing with the early campaigns and wars of the past kings and pharaohs. Here, cut out of mammoth stone blocks, weighing from eighty to a thousand tons, are colossal portraits of these rulers of a past civilization. It would be a considerable engineering task today to quarry in one piece such enormous blocks, and to move them from the quarry, intact, to the place of their erection. One is forced again to admire the skill and ability of these ancient builders.

As we stood at one end of the nave of this great temple and looked upward, we saw, high above our heads, at the opposite end, a stone lattice window—the only remaining one of several windows which originally surrounded that portion of the nave which rose above the halls on either side of it; and it is believed that from these windows or grills the temple gained its name of Karnak.

We profited greatly by the detailed descriptions and explanations of our eminent companion, Inspector Habachi, and were able to make many notes to incorporate in the dialogue of the motion-picture which at this time is being edited for exposition purposes. Furthermore, we were permitted to set up our equipment in, and enter, places—inner sanctuaries of this Karnak Temple—usually forbidden the average visitor or traveler.

With the passing of each hour, the heat increased. The temperature rose to nearly 120 degrees Fahrenheit; and our native porters whom we had engaged to carry our equipment luggage were reluctant to continue, as it is their custom to take a siesta from noon until four in the afternoon. Our time was limited; we were allowed just one week; and so we had to disappoint them and oblige them to continue.

We entered the beautiful little temple of Thutmose III, who was related to the early foundation of the Rosicrucian Order. There, outside of the portal, in pure white, in contrast to the gray stone columns and pylons about it, was the little altar of this early mystery school. It seemed like a dream—so quiet, so peaceful, so sturdy, and yet representing a people and a time of thousands of years ago. It did not seem possible that something constructed so long ago could be in such a perfect state of preservation. In this ideal climate of Egypt, where rain falls every thirty or forty years (which makes of the land a warehouse kept at a constant temperature, free from moisture) all antiquities will remain in an excellent state of preservation perhaps for centuries to come. Approximately 1,000 feet of film were ground out within this edifice alone. We reluctantly returned to our hotel, but were assured that we would find additional splendor in Luxor Temple on the morrow.

The next morning at the same hour we were once again accompanied by Inspector Habachi, and went immediately to Luxor Temple, also

known as El Aksur, or “the castles”. The length of Luxor Temple, from front to back, is three hundred yards, and it was built mainly under the direction of that famous builder, Amenhotep III. During the campaigns of Alexander, the Great, it was partially destroyed, and temples of the Greeks were set up within its midst. At a still later period, the Christians entered this magnificent structure and defaced portions of its beauty by chiseling hieroglyphics and inscriptions from its walls, and covering them with crude, coarse plaster on which they painted even more crude murals depicting incidents of the Christian Bible.

To us, this seemed a sacrilege, not because Christianity established itself in Egypt and attempted to further its ends; but because there was more to these temples than the worshiper’s religion, their beliefs in the hereafter, or their interpretations of a god: there was their physical beauty, their architecture, their art. These things belong to all religions, and not to any sect; and it is the duty of religion to preserve beauty, because, as Plato has taught us, through beauty of the external world man can come to have greater appreciation of the better life—those things which represent the beauty of his inner nature or his soul. And we felt that this desecration on the part of the early Christians was not to their credit.

Our companion also showed us other chisel marks on the side of a great stone wall. These marks were made during the time of our venerated Rosicrucian Grand Master, Amenhotep IV. Centuries before Christianity, as we know, he had the first monotheistic conception—the belief in a single or sole God. He was so inspired by this thought that he attempted at once to reform the religions of the land—to make all the peoples of his empire realize *the One God*—a mighty and just God; and he ordered the destruction of the pagan gods, idols, and statues in the temples, and even ordered the immediate eradication from the walls of the great temples of prayers of adoration to the false gods. And these chisel marks, deep etchings into the stone wall before us, were made by those acting under his command to remove the tribute to the false gods. Nothing else did he destroy; all other art he preserved. We could not fail to admire the courage of a man who dared to change overnight, one might say, the religion of the people—to lift them boldly from their superstition and ignorance to a higher

and loftier plane—who incurred the hatred of the priesthood by these acts, and who brought about the ruination of his power.

An entire day was spent at Luxor Temple—an insignificant period to appreciate properly its history or even to attempt a careful study of its architecture and any portion of its inscriptions, but sufficient time, with the ideal lighting Egypt affords, for considerable photography.

Leaving Luxor Temple, we turned again to look westward. Ever since our arrival, we seemed to have been drawn to those purple hills, rugged cliffs across the Nile. Although they were foreboding in appearance, we always felt a strange fascination for them as the sun set behind their crowns. Tomorrow, we would succumb to this magnetic attraction and cross the Nile to them.

Chapter VII

THE VALLEY OF THE KINGS

BY ARRANGEMENT, EARLY in the morning we met the Inspector, our dragoman, and porters on the bank of the Nile. We were fascinated by the quaint little boats with their patched sails, and their one-man crews, fighting the tide trying to reach a point directly opposite on the other shore. We watched patient little burros tread along the bank, laden with bales or crates, wits masters who either walked along in front, or behind, tapping them on their flanks with a stick to keep their pace constant. Groups of native women sat in little circles on the road edge, waiting for the return of someone patient, impervious to sun, flies, and insects. Their faces were covered, with the exception of their eyes. Most of them, unfortunately, had diseased eyes, due to the water in which they wash—when they do—and due to infection and lack of knowledge of sanitation and hygiene.

Finally we climbed aboard our frail craft with our equipment, and started across the Nile from a point where for centuries the Egyptians had crossed. As we were swept along, there came to our minds the legends of the great ancient funeral processions which had crossed this same body of water. From the East bank of the Nile—the city of the living, because the sun rose with its life-giving rays in the East—they floated across, on great decorated barges with the sarcophagus of the departed, always at dusk, representing the closing of life and the crossing from this world of the living to the world of the-dead. The West side of the Nile, therefore, or the city which existed there at that time, was called the City of the Dead, because it was in the West where the sun set at the close of day, and where darkness came.

It must have been a magnificent ceremony. We could imagine the chanting, the sound of strains of music on the river. In our minds we could hear the wailing of bereavement. We could mentally see the unloading of the sarcophagus see it being carried on backs and shoulders of great Nubian slaves. We could see priests in ornamental costumes, bedecked with jewelry, emblems of their office, marching two abreast ahead, swaying from side to side in time with the rhythm of chanting and music. Behind came the military escort, the members of the court and the family of the departed. Behind them came, piled high on the backs of personal slaves, the intimate belongings of the departed—great alabaster chests inlaid with ivory, hand-beaten gold masks and vessels, gems, rare woods, frankincense, pottery, beautiful tiles, magnificent furniture, hand-carved, showing great skill and craftsmanship. The procession would wend its way into the hills that became the tombs of the great—of the kings of the eighteenth, nineteenth, and twentieth dynasties.

Our musing soon ended as our boat slid alongside the crude landing. We loaded our equipment into a ramshackle car to be driven over a rough, ungraded road as far as possible, and from there to be packed on the backs of our porters. We started through this little valley with its towering limestone cliffs. Here were buried the Theban kings—some forty-one of their tombs have now been located. We eventually entered various ones, going down their long, sloping passageways or ramps, observing painted on the walls the original diagrams showing the plan of construction. We learned that these plans were quite frequently deceptive, intended to mislead any vandals who might break into the tomb, as to its real arrangement. Treasure rooms were usually sealed in such a manner that it would take considerable investigation to locate them. When our torches were temporarily extinguished for a moment, and we realized the inky blackness of these underground chapels and mortuaries, the sensation was real.

On the walls were prayers in adoration of the gods, also inscriptions from the rituals which the deceased would have to perform in the after-world. There still remained some of the great stone sarcophagi or coffins from which the mummified remains had been recently removed, or which were empty when recently excavated. These tombs of kings were not as interesting historically, nor did they contribute

as much to our knowledge of the times and of the people and their customs, as the tombs of the lords or noblemen. The inscriptions and hieroglyphics on the walls of these tombs of the kings were mostly concerned with their personal accomplishments, and self-aggrandizement, and with phrases from the great Book of the Dead, a book containing the rituals and ceremonies of the after-life. However, we did film the tombs of Rameses III, Seti II, and the one of the renowned King Tutankhamen, and others. The heat was unbearable to us who were not accustomed to it. The only shade was that afforded by the interior of the tombs themselves. The cliffs were barren, rugged, ghastly. They suggested another world—a *world of the dead*. They were used principally because they were the only stone hills in the immediate vicinity which would afford construction material for tombs.

We went, then, after a few minutes journey, to the tombs of the nobles—that class of individuals who sprang up during the feudal age of Egypt and became wealthy and powerful, and who rivaled the power of the kings. They owned great estates, worked by both freemen and slaves, and built luxurious palace homes with mosaic floors depicting the cool waters of the Nile, and the green grasses which grow about it. The walls were ornamented with paintings of water fowl common at the time. These nobles enjoyed all the luxuries which the time afforded—beautiful furniture, tapestries, fruits, wines and vegetables—many of which we have inherited, such as romaine salad wonderful jewelry made of gold and rare stones. They had great crops of grain, and skilled workmen, basket makers, cabinet makers, metal workers. These craftsmen had tools of bronze—saws, hammers, and many implements similar to those we employ today.

On the walls of the tombs of these nobles, painted in vivid colors—startlingly vivid to us, for it seemed almost unbelievable that the colors could be so bright after the centuries that had passed over them—were incidents in the lives of the people of the estates. Thus we know how they were employed, what they did. There are scenes showing the gathering of grain, showing the scribe recording the bushels. Scenes showing the crushing of the grapes, and making of wine. Others show the tilling of fields with ploughs; and we see in these first ploughs used a similarity to ours of today. The Egyptians of this period had gone beyond hoe-culture and had developed agriculture. We see

irrigation canals, the first in the world. We see the chariot makers; we note the fishermen preparing to set out with their nets. We note the intimate family life of the noble. Here he is entertaining guests, with children playing in the same room at a game that resembles our draughts or checkers. We observe that the noble had but one wife, whom he respected and who shared equally with him all of his powers, privileges, and property rights. Here, on the walls of these tombs, history is unfolded.

We then visited splendid Der-El-Bahri, or the mortuary temple of Queen Hatshepsut. This great tomb-temple, now being restored to its original condition as nearly as possible, was built for Hatshepsut by her architect and vizier, Hapuseneb. Considerable enmity and jealousy existed in later life between her King husband and herself. It is related that he was envious of his wife's power in the Egyptian empire. And later, when she died, he ordered her cartouche or signature eradicated from the great obelisks which she had erected during her time.

On either side of the great ramp which leads to the outer court-yard of this temple-tomb we saw what seems to be just a great, dry root protruding from the sand of the desert. These two roots are all that is left of two great trees which were once on either side of that ramp and which had been imported from far up the Nile, from equatorial Africa, by emissaries of the queen so that she might have shade. It is also said, that where now there is naught but desert surrounding this temple-tomb, there were once flourishing gardens. The tomb itself is deep in the face of the cliff which is immediately behind the temple.

Our journey next brought us to the temple of Medinet Habu which was built to the god, Amon. Though mammoth in size, with gigantic columns and pylons, it reveals a decadence in architecture. The reliefs tell of the great campaigns of the pharaoh; show his naval battles; we see his mercenaries or hired soldiers capturing the revolting subjects of the countries which comprised his empire; we study the weapons they used—spears, shields, swords, armor; we examine the type of war galleys. The architecture is decadent in comparison with that of other temples we have seen because there is no uniformity of design. One finds square columns, short, ill proportioned ones, others tall and graceful, with capitals of different design, some plain, others highly ornamented.

TEMPLE-TOMB OF QUEEN HATSHEPSUT

In the awe-inspiring Valley of the Queens, surrounded by age-old, gnarled, and worn cliffs, is this temple and tomb of Egypt's most powerful Queen, Hatshepsut, wife of Amenhotep III.

Climbing to the top of a great pylon through a narrow stone passageway, we had an excellent view of the plain around it, and the Nile a mile or two distant. Where we stood, some seventy-five feet above the ground, had stood the defending warriors many times before, hurling stones or spears at the attacking invaders below.

We left Medinet Habu, and finally the Valley of the Kings, to admire—at a distance of some several hundred yards—the Colossi of Memnon. These enormous statues were erected by Amenhotep III as an outer gateway to a great temple which is no longer in existence. They were surrounded by water as the land around them was inundated

by the rising Nile. It made a thrilling picture, for the clear, still water reflected their mysterious images. Completing a full day, we returned again to Luxor, but on the following day went back for further detailed photographing, as our first trip was only sufficient for us to plot out those sections or portions of all the things we saw which we believed to be the most impressive and which would convey, to future audiences who would see our films, a better impression of the greatness of that which we had the privilege of seeing personally.

It was while crossing the Nile after our second day on the West bank that Habachi said to us suddenly, "I believe I can arrange to have you film with your cinema, for the first time, an interesting demonstration which I feel will prove of interest to your friends and your countrymen."

We asked him what it was, and he stated, "I cannot comment more freely at this time, for I must inquire further before I can be certain. But if you will come to my office early tomorrow morning, I will be prepared to tell you more, I am sure."

His way of arousing our interest to a certain point and then telling us no more was exciting, and the following morning found us early at his office. We did not know what to expect, because for the last few days he had given us entree into tombs which were ordinarily locked and barred to the public; he had ordered attendants and guards to make available to us places which are recorded only in historical texts and have never before been photographed for public examination; so We felt this would truly be something unusual.

Habachi began, "There is an Egyptian by the title and name of Sheikh Moussa-EI-Hawi, who has an unusual power of sensing or detecting by smell and other means—perhaps you will call them mystic—the presence of venomous snakes and insects. He also has the means of subduing these snakes, making them docile, although at times I understand he has been bitten by them, and in fact has lost his two sons who inherited his power of detecting snakes; they were seriously bitten."

Immediately there flashed into our minds the accounts that had been published of this individual in American magazines at different times, though of course we had never seen a picture of him and no picture had ever been published of him. I asked, "He will perform for

us?" He said, "Yes, gladly, as a courtesy to me." "When?" we chorused, and he replied, "He awaits in the courtyard and will accompany you to wherever you wish."

I asked if the demonstration could be delayed for a few minutes while we rushed to the hotel to obtain the balance of our party—Fratr and Soror Harry L. Shibley and Soror Lewis. He consented, and in a few minutes we returned, breathless, for the demonstration. Naturally we wanted to assure ourselves that this was to be a genuine demonstration and not the trickery common among snake charmers in the Orient. Habachi said, "He is not a snake charmer; he has no snakes with him. He will gladly remove all his garments for your inspection and examination." And, in fact, he did remove all his garments except his loin cloth to assure us none were concealed on his person.

Habachi continued. "He will go wherever you wish, to call out these snakes, so that you may be certain that he has not by any prearrangement placed snakes in places where he would recommend that the demonstration be held."

This was fair enough. There could be no trickery under such arrangements. We suggested, therefore, the interior of Luxor Temple. We all accompanied Sheik Moussa-El-Hawi to Luxor Temple. He was a strange individual; his very presence caused one to shiver, to have a frigid feeling along the spine. His eyes were like a reptile's, piercing and black. His face was strange, slightly distorted; his clothes had a peculiar odor. He looked neither to right nor to left, nor even at the ground before him as he walked ahead of us. Suddenly he stopped and said in broken English, to no one in particular but audible to all of us, "I shall now, with your consent, proceed."

Fratr Brower asked Inspector Habachi, "will the snakes and insects which he calls out from the debris of the ruins be within ten, twenty-five, or fifty feet of us as we wish to know just exactly where to set up our cameras?" We had three cameras to record the incident—a professional cinema, a Graphlex still camera, and another.

Habachi spoke to him in Arabic, and then said to us in English, "He says he knows there is a scorpion right near him and a cobra not far distant."

Moussa, tilting his head backward and sniffing the air as a bloodhound would, apparently caught the scent, as he called it, of what he was searching for, and then he broke out in the weirdest chant I ever heard—a chant in Arabic, starting slowly with deep intonation, and increasing in rapidity and pitch till it eventually reached a frenzied shrill tone; repeating again and again. The man was obviously working himself into some sort of emotional state. At the height of this frenzy, and after walking about in circles from ten to twenty feet distant from us, he suddenly stopped before one of the rocks at his feet, reached down, rolled up his sleeve, baring his arm, tugged at the rock, threw it backward, and reaching in the cavity it had made suddenly brought forth a hideous golden-colored scorpion. He held the scorpion in his hand so that it was visible to us and easily photographed. We noticed that it was continually striking at him with its barbed appendage. When it pricked the flesh of his finger, he would wince at the pain, but showed little or no concern otherwise. At first this was repulsive to all of us, and yet it was so awesome and fascinating that we could not turn from his further demonstrations.

Returning the scorpion to its place, he then walked ahead for perhaps thirty-five or forty feet. We followed him. Suddenly he stopped and again went through the peculiar gesture of detecting some strange scent, and also broke forth with his incantation. Frater Brower, with my aid, hurriedly again set up the cinema equipment.

Habachi turned to us and stated, "This time it is a cobra."

"How," I whispered, "do you know?"

He stated, "His chant is different."

"What is this strange incantation?" I asked. Habachi said he was calling these serpents, as representatives of Satanical power, in the name of Allah, to expose themselves, to come forth—that a greater power than they was giving the command. Finally he stepped over to a little embankment. We noticed the embankment was pock-marked with holes. Rolling up the sleeve of his robe again, he plunged his bared arm down one of these holes to the depth of his elbow. He was apparently struggling with something. I turned to Habachi with a quizzical look on my face. Anticipating my question, he said. "He has one."

We formed a semi-circle at a safe distance behind Sheikh Moussa-El-Hawi, and finally out it came. He had pulled the cobra by its tail out of its biding place. He threw it before him. Immediately it endeavored to get away; it started to crawl back toward its hole. He increased the rapidity of his chanting and a strange light was in his eyes; his face was twisted and grotesque, and as if in a fury he jumped up and down in his bare feet in the dust before the reptile, calling it in the name of all the powers that he knew to return to him. Slowly the snake, as if it had been drawn against its will, turned and crawled back toward him, apparently fighting against some influence stronger than itself. When immediately before him, it coiled and swayed from side to side. Continually chanting, he slowly reached down, picked up the reptile which coiled its body tightly around his arm, and held it before his face. The cobra had inflated its hood and struck at him several times, but by a twist of his wrist he threw the reptile off balance so it would miss its aim and he was not bitten. All this time Frater Brower was faithfully recording this strange incident on cinema film, and as we today see the same scene on the film, we recall the strange feeling we had that this individual was not just a snake charmer but did exert some strange power over these reptiles.

The demonstration was repeated from time to time, and at the close of the last demonstration we offered him compensation, but he haughtily refused it, waved us aside with his hand, and marched on, apparently indifferent to our words of appreciation and gratitude for his demonstration. We were deeply grateful for this unusual opportunity to record this scene, and thanked Inspector Habachi profusely. (Note: Sheikh Moussa El-Hawi died in Gizeh of a cobra bite a few months after our return, so a news cable reported.)

The balance of the day was spent in negotiating for the purchase of an unusual collection of exhibits for the Rosicrucian Egyptian Oriental Museum relics worth a considerable sum because of their age and because they were the property of renowned personages. Each of these antiquities had to be inspected by Habachi before being exported from Egypt, as it is now the custom of the Egyptian government to permit the exportation of only those things of which it may have a likeness, and those things which are authentic, so as not to bring ridicule upon Egypt.

I will never forget the stroll we took with Habachi down to the edge of the Nile just as the sun was beginning to set. Its rosy glow spread over the water; the air was now cool and pleasant. It was our last night in Egypt; we were reluctant to leave. We were thankful to the Inspector for what he had done and had helped us to accomplish. We had just finished again expressing our gratitude, and were about to return to our hotel, expecting him to accompany us part way, when he said, "I leave you here. I am crossing the Nile."

We were surprised, and said, "At this hour? It will be quite dark before you return."

With a peculiar smile he looked straight into my eyes and said, "I am not returning tonight. I sleep on the West Bank."

Frazer Brower stated, "Oh, then you have another office, or an abode across there."

He said, "My abode shall be the Temple of Medinet Habu."

Frazer Brower and I looked at each other. "You are sleeping in that great temple tonight, by yourself? Why?"

Smiling again, he said, "You are students of mysticism; you are Rosicrucians, are you not?"

"Yes," was our reply.

"Then you have my answer."

We were astounded. Apparently he was returning to spend the night in an environment and atmosphere of his ancient ancestors, to be surrounded by memories of their achievements, to dream of their hopes, and aspirations, to try and visualize the scenes that took place there, to gain from those great stone walls and the inscriptions, dark shadows and absolute silence, some idea of their inner ideals, of things left undone—perhaps to quicken his own consciousness, to help him carry on, to keep alive in Egypt what they had begun centuries before.

Slowly we turned and in silence left him, we to leave Egypt, to pass another milestone along civilization's trail.

Chapter VIII

STRIFE IN THE HOLY LAND

War in Jerusalem!

THE LAND WHERE the Prince of Peace had expounded His message of hope for humanity was now ridden by riots and burning with the flames of hatred! Nearly twenty centuries ago, from the same land, went forth the doctrine that a brotherhood of man, and good will on earth toward all, would be the highest manifestation of the divine in man's nature. Today the authorities in Cairo warned us that we would enter Palestine and Jerusalem at our own risk, for the populace were aligned against each other. Racial and religious prejudices had swept all barriers of reason and tradition away.

We thought, as we determinedly signed papers releasing the authorities from responsibility for any possible injury to our persons in Palestine, that it is remarkable how well religion has survived, promising peace, love and compassion in a world where on every side reality portrays envy, greed, jealousy, and strife. Still the illusion goes on. But then, are not many worthy ideals illusions only because they are not possible of actuality under existing circumstances? The illusion exists not in their worthiness but in the belief that they are possible of attainment in our own lifetimes.

The Egyptian press substantiated the dire warning of the railroad representatives. Articles told of troop movements in Palestine, of the concentration of armed forces in Jerusalem, of pillaging and Arab atrocities. As we rode through the night, looking up at the dark blue canopy overhead with its scintillating specks, the tales of war and

bloodshed seemed fantastic and distant, like a horrible dream when one awakens in a room bathed in warm, courage-giving sunlight. "The press exaggerates," was our self-encouraging thought as we settled down for a monotonous railway journey of a night and a day.

Kantara at last! We rose stiffly after our journey of several hours, shook the desert dust from our clothing, feeling much as the Nomad must feel who pushes his way across the desert wastes on the back of a camel. Here was relief; we were to ferry across the celebrated Suez Canal, point of international controversy. The coolness of the water would be refreshing. We—Fratres Brower and Shibley and I—juggled our luggage through the open compartment windows to jabbering, fezzed, native porters who eagerly seized it and fought among themselves for the privilege of carrying the pieces and earning a small fee in compensation.

A queer spectacle greeted our sight as we trailed behind our porters. The Suez at this point was exceedingly narrow and unimpressive. Its width seemed to us not greater than many of the principal irrigation canals of Western United States. Except for three low-wattage flood lights mounted on slender, obliquely fastened poles, which cast small circles of a yellow haze on the sluggishly moving water, the canal was inky black and free from even the outline of any craft. Parading down a rickety plank ramp, we walked on board the "ferry." The ferry was like a continuation of the ramp; the flooring consisted of rough planks, fastened with hand-wrought nails, protruding in many places, over which passengers stumbled. The only support on either side was a railing, much like a crude fence but having only a top bar. The ferry had neither prow nor stern. It was, in fact, but a raft some thirty-five feet in length and twenty-five feet in width. The passengers crowded against the railings to permit a lumbering truck the center.

While humanity and vehicles were being compressed into the small area, we looked at our fellow passengers. We felt conspicuous; our garb was so strictly Western. Not another of the perspiring group was attired in a like manner. On my right stood a swarthy native woman, with shiny brass earrings and a voluminous skirt of brilliant hues. A striped shawl draped her head and partly shaded her darting eyes. On my left was a Bedouin, Arab Nomad, wearing leather sandals, each with its supporting thong tightly drawn between the large and next toes of

his broad feet. Covering his gaunt frame was an awning-like linen robe, and hanging from his black rope belt was a dirk, the scabbard of which was inlaid with mother-of-pearl, causing it to shimmer with reflected light. He, and many of his kind who crowded us, were apparently oblivious to our presence. Chamber dwelt on thoughts not agreeable, for their faces were distorted by scowls. "None too pleasant company," I thought as I recollected tales of hatred which the Arabs were said to harbor for us Occidentals at this time.

The pleasing coolness of the air was mitigated by the ravenous mosquitoes, and the pernicious sticky black flies. We felt further uncomfortable, for we were aware that we were now becoming objects of exceptional curiosity to several.

It was but a matter of moments before we had crossed the Suez and were aboard the sleeper which was to take us into Palestine. As I lay listening to the high-pitched shriek—rather than whistle—of our engine as we sped across the Peninsula of Sinai, I thought of its ancient copper mines. For centuries these great mines had provided the pharaohs with the metal so badly needed for implements and weapons alike. All the peoples of the then-known world bartered for this Egyptian copper. No one knows how and when ore was first discovered, but it is thought to have been first found on this peninsula in the dim past. Some prehistoric Egyptian—perhaps a late stone-age traveler—found one morning, glistening in the still-warm ashes of his fire, one or more beads of metal which had gone through the process of smelting in the roaring flames of the night before. Repeated findings of these beads in the remnants of the fire on this peninsula caused him and his companions to experiment with heating the loose surface stone. Such experimentation resulted in eventually learning how to extract the metal crudely from the ore. With that simple discovery, the world advanced tremendously. New accomplishments were possible, for the age of metal had arrived!

We rose early to greet the rising sun tinting the distant Eastern hills a delicate shade of pink. The land was desolate, like our Bad Lands of Nevada—table-like, hard packed with tufts of parched vegetation, with a sprinkling of round pebbles, a little larger than commercial gravel. Not a sign of life was apparent. This vista did not complement our glamorous concept of what the Holy Land should be. The uninteresting

view turned our attention to our reading matter, by which we hoped to break the monotony of the ride.

Our attention sometime later was drawn from our books to the outside again by a sudden slowing of the train's speed to a crawl. The hills were now closer very near, in fact and on both sides of us. We were traveling through a narrow valley. The floor of the valley was covered by short grass stubble, still brownish in hue. There before us was what we had expected to see in Palestine—a flock of sheep and herd of goats being driven by a nodding Semitic, riding astride a small, trotting burro. The bare feet of the shepherd nearly dragged in the dust; it looked as though, if he stood upright, feet on the ground, the burro could have passed easily between his straddled legs. As we looked, more flocks came into evidence, some descending from nearby hills. All seemed to be converging.

So slowly had we been traveling for several minutes, that the halt of the train was hardly noticeable. Here was the first stop we had made during the day. We left our compartment to crowd in the aisle of the car, and leaned far out of the lowered windows. Parallel with the track, for about the length of two cars, stretched a board platform, open to the sky. A hundred yards back of it were eight or ten tents, somewhat squattier than our American Indian tepees and less graceful; of a black material which we later learned was tanned goatskin. Aligned in front were small children in the customary tattered clothing of the East, some partly naked; but unlike the children of the Egyptian fellahs, these were quiet, and almost motionless. Near them were groups of adults, either astride burros or sitting on their haunches.

Loud voices and the clatter of heavy boots on the platform caused us to turn our heads in the direction of the rear of the train. There were two soldiers British tommies. They wore the regulation tropical uniform of the British soldier—khaki shorts and shirt, high socks, trench shoes, and tan cork helmet. Each had, slung across his back, an automatic rifle with bayonet affixed. The men themselves particularly attracted our attention. They were, in fact, boys; neither of the lads was over nineteen at the utmost—fresh-faced, bright eyed, the kind of youthful, intelligent face you see in a college sports event and little expect to find in a military expedition of this kind.

An incident occurred in the few minutes of our stay which caused us to lose admiration for them and their superiors. Perhaps it was exceptional; at least, we hoped so. An Arab lad, about sixteen or seventeen, sauntered over to the platform, with ragged turban, legs and feet bare. Upon his approach, the young tommies stopped their bantering and watched him. As soon as he stepped upon the platform they were upon him. Each grabbing one of his arms, they pulled him in opposite directions, then shoved him so violently toward each other that he nearly fell. He was finally pushed off the platform. One then struck him with his open hand across the head, as he vainly tried to protect head and shoulders with his arms. Retreating, he never once offered resistance. The other ran after him, kicking him as he fled. We were astounded. Why this brutality? The Arab boy had said or done nothing. Assuming that his presence was a menace to the train because of danger of sabotage, could they not have ordered him away, enforcing their orders with the presence of their weapons? Was Great Britain countenancing such conduct on the part of her troops? Or were these, as their youth indicated, just raw troops unjustly displaying their new authority and might? Such actions, whatever their cause, would only breed further hatred and difficulty in Palestine for Britain, we thought.

We rode on in silence for nearly another hour at a snail-like speed. The next stop was at Lyda—a larger platform, crowded as the previous one, having a partial rain-shed down the center. The hills had closed in on us. Lyda was a junction point; our train was to go to Haifa and the sea; we must change here for Jerusalem. No porters clamored at the windows for our baggage. After quite some labor, we unloaded our assortment of twenty-one pieces, including the delicate cinema equipment, into a pile on the platform. Our Jerusalem train had not yet arrived. We looked about us. We were in an armed camp, it would seem. One end of the narrow, rough shed was supported by additional posts, and on top of it, behind a rampart of sand bags, a machine gun was mounted, and behind it sat two alert tommies—about the same age as those we had previously seen. From their position they commanded full view of the rocky cliffs which frowned down upon us, and they were alert, watching for Arab snipers that had been harassing the railroad crews. The platform was crowded with troops carrying

full equipment, waiting as we were for the train to Jerusalem. A drone overhead caused us to look upward. There a lone plane—a scout—circled high over the depot and adjacent hills, ready to signal the troops below of any Arab movement in their direction. We scanned the clefts in the scarred hills. There was no life visible; yet we had the uneasy feeling that eyes from the dark shadows of the hillsides watched our movements, perhaps sighting at us along rifles they hesitated to fire at the moment.

The piercing shriek of the dumpy engine, pulling rickety wooden cars toward us, was a welcome relief. Our party was separated; we were all fortunate to find space on board. This was a troop train, and passengers—of which we were the only ones—were incidental, and their comfort not considered. The troops were all in good humor; they had just arrived on the transport from England, and were on their way from Haifa to various zones in the trouble area in the vicinity of Jerusalem and Bethlehem. None was over twenty-one, or so it seemed, with the exception of the officers. We learned that the youthfulness of the troops was due to the fact that England has found that men over twenty-five years of age do not, unless they have lived for some length of time in the tropics, readily adjust themselves to extremes in temperature.

In the aisles outside of the compartments in each car were stationed four men, rifles ready and at rest on window bars, as they peered into the hills for signs of Arab hostilities toward the train. On a sharp bend I saw, through our open window (through which dust and cinders poured) a gasoline truck traveling on the rails about a hundred feet in advance of our engine. On it was mounted a rather heavy-caliber machine gun, and three armed tommies stood by. This, we learned, ran in advance of the train to ward off attacks on it and to sight any damaged rails or bridges intended to derail the train, which had been the recent practice in these canyons.

The viciousness of the rocky hills through which we were winding was finally broken by patches of vegetation. We were nearing Jerusalem. The sloping sides of the hills were now terraced every ten or twelve feet, with three-foot walls made of irregular stones plucked from the surrounding surface. Between each wall and the one above was a thin veneer of soil; in these rims of soil grew the grapes of Palestine, and

much of the grain and truck which the Holy Land depended upon. In Biblical times the peasant of Palestine found the thin coating of soil on the rocky cliffs hardly sufficient for his actual needs; centuries of rainfall had washed nearly all the remaining soil away. The land in this vicinity would have been completely impoverished but for these stone retaining-walls, built as a last protective measure. Hardy Hebrew women turned from their task of hand-cultivation to stare at the train of singing armed men that passed. We wondered as we looked at their solemn, weather-beaten, dull faces, whether they saw in these troops new hope or further disaster for their land and race.

We swung suddenly from the open country into the yards of Jerusalem's only depot. Crowds on the platform cheered the troops who detained with the light-hearted spirit of a crowd of Sunday excursionists. Our only conveyance was an old private car; the Arab taxi drivers were on strike as were all other Arab employees. The Jews dared not supplant them or operate their competitive enterprises for fear of Arab reprisals, which meant bloodshed for both sides. In consequence, all shops, factories, mills, banks, and industrial places were closed and had been for months. Hunger and disease were rampant, and tension was growing stronger. Outbursts were frequent, loss of life considerable.

As we sped at fifty miles an hour along one of the main thoroughfares with a young Hebrew at the wheel, who furtively glanced toward the boarded shop windows on his left and right, we studied the buildings as best we could. Their fronts were plastered and white-washed, which made them gleam in the hot afternoon sun. They rose to a height of two or three stories. Many had dome-like roofs and minaret-like towers, revealing the Moorish and Byzantine influence. Others had red handmade tile and wrought-iron balconies, upon which ordinarily doors opened but which were now boarded closed. This street was macadamized, but side streets, of which we had but fleeting glimpses, were cobble-stoned, narrow, crude.

Our destination, one of the most prominent hotels in Jerusalem, was gratifyingly modern. After an exceptionally appetizing and well served meal, we retired. Several times I was awakened during the night by rumbling, indistinct voices and the thud of feet below in the corridors and upon the street beneath my window. Fatigue overcame curiosity,

and I would lapse again into sleep. In the morning we discovered that night had brought about a startling transformation of our hostelry. It had been converted into a military headquarters for the high staff of the British Palestine expeditionary force. Uniformed army messengers were running up the broad staircase bearing side arms. High-ranking officers stood or sat in groups in the main foyer, talking in low voices. All the rooms were occupied by the military staff, and would be, with the exception of those held by our party. An indication of the seriousness of events was the low sandbag rampart on the sidewalk immediately in front of the main entrance, behind which a sentry patrolled. We were allowed free exit and entry, but must return before 8:00 p.m. or be barred from entry. Each time we desired admittance, we had to secure the permission of the armed sentry.

Turning the corner to cross the street to secure the services of a guide whose name had been given us, we saw directly beneath the balcony of our rooms two armored trucks bearing one-pound cannon and regulation machine guns. These were riot cars which patrolled the streets at night and rushed to areas of disturbance until the arrival of the infantry. A state of war truly existed.

"Will we be allowed to film even the historic and mystical places under such conditions?" asked Frater Brower, putting into words my own thoughts.

"Probably not," was my pessimistic reply.

By appointment, a representative of the American Express Company met us, and after greeting us he said, "Our office is closed and all ordinary business is suspended. It is a special concession that I meet you here. I cannot assure you any success in your enterprise, for the High British Commissioner of Jerusalem has declared the city under martial law."

"Shall we seek to obtain permission to take our cinema pictures?" I asked.

"Such channels of authority do not exist at present," he said. "I would suggest that you proceed as usual unless ordered to cease by the military authorities."

I suddenly became aware of someone standing close behind me. Somewhat startled, I turned quickly to look into the face of an Arab,

bowing graciously to me. He was attired nattily in a business suit such as any young American or Englishman might wear. The only touch of the Oriental in his attire was his tarboosh (fez). He was a young man of thirty-five. Particularly impressive were his large, expressive eyes and his exceptionally fair skin for one of his race. The extent of his lavish bow and his genial smile caused me involuntarily to bow slightly in return. Noticing our confusion, the American Express representative stepped forward and introduced us; he was to be our guide. We shall call him "Sule," which is not his true name. Not a pleasant prospect, I contemplated; an Arab guide, and we Americans—the next to being English in the minds of most of the peoples of the Levant, and the English were far from being in favor with the Arabs at that time.

My musing was interrupted by his question, "Shall we proceed on our journey at once?"

Before I could reply, the American Express representative was bidding us farewell and hastily retiring. Turning to Sule, I answered with a question. "Shall we take our cinema equipment with us now, or just our still cameras?"

"Let us investigate the sites now. Therefore, take your still cameras; tomorrow, the cinema," he said in his charming accent.

In less than half an hour we were off. Sule had engaged two robust Arab porters to carry our Graphlex, tripod, plates, and other paraphernalia. No automobiles being available, we walked, feeling quite uncomfortable in the hot sun. The heat discouraged unnecessary conversation. Our comments were in monosyllables.

We stopped before one of Jerusalem's historical and massive triple gates—now but a great stone archway through which pedestrians and pack burrows alike tread. Everywhere shop windows were boarded, creating a depressing atmosphere, impressing one with the fact that danger lurked near at hand or was expected momentarily. Natives stood idly, leaning against shop fronts or buildings. To us they all seemed to be Arabs, solemn, unexpressive, staring into space. Some slowly turned their heads and looked after us. Beggar boys ran up to us holding out dirty hands, chattering in Arabic, some proffering cakes for sale in filthy straw baskets which had been sitting on the curbs of the gutter, and over which flies hovered, many already covering the wares. The whole

scene was, however, picturesque: the remaining portions of the once great walls of King David's temple; the alley-like streets; the roofs of houses on either side, leaning until they nearly touched, as though supporting each other in their stage of near-collapse. Burros were the only means of conveyance, walking patiently, their ears flapping, flies buzzing about their heads, trudging under swaying, cruel burdens. The commercial life of the city however, was obviously paralyzed, and there were no tourists, no outsiders but ourselves.

Chapter IX

THE UNKNOWN CONDITIONS OF PALESTINE

TURNING DOWN A steep incline, we entered at the bottom a large flagged courtyard, closed in on either side of us by a massive, sombre, granite-block wall. In front of us, the third side of the courtyard was a fairly large edifice of the same depressing hue. The natural gray of the stone had been darkened by years of rain which had streaked the stones with black. It reminded me, with its arched entrance reached by descending the flight of well-worn steps, of the Temple of Justice in Paris, former prison during the French Revolution. This fortress-like structure was the Church of the Holy Sepulchre. The authenticity of this purported tomb of the Christ is much disputed. Now lying in the center of modern Jerusalem, it at one time was just outside the walls of the city. The Christian literature of the first three centuries made absolutely no reference to the “empty tomb”; if it had been known in the past and venerated, it certainly would have been destroyed—so historians state—during the destruction of Jerusalem by Titus (70 A.D.) and the great devastation of the Bar Koklos Rebellion.

The Roman emperor, Hadrian, restored the city in 135 A.D., and erected over the tomb a temple, dedicated to the pagan goddess, Aphrodite. Two hundred years later, Macarius removed the temple and found an ancient Jewish tomb. Rock was cut away from the tomb and a circular building—the Anastosius—was built around it. Over this was built the present medieval building. That the tomb inside is the one

located by Macarius is indisputable, but there is no proof, it is argued, that it was the Christ's tomb. Speculation runs high as to outside of just which gate of Jerusalem the Crucifixion actually took place, for that fact would assist in determining the site of the actual tomb.

The inside of the rotunda was dimly lighted by candles. On either side, against the walls, like concessions at an exposition, were the altars and accouterments of the various Christian sects which have property rights in the buildings and share the honor of preserving the site. Even to one who might not be strictly orthodox, and therefore not unduly sensitive, the ostentatious display was offensive. Each sect had tried, not to make its shrine more dignified or symbolic of the sanctity of the place, but more pretentious, just as a merchant would, to dominate the attention of passers-by. This obvious competition within the confines of the sacred shrine itself has led to many disputes, culminating in bloodshed. "How disillusioning," was our paramount thought as we left the edifice, "must a visit to the place be to religious pilgrims!"

We discussed the circumstances and our impressions freely in the presence of our guide, Sule, as we prepared to take photographs of the exterior. He had been attentively listening, for he said, "Your views are different from many who come to visit. To you, God does not bestow blessings only upon those who profess to know His ways, but as well upon those who follow them, whether they know they are His ways or not."

We explained that we were not creedists, feeling that we could understand God without reducing our understanding to dogma. We further explained that in our opinion, the errors which existed in any religion were not in motive but in interpretation and application.

"Precisely," he replied. "And so I shall express myself in my book."

"You are writing a book?" I queried, studying carefully his enigmatic face.

"I am now a Christian, although I am an Arab. I was a Mohammedan, and I feel qualified to make a comparison between these two great faiths, and of this my book shall consist."

"And is it possible that your book might bring greater harmony between your people and the Jews?" I asked, risking a challenging question.

If my question surprised him, his face did not reveal it; but his eye held mine, as he replied in a deliberate manner, "You are Americans, not involved in the situation which exists here. I feel that I can speak freely to you."

This he did, giving us an understanding of the turbulent state not obtained from the others, whose views have been more publicized because of the means at their disposal.

"The conditions which exist in Palestine," he began, "are not solely due to religious differences between the Arabs and Jews, as many of the leading newspapers of the world would have their readers believe. We have had as next-door neighbors for decades, Jews who deal with us and we with them. Our mutual respect has been heightened by fair dealings and an equal assumption of social, political, and economic responsibilities. In the controversy that exists, these Jews, our neighbors and our friends, support us. Palestine is a land which, even in your short stay," he continued, his voice now quivering with emotion, "you must have already observed is incapable of supporting agriculturally a numerous people. With the exception of the Jordan Valley, a fertile strip, it is nearly a barren land and requires a very hardy people to subsist on it. We and the Jews who have been established here are not selfish, but we know that an influx of population will bring ruin to all here who are now enjoying no more than life's necessities." We listened intently, impressed by his earnestness.

"Propaganda in England and in America, and conditions in Germany, have encouraged thousands upon thousands of Jews to enter Palestine with the belief that it was to become a new kingdom of Judea, a land of affluence. This migration has been encouraged by certain money interests that have bought worthless lands in Palestine and sold them, sight unseen, to the immigrants before they left their homes in other lands. These newcomers are mostly not agriculturists—are even unaccustomed to manual labor. They arrive nearly destitute. A few weeks hardship on the soil of Palestine proves to them that they cannot support themselves upon it, and being financially unable to return to their original homes, they move into our cities and towns. They, by nature, are barterers, merchants, and they set up numerous little stalls (one cannot call them shops). They are forced to live like cattle by circumstance, and thus undersell by far the rest of us—even

their own kind who have been established here. This unfair competition reduces living standards, wages fall, business suffers, and we all starve. Still they keep pouring in, to be in turn deceived.

“Not a word of these conditions reaches the outside world. The British press and others continue to tell the world at large how Palestine is fulfilling a prophecy of becoming a new kingdom of hope and prosperity for the Jews. We have pleaded with England, which exercises the Palestine mandate, to restrict immigration and to establish a quota for Palestine, allowing a limited number to enter annually. A number that new business, industry, and development can rightly assimilate. This has been promised periodically, but still there is actually no quota in existence.* A people can stand only so much deprivation; then the law of their being causes them to retaliate, to struggle for survival and for those little things which make life worth living.” “If,” we reasoned, “we could paralyze transportation and all commerce in Palestine, we could force the world to realize our desperate circumstances. We no longer operate the railroads; those that are operated are done so by the British army. We permit no trucking, manufacturing, or conducting of usual business.”

* Efforts are being made now by the British Government to fix a quota and to portion Palestine into sections for the Jews and the Arabs.

“This is very harsh and lawless you may think, but we fight for life and the lives of our loved ones. Britain and other nations have great interests here. Their financial resources are affected by these conditions. Pressure was brought upon the British Parliament to establish normalcy. We have been threatened but have not complied with the demands. The military force has undertaken to operate mills and supervise institutions. This display of force has caused hatred, and my people have resorted to the same means. They harass Britain’s troops. They prefer to bring about a settlement by treaty and compromise, but their pleas are met by a cruel overriding by the military might. In the national treasury of Palestine there was a small reserve sum of six million dollars. We are being penalized for our attempt at existence; the expense of transporting troops, supplies, and war materials here from England to oppose us is being paid out of these reserve funds. We shall never surrender or submit to such conditions! Our people are used to these hills; they were raised in them. Armed and in them, they

can resist a trained and fully equipped British force of fifty thousand troops indefinitely.”

“America,” he stated, apparently to placate us if anything he had said might have offended, “would surely be more considerate of our needs. We selected her at the close of the World War to exercise the mandate over Palestine, but she refused.”

“Fortunately,” I replied, “for undoubtedly she might have confronted the same conditions and how she would have reacted to them one cannot truthfully say. “Is there,” I asked, “much loss of life?”

“Listen tonight, an hour after sunset. You will hear the crack of rifles from various directions,” he said with a glint in his eyes. “The chattering reply you will then hear is the machine guns of the British. When British troops rush one section, Arab snipers harass them from another. We do not like these methods, but our conduct is the cry of a people in distress. We have the moral and material support,” he proudly added, “of all the Islamic peoples of Syria, Turkey, Egypt, Iraq, and Arabia.”

“The British are usually fair in their dealings,” I began.

He interrupted. “I speak no condemnation of the British people as a whole; they have been our friends. Those who have lived here before, and understand, have deplored their country’s action and protested. But mercenary interests have stifled their pleadings, and the homeland knows not the true facts.”

We had walked as we talked. Carefully we plotted our campaign for the next day. Bidding Sule good evening, we retired to our hotel. That evening we dined with the most prominent British officers stationed in Palestine, in the simple, unpretentious dining salon of the hotel. A British officer of rank is a cultured gentleman; no matter how far from his native land, he never relaxes his customs, manners, or poise. Each evening, though men only were present, every officer dressed for dinner in his dinner jacket as meticulously as though visiting some smart restaurant on the Strand with his lady.

An Englishman never permits himself to become influenced by environment and social conditions into which he is thrust. It can be said, that wherever an Englishman is, there is England. This reveals a most pure strain of nationalism. It does not mean superiority, but

rather a stronger allegiance to a chain of traditions. An American is more easily swayed by environment, and will assimilate the customs and practices about him quickly, sometimes good, sometimes bad. For example—though the clocks of the hotel had accurate Palestine time, these officers gathered about the single radio receiver which the hotel afforded to secure London time by short wave, and then adjusted their watches accordingly for the number of hours difference between that and the local time. What American would set his time in Palestine by a New York broadcast if he could obtain it from the local clocks? Such is the influence tradition asserts on a Briton.

The brilliant sunlight of the next morning was encouraging. We had feared it would be overcast, from the appearance of the skies in the evening. Our equipment was all prepared. We carried with us four magazines of film, representing several thousand feet, and all of the necessary shades and filters and accessories for the successful operation—we hoped—of our equipment. A twenty-minute walk brought us to what had originally been the outskirts of the ancient city of Jerusalem. Before us was an attractive tower-like church—a gift to the Roman Catholics of Jerusalem by the former Kaiser Wilhelm of Germany.

Passing through a large gateway, we entered a pleasant garden, quiet and serene. Crossing this to the Gothic doorway, we pulled on a weather-beaten rope hanging there and heard from the interior the distant tinkling of a small bell. A few seconds later, the door opened disclosing a pleasant faced father, middle aged, portly, wearing sandals and clerical garb. Our guide explained to him in French our purpose—that we desired to ascend to the top of the tower, which structure had the greatest height in that vicinity, to photograph views of the surrounding terrain. It was rather an unusual request, this we realized. After studying us carefully for a moment or two, he kindly consented. After winding our way to the top of a tower by means of a circular stone stairway, which permitted the passage of just one person at a time, we were rewarded for our effort. There before us was spread a goodly section of modern Jerusalem. In the great distance could be seen a portion of the Dead Sea.

Slightly to our left was a hill, not great in height, but higher than the surrounding land. It was perfectly bare. At one time it was covered with

olive trees, and was, in fact, the Mt. of Olives upon which had been located the historical Garden of Gethsemane. Turning to our guide I stated, "I presume that the olive trees were removed centuries ago." "To the contrary," he replied. "The Mt. of Olives was covered with olive trees until during the world war, when Palestine was occupied and dominated by Turkish forces. Due to the embargo by British ships, the Turks were not able to obtain coal to operate the trains through Palestine, and being badly in need of fuel, the olive trees were felled by the Turks and used to fire their locomotives."

Here again was another indication of the fact that war is no respecter of traditions, historical sites or even sacred places. Being satisfied that we could get no better view than this, we spent considerable time filming the vista before us. I was particularly impressed with this little church. After departing from the tower, I entered the chapel. Its simplicity was impressive, restful, a place where one could quickly depart in thought and feeling from the rest of the world. No lavishness, no attempted display, just the cool, gray walls, the plain hardwood pews the high altar beautifully carved of teakwood. High above it some light filtered through a stained glass window, forming a geometrical pattern on the mosaic floor and heightening the shadows on either side of the chapel. But we had to hurry away, for our time was limited.

From here we were to proceed to the historical town of Bethlehem. The only transportation was burros. Getting astride these small animals we jogged the entire distance of six miles along a modern highway to Bethlehem. To passing troops in motor lorries, we must have presented an amusing spectacle, but the only means of transportation were these burros, with the exception of the military trucks and lorries. We felt fortunate that we could go even by this means. We were accustomed to horseback riding, which we enjoy, but there is a great difference in riding a horse and a burro, as one soon learns. The stride of the burro is shorter, more jerky and far more breathtaking. A ride of three or four miles by burro is as fatiguing to one not used to it, as a ride of several hours on horseback.

Midway we stopped at the Well of the Magi. This well today is the same in appearance as it must have been in the time of Christ and before. Back of it is a grove of olive trees. There have always been olive trees there as far back as local history goes. The well is now dry and has

been dry in the memory of the oldest inhabitants. There is no doubt as to its authenticity, for historical records as well as legend point to this well as the common meeting and stopping place of travelers and those going to and fro from Jerusalem or Bethlehem. Caravans used to pass there, as well as those driving their flocks from one section to another in search of new pastures. I was deeply impressed as I sat on the edge of this well and thought of the brethren of the mystic schools who conversed here while refreshing themselves with the wells cool water.

THE WELL OF THE MAGI

Tradition states that the wise men of the East, on their way to Bethlehem to visit, “A new-born King,” drank of the water from this well.

Further on, we passed the round, silo-like tomb of Rachel, another truly authenticated historic place—although unimpressive—along the same famous highway. Rounding a bend in the road, we had a panorama of the hills surrounding Bethlehem, to which so much reference is made in the New Testament. We could visualize the shepherds there

watching over their flocks. We could realize why, since the shepherds played such a prominent part in the life of the people of that time, there were so many parables concerning their conduct. It was simple for people to grasp the significance of such parables.

Lorry after lorry of troops and armored cars passed us, hurrying to Bethlehem. Once the highway over which the wise men traveled, those predicting the coming of the Great Avatar, and the road over which the Christ himself rode and preached to the passers-by of the coming of a new era, it is now an avenue for the quick moving of machinery of destruction and the armies of war.

We were more impressed with our entrance into Bethlehem than into Jerusalem. All streets were exceptionally tortuous, twisting, winding and rough, with cobble and flagstones. Hardly anyone in Western garb was to be seen. All were robed much like the pictures and paintings we have of the people of Biblical times. We were held up occasionally to let a herd of goats or a flock of sheep pass us by. Finally, the narrow street on which we traveled opened into a wider thoroughfare and there before us was the Church of Nativity, the birthplace of Christ. Immediately before it was a large plaza, elevated just a few feet above the approaching street. Like most all of these ancient buildings, it was not welcoming, but sombre, depressing, the very massiveness of the stone conveying the feeling of coldness and dreariness. The windows were small and slit-like. The entrance into the church itself was so low that one had to bow his head to enter.

Most astounding to us, however, was the fact that the lorries which had been passing us with troops and war supplies were making this plaza before the Church of the Nativity their destination. This great space was to be used as a temporary barracks and storage area for war materials. Stacked high were cartons, cases and bundles and the black, ugly, large metal containers of crude oil and gasoline needed for the mechanized equipment of the British troops. Stacked also—almost in front of the very entrance into the Church of the Nativity—were rifles. The troops stood idly by awaiting further orders. Machine guns were mounted on the adjacent wall, surveying the whole area as a protective means. A goodly portion of the Hebrew population stood by, curiously watching.

We entered the Church and walked from chamber to chamber. From these very chambers each Christmas morning a sermon is broadcast throughout the world. In fact, ninety days later, during the greatest strife in Palestine, with all of these armaments about, a message of peace and hope was issued to humanity. Fortunately, the listeners throughout the world could not see the conditions existing where this message originated or they would perhaps have had their faith in the message somewhat shaken.

We were permitted to take pictures of this place, and found it extremely difficult to avoid including modern troops and war paraphernalia in the scenes of this holy site.

Returning once again to Jerusalem, and after visiting many other historic places about which there is dispute as to their authenticity, we were fortunate in being able to photograph the building which legend and tradition declare is the place where the Last Supper of Christ was held. Even most historians are of the belief that this structure was undoubtedly the original edifice. Strange, that this chamber which means so much to Christians, to philosophers and mystics who are all somewhat in dispute as to the real purpose and objects of the Last Supper, is now a Mohammedan Mosque. The Mohammedans themselves confirm the legend that it is the place where Christ's Last Supper was held. They appreciate its sacredness to Christians. Everyone is permitted to visit it. It is a chamber about sixty feet in length and about forty feet in width, with two rows of rather stout columns down the center. It has a very low, arched ceiling and is dark, except for two narrow windows at one end which admit very little light, and candles which are placed about the wall. The stone floor is covered, as is the custom in mosques, with exquisite and very old and valuable Oriental rugs. Unlike many of the other sites of interest to tourists and Christian pilgrims, now controlled by Christian sects, no fees were asked for admission. One could make a contribution as he left but the Mohammedans did not seem to expect it, or ask for it. This contrast in custom was very noticeable to us, and certainly complimentary to the Mohammedans.

We returned to the hotel just before the curfew hour. We found a flurry of excitement. The high commissioner had requested additional troops for Palestine. During the night before an attack had been made

upon his executive mansion, and the rebellion was growing. Tomorrow we would begin our journey away from Palestine into the interior of lands populated by people thought by Christians to be heathens, even pagans, or at least enemies of that for which Christianity stands. Had Christianity set such a marvelous example for them to aspire to? Had it succeeded as well as one would imagine from the reading of its literature and its glowing terms of promise, when the birthplace of its idealism and its greatest exponent was steeped in war and bloodshed, and seething with hatred?

Chapter X

ANCIENT PHOENICIA

RACING THROUGH BOWERS of fragrant shrubs, and then suddenly sweeping upward to skim along the crest of rocky slopes overlooking the broad expanse of the Mediterranean, our spirits rose with each turn in the road. Not more than two hours previously we had been in Palestine, but its blue skies had been colored by our feelings, a pall of dejection had hung over us, because of our intimate experiences with its bitter revolution. How can one doubt that we mortals are torn by the strong influences of environment and our mental attitudes? The most dominant factor in life is our attitude toward things and people, our personal interpretations. If we are confident, cheerful and courageous, every obstacle is but another stride to be taken in our progress. The most sordid environment, even the darkest hour becomes but a background by which to contrast our radiant spirits. Let hope and self-assurance ebb, however, and the slightest change in circumstances becomes to us a wave of calamity by which we are completely engulfed. This but proves that the world is impartial. It never intentionally oppresses the individual nor does it favor him. Time either sweeps the individual along with it, or passes him by. The mentally alert, visionary individual is prepared to strike out and swim with the current. He is never content to bewail his lot on the bank, watching life flow by.

The Mediterranean was exceptionally blue, rather of the colored postcard hue, almost unbelievably brilliant. The sunlight seemed to dance upon its glass-like surface. This coast line of ancient Phoenicia, now Syria, was amazingly like that of California. The mountains seemed to plunge into the sea no gradual approach, but an abrupt demarcation, a bold precipice submerging itself in the waters. It was as

if the parched desert far inland had, by a series of undulations, sought to reach the sea and, suddenly coming upon it, one of its crests had slipped beneath the water.

The surrounding terrain was little changed. Nowhere for miles along this coast were evidences of human progress, except for the pavement upon which we traveled. The coastal hills were uncultivated, although spotted with verdure, but, unlike our California Coast range, they were unfenced. Beautiful sandy beaches marked the erosion of the rocky shore by the sea, beaches which in a more commercialized land would have been marred by gaudy concessions. Little harbor-bays were formed by jutting rugged arms of the coast. In these still waters, about 1000 B.C., floated the sturdy, but small craft of the Phoenicians. At that time black-bearded men, who but a few centuries previous had been desert wanderers, nomads, directed the loading of the boats. They carried cargoes of mother-of-pearl inlay furniture, ivory combs, household utensils, gold trinkets, frankincense and other luxuries with which to barter with the peoples of distant countries bordering the shores of the Mediterranean. They were at that time the greatest navigators of the world. They ventured as far West as what is now Spain and carried on an extensive trade with the early Greeks who were greatly influenced by the Phoenician dress and customs. It is said that the early Greeks borrowed their style of costume from the Phoenicians. As they prospered in their trade, they colonized many towns along the coast of the eastern end of the Mediterranean.

Cars were now passing us rather frequently going in the opposite direction. We were approaching Beirut, the principal seaport of Syria, or the state of Lebanon. In a few moments we were slowly moving through the streets of this city, which was quite evidently influenced by Western ideas and practices. The change in the appearance of shop windows from those of Egypt and Palestine, the large paved thoroughfares, elaborate cafes, spacious lawns, even public trams, did not give us the impression of the Western World attempting to invade the East, but rather that it had already arrived, and the East was trying to survive the influence. Originally captured by the British in October, 1908, the country is now a French Mandated territory, but the city of Beirut is exceptionally Americanized because of the great American University now established there, whose faculty members are mainly

from the United States. These instructors brought with them their manner and methods of living, and, with their families, gradually impressed the natives with their superior way of living, to which the natives have taken readily.

Our stay in Beirut was brief, for it was not our immediate destination. We were bound for the inland. Leaving the sea level we began a very steep ascent, winding our way over the high mountains. Lebanon, as this section is known, is renowned for being the site of the once famous cedar trees, by the same name, for centuries used extensively in the building operations of the ancient peoples whose countries bordered the Mediterranean. But one small grove of the great trees still remains and it is preserved as a monument of the past. Centuries before Christ, the Egyptians put out expeditions to this coast to fell the great trees and float them back to the mouth of the Nile, thence up the great river for hundreds of miles. The writer recently had the opportunity of examining thoroughly several sarcophagi (mummy coffins) being installed in the new addition of the Rosicrucian Oriental and Egyptian museum. These sarcophagi date back to approximately 1000 B.C. Each of them was made, as practically all of them were during that time, from planks of cedar brought from Lebanon, centuries ago. Even though they were about thirty centuries old, they were yet in a fair state of preservation. Many of the early fleets that plied the waters of the Mediterranean were built of the cedars of Lebanon. It was a rare wood and much sought after. Toward the South end of the Lebanon mountains, towers Mt. Hermon, reaching a height of 9000 feet. The mountain is frequently mentioned in the Christian Bible by other names. Around its base are to be found the ruins of the Temples of Baal. Generally speaking, Baal is an ancient sun god, but generically speaking, Baal was the Syrio-Phoenician word meaning God. The ancient Sidonians had named this mountain Syron. It is without vegetation of any kind, except a plant life resembling our North American sage brush.

To this point in our travels, our roads had been remarkably well paved and graded. Now, they narrowed and were frequently pitted. The hills were growing brown, as though they needed rain badly. The country was becoming more desolate and it had its effect upon our moods, and our conversation became less frequent. About two

hours after having left Beirut, and having just made a turn on a high mountain pass, we looked down from an altitude of several thousand feet upon a broad plateau stretching into the distance. Far below our road continued, like a gray ribbon stretching for miles across the waste. Toward the horizon a great green patch was visible. Soon we were entering this patch, the outer edge of a fertile area, and the age-old city of Damascus, which is on the fringe of the great Mesopotamian desert. Damascus, 57 miles east of Beirut, has a population of about 188,000; 21,000 of which are Christians and about 160,000 Jews. It is the oldest inhabited city in the world. In the Tel-El-Amarna tablets or letters, the first letters of state in the history of the world, exchanged between Queen Nefertiti and the rulers of her subordinate states or colonies in 1350 B.C., Damascus is mentioned. At that early time, according to translations, it was termed Dimashka. The same name, referring to the same city is found inscribed on the walls of the Temple of Rameses III in Upper Egypt. It was the scene of many wars mentioned in Biblical literature. David had campaigned against it, but without a great deal of success. French troops were garrisoned there as elsewhere in Syria, but were unsuccessful in accomplishing much with Damascus, or any of Syria in fact, because of an antipathy held toward them by the native Syrians. Various political influences, which we will describe later, caused the French much unrest and a regret that they had ever assumed the mandate.

Our first impressive sight after entering this ancient city, was a large cemetery near the city's center, the tombs of which were fashioned like small mosques with their customary domed roofs and spiral minarets. They were so diminutive that I likened them to the ovens one sees used for the manufacturing of tile and brick. Around the whole cemetery was an artistic Byzantine brick wall, the top of which was crenellated. When our car stopped before the principal hostelry which the city afforded, located in a plaza directly across from the depot of a narrow gauge railroad originally built by Germany before World War I, and now used for the transporting of freight from Beirut to Damascus, we were greeted by a now familiar sight. Porters in white linen robes which looked not unlike the old fashioned night gown tied around the middle with a soiled red sash, and wearing Mohammedan tarbooshes, shuffled up and sought our baggage.

We paid little attention to the interior of the hotel, that is, the main foyer, until our return from our rooms above where we had immediately retired to remove some of the grime of travel. Intensely hungry, we sought the dining hall. We were ushered into a spacious interior court. Courts are exceptionally common in these Eastern countries, because they are cool, inviting and traditional. The walls were all white, against which pots of flowers and climbing vines appeared refreshingly cool. The ceiling was constructed of hand-hewn timbers. Between the tops of the walls and the ceiling was a stone grill work which allowed ample ventilation. At either end was a high, narrow window, hardly large enough to permit the passage of a man. They were well shaded and kept out the mid-day heat and glare. Most surprising was the great number of persons that were crowded in this fairly large dining hall. There must have been at least 400 persons seated at long tables somewhat like those one would find in an army or construction camp. Instead of being seated on chairs, they were seated on benches which were a part of the table. Most of the diners were in Western attire, a sack or business suit, and all wore tarbooshes. It is a custom not to remove the tarboosh when indoors, or when dining.

An amusing incident was that all were eating as rapidly as they could, and not a sound of a voice was to be heard. No one was conversing, all intently concentrating upon the consumption of food. It seemed as though they were given a limited time to eat and could not afford to indulge in conversation. It was so different from the leisurely dining of Europe, where eating is an art and a social event as well. We later learned that it is not a custom among the Syrians and the peoples of the Levant to converse when eating, but rather to devote their attention to food first, and then converse at length afterward. I was also surprised to find a hotel so crowded in such an out of the way place as Damascus. Many of the big hostelrys of America and the Western world would have been grateful for such patronage as this hotel was apparently enjoying at this time. If we had seen a similar sight in America, we would have thought a convention was in session. Conventions seemed to be such a Western mode, that we did not entertain the thought in this instance. Upon inquiry, we found that this was a momentous occasion in Syria, and that an election was to be held for the president of Syria. The hotel was more than a mere hostelry, it was used as an administration

building by government officials and political parties, and in fact all of the principal affairs of state were conducted there. As soon as lunch was finished, the guests all crowded into the hallways, lounge and foyer to congregate in groups, gesticulating wildly with their hands, which is customary among a very highly emotional people such as they are.

Suddenly, while we were studying these people, who, although mainly dressed as we were, yet were so different in manner, a hush came over the entire assembly. Everyone stood rigid as though for an inspection and immediately ceased talking. We looked about to see the cause of the sudden suspension of activities and conversation. All eyes were fastened upon a large French doorway that led into the dining hall, from whence we had just come. The doors were thrust open and a dramatic entry was made, in ceremonial fashion, by a person whose very appearance indicated a regal position and birth. He was an Arab prince, we learned. He had traveled several hundred miles from a desert area over which he had dominance, to participate in these conferences and the election. He was in fact a royal nomad, a desert chieftain. He had control and direction over some 15,000 Bedouins. His costume was impressive and picturesque. He wore a heavy silken robe, full at the bottom, and the conventional Bedouin sandals inlaid with sterling silver. His turban was of a brilliant hue and affixed to his head with the argila. Around his girth he wore a twisted silk cord like a cordelier from which hung, on his left side, a beautiful dirk—although highly ornamental it undoubtedly was quite practical. His wearing of such large sun glasses was unusual. Typical of the Bedouin, his hands were quite large and gnarled. His face was long, slender, and with a large aquiline nose characteristic of the Semitic race. He spoke with a soft, vibrant voice and was very graceful in his walk. He had a definite positiveness and self-assurance, and reflected the attitude of one accustomed to respect and obedience to his least command or wish. He had descended from a long line of nobility. In the open desert his word was absolute law. He was the highest court of appeal and made decisions which would shape the course of the lives of those who depended on him.

In this election which was now taking place, he could have easily influenced the thousands who were his followers and subjects to vote as he wished, for either candidate. Looking neither to the right nor

left, he strode out of the hotel toward a waiting carriage, followed by his personal bodyguards, two huge members of his race, dressed like himself, but not having such ornamentation because of their lesser station. In addition to carrying dirks, the bodyguards also wore, crisscrossed over their chests, bandoliers containing large calibre shells, and slung across each of their backs was a modern repeating rifle. Becoming more curious about the situation we determined to learn further facts. Later that evening we made the acquaintance of the British Vice Consul of Damascus, who frequented our hotel because it was the center of local social life, and because the few foreigners or Europeans who visited Damascus for a brief stay, whether on business or pleasure, located there.

France, we learned, was anxious to make Syria profitable to her—to develop it in some way so that it would not become an enormous expense or burden to the home land, as it very evidently now was. She could not, however, gain the confidence and respect of the people of Syria—primarily because of her foreign policies and her refusal to oblige her officials, both military and diplomatic, who were stationed there, to learn the native language. It is related that she considers it beneath French dignity and obliges the natives to learn French, if they wish to transact any business or affairs with her. This attitude caused a resentment which could not be bridged over by any protestations of friendliness. On the other hand, two other interests were seeking control in Syria. Turkey, who during the Ottoman Empire reigned supreme in Syria, as almost everywhere else in the Levant, had her agents constantly fomenting discord and dissatisfaction among the people, agitating against France and urging an overthrow of the French mandate and the return of Syria to Turkish rule. The more intelligent of the Syrians oppose this move. They either recall experiences with Turkey in the past or are very familiar with the history of Syria under Turkish domination, and they desire Syrian independence, a complete Nationalistic government.

One of the two candidates for president was definitely a tool of the French government, and would have been in accord with any move France wished to make. The other candidate was said to be a tool of the Nationalist party that sought complete independence from France. The Nationalist party dared not run one of its own principal

supporters, for France would have definitely prevented the election. The tool of the Nationalist party had to appear to be sympathetic toward France, but as we later learned, was really powerless to speak and act without consulting his supporters.

The president-elect of Syria resided at our hotel, and by a coincidence his quarters were directly across from ours. He was a small man, one who appeared to be more impressed with his own importance than with the welfare of the state. He was an enthusiastic motion picture fan, particularly upon those occasions when the only theatre of the city exhibited news reels in which he appeared. The local cinema was in the same block and only about two doors from the main entrance of the hotel, yet upon his frequent weekly visits to it, a car of state would pull up to the main entrance of the hotel, the president's uniformed military guard of six would stand at attention and present arms, while he entered the car and was driven about 400 feet further down the block. Then the car would stop, the military guard would march up to it, stand at attention, and again present arms while he left the car. At the end of the performance the whole ceremony was repeated. It was like a scene from a comic opera.

It seems as though the citizenry know the status of the situation and more respect and awe were shown for the Bedouin chieftain, and for the principal political supporter of the National party, the power behind the scenes, who used the hotel lobby and foyer for his consultations. This political leader and hero of the National party, who is said to pull the strings that actuate the president, is a very intellectual type—eyes far apart, deep set, visionary, dreamy made dramatic mannerisms.

He had been incarcerated a number of times by the French authorities for inconsequential offenses, mainly, of course, for political reasons. He was the author of a number of books having considerable circulation in Syria and elsewhere, written mainly to reveal the purported oppression of Syria. One often reads of these political fracasés and intrigues, but one very seldom has the opportunity to see them demonstrated and enacted in such intimate quarters as the lobby of a hotel, and so openly disclosed. Syria, politically, has not yet acquired the subtleties or diplomacies of her larger sister nations of the world where the same things occur, but are rather more carefully staged.

Chapter XI

THE OLDEST INHABITED CITY OF THE WORLD

OUR NEXT DAY was spent mainly in making preliminary preparations for Mr. Brower's and my departure for the strange land of Babylonia, known as Iraq or Mesopotamia. The following day was devoted to photographing some of the historic sites of this most historic city of Damascus with our Graphlex still camera. We visited the "Street Called Straight," a very long and actually very straight street, which bisects the city from the Eastern to the Western gate, a street which has been in existence for several centuries. The major portion of this street is covered over with an arched ceiling, forming an arcade in which there are occasional skylights permitting a soft light which penetrates the dust and smoke fumes from the bazaars and shops below. On either side of the narrow street are little shops, most of them mere closets or cubbyholes, niches in the wall, over the entrances of which are suspended striped awnings of vivid hue.

The proprietors are frequently in native costume. Chamber sit on their haunches before their shops, with knees up under the chin—the most uncomfortable posture for a Westerner, or one unaccustomed to it—or they sit upon small stools, the seats of which are of woven fibre, like the stools of antiquity, or strips of leather. As you pass, they pull at your garments or run in front of you trying to block your way in as gracious a manner as they possibly can, endeavoring to have you turn and enter their shops. If they think you are English or American, or if they understand any English whatsoever, they cry "best goods," meaning that their particular bazaar or shop contains the best wares of its kind. The "best goods" cry, of course, is not to be relied upon, for

four or five doors further on another one of these shops, with equal service and wares, can be found.

The city of Damascus has long been noted for its steel. A particular process was used by the early Damascans in making steel which caused it to be renowned among the ancients. Excellent cutlery, knives, swords and dirks, marvelous examples of craftsmanship, may be purchased at ridiculously small prices, if one is accustomed to buying in these bazaars, which means not purchasing at the first price demanded. The Syrians are also noted for their native candy which has a remarkable combination of flavors and is very attractively prepared. If one can overlook the methods of making it, and uncleanness is not too repulsive to him, the candy is very enjoyable. A number of the bazaars specialized in the sale of rugs, hand-woven and having beautiful hues and a variety of design which would delight any lover of Oriental rugs. Although the prices were considerably less than any we had seen previously, these rugs were yet much higher in price than those which we were to see later on.

In the center of the city is a great mosque, originally a Christian church built by Constantine. Around the mosque are the original walls built by the crusaders. They are still in an excellent state of preservation. One enters the great arched gateway, and there before him is an enormous plaza of original flagging. The high wall surrounding it has, on each of its four corners, a minaret tower from which the Meuzzin, a Mohammedan priest, calls the faithful to prayer several times daily with his musical chant. The area within the walls would comprise the equivalent of at least three or four of our modern city blocks or squares. In this area are also two or three small buildings, some partly in ruins, which are now shrines because of some historical significance. The great mosque itself is to the left of the court and runs the full length of it. There are several entrances typical of Byzantine architecture. We were amazed upon entering to find an enormous room without partitions and supported by Byzantine columns or spiral columns, graceful, tall and impressive. These columns supported timbers, upon which the flat stone roof rested. The entire area of this great space which must have been at least 500 feet in length and about 100 feet in width was covered by rare Oriental rugs, not only rare because of excellent material and design, but because they were several centuries

old. One of them was the largest single woven rug I have ever seen. It did not consist of several sewn together. It was one continuous weaving and was nearly 200 feet in length and the complete width of the structure. Although showing considerable wear, it was still in an excellent condition. By a rubbing of the hand over the surface of the rug and brushing the nap back, in a few moments the original colors would return with brilliance. We were informed that a wealthy English nobleman some fifty years ago had offered the Mohammedans of Damascus ten thousand pounds, or about \$50,000.00 for this rug and the Mohammedans were quite offended, because no price would be accepted for such a rug, having been so long in such a sacred place.

Toward one end of this great room were four wooden shafts, like posts, reaching to the roof from the stone floor. Around these shafts which were set about eight feet apart, forming an eight foot square, was an Arabian grillwork of wood, through which one could look. The floor of the center was a mosaic, the colors were a delicate pastel shade, and the design consisted of flowers, vines, and clusters of grapes. On the center of this mosaic floor sat a small gold chest, about two feet in length, one foot wide, and about eighteen inches high, apparently of hand-beaten gold. Our curiosity was naturally aroused by the special prominence given this chest and we engaged one of the Moslems in conversation. Speaking fair English he advised us that the chest was supposed to contain the head of St. John, the Baptist, and beneath the mosaic floor was the tomb of St. John, the Baptist. It may seem strange to many Christians to know that St. John the Baptist, as an individual, is venerated by these Moslems as well as by the Christians, not because he was a Christian but because he was a holy man to them because of his deeds, and the accomplishments of his life were highly respected by the Mohammedans. No one has ever opened this chest, according to historians, to determine whether or not it does contain a skull which might be in some way identified with St. John, the Baptist. Whether or not St. John, the Baptist's remains are beneath the mosaic floor no one knows, but history does recount the legend that St. John the Baptist was entombed there.

Our journey carried us through a number of little winding cobblestone streets, all filled with small bazaars and shops, and containing a jostling crowd of jabbering citizens, who turned to stare at

us. Foreigners, particularly Europeans and Americans, do not frequent Damascus since it is far off the popular tourist track. Those few who do come do not go into the native quarters, as we were doing. We finally stopped before a large wall, more rightly the side of a building. It was covered with a white stucco, badly soiled and which had broken away in part, exposing mud brick behind it, with an occasional natural stone protruding. We walked to the entrance way which consisted of two large wooden doors, planks hung on crude hinges, suggesting no evidence of the beauty and quaint interior we were to see.

When the doors were opened, we unconsciously gave vent to words and phrases that indicated our pleasure at what we saw. Before us was one of the most attractive gardens I have ever had the pleasure of viewing. It was not as elaborate or as expansive as many of the spacious lawns and gardens which we find in America or England—in fact, it was rather small, but it was as though we were looking at an old Persian print, or as though there had materialized before us, a scene out of the Arabian Nights. Here was a true Persian Garden, such as fabled in song and story. In the center was a mosaic pool. The artistic design consisted of Arabic characters and geometric symbols. The center of the pool had a bubbling fountain. In its center were lotus and water lilies and water plants with which we were not familiar. The flagging which was uneven in the courtyard was of a variety of stones of beautiful natural colors, some a light shade of blue, some terra cotta, some slate, some almost as black and shiny as onyx. About the flagging were large vases, terra cotta, evidently hand-made, because they were not of uniform shape or size, and did not sit level on the flooring. Some of them showed indentations, traces of the potter's fingerprints, and in these vases there were growing shrubs and flowers of brilliant hues, and vines which climbed the walls and high windows.

Toward one end of this patio—or more properly Persian garden, and of which we were to see many in the near future—was an arched walk. Stepping up onto the walk and walking its extreme length, we entered another doorway into a very small, but high chamber, which housed a huge sarcophagus which was quite plain, without color or design. In fact, the tomb chamber itself was without any ornamentation, without any splendor of any sort, and yet it contained the remains of one of the most famous characters in history and the most beloved by

the Mohammedans. It was the tomb of Saladin who lived between 1158 and 1193, A.D. and who died in this city of Damascus. He was a great military lord and defender of the Moslem faith and renowned for his opposition to the crusaders. Although fierce in warfare, in actual combat, he was noted not only for his bravery, but for his kindness to prisoners, to the men, women and children whom he captured, and for his high idealism. His word was his bond and he countenanced no lies or treachery. He despised the breaking of promises which was common among many of the crusader leaders, who would resort to any means to accomplish their end in the name of Christianity.

Our party was to be further divided in Damascus. Frater and Soror Shibley had remained in Jerusalem, Frater Brower and I were to take our elaborate cinema camera equipment and photographic apparatus and paraphernalia with us further East on our venture across the Mesopotamian desert. Soror Gladys Lewis was to remain in Damascus, awaiting our return some ten days later. Damascus was hardly the place to leave an unescorted American or European woman. Even native Syrian women were infrequently seen out of doors, or in public places, except when escorted by their husbands or some male member of their immediate families. On such occasions they were veiled. American and European women are accustomed to greater freedom and dislike being confined, and yet it would be obviously dangerous to go about these bazaars and the native district, and even the main thoroughfares, without an escort. Soror Lewis, however, insisted that we proceed as scheduled, so we prepared for our departure, and one of the most exciting adventures we were to experience on our entire journey. We retired early that night, as we were to leave at sunrise the next morning.

Chapter XII

CROSSING THE MESOPOTAMIAN DESERT

THE HOUR WAS early, the sun already uncomfortably warm, and the streets filling with garrulous Arabs, when a motor bus rumbled up. This was to be our mode of transportation to distant Baghdad, the glamorous city of Arabian Night's fame. Upon a first examination, it was a typical motor coach, such as one sees racing along the modern high ways of the larger nations of the world. This symbol of the Twentieth Century dampened our spirit of adventure for the moment, and jarred the mental picture which we had of ourselves reliving the experiences of ancient travelers to Baghdad. A motor coach does not complement a Marco Polo mood. Frater Brower called my attention to the exceptionally large wheels of the coach—over four feet in height, and having tires with a peculiar lateral tread which I had never seen before. We conjectured that they were designed to afford traction in the soft sands we expected to encounter.

After securing our seats and supervising the careful loading of our camera equipment, still having a few moments before departure, we carried our examination further. The windows, we now observed, were smaller than the conventional ones of other buses. Surprising was the fact that they were hermetically sealed, and we were to travel in desert heat—not a pleasant thought. Small louvers, above each window, afforded the only ventilation when the car was in motion. The driver and his relief assistant had not entered, so we took the opportunity of inspecting the driving and control panel. Just above the panel, and on a line with an aperture in the windshield, now closed, was a metal turnbuckle, mounted on a swivel and ratchet, much after the kind used

as a machine gun mounting in the cockpits of military aircraft. This was ominous and we looked at each other significantly. The thought had passed through my mind that perhaps this journey would not be so uneventful after all.

We retired to our fairly comfortable, individual reclining seats upon the entrance of the drivers. The drivers now received our attention. Both were obviously English. Not only was this apparent from their accent, but from their fair complexions, by contrast with the dark-skinned Syrians and Bedouins of Damascus. They were dressed in khaki shirts and shorts, exposing bare knees above woolen socks, a customary tropical attire for the British, but one which the American never quite seems to get accustomed to. They were tall, about thirty-five years of age, robust and deeply tanned, with eyes that squinted—the result of a continuous attempt to keep out the glare of the desert sun. Traveling slowly to avoid striking indifferent children and animals that straggled down the center of the twisted streets, we headed toward the desert.

Nairne, an Englishman, so we had learned, had left the comforts and conveniences of his home land to promote this modern transportation in a land whose history dates back to the earliest civilizations. He had become particularly impressed with the American advance in the automotive industry and had used American-built motor coaches exclusively. This coach was built in Philadelphia, Pennsylvania, from his own specifications. He had been advised that attempting to operate a passenger line across this desert would be risking human lives as well as property. Marauding bands of Arabs and Bedouins would pilfer and lay to waste each caravan. He made the attempt, it is said, and found the predictions true. Unable to secure adequate protection, it was reputed, he was compelled to pay tribute to certain Bedouin chieftains who in some “mysterious” manner influenced the marauders to give his drivers and property immunity to attack and seizure.

For the last few minutes we had been whisking through the outskirts of this ancient oasis-like city. Suddenly our speed was so quickly checked that the momentum carried us forward in our seats. Looking ahead for the cause, we saw the pavements end. Here was no graded road or winding ruts stretching out toward the horizon, but a vast expanse of hard, table surface, giving little indication, even at this close

proximity to the city, of any vehicular travel. We craned our necks, looking out of either side of the coach. There was no telltale mark of our destination or direction. In a moment we were again traveling, attaining a speed of about forty miles an hour over this open desert, heading due East—but where was the road? There were no sign posts or even tire tracks. The driver caused the coach to weave from side to side occasionally, to avoid depressions in the surface. The riding was not uncomfortable—in fact, more comfortable than over some of the pitted streets of Damascus. Our curiosity was great, but the timidity of revealing our inexperience with this sort of travel kept us from questioning the driver at first—this, and the fact that his relief assistant had reclined his chair and from all appearances was sleeping.

Turning, we looked over our fellow passengers with the intent of questioning one of them. Six other men shared the bus with us—four seemed to be Syrians or possibly Arabs or Iraqians. Their faces were immobile. All were looking across the wastes buried in abstraction. The other two men were Europeans. They were, in fact, Englishmen. One, we learned later, was an army officer returning from leave to a post near Baghdad, and was not a very sociable chap, compared to British officers we had met in Palestine. The other young man, in his twenties, was bound for the Wells of a British Petroleum Company, East of Baghdad. He had made this journey before, and from him came the answers to our questions. We were “navigating” our way across this desert. The driver was guiding the car by compass as a mariner does a ship at sea. These motor caravans, then, were truly ships of the desert.

The Mesopotamian desert at this point was some six hundred miles wide. Unlike our deserts of North America, it was absolutely barren. No cacti, sagebrush, or even birds or reptiles were visible. Except for an occasional swell it was as level as if graded by man. The surface was so hard that walking hardly made the impression of footprints. Unlike the Sahara, here there were no sand dunes. As the great car rolled along, now traveling nearly a mile a minute, it caused a fine dust to swirl around the windows and we were thankful that they were sealed. Small, almost perfectly round gravel, as though shaped by hand, was scattered on the desert floor. The striking of this gravel by the fast revolving wheels caused the pieces to ricochet against the heavy window cracks.

Just as the sameness of the scene began to become monotonous

and the steady hum of the motor lulled us into drowsiness, we saw what looked to us like little dots in the distance, slowly bobbing up and down. Three or four minutes later and we were approaching them. It was the first of many camel caravans which we were to see on this journey. Walking in single file, with their peculiar, forward lurching gait, were a dozen giant dromedary camels. To us they were enormous, in comparison with the riding camels we had seen and used in Egypt. These were pack camels, far larger and much stronger. Lashed to their backs and suspended on either side, swayed their great cargo packs, done in huge bales. Dangling from the lead camel was a hand-hammered brass bell, having a clear and more melodious note than our cow bells. Immediately preceding the lead camel on a fast-trotting burro, which appeared exceptionally diminutive in contrast to the size of the camels, rode the leader of the caravan, a heavily black-bearded Arab. On one side of the line of camels rode three of his companions, also astride patient little burros.

They were following the ancient caravan trail that had led for centuries from Damascus to Baghdad, thence to Persia and Arabia. Even today, nearly all of the freight between these cities and countries is still transported via camel caravan in the same manner as in antiquity. Camels, although considerably slower than motor trucks, are far more economical and dependable on the desert. In this great open space there are no service stations or repair shops, and the hauling of fuel is a considerable item. The camels require little food, as well as water, for their journey. The products of the Western world are being carried in this primitive manner to the East in exchange for the things in which the cryptic East still excels. Each night, the cumbersome burdens are removed from the camel's backs and stacked in a large pile. The camels are sometimes tethered. Drivers pitch low tents of goat skins into which they crawl to sleep on crudely-made, but richly designed hand-woven rugs. As soon as the sun drops beneath the horizon, the desert begins to cool, and late at night the temperature drop is considerable. Bedouin encampments can be detected by flickering camp fires. To approach them unannounced in the dark would mean death, for during the long hours of the night, some keen eyes are keeping vigil and steady hands grasp high calibered rifles. Even today, as in the centuries past, the law of the desert is mainly an individual interpretation of what is right, and

might still rules.

An unusually sharp veering of the bus from its course caused us to look ahead, and on the horizon straight before us was a dark cloud, rising from the floor of the desert to a great height and moving with rapidity in the direction we had been traveling. We were now going at nearly right-angles to our previous course. The driver, whom we had finally engaged in conversation, knowing our interest, said laconically, "Dust clouds."

"Can we avoid them?" we asked.

"These we can, we will drive around them, but it will put us about ten miles out of our way," he replied. Here, then, was an advantage in not being obliged to travel a road or definite course. We could cruise at will, in any direction, without thought of roadway or embankment. "When we are caught in these storms, we are sometimes forced to wait for a relief caravan to aid us. The dust, despite our precautions, chokes our motor," the driver further volunteered.

For the first time, the thought of food entered our minds. I glanced at my watch, and it was nearly noon. We were not due in Baghdad, if on schedule, until tomorrow morning. Certainly food must be provided some way. How foolish not to have thought of it before. Suppose, I thought, we had been expected to bring our own. Mentally, I was reproaching myself when the bus came to a stop. The relief driver stretched, and then, standing in a stooped position facing us, said, "We will eat here." Frater Brower and I looked at each other, and in unison looked out of the windows at the glaring desert, white with the noon day sun, the heat radiations visibly rising, no habitation, no sign of life, no shelter, no water. Where were we going to eat? Why stop here.

We were soon to learn. Lifting a trap in the door of the driver's compartment, the assistant removed a number of cardboard containers, like the commercial size workman's lunch boxes. In fact, they were specially packed, individual lunches. This, and exceedingly cold water from a refrigerator tank, constituted our noon repast. When the car was not in motion, the heat became intense, as very little air entered through the louvers. We stepped out, but the sun's direct rays made the comparative cool of the car's shade welcome. We were about to climb aboard again when we heard the distant sound of a motor.

Coming from the North, still several miles distant, was a dark spot. A few moments later an open, specially built automobile came to a stop a few feet from us. It was evidently very high powered, and was armored with light steel plates. In what would be the tonneau of an ordinary car, was mounted a light cannon for firing one pound shells. Attached to a steel plate on the back of the driver's seat, was a heavy-calibre machine gun.

Solemnly the three occupants got out and approached the bus. Through the white dust that covered them, we recognized that they wore the French regulation army uniform. They also wore the French Legion cap which has a heavy cloth fastened to it that drapes down over the nape of the neck and sides of the face. Removing their goggles which made them appear grotesque—for the area around their eyes was the only portion of their faces which appeared white—they looked at each of us, then peered into the bus windows and under the coach. Without a word or further ceremony they climbed aboard their car and roared away toward the South in a cloud of dust. They were certainly symbols of the silence of the desert. Our driver explained that they were members of the French Desert Patrol. Seeing our bus stopped, and believing that it might be attacked, or in some trouble, they came to investigate. Seeing no difficulty, they did not find it necessary to converse. This desert patrol is to a great extent ineffectual, because there are an insufficient number of these armored cars to patrol the vast area, and travelers can be attacked, robbed and murdered, and hours, even days, pass before their remains are located.

We had been riding for hours, passing only an occasional camel caravan. As it grew dusk, we saw lights far ahead. "A town," I said to Frater Brower. "Can't be," he said. His clipped sentence reminded me of the disinclination of anyone aboard the bus to converse freely. Nothing between here and Baghdad, he continued. It was not really a town we came to, but a great desert fortress, a frontier post manned by French officers and Singhalese troops. This mud-brick, one-story building, with high walls and corner watch-towers surrounding it, was known as Rutba-Wells. Here in this sea of sand, was the only well of drinking water for miles around. The water had produced no natural oasis, but the white man had created one. To make the water available to caravans and the nomads of the desert, and to prevent marauders

from seizing or despoiling it, the French had built this fortress. It was really a garrison in the middle of the desert. The water made it possible for French troops—before the advent of the motor car or plane, which could now bring military relief quickly—to hold out against a siege for many days. Completely surrounding the fortress, whose white walls glistened in the sun, were barbed wire entanglements, the only entrance through them being a narrow path to the heavily barricaded gates.

Sentries peered down at us from the corner towers in which we could also see menacing rapid-fire guns. Behind the parapet of the walls within the gates was a cat-walk, on which troops could stand and fire through apertures if the fortress were attacked. In the center of the enclosure was a radio short-wave antenna mast, the only means of dependable communication the outside world. Outside of the barbed wire were sprinkled the black-skinned, crude tents of the desert wanderers. They were allowed to stay as long as they desired, but were permitted to enter the enclosure only to fill their earthen vessels from the single well. An armed sentry always accompanied them, and waited while they pumped the water into jug or vase. We were besieged by the vain sentries when they saw our photography equipment. We were about to photograph one, when the corporal of the guard came forward and abruptly shoved away our subject and posed himself. It was his photograph which we finally took. Within the cool walls of the officer's dining quarters, we enjoyed a meal which would have done credit to prominent American hostelryes. The prices were exorbitant, but, considering the circumstances, we offered no complaint.

Nowhere do stillness and quiet enchant, as in a desert night under a full moon. The car swept along with a steady drone of which we finally became no longer conscious. The floor of the desert was bathed in moonlight which looked surprisingly like a blanket of snow. The stars were so bright that many had auras which enveloped each other to cause the sky to shine with irregular, luminous patches. We had left Rutba-Wells several hours ago and would in a short while reach the Euphrates, one of the great twin rivers. More than alluvian soil had been swept along the Euphrates and its sister river, the Tigris. Barques of many nations had sailed down these rivers. Races had died by their sides; civilizations had lifted their proud heads from the black mud

that was regurgitated on the surrounding plain. Like two great arms these rivers had entwined and held humanity in a protective embrace for centuries. Here, according to many archaeologists and historians, was the cradle of civilization, the site of the original Garden of Eden. The plain between the Tigris and Euphrates River, formed by the alluvian soil brought down from the North, forms the South end of a great fertile crescent, which fringes the deserts. The greatest distance between the two rivers hardly exceeds forty miles.

It was not until about two thousand years B.C. that this plain received the name Babylonia. Before, it was known as the Plain of Shinar. In the dim past, no one knows just when, persons of the great white race of the highlands, far to the North, came Southward and followed these rivers to their outlet at the mouth. Perhaps they were driven Southward by the descending glaciers that swept all life before them. These peoples we call the Sumerians and they were not of the Semitic race. They were even thought by some to antedate the earliest Egyptians. Gradually they crept North again, along the banks of these twin rivers, building thriving towns and developing the land in between into a great and thriving agricultural center.

We had now crossed the Euphrates. It was dawn, and we were encouraged that we were ahead of our schedule, for we had encountered no severe dust storms. The distance between here and Baghdad was but twenty-five miles. The Tigris and Euphrates veered sharply toward each other from this point Southward. The desert was now intermittently broken by spots of green, where irrigation canals brought the life-giving water to the parched soil. Soon we began to bounce through ruts which followed the contour of a road, and to see straggling riders on burros and camels. Baghdad was now a matter of minutes away. It is the foremost city of Mesopotamia, which name means, it is said, oil. The present population is in excess of 250,000. The city is also now the capital of Iraq which is said to be the old name of this land, and which was restored to it after the recent world war. The ruts now gave way to a fairly well graded, but unpaved road. We came to a stop at a one-story, white stucco building around which stood a number of persons dressed in Western attire. This was the end of our present desert journey. "Baghdad?" I inquired of the driver.

"No," he replied, "the military airport and customs." We cleared the

customs remarkably soon. Our unusual amount of camera equipment aroused considerable curiosity, but no official protest. Negotiating the rental of a small, private car of American make, we proceeded with a native driver to Baghdad, a quarter of a mile distant. Suddenly, we came upon the wide expanse of the historical Tigris River. Murky brown and fast-moving, it was a welcome sight after the long hours of the desert, especially since its shores were fringed with brilliant, refreshing green vegetation, a relief to our eyes.

Chapter XIII

THE CITY OF THE ARABIAN NIGHTS

BEFORE US, STRETCHING across this historical Tigris river and joined together at their ends, was a parallel line of pontoons, floating inflated metal tubes. Heavy planks were fastened across them horizontally. This was a pontoon bridge which Americans or Europeans never see, except during military campaigns or in times of emergency. Across it, in both directions, flowed a stream of humanity. As our car entered upon the first unit of it, the bridge sank deeply into the water, but did not submerge and easily held the weight. As the car ran upon the next section, the preceding one we had left rose again. It caused a peculiar bobbing motion, which agitated the river's surface and sent out a backwash or current on either side. Looking down and up stream, we saw, at about quarter-mile intervals, three other similar bridges. These bridges, the only ones of any kind in existence there, were put down by the British during the last World War for the movement of their troops and armament across the large river. In their campaign against the Turks, Great Britain lost a great number of men within the vicinity of Baghdad, but was eventually successful. These pontoon bridges were very crude, and very old, but far superior to the ancient ferry methods, and were now maintained by the Iraqi government.

Ahead of us, on the East bank, lay Baghdad, a strange skyline indeed. The structures were of no particular design; they were not definitely Oriental, Byzantine, Moorish, or European, but a sort of abortion—as though they were going through a transition of Eastern architecture into Western. The hotels, so-called, had strange and crude

balconies superimposed, which hung, so it seemed to us, precariously over the banks of the river. Most of the structures were very low, shanty-like, and sprawling, without any particular design, and even at this distance suggested neglect and perhaps filth. Originally, Baghdad lay entirely on the Eastern bank of the river, but for the past thousand years it has been partly on the East and partly on the West. A traveler who visited it in 1583, said of it, "A town not very great, but very populous, of great traffic between Persia, Turkey and Arabia." Time has not changed this. Baghdad is the gateway for caravans to Persia, the border of which is but a few miles distant. Southward lies Arabia and northward, Turkey. In the Eighth Century it was purely an Arab town; in the Ninth Century it had reached the height of its power under an enlightened Caliphate, and was a center of power and learning. It was rich in silks and tile buildings, and it was of the Baghdad of the Ninth Century that the glamorous tales of the Arabian Nights were written. Its downfall came about 1258 when Hulaku and his Mongols swarmed over it and ruined the network of magnificent irrigation canals which had converted the parched land around it into a rich and fertile plain. In the Fifteenth Century it succumbed to Turkish invasion. The nearby little village, Hilla, preserves more of the original, truly Oriental nature of the ancient city than does Baghdad, which is a hodge-podge of influences, the result of numerous conquests and migrations.

Perhaps one of the most impressive things to see in Baghdad is what is known as a Caravanserai, which operates in the form of a bank, and in which money customs and trade are carried on in the same manner as they have been for centuries. To visit one of these places is to be transplanted backward, in point of time, for centuries. On the outside it is just another mud-brick building, substantial, somewhat resembling our large warehouses in America. When you enter it takes you a moment or two to get adjusted to the darkness inside, in contrast to the glaring light from which you entered. There before you is a great area—no partitions or rooms, just high posts, at intervals of a few feet around the wall, which support a mezzanine floor about half the height of the entire building. In this great area before you are piled bales, wrapped in skins of animals, or in what looks like coarse burlap. A pungent odor prevails, a mingling of pleasant spices and not-too-pleasant smells. Up above on the mezzanine floor are little dingy

booths—we might term them “offices”—in which banking operations are carried on, using the same primitive methods of several centuries ago.

These men are financiers, and they loan money for the organization of caravans to go to distant lands—perhaps Persia or Arabia—there to purchase, as cheaply as possible, and bring back such cargoes as they feel can be sold to the best advantage. When the cargo is returned, it is brought into this huge building and sold to the highest bidder. From the receipts, the banker or financier takes his principal and his interest, if there is sufficient to meet both; and the caravan organizer receives what is left, if any. If he is fortunate, he makes a substantial profit; if unfortunate, he not only makes no profit but finds himself still indebted to these financiers, most of whom are Persians. Here one sees trade and barter and business undisturbed by the modern methods of the Western world.

With the exception of Rashid Street, which is the main thoroughfare of Baghdad, the majority of the streets are very narrow, alley-like, dark, unclean, swarming with flies attracted by refuse which is permitted to lie until it becomes putrid. Again one is attracted by the great number of natives with infected eyes—men, women, and children. A clear, normal pair of eyes is an unusual sight, strange as it may seem. The lack of sanitation and hygiene causes this infection of the eyes in early childhood. Having a superstitious fear of medical treatment, they avoid physicians, of which there are only a few anyway. We noticed a number of these natives with a painted red circle around the infected eye. We were informed that some few who had received medical treatment had applied to their eyes some medicine which colored the skin temporarily with a red hue, and because it gave them relief, they attributed to the red some efficacy; and thus they used a red ink of their own making to paint around the eyes, believing the color itself, rather than the ingredients, to be remedial.

No attempt was made in any of the native markets to keep the food clean or to protect it from filth. Hawksters sold their bread and cakes from curbs, stacking them on the walks and peddling them with their filthy hands.

The craftsmanship of these people, however, is remarkable and is extremely educational to watch; especially is this so in the copper bazaar. This bazaar is really like a street covered with an arched roof. It is divided into little pens. In each of these little pens, or booths, some craftsman sets up his shop in which he manufactures his wares. All of the wares in this bazaar or street are made of copper. Here one finds magnificent copper samovars, copper teakettles, basins and bowls, ornaments and candlesticks. Walking down this alley-street, one can see copper being fashioned in every form and see it in different stages of manufacture. Back against the wall, in the darkness of the booth, at midday—which is ordinarily extremely hot even in the open—are little boys, not more than eight or nine years of age, who are earning their apprenticeship by pumping the bellows of charcoal fires to keep tools hot or to heat copper plate. One can hardly see them for the smoke and metal fumes which, even where we stood, caused us to turn our heads away so as not to inhale them and irritate our throats. We can understand when we see this why so many of these people die of consumption early in life. It is remarkable that anyone survives these conditions to reach manhood.

They are a jolly lot, good-natured, curious about Westerners. Very few tourists ever reach Baghdad; it has not quite the atmosphere for the one who likes his tennis courts, swimming pools, afternoon tea, drives, cocktail hours, and a few holes of golf. These things do not go with Baghdad; here is the East un-veneered. If one accepts a drink, either water or a local concoction—sweet, brightly colored—he is taking his life in his hands, for the Westerner's system is not immune to the things which the natives survive. In the hotels—that is, the two where Occidentals stop when they do visit Baghdad—the water is purified through a special process. To drink any other water is risking one's life in no uncertain way.

In Baghdad there is also one of the largest leprosy hospitals of the Near East; the contributing conditions we saw about us at every step. And yet there are some inspiring sights as well. To Miss Gertrude Bell must go credit for establishing in the Near East one of the first museums for the collection of the antiquities of this ancient land. An attractive building, unusually clean, houses her marvelous collection. The palace of the late king of Iraq is also an unusual place to visit, as it

is now a state museum, and is so simple in contrast to what one imagines the ancient caliphs had. Most of the exhibits, unfortunately, consist of just his own personal belongings—his riding habit, the costumes he wore on different state occasions and little personal trinkets given to him as gifts by the Shah of Persia, Sultans of Turkey, and some of the Kings of Europe.

On the Western edge of Baghdad lies the great race track. Here, each year in the fall, are races in which the horses are entered by Bedouins, Chieftains, Khurds, and Persians. It is purely sport with them, and is not the commercial venture that racing is in the Western world. The finest blooded Arabian stock is entered, and buyers and breeders of horses from all over the world come to this annual series of races to bid for the winner for breeding purposes. As the racing was to begin about a week after we were to take our departure from Baghdad, several were already training their horses on the track, and we marveled at the speed, grace and beauty of these rather small horses.

After having taken a number of still photographs of unusual places and scenes in Baghdad, we entered a small doorway on Rashid Street and found in the dim interior the most magnificent display of Persian and Arabian rugs we had ever seen. There was no attempt at ostentation; the rugs were piled high over the floors and fastened on pegs around the walls. A brass, hand-hammered, ancient oil lamp was the only means of illumination. The rugs were covered with dust, yet were in excellent condition. Pricing a large rug of beautiful design, I was surprised to learn that all the rugs were thirty-five years or older. More surprising still were the unbelievably cheap prices. The large rug before me cost but \$20.00, and in America, England, or Canada it would have brought easily twenty-five times that price. Seeing that I was interested, the gracious proprietor drew the rug out through a little passageway, we suddenly came out on another of the splendid little gardens which are in back of the home of each fairly prosperous merchant in Baghdad. No matter how dark, how filthy, or how squalid his place of business or his living quarters, if he can at all afford it you will find in back of them a gem of a little Persian garden—mosaic tiling, running water, fountain, and an artistic array of green shrubbery, open to the blue sky above.

Clapping his hands in Eastern fashion, he summoned his assistants and ordered them in Arabic to clean the rug, spraying it out on the rug. This they did by filling their mouths with water from a pail, and then spraying it out on the rug. Then, taking their hands, they rubbed the nap vigorously, which brought back the brilliance of the colors. The rugs were all made from camel's hair, and in broken English he explained that most of these rugs are not made by factories or any place organized for the commercial production of rugs, but are a pastime and a family or tribal industry. The rugs are brought in by the Bedouins, or desert wanderers, two or three at a time, and for these they receive a paltry sum. This merchant exported his rugs to various parts of the world where they would sell at fabulous prices.

By this time we had visited a number of mosques, but no mosque was more splendid, more lavish, more like a jewel set in squalor, than the Gold Mosque of Kadhimain. The towers and minarets, and the central dome itself, were all of pure gold and fascinated the impoverished natives—a symbol of wealth and riches surrounded by poverty, disease, and filth. It was something, however, to lift the thoughts of the people from their circumstances—to give them some appreciation of the beautiful and the sublime, something they could not bring into their own lives, something that could not exist in their homes. We stood and listened to the intriguing wail and prayer of the muezzin (the Mohammedan priest). It was with extreme difficulty that we were able to take cinematographic pictures of this mosque, as one must avoid offending the religious principles of these people.

At night the scene changes. Peaceful side streets have lurking assassins in them. A person who dares to venture down them unarmed will be slain and robbed. The Iraqi police force, efficient in many ways, is incapable of policing the entire area. The people are mostly barbarians, and seem strangely attired even when they do wear Western clothes. The Bedouins who bring cargoes across the desert, or who came to trade with the city dwellers, enter the city nightly for entertainment, and they visit the native cabarets or cafes in which dancers go through sensuous gyrations which, in addition to the native liquor, help intoxicate their senses. The Bedouins are powerfully built men, all of six feet or more in height, large boned; typical of their racial characteristics they have large aquiline noses, big, bony hands and large

feet. Ordinarily they are mild mannered and extremely generous, but temperamental and easily offended. Frater Brower and I visited a native eating place one noon and were the only Westerners present; had we known this, we would not have entered. All the rest were Bedouins attired in flowing robes, sandals, armed with dirks. Looking us over curiously, they immediately came forward, proffered us cigarettes and cups of Arabian coffee which one must acquire a habit for over a long period of time; and since I had not been in Baghdad that length of time, I could not become accustomed to the molasses-like substance and quinine-like taste.

Another unforgettable scene is the river with its strange modes of transportation. Very few motor craft are seen—mostly barges that are moved by long skiffs or poles. The strangest boat of all seen anywhere in the world is the gufah. It is a sewing-basket-like boat, about six feet in diameter, and woven of a river reed; being perfectly circular it has neither bow nor stern. It is guided by a pole, and it is indeed an amusing sight to see these baskets floating downstream, loaded with cargo and with their one-man crew. These strange boats have navigated the Tigris River for centuries. Herodotus, ancient historian, in his accounts of his travels through Babylonia, mentions these gufah boats and explains how the natives far North of Baghdad make these boats, put on board their wares and a burro, and sail downstream with them for miles to market; there they sell their wares, break up the boat, sell it as firewood, and ride home again on the burro.

Burros are not common in Baghdad, and neither are trucks. *Human beings are the cargo bearers.* Here we see coolies for the first time in the East—white men staggering along under unbelievable burdens, enormous timbers which must weigh at least 300 pounds or more. These men will carry anything that it is humanly possible to carry, and for a few cents a mile they carry coal, iron, or cans of petroleum. The muscles of their legs and backs are abnormally developed, and unless they cease their activities of carrying these tremendous weights day in and day out early in life, they soon die. Most of them become afflicted with varicose veins, the result of over development of the muscles and the consequent causing of an exceptional flow of blood through the arteries.

It is pitiful to see a human being competing with animals as burden bearers. You can hire a human being to carry cargo—furniture, case goods, anything—cheaper than you could possibly hire either a camel or a burro for short hauls in and around the city. They live on rice and water—unclean water. Their income hardly exceeds thirty-five or forty cents a week if they work steadily; and yet they seem much more intelligent than peoples we had seen in other lands. They do not have the vacuous look in their eyes—that hopeless, despairing look. They are bright and cheerful. Their fathers and grandfathers before them have carried loads as they do. A steady stream of them cross pontoon bridges from one bank of the river to the other, like ants, carrying for a mile or more what an ordinary man could hardly lift.

But Baghdad was not our final destination in this country. We were to go Southeast to Babylon—the *Babylon of Biblical times*—the Babylon of history. It was with enthusiasm and expectancy that we prepared for our next adventure. We found it difficult to secure porters to accompany us. Always enthusiastic, hoping to earn some extra money, until they learned that our destination was Babylon; they offered then excuses that seemed strange to us—no, they did not wish to go to Babylon. We tried to draw out of them “why.” We would pay them well; it was not a great journey; our equipment was not unusually heavy. They avoided making any explanation—and would look at each other as we urged them, with a knowing, furtive glance that was not only annoying but uncanny. If we showed irritation at their reluctance to aid us, they hastened to suggest someone else who—perhaps—would go instead. Their conduct heightened an emotional state I was experiencing, which, so far, I had carefully concealed from my companion, because if it had become visible. I would not have been able to explain it. For the last twenty-four hours, in fact, since crossing the Mesopotamian Desert, I was conscious that I was suppressing an intense excitement that kept my celiac plexus in constant agitation. I had endeavored to analyze these strange feelings and physical discomforts I was undergoing. It was not fear—for what had I to fear? It was not exuberance, for there was no reason to anticipate that this next episode in our adventures and travels would be more thrilling than what had gone before—yet the sense of excitement and agitation was peculiarly familiar to me. The sensations were like those I had often experienced when returning

after an absence of several months at school to rejoin my parents. The gripping in the region of the solar plexus and the quickening of the pulse were also like the sensations I had often had when anticipating, at any moment, the presence of a deeply loved personality, or again seeing a scene of which I was very fond, or about which I had pleasant memories. It was with difficulty that I controlled my speech, so as not to reveal these feelings. Something, somewhere in this environment or in the thought of our forthcoming journey, was stimulating and arousing to great intensity the psychic centers of my being—I was not conscious of the reason for it or the source of it—at least not at this time.

Chapter XIV

AMID THE DUST OF THE AGES

THE PAVEMENT HAD ended nearly an hour ago. Baghdad was no longer in sight. Riding, even though in a modern car, was an exertion rather than a pleasure, and we were thrown violently from one side to another as the car attempted to negotiate the ruts that served as a road. The actual distance from Baghdad to the ancient site of Babylon is but sixty miles, but it requires nearly three hours to make the journey. Though it was only 10:00 A.M. the sun had already become uncomfortably warm, and the powder-like dust of the plain over which we traveled, churned by the wheels of the car, choked and irritated our throats and eyes. We had left the Tigris River and were heading westward toward its twin, the Euphrates, on whose banks the city of Babylon was originally located. With the waters of the Tigris we left behind us all vegetation, all vestiges of life, even color. Before us was a flat terrain covered everywhere with the whitish dust. It was, strange to say, not desert-like in appearance, not like a land that had always been barren, but like a place that had been laid to waste. I thought of it as some vigorous being that had been trapped and, after life had ebbed from its form, had gradually crumbled until its impalpable parts, flung free, had settled down on all things around.

In my imagination I visualized that a deluge of water here would cause not only a cohesion of these dust particles, but a magical reassembly and restoration of the magnificent forms that once composed the civilization of this region.

The stillness, when we stopped for a few moments, was appalling and hung heavily about us. We felt as though we were shut within a

glass sphere which the slightest sound might shatter, permitting the inrush of strange cries, freakish laughter, and the wails of the millions who had lived and died here centuries ago. Ominous as the quiet was, we contributed to it by not speaking, because the human voice sounded unnatural, even hideous, like a cry from the depths of a cavern.

I was not unmindful of the predictions of the Hebrew prophets taken into captivity by Nebuchadnezzar when he destroyed Jerusalem in 586 B.C. that the splendor and glory of Babylon would so crumble that future man, looking at its utter desolation and ruin, would marvel that such a place could have ever been a site of power and beauty. It truly was as though that land had been visited by the wrath of a god. We were not alone in our feelings, for our native porter and driver was strangely quiet as well. He seemed to have a reluctance to reach our destination quickly, and even when the roadway permitted he did not accelerate the car speed. Was there, I wondered, any connection between this combination of sentiments which we had about the land and the difficulty we had experienced in engaging a porter for the journey?

Rising suddenly into view about a mile to our right were a series of mounds. At this distance they never would have attracted the attention of tourists or casual travelers, but to us who knew of their existence they were the remains of Babylon which we sought. Babylon was of little importance before the Third Millennium B.C. In fact, its prominence came with Hammurabi's rise to power, and when it became the capital of Babylonia, it dominated this whole surrounding land.

Babylonia owed its importance to three conditions; namely, geographical, political, and spiritual. Preceding Babylon in importance was the city of Kish, not far distant, located on the banks of the Euphrates at that time. Later the river changed its course away from Kish to Babylon, and because of this Babylon acquired suzerainty of the entire land. At this point but a narrow stretch of land separates the two big rivers of the valley, the Tigris and the Euphrates. To the north originally was the great fertile area of the Tigris, and to the south, the wide plain that borders on the Persian Gulf. Travel centuries ago, as now, was best along the river edges in the valley proper. This forced all traffic through Babylon, in the middle, and gave Babylon her dominant political position.

The third factor, or the spiritual one, was the city religion of Babylon. The principal god of Babylon was Marduk. The people had personal pride in him, and desired that he be given priority over the other gods of the entire country, and its surrounding nations. Even kings and princes were forced to submit to the rites of respect to this god, which amounted nearly to their coronation by the priesthood. No ventures or activities were permitted which were not done in the name of this god. For a great time this religious influence bound all contemporary life closely with Babylon, and made her a religious mecca, as well as a place of commercial importance. This religious supremacy was made possible mainly by fear. When any prominent person who had not recognized Marduk or his priesthood suffered a calamity, the priesthood attributed the misfortune to a punishment by the god. When the Assyrian king, Sennacherib, who leveled Babylon in his siege of that city in the Sixth Century B.C. died, his death was said by the priesthood to have been caused by his failure to pay homage to their god Marduk.

We had come to an abrupt stop at the foot of one of these mounds which were about twenty-five feet in height, and now that we were close to them we observed that they were about one hundred yards in length, and fifty yards across. Viewing them from where we stood, they seemed to be a natural formation—certainly not man-made. Actually, these mounds covered by debris and the dust of the centuries, were the remains of palaces, walls, canals, temples, and towers of Babylon and later civilizations. We struggled up the steep sides of one, lugging our heavy camera equipment, and sneezing with the dust raised by our feet which broke through the surface crust baked by the sun. We perspired little for the air, as in Egypt, was exceedingly dry and absorbed the moisture as it appeared. The sun's rays were now fierce; their burning effect on our exposed skin was like that of drawing a sharp blade across the flesh, smarting and stinging.

From our elevation the whole plain for miles around was revealed. To our West some distance from these ruins was a fringe of green grass and palms stretching in a straight line nearly North and South as far as the eye could see. This growth marked the banks of the Euphrates River. Its course in ancient times ran close to these mounds and fed the canals of the ancient city. The brilliance and varied shades of green of

the vegetation caused us to realize how magnificent the gardens and surrounding terrain must have been during the glory of Babylon when she was queen of the ancient world.

After she was demolished by Sennacherib, Nebuchadnezzar in 604-561 B.C. returned from his destruction of Jerusalem to restore Babylon's splendor, and the temples of her revered gods. There before us, like a refuse heap, lay part of his handiwork, the ruins of his great palace. It looked like a crater caused by the explosion of a great shell, for it was merely a large ugly hole. It must have been two hundred feet square. From where we stood it looked as though heaped high in the center was a mass of rock or chunks of dried soil. Adjoining this large crater were smaller ones, subdivided with partially-upright partitions or walls. These were the remains of the same structure and parts of others. Towering above all to the right, the largest structure still standing in Babylon was the Ishtar Gate. The remains are two square-like towers of mud-brick, once faced with splendidly glazed and colored tile and ornamented with figures of animals, a few of which are still visible.

Nebuchadnezzar had married a Median princess of extreme beauty and culture, whom he greatly loved, so the legends tell us. He brought her from her mountainous and beautiful home country of Persia to the flat, dusty, and ugly land of Babylonia. He set about rebuilding Babylon, and he constructed great walls of defense, one within the other, making it the greatest fortified city of antiquity. Meanwhile, his beautiful bride pined for the beauty of the mountains of her homeland with their fragrant shrubs, flowers, and refreshing verdure. Learning of her loneliness, it is recounted that he decided to build her an artificial mountain on which she could dwell. Thus was begun his great palace which became one of the seven wonders of the world which we refer to as The Hanging Gardens of Babylon. The structure, as most of them in Babylon and Assyria, was built of mud brick and then fired to compose a tile or faïence. It was built in tiers each slightly recessed so that the whole composed an enormous terraced tower, and along each terrace were planted magnificent trees and tropical plants and vines which hung low on the sides, causing it to be known as The Hanging Gardens. At the top of the tower was the palace and living quarters of Nebuchadnezzar and his bride. He had the waters of the Euphrates diverted into great canals around the palace base, and on either side of

them were magnificent tiled walks, and in them artistic boats leisurely floated carrying musicians and men and women of his court.

The great Ishtar Gate was built to commemorate the Babylonian goddess Ishtar, a composite of all the female Babylonian goddesses. She was a deity of nature and beauty, also known as the weeping mother because it was thought that she interceded in behalf of man whenever he was to be punished severely for his sins against Marduk. A planet was named after her, and it is thought it was the same one which the Greeks later called Venus. In fact, authorities believe Venus was the Grecian counterpart of Ishtar. From this gateway to his palace, Nebuchadnezzar built a roadway which became known as the sacred way. Along it at the new year festival in March a procession carried an image of Marduk. After homage was paid to him at the numerous temples, he was then placed on the river barge and conveyed to the northern section of the city. Through this gateway, which we carefully photographed, had marched the conquering army of Xerxes, and later. Cyrus, who successfully in the Sixth Century B.C. routed the combined Lydian, Babylonian and Egyptian forces which opposed him. Also through this gateway tramped the legions of Darius. Cyrus' successor. Darius, admiring the beauty and culture of the city, attempted to preserve it.

ONCE MIGHTY BABYLON

Of all of the remains of civilization to be seen in Asia Minor and Egypt, those of Babylon, shown above, are the most demolished and depressing, as captive Hebrew prophets predicted they would become, centuries ago.

We endeavored to persuade our porter to climb among these ruins with us. We offered him an additional fee to carry the camera equipment. He refused. Fearing that if we insisted too strongly, he might leave entirely, we desisted and slid with an avalanche of dust and hard particles following us down into the center of the demolished Nebuchadnezzar's palace. The surface blocks in the piles about us were just mud bricks, several of them still adhering to each other, and slowly returning to the dust from which they were made, and they received little attention from us. Slowly we began the laborious business of digging deeper in the thousands of years old rubbish about us for what might have been left or overlooked by the German archaeological expeditions of 1914 and earlier which had worked here. Since the World

War, no real attempt had been made to continue the great excavation work in Babylon begun by the Germans. The Iraqi government, which controls the ruins, discouraged further excavations, not by its attitude or by actual prohibition, but because of the instability of the government. An expedition might obtain a permit from the present government to excavate extensively and establish a research base at the site of the ruins, with thousands of dollars' worth of equipment, work diligently for several years and recover much valuable material, and then suddenly a government upset occur, and the succeeding authorities prohibit the excavators from continuing or from removing the fruits of their labors; or might even, as has been done elsewhere, give the materials which they recovered to some other institution or country.

We worked diligently, our thoughts occupied not with what we now saw before us, but with a mental picture of this site in ancient days, the days of its magnificence. We thought of the great engineering skill of these people, how they had driven into the Tigris and the Euphrates rivers piles to enlarge their land, how they had built beautiful parks laid out in geometrical designs. We thought of the splendid gold work which they accomplished, of the gorgeous jewelry and furnishings with which the palaces were amply supplied, of swimming pools, race courses, fields of grain and vegetables, herds of cattle and sheep. We also thought of the Hammurabi code of laws, with its excellent system for courts and judges, its protection of the person and of property rights, with its sound provisions for divorce, its regulation of taxes, and of the stern punishment it meted out. We thought of the temple liturgies, the chanting and singing, the wailing and prayers.

A cry from Frater Brower brought me to his side. He had found the first of what we had hoped to find, a large mud brick, a building block about a foot square inscribed in cuneiform, the peculiar wedge-like writing of the Babylonians and Assyrians. As we held it in our hands we diligently and reverently examined it. Nearly four thousand years ago, some human like ourselves, a craftsman, had carefully written this inscription with his reed stylus in preparation for including this block with thousands of others in the walls of the palace of Nebuchadnezzar. What was he like, this ancient craftsman? What was his life, and what did he think of the future, four thousand years hence? Could he have

imagined a people from a very distant land, like ourselves, examining his handiwork centuries after his death? From the time the workman cemented this block in place, using the natural soil, until now, when we lifted it from the dust into which it fell, it is very probable that no other hand had ever touched it. We were at this moment living in another world, seeing and feeling things which represented life and power to another people, that seemed as much a part of a continuous existence to them as the things of our world do to us. Around the ancient maker of this block, the writer of this inscription, had been such activity, such examples of strength—that is, buildings, temples, troops, broad avenues, teeming thousands of humans—that although he could have imagined changes, a state of such utter desolation, oblivion, nothingness as that into which his civilization eventually fell, would have been beyond his thought—as far beyond it as is a similar thought to the mind of the average resident of cities like New York, London and Paris. Time had made the impossible possible; it had vanquished all, and we very forcefully realized that it could do so again with the powerful civilizations now in existence.

It is surges of thought such as we now experienced, stirring emotions such as those we now felt, that have led archaeologists to the far corners of the earth to wrest from the past the story of men of other times. Here, then, was another example of universal brotherhood, but universal in time as well as extent. In archaeology we find a love not only of those who work, play and pray today throughout the world, but a sympathetic understanding of the human race since it began, and a desire to bind the past fast to the present. The archaeologist has a pride in all human achievement. He believes, and rightly so, that we have as much right to share the experiences of our fellow men of thousands of years ago as we do those of today who are thousands of miles distant from us. After all, no experience is personal unless we participate in it. Thus, what others have done before us can be as interesting and as intimate to us as those experiences of our foreign contemporaries which we seek to know through our news channels. In the broader sense, humanity has no periods. It is a continuous flow from its beginning to its ultimate end. Only when we confine ourselves to a consideration of the things of our individual lives do we get that narrow concept of humanity as having periods or eras

and assign them a relative importance to our own day. If we think the Egyptian and Babylonian vain and lacking in forethought because he concerned himself so fully with only the things of his own period, then, in light of what time has since done to his civilization, let us not make the same mistake of occupying ourselves solely with the things of the present time. To us belongs a consciousness of thousands of years of human endeavor, not just of the meager span of the few years that compose our individual lives. If we live in the past as well as in the present, we can live ten thousand years in one lifetime. In other words, life begins not with our infancy, but with the earliest birth of humanity of which we have record.

Chapter XV

I RELIVE A LIFE

WE BOTH CONCENTRATED our digging and probing in the one place in which we had made our discovery. We were soon rewarded for our efforts and we turned up brick after brick, each weighing about ten pounds, all deeply and clearly inscribed in cuneiform, some bearing the inscription of Nebuchadnezzar's name. Turning them over, we saw that they had a sticky black substance smeared on them. "Looks and smells like asphaltum," said Brower.

"It is," I replied, "the Babylonians had asphalt or bitumen pits, and they used this substance to coat their bricks just as we use the same material today as a preservative on our roads and highways. And you will observe," I continued, "that it has done an excellent job." We hurried, for the hour was getting late, to reduce the size of the bricks—because of their weight—with a hammer we had for the purpose. We knocked away all except the area containing the inscriptions. We soon had a very representative collection, and one quite heavy. We intended to take them back with us to America for the Rosicrucian Museum. In fact, they are now part of the collection to be seen in the Babylonian and Assyrian gallery of the Rosicrucian Museum.

In this same palace where we were making our discoveries an outstanding tragedy had happened. Alexander the Great, after successfully putting to rout the army of Darius, the Persian king who occupied Babylon at that time, and taking over Babylon himself, was murdered in this palace at the height of his power, and, it is said, while in a drunken stupor. Near here, in this series of earth mounds, was the ruins of a library. Ashurbanipal, last Assyrian king, and grandson of Sennacherib, built himself a great library at Nineveh, Assyrian city located north of the present city of Baghdad. This was centuries

before the great Alexandrian library of the Greeks. He had thousands of clay tablets inscribed in cuneiform writing placed in jars. These stone books, for this is what they were, were placed in rows on shelves, properly classified. There were thousands of them, devoted to the subjects of science, history, various phases of literature and religion. Hanging from the top of each was a little straw tag giving the title of the tablet, or the subject of the book. Some of these books were later filed in a library in Babylon, and they have not yet been discovered.

The great library of Nineveh has been found; that is how we know of these books and their classification, and most of its stone books which lay in a heap when the building crumbled are now in the British Museum in London. On some of these tablets are found parts of the story of the flood mentioned in the Old Testament. The legend, as it also appears in the Old Testament, tells of the hero building a large boat on which he took his wife and a pair of each of the animals, and that all other humans, and animals were destroyed by the deluge, and that finally when the flood subsided, he and his wife and the animals were left to perpetuate themselves as the only living things. This story is undoubtedly based upon an actual local flood within that region, and of course it was thought by the early writers to have been a deluge of the whole world. It was passed perhaps by word of mouth, or even by tablet, to the Egyptians, thence to the Hebrews, and it was finally incorporated in the Christian literature.

We loaded our camera equipment into the car, also the inscribed stones, for our porter would not help us with them. They were to him taboo; that is, untouchable. A curse, so the natives believed, would be inflicted upon those who disturbed the property of the dead. The Assyrians, like the Egyptians, threatened trespassers and those who would violate their sacred precincts with oaths of vengeance. Ashurbanipal, for example, declared in cuneiform writing on each stone tablet of his library (each book in other words), that whosoever shall carry off this tablet or shall inscribe his name upon it side by side with my own, may Assur and Belit (gods) overthrow him in wrath and anger, and may they destroy his name and posterity in the land. Now we began to realize why they feared to visit this site. Strange, too, since working in the palace rooms I felt rather ill. My heart was palpitating. I could no longer control physical evidence of the intense

excitement I felt, the uncontrollable feeling of suspense—as though any moment something unforgettable was about to occur. Beads of cold perspiration stood out on my forehead, unusual for this climate. I felt exceptionally tired. My head throbbed slightly. I laughed to myself, and said, the power of suggestion.

Relieved of our burdens, we climbed over several mounds to another large pile of crumbling brick. It is referred to by some authorities as the remains of the Tower of Babel, mentioned in the Old Testament. The Babylonians, contrary to popular knowledge, built many large towers. The one to which the Old Testament refers was just one of many similar structures. The predecessors of the Babylonians were the Sumerians, a people who came from a mountain land far to the north, and finally settled on this plain which they named the Plain of Shinar. In their home land they worshiped in temples on mountain tops a god named Enlil. He was the god of the earth. To simulate the mountain temples they built great tower temples which were cube-like in shape. The base was nearly as large in area as the height of the structure. Surrounding the base was a great stone courtyard. On one side three large inclines or ramps made it possible to reach the first two levels of the tower, and from there a gradual incline continued around the entire structure, making it possible to reach the tower top. On the top was the actual temple itself in which dwelt the priests, and in which the ceremonies were conducted.

Koldewey, German excavator and archaeologist, has reconstructed, from the plans he made of the ruins of Babylonian tower temples, complete models showing how they actually appeared in ancient times. The highest of these towers was probably some four hundred feet, which, like the great Pyramid of Gizeh, looked by comparison to the surrounding level terrain much greater. Of course, to the captive Hebrews, this god of the Babylonians was a false one, and the worship of him on such a high edifice, reaching, it seemed, into the clouds, was a defiling of the sanctuary of their own god, consequently the story of the Tower of Babel. These tower temples contributed to later architecture and were first copied during the Hellenistic period. The world's first lighthouse, on Pharos Island, outside the ancient port of Alexandria, Egypt, was a copy of these tower temples. It, in turn, became the model for the Mohammedan minarets. In the Babylonian-

Assyrian Gallery of the Rosicrucian Museum, which collection is now one of the largest in Western United States, is a great number of these tablets and cones having inscribed on them liturgies and commercial correspondence; all of which were removed from the ruins of these ancient temples.

As we pondered among these ruins, in our mind's eye we could see the Hebrew slaves, naked except for loincloth, with matted hair and beards, fettered with bronze chains and anklets, toiling, sweating, and stumbling in their misery and near exhaustion, in the blazing sun under the lash of the whips of their Babylonian captors, making and carrying the brick which was raising a tower for the worship of the god of their oppressors, offering prayers silently for their deliverance—prayers, the echoes of which still ring in the chapters of the Old Testament. Cruelty, yes. Unnecessary—yes, also. But the custom neither began with the Babylonians nor did it end with them. This much can be said of the Babylonians: Their persecution of the Jews was not primarily a religious one, but a political one. Judea being a subordinate state and a rebellious one, its warriors became political prisoners of the Babylonians, not religious ones. Other prisoners were treated likewise by them. Today, now, the Jews suffer persecution again, but in this day and age it is not principally political persecution but religious or racial persecution, which is a far greater reflection upon the level of intelligence of an age than the punishment of a people because of political uprising.

I now felt rather faint—yet I was surprised that I was not alarmed at my condition. There was a proclivity to let go—to slip into either sleep or oblivion. To watch Frater Brower and listen to him seemed such an effort. On the other side of my objective consciousness, and seemingly deep within, was an appealing sense of ease, of comfort, of relaxation, that tugged strongly at my consciousness. The world around me was perturbing. I was like one on a threshold of a portal leading to a chamber of quiet and soothing atmosphere, and yet reluctant to cross over and leave my present distraction. The struggle was tremendous—but objectively I was losing. It was too difficult to draw myself back into my immediate surroundings. I must submit to the impelling urge. With that ultimate resignation came not just gratification but afflatus. Ethereal throngs pushed by me, jostled

me. Familiar sounds came to my ears. Was I now awakening from a dream? There before me were the citizenry of my home land going to and fro, attired as I had always seen them, occupied with their daily interests I so well knew. I was with them—and yet I was an unseen spectator. Vaguely I recalled another place and different peoples. But to think of them, place them, was now an effort. And why try? Here I belonged—in Babylon. I did not want to participate in the activities before me just to drink them in, and each sound and sight gave me new life, seemed to lift a burden from my soul, and my spirits rose. I could remain this way forever, yet something was continually annoying me—a voice, faint, distant, but distinct, kept calling me. I could not avoid it. If I listened, this joyous procession of my friends, Babylon itself, to which I had just returned, became hazy. I decided to get away from this voice, to move along with people about me, to be myself again, to enter into their spirit and mood. I rose, but I seemed to float; surprising to me, yet a pleasure, was the sensation. Here then was a pleasing freedom. I could mingle with the throngs unobserved. I could satisfy my curiosity as I entered the various craftsmen's stalls. I was amused at the conversations I overheard as I stood with the spectators who watched the armorer fashion new shields, and who lamented the added weight and reminisced when leather was sufficient for even the king's guards to protect their persons when doing battle. I sauntered on, to come to rest before an aged lapidary worker. Around him were grouped his keen-eyed and agile apprentices. I marveled again, yes, as I had on many occasions, at the symmetry of design and the details carved in such hard stone and with such unvarying accuracy. I was proud of the age in which I lived—for had we not advanced far? Certainly long shall we endure. Nowhere, not perhaps even in the land of the tyrants of Mizraim, are men as progressive as we. I looked up in admiration at the magnificent varicolored tiled walls of the Great King's Palace. They sparkled like the rays emanating from Marduk when they plunged into the waters of the canals. I turned to watch the orderly steps of a squad of stalwart bowmen as they passed to enter the portals of the sacred way of the Goddess Ishtar. Above my head and fastened to the mass of inner walls which secured our city, beloved of the God Marduk, against the ravages of the Northern invaders, was a proclamation to all free men guaranteeing them the protection of the God of living things and his earthly ambassador, my most powerful and glorious king. I had

achieved, my tongue could express itself in signs, my words could go far beyond the sound of my voice. I could read as well. Few could equal me. I had read, and I had written often; my livelihood depended on my writing. My words shall live beyond my time. I recalled how I was often sought to leave my message with my seal impressed, with those who wished to ponder over my thoughts. I was more than a scribe bound to the Temple or the court of the King—I was a counselor on the ways of living. It was my art to translate into understandable language, into a code of practice and into a useful order of living, the enigmatic words of Marduk which his priests spake high in the tower temples. I was not unaware that I was disliked, envied, possibly feared. The mighty of Marduk's sacerdotal army resented my intervention, my mediation between them and my fellows. I was not of their holy sect. I was not appointed for ministrations to God, yet I spake and wrote words of wisdom as I knew them. My thoughts were just of earth, of man. However, I took comfort that my words in writing had been commanded for examination by the great Lord and King. He had favorably accepted them, for had he not given me reward and the generous sanction allowed one who is honored as a sage? He had encouraged me in an epistle from his supreme minister to freely give my thoughts animation and permanency—but to be ever mindful that I did not offend Marduk, creator of all, and himself, Babylonia's Lord and King.

Again, once again, that fretful disturbance, that distant echo, that now indistinct cry, seemed to possess me. I shook my head repeatedly as though trying to shake off some physical bondage. Then the sound of my name crashed down upon me like a bolt of lightning. It shattered the vista before me; towers, palaces, streets, peoples, slaves—they all fell into mere parts like a jigsaw puzzle dropped abruptly on pavement. They melted before my eyes, and through the mist there appeared the face of Frater Brower. He was speaking, but his voice was still distant; then it gradually grew stronger as though it were approaching me from afar. He was shaking me by the shoulder and saying, "What is the matter with you? Why don't you answer me? We must get back. Are you ill? You are extremely pale." I realize now that I must have been in a state of semi-consciousness. Objectively I had not been aware for several minutes, perhaps, of my actual surroundings. For while I had

this vivid experience, this transition to an era of nearly four thousand years ago, my body had been seated right where it now was, on the sub-foundation wall of this tower temple. And yet, how clear had been my experience in all its details! Hardly like an hallucination that comes from an ordinary lapse of objective consciousness. I was ill, extremely so; I burned with fever. My mouth was parched and I was badly nauseated.

Two thoughts now dominated my consciousness. First, over and over again, like a leer, the words of the Babylonian execration imploring the gods to punish despoilers coursed through my mind. I attempted to ridicule myself as I lay in the back of the bouncing car heading again toward Baghdad. I thought of the dozen or more volumes I had read quoting the authorities of the world, and of the Rosicrucian teachings, all of which discredited this superstitious belief, yet mocking me was this ailment, the discomfitures of which gave the oaths a more vivid realism to my semi-delirious mind than anything which I could recall having read or studied. Reason gave way to fantasy. I pictured myself as the victim whose life was to be given to prove the mysterious potency of these ancient curses. I had been chosen to vindicate the Babylonians, to discredit the stigma modern science had placed upon the forces which they were said to invoke! Second was the realization that all I was now perceiving in this awakened state seemed more unreal, more dreamlike than what I had just experienced. In fact, I felt that instead of returning to normalcy I had lapsed into delirium, and that the preceding occurrences were my natural state—I even yearned to return to them. The details of what I had seen and heard clung to my memory like a deep fragrance to the air after flowers have been removed. Reason told me that I had, during the entire time, been seated on that mud-brick foundation, and yet I knew, a conviction that I could not shake, that my inner consciousness had relived, not in imagination but in memory, what it had once registered as an actual experience.

Several days of quiet, after a diagnosis of my case as mild tropical fever combined with intestinal influenza, caused possibly by an insect bite on the desert, saw me rally sufficiently to prepare for the trek back across the desert. Our trail was now to lead northward and westward like the flow of the ancient civilization whose sites we had been visiting.

Chapter XVI

THE VINEYARD OF WISDOM

SO CEASELESS AND yet so unchanging is the sea. To ancient eyes that peered across its wastes from the bows of frail craft, it too, was either a roaring fury with deep valleys whose mountainous walls were tipped with lacy foam, or a placid glass-like calm. Of all of the things of the world, the sea alone seems untouched by the moods of man or nature. As we gaze into it today we see, mirrored in our consciousness, the same vision which men who looked upon it in centuries past experienced. It remains an unbroken, unscathed bond with the beginning of time. Perhaps it was the spirit of oneness with all that had gone before, which the inky waters instilled in me as I looked over them from the deck of our motor ship, that made me think of the great personalities who had sailed this same sea.

Just a few hours before we had departed from the modern docks of Istanbul and now we were leaving the sea of Marmora and entering the straits of the Dardanelles. At this point, two great continents, Europe and Asia, were separated by a scant watery thread three to four miles in width. It was as if nature had symbolized, by this geographic arrangement, that the peoples of these enormous land areas should often embrace each other's customs and habits and yet by the slender thread of racial differences ever be separated.

The ancient name of the Dardanelles—a narrow body of water forty-seven miles long—is the Hellespont. It separates the Marmora and Aegean seas. It is related to have derived its modern name from the city of Dardanis. Here, too, Xerxes, Persian King in the Sixth Century B.C., built a floating bridge—composed of a series of small boats

lashed together—and crossed with his vast Army of the East for one of the earliest invasions of Europe. This same site, within the century, had been the scene of other great armies struggling for possession of its natural gateway to the Black Sea, and the great territory of Russia. During the first World War, the German and Turkish powers had fortified the slopes on either side of the Dardanelles, so as to make it almost impregnable. The British Navy was mainly assigned the task, by the allies, of penetrating the Straits, running the gauntlet, it may be said, and opening the water route to the Black Sea. Russia, an ally, needed this outlet to the Mediterranean very badly. British ships were blown to bits in the mine-infested waters and by the bombardment of heavy land batteries.

The strategy of the Turks, under German military guidance, cost England thousands of Canadian and Australian troops. After severe return assaults on the land batteries by the British cruisers, one suddenly ceased firing, and after a length of time it was believed to have been silenced. The troops prepared to land and when they had but touched the shore an inferno broke loose. Heavy artillery shells crashed about them and machine guns rattled, mowing down wave after wave of men. Retreat from the trap was impossible and advance was suicide. Britain became the eventual victor of the engagement by a small margin, for which she paid a terrific price in human lives.

Turkey remains today a steadfast ally of Germany, though making overtures of friendship to England. Every third man in impoverished Turkey is in uniform and all have the military bearing and stamp of German training. After the World War Turkey solicited a continuation of German officership of her forces, in exchange for certain trade concessions to the Reich. At this time, the system is so thoroughly organized that in only the highest ranks, and then in an advisory capacity, is it necessary for German officers to remain. Turkey's own officers now know only one military technique—German. In Turkey, also, the army has the same outstanding prestige that it does in Germany. No other class of citizenry receives the privileges or the distinctions of the army. To Americans and to Canadians, this may seem deplorable and indicating a warlike spirit. On the other hand, our survival-of-the-fittest contest is strictly along economic lines—clashes between capital and labor—attempts at an adjustment of consumption and production,

but with these other powers, it means a fight for actual existence as a sovereignty.

To become weak in military strength is to be absorbed literally over night by a stronger nation; consequently the attitude is: defense of national existence must precede economic and cultural interests.

WINDOWS OF THE EAST

From a grilled arch of the quadrangle of the blue Mosque, we look out upon the stately, impressive beauty of Saint Sophia, the greatest of all of the mosques.

A slow rolling of our ship accompanied our entrance into the Aegean Sea. To our starboard side, but two or three miles distant, were the rugged mountains of the Island of Lemnos. Frater Brower and I stepped to the railing to scan them through binoculars. Deep in their clefts, near the shoreline, here and there, were small villages appearing

as though they had been washed down from the heights to wedge fast, and there, like sheltered vegetation, flourish. To the northwest, not more than fifty miles beyond our range of vision, lay historic Macedonia. In what is now known as the Thessalonike Peninsula, of Macedonia, once existed the small outpost colony city of Stagira. In it, about 384 B.C. was born a man who was to fashion the thought of the world for over 2000 years and command its respect for centuries more. It was here that Aristotle, son of the physician to the King of Macedonia, and descendant of a long line of physicians, began his career.

Each island, each peak, bay or inlet about us constituted a landmark, not in the history of races, nations, or men, but of thought. Surrounding this small sea were born and lived more men who contributed to the advancement of thought than in any similar area on the surface of the earth and in the history of man. Genius after genius sprang from the hearty mountainous region. It was as though it had been impregnated by Divine touch with the seeds of wisdom.

Over the port side loomed the silhouette of another nearby island. Its coast line was so precipitous that it plunged from a height directly into the sea, affording little beach. The late afternoon sun was concealed behind its hills, causing a back-lighting and a radiant aura to extend around and sharpen its rugged contour. This was Mytilene or the renowned island of Lesbos which played a prominent part in Aristotle's life. Students of philosophy and of Aristotleanism divide Aristotle's life into three distinct periods. The first and perhaps the most prominent was from his seventeenth to thirty-seventh years, when he was a disciple and constant companion of Plato. His writings during this period had the formal pedagogic style of Plato's dialogues and his doctrines reflected the principles of his teacher. He lived in Athens and never journeyed far from the academy.

The second period, called the *Wanderjahre*, was after his master's death and was devoted to travel. His contact with other schools of thought, and his own experiments and conceptions, caused his writings of this period to contrast sharply with his former ones. It was during this period of travel that he spent two years of study on Lesbos, the island before us. Here he gathered specimens of marine life and carefully observed their habits. It is said that from these observations

there came about his famous doctrine of development, which was the first theory of evolution. He attempted to unite by his theory two realms of reality—mind, or the initial ideas as Plato called them, and matter. What a surge of wisdom flowed through the small channel of this one human mind! He attempted the first classification of all natural phenomena—grouping inanimate matter, plant and animal life, into separate divisions and making possible the first truly scientific study. He devised the term metaphysics, meaning beyond physics, to define the study of the causes of physical phenomena, in fact, the first causes of all being. He gave the name psychology to that branch of study concerned with the Soul and the functions of mind, thought, sensation, perception. Merely as an aid to assist his reasoning and to make his insight into the profound problems which he considered clearer, he invented the system of formal logic, which is still in use today with slight variation.

No greater test of wisdom or its relevancy to truth can be had than that it be subjected to the passing of time. The titles which Aristotle bestowed upon the divisions of reality he made have endured, and many of his fundamental doctrines remain unshaken by sieges of controversy. It seems incredible that one mind could conceive such truths, become so enlightened by its own efforts during one normal life's span. As further tribute to his greatness, may it be said that he, far more than his contemporaries and his later followers, realized and admitted his limitations, this bleak body of land, therefore, seemingly spewed up from the sea, provided not a source of great mineral or vegetable wealth to protect or sustain the bodies of men, but a natural laboratory from which came ideas that nourished the minds of men for centuries.

Eighty miles west of Stagira, Aristotle's birthplace, was located the City of Pella, the ancient capital of Macedonia, over which presided Phillip II. His fame having spread, Aristotle was urged by Phillip to become the private tutor of his son, Alexander, who was destined to become a world conqueror. It was said he accepted the appointment because of the opportunity it provided to test his political theories. His pupil, later, while on an expedition of conquest, had a selected staff of sages collect and send back to Aristotle, for his examination and study, strange plants and specimens of minerals and soil. Vicious gossip and

the jealousy of Alexander poisoned his mind toward his master and teacher, while he was on a distant campaign. Eventually Aristotle fled to Chalcis, on the elongated island of Euboea, which was now directly west of us, but beyond our vision. There he died in 322 B.C. In recent years, just outside of where existed the small colonial city of Eretria, about twelve miles south of Chalcis, excavators unearthed a gold stylus, ring, and pieces of pottery which were said to be Aristotle's. In the grave was also found a skull, which is believed to be his as well.

The eastern shore of Asia had faded from our view. We were now directly off the coast of the ancient Ionians. During the glory of the Greek schools of philosophy it was said that, of all of the colonies of Attica, Ionia provided those who excelled in the love of inquiry into nature—in other words, those who inclined toward what we consider the physical sciences. The principal city and capital of Ionia was Miletus, in which flourished the earliest school of philosophy. The founder was Thales, 585 B.C., who is said to have predicted an eclipse. There began with him a transition from the theogony of the gods, the common belief in Greece at that time, to physical philosophy, which sought to explain the universe along rational, and what we might term scientific, lines. Thales sought an ultimate substance, a primary element from which all things came, and he finally concluded that substance to be water. The school ceased with the destruction of that city by the Persians in 494 B.C. Nearly opposite from Miletus, across the Aegean, was the City of Megara, where certain lesser Socratic schools, those expounding a version of the Socratic philosophy, came into existence but never into prominence.

With such enjoyment had I lived in my mind the lives and accomplishments of these astute personalities of thousands of years past, that I had not become conscious of the hour. The clashing sound of the dining steward's dinner gong brought me to an awareness of a keen hunger induced by the invigorating sea air.

We retired to our stateroom early, but I could not sleep. My imagination had been stimulated by these monuments, these reminders of a great past civilization. Perching myself on the berth, in a position so I could look out of the porthole, I opened it and stared down at the water a few feet below, which seemed to rush past. The light of the stateroom cast a faint glow upon the sea. The small circle of light

was sufficient to intensify the darkness of the water and give the foam a contrasting scintillating whiteness. With my back to the room, and before me visible only this small illuminated circle of the sea, and with the freshness of the salt air stinging my face, I had a full sense of appreciation of the beauty, majesty and wildness of this element. For miles, on and on, the water rolled, rose to crests, broke, lashed, and slid into great wallows: the sky reaching down on all sides was its only container. What it held close to its bosom fathoms below and immediately beneath me, perhaps no man would ever know. I thought if there is on earth any power or agency of nature which displays a spirit of complete freedom and a disregard for the efforts of man to control it, it is the sea. Use it man can, but never is he its master.

The following morning the decks were bathed in sunlight. It was enjoyed in sheltered corners for the air was biting. Land had not been seen for hours, but there was no possibility for monotony as preparations by passengers and crew alike were being made for the arrival at the port of Piraeus. By the time Frater Brower and I had repacked our cinema equipment, after having filmed the notable sights we had passed, we were entering the Gulf of Aegina. In this gulf some of the greatest naval battles of the ancient world were fought. These battles gave Attica the supremacy that assured her independence and perhaps preserved her spirit of inquiry and love of knowledge. Persia had constantly menaced the security of Attica, under the leadership of Darius. Xerxes, his son, at the death of his father, continued the campaigns against Greece. Success crowned first the efforts of one side, then of the other. A powerful Persian fleet sailed one day into the port of Piraeus, and only the strong Athenian army stationed on the shore kept it from landing. Themistocles, great statesman of Athens and Arcon, head of the state, proposed that the Athenians build a large fleet to dominate the surrounding sea and keep the Persians from crossing, as in only that way, he believed Athens safe from invasion. His proposals were well received and finally 180 ships were built and put to sea. The Athenian fleet eventually met and defeated the Persian fleet in a great naval combat in the waters immediately surrounding the Island of Salam is, slightly north and west of Piraeus, whose harbor we were now slowly entering.

We had been standing in line alongside wooden benches in the

customs shed, where our baggage was piled awaiting inspection, for nearly an hour. Our estimation of the department's efficiency was greatly diminishing, as was our patience. There was an obvious shortage in personnel, which at the time appeared to us an imposition on travelers. The inspectors were gracious enough, but their courtesy did not lessen our agitation. It was not until the next day that we became aware that Greece's severe economic plight was responsible for the under-manned staff. For centuries Greece had been under the domination of Turkey. During the Ottoman Empire it was divided into many districts by Turkey, and like other subjugated nations of the Ottoman Empire, it was bled of resources and of the opportunities of internal expansion. Not long after obtaining its independence and following its participation in the World War, it was plunged into revolution—a struggle between monarchy and republic. Its people are thrifty and its resources, though not many, are in demand, but it has been and is still at the mercy of its more powerful neighboring states, which prevent it from obtaining the concessions it needs for a successful economic life.

Archaeological collection began in Greece as early as the Seventeenth Century. The ruins of its great edifices were so impressive that they were bound to excite curiosity and interest. It was not until the Nineteenth Century, however, that a real scientific examination of the antiquities of Greece was begun. To Lord Byron, English poet, 1788-1824, must go the credit for reawakening world interest in the magnificent history that was Greece's, and the decaying arts which lay in Athens just below the debris of centuries.

Byron, a cripple, who traveled for health, romance, and adventure, through Europe where his works were more appreciated than in England, visited Greece and immediately felt a strong affinity for its traditions and people. To commemorate an historic event, he swam the Hellespont. Inspired by his studies there, he returned to England to compose his greatest works. Later he returned to Greece to interest himself in its political strife. He spent a considerable amount of his personal fortune to aid in her liberation. He was once offered, in return, the Governor-Generalship.

Athens nestled between two mountains. Mt. Hymettus and Mt. Pentelicus, the former having always been renowned for its honey and

the latter for its excellent marble. Nature had endowed Athens with excellent elements for defense. Slightly inland, with elevations that made the sea visible and prevented sudden naval attack, and with a surrounding plain whose soil provided essential foods, such as olives, fig groves, vineyards, and good pasturage, its people were soon able to give themselves over to pursuits other than the mere acquiring of sustenance. Speaking of the climate, which is never extreme, one of the ancient philosophers wrote of it: The clear bracing air fostered intellectual and esthetic pursuits and endowed them with mental energy.

Our stay in Athens was not to be lengthy and we had much to accomplish. Consequently, after depositing our baggage at our quarters, we immediately set out to photograph those things which would be representative of the Hellenic civilization. Sporadic showers did not discourage us. The most commanding and never-to-be-forgotten sight is the Acropolis, a large promontory, 1000 feet in length or about two of our city blocks, on which temples to the gods and fortresses with protective walls have been erected since Neolithic times.

Modern Archaeology has located the remnants of the numerous gates of Themistocles' wall which surrounded it and through which trod many of the eminent of Greece's past. Not far from the Dipylon Gate was the Academy of Plato, where his students came to hear his learned discourses and to hear him inveigh against the Sophists. But a short distance from still another gate is said to be the site of the Lyceum, the school of the peripatetics, where Aristotle expounded truths to his disciples, as they walked to and fro with him.

We wended our way up and through a wooded section known as the Pnyx. After a brisk walk we stopped before an enormous rock pitted with age, in which there are two cave-like chambers with benches hewn out of the living rock and giving evidence of once having been occupied by humans. The entrances now have iron gateways, which are opened by attendants. An exhilarating sensation swept over me when I was told that I stood in the prison cell of Socrates in which—Plato's dialogue, the *Phaedo*, informs us—the great Sage drank the hemlock. It is difficult to express the emotions we felt, as Plato's masterfully drawn word picture of the execution of Socrates occupied our thoughts in the very place where it is supposed to have occurred.

However, we reluctantly drew ourselves back to the reality of fact, that in all probability, from an Archaeological point of view, these caves, of which there were others, were part of a prehistoric city which surrounded the Acropolis.

Nearby was the Aeropagus, commonly called Mars Hill, on which, it is generally held by historians, the Apostle Paul preached to the Athenians. The structures which now stand upon the Acropolis were built after the Persians had destroyed all of the previous edifices and left them in smoldering ruins.

Conceded to be one of the Seven Wonders of the World is the magnificent Parthenon, the great temple erected, on the Acropolis, to the glory of the Goddess Athena. One stands before it overwhelmed at its beauty. Even though it is in partial ruins, there clings to its great Doric columns an atmosphere, in effect, like a heavy perfume, which so overpowers the senses that naught but its exotic presence can be realized. As I walked along the marble flagging of a peristyle and gazed between the graceful columns at the city lying below, I wondered what thoughts must have occupied the great minds which assembled here on occasion. Were such idealists limited in the range of their concepts to a mere consideration of the problems and affairs of their day, or did they at times separate themselves in mind from their environment and in such an inspiring setting envision the future of the world 2500 years hence? Could they have imagined that men of other races, centuries later, would pass through the structures they had planned and built? Could they feel that their work in many of the arts was so original, so far-reaching, that their influence would be felt thousands of generations into the future? Would these men, if alive today, choose our times in preference to the times in which they lived?

After the destruction by the Persians of the earlier structures of the Acropolis, Pericles, Fifth Century B.C., statesman, orator, and lover of culture, began a great campaign for the beautification of Athens. From the campaign came artistic developments which, even today, remain foremost in the records of the achievements of man. Appropriating the enormous sum, for that time, of over two and one-half million dollars, which was derived mainly from the Athenians, he engaged the greatest Greek craftsmen and artists of the day to perform the work. Ictinus was the architect who designed and supervised the building of

the Parthenon. Phidias was the sculptor who beautified it. Architect and sculptor worked hand in hand in creating these masterpieces. The columns, for the first time in the history of architecture, were caused to incline inward at the top, to give the structure the appearance of stability. To prevent the illusion of concavity they were gracefully tapered, giving the whole a symmetrical balance. Phidias sculptured a frieze of idealistic figures around the top sides of the temple. The figures, though human in form, were so perfect, depicting the ideal man and woman for which Greece strove, that they became a symbol of beauty which inspired the citizenry to emulate them. The sculpture at the gabled ends depicted the birth of the Goddess Athena and her struggle with Poseidon, God of the Sea, for possession of Attica.

Within the temple there had stood a magnificent gold and ivory statue of the Goddess Athena, thirty feet in height and wrought by the genius of Phidias. Outside of the temple was also a colossal bronze statue of this protectress of Athens. This, too, was the work of Phidias. Rising to a height of seventy feet, the figure held her shield and spear upraised in an attitude of protection of the city below. It is said that sailors returning home could see the tip of Athena's spear glistening in the sun like a beacon of welcome when their ships rounded Mt. Hymettus. Is it a wonder that the Periclean period of history is referred to as the Golden Age?

The days had swept by so rapidly that it was extremely difficult for us to separate them into periods spent in one country, on one continent, or in one place. We had, it seemed, in the months of our travels witnessed not a series of disconnected past events, but a continuous parade of human adventure. At no time had the threads of man's efforts been entirely lost in the transition from one fabric of civilization to another. Decline had meant a paucity of material, a few minds working to preserve the heritage of wisdom against the contaminating influences of ignorance and superstition. These threads of genius were surrounded, in the eras of stagnation, by the drab incidents of the deterioration of human morals and thought. Let a time be favorable and the threads transformed all they touched into beauty, illumination and splendor.

Civilization is a great force put into motion by the concerted actions of men. The momentum of that force can carry it forward or backward.

It depends upon the direction in which it is started. It is individual human intelligence, inspired intellect, virgin ideas and concepts which determine the direction that civilization shall take. Civilization itself does not produce this intelligence, but merely provides it with an excellent tool with which to work. Only in a degeneracy of life itself can this intelligence ever be destroyed. Civilization can and will fall again and again, and time after time from the purged ashes will arise, phoenix-like, a mind or minds which will develop another civilization, founded upon those instincts and precepts which draw men together in the hope of attaining a common good not individually possible. The only fear, and that is a remote one, is that some civilization may pervert all of the human race simultaneously and close the channels from which spring the visions which move men upward and onward.

Our journey was completed. Homeward bound, we sailed past the Rock of Gibraltar, through the legendary gates of Hercules, toward the Western world and the New Age.

THE ROSICRUCIAN ORDER, AMORC

Purpose and Work of the Order

The Rosicrucian Order, AMORC, is a philosophical and initiatic tradition. As students progress in their studies, they are initiated into the next level or degree.

Rosicrucians are men and women around the world who study the laws of nature in order to live in harmony with them. Individuals study the Rosicrucian lessons in the privacy of their own homes on subjects such as the nature of the soul, developing intuition, classical Greek philosophy, energy centers in the body, and self-healing techniques.

The Rosicrucian tradition encourages each student to discover the wisdom, compassion, strength, and peace that already reside within each of us.

To
MAY FOREMAN CARR

I have esteemed Thy Words more than my necessary food.

—*The Bible*

Imagine yourself standing waist deep in the middle of a small pond. You have become very quiet. Not a ripple stirs across the surface of the water. Your hands hang straight and still at your sides. So silver-flat is the surface around you that it is like being at the center of a vast mirror.

Then very gently you begin to rise and fall upon your toes, just a little at first, and in perfect rhythm. Waves begin to move from you toward the distant shore. A dreamy peace fills your heart. You are enchanted. A childhood dream of a fairy circle has come true. From you as a center, perfectly timed concentric circles are lifting and falling and widening. A rosy flush gleams along each smooth crest.

Still maintaining your rhythm, you increase the tempo. A wonderful thing happens. Waves, moving also with increasing speed, gradually assume a rich orange glow. A clear pleasing yellow follows. Faster yet you rise and fall, rise and fall. The yellow slips on shoreward, followed now by delicate green waves. With each increase of speed the color shifts from green to blue; from blue to indigo; and from indigo to violet until at last you are surrounded by a pulsating rainbow.

Suppose you grow curious and begin to experiment a bit. Perhaps the clear yellow has appealed to you. You find again the speed that produced that wave, and then you rise and fall rhythmically at that tempo until all about you spreads a sea of gold. Or you may have preferred the rose-colored sea. Slowly you drop to your first motion, and wave follows wave to the shore until you find yourself at the center of a living rose.

“Magic!” you cry.

Yes, it is a kind of magic. You have invoked the law of vibration from which all manifestation springs. You have established a rate of vibration which produces a correspondence of manifestation in all fields of experience. That which has delighted you in sight might have been realized also in hearing had your ears been attuned to catch the tones. The color has simply made visible to you the pattern of sound that would surround us if every tone we uttered were permitted to manifest its true nature.

Whether we are color conscious or tone conscious, we are dealing with the same fundamental vibrations, for the two are inextricably

interwoven. Wherever there is a pure and beautiful color, there is also a pure and beautiful tone. Whenever we voice a perfectly and purely enunciated word, we also evoke a clear and lovely color.

Let us imagine that in the midst of your playing with the prismatic waves, your body suddenly grows too weary to move longer. As your motion ceases, the waves begin to subside. The colors begin to fade. Sharp disappointment stirs in you, then despair. In that desperation you cry out. Surprise cuts the cry short. At the impact of your voice upon the waves something has happened. The sudden sharp vibration has apparently checked the fading of the color. It even seems to have deepened the glow along the crest. Can it be? You cry out again and the wave beat picks up its momentum. Excitement lays hold of you, and you begin to send out sounds in quick succession. You run up and down the scale; you vary the syllables. You have made a tremendous discovery. The same spectrum colors are riding out from you toward the shore, more delicate in hue but just as well defined. The motion of the body is not necessary. Now you stand in the middle of the pool and chant rhythmically. Wave follows wave; color succeeds color; the shore is still washed with iridescence.

You have demonstrated two important principles of sound and color: first, that an integrated pattern underlies the related fields; and second, that this basic pattern is simple and uncomplicated. In spite of all the bewildering array of color in our modern world, we all know that the whole vast display can be resolved back to the seven colors of the spectrum. The seven can be resolved into the three primary ones; and the three in turn resolve themselves into white.

Sound, too, is an apparently complicated mass; but sound, like color, can be reduced to just five elements. Throughout the world, regardless of the languages they speak, men use only five sounds: A. E. I. O. U. The symbols of sound may be multiplied, but the sounds themselves remain as five.

The important point is that these five vowel sounds are the entire vocabulary of the Inner Self. Whenever the real I wants to express itself in audible form, it must use those five sounds. It has no others; in fact, there are no more in the universe. Here then we begin to see the simplified pattern.

Only five sounds, yet how utterly adequate! The Self that has learned to use them has begun to apprehend the secret of creation itself!

Sound is a homing pigeon. Send it never so far away, and it will still find its way home. Some years ago there was an experiment over the radio. A dog barked into the microphone, and seventeen seconds later his voice returned to him from the loud speaker. In that fraction of a minute, his voice had travelled all around the earth, a distance of some twenty-five thousand miles, and found its way right back into the room where the dog stood.

Every tone that we send out from the middle of our pool rushes away from us on a curved path. Nor does it move outward in only one line of progression. We need to remember those concentric circles. In fact we should think of ourselves as standing in the center of a great globe, to change our illustration for a moment. The waves not only go out to the four points of the compass, but they go up above us and down below us as well. The figure is so complex that we cannot actually conceive of all those circles, moving in every conceivable direction and at every existent angle from our center. As we attempt to picture them moving out on a curved path; gradually reaching the limit of their orbits and then turning back to the point of their origin, we find ourselves out into figures of a fourth dimension.

The pattern is intricate and exceedingly symmetrical but utterly beyond us. Then we need to come back to our basic simplicity. We need to remind ourselves that there are only five original sounds. Again we need to impress upon our minds the truth that the Inner Self is uncomplicated. It deals with fundamentals and operates according to

law. Its alphabet forms, not the ABC's of speech, but the AEIOU's of sound.

The whole topic of sound is so immense that the figures we use in attempting to deal with it may be multiplied almost indefinitely. We have called it a pool and a homing pigeon. Like the pigeon, sound returns to us bearing gifts. Another analogy might be the carrier wave in radio. Picture again the pool. Imagine that we can see groups of creatures on the shores. Shall we make them human in form, or elfish, or frisking animals? It does not matter much. They are there; some lovely, some stupid, some coarse, some tender and gracious. They are all facing toward us as we stand in the center of the waves. They want to come to us, but can do so only when a wave of their own character curls upon the shore, turns and flows back toward the center. Then upon that vibration which harmonizes with their own, they hurl themselves and are borne to the center.

If the sound that we send out is one of anger, its sharp, ugly vibrations could not carry back to us the tender creatures. They would shrink from it. Only those creatures of sharp and ugly wavelengths could accommodate themselves to it. Thus when it reached us once more, it would not come simply as we sent it out. It would come reinforced with all the crowding creatures of hatred and malice riding on its crest. Its impact upon us would be destructive and violent. Certainly our mental peace would be gone in that terrific washing. Also certainly, though perhaps less obviously, our physical poise would be undermined. Days later when its effect came into our consciousness in the form of a headache or an upset stomach we would wonder why we felt so miserable. We would fail to connect the two facts; the harsh tone and the aching head. The connection, however, would be there, hidden and potent.

Fortunately the reverse also holds true. The loving word sent out provides a return wave for all creatures tender and gracious. Someday we rejoice in a feeling of great and abiding well-being. We cannot trace it to its source; but it lies perhaps in that which Shakespeare calls the best part of a good man's life, his little acts of unremembered kindness.

The vowels A. E. I. O. U. are in reality the only sounds man uses in speech or song. Perhaps the question has risen: Are not the consonants

also sounds? No, consonants are only stoppages. Test them for yourself. Try to utter the sound of B without any vowel sound attached to it. You cannot do it, for B alone is only a repression of the breath stream behind the lips. R is only a stoppage a little further back in the mouth, and not quite so rigid as B, but without an initial vowel sound, it cannot be pronounced.

The consonants are forces opposed to the vowels. The vowels are positive; the consonants, negative. The vowels give voice to the Inner Self; the consonants are the outer and material self, obstructing. The vowels are constructive and creative; the consonants interrupt and destroy. It is the age-old conflict between body and soul, expressing now through the realm of sound.

If we analyze the various abuses of voice, we find that the consonants are usually the troublemakers. Take the man who talks through his nose. There is a tensing of the muscles in the voice mechanism so that the breath stream is forced out of its natural channel instead of being permitted to flow freely. Tension belongs to the consonants; relaxation belongs to the vowels. There is perpetual conflict between the two, but each is necessary. It is not a case of getting rid of tension; it is a case of controlling and using tension as an ally of relaxation. We live in a world of opposing forces. It is only as we control and bring them into a state of poise that manifestation takes place. The negative and positive forces must meet in the electric light bulb and establish a state of equilibrium before we can have light in the bulb or power in the machine; and this same rule of three operates in every department of life, including that of speech.

A pure tone is the result of a nice balance between the open, relaxed flow of the vowels and the reserve energy created by the tension of the consonants. Notice how this state of balance reacts upon the speaker. Let a sudden emotion cut in to upset the balance. Let anger, for example, throw in sharp, hard repressions upon the breath stream. Ugly, broken vibrations go forth. They build a path from us to all other angry, ugly utterances. Sharp and bitter vibrations, seeking lines of force along which to travel, click with the stream we have sent forth. They are like shoppers at rush hours hopping upon an escalator and hopping off again when they reach their destination. The one who sends out the angry vibrations sets his own private escalator in motion. His own body is the destination toward which myriad shoppers, bent upon destruction, hasten, pushing and snatching and upsetting all the rhythms of life. The return wave is well-nigh unbearable.

“What have I done to deserve this?” is the baffled and often sincere cry.

We are not conscious of the true relationship of cause and effect. We should be better aware of this relationship could we see the pattern of sound our voices produce when we are emotionally taut. That wonderful instrument, the oscillograph, should be an inspiration to everyone who has ever watched his own voice weave an unbalanced and irregular line across its screen. If even one perfect pattern should occur in the midst of the straggling lines, it would be forever in his heart as a desired goal. Were the oscillograph to register color also, the corresponding color when anger strikes through our voices would lose its purity. It would be muddled and dull.

It is strange that we should feel that this combining of sound and color and emotion is fanciful, for our common speech is shot through with evidence of our having perceived the relationship. We have through long years of usage classified the negative emotions by a color scheme. We see red; we feel blue; we are green with jealousy; we have yellow streaks and dark brown tastes; grief is garbed in black; and our faces turn grey with fear.

Strangely also, we have not so well classified the finer emotions except in a few cases. We have golden memories; we are tickled pink; and the future assumes a rosy hue. Old age wears lavender. Green, blue, and brown figure not at all in our happier moments.

We speak of evolving upon a higher plane by merely contemplating this subject. It has been said that no one can achieve his own highest place in the cosmic scheme until he has become aware of the true significance of sound. By every sound that we utter we are constantly attuning ourselves and our environment to a definite vibratory pattern, in the midst of which we must live, like the spider in the middle of its self-constructed web. The pool of color is merely a device to help us visualize this sea of vibration in which we are immersed.

A second point to realize is that these patterns which we establish are carrier waves over which lines of communication are set up between our centers and the numerous centers of other people, whose webs are contiguous to ours. Shakespeare says that we creep into the jaundice by being peevish. Can you not visualize that peevish, whining child surrounded by thin irregular waves of irritation? Can you not also discern the lines of force pouring back upon him from scores of other peevish whining creatures? Misery truly loves company; and presently the child's glands are overtaxed. The invisible reactions have pounded at the nervous system until it has lost all its resilience. The child is ill.

There is a third point to be considered. Jesus said that every idle word men speak must be accounted for in the judgment. That seems preposterous. Deep down in our hearts we find it hard to believe; yet it is profoundly true. How do our words affect our own inner selves? How do they register their power for good or evil in our very bodies? A possible and relatively understandable answer is found in the structure of the pituitary gland.

The whole subject of glands has been so popularized that there is scarcely a child of this generation who has not at least heard of them. Science has brought within the scope of the layman's attention these seven ductless glands which so vitally influence our development that they are sometimes called *personality glands*. Our knowledge, however, is still very elementary; not even the most eminent scientists pretend to have an exhaustive knowledge of them. That they are there we know; and that they are like great controlling motors of the whole system with its growth and development. That they respond to certain stimuli we also know. We know that they are of two types; both of which affect the sympathetic nervous system. One set stimulates that system to greater activity; the other retards its activity, or even inhibits its functioning altogether. Can we not see here the same pattern of action and reaction that we see in the vowels and consonants? The sympathetic nervous system controls our involuntary actions, and brings our psychic impressions into the field of consciousness. Here as elsewhere we find the eternal struggle between forces. There are the thrust and the counter-thrust, the positive and the negative, in the constant interplay of the sympathetic and the cerebro-spinal nervous systems.

If we ask how these glands control the body, there can be only one answer: by initiating certain vibratory motions. How does a watch-maker so condition his watches that they will keep accurate time? By a series of fine adjustments he brings them into harmony with the rhythmic beat of the universal magnetic currents. When they synchronize with these magnetic currents that sweep the earth, the watches are trustworthy. Bring a magnet near your watch, shift its rhythm ever so lightly and mischief results. The watch becomes very ill. So do the glands bring the nervous system into harmony with the rhythm of its universe.

We might reasonably ask how the glands themselves keep in harmony. As the watch depends ultimately upon its great mainspring, so do the glands depend upon one gland which seems to be superior to them all, the pituitary. Here are secreted hormones that determine growth and development; here are the hormones which enter into the creation of new life; here are secretions that regulate metabolism, sex, sleep, blood pressure, and body heat. With good reason the pituitary has been called the Master Gland.

Like a child we can continue to ask *why* and *how* until we push back our borders of knowledge to their final limits. How does this Master Gland function? What force keeps it in harmony? We can go at least one step nearer to the answer; and that is one step nearer to solving an acknowledged riddle. The structure of this gland is most interesting. We need only to glance at it to recognize its connection with our voices.

The pituitary is a sort of triple gland. It is composed of three parts; an anterior or front lobe, a middle portion, and a posterior or back lobe. Of the middle, or smaller part, science has as yet little to say; only that it is probably less important than the other parts. Yes, it is less important in just the same way that the hairspring is less important than the mainspring. Just a little matter of equalization perhaps, a transformer that serves to synchronize the vibrations from the two larger lobes. Of these two, the posterior descends from the floor of the mid brain. We are not immediately concerned with it and its functions. We are interested in it only as it transmits the messages from the anterior lobe, relaying them to the sympathetic nervous system.

The anterior lobe is of tremendous importance in our study of speech. It arises from the upper part of the pharynx during the embryologic stage of development. Picture those two lobes, one arising from the upper part of the pharynx, the other dropping down from the mid brain, contacting each other by means of the smaller middle portion that lies between them. Follow the pharynx downward and discover that it is only an upward extension of the same tube that forms the larynx or voice box. In imagination speak words of various emotional content and tone. Watch the vibrations formed in the vocal chords, see them travel upward through the tubelike aperture into the mouth, into the ears, into the nose, and on up until they strike against that upstanding tip that forms the front lobe of the pituitary gland. Follow them further, if you will, as they are modified and transformed—possibly stepped up to a greatly intensified rate—so that the posterior lobe can gather them up and flash them along through the brain to the entire nervous system of the body.

Possibly that middle portion functions like a thermostat, controlling the rate of vibration to that which will at least not destroy the body. Otherwise how could the system stand the constant crashing of noise and static that bombards it in our modern civilization? How,

THE WORD WENT FORTH

for instance, could it endure the screaming and yelling that one does at a ball game? Is it any wonder that one comes home completely exhausted from such an orgy? It is not only from expended energy that we suffer; it is also from the interruption of the normal flow of regular and vitalizing vibrations through our nerve channels. College yells emphasize the snap and crackle of the consonants: "Rah! Rah! Siss, boom, bah!" Even written here on the page these words seem like an outrage.

In the beginning was Chaos. The word means little to us, for our experience has all been within the realm of law and order. We attempt to picture it by swirling fog clouds, by flashes of erratic lightning, by *darkness*. None of these figures is adequate. All we really know about it can be summed up in three brief statements: It was complete darkness. Have you ever stood deep in the earth, in some cavern, while the guide snapped off the light? Well, that is it. Nature's one hundred per cent blackout; it was without form, *patternless*, a state inconceivable to us; it was the *negation* of the Cosmos which is a patterned, orderly universe. These three truths we believe, and there is a dim fourth one that we arrive at by inference. There must have been, buried somewhere in the heart of that chaotic mass, *the germ of life*. Something there was that was waiting, waiting, waiting the stimulus that would cause it to stir and rise and emerge; and the something came in the fulness of time.

In the beginning was the Word also. When God was ready to create, when the plan was fully conceived, and the finished design lay before Him, perfected to the last detail, then He cast about for the medium by which He could externalize His conception. He needed, as it were, a tuning fork to set the vast machinery of the universe in motion, for He had planned that this universe which He was about to fashion should move to music. It needed chords of harmony echoing and re-echoing forever; chords too vast for human comprehension; chords that would seem lost because no one little human brain could ever contain them

in their entirety. Only in broken bits could the mind grasp the divine harmony; only in thin pipings could it pretend to reproduce it. The individual notes of that cosmic chord were destined to be scattered throughout the entire universe, sustaining and nourishing all creation, and constantly stirring in mankind the discontent of the partial and broken. Always within the heart of man was to lie a veiled knowledge that he was only a part, separated from a vast and perfect whole.

What then was the tuning fork that God used? Brooding over His inert universe, He breathed life into it by speaking the syllables of His own Name. *The Word went forth*, syllable by syllable, powerful, invigorating; And the Word became flesh. It gathered to itself whirling electrons; it built up form, atom by atom, until the waters departed into their own places; land appeared; trees and flowers unfolded; and animals stirred in field and forest. The earth was ready and waiting for man.

But while sound initiated the creation, it did not work alone. The tones of that great scale, chanted through space, would have been like the empty warp strung upon a loom had not light been called into being. Light with its sevenfold threads of color furnished the woof. Back and forth across the love-call of the Almighty, as across the warp of the fabric, shuttled the thread of light to create the vivid tapestry of life.

Man has never forgotten that there was a Word. He has cried for it in his loneliness. He has, in rare moments, heard its echo in his heart. Occasionally there have arisen men who outstripped their fellows. They have stood above the crowd, and their voices have seemed to work magic. People have gathered around them and among the throng has run the subdued whisper: "The Word! The Word is made flesh!"

The Word has not been lost. It is Man that is lost. Carrying his one little note in his heart, he has wandered off until the sense of his separation has overwhelmed him. His single syllable is not a harmony when it removed from other syllables. Mobility has betrayed man. His power to move about has led him to withdraw from his fellow beings. Nature in her fixed orbit has retained her song; man has lost himself in his straying.

He has lost, too, the knowledge that he is essentially a creature of light. There is a light and there is a word deep within each being, for sound and color co-exist eternally. The voice of the Inner Self is the echo of that Name by which creation started. Twisted and distorted, but still recognizable, the Word goes forth continually: A.E.I.O.U. How tragic it is to mouth the sacred sounds over a lazy tongue. We slur them into slovenly syllables from ignorance and haste. Unaware of the creative energy of these five letters, we fail to stimulate and energize our glands by pure and true speech. We permit song to lie idle within us while we crowd our days with nervous tension. That which was given to us to renew and invigorate, loses its own resilience through neglect; and both body and soul are the poorer as a result.

The Tetragramaton has long been considered a sacred remnant of the Word that God spoke in creating the world. *Tetra* means four and *gramma* means letter. This four-lettered Name of God is found in many languages: Egyptian, Arabic, Persian, Turkish, German, and Latin; French and ancient Hebrew; Greek and Keltic. Our special interest centers in the Hebrew form whose four letters are all consonants.

To the Jew the Word became known as the *Incommunicable Name*, for the vowels were lost. If man had ever known them, he had forfeited his right to even the memory of them when he wandered away from his original state. In the days when he may have known their meaning, he feared to take the Holy Name in vain, for he dared not lightly invoke its power. Because of the ban placed upon him, he never wrote it down. Its syllables were whispered from man to man, and cherished in

memory. But gradually through his extreme reluctance to pronounce it, the true pronunciation was lost. The vowels slipped away, and only the consonants, the voice of the outer body, were left. To the present day, no devout Jew will needlessly pronounce that Great and Omnipotent Name, not even in its emasculated form. He will instead substitute for it the word *Adonai*, meaning Lord.

With the Christianizing of the Name, however, one of those curious happenings occurred which give us pause. Could it have been merely accidental? Could it rather be that by some subtle process beyond our understanding, when the Word that was in the beginning was again made flesh and dwelt among us, that memory stirred anew in the heart of humanity, unconsciously restoring to us a creative power which even yet we scarcely realize after more than two thousand years?

However that may be, when the Tetragrammaton was Christianized, it became *Jehovah*. To the Incommunicable Name, composed of its four consonants, had been added the vowel points from the word *Adonai*. Thus the various forms came into being: Yah, or Yahvah; Jahveh, and finally the *Jehovah* of the Christian period. Occasionally we find this form shortened to Jehova. The I of the original four-lettered name, IHVH, was thus made interchangeable with Y or J. In the same manner we know that U and V have always been interchangeable. Thus by substitution it would be quite proper to write the word IEHOVA.

What then of the H that stands in the middle of the Sacred Name; is it a consonant or a vowel? It is really neither. It offers no obstruction to the breath, and therefore cannot be called a consonant. It makes no sound, and hence cannot be called a vowel. It is in reality only a breathing. Do you not catch the marvelous symbolism of the word? Rearrange those letters without the H in their midst and you find the five vowels: AEIOU. Then set in their midst the royal sign of the breath stream upon which they must flow freely if we are to utilize their sacred creative power. What wonder that we are forbidden to take the Name in vain. Yet it is not a power reserved only for a select priesthood. No man can ever be defrauded of his birthright, for the word is a part of his own flesh.

When humanity was in danger of losing this sacred inheritance, the Word clothed itself again in flesh and cohabited with man. Jesus about to lay aside the flesh cried out to His Father, "I have manifested Thy

Name unto the men that Thou gavest me.” Later Paul, quoting from the scriptures of a former age, urged man to remember that the Word was nigh them even in the mouth and heart. Something that was lost had been recovered.

Law and Love are two of the most important of the opposing forces that dominate life. Law belongs to the outer self. It is composed largely of restraints placed upon individuals and society. Whether the command is positive or negative makes slight difference. *Do this* carries with it by implication a long series of *Do not's*. If the law says, “Drive at thirty-five miles an hour,” every driver is immediately aware of the negative implications, “Do not drive at fifty miles an hour or else—” Even in its positive form Law is still restraint, interruption of normal desire or activity.

Love, on the contrary, is the fulfillment of desire. Not even a positive command has any effect upon a lover. He would laugh at the suggestion that he *must* love.

“How could I help loving?” He would ask.

Love knows nothing of compulsion. Its only law is that law of man's own Inner Self. Law is negation; love is confirmation. Law destroys freedom in order to express itself; love by its own nature creates freedom. When humanity functions chiefly under the law, the consonants hold the balance of power; the outer self cracks the whip over the breath stream and drives it out of its natural channel. The voice grows harsh and dictatorial. *Thou shalt* and *Thou shalt not* arouse the spirit of combativeness. Caution and nervous tension contract the voice's range. Reserve destroys flexibility. Fear and deceit sap its resonance. Body triumphs over Soul.

When Love dominates, the vowels assume the mastery. They do not destroy the consonants. They share with them and together with the Inner Self create sound images of surpassing beauty. Streams of tender emotion are unleashed. The Self expands and the tones of the voice grow warm with kindness. Soul has triumphed and is guiding the Body along ways of pleasantness and peace. Then Soul and Body function in harmony, each necessary to the welfare of the whole. Conflict is past; balance has been achieved.

Man can never capture and confine the Spirit of God. When under the reign of Law, he sought to monopolize the secret of life and to retain it for the benefit of a select few, he eventually found himself holding the mere husk of a word, a few consonants from which the essence had escaped. He was left with nothing vital, and so was forced back upon the necessity of establishing a legend. He told of the thing that once existed; he told of it so long that it became a reality to him once more, but a lost reality. Now he had only a vanishing memory and four letters which he could not pronounce if he would.

When in the fulness of time, love became incarnate and man passed out of the old regime into a new one, slowly he learned a new commandment: *Freely ye have received; freely give.* Then the miracle happened. As man opened his hands and sought to share the thing he had once hugged to his own heart selfishly, back into the empty husks, revitalizing them and gradually displacing them, came once more the glorious, creative vowels. Here was the something that had been lost and was found again, none other than the Incommunicable Name made Articulate once more.

That which was lost among the consonants under the rule of Law has been found again, thinly disguised in the garb of the vowels, under the rule of Love. Here is good news indeed! As we meditate upon it, light dawns within us.

“I see!” we cry, in the astonishment of a new understanding. It is not the physical light of a material creation that fills our hearts; it is the spiritual glow of an awakening consciousness. Merlin’s light that is not of sunlight, or moonlight, or starlight has flooded our beings. Song and speech have become sacred things because we have realized the multiform character of our five words. Sound, muted though it is as it creeps through our cramped channels, is yet pregnant with life; the gleam, that flickers through our dreams and interweaves with the strands of sound, is still powerful enough to bring to pass all of the loveliness that our hearts crave.

THE ROSICRUCIAN ORDER, AMORC

Purpose and Work of the Order

The Rosicrucian Order, AMORC, is a philosophical and initiatic tradition. As students progress in their studies, they are initiated into the next level or degree.

Rosicrucians are men and women around the world who study the laws of nature in order to live in harmony with them. Individuals study the Rosicrucian lessons in the privacy of their own homes on subjects such as the nature of the soul, developing intuition, classical Greek philosophy, energy centers in the body, and self-healing techniques.

The Rosicrucian tradition encourages each student to discover the wisdom, compassion, strength, and peace that already reside within each of us.
